10463

is hollow within; and upon the midst of this same spire they place a bunch of quills, or slender canes, a foot and a half long, or more, and the bunch on the top thereof they beautify with peacock's feathers; and round about they slick the feathers of a mallard's tail, and adorn it with precious stones. Also great ladies wear this kind of ornament upon their heads, binding it strongly to a kind of hat or coif, which hath a pole in the crown, sit for the spire to come through; and under this ornament they comb the hair of their heads, which they gather up round together, from the hinder part thereof to the crown, and so lap them up in a knot or bundle within the Batta, which

afterwards they bind strongly under their throats.

It is on this account; that when a great company of such ladies ride together, and are feen at a distance, they look like foldiers with helmets on their heads, carrying their lances upright, for the Botta appears like a helmet with a lance over it. All their women sit on horseback like men, and they bind their veils or gowns about their waits with a sky-coloured or silk fears, and with another scars they gird it about their breasts; and they also bind a piece of white silk, like a mussiler or mask, under their eyes, reaching down to their breasts. These ladies are, generally speaking, exceeding fat; and the less their noses, the handsomer they are esteemed. They daub over their face with grease too most frightfully, and they never keep their beds on account of their bringing forth children.

14. As to the employments of their women, they drive carts, lay their houses upon carts, and take them down again, milk cattle, make butter and griat, dress skins and sew them, which they usually do with thread made of sinews; for they divide sinews into slender threads, and then twine them into one large one. They make sandals and socks, and other kind of apparel; but they never wash any clouds, for they say that God is then angry, and that dreadful thunder will ensue, if washed garments be hing out to dry. Nay, they beat such as wash, and take their garments from them. They are wonderfully afraid of thunder; for in the time of stunder they force all strangers out of their houses, and then wrapping themselves in black felt, he hid therein till the thunder be over. They never wash their dishes or bowls; yet when the flesh is boiled they wash their platter, wherein it must be pur, with scalding not broth out of the pot, and then pour the broth into the pot again. They make selecation and cover the houses therewith.

The men are employed to make powe and arrows, firrups, bridles and faddles, to build house and carts, to keep stories, to milk mares, to claum coims and mares holk, and to make base to suit it in; they keep camels also, and lay butthens upon them. As for frieep and goats, they mind and milk them, both men and women. When there is milk thickened and falsed they dress and ma their mass. When they wash their hands and their heads, they fill their names fall of water, and positing it into their hands by indicated they fill their names fall of water, and positing it into their hands by indicated their fill of water, and wall their heads for seath has been been also been allowed to the special transfer of the milk and their fill of their special transfer of their special transfer of their parents also observe their milk has been all their transfer of their parents also be seathern all their car all their transfer of their parents also be seathern. If they can all their their their special transfer of their parents also be seathern all their car all their their transfer of their parents.

mother for the court, or house of the fitter or nother, falleth by inheritance always to be vounged for, whiteepon he is to orde for all his other's wives, because they me part of his inheritance, is well as let in her's possessions; and then, it he will, he of he dien for his own wives, for he tanks it no injury or disparagement to himself, though they return unto his father asian ueato. Therefore, wall may man half being and with another for a maid, the father of the demich makes him a feast; in the meant if he she she says to some of her landfoll to have herself. Then her father says to the bracegroom, my daughter is yours, the her wheresoever you can find her. Then he and his friends seek her till they find her, and having sound her, he takes her by soice, and cornes her to his own house.

15 In repard to their laws, or their execution of justice, Your Majesty is to be idvertiled, that when two men fight are the come adare intrude himself to part them the father die not help his own fort, but I o that ha too not have the worst, must appear to the cont for his had, and to oever elected him any violence after appeal, as put a ceach, but he is all be teach per ally who at delive. They purish no man in h dorth, unless he be taken atte cor in he is of the is or elle contess the farae, but Leira accused, the out him to axi ema to the to make him confe's the truth. They right murder with death, and come for a control as y other bessues his own nom n: by his orn. I mean his seed his masser for every man may use his m as 's plane. I a nous there of o, felon , they punish with courts. For a light the , as I fell ig out a read, the created and precented in the left, but otherwise de esteu, as courtly beaten, and a the excessioner lays on an hundred ftrokes, he made nation indications, for such is a position from senience given in cruit. That is tike the cold list hey purish with doub. Socialegious persons they use in the n icity,) b . fe they chean fuch to be out has. When a man dies they lame it and al, occition, one are mountains are free from paying any tribute for on wir's just a co, also whoever is prefer to the house where one of man's estate his dea' fon fanot ent a mito the court of Mangu-Khan till one whole year be exa chi'd d cealed, he me t not enter into the court till the next month pired. In after. Her the grave of the party deceased, they always leave one cottage. If any of their nobles, being or the flock of Zingis their arft Lord, dies, the place of his burul is not known. About their places where they inter their nobles, there is a family left to keep the fepulchie. I could not learn that they used to lide treasures in the graves of their dead.

The Comanians build a stately tomb over their dead, and erect the image of the dead man thereupon, with his face towards the Eall, holding a drinking-cup in his hand before his navel. They erect also upon the monuments of rich men pyramids; and in some places I saw high towers made of brick; mother places pyram its made of stone, though there are no stones to be sound thereabouts. I saw one newly bured, in homony of whom they hung up sixteen house-hides unto each quarter of the world, sour between certain high posts; and they set beside his grave Cosmos for him to drink, and state to east and yet they said that he was baptized. We beheld other kind of sepulched also towards the East, viz. large stoors of pavements, made of stones, time cound the story story of the world. When any man is sick, he lieth in his bed, and the story of the world. When any man is sick, he lieth in his bed, and the house; for none are admitted there to sick person, that no man is sick in their great courts, they appoint wetchmen to stand round.

Louis about the const, who will not funer any person to enter the precincts thereof, for such is their superst ion, that they are atraid that evil spirits or witches should come to-

gether with the puttes that enter in.

76. On my anited among these carbarous people, I thought, as I before observed, that I was come the case world, for they came flocking about us on horfeback after they had made us wait for them in the shade under the black casts. The first question they alred was, viether we had ever been with them heretofore or not? And on our answering that vehad not, they began impudently to begoon valuals from us; we gave them some of our biscut and wine, which we had brought with us from the town of Soldai; and having deadle of one flaggon of our wine, they demanded another, telling 1., that a man does not go into the house with one foot; we gave them no more, howe e, excusing ourselves that we h d but little. Then they asked us whence we came, and whither we vere bound; I a fivered them in these words: that we had heard concoming that Prince Sartach, that he was become a christian, and that unto him our decermination was to travel, having Your Majesty's letters to deliver unto him. were very inquilitive to know whether I came of mine own accord, or whether I was tent. I answord, that no man compelled me to come, neither had I come unless I had been willing; and that therefore I was come according to my own will, and to the will of my luperior. I took the utmost care never to say that I was Your Majesty's ambas-Then they asked what I had in my cares, whether it were gold, suver, or rich garments to carry to Saitach. I answered, that Saitach should see what we had brought when we were cone us to him; that they had nothing to do to alk fuch questions, but rather ought to conduct me unto their captain, and that he, if he thought proper, should cause me to be directed to Sartach, if not, that I would return; for there was in the fame province one of Baatu's kinfinen, called Zagatai, to whom the Emperor of Constantinople had written letters to fusser me to pass through his territories.

With this answer of ours they were fatisfied, giving us horse, and exen, and two men to conduct us. But before they would allow us those necessaries, they made us wait a long while, begging our bread for their brats, wondering at all things they faw about our servants, as their knives, gloves, purses, and points, and desiring to have them. I excused myself, faying, we had a long way to travel, and that we could not deprive ourselves of things necessary to finish so long a journey. Then they said I was a niggardly scoundrel. It is true, they took nothing by force from me, but they will beg all they fee very importunately; and if a man bestows any thing upon them, it is but loft, for they are thankless wretches. They esteem themselves lords, and think that nothing should be denied them by any man. If a man gives them nothing, and afterwards stands in need of their service, they will do nothing for him. They gave us of their cows' milk to drink after the butter was churned out of it, which was very four, which they call apram. So we departed from them; and indeed it feemed to me that we were escaped out of the hands of devils. The next day we were introduced to their captain. From the time wherein we departed from Soldai, till we arrived at the court of Sartach, which was the space of two months, we never lay in house or tent. but always under the canopy of heaven, and in the open air, or under our carts; neither faw we any village, or heard of any building where any village had been; but the graves of the Comanians we faw in great abundance. The same evening our guide which had conducted us, gave us fome cosmos; after I had drank thereof, I sweated extremely, which was owing, I believe, to the novelty of it, because I never drank of it before; notwithstanding I thought it was very pleasant and well-tasted.

17. We met the day following with the carts of Zng 117i, laden with houses; and I really thought that a great city came to meet me. I wondered at the muliitude of dioves of exen and horses, and droves of sheep; I could see but a sew men that gu ded all these; upon which I enquired how many men he had under him, and they 10'd ne that he had not above five hundred in all, and that the one half of this numbut we pailed, as they lay in another lodging. Then the lervant which was our go le, to done i' a I must present somewhat to Z zain; and so he can ed us to man, form them lives before to give notice of our coining. By this time it was past three, a 1.1 y in taled their tous near a river; and there came unto us his interpreter, who being informed by as that we were ne or there before, demanded to ne of our victuais, and wag anted is request. The also year dol is somagniment to a const, because news to interpret our mediage to his marker, we excused ourselves as was inrecould. Income of class hat we rould refer to his lord, and we took a figure of tyme, and miled a brick with influence in falver with applies, and o here with, but he was not contented theret in, because we'll mant him not fone such garment.

We were howeve, ed. a ted into lass the co with fear and lashfulness. It for the had I holding a muficil indication that is noted as we do by and, who, not y opinion, had cut and per I had no februa carthe eyes, that it is might been to be firt-noted, in the had left both include at all in that place, he may not a directly fear with black onetn int, a the also did her cyc-brows, which have a unto is of ugh. Then I repeated to I me the I me words which I had I poken in office it co, we were directed in this circumflure by lenie that had been record to be not a rewe flould never vary in out tel. I be ought him that he would very the o this fmall gift at our hands, excusing myself that I was a ment, a cleant where it our protession to pesses gold, alver, or preconsigning mes, and there is a little not any fuch thing to give him, unless he would receive form pre a or a tall me flerd of a bleffing. He caused thereupon our profest to be recense, and amin duely, distributed the same amongst his men, who were met to either to the interpret direct and make merry. I delivered also to him the Englior of Constantinople's letter, eight days after the feast of Ascension, and he concurred to Schlei, to have the n incopreted there; for they were written in Greek, and he I ad none about him that was fkilled in the Greek tongue.

He asked us if we would drink any cosmos, it at is to say mane, milk, for those that are Christians among them, as the Russians, Grecians, and Alane, who keep their own law very strictly, will not drink thereof, for they account themselves no Chussians after they have once drank of it, and their priests reconcile them unto the church as if they had renounced the Christian saith. I answered, that we had as yet sufficient of our own to drink, and that when it failed us, we must be constrained to drink such as should be given us. He enquired also what was contained in the letters which Your Majesty sent to Sartach? I answered, that they were sealed up, and that there was nothing contained in them but friendly words. And he asked, what words we would deliver unto Sartach? I unswered, the words of Christian saith. He asked again, what those words were? For he was very desirous to hear them. Then I expounded unto him as well as I could by my interpreter, who was a very sorry one, the Apostics Creed, which after he had heard be shook his head. Then he assigned us two man to attend upon us, and our horses and our exent, ends he caused us to side in his company, till the messenger he had sent for the translation of the Lappendes letters arrived to we travelled the company till the day established the state of the translation of the Lappendes letters arrived to we travelled

1. There came to its on Whitfun-eve fome of the people call of Alams, who as the Christians of the Creek church, using Greek books, and were proof they have they a not schimatics as the Greeks are, since without exception of persons they brought unto us boiled sless, requesting us to one of their in any and to pray for one of their correspondence of the property of the feast, we would not cat any sless; and I expounded to them the seal lemosts of the feast, for they were ignorant of all thousands to the Christian relationship of the feast, for they were ignorant of all thousands.

gion, except the name of Chilft.

The; and many other Charlans, both Ruffians and Hungarians, derander of us viether they might be faved or no, because they were conftrained to donk colmos, and to cat the dead carcales of things flain by the infidels, which even the Greaks and Rusfian purells also effected as things if angled or offered to idely, because it, y were ignotant of the times of fafting, neither could they have observed them if they had known I instruct d th m as well as I could, and strengthed them in the faith; as for the field which they had brought, we referved it till the feaft-day, for there is nothing fold arrong the Tartars for gold and filver, but for cloth and garments, of which we had none. When our fervants offcred them any of their coin, called by them Yperpera, they subbed it with their fingers and put it to their notes, to try by the smell whether it were They did not allow for our food any jubfiftence but cows' milk only, copper or no. which was very four: one thing most necessary was greatly wanting to us, for the water was so foul and muddy by reason of their hories, that it was not sit to be drank; so that had it not been for some Bucuit which by the goodness of God was still left us, we had undoubtedly perished.

19. On the Feast of Pentecost there came to us a Mohammedan, to whom, as he talked with us, we expounded the Christian faith, who (being informed of God's goodness to mankind in the incarnation of our Saviour Christ, the resurrection of the dead and the judgment to come, and that baptilin was a washing away of fins) faid that he would be baptized; but when we prepared to baptize him, he fuddenly mounted on hoafeback, saying, that he would go home and confult with his wife: and the next day he told us that he durft not receive baptifm, because then he should drink no more cof mos; for the Chillians of that place affirm, that no true Christians-ought to drink it, and that without it he could not live in that defart; from which opinion I could not for 1 1y life remove him. It is scarce credible, how many are restrained from becoming Christians from this opinion, broached and confirmed among them by the Russians, of whom there are a great many fettled here. The same day Zagatai gave us one min to conduct us to Sartach, and to guide us to the next stage, which was five days journey for oxen to travel. They gave us also a goat for victuals, and a great many bladders of cows' milk, and but a little cosmos, because they love it so much themselves; and so taking our journey directly towards the north, I thought we had passed through one of hell-gates.

The fervants who conducted us began to play the bold thieves, feeing us take little heed to ourselves; at length having lost much by their thievery, suffering taught us wisdom. When we came to the extremity of that province, which is fortified with a ditch from one sea unto another, without which was their place of lodging, into which so soon as we had entered, it appeared to us as if all the inhabitants were inscreed with leprosy, for certain base sellows were placed there to receive tribute of such as took salt out of the salt-pits. From that place they told us we must travel afteen days journey before we should find any other place; with them we drank cosmos, and gave to them a basket full of fruits and of hiscuit, and they gave unto us eight exert and one goat to

maintain us in fuch a journey, and I know not how many bladders of milk, and fo changing our oxen we proceeded for ten days, arriving then at another stage, neither found we any water all that way, but only in some ditches made in the vallies and in two rivers. From the time also that we departed out of the province of Gassaria, we travelled directly eastward, having the sea on the south side of us, and a vast defart on the north, which defert in some places reaches twenty days journey in breadth, without tree, mountain, or fo much as a stone therein, and is a most excellent pasture. Here the Comanians, which were called Copthai, were wont to feed their cattle, and were the fame the Germans stiled Walani, and the province itself Walania. But Isidore calleth all the tract of land stretching from the river of Tanais to the lake of Meotis, and so far as the Danube, the country of the Alani. And the fame country extends in length from the Danube to Tanais (which divides Afia from Europe) for the space of two months journey, and it was all inhabited by the Comanians, called Copthai, and beyond Tanais as far as the river of Edil or Volga, the space between which two rivers is a long journey to be travelled in ten days. To the north of the same province lieth Russia, which is full of wood in all places, and stretches from Poland and Hungary to the river of Tanais, and it likewise hath been wasted by the Tartars, and is still wasted by them.

20. The Tartars have more esteem for the Saracens than the Russians, because the latter are Christians, and when they are able to give them no more, they drive them and their children, like slocks of sheep, into the wilderness, constraining them to keep their cattle there. Beyond Russia lieth the country of Prussia, which the Teutonic knights of the order of St. Mary's hospital of Jerusalem have of late wholly subdued, and indeed they might easily win Russia if they would attempt it vigorously; for if the Tartars should once know that the great priest, for that is the name they give to the Pope, had caused the ensign of the cross to be displayed against them, they would sly

into the defarts. But to proceed:

We went towards the eastward, seeing nothing but the sky and the earth, and sometimes the sea on our right hand, called the sea of Tanais, and the sepulchres of the Comanians, which appeared unto us two leagues off, in which their custom was to bury their dead altogether. While we were travelling through the desart it went reasonably well with us, but I cannot sufficiently express the irksomeness of their place of abode, for our guide would have us go to every captain with a present, which was an expence our circumstances would not bear, for we were eight persons spending our own provision, for the Tartar servants would all of them eat of our victuals. The sless which they gave us was not sufficient for us, neither could we find any thing to be bought for our money: and as we sat under our carts in the cool shadow, on account of the extreme heat, they would importunately and sharefully intrude themselves into our company, so that they would even tread upon us to see what we had; such slovens they were, that they would lay their tails in our presence while they were yet talking with many other things they committed, which were most tedious and loathsome units us.

But above all it streved me to the very heart, that when I would have boken what might strength their admication, my feelth inverprener would my, you should not make me pecome a presence now. I self you I cannot, I will not rebear any fuch words; and cree is win schield to date for I detective tables words? I became once a little Longitude of the land for I have about the cannot are a little Longitude of the land of their above. I have not that he could be capte another a man a shadower came most or the willest provide could. Then feeling the damper a major allowing to feeling to damper a major allowing to feeling to damper a major allowing to feeling to damper a major allowing the came and the same and the sam

of St. Mary Magdalen, we arrived at the banks of the mighty river Tanais, which divides Afia from Europe, even as the river Nile of Egypt separates Afia from Africa. At the place where we arrived, Baatu and Sartach had caused cottages to be built upon the eastern bank of the river, for a company of Russians to dwell in, that they might transport ambassadors and merchants in ferry-boats over that part of the river; where first they ferried us over, and then our carts, putting one wheel into one, and the other into the other lighter, first binding both the lighters together, and so they rowed them over.

In this place our guide played the fool strangely; for he imagining that the Ruslians dwelling in the cottage should have provided us horses, sent home the beasts we brought with us, in another cart, that they might return to their own masters. But when we demanded some beasts of them, they answered, that they had a privilege from Baatu, whereby they were bound to no other service but to servy goers and comers; and that they received great sums from merchants even for that. We stayed there by the river side three days. The first day they gave us a great fresh turbot; the second day they bestowed rye-bread and a little slesh upon us, which the purveyor of the village had taken up at every house for us: and the third day dried sish, which they have there in abundance. The river was as broad in that place as the river Seine is at Paris; and before we came there, we passed over many fine waters all full of sish, and yet the barbarous and rude Tartars know not how to take them; neither do they make any reckoning of any sish, except it be so great that they may eat the slesh of it as they do the slesh of a ram.

This river is the limit of the east part of Russia; it riseth out of the sens of Maotis, which sens extend quite to the Northern ocean. It runs southward and forms a sea of seven hundred miles in extent before it falls into the Pontus Euxinus, or the Black sea; and all the rivers we passed over ran into the same. This river has also great store of wood growing on the west side thereof. The Tartars remove no farther towards the north: for about the first of August they begin to return back to the south; and therefore there is another cottage somewhat lower, where passengers are ferried over in winter time. And in this place we were driven to great extremity, because we could get neither horses nor oxen for money; at length, after I had declared unto them, that my coming was for the common good of all Christians, they sent us oxen and men, but we ourselves were forced to travel on foot. At this time they were reaping their rive; as for wheat, it grows not well in that foil: they have millet in great abundance.

The Ruffian women drefs their heads like our women; they embroider their gowns on the outfide, from their feet unto the knees with party-coloured or grey full. The Ruffian men wear caps like the Dutchmen; also they wear upon their heads certain tharp and high-crowded bats made of felt, much like a lugar loat. We travelled thence three days topether without finding any people; and when ourfelves and our owen were exceeding wearvand faint, not knowing new far it would be to any Taxtars, on a ludden there came rise thories running towards us, which we caught with great love, the public and our interpreter mounted upon their backs, to be how far off they could determ any people; and upon the fourfaction of our jointeys having found furn intuitions, we rejoiced like termen who had elegand out of a dangerous temper, and had newly sentimeed the bases. Then having taken it efficiences and outerly we posted or from dages to have a list she record or thought like analysis. Then having taken it efficiences and outerly we posted or from dages to have a list she record or thought like analysis.

es. All the coentricting decord. Constitut severe destricts for bedank regard Meditangonality decream raday. Constitute birdi pentheren blure realization de inhabited by two forts of people, one of them is called Moxel, being mere Pagans, and without law; they have neither towns nor cities, but only cottages in the woods. Their Lord, and a great part of themselves, were put to the sword in Germany; whereupon they highly commend the brave courage of the Alanians, hoping as yet to be delivered out of the bondage of the Tartars by their means. If any merchant come among them, he must provide things necessary for him with whom he is first entertained all the time of his abode among them. If any lieth with another man's wife, her husband, unless he be an eye witness thereof, doth not regard it, for they are not jealous of their wives. They have abundance of hogs, and great store of honey and wax, and various forts of

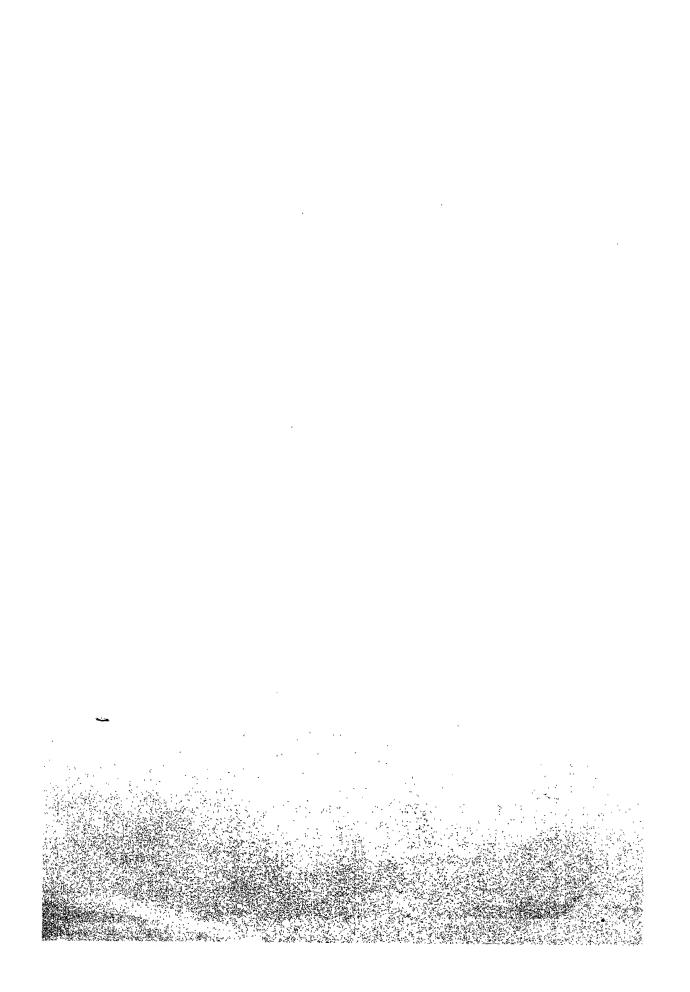

tich and costly skins, and plenty of falcons.

The other people are called Merclas, which the Latins call Mardui, and they are Mohammedans. Beyond them is the river of Etilia, or Volga, which is the greatest river that ever I saw, and it issues from the north part of Bulgaria the Greater; and se trending along fouthward, discharges itself into a certain lake, containing in circuit the space of four months travel, of which I shall speak hereafter. The two rivers afore-mentioned, Tanais and Etilia, otherwife called Volga, in the northern rogions, through which we travelled, are not diffant above ten days journey; but fouthward they are divided a great space one from another, for Tanais descendeth into the sea of Pontus. Etilia maketh the foresaid sea or lake, with the help of many other rivers which fall into it out of Perfia, and we had to the fouth of us very high mountains; upon the fide thereof towards the faid defart, the people called Carges, and the Alam or Arcas inhabit, who are as yet Christians, and make war against the Tartars. Beyond them, next unto the fea or lake of Etilia, there are certain Mohammedans called Lefgi, who are in fubjection to the Tartars. Beyond this is Porta-Ferrea, or the Iron Gate, concerning the fituation of which Your Majesty shall be further informed towards the end of this treatise, for I travelled in my return by the very place between these two rivers; in the regions through which we passed the Comanians formerly inhabited before they were over-run by the Tartars.

22. We found Sartach lying within three days journey of the river Etilia, whose court seemed to us to be very great, for he himself had fix wives, and his eldest son also had three wives, every one of which women hath a great house, and each of them above two hundred carts. Our guide went unto a certain Nestorian named Coiat, who is a main of great authority in Sartach's court; he made us go a long way to one Janua, for so they call him who has the office of entertaining ambassadors. In the evening Coiat commanded us to come unto him. Then our guide began to inquire what we would

commanded us to come unto him. Then our guide began to incurre what we would prefent him with, and was exceedingly offended when he law we had nothing ready to prefent. We flood before him, and he far majefficially that in, in its and daucing in his prefence. Then I looke into him in the words hence are pad, telling him for what purpose I was come unto his Lond, and requireme to make, favour as his hands as to bring our leners into the right of his load. It exclude invited hid stark was a monk, not having not receiving nor using any cold or nives are other precious ching leve our books, and the garments in which, as arrieds we derived that find this was the curle we instantly no prefent to this one has been excluded and the cold in definition of the exceeding likely because any cold and the second or the exceeding the cold being the cold of the cold being the cold being the cold of the cold being the cold to be an exceeding the fact the cold being the cold of the cold being the cold being the cold of the cold being the cold being the cold of the cold being the cold being the cold of the cold being the cold being the cold of the cold being the

He enquired also who was the greatest prince among the Franks, i. e. the western Christians? and I said the Emperor, if he could enjoy his own dominions in quiet. No, replied he, but the King of France, for he had heard of Your Highness by Lord Baldwin of Henalt. I found there also one of the Knights Templars, who had been in Cyprus, and had made report of all things which he faw there. Then we returned to our lodging, and the next morning we fent him a flaggon of Muscadel wine (which had kept very well in fo long a journey) and a box full of bifcuit, which was most acceptable unto him, and he detained our fervants for that evening, and they were well entertained at his tents. The next morning he commanded me to come to court, and to bring the King's letters, and my vestments and books with me, because his lord was defirous to fee them, which we did accordingly, lading one cart with our books and veftments, and another with bifcuit, wine, and fruits: then he caufed all our books and vestments to be spread abroad, and there stood round about us many Tartars, Christians, and Saracens, on horseback; at the fight of which he demanded, whether I would bestow all those things upon his lord or no? which saying made me tremble, and threw me into an excessive fright. Dissembling our grief as well as we could, we gave him the following answer: Sir, our humble request is, that our lord, your master, would vouchsafe to accept our bread, wine, and fruits, not as a present, because it is too mean, but as a benediction, lest we should come with an empty hand before him, and he shall see the letters of my Sovereign Lord the King, and by them he shall understand for what cause we are come unto him, and then both ourselves and all that we have are at his pleafure, but for our vestments they are holy, and it is unlawful for any but priefts to touch them.

Then he commanded us to dress ourselves in the garments, that we might go before his lord, and we did so. Then putting on our most precious ornaments, I took in my arms a very fair cushion, and the bible which Your Majesty gave me, and a most beautiful psalter, which the Queen was pleased to bestow upon me, wherein there were very fine pictures. My associate took a missal and a cross, and the clerk having put on his surplice, took a censor in his hand, and so we came to the presence of his lord, and they lifted up the felt hanging before his door, that he might behold us.

Then they caused the clerk and the interpreter thrice to bow the knee, but of us they required no such submission; and they diligently admonished to take care that in going in, and in coming out, we touched not the threshold of the house, and requested us to sing a benediction for him. At length we entered singing Salve Regina; and in the entrance of the door stood a bench with cosmos, and drinking-cups, thereon, and all his wives were there assembled; also the Moguls, or, as they pronounce, Moals, or rich Tartars, thrust in, and pressed hard upon us. Then Coiat carried to his lord the censor, with incense, which he beheld very diligently, holding it in his hand; afterwards he carried the platter unto him, which he looked earnestly upon, and his wife also that sat by him; after that he carried the bible; then Sartach asked if the gospel were contained therein? Yes, said I, and all the Holy Scriptures besides.

He took the crois also in his hand, and alked, as to the image, whether it were the image of Christ or no? I said it was. The Nestorians and the Armenians never make the figure of Christ upon their crosses. Wherefore, either they seem not to think well of this passion, or else are assumed of it. Then he caused them that stood about us to stand aside, that he might more sully behold our ornaments. Asserwards I delivered unto him Your Majesty's letters, with the translation thereof in the Arabic and Syriac languages, for I caused them to be translated as Acon into the character and your with

dialect of both the faid tongues. There were certain Armenian priests who were versed in the Turkish and Arabian languages, and the Knight before mentioned also of the order of the Temple, had knowledge in the Syriac, Turkish, and Arabian tongues. Then we departed, and put off our vestments, and there came unto us some secretaries of the court, together with the Coiat, and caused our letters to be interpreted, which letters being heard, he caused our bread, wine, and fruits, to be received; and he permitted us also to carry our vestments and books unto our own

lodging.

23: We had the next morning betimes a vifit from a certain priest, who was brother to Croiat, requesting to have our box of chrism, because Sartach, as he said, was defirous to fee it, and fo we gave it him. In the evening Coiat fent for us, faying, my lord your King wrote kind words unto my lord and master Sartach. There are, however, certain matters of difficulty in them, concerning which he dare not determine without the advice of his father, and therefore you must depart unto him, leaving behind you the two carts which you brought hither yesterday with vestments and books in my custody, because my lord is desirous to take a more diligent view of I, prefently fuspecting what mischief might ensue from his covetousness, made him answer, Sir, we will not only leave those with you, but the two other carts also which we have, in your possession. You shall not, said he, leave those behind you; but for the two carts first named, we will satisfy your request: I said that this could not conveniently be done, but we must leave all with him. Then he asked, whether we meant to remain in the land? I answered, if you have read, and understand the Letters of my lord the King, you know that we are so determined; then he replied, that he ought to be patient, and so we departed from him that evening.

The next morning he fent a Nestorian priest for the carts, and we caused all the four carts to be delivered; then came the before mentioned brother of Coiat to meet us; and separated those things, which we had brought the day before to the court from the rest, viz. the books and vestments, and took them away with him. Coiat had, however, commanded, that we should carry these vestments with us, which we wore in the presence of Sartach, that we might put them on before Baatu, if he should require it; but the priest took them from us by violence, using these words: you brought them to Sartach, and would you carry them to Baatu? and when I would have shewn him the reason, he answered, come, don't be too talkative, but go your Then I faw there was no remedy but patience, for we could have no access unto Sartach himself, neither was there any that would do us justice. I was afraid also of the interpreter, that he had spoken other things than I directed him, for his will was good, that we should have given away all that we had. There was yet one comfort left to me, for when I once perceived their covetous intent, I conveyed from among our books the bible, and the fentences, and other books, which I valued most. I durst not, however take away the platter of my lovereign lady the Queen, because it was too well known, on account of the golden pictures therein: fo we returned with the two others carts to our lodging; then came he that was appointed to be our guide to the court of Baatus, bidding us provide for our journey in all hafte; to whom I faid, that I would in no cale have the carts go with me, which he declared unto Coiat.

The Coist commanded that we should leave them and our servant with him, and we alld as he directed, and so travelled directly eastwards towards Bastu; the third day we came to Ettia, on Voiga, the stream of which when I beheld I wendered incomplish region of the north made huge and raights waters should defected. Before we agree departed from Sarteche Coice, which many other scribes of the cours, and many us.

do not make report that our lord is a Christian, but a Moal, because the name of a Christian seemeth to them to be the name of some nation; and so great is their pride, that though they believe, perhaps some things concerning Christ, yet they will not be called Christians, being desirous that their own name, that is to say, Mogul Moal, should be exalted above all other names: neither will they be called by the name of

Tartars, for the Tartars were another nation, as I was informed by them.

24. At the time that the Franks made themselves masters of the city of Antioch, which was about the year 1097, there reigned in these northern parts a Prince whose name was Kon-Khan, or Ken-Khan. Kon or Ken was his proper name, and Khan his style of power or dignity; for it is to be understood that the word khan, strictly taken, signifies a diviner, a man skilled in sublime sciences, or one who can foretel suture events; and from thence it is transferred to their princes, as if they held them to be endowed with all these great qualities. The Turks, at the time of that siege, demanded succours of Kon-Khan against the Christians, as coming themselves originally out of these countries. This Kon-Khan was styled likewise Khan, or Prince of Cara-Cathay, which is as much as to say, the Black Cathay; for Cara in their language signifies black, and Cathay is the name of a certain country, which, however, is to be distinguished from that Cathay which lies farther towards the east, and is a mari-

time country, of which I shall speak hereafter.

As for this Cara-Cathay, it lies behind certain mountains, over which I passed, as also through a plain country, in which dwelt formerly a certain great Nestorian priest, who was the fovereign of a nation called Naymans, and who were all Christians of This Kon-Khan being dead, the Nestorian priest before-mentioned the Nestorian sect. took upon him the style and office of a king, and thence the Nestorians called him the King Prestre John, i.e. John the Priest, and published mighty things concerning him, and much beyond the truth; for it is the cultom of the Neltorians coming from this country to magnify every little thing into a great matter, just as they spread a report that Sartach was become a Christian, and that Mangu-Khan and Ken-Khan, had also embraced our religion, only because they were indulgent to those of our profession, though nothing is more certain than that none of them are Christians. So likewise there went abroad a great report concerning this King and Priest John; notwithstanding which, when I travelled through his territories, there was no body that knew any thing of him, but a few Nestorians. In his pastures or territories dwelt Ken-Khan, at whose court Friar Andrew was, and I myself passed by at my return. This John had a brother who was powerful also, and a shepherd like himself called Unc, and he inhabited beyond the mountains of Cara-Cathay, diftant from his brother John the space of three weeks journey. He was lord of a certain village called Cara-Carum, having people also for his subjects named Prit; or Merkit, who were Christians of the sect of Nestorius; but their lord abandoning the worship of Christ, embraced idolatry, reraining with him priefts of the faid idols, who all of them are worthippers of devils, and are forcerers themselves.

Beyond his pattures, about ten or fifteen days journey, are the pattures of Moal, who were a poor and beggarly nation, without governor and without law; except their foothfavings and their divinations, unto which detectable ftudies all in those parts apply their minds. Near unto Meal were other poor people called Tartars. The atoyetaid King John died without iffice male, his brother thic thereby was greatly inriched, and took himfelf the five of Khan, and his carte and herds ranged to the bunders of Moal, about the fame time these was one Zings a famour among the people of Moal. This Zings their as many cattle from the Khan as he canad poundary to that the despite of Moal.

Unc complained and their lord; upon which he raifed an army, and marched up into the country of Morl to feck for Zingis: but Zingis fled amongst the Tartars, and hid hinself among them; and Unc having taken some spoils both from Morl and also from the Tartars, returned home; then Zingis addressed himself to the Tartars, and to the people of Morl, "Behold brethren," said he, "because we are destitute of a governor and a captain, you see how our neighbour oppresses us;" on which the

Tartars and Moals appointed him to be their captain.

Then having feeretly gathered together an army, he broke in fuddenly upon Unc, and overcome him, and Unc fled into Cathaya. At the fame time his daughter wataken, which Zingis married unto one of his fons, by whom fhe conceived and brought forth the Great Khan, which now reigneth, called Mangu-Khan. Then Zingis fort the Tartars before him in all place where he came; and thereupon was their name published and spead abroad; for in all places the people call out, "The Tartars come, the Tartars come. Yet through continual wars, they are now all of them in a manner confumed and brought to nought. Whereupon the Moals endeavour what they can to extinguish the name of the Tartars, that they may exalt their own. The country wherein they first inhabited, and where the court of Zingis-Khan yet remains th, is cailed Mancherule. But because Tartaria is the region out of which they have obtained their conquests, they esteem that the feat of their kingdom; and there also, for the most part, do they elect their Great Khan.

25. In respect to this Sartach, whether he believes in Christ or no, I know not; this I am fure of, that he will not be called a Christian: on the contrary, he seems to me to deride and fcoff at Christians. His country is in the way of the Christians, viz. of the Russians, the Walachians, the Bulgarians, the Soldaians, the Kerchis, and the Alans, who all of them pass by him as they are going to the court of his lather Bastu to carry gifts; and therefore he is more in friendship with them. If the Saraceus however come and bring greater gifts than they, they are dispatched sooner. He hath about him certain Nestorian priests, who tell their beads and sing their devotions. is also another under Baatu, called Berta, who feeds his cattle towards the iron gate or Derbent, where lieth the passage of all the Saracens which come out of Persia and out of Turkey, to go unto Baatu, and passing by they make him presents, and he professeth himself to be a Saracen, and will not permit swine's slesh to be eaten in his dominions. At the time of our return, Baatu commanded him to remove himfelf from that place, and to inhabit upon the east side of Volga, for he was not willing that the Saracen's Ambassadors should pass by the said Berta, because he saw it was not for his profit.

For the space of four days while we remained in the court of Sartach, we had not any victuals allowed us, except once a little cosmos; and in our journey between him and his father, we travelled in great fear; for certain Russians, Hungarians, and Alans, being servants to the Tartars (of whom they have great multitudes among them), assembled themselves twenty or thirty in a company; and secretly in the night conveying themselves from home, they take bows and arrows with them, and whosoever they find in the night season they put him to death, hiding themselves in the day time; and having tired their horses, they go in the night to a company of other horses seeding in some pasture, and change them for new, taking with them also one or two horses besides to eat them when they stand in need. Our guide therefore was much afraid,

left we should have met with fuch companions.

In this journey we had perished through famine, had we not carried some of our biscuit with us: at length we came to the vast river Etilia, or the Volga, which is

four times greater than the river of Seine, and of a wonderful depth, falling into that which of late they call the Hircanian Sea, according to the name of a certain country in Persia, lying on the shore thereof. Isidore calleth it however the Caspian Sea, for it hath the Calpian mountains and the land of Persia situate on the south side thereof, and the mountains of Massihet, that is to say, of the people called Assassini, towards the cast, which mountains are joined unto the Caspian mountains; but on the north fide thereof lieth the same defart, wherein the Tartars now inhabit; in which heretofore there dwelt a nation called Changle; and on that fide it receives the Etilia, which river rifes in fummer-time like the river Nile in Egypt. On the west part thereof it hath the mountains of Alan, and Lefgi, and Derbent or the iron gate, and the mountains of Georgia. This fea therefore is encompassed on three fides, with mountains; but on the north fide hath a fine flat country. Friar Andrew, in his journey, travelled round about two fides thereof, namely the fouth and east fides, and I mysell about the other two; that is to fay, the north fide, in going from Baatu to Magu-Khan, and in returning likewise; on the west side, in coming home from Baztu into Syria. A man may travel round about it in four months; and it is not true which Isidore reports, that this fea is a bay or gulph coming out of the ocean, for in no part it communicates with the ocean, but is environed on all fides with the land.

26. All the regions extending from the west shore of this sea, where Alexander's iron gate, otherwise called the city of Derbent, is situate, and from the mountains Alan, all along by the sences of Mæotis, into which the river of Tanais falls, and so to the North ocean, was of old called Albania, of which country Isidore reporteth, that there are in it dogs of such huge slature, and so fierce, that they are able, in fight, to match bulle, and to mafter lions, which is true, as I was affured by feveral, who told me, that towards the North ocean they make their dogs draw in carts like exen, on account of their bigness and strength. On that part of Etilia where we arrived, there is a new flation built, wherein they have placed lartars and Ruffians together to ferry over and transport messengers going and coming to and from the court of Baatu, for Baatu keeps his court upon the farther fide towards the east; neither afcendeth he in the fummer-time more northward than the place where we arrived. but was even then descending to the south. From January to August, he, and all other Tartars ascend by the banks of rivers towards cold and northerly regions, and

in August they begin to return back again.

We paffed down the stream therefore in a bark from the above mentioned station unto his court, from the same place unto a village of Bulgaria the Greater, standing towards the north; it is five days journey. I wonder how the Devil carried the religion of Mohammed thither; for, from Derbent, which is upon the extreme borders of Persia, it is above thirty days journey to pass over the defart, and so ascend to the bank of Etilia into the country of Bulgaria, in all which way there is no city, only certain cottages near unto that place where Etilia falleth into the fea. These Bulgarians are more wicked Mahommedans than any other nations whatever. When I beheld the court of Baatu, I was aftonished at the first fight thereof, for his houses or tents are as though they had been some mighty city stretching out a great way in length, the people ranging up and down about it for the space of some three or four leagues; and even as the people of Ifrael knew every man on one fide the tabernacle to pitch his tent, so every one of them knoweth very well toward which side of the court he ought to place his house when he takes it from off the cart. The court is called therefore in their language Horda, which fignifies the midft, because the governor, or chief captain among them, dwells always in the midst of his people, except only that directly towards the fouth no inferior person places himself, because, towards that region the court gates are set open; but to the right hand and the left hand they place themselves as far as they will, according to the convenience of places, so that they erect not their houses directly opposite against the court. At our arrival we were conducted to a Mohammedan, who provided no victuals for us at all. The day following, we were brought to the court, and Baatu caused a large tent to be erected, because his house or tent could not contain so many men and women as were assembled. Our guide admonished us not to speak till Baatu had given us commandment so to do, and that then we should speak our minds briefly.

Then Baatu demanded whether Your Majesty had sent ambassadors unto him or no? I answered, that Your Majesty had sent messengers to Ken-Khan, and that you would not have fent messengers or letters to Sartach, had not Your Highness been persuaded that they were become Christians, because you sent not unto them out of any sear, but only for congratulation and courtefy fake, in regard that you heard they were converted to Christianity. Then led he us unto his pavilion, and we were charged not to touch the cords of the tent, about which they are as fuspicious as about the threshold There we stood in our habits bare-footed and bare-headed, and were of the house. a great and ftrange spectacle in their eyes. Indeed Friar John Du Plano Carpini had been there before my coming; but because he was the Pope's ambassador, he changed his habit, that he might not be contemned. Then we were brought into the midft of the tent, neither required they of us to do any reverence, by bowing our knees as they used to do of other messengers; we stood therefore before him for the space wherein a a man might have rehearfed the pfalm Miscrere mei Deus, and there was a great silence kept by all.

Baatu himself sat upon a seat long and broad, like a bed gilt all over, with three stairs to ascend, and one of his ladies sat beside him. The men there assembled far down scattering, some on the right hand of the said lady, and some on the left. These places on the one side, which the women filled not up (for there were only the wives of Baatu) were supplied by the men. Also at the very entrance of the tent stood a bench furnished with cosmos, and with stately cups of silver and gold, richly set with precious stones. Baatu beheld us earnestly, and we him, and he seemed to resemble in personage Monsieur John de Beaumont, whose soul resteth in peace; for, like him,

he had a fresh ruddy countenance.

At length he commanded us to speak. Then our guide gave us direction that we should bow our knees and speak; on which I bowed one knee, then he signified that I should kneel on both my knees; I did so, being loth to contend about such circumstances; and again he commanded me to speak. Then I thinking of a prayer unto God, because I kneeled on both my knees, began to pray in these words: "Sir, we beseach the Lord, from whom all good things do proceed, and who hath given you these earthly benefits, that it would please him hereafter to make you partaker of his heavenly blessings, because the former, without shele, are but vain and unprositable and, indeed, surther be it known unto you of a certain, that you shall not obtain the love of steaves, unless you become a Christian; for God saith, Whosever believeth and is baptized. That he saved, but he that believes not shall be condemned."

At this, he modelity finited, but the other. Moals began to glap their hands and to decide use and toy filly interpreter, sof whom especially I should have received condition in time of needs was skinned abouted, and attend out of conductances. Their after filence make, I laid to him, \$11 cares to your long because we heard that he was heard come a Christian, and because to spinite here on the behalf of my Sovering Long the

King of France, and your fon fent me hither unto you; the cause of my coming therefore is best known unto yourself." Then he caused me to rise up, and he enquired Your Majesty's name, my name, and the name of my associate and interpreter, and caused them all to be put down in writing. He demanded also (because he had been informed that you was departed out of your own countries with an army) against whom you waged war? I answered against the Saracens, who had defiled the House of God at Jerusalem. He asked also whether Your Highness had ever before that time sent any

ambassador unto him or no? To you, Sir, said I, never.

Then he caused us to fit down, and gave us of his milk to drink, which they account to be a great favour, especially when any man is permitted to drink cosmos with him in his own house: and as I fat looking down on the ground, he commanded me to lift up my countenance, being defirous yet to take a more diligent view of us, or else perhaps for a kind of superstitious observation; for they esteem it a sign of ill luck, or a prognoffication of evil unto them, when any fits in their presence holding down his head as if he were fad, especially when he leans his cheek or chin upon his hand. Then we departed, and immediately after came our guide to us, and conducting us to our lodging, faid unto me; Your mafter the King, requesteth that you may remain in this kingdom which request Baatu cannot grant, without the knowledge and confent of Mangu-Khan; wherefore you and your interpreter must, of necessity, go to Mangu-Khan; but, nevertheless, your associate and the other man, shall return unto the court of Sartach, and stay there for you till you come back." Then began my interpreter to lament, esteeming himself but a dead man; my associate also protested he would fooner lose his head than withdraw out of my company: I myself faid, that without my affociate I could not go, and that we stood in need of two servants at least, because if one should chance to fall sick we would not be without another.

Upon this, returning unto the court, he told this to Baatu, and Baatu answered, let the two priests and the interpreter go together, but let the clerk return to Sartach; and coming again unto us, he told us so; and when I would have spoken for the clerk to have had him with us, he said, no more words, for Baatu is resolved that so it shall be and therefore I dare not go to the court any more. Goset, the clerk, had the remainder of the alms-money bestowed upon him, twenty-six Yperperas, and no more, ten where-of he kept for himself and the lad, and sixteen he gave unto the interpreter for us; and thus were we parted with tears, he returning unto the court of Sartach, and ourselves

remaining still in the same place.

27. On the eve of the feaft of Affumption our clerk arrived at the court of Sartach, and the next day after, the Neftorian priefts were adorned with our veftments, in the prefence of the faid Sartach. Then we ourselves were conducted unto another host, who was appointed to provide us house-room, victuals, and horses; but because we had not any thing to bestow upon him, he did all things untowardly for us: then we rode on forward with Baatu, descending along by the bank of Etilia, or Volga, for the space of five weeks together. Sometimes my associate was so extremely hungry, that he would tell me in a manner weeping, that it fared with him as though he had never eaten any thing in all his life before. There is a fair or market following the court of Baatu at all times; but it was so far distant from us, that we could not have reconsideration for we were constrained to walking on foot for want of horses. At length certain Hungarans, a sort of clergymen, found as out, and one of them could as versing many longs without book, and was accounted of other Hungarans as priest and was secounted of other Hungarans as priest and

Licie

There was another of them also pretty well instructed in his grammar, for he could underland the meaning of any thing that we spoke, but could not answer us. These Hungarian were a great help to us, giving us colmos to drink and fometimes flesh to car also, who when they requested to have some books of us, and I had not any to give them (for indeed we had none except a Bible and a breviary) it greived me exceedingly; and I find to them tring me fome ink and paper, and I will write for you fo long as we shall remain here; and they did so, and I copied out for them the hours of the blessed Virgin, and the office of the dead. One day there was a Comanian that accompanied us, that faluted us, flying Salve Donline; wondering thereat, and faluting him again, I demanded of him who had taught him that kind of falutation? He faid, that he was baptized in Hungary by our friars, and that of them he learned it: he faid moreover, that Bhata had inquired many things of him concerning us, and that he told him the flate Afterwards I saw Baatu riding with his company, and all his subjects of our order. that were mafters of families riding with him, and in my estimation there were more than five hundred perfons mall.

At length about the end of Holy-rood, there came a cortain rich Moal unto us, whose father was a millanary, which is a great office among them, and told us. I am the man that must conduct you to Mangu-Khan, and we have thither a journey of four months. to travel, and there is fuch extreme cold in those parts, that slones and trees burst afunder: therefere I with you would advise with yourfelves whether you be able to endure it or no; I answered by God's help I hope we shall be able to go through that which Then he faid, if you cannot endure it, I will tortake you by other men can endure. the way, and I answered it were not just dealings for you to do, for we go not thither upon any business of our own, but by reason that we are sent thither by our lord; wherefore fince we are committed to your charge, you ought in no wife to for-Then he faid, all shall be well. He caused us to shew him our garments, and whatfoever he deemed to be less needful for us, he bid us leave behind in the cuftedy of our hoft. On the morrow they brought unto each of us a furred gown made all of ram's skins with the wool still upon them, and breeches of the same, boots according to their fashion, shoes made of felt, and hoods also made of skins and after their manner. The fecond day after Holy-rood we began to fet forward on our journey having three guides to direct us, and we rode continually eastward till the feast of All-Saints throughout all that region, and beyond also, were the people Changles inhabitants, who were descended from the Romans. On the north fide of us we had Bulgaria the Greater, and on the fouth the Caspian sea.

When we had travelled twelve days journey from Etilia we found a mighty river called Jagac, which river issuing out of the north from the land of Pascatar, or of the Hungarians, which all is one, and they are all of them shepherds, not having any cities; and their country bordereth upon Bulgaria the Greater on the west frontier; from the north-east part of the country there is no city at all. Out of the said region of Pascatir proceeded the Hunnes of old, who afterwards were called Hungarians. Next unto it is Bulgaria the Greater. Is idore reporteth concerning the people of this nation, that with swift horses they traversed the impregnable walls and bounds of Alexander, which with the rocks of Caucasus, serve to restrain those barbarous and blood-thirsty people from invading the regions of the south, insomuch as they had tribute paid unto them as far as Egypt, and they wasted all countries even unto France. If so they were more mighty than the Tartars as yet are, and unto them the Blacians and the Bulgarians and the Vandals joined themselves: for out of Bulgaria the Creater

came

came those Bulgarians. As for them who inhabited beyond Danubius, near un of Constantinople, and not far from Palcatir, are called Ilac, which (faving the pronunciation) is all one with black, for the Tartars cannot pronounce the letter B; from whom also descend the people which inhabit the land of Hassan, for they are called Ilac (both these and the other) in the Language of the Russians, and Polonians, and the Dohen are.

The Sclavoni are fooke one language with the Vandals, all v hich confederate with the Hunnes, and now, for the most part, they unite themselves to the Tarters, whom God hath raised up from the utmost parts of the earth, according to that which the Lod saith; "I will provoke them to envy by a people which is no people, and by a foolish nation will I anger them." This prophecy is fulfilled, according to the literal sense thereof, upon all nations, which observe not the law of God. All this which I have written concerning the land of Pascatir, was told me by certain friars, who travelled thither before ever the Tartais came; and, from that time, they were subdued unto their neighbours the Bulgarians, being Saracens; for which reason many of them

proved Saracens alfo.

Other matters concerning these people may be known out of history; for it is manifest, that those provinces beyond Constantinople, which are now called Bulgaria, Valachi, and Sclavonia, were of old provinces belonging to the Greeks; also Hungary was heretofor, called Panonia, and we were riding over the land of Changle from the feast of Holy-rood, until the feast of All-saints, travelling almost every day, according to my account, as far as it is from Paris to Orleans, and fometimes farther, according as we were provided with post-horses; for some days we had change of horses twice or thrice in a day, fometimes we were two or three days together, not finding any people, and then we were constrained not to ride so fast. Of twenty or thirty horses we had always the worst, because we were strangers, for every one took their choice of the best horses before us. They provided me always a strong horse, because I was corpulent and heavy; but whether he went a gentle pace or no, I durft not make any question, neither durst I complain, although he trotted very hard; for every man must here be contented with his lot as it falls. We were often exceedingly troubled, because our horses tired before we could come at any people, and then we were constrained to whip our horics, and to lay our garments on other horics, and fometimes two of us to ride upon one norfe.

29. Of hunger and thirst, cold and weariness, there was no end, for they gave us no flesh-meat, but in the evening. In the morning they used to give us a little drink or fome boiled millet; in the evening they bestowed flesh upon us, as a shoulder and breast of ram's mutton, and every man a quantity of broth to drink. When we had fufficient of the flesh broth we were well refreshed, and it seemed to me most pleasant, and most nourishing drink. Every Saturday I remained fasting until night, without eating or drinking; and when night came I was constrained, to my great grief and forrow, to eat flesh: sometimes we were compelled to eat flesh half sodden, or almost raw, for want of fuel to boil it, ofpecially when we lay in the fields, or were benighted before we came to our journey's end, because we then could not conveniently gather together the dung of horses and oxen, for other fuel we found but seldom, except, perhaps, a few thorns in some places. Upon the banks of some rivers there are woods growing here and there, but they are very rare: in the beginning our guide highly distained us, and it was tedious unto him to conduct such base fellows. Afterwards, when he began to know us fomewhat better, he directed us on our way by the courts of rich Moals, and we were requested to pray for them: wherefore had I

Mola vii.

e . .

14 .

carried a good interpreter with me I should have had opportunities to have done much

good.

The before-mentioned Zingis, who was the first great Khan or Emperor of the Tartars, had four fons, of whom proceeded by natural defcent many children, every one of which doth at this day enjoy great possessions, and they are daily multiplied and difperfed over that huge and vast defart, which is in dimensions like the ocean. Our guide therefore directed us, as we were going on our journey, to many of their habitations; and they marvelled exceedingly, that we would not receive either gold or filver, or precious and costly garments at their hands. They enquired also concerning the great pope, whether he was of so lasting an age as they had heard; for there had gone a report among them, that he was five hundred years old. They enquired also after our countries, whether there was abundance of sheep, oxen, and hories or no? Concerning the ccean, they could not conceive of it, because it was without limits or banks. Upon the eve of the feast of All-Saints we altered our course, which hitherto pointed ealt, because the people were now descended very much south, and we went on our journey by certain mountains directly fouthward for the space of eight days together. In the defart I faw many affes, which they call Colan, being rather mules; these did our guide and his companions chafe very eagerly, though they did but lose their labour, for the beafts were too fwift for them.

Upon the feventh day there appeared to the fouth of us very high mountains; and we entered into a place which was well watered, and fresh as a garden, and found land tilled and manured. The eighth day after the feast of All Saints we arrived at a town of the Saracens named Kenchat, the governor whereof met our guide at the towns end, with ale and cups; for it is their custom, at all towns and villages subject to them, to meet the messengers of Baatu and Mangu-Khan, with meat and drink; at this time of the year they went upon the ice in that country, and before the feast of Saint Michael they had frost in the defart. I enquired the name of this province, but being now in a strange territory, they could not tell me the name thereof, but only the name of a small city in the same province; and that there descended a great river down from the mountains, which watered the whole region, according as the inhabitants would give it paffage, by making divers channels and fluices; neither did the river discharge ittelf into any fea, but was swallowed up by a gulph into the bowels of the earth, and it caused many sens or lakes; also I sawmany vines, and drank of the wine made from them.

30. The day following we came unto another cottage near the mountains, and I enquired what mountains they were, which I understood to be the mountains of Caucafus. which are firetched forth and continued on both fides to the lea from the west unto the eaft; and on the well they are bordering to the Cafpian fea; into which the river Volga discharges its streams. I enquired also of the city of Talas, wherein were certain Germans, fervants unto one Buri, of whom Frize Andrew makes mention, concerning whom also Lenguired very dilipently in the courts of Sarrach and Baatu. I could get no intelligence of them, but only that their loss and mafter Ban was put to death upon the occasion followings. This Ban was not fettled in good and fertile paltures; and upon, a certain day being drunk, he speke thus to lus men; "thu por I of the Rock promoted of Augro-Commettowell professor (for paleon by way represent a party related to the professor of th

excused himself by saying that he was drunk at the time. How durst you, said Baatu, once name me in thy drunkennes? and having said this, he caused his head to be chopped off. Concerning the aforesaid Germans, I could not learn any thing till I came to the court of Mangu-Khan, and there I was informed that Mangu-Khan had removed them out of the jurisdiction of Baatu for the space of a month's journey from Talas eastward to a certain village called Bolac, where they are set to dig gold, and to make armour, so that I could neither go nor come by them. I passed very near the said city in going, that is, within three days journey, but I was ignorant that I did so, neither could I have turned out of the way, if I had known so much. From the aforesaid cottage, we went directly eastward by the mountains, and from that time we travelled among the people of Mangu-Khan, who in all places sang and danced before our guide, because he was the messenger of Baatu; for this courtesy they do to each other, namely, the people of Mangu-Khan receiving the messengers of Baatu, and so likewise the people of Baatu entertaining the people of Mangu-Khan, notwithstanding the people of Baatu are more surely, and shew not so much courtesy to the subjects of Mangu-Khan as in their turn

A few days after we entered upon those mountains where the Cara-Cathayans were wont to inhabit, and there we found a mighty river, infomuch that we were constrained to embark ourselves, and to sail over it. Afterwards we came into a valley, where I saw a castle destroyed, the walls whereof were only of mud, and in that place the ground was tilled also; and there we found a certain village named Equius, wherein were Mohammedans speaking the Persian language, but they dwelt a great way off Persia. The day following, having passed over the great mountains southward, we entered into a most beautiful plain, having high mountains on our right hand, and on the left hand of us a certain sea or lake, fifteen days journey in circuit. All the plain is most commodiously watered by trenches distilling from the said mountains; all which sail into the lake in summer time. We returned by the north side of the lake, and there were great mountains on that side also. Upon this plain there used to be formerly many villages; but for the most part they were all walted in regard of fertile passures, that

the Tartars might feed their cattle there.

they do to them.

We found one great city there named Cailac, which was a market, and great numbers of merchants frequented it. In this city we remained fifteen days, flaving for a certain feribe or fecretary of Baatu, who ought to have accompanied one guide for the dispatching of certain affairs in the court of Mangu. All this country was wont to be called Organum, and the people thereof had their proper language, and their peculiar kind of writing; but it was now inhabited by the people called Contomans. The Nestorians likewise in those parts use the very same kind of language and writing; they are called Organa, because they were wont to be most skilled in playing upon organs, as was reported into me. Here did I first see worthippers of idols; concerning whom, let me observe to Your Magsly, that there be many less of there in these called countries.

11. The first ferr of their adolaters are called Jugures, whose country before apparathe Land of Organian, within the first mountains entward and in ultimete dries Netcours intake, and in ultimete dries to the Species intake, and insultance of the Species in their areas of the Location of your Land had fines high countries are a secret may five of them, and select cheir Lachile hiperthicus. In other first I bounded may fraction secrets entired with the open may reach a white proposed turn to be Charlesia to the actives of their actives of their actives of the actives of the active of

I thereupon conjectured, that they were indeed Christians, but that for lack of struction they omitted the aforesaid ceremony; for I saw there behind a certain c which was unto them instead of an altar, whereon they set candles and oblations image having wings like unto the image of St. Michael, and other images also, hol their singers as if they would bless somebody. That evening I could not find any t else, for the Saracens only invite men thither, but will not have them speak of religion, and therefore when I required of the Saracens concerning such cereino

they were offended thereat.

On the next day after was the new moon, and the Saracens feaft of Passover, changing my inn or lodging the same day, I took my abode near another idol tem for the citizens of the said city of Cailac courteously invite, and lovingly entertain messengers, every man of them according to his ability and station; and entering the temple, I found the priests of the said idols there; for always at the new methey set open their temples, and the priests adorn themselves, and offer up the peoplications of bread and fruits. First, therefore, I will describe to you those rites ceremonies which are common unto all their idol temples, and then the superstition the aforesaid Jugures, which are, as it were, a sect distinguished from the rest. all of them worship towards the north, clapping their hands together, and prostremented the Nestorians in those parts will in no case join their hands together in time of prayer, but they pray, displaying their hands before their breasts.

They extend their temples in length east and west, and on the north side they a chamber in the manner of a vestry, for themselves to go into, or sometimes it is o wise. If it be a four-square temple, in the midst of the temple towards the north thereof, they take in one chamber in that place where the choir should stand, and i said chamber they place a chest long and broad like a table, and behind the said towards the south stands their principal idol, which I saw at Caracarum, and it w big as the idol of St. Christopher; also a certain Nestorian priest, who had be Cathay, said, that in that country there is an idol of such bigness, that it may be two days journey before a man came at it; and so they place other idols round the principal idol, being all of them sinely gilt over with pure gold, and upon chest, which is in a manner a table, they set candles and obtations. The doors of temple are always open towards the south, contrary to the custom of Saracens: have also great bells like us and that is the cause, as I think, why she Christians east will in no case use great bells, notwithstanding they are common among the sans and Grecius of Galaria.

12. All their prieffs had their heads and beards (haven quite over, and they are in faffron coloured garments; and being once flaven, they lead an unmarried life that time forward, and they live an function of two himdred of them together in coliter. Upon these cays, when they enter into their temples, they place two forms therein; and to fixing upon the laid forms like suging men in a close, on a them directly over excitil the other, they have certain books in their fairth contains their law diversity flows upon the forms, and their deads are that for the fairth and th

these words, Ou mam bactavi; "God, thou knowest," as one of them expounded it unto me. And so often do they expect a reward at God's hands as they pronounce these words in remembrance of God.

Round about their temple they always make a fair court like a church-yard, which they environ with a good wall; and upon the fouth part thereof, they build a great portico, wherein they fit and confer together: and upon the top of the faid portico they pitch a long pole upright, exalting it if they can, above all the buildings in the town; and by the view of the lame pole, people may know that there stands a temple of the idols. These rites and ceremonies are common to all idolaters in those parts. Once I made a visit to this idol-temple, and found certain priests sitting in the outward portico, and those which I saw feemed, by their shaven beards, as if they had been our countrymen. They were certain ornaments upon their heads like mitres, made of paper. The priefts of the Jugures above mentioned use those ornaments wherever they go. They go always in their faffron-coloured jackets, which are very first laced or buttoned, from the bosom downwards, after the French fashion; and they have a cloak upon their left shoulder descending under their right arm, like a deacon carrying the collector's box in time of Lent. Their letters or writings, the Tartars use as well as they. They begin to write at the top of their paper, drawing their lines right down, and fo they read and multiply their lines from the left hand to the right. They ale certain little papers and uncouth characters in their magical practices, and their temples are full of fuch thort ferolls hanging round about them.

Mangu-Khan hath fent letters unto Your Majesty, written in the language of the Moals or Tartars, but in the characters of these Jugures; they but a the dead, according to the ancient cultom, and lay up their ashes on the top of a pyramid. After I had fat a while with these priests, and entered into their temple, and seen many of their images both great and small, I demanded of them, What they believed concerning God? They answered, "We believe that there is only one God." Whether do you believe that he is a spirit, or some bodily substance?" They laid, "We believe that he is a spirit." "Then," said I, "do you believe that God ever took man's nature upon him ?" They answered, "No." Again, I said, "Since you believe that he is a spirit, to what end do you make to many bodily images to represent him? Since also you believe that he was not made in it, why do you rather represent him by the image of a man than of any other creature?". Then they answered, "We hame not these images to represent God; but when any rich man among thus, or his fon, or his wife, or any of his friends dieth, he cauleth the image of the dead perfor to be made, and to be placed here, and we, in remembrance of him, do reverence thereuntor. Treplied them,

Do you there things only for friendling and our of flattery to men? "—" No." and they, "but out of regard to their memories?"

Then they demanded of me, in footmand chidam "Aviliere is your God?" To whom I ardwered, "Where is your ford?" I bey find a his arresponder. —"I keep!" Land I, his is not in every purpose out to be by mixing and capting the whole bedy and be recommended in the extrapolation of the bedy and be been and suitable and the extrapolation of the bedy and be been and yet not in another and another and wildow if all. "I are some any defending the bare and suitable about the form of the control of the extrapolation of the extrapolation of the extrapolation of the extrapolation of the beautiful to be an extrapolation of the beautiful to be a subject to be a

layers, who are their priests; concerning whom I will give Your Highness an account

more at large hereafter.

These soothsayers or diviners always attend upon the court of Mangu, and of other great personages; as for the poorer or meaner fort, they have them not, except such only as are of the kindred of Zingis; and when they are to remove or take any journey, the said diviners go before them, as the cloudy pillar went before the children of Israel, and they appoint ground where the tents must be pitched; and, first of all, they take down their own houses, and after them the whole court does the like. Also on their sessival days, or new moons, they take out these images, and place them in order circle-wise within the house; then come the Moals or Tartais into the same house, bowing themselves belone the images, and worship them. It is not lawful for any stranger to enter the house. And, on a certain time, I myself would have gone in, but was very rudely turned out, and obliged to remove, so that I never after attempted to pry any further into this matter.

32. But it is my opinion, that these Jugures, who live among the Christians and Saracens, by frequent disputes with them, have been brought to believe that there is but one God; and they dwell in certain cities, a lich were brought into subjection to Zingis-Khan, and he give his daughter in mannage unto their King: also the city of Caracarum itself is in a manner within their territories; and the whole country of King or Presbyter John, and of his brother Unc, heth near to their dominions, except that they inhabit in certain pastures northward, and the said Jugures between the mountains towards the south.

The Moals received their letters or characters from them; and they are the Tartars' principal feribes, and all the Neftorians almost can read their letters. Next unto them, between the aforesaid mountains eastward, inhabites the nation Tangut, who are most valiant people, and took Zingis in battle; but after the conclusion of a peace he was set at liberty by them, and aftewards subdued them. These people of Tangut have oxen of great strength, with tails like horses, and with long, sharp hair upon the backs and belies. Their legs are larger than those of other oxen, and they are exceeding sterce; these oxen draw the houses of the Moals; and then horn are stender, long, straight, and very sharp pointed, insomuch that the express are obliged to cut off the ends of them. A cow will not suffer hertelf to be coupled to one or them, unless they whiltle or sing unto her. They have also the qualities of a bustalo; so af they see a person clothed in red, they run upon him immediately to kill him.

Next to this nation are the people of Tibet; men, who had fermerly a custom to cat the bodies of their deccased parents, that they might make no other sepulchre for them than their own bowels. But of late they have left off this custom, because thereby they became odious to all other nations; notwithstanding which, at this day, they make fine cups of the sculls of their parents, to this end, that when they diak out of them, they may, in the midst of all their jollities and delights, call their dead parents to remembrance: this was told me by one that saw it. The said people of Tibet have vast plenty of gold in their land; whosoever therefore wants gold digs till he hath found some, and then taking so much thereof as will serve his turn, he lays up the remainder in the earth, because, if he should put it into his chest, or storehouse, he is of opinion that God would withhold from him all other gold.

I saw some of these people, being very deformed creatures. In Tangut I saw lusty, tall men, but brown and swarthy in colour. The Jugures are of a middle stature, like Frenchmen. The language of the Jugures is the original and root of the Turkish and Comanian languages. Next to Tibet are the people of Langa and Solanga, whose are.

baffadors,

bailidous I law in the 'La tars' court; and they brought ten great carts with them, every one of which was around by fix oxen. They are little brown men, like Spaniards. I hefe people wear jackets, like the upper vestment of a deacon, faving that the sleeves are somewhat streighter, and they have mitres upon their heads like bishops; but the lorepare of their mitre is not so hollow within as the hinder part, neither is it sharp-pointed, i. ii cornered at the top; but there hang down certain fquare laps, compacted of a I and of straw, which is made rough through extreme heat, and is so trimmed that it gluterach in the fun beams like a glass, or a helmer well burnished. On their brows they have long bands of the same manufacture sastened to their mitres, which hover in the wind is it two long horns grew out of their heads; and when the wind toffes them up and down too much, they tie them over the midst of their mitre, from one temple to another, and fo they lie across their heads. I heir principal ambaffador to the Tartais' cour, in a table of elephant's teeth about him, of a cubit in length, and a handful in breadth, very smooth; and whensover he spoke to the Emperor himself, or to any other grant personage, he always looked on that table as if he had found therein those things which he spake; neither did he cast his eyes to the right hand or to the left of those with whom he talked.

Beyond them, as I was certainly informed, there are other people called Muc, having villages, but no one man of them appropriates any cattle to himself, notwithstanding there are many flocks and droves of cattle in their country, and nobody appointed to keep them; but when any of them want a beaft, he goes upon a hill, and there makes a shout, and all the cattle which are within hearing of the noise come flocking about him, and fuffer themselves to be taken as if they were tame. And when any messenger, or stranger cometh into their country, they shut him up in a house, allowing him things necessary, till his business be dispatched; for if any stranger should travel through that country, the cattle would fly away at the very fcent of him, and so become wild. Beyond Muc is the grand Cathaya, the inhabitants of which, as I suppose, were of old called Seres, for from them are brought most excellent stuffs and silk; and this people are called Seres of a certain town in the same country. I was credibly informed, that in the said country there is a town having walls of filver, and bulwarks of gold. There are many provinces in that land, the greater part of which are not as yet lubdued by the Tartars, and the fea lieth between them and India. These Cathayans are men of little stature, fpeaking much through the nofe.

This is a general remark, that all the people of the east have small eyes. They are excellent workmen in every art, and their physicians are well skilled in the virtue of herbs, and judge very exactly of the pulse, but know not any thing concerning urine. Some of them I saw, for there are many at Caracarum, and they always bring up their children in the same trade of their father, and therefore they pay so much tribute; for they give the Moals, or Moguls, every day, one thousand five hundred Cassinos, or Jascots (Jascot is a piece of silver weighing ten marks); that is to say, every day sifty thousands marks, besides silks, and a certain quantity of victuals, and other services which they do them. All these nations are between the mountains of Cancasus; on the north side of those mountains to the east sea, on the south part of Scythia, which the shepherds of Moal inhabit, all are tributary unto them, and all given to idolatry, and report many sables of a multitude of gods, and certain deisied men, and make a pedigree of

their gods, as our poets do.

The Nessorians are intermixed with them as strangers, so are the Saracens as far as Cathay. The Nestorians inhabit sisteen cities of Cathay, and have a bishop there in a city called Segin; but if you proceed further, they are more idolaters; the priess

of the idols of those nations have all broad yellow hoods. There are also among them certain hermits, living in the woods and mountains, of an austere and strange life. The Nestorians there know nothing, for they say their service, and have holy books in the Syrian tongue, which they know not; so that they sing as our monks do, who are ignorant of grammar, and hence it cometh that they are wholly corrupted. They are great usurers and drunkards, and some of them also, who live among the Tartars, have

many wives in the same manner as the Tartars have.

When they enter into the church they wash their lower parts, as the Saracens do; they eat no sless on Friday, and hold their feasts on that day, after the manner of the Saracens. The Bishops come seldom into the countries, perhaps once in sifty years; then they cause all their little children to be made priests, even in the cradle, so that all their men almost are priests, and, after this, they marry wives, which is directly against the decrees of the Fathers. They are also bigamists, for their priest themselves, when their wife is dead, marry another. They are all Simonists, for they give no holy thing freely. They are very careful of their wives and children, wherefore they apply themselves to gain, and not to the spreading of the faith; whence it comes to pass, while some of them bring up the nobility's children of Moal, although they teach them the gospel, and the articles of the faith, yet by their evil life and covetousness, they drive them further from Christianity, because the life of the Moals, or Moguls, and Tuinians, who are downright idolaters, is more just and upright than their's.

34. We departed from the city Cailac on St. Andrew's day, and within three leagues found a village of Nestorians. Entering into the church, we sang Salve Regina, &c. with joy, because it was long since we had seen a church. Departing thence, in three days we came to the entrance of that province, not far from the sea before mentioned, which seemed to us as tempessuous as the ocean, and therein we saw a great island. My companions drew near the shore, and wet a linen cloth therein, to taste the water, which was somewhat salt, but however might be drank. There was a valley over against it, between the great mountains south and east, and between the hills was another salt lake or sea; and there ran a river through that valley from the other sea into this, and there came such a continual wind through the valley, that men pass along the road with

great danger, fearing the wind should carry them into the sea.

Therefore we left the valley, and went towards the north, to the hilly countries, covered with deep fnow, which then lay upon the earth, so that upon St. Nicholas's day we began to hasten our journey, and because we found no people but the Jani, or men appointed from day's journey to day's journey to conduct the messengers; for in many places in the hilly countries the way is narrow, and there are but few fields, so that between day and night we meet with two Jani, and therefore of two days journey we made one, and travelled more by night than by day: it was extremely cold there, so that they lent us their goat-skins, turning the hair outward. On the 7th of December, in the evening, we passed by a certain place, between very terrible rocks, and our guide sent unto me, intreating me to pray to God, which I did. Then we sang with loud voice, Grede in Deum, Acc, and by the grace of God we passed through unhart.

After that, they began to intreat me that I would write them papers, and I fold them I would teach them words which they flould carry in their hearts, whereby their fours and bodies flould be laved; but when I fourth to teach them. I wanted an interpreter, yet i wrote them the creed and Lord's Prayer, faying. * Here is written whatfoever a man bught to believe concerning God; here also is that prayer wherein we beg of God whatfoever is resolved for a man; now therefore believe firmly what is written here, although you cannot underland it and aff God to do that for you which

is contained in this written prayer, because with his own mouth he taught it his friends, and I hope he will save you." I could not do anything else, because it was dangerous to speak by such an interpreter, nay, almost impossible, because he was ignorant.

35. After this, we entered into the country where the court of Kon Khan was, which was formerly called the country of Naymans, who were the peculiar subjects of Prestre, that is, Presbyter John, but I saw not that court till my return; yet here I shall briesly mention what befel his son and wives. Kon Khan being dead, Baatu desired that Mangu should be Khan, but I could not well understand in what manner happened the death of Khan. Friar Andrew said, that he died by a certain medicine given him, and it was suspected that Baatu caused it to be administered: yet I heard it otherwise, for he summoned Baatu to come and do him homage, and Baatu took his journey with great pomp and splendor, but he and his servants were much asraid, and he sent one of his brothers before, called Stichin, who, when he came to Kon, and ought to have presented him with his cup, high words arose between them, insomuch that they slew one another. The widow of Stichin kept us a whole day, that we might go to her house, and bless her, or pray for her.

Kon being dead, Mangu was chosen by the consent of Baatu, and was then chosen while Friar Andrew was there. Kon had among others a brother called Siremon, who, by the counsel of Kon's wife and her vasials, went with a great train towards Mangu, as if he went to do him homage, and yet in reality he purposed to kill him, and destroy his whole court; and when he was near Mangu, and within one or two days journey, one of his waggons happened to break in the way; while the waggoner endeavoured to mend it, came one of the servants of Mangu who helped him; he was so inquisitive of their journey, that the waggoner revealed unto him what Siremon purposed to do. Then turning out of the way, as if he lightly regarded it, he went unto the herd of horses, and took the best horse he could, and, posting night and day, came

speedily to the court of Mangu, reporting what he had heard.

The plot being thus discovered, Mangu quickly assembled all his forces, caused four lines of armed men to encompass his court, that none might go in or out, and sent the rest against Siremon, who took him and brought him to the court with all his followers, who, when Mangu laid the matter to his charge, confessed it immediately. Then he and his eldest son Kon Khan were slain, and three hundred of the nobility of the Tartars with them. The noble women also were sent for, who were all beaten with burning strebrands, to make them confess, and, having confessed, were put to death. His youngest son Kon, who was not capable of entering into the conspiracy, was lest alive, and his father's palace was lest him with all belonging unto it, and we passed by it in our return, nor dorst my guide turn in unto it, either going or coming: "For the lady of the nations satisfier in heaviness, and there was none to comfort her."

At length, on St. Stephen's day, we entered into a great plan, where there was not so much as a Molechill, and the next day, on the fealt of St. John the Evangehit, we came unto the palace of that great Lord; but when we were near it, that is to say, within five days journey, our boil where we lav would have directed us much about, so that we should have travelled more than fitteen days, and this was the reason, as I understood, that we might go by Onam Kerule, their proper country, where the court of sellinghis Khanas. Others said, that he day i for this purpose that he might make the way longer, and shight shew their power the more; for so they are wont in deal or in mer coming from crantices got subject to there; and our gode obtained with events.

difficulty, that we might go the right way, for they held us debating this from the

morning till three o'clock.

By the way also the secretary told me, that it was contained in the letters which Baatu sent to Mangu-Khan, that we required an army and aid of Sartach against the Saracens. Then I began to wonder much, and to be greatly troubled, for I knew the contents of the letters, and that no mention of any army was made therein, only you advised him to be a friend to all Christians, and that he should exalt the cross; and bear enmity to all the enemies of the cross; and because also the interpreters were Armenians of the greater Armenia, who greatly hated the Saracens, lest perhaps they had interpreted any thing in evil part, to make the Saracens more odious and hateful at their pleasure. I therefore held my peace, not speaking a word for them or against them; for I feared to gainsay the words of Baatu, lest I should incur some false accusation, and

without reasonable cause.

We came therefore the day after into the faid court, our guide had a great house appointed him, and we three a little cottage, wherein we could fearce lay our baggage, make our beds, and have a little fire. Many came to visit our guide and brought him drink made of rice, in long strait-mouthed bottles, in which I could discern no difference from the best wine, except that it had not the scent of wine. We were called soon after. and most strictly examined upon what business we came; "I answered, that we having heard Sartach was a Christian, we came therefore unto him. The King our master sent him a packet by us, he sent us to Baatu his father, and his father sent us hither, he should have written the cause." Whereupon they demanded, whether we would make peace with them? I answered, "he had sent letters unto Sartach as a Christian, and if he had known he were not a Christian, he would never have fent him letters. That as to a treaty of peace, there was no ground for it, fince he has done you no wrong; if he had not done any, why should you war upon him or his people? He willingly (as a just man) would reform himself and desire peace. If ye without cause will make war with him or his nation, we hope that God (who is just) will help them." At this they wondered, always repeating, why came ye not to make peace. For they are now to puffed up with pride, that they think the whole world should defire to make peace with them: whereas, if I might be fuffered, I would preach war against them to the utmost of my power. But I would not plainly deliver the caufe of my coming, left I should speak any thing against that which Baatu commanded; I told them therefore the sole cause of my coming thither was, because he sent me.

The day following we were brought to the court, and I thought I could go barefoot, as I slid meant country, and therefore I laid afide my those; but fuch as come to the court, salight fait from the house, where the great Khan is, as it were a bow that off, where the horses remain, and a boy to keep them. When we alighted there, and our ruide went with as to the house, a Hungarian boy was present there, who knew our order, and when the aren came about us, and thared at us as moniters, especially because we seek barefooted, and damanded whether we did not need our feet because they happened we thought by point have full them, that Hungarian told them the resion, the one then the realism to be taken the following them the relies and procure of our order. Then the inest ferrelant who was in the ten and the country pair of the country and advice almost all a done came to us the realism each came to be a supported as an area of the country and advice almost all a done came to use the realism of the country of the country and advice almost all a done came to use the country of the country of

en 1902 en 1907 en 1907 de la companya de la compa La companya de la co crois, at which I rejoiced much, supposing there was some Christian there, and I went in boldly, and found an altar there, very well furnished; for there, in a golden cloth, were the images of Christ, the Blessed Virgin, and St. John Baptist, and two Angels; the lineaments of their bodies and garments distinguished with pearl, and a great silver cross with precious stones in the corners, and the middle thereof, and many other embroiderings, and a lamp burning with oil before the altar, having eight lights; and there fat an Armenian monk, somewhat black and lean, clad with a rough hairy coat to the mid-leg having upon it a black cloak of bristles, surred with spotted skins, girt with fron under his hair-cloth.

Presently after we entered in, before we saluted the monk, falling flat upon the ground. we lang Ave Regina Calorum, &c. and he rifing, prayed with us; then faluting him, we fat by him, having a little fire before him in a pan; therefore we told him the cause of our coming, and he began to comfort us, faying, that we should boldly speak, because we were the messengers of God, who is greater than all men. Afterwards he told us of his coming, faying, he came thither a month before us, and that he was a hermit of the territories of Jerusalem, and that the Lord appeared unto him three times. commanding him to go to the Prince of the Tartars; and when he deferred to go the third time. God threatened him, and overthrew him upon the ground, faying, he should die, unless he went; and that he told Mangu-Khan that if he would become a Christian, the whole world should be obedient to him. Then I answered. "Brother, I will willingly perfuade him to become a Christian; I will promise him also that the French and the Pope will much rejoice thereat, and account him a brother and a friend; but I will never promife that they shall become his fervants, and pay him tribute, as these other nations, because in so doing, I should speak against my conscience." On which he held his peace. We afterwards went together to our lodging, which I found a cold habitation.

We had eaten nothing that day, so we boiled a little fielh and millet, of which we made broth for our suppers. Our guide and his companions were drunk at the court, and little care was had of us. At that time the messengers of Vestage were there, hard by us, which we knew not, and the men of the court made us rise in great halfe at the dawning of the day. I went barefoot with them a little way into the house of the faid messengers, and they demanded of them whether they knew us. Then the Grecian foldier calling our order, and my companion to remembrance, because he had seen him in the court of Vestage, with friar Thomas, our number, and all his sellows, gave great testimony of us. Then they demanded whether we had peace or war with Vestage We have, laid I, neither war nor peace; and they demanded how that might be? Because, and I, their countries are far from each other, and meddle not together. Then the ambauador of Vestage laid we had peace, giving me a cantion; so I held my tongue. I had my toos ends were to trezen, that I could no longer contraction; for in these countries the cold is extreme sharp, and from the time when it beginness to reeze, it never ceases still Max, have in the month of Mayat freeze every morning but it the day time of the west surfaces with every said. And if there were any such there is most in a trong of the line; but my winter it never chars, but the common of the continues with every said. And if there were any such there is most income the line is not in the continues with every said. And if there were any such there is no a first time where we were there a but trades in April, and then winds the proof of the contributes of jump greatures.

The sum of the latest the second control of the second control of

court) ram skin coats, and breeches of the same, and shoes, which my companion and interpreter received; but I thought I had no need of them, because I supposed my furred garment, which I brought from Baatu, was sufficient for me. On the 5th of January we were brought to the court, and there came Nestorian priests to me, whom I knew not to be Christians, demanding which way we worshipped? I faid, to the east, and this they demanded, because we had shaven our beards, by the advice of our guide, that we might appear before the Khan according to the fashion of our country, where upon they thought we had been Tuinians, or idolaters: they made us also expound out of the bible. Then they demanded what reverence we would pay to the Khan, whether after our own fashion or theirs? To whom I made answer, "We are priests dedicated to the fervice of God; noblemen in our country will not fuffer priests to bow their knees before them for the honour of God: nevertheless we will humble ourselves to all men for the Lord's fake. We came from a far country, if ye pleafe we will first fing praises unto God who hath brought us fafe hither from afar, and afterwards we will do whatfoever pleafeth this Lord, with this exception, that he command us nothing which may be against the worship and honour of God." Then they entering into the house, delivered what we had faid; for their Lord was contented, and they fet us before the entrance of house, lifting up the felt which hung before the gate, and because it was Christmas, we began to fing, A Solis ortus cardine, &c.

38. When we had lung this hymn, they fearched our bosoms to see we had no knives about us. They made our interpreter ungird himself, and leave his girdle and his knife without, in the custody of a door-keeper. When we came in, there stood in the entrance a bench with cosmos, by which they made our interpreter stand, and caused us to sit upon a form before the ladies; the whole house was hung with cloth of gold, and on a hearth, in the middle of the house, there was a fire made of thorns and wormwood roots (which grew there very big) and ox dung. The Khan sat upon a bed covered with a spotted skin or fur, bright and shining like a seal's skin; he was a flat nosed man, of a middle stature, about the age of five and forty, and a little pretty young woman his wife sat by him, and one of his daughters, whose name was Cerina, a hard-savoured young woman, with other children that were younger, sat next unto them upon a bed; for that was the house of a certain Christian lady he loved, by whom he had this daughter, and he married the young wife afterwards; yet the daughter was mistress of all

that court which was her mother's.

Then he made them ask us what we would drink, whether wine or caracina, that is, drink made of rice, or caracofmus, that is, clear cow's milk, or ball, that is, mead made of honey; for they use these four kinds of liquor in the winter? Then I answered, Sir, we are not men who take pleasure in drink, what pleaseth you shall content us. Then he commanded drink of rice to be given us, clear and good as white wine, whereof I tasted a little for reverence of him, and our interpreter; to our misfortune, stood by the butters, who gave him much drink, so that he was quickly drank; then the Khan caused saleons and other birds to be brought unto him, which he took upon his fift, and sooked upon them, and after a long time he commanded us to speak. We were then to bow the knee; and he had his interpreter; a certain Nestorian; whom I knew not to be a Christian; and we had our interpreter; such a one as he was who by this time was drink. Then I said, "We nirst give make and praise to God, who had brought is from so reas power upon early; and we beserve him? Lord, he write cannot had given so reas power upon early; and we beserve him? Lord, he write cannot have that they must the that she would grant him a long and properous in the sites they that the tree may not the star second a star of the would be and properous in the star that they draw the star second as the star that meeting a star of the would grant him a long and properous in the star of the star of the would grant him a long and properous in the star of the

was a Christian, and the Christians who heard it, but especially the French King, rejoiced; wherefore we come unto him, and our Lord and King hath sent him letters by us, wherein were words of peace, and amongst other things he testifieth of us whose servants we are, and entreated him to suffer us to abide in his country; for it is our office to teach men to live according to the law of God, and he sent us to Baatu his father, and Baatu hath sent us hither unto you; you are they to whom God hath given great dominions upon earth, we therefore intreat Your Highness to give us leave to continue in your country to do the service of God for you, your wives, and children. We have neither gold, nor silver, nor precious stones to present unto you, but ourselves, whom we present to serve and pray unto God for you: at least give us leave to continue while the cold be past. My companion is so weak, that he cannot by any means travel on horseback without hazard of his life;" for my companion begged me and adjured me to crave leave to stay. Then he began to answer, even as the sun spreads his beams every where, so our power and Baatu's shews lifels every where, so that we had no need

of your filver and gold.

Hitherto I understood my interpreter, but farther I could not perceive any perfect. fentence, whereby I eafily found he was drunk, and Mangu-Khan himfelf was drunk too, at least I thought so; yet he was displeased that we came first to Sartach, before we came to him. Then feeing the defect of my interpreter, I held my peace, this only excepted; I entreated his Highness not to be displeased for that which I spake of gold and filver, because I spoke it, not that he had need of such things, or defired them, but because we would willingly honour him with spiritual things. Then he made us rife, and fit down again, and after fome few words, and paying our duty to him, we went out, and his fecretaries, and that interpreter of his (who had the bringing up of one of his daughters) went with us. They began to be very inquilitive concerning the kingdom of France, whether there were many rams, oxen, and horses there, as it prefently they should enter and take all? And oftentimes I was fain to bridle myself much in dissembling anger and indignation. I answered, however, there are many good things there which ye shall fee if you happen to come thither. Then they appointed us one who should have care of us, and we went to the monk; and when we came out. again ready to go to our lodging, the interpreter came to us, faying Mangu-Khan hath compation on you, and gives you two months to flay, then the extremy cold will be pail; and he offers to fend you ten days journey, where is a good city called Caracarum; if you will go thither he will cause necessary things to be given you, but if ye will stay here ye may have necessaries; yet it will be a froublesome thing for you to follow the

I faid the Lord preferve Mangu-Khan, and grant him a good and long life. We have found this monk here, who we think to be a holy man, and that by the good pleafure of God he came into these parts, wherefore we would willing a flay with him, and we will pray together for the life of Khan. Then he held his peace, and denated, and we went to our house, which we found very cold, and without any are, as ret failing, though it was tight. Then he to whom we were recommended, previded as tight and a little meat. Our guide was now to return to Basic who detreed a earper of activity we let in the court of Basic, which we give him, and he peaceable departed; lot killing our cipactured, and contesting his fault if he inflered us to encure manner and third upon the war, we predoner him, or wire partees of fain and his whole kinds. It we list cover their one will be an and a suit his whole kinds.

en particular de la comparte de la c La particular de la comparte del comparte del comparte de la comparte del la comparte de la comparte del la comparte de la comparte del la comparte a Christian of whom I spoke before, who told us of her strange poverty which she endured before she came to the court; but now she was well to sive, for she had a young husband, a Rutenian (by whom she had three very fair children) who was skilful in building, which amongst them is an excellent art. She told us farther, that at Caracarum there was a certain goldsmith called William, born at Paris, whose surname was Bouchier, and his father's name Lawrence Bouchier, and she believed he hath a brother yet living upon the great bridge, called Roger Bouchier; and she told me that he hath a certain young man which he brought up, whom he accounted as his son, who was an excellent interpreter; but Mangu-Khan delivered to the aforesaid goldsmith three hundred jaseots, that is, three thousand marks, and sifty workmen, to make a piece of work, so that she feared he could not send his son to me; for she heard some say in that court, the men which came from your country are good men, and Mangu-Khan would willingly speak unto them, but their interpreter is good for nothing; therefore she was careful for an interpreter.

Then I wrote unto the goldfinith, certifying him of my coming hither, and requesting him, that if he could he would send me his son, and he wrote me answer, that he could not that moon; but the next his work should be perfected, and then he would send him unto me. We stayed therefore with other ambassadors and it is otherwise with ambassadors in Baatu's court than in the court of Mangu-Khan; for in the court of Baatu there is one Jani on the east side, who receives all such as come from the west, and so of other countries of the world; but in the court of Mangu they are all together under one Jani, and they may see and visit one another. In Baatu's court they know not one another, or whether a man be a messenger or no, because they know not one another's lodging, nor see one another, but in the court; and when one is called by accident, another is not, for they go not to court unless they be sent for. We sound there a certain Christian in Damascus, who said he came in the behalf of the Soldan of Mons Re-

galis, and of Crax, who defired to become friend and tributary to the Tartars.

40. The year before I came thither there was a certain clerk of Acon or Ptolemais, in Syria, who called himself Raimund, but his true name was Theodolus, and he took his journey from Cyprus with friar Andrew, and went with him into Persia, and procured certain instruments of Amoricus, then in Persia, who remained after friar Andrew. Friar Andrew returning, he wene forward with his instruments, and came to Mangu-Khan, and being demanded upon what account he came, said, "That he was with a certain holy bishop, to whom the Lord sent letters from heaven, written in golden characters, and commanded him to send them to the Emperor of the Tartars, because he should be Lord of the whole earth, and that he should persuade men to make peace with him." Then Mangu said anto him, it thou hadst brought these letters which come from heaven, and the letters of thy Lord shou hadst been welcome. He answered, that he brought letters, but they were with other things of his on a wild and pampered residing which escaping, fied from him through the woods and mountains, to that he had helf all.

 messengers to that King, and that Bishop? He told him he would, and also to the

Pope.

Then Mangu caused an exceeding strong bow to be made, which two men could scarce bend, and two arrows of silver, whose heads were full of holes, which sung, when they are shot, like a whistle; and he chose a Moal, whom he should send with the said Theodolus, and to whom he said, "Thou shalt go to the King of the Franks, to whom this man shall bring thee, and present him with these on my behalf; and if he will have peace with us, we will win the country from the Saracens, even home to him, and will grant him the rest of the country unto the west; if otherwise, bring back the bow and arrows unto us, and tell him we shoot far and strongly with such bows." Then he caused Theodolus to go forth, whose interpreter Master William's son was, and in his hearing he said unto the Moal, "Thou shalt go with this man, mark well the ways, the countries, and their castles, men and mountains." For this reason the young man blamed Theodolus, saying he had done ill in conducting the messengers of the Tartars with him, for they went for no other cause but to spy.

He answered, that he would set them on the sea, that they should not know which way to return. Mangu gave also unto Moal his golden bull or tablet, to wit, a plate of gold of an hand breadth, and half a cubit long, wherein his orders are engraven; whose carrieth that may command what he will and it is done without delay. So then Theodolus came to Vestacius, determining to pass over to the Pope, that he might deceive the Pope, as he had deceived Mangu-Khan. Then Vestacius demanded of him, whether he had letters to the Pope, because he was a messenger, and should conduct the messengers of the Tartars; but not being able to shew the setters, he took him and spoiled him of all that he had got, and cast him in prison, and the Moal sell-

fick and died there.

But Veilacius sent back the golden tablet to Mangu-Khan by the servants of the Moal, whom I met at Alfron in the entrance into Turkey, who told me what had happened to Theodolus. Such sharpers run through the world, whom the Tartars kill when they can take them. Now the Epiphany was at hand; and that Armenian monk, Sergius by name, told me that he should baptize Mangu-Khan upon that holy day. I entreated him to labour, by all means, that I might be present, that I might

bear witness that I law it; and he promised me he would.

I was fent for to court, and I faw the monk called memot, but at fix of the clock. I was fent for to court, and I faw the monk with the priefs returning from the court with his crois, and the priefs with the center, and the golpel for that days. Mango Khan made a feaft, and his cultomis, that on such days as his louthlayers appoint him, or the Neftorian priefs make holy days, he held his court and on their days the Christians come first, with their furniture, and pray for him and plets his cap, then they departing the Saracen priefs come and do the like their after fibric comes the idolations priefs and do the lame. The monk told me that he only believes the Christians, yet will have all to pray to him; but it this he jed, low-he believes none; yet all fellow biscourt as files as hence. Hagivest to sake an in a secretarity they are his familiars, and all prophety problems to him. Then we be course into contract the transfer and her brought in high total to what I had an action of the secretarity and all prophety problems to him. Then we he dained in a second day to him they would not at those brought her would attain the second days of the second days. The like the second days are all the first the latest the second days of the second days are all the second days as a second day of the second days are second days.

the Nestorians affirmed that he was baptized; to whom I said, that I would never believe it, nor report it to others, seeing I saw it not.

We came at last to our old and empty house, where they provided us bedding and coverlids; they brought us also fuel, and gave us three the carcale of one little lean ram, as meat for fix days, and every day a little platterful of millet, and lent us a cauldron, and a trivet to boil our flesh, which being boiled, we boiled our millet in the broth of the flesh. This was our meat, and it had well sufficed us, if they had suffered us to eat in peace; but there were fo many starved fellows, who were not provided with meat, that as foon as they faw us drefs ours, they thrust in upon us, and would eat with us. The cold began then to prevail, and Mangu-Khan fent us three fur coats with the hair outward, which we thankfully received: they demanded also how we were provided with necessary food; to whom I answered, that little meat sufficed us, but we have not an house wherein to pray for Mangu-Khan; for our cottage was so little, that we could fearce fland upright in it, nor open our books for moke after the fire was lighted. Of this they gave him an account, and he fent to the monk, to know if he would be pleafed with our company, who gladly answered that he would. From that time we were provided with a better house, and we went down with the monk before the court, where none lodged but we and their foothfayers; but they lodged nearer before the palace of the greatest lady, and we at the farthest end towards the east, before the palace of the last lady; and that was on the thirteenth of January.

On the next morning, all the Nestorian priests came together before day at the chapel, and fmote upon a board instead of ringing a bell, and fang mating folemaly, and put on their ornaments, preparing the cenfor and the incenfe; and while they were waiting thus, behold, in the morning the principal wife, Cotata-Caten by name, (Caten is of the same import as lady, and Cotata is her proper name,) came into the chapel with many other ladies, and with her eldest son called Baltu, and other children, and they cast themselves down upon the earth, ducking after the manner of the Nestorians; and after this, they touched all the images with their right hands, always kiffing their hands after they had touched f and after that they gave their right hands to all that flood by them in the church, for this is the cultom of the Nestorians when they come into the church; then the priefts fang many things, giving the lady incense in her hand, and she put it upon the fire; then they perfumed her: after this, when the day was clear the began to put off the ornament from her head, which is called Bacca, and I law her bare head; then the commanded us to go forth, and as I went out I law a filver balon brought, whether they baptized her or no I know not; but I know they celebrate not mals in a tent, but in a flanding church; and at the fealt of Latter Llaw them baptize and confecrate a font with great follownity, which now they did not.

While we went into our house, Mangu Khan himself came and went into the church or Oratory, and a golden bed was brought, on which he fat by his Queen, over against the altar, then we were sent for, who knew not then that Mangu was come, and the door keeper searched us, lest we should have knives about us; but coming into the Cratory, taving a bible and to breviary in any bolom. I first bowed however, the same as and other is Mangu Khan, and to pessing by we should her ween the sould and the about a paper was used us ting a plane after our manner, and claim it; it is a time for the pession for a paper of the property man had been also be also be brought into the about the search of all the many papers.

came not in with us; and when I was first before him, I had the bible in my bosom, which he commanded to be brought unto him, and he looked earnestly on it; then he departed, and his lady remained there, and distributed gifts to all the Christians there; she gave the monk a Jaseot, and to the archdeacon of the priests another; she caused a nassic to be spread before us, that is, a piece of cloth as broad as a coverlid of a bed, very large, and a buckram, which, when I would not receive, they sent them to my interpreter, who had them to himself. He brought the nassic to Cyprus, which he sold for eighteen sultanines of Cyprus, but it was much the worse for the carriage. Then drink was brought us, viz. drink made of rice and red wine, like a wine of Rochelle, and cosmos; then the lady holding the cup full in her hand, desired a blessing upon her knees, and all the priests sung with a loud voice, and she drank it up,

and I and my companion were obliged to fing.

Another time, when all of them were almost drunk, there was brought the carcale of one ram, which was presently devoured, and after that great sishes, which are like our carp, without salt or bread, whereof I eat a little, so they passed the day till the evening; and when the lady herself was drunk, she took her chariot, the priests singing, and went her way. The next Sunday, which was the twenty third of January, the Khan's son came (whose mother was a Christian) and did the like, but not with so great solemnity, for he gave no gifts, but made the priests drink, and gave them parched millet to eat. Before the first Sunday in Lent, the Nestorians sast three days, which they call the fast of Jonas, when he preached to the Ninevites. And the Armenians sast five days, which they call the fast of St. Lorkis, who is the greatest saint among them. The Nestorians begin their fast on Tuesday, and end it on Thursday; so that on Friday they eat sless, and all that time I saw the chancellor, who is there called Bulgai, give them small pieces of sless upon the Friday, and they bessed the sless with great solemnity, as the paschal lamb is blessed, but he eat none with them; and this I learned of the French goldsnith, who was his very familiar friend.

The monk fent to Mangu to fast that week, which he did; so that on the Easter of the Armenians we went in procession to the House of the Mangu, and the monk and we too went in with the priests before him; and while we went in, one of the servants wentout, carrying out the shoulder bones of rams burnt as black as coals. I wondered at this greatly, as not knowing what it should mean; but after I had enquired, I underslood, that the Khan never does any thing before he has consulted these bones, which kind of divination is thus performed: when the Khan undertakes any thing, or rather before he undertakes it, he causes three of these bones to be brought to him unburnt, and holding them; he considers in his mind the thing he contains about, and whether he shall do it or not, and then delivers the bones to be burnt; and there are shways two little rooms by the house where he lies, where these bones are burnt, which are diligently lought for every day through all the leskar or carrie of the start as When they are burnt black, they bring them to him; then he looks upon them, whether the bones, by the heat of the first be cleft lengthwars, his then he may deal thus the bones are always cleft in one for the bones are always cleft in one for the bones are always cleft in one for the bones are always cleft in the rooms of the first bones are always cleft in the rooms of the bones are always cleft in the rooms of the bones are always cleft in the rooms of the bones are always cleft in the rooms of the bones are always cleft in the rooms of the bones are always cleft in the rooms of the bones are always cleft in the rooms of the bones are always cleft in the contents in the bone which covers the bone are the bone are the bone which covers the bone are the bone are the bone of the bone with the bones are always cleft in the less than the bone of the bone which covers the bone are the bone are the bone with the bone of the bone are the bone of t

earnestly looked upon; then after he had drunk, and the chief priest had waited on his cup, they gave the priests drink, but we went out; but my companion staying last, when we were gone, turned his face to the Khan, bowing himself to him, and then hastily following us, he stumbled at the threshold of the house, while we went in haste towards the house of Baltu, the Khan's eldest son. They that observed the threshold seized my companion and made him stay, calling one, and commanding him to be carried to the Bulgai, who is the chancellor, or secretary of the court, who judgeth those that are arraigned of life and death, but I knew it not; yet, when I looked back, and did not see him coming, I thought they kept him to give him some lighter garments, for

he was weak, and fo laden with felt garments that he could fcarce go.

Then they called our interpreter, and made him fit with him, but we went to the Khan's eldest fon's house, who had two wives, and was lodged at the right side of his father's court; who, as soon as he saw us coming, leaping from his bed whereon he sat, cast himself upon the earth, smiting his forehead against the ground, where kissing the cross, and then arising, caused it to be laid upon a new cloth, in an high place by him, very honourably. He hath a schoolmaster, a Nestorian priest called David, a drunkard, who instructs him. Then he made us sit, and gave the priests drink, and he also drank, receiving the bleffing from them; then we went to the court of the fecond lady, which was called Cota, who followed idolaters, whom we found lying fick a-bed; then the monk made her rife out of her bed, and worship the cross, bowing her knees thrice, and bowing towards the ground, he standing with the cross at. the west side of the house, and she on the east; this being done, they changed places, and the monk went with the cross unto the east, and she unto the west, and he boldly commanded her, though she was so weak that she could scarce stand upon her feet, that she should cast herself down thrice, and worship the cross, towards the east, after the manner of the Christians, which she did, and he taught her to make the sign of the cross upon her forehead, after she laid down upon her bed; and praying for her, we went unto the third house, where a Christian lady used to be, who being dead, a young woman succeeded her, who, together with the daughter of her lord, joyfully received us; and all that whole house reverently worshipped the cross, and he set it apon a velvet cloth, in an high place, and she ordered meat to be brought, which being set before the lady, the caused it to be distributed to the priests; but I and the monk were very weary of the meat and drink, for the meat being eaten, and much drink drunk, we were to go to the young lady Cerma, who lodged behind that great house, which has her mother's, who, at the coming in of the crois, call herfelf down upon the earth. and worthipped it very devoutly, because the had been taught to to do, and the let it in a high place, thom a piece of filk, and all those cloths whereon the cross was set, were given to the monks

A certain Armeman brought his cross, who came with the monk as he faid, from levolaten, and it was of filter, weighing about fome four marks, and it had four preserus itones in the country, and one in the middle. It had not the image of our sactions and he had excited it to Mangu-Khan, and Mangu demanded of him what he derived to whop he intovered, that he was the fon of an Armemin pixelt, whole there was the fon of an Armemin pixelt, whole there was the fon of an Armemin pixelt, whole there was the fon of an Armemin pixelt, whole there was the fon of an Armemin pixelt, whole there was the fon of an Armemin pixelt, whole there was the fon of an Armemin pixelt, whole there was the fait was built seam the missioners of the characters in the missioners of the missioners and the commended larger pixels built in the fait was the commended larger pixels built as built as the fait of the saction of the commended larger when the saction the saction of the sact

in the house of the young lady, and she gave the priests much drink; from hence we went up into the fourth house, which was the last, for he used not to come often unto that lady, and her house was very old, and herself not over gracious; but after Eafter, the Khan made her a new house, and new chariots. She likewise, as well as the fecond, knew little or nothing of christianity, but followed foothfayers and idolaters; yet at our coming in, the worthipped the crofs as the monk and the prieft taught her. There also the priests drank again, and from this place we returned to our oratory, which was not far from thence, the priests accompanying us with great howling and outcries in their drunkenness, which is not confidered there as blameable, either in man or woman. A little after, my companion was brought home, and the monk sharply rebuked him, because he touched the threshold. The next day Bulgai came (who was a justice) and diligently enquired whether any had warned us to take heed of touching the threshold; and I answered, Sir, we had not our interpreter with us, and if they did, how could we understand? Then he pardoned him, but would

never after fuffer him to come into any of the houses of Mangu-Khan.

43. Sometime afterwards, it happened that the lady Cota was fick, almost to death, and the divination by lot of the idolaters did her no good at all; then Mangu fent unto the monk, demanding of him what might be done for her, and the monk indifcreetly answered, that if she were not cured he should cut off his head. Having made that answer, the monk called us, declaring the matter unto us with tears, intreating us to watch with him that night in prayer, which we did; and he had a certain root which is called rhubarb, and he beat it almost to powder, and put it in water, with a little crucifix which he had, whereon the image of our Saviour was advanced, whereof he reported, that by it he knew whether the fick would recover or die; for if they should escape, it stuck to the breast of the sick, as if it were glued; if otherwise, it fluck not at all; and I still thought that rhubarb had been some holy relick, which he had brought from the holy land of Jerufalem. And he gave all fick perfons of that water to drink, so that it could not be, but their bowels should be griped with so bitter a potion; which alteration in their bowels they accounted a miracle. Then I told him, he should prepare some of that holy water which is made in the church of Rome, which hath great virtue to expel devils, because I understood she was vexed of a devil; and at his request, we made him some holy water, and he mingled thubarb. and put his crucifix all night long in the water to temper it. I faid, moreover, that if he were a priest, that the order of priesthood had great power to expel devils; and he faid it was very true, yet he lied, becaufe he had no order, nor knew any one letter : but was a weaver, as I understood after, in his country, when I returned.

The next morning therefore, I and the monk, and two Nefforian priests, went unto the lady, and the was in a little house behind her greater house. When we came in, the lat in her bed, and worthipped the crois, and fer it honourably by her, upon a gloth of filk, and drank of the bleffed water with rhubarb, and walked her breast and the monk requelled me to read a goipel everher, to I read the pathon of onviord according to John; at length the was cheered, and telt herieft better, and the capled four affore so be brought, which the first laid at the feet of the crois, and after gave them, to the monks, and reached me one, which I would not receive; then the monk iteration to this unstant, posts it and caveleach of the pasets one; justing a that une he cave forty matters. Then the caused wine to be brought, and gave a the pasets to drill, and was known to dropp the first in boson of the Trium; offer boson and two known to dropp the first in boson of the Trium; offer boson and to the cause the language, although our inc. Acquire tops filed, is not accome the

The next day again Mangu-Khan, hearing that we came that way, made us come in to him, because he understood that the lady was somewhat better; and we found him with a few fervants, taking a fort of meat made of paste, for comforting the head, and the burnt shoulder-blades of a ram lay before him, and he took the cross in his hand. but that he worshipped it, I saw not; he looked upon it indeed, and asked some questions, but I know not what. Then the monk craved leave to carry the cross aloft. upon a lance, because I had spoken to the monk before concerning this, and Mangu answered, carry it as you think best; then paying our duty to him, we went unto the lady, and we found her strong and cheerful, and she still drank of the holy water, and we read the passion over her, and those miserable priests never taught her the faith, nor advised her to be baptized; but I sat there mute, not able to speak any thing, yet she still taught me the language; the priests found no fault with any kind of forcery, for there I saw four swords half drawn out of the sheath, one at the head of the lady's bed another at the feet, and two others, on either fide of the door one. I faw also there one filver chalice, of our chalices, which very probably was taken out of fone church in Hungary, and it hung against the walls full of ashes, and upon those ashes there was a black stone, and concerning such things, the priests never teach them that they are evil; nay, they themselves do teach such things. We visited her three days so that she was restored to perfect health; after that, the monk made a banner full of crosses, and got a cane as long as a lance, and we carried the cross aloft.

I honoured him as my Bishop, because he could speak the language, yet he did many things that did not please me; for he caused a chair, which may be folded, to be made for him, such as bishops used to have, and gloves, and a cap of peacock's feathers, and upon it a little cross of gold; I was well pleased with the cross. He had scabbed feet, which he endeavoured to palliate with ointments, and was very presumptuous in speech; the Nestorians also repeated certain verses of the Psalter upon two rods, which were joined together, being held by two men. The monk was present at such things, and many other vanities appeared in him, which displeased me, yet we joined ourselves to his society for the honour of the cross, for we carried the cross advanced through all the tents, singing, Vexilla Regis, prodeunt, &c. Whereupon the Molanamedans were

much dejected.

whereof I have spoken before. The bound or summit of the north corner is not known for the extremity of the cold; for in that place there are continual mountains of inow.

I was inquisitive of the monsters, or monstrous men, whereof Isidorus and Solinus make report: they told me they never faw any fuch, and I therefore doubt whether it be true or no. All these nations are poor, yet they must serve in some trade, for it was the commandment of Zingis, that none should be free from service, till he were so old, that he could labour no longer by any means. Once I remember a certain priest of Cathaya fat with me clothed in a red-coloured cloth, and I demanded of him whence he had fuch a colour, and he told me, that in the east parts of Cathava there were high. craggy rocks, wherein certain creatures dwell, having in all parts the shape of men but that they bow not the knees, but leap instead of walking, which are not above one cubit long, and their whole body is covered with hair, who have their abode in caves, which no man can come unto; and they who hunt them, go to them, and carry strong drink with them, and make pits in the rocks like wells, which they fill with that firing drink; for Cathaya hitherto has had no wine, though now they begin to plant vineyards but the strong liquor before mentioned is made of rice. The hunters hide themselves, and then these creatures come out of their holes and taste the drink, and cry, chin-chin; on this they come together in great multitudes, and drink till they are made drunk, so that they sleep there. Then the hunters come and bind them hand and feet, while they are fleeping, and afterwards open the veins in their neck, and draw forth three or four drops of blood from every one, and let them go free, and that blood, as he told me, is the most precious purple.

He told us also a truth, (which, however, I do not believe,) that there is a province beyond Cathaya, into which, at whatever age a man enters, he continueth in the fame age wherein he entered. Cathaya is on the ocean, and the goldfmith to often mentioned told me, that there arrived mellengers from a certain people which are called Tante and Manfe, who inhabit iflands, the lea of which is frozen in the winter, forthat the Tartars may invade them, who offered two thouland Tuemen or Jacots yearly, lo they would let them live in peace. Tue men is a piece of money containing ten marks. The common money of Cathaya is paper made like palfeboard; the breadth and length of an hand, upon which they imprint lines like the feal of Mangu; they write with a pencil, like that with which painters paint, and in one figure they make many letters comprehending one word. The people of Thibet write as we do, and they have characters: very like ours. They of Tangut write from the right hand to the left; as the Arabians do, and multiply the line alcending upwards; the Jugures, as I laid before, from above to the bottom of the line: The common money of the Rutenians are little lighted and griffed ikins. When we came with the mank, he charastry admorphed us to ablain from fleth, and that our fervants should eat fieth with his fervants; but he would promile us meal, and oil to butter; which we did, thought much grieved my companion by realent of his weaknels; wherefore our food was ruiber and butter, or state posted in water, with builter, or lour task, and unleavened tread taked on oxidiate or nord-

- 15. When our Danguagema some, whiches the Pentinge of all the people of the ealtailde great lach Congregie all der company, rolled that werk, who come ever any to our Clescop, and eart men go de priesenant other Chellism of which eares name als lieuces subspecials but were notices and which and he serve me paid by

fake, exculing myself, nevertheless, that I would not wear such clothes, I gar a to my interpreter what belonged to me. Then the porters of the court, seeing that such a multitude came daily to the church, which was within the bounds of the keepers of the court, they sent one of their attendants to the monk, to let him know, that they would not have such a multitude come within the precincts of the court; to this the monk roughly answered, that he would know whether they commanded this from Mangu-Khan, and he added certain speeches, as if he would accure them to Mangu-Khan; but they preventing him, accused him before Mangu, that Le was too full of vorce, and

that he gathered together too great a multitude to hour him speak.

Afterwards being called to the court, we came in perfore the Khan himfelf, who having the burnt shoulder-blade of a vam in his hand, looked upon it, as it were reading it, began to reprove the monk feverely, telling I m, that fleing he was a holy man, he should pray unto God, and asked why he spoke so much with a en? But I stood behind with my head pare. Then the Khan aid to him, Why coil how not put off thy cap when thou comest before me, as that broad ach? and commanded me to be called nearcr; then the monk being much abased, put on his cas countary to the custom of the Greeks and Armenians, and when Khan hi cfelf had led en sharply to him, we went out; the monk then Jelivered me the cross to bear to the Oratory, because he could not carry it for shame. After a few days he was reconciled to him, promising that he would go to the Pope, and that he would bring all the nations of the west to his obedience. Whereupon he returning to the Oratory, after that conference had with the Khan, began to enquire of mc touching the Pope, if I believed he would fee him, if he came unto him in the behalf of Mangu, and if he would furnish him with horses unto St. James in Gallicia. He demanded also of Your Majesty, if I thought you would fend your son unto Mangu? Then I counselled him, that he should take heed that he did not promife faisehoods to Mangu, because the last error would be worse than the first, and that God needeth not our lies, or that we should speak deceitfully for him.

At that time there arose a certain question between the monk and a priest, a learned man, whose father was an archdeacon, and the other priests accounted him an archdeacon. For the monk said, that man was created before Paradise, and that the Scripture said so; then was I called to be an arbitrator of the question, but I being ignorant that they contended about this, answered, that Paradise was made upon Tuesday, when the other trees were made, and that man was made the fixth day. Then the monk began to say, did not the devil bring earth the first day from the four parts of the world, and making clay, made the body of man therewith, and God inspired his soul? Then hearing this heresy of the monk, and that he so publicly and shamefully recited it, I reproved him sharply, saying, he should put his singer upon his mouth, because he knew not the Scriptures, and that he should take heed what he said; and he began to scorn me, because I was ignorant of the language.

I departed therefore from him, going to our house; it sell out asterwards, that he and the priests went in procession to the court without calling me, because the monk would no longer speak to me as he was wont; when, therefore, they came before Mangu, he earnestly demanded where I was, and why I came not with them? The priests being askaid, excused themselves, but returning, they told me the words of Mangu, and murmured at the monk. After this the monk was reconciled to me, and I to him, entreating him, that he would help me with his language, and I would help him in the Holy Scripture: "For a brother that is holpen of a brother, is as a strong city." After the first week of safting, the lady ceased to come unto the Oratory, and to

give.

give meat and draik, " with we were wont to have, for the monk suffered it not to be brought, faying, that mutton fat or fuet was put in the fauce; and the gave no oil, but very teldom; to that we had nothing but brown bread and pathe, boiled in water, though we had no water but of diffolved 'now or ice, which was exceeding bad. My companion began to be much grieved; fo I acquainted David, the ichoolinafter of the Khan's eldeft fon, with our necessity, who made report thereof to the Khan, and he

commanded to give us wine, flour, and cd.

Neither the Nestorians or Armenians cat fish by any means in lent; but the monk had a cheef by him under the altar, with almont and raisins, and dried praire, and many other fruits, which he cat all day, whenever he was alone. We can once a day, and that in great association; for as soon as they knew that Mangual edgiven us wine, nost impudently they came in upon us like day, both the Nestorian priests, who were drunk all the day in the court, and the Moods also, and the servants of the monk. The monk also, when any came unto him to whom he would give drink, he for the us for wine, so that the wine caused us more trouble than constort, because we could not der, it without offence. If we gave, we wanted ourselves; nor durft we, that being spent, desire any more from the court.

46. About the middle of lent the French goldfinith's fon came, beinging sith him a flyer cross made after the French fulnion, having the image of Clintall of filver talkened upon it at the top, which the monks and priefts feeing, put it away. This cross he was to present in the behalf of his master to Bulgai, who was the chief secretary of the court, which when I hard I was offended. The fame young man also declared to Mangu-Khan, that the work which he had commanded to be made, was finished, which work I defcribed unto you. Mangu hath at Caracarum a great court hard by the walls of the city, inclosed with a brick wall, as the priories of menks are incrofed with us. In that court there is a great palace, whe an he held his teafts twice a year, once in Easter, when he passeth that way, and once in framer, a house returnerh; but the latter is the greater, because then an the mobile muct tegeth rat his court, and then he gives unto them garments, and then all his magnitudence. There are many other houses there as large as our farms, wherein his victuals and treatures are flored. In the entrance of that reat place, because it was indecent to have flaggons going about, as in a tavern, William the goldsmith made him a great silver tree, at the 10st v hereof were four filver hons, having one pipe fending forth pure cows' milk; a. If the four pipes were conveyed within the true unto the top thereof, whose top spread back egua downward, and upon every one of them was a golden ferpent, whose tails wincal about the tree; and one of these pipes run with wine, another with caracosinos, that is, clarified whey, another with ball, that is, drink made of honey, another with drink made of rice, called teracina; and every drink had a veffel prepared of filver at the fort of the tree to receivait. Between these sour pipes, at the top, he made an eagel holding a trumpet, and under the tree he made an hollow vault, wherein a man relight he hid, and a pipe alcending up the heart of the tase unto the angel. He first made bellows, but they gave not wind enough. Without the palace there is a chamber, wherein the liquors were laid, and there were fervants ready to pour it out when they heard the angel founding the trumpet; and the boughs of the tree are of filver, and fo are the leaves and pears that are on it; when, therefore, they want drink, the butler commands the angel to found the trumpet; he who is hid in the vault hearing, blows the pipe strongly, which ascending to the angel, he sets his trumper to his mouth, and the trumpet foundeth very shrill; then the fervants hearing, which are in the chamber, pour liquor into the proper pipe, and the pipes pour it from above, and they are received below

below into vessels prepared for that purpose. Then the outlers draw them, and car v

them through the palace to men and women.

The palace is like a church, having the middle aifle and the two fides beyond two lows of pillars, and three gates on the fourh; before the middle gate flands the tree, and the Lhan hindelf fits in the north front on an high place, that he may be feen of all; and there are two flights of fleps afcending to him, by one he that carries the cup goes unto him; and by the other he comes down. The space which is in the middle, between the tree and the steps by which they ascend, is word, for there shands e that wais on his cup, and the mislengers which bring presents, the Khan sitting there above like a god. On the right side, towards the well, are the rien; on the left, women, for the palace street hed out in length from north to south, on the right side are places full of reats, on which his sons and brethren sit; on the left side are the like, where his wives and daughters sit, one woman only sits above by him, but not so high as he. When, therefore, he had heard that the work was similarly, he commanded the chief workman to set it up in its place, and make it sit.

About Prssion Sund whe went before with his small Louses, leaving his greater house behind; and the monk and we followed him; and he sent us another bottle of vine the Khan, in his march, passed between the hilly countries where there was great wind, and extreme cold, and there fell a great snow; whereupon he sent about midnight to the monk and us, entreating us to pray unto God, that he vould mitigate the wind and cold, because all the beasts which were in the train were in jeopardy; especially because all that time they were with young, and ready to bring forth. Then the monk sent him incense, requiring him to put it upon the coals, and offer it to God; which whether he did I know not; but the tempest ceased, which had continued two

dar s.

On Palm Sunday we were near Caracarum in the dawning of the day, we bleffed the willow-boughts, whereon as yet there appeared no bud; and about ning we entered the city, carrying the cross aloft, with the banner, passing through the middle of the street of the varacens, where the market and fair are, to the church, and the Nestorians met us in procession; and entering into the church, we found them prepared to celebrate the mass; which being celebrated, they all communicated; and they asked me whether I would communicate? I answered, that I had drank before, and the faciament should not be received but fasting. Mass being said, it was evening, and Master William the goldsmith brought us with joy to his inn to sup with him. He had a wife who was the daughter of Mohammedan parents, though born in Hungary he reels, who could speak French, and the language of Comania. We found also there one other man, called Bassilius, the son of an Englishman, born in Hungary, who also was skilful in the same languages. Supper being ended, they brought us to cur cottage, which the Tartars had appointed in a certain plat of ground near the church, with the Oratory of the monk.

On the next morning the Khan himself entered into his palace, and the monk and I and the pricits went to him; they suffered not my companion to go because he stumbled on the threshold. I much deliberated with myself what I should do, whether I should go or no; and, fearing offence, if I should depart from other Christians, and because it pleased him, and fearing lest that good might be hindered which I hoped to obtain, I chose rather to go, though I saw their actions full of idolatry and forcery, nor did I any other thing there but pray for the whole church with a loud voice, and also for the Khan himself, that God would direct him to the way of eternal salvation. We therefore went into the court, which was very neat, for in the summer rivers.

the state of the s

inversing conveyed into every place whereby it is water d. After this we entered into he polace full of men and wors r, a defend before the Khan, living the afores a the at our backs, which with the veril it reof took up a gent part of the parace. The process of two little learness are use non earthern dith, which they prifented . I have done and the buter brought I mento im, fitting above or a 1 , pro, "a hape until b gortheren of the lovs, in farme o 1 to "I are a mid a young r brother of his min a brong in up by a 14cfer " a "! the gotpe, who also fent too my bid, that he might for it. I feet the field the monk field his part is, and I al cith monk; a his promise t that the row in his would be no unit the clurch, which is a cut enough and far, and all it can are a conwas concered with filk mought with gold, the next day no departed, d film, the profis to exemie him. That he adult not corne to the church, because he and Acold early with carry limithe; but we and the monk remained at Caracarum with the property I are of the court, that we might relebrate Eafler there.

47. The teste of I after was now drawing near, and we had not our veft in the standard tikewite of nitdered the manner how the Nestorians made the factumental bread, and was much troubled what I flould do, whether I should receive the facrament from the lost should celebrate in their restinients and chalice, and upon their alter, or should alto ze her ability from the factament. There was a great multitude of Christians; limited are, Allans, Ritemans, Georgians, and Armenians, all which had not feen the facrament fines the, were taken prisoners, because the Nestorians would not admit them into it emchances. unless they were baptized by them, as they said; yet they made no mention of that to us, and they offered their factament freely to us, and made me fland in the door of the chois that I might lee their manner of confecration. On the vigil of Eafler I flood by the fount that I might see their manner of baptizing. They ay they have of the outment y herewith Mary Magdalen anointed the feet of our Lord; and they pour in as much as they think fit of that oil, with which they knead their bread; for all the people of the East put tat in their bread instead of leaven, which fat is butter, or fuet out of a sheen's tail, or oil.

They is, also, they have of the flour of which the bread was made which the Lord ronficiated, and always add as much fresh as the quantity of the flour they lay aside; and they have a chamber, hard by their choir, and an oven where they bake their bread, which they n xt confectate with great reverence. They therefore make one loaf of an 'and's breadth, with the belove-mentioned oil, which they first break into twelve pieces, according to the number of the apostles, and after divide those pieces according to the multhud of the people, and the priests give the body of Christ to every one in his hand; and then every one taketh it out of the palm of his hand with reverence, and firetcheth his hand to the top of his head. The Christians I mentioned before, and the monks. very empetity intreated us, for God's fake, that we would celebrate. Then I made them he confessed by an interpreter as I could, reckoning the ten commandments, and the feven deadly fins, and other things, for which every man ought to be penitent and confilled; all of them publicly exculed themselves concerning theft, saying, that without the it they could not live, because their masters provided them neither food nor raiment. Then confidering that they had taken away their perfons and their fubstance without just cause, I said unto them, that they might lawfully take necessaries of the goods of their malters, and I was ready to maintain it to the face of Mangu-Khan.

Some of them also were foldiers, who excused themselves, that they must go to the wars or cife they flould be flain: I forhad them to go against the Christians, and that they should not hurt them, and that they should rather suffer themselves to be slain, for so they should become martyrs. And I said, that if any would accuse me of this doctrine , vot. vir.

before Manga.-Khan, I would be ready to preach the fame in his hearing: for the Neftonians themselves of the court were present when I taught this, of whom I was suspicious they might report ill of us. Then master William the goldsmith caused an iron to be made for us to make hosts; and he had certain vestments which he had made for himself, for he had some knowledge in learning and officiated as a clock. He caused the image of the blessed Virgin Mary to be graven after the French fashion, and engraved the history of the gospel very fair; and made a silver box to lay up the body of Christ, and the relicks in certain little holes, curiously wrought in the side of the box.

He made also a certain oratory upon a chariot, very fairly painted with scripture histories; I therefore took his vestments and blessed them; and we made hosts after our manner, very fair: and the Nestorians assigned me their fount for baptism. And their partiarch sent them from Baldach a square hide like a portable altar, made with chissm, which they use instead of consecrated slone, therefore I celebrated on the day of the Lord's supper, in their silver chalice and dish, which were very great vessels. I did the like also on Easter-day, and we communicated the people with the blessing of God, as I hope; but they baptised in the vigil of Easter more than threescore persons very

orderly. There was great joy for this generally among all Christians.

48. After this, it happened that mafter William the goldinith was grievously sick, and when he was upon the recovery, the monk visiting him, gave him rhubarb to drink, so that he had almost killed him. Then visiting him when I found him so ill, I asked him what he had eat or drank? and he told me the monk had given him the potion, and he drunk two little dishes full, thinking it had been holy water. Then I went to the monk, and said to him, either go as an apostle, doing miracles indeed by virtue of prayer and the Holy Ghost, or as a physician according to the art of medicine; you give a strong potion of physick to drink to men not prepared, as if it were an innocent thing; so which you will incur a soul scandal, if it come to the knowledge of men. From that time he began to fear and to be weary of him.

It happened at that time, that the priest too was sick, who was as it were the arch-deacon of the rest, and his friends sent for a certain Saracen, who was a soothsayer, who said unto them, a certain lean man, who neither eateth or drinketh, nor sleeps in a bed, is angry with him; if he can obtain his blessing, he may recover; then they understood it was the monk, and about inidnight the priest's wise, his sister, and his son came, intrcating that he would come and bless him; they also raised us up to intercede with the monk, who answered us upon this occasion, let him alone, because he, with three others, who likewise took evil courses, consulted to go to the court, to precure Mangu-Khan, that I and you should be expelled from these parts; for there arose a contention among them, because Mangu and his wives sent four Jascots, and pieces of silk, upon Easter eve, to the monk and priests, to distribute among them; and the monk had kept unto himself one Jascot for his part and of the other three one was counterseit, for it was copper. The priests thought therefore that the monk had kept too great a share to himself, whence (it might be) that they had some words among themselves, which were reported to the monk.

When day came, I went to the pricit, who had extreme pain in his fide, and spit blood, whence I thought it was an impostume; then I advised him, that if he had any thing that was another's to restore it; he said he had nothing. I spoke unto him also of the sherament of extreme unction; who answered, we have no such custom, neither do our pricits know how to do it; I intrest you that you would do it for me, as you know best. I advised him also, concerning confession, which they frequent not; and he spake a little is the ear of a certain pricit, one of his companions. After this, he grew better, and

intreated:

mercated me to go for the month, for I visite the reak world not come at fill, but when he heard he was forecolated ever, I were vish his cool, and talso vent, and carried the body of Christ, which I had a "read upon E for the year the intretty of rafter visiting, then the monk began to I of him a read at a read he most bumble and read he occus then I is dunto him, it is in a for the object of Reme, then the read he occus then I is dunto him, it is in a for the object of Reme, then the read and force against all the decease of the name of the read to the ficking, fait, and a decrease against all the decease of the name of the read to the ficking, fait, and the read of the body of Class, which I and craced of the read to the first of the first of the read of the read of the first of the read of the r

The next day he began to lieve the panes of death upon him; to never a their oil, which they hid was holy, I annotated him according to the church of Rome, as they neverted me. In I none of our oil, because the press of Sartach kept it all. When we hold have long a dage, and I would have been present at his end, the monk out to me, bidding the depart, because if I were present, I could not come into the house of Mangu-Chan for one whole year; which, when I had told his risends, they faid it was true, and defined me to depart, lest I might be hindered in that good which I might promote. As soon as he was dead, the monk said unto me, "Never much it, I have killed him with my prayers; this man only was learned, and opposed himself against us, the rest know nothing: henceforth Mangu-Khan himself, and they all will couch at our teet." Then he declared unto me the before-mentioned answer of the sothsayer; which not believing it, I enquired of the priests who were friends of the decented, whether it were true or no, who said it was; but whether he was pre-instructed or not, that they knew not.

Afterwards I found that the monk called the foothfayer and his wife into his chapel, and caused dust to be sifted for him to divine to him, for he had a certain Rutenian deacon who divined to him; which, when I understood, I was amazed at his foolishness, and said to him, Brother, a man full of the Holy Ghost, which teacheth all things, should not demand answers or counsels from soothsayers, seeing all such things are forbidden, and they are excommunicated who follow such things. Then he began to exuse himself, that it was not true that he sought after such things; but I would not depart from him, because I was placed there by the commandment of the Khan himself, nor could I remove without his special command.

49. As to the city of Caracarum, Your Highness may be pleased to know this; that, excluding the palace of the Khan himself, it is not so good as the castle of St. Dennis, and the monality of St. Dennis is worth ten times that palace and more too. There are two streets there, one of the Saracens or Mohammedans, where the fairs are kept, and many merchants resort thither, by reason of the court which is always near, and for the number of embassadors. There is another of the Cathayans, who are all artificers. Without those streets there are great palaces, which are the courts of the secretaries; there are there twelve kinds of idolators of divers nations, two mosques, where the law of Mohammed is proclaimed, and one church of the Christians at the end of the town. The town is enclosed with a mud wall, and both four gates; on the cast part millet and other grain is sold, which, as yet, is seldom brought thither; on the west sheep and goats, on the fouth oxen and waggons are sold; and on the north horses.

Following

Following the court, we came thither on the Sunday before the Afcension; the next day after we were called before Bulgai, who is their justice and chief secretary; both the monk and all his family, and we and all the messengers and strangers likewise who frequented the house of the monk, were called before Bulgai severally, first the monk, and after us, and they began diligently to enquire whence we were, and for what purpose we came, and what our errand was? and this enquiry was made because it was told Mangu-Khan, that four hundred assassins or secret murderers were gone forth in divers habits to kill him. About that time the Khan's lady was restored to health, and she sent for the monk, and he, not willing to go, answered, she hath sent

for idolators about her, let them cure her if they can, I will go no more.

Upon Ascension eve, we were all in the house of Mangu-Khan: and I saw as often as he was to drink, they cast Cosmos to their idols of felt; then I said to the monk. "What fellowship hath Christ with Belial? what part hath our cross with those idols?" Mangu-Khan hath eight brethren, three by the mother, and five by the father. One of them of his mother's fide he fent into the country of Affaffines, who are called by them Mulibet, and he commanded him to kill them all. Another went to Persia, and is now entered therein to go, as is thought, into Turkey, from thence to fend armies to Baldach and Vastacius. One of the others he sent into Cathaia against some that rebelled: his youngest brother of the same venter, he kept himself, whose name was Arabucha, who holds his mother's court, who was a Christian, whose fervant master William is: for one of the brothers on the father's side took him in a certain city called Belgrade, where there was a Norman bishop, of Belle Ville near Roan with a nephew of the bishop's, whom I saw there at Caracarum, and he gave mafter William to Mangu's mother, because she was desirous to have him. But when she was dead, master William came back again to Arabucha, with all things else pertaining to the court of his mother; and from him he came to the knowledge of Mangu-Khan, who, on finishing of the aforesaid work, gave unto master William one hundred Jascots, that is, a thousand marks.

On the Eve of the Afcenfion, Mangu-Khan faid, he would go to his mother's court and vifit her, and the monk faid he would go with him, and give his blefling to his mother, with which Khan was well contented. In the evening of the day of the afcenfion, the aforefaid lady was very ill: and the chief of the foothfayers fent to the monk, commanding him that the table should not be smitten. On the morrow, when the whole court removed, the court of the lady remained still: and when we came to the place where the court should stay, the monk was commanded to depart farther from the court than he was wont, which he did: then Arabucha met his brother the Khan: so the monk and we, seeing that he was to pass by us, met him with the cross; and he calling us to mind, because sometimes he had been at our Oratory, stretching forth his hand made a cross unto us like a bishop; then the monk taking horse followed him, bearing certain fruits; but he alighted before his brother's court, waiting while he came from humings the monk alighted there also and offered him the fruit, which he recovered that he monk is the control of khan; but a share the state of the nobility of the control of khan; but a share the state of the nobility of the control of khan; but a share the share the share and the share the share the share and the share the share the share and the share th

God. That very hour there arose a great wind over all the street, and after a while there came a rumour that the lady was dead.

The next morning the Khan returned towards the court another way; for this is a rule amongst them, that they never return the same way they come. While the court remained here none dare pass that way (neither horse-man nor foot-man,) where the court flayed, fo long as any shew of the fire made there remaineth. That day certain Saracens kept company with the monk, upon the way, provoking him, and disputing with him; and when he could not defend himfelf with argument, and they made light of him, he would have lashed them with the whip which he held in his hand, and he went to far that his words were reported at the court, and we were commanded to depart to the fame place with other mellengers, and not to abide before the court as we were wont. I hitherto always hoped the King of Armenia would come. There came fome about Easter from Bolac, where those Germans are, for whole sake chiefly I went thicher, who told me, that the Dutch priest should come to court; therefore I moved no questions to Mangu concerning our stay or departure; for at the beginning he gave us leave to flay two months, and now five months were past. This was done about the end of May, and we had continued there all February, March, April and May; but hearing no news of the King or the faid prieft, and fearing left we should return in the winter, the sharpness of which we had experienced, I caused it to be demanded of Mangu-Khan, what his pleafure was concerning us, because we would stay there, if so he pleased, or if we must return, it were easier for us to return in summer, than in the winter.

He presently sent to me, commanding that I should not go far off, because his pleasure was to fpeak with me the next day; to which I answered, if he would speak with me. he should lend for master William's son, for my interpreter was not sufficient, and he that brought this mellage to me was a Saracen, who had been a melfenger to Vaftacius. and, blinded with rewards, counfelled Valfacius to fend ambaffadors to Mangu-Khan, and the mean while the time passed, for Vastacius thought he would presently enter their country, so he sent, and after he knew them, he little regarded them; nor made a peace with them; neither did they yet enter his country, nor will they be able to long as they dare defend themselves; nor did they ever take any country by force, but by deceit; and because men make peace with them, under colour of that peace they circumvent them and overthrow them. Then he began to be very inquitive of the Pope, and of the King of the Franks, and of the way to go to them; but the monks hearing this. advifed me fecretly not to aniwer him, because he would procure that an ambassador should be fent. I therefore held my peace, not willing to answer him: and he fpake to me I know not what injurious words, for which the Nestorian priess would have accused him, so that he had either been flain or beaten, but I would not agree to it.

of the very next day they brought me to the court and the chief ferretaines of the court came to me, one of them a Mook, who wantab apon the Khan's cip, and the reft Saracens, enquiring on the behalf of the Khan, wherefore beame? If then I fold him in the stary time words I said before how I came to sattach, and from Sarachto Ment, and box Bauti few me to there. Wherevery I said into him, I have nothing to the and box Bauti few man, unterest boxed foests he words at Good me apart in a wantaber them, for the Khan fitting cett me we what barra trade streets put from There and upon the Khan fitting settle streets of Laid I would feed a trade time, thinking a world properly that the fitting of the confidence of the said trade time.

To whom I answered, if ye will that I speak the words of God unto him, get me an interpreter, who faid, we have fent for him, yet speak by this interpreter as you may, we shall understand you well, and they urged me much to speak. I hen I said, "This is the word of God. To whom more is committed, more is required at his hands. Another also, to whom more is forgiven, he ought to love more. Out of these true words of God, I faid to the Mangu himfelf, that God hath given him much: for the power and riches which he hath, the idols of the Tuinians hath not given him, but the omnipotent God, who hath made heaven and earth, in whose hands all kingdoms are. and he translateth them from nation to nation for the fins of men, wherefore if he love him, it shall go well with him; if otherwise, let him know that God will require all these things at his hands, even to the uttermost farthing." Then said one of the Saracens, is there any man that loveth not God? I answered, "God faith, if any man love me, he will keep my commandments; therefore he that keepeth not the commandments of God, loveth not God." Then faid he, Have ye been in heaven, that ye might know the commandments of God? "No, faid I, but he hath given them from heaven to holy men, and at the last himself descended from heaven, teaching us, and we have these things in the scriptures, and we see by the works of men whether they keep them or no."

Whereupon he replied, Will ye then fay that Mangu Khan keeps not the commandments of God? To whom I faid your interpreter will come as ye fay. Then before Mangu-Khan, if it pleafe him, I will recite the commandments of God, and he shall be his own judge, whether he keep them or not; so they departed and told him that I said he was an idolater, or a Tuinian, and kept not the commandments of God. The next day he sent his secretaries unto me, saying, Our Lord sends us unto you, saying, ye are here, Christians, Saracens, and Tuinians, and every of you saith, his law is better, and his books are true: wherefore he would that ye all come together, and make comparison that every one write his words, that he may know the truth. Then I said, "Blessed be God, that hath put this in the heart of Khan; but our scripture saith, the servant of God must not be contentious, but meek unto all. Wherefore I am ready without strife and contention to render an account of the faith and hope of Christians to every one that shall require it." Then they wrote my words, and brought them unto him.

Then the Nestorians were commanded to provide themselves, and write what they would speak, and the Saracens likewise, and the Tumians also. On the next morning he sent the secretaries again, saying, Mangu Khan would know wherefore ye came to these parts? To whom I said, he may know by the letters of Baatu: to this they answered Baatu's letters are lost, and he hath forgotten what Baatu hath wrote to him.

Wherefore he would know of you.

At this formewhat embolders, I faid, "The duty or office of our religion is to preach the goipel unto all. Whereupon when I heard of the fame of the people of Moal, I had a delire to come unto them, and while I was thus minded we heard of Sarrach that he was a Christian; then I directed my journey unto him, and my Sovereign Lord the King of the Franks sem him letters containing good words; and other words believe winch relieve of us had him what men we are, when he saide request that he would have many scriping with the people of Moal; then he term us to Isaan, and Shani to blance to be used wind earlier in the fact us to Isaan, and Shani to blance to be used wind earlier in the fact which is the people of the interest in the latter us to Isaan, and Isaan to blance to be used to be used to be seen to be used to be used. They write all officially religious delegations have been all the demonstrates used for the people of the said of the said

ambassadors were with him, or ours with you. Then I declared all unto them concerning David and friar Andrew, so they putting all in writing, reported the same to him.

Then he fent again unto me faying, Our Lord Khan faith ye have staid long here: his pleafure is, that ye return unto your own country, and he further demands, whether ye would conduct his ambaffadors with you? To whom I made answer, that I durst not carry his ambaffadors beyond his own country, because there is a warlike nation beween us and you, and the fea and mountains, and I am a poor monk, and therefore dare not take upon me to be their guide; fo they having fet down all in writing, returned and reported it to the Khan. When Whitfun-Eve came, the Neftorians wrote chronicles from the creation of the world to the passion of Christ, and passing over the passion, they spake of the resurrection of the dead, and of the ascension, and of the comng of judgment, wherein many things were to be reprehended, which I told them; and we likewise wrote the symbol or creed, Credo unum Deum. Then I demanded of them how they would proceed? They faid they would first dispute with the Saracens; I. hewed them this was not the proper method, for the Saracens in this agree with us, that they affirm there is but one God, and therefore you may have them to help you. against the Tuinians, so they were contented. Then I asked them, if they knew how idolatry had its first original in the world, and they could not tell? I told them, and they faid you shall clear these things to them, and then let us speak, for it is hard to speak by an interpreter; to whom I said, try how you can behave yourselves against hem, I will take the Tuinians part, and you the Christians.

Suppose I am of that sect that say there is no God, prove ye there is a God, for there is a fect there which saith, that every virtue in what thing soever, is the God thereof, and that otherwise there is no God. Then the Nestorians knew not how to prove any hing, but only that which their writing declareth: I said, they believe not the scripures, if ye shew one, they will shew another. Then I directed them to let me sirffalk with them, because if I should be overcome, they might still have liberty of peech; whereas if they should be overcome, I should have no hearing: they agreed

into it.

We therefore gathered together at our Orafory, and Mangu-Khan fent three writers o be judges; one Christian, one Saracen, and one Tunian, and it was first proclaimed, 'This is the commandment of Mangu-Khan, and none dare say that the commandment of God is otherwise. He commandeth that none speak contentious or injurious words to another, or make any tumult, whereby this business may be hindered, upon ain of his head.' Then all were filent, and there was a great affembly there, for very party invited the wifest of their nation, and many others came slocking thither, then the Christians set me in the middle of them, willing the Tunians to speak with ac. Then they began to murmur against Mangu-Khan, because never my Khan at empted thus to learch mo their secrets. Then they opposed one to me, who came rom Cathaya, having his interpreter, and I had Master William's ton. And he fiffing to me, "Friend, if thou be brought to a nonplus, who must seek a wifer han ourself." But I held my peace.

Then he demanded whereof I would dispute, eather How the world was made, or

Then be demanded whereof I would diffrance either How the world was name continued becomes at the louis after death? To winou, Landwered, a Friend, this thousand of be the degraphing of our special. All things proof Cods and he write tournament of head of all and dispersions we don't be bright to be all of all ones therefore we don't be come the code of all ones to select the first of the code of all ones to select the first terms of the code of all ones to select the first terms of the code of all ones to select the first terms of the code of all ones to select the first terms of the code of all ones to select the first terms of the code of all ones to select the first terms of the code of all ones to select the code of all ones to s

following questions; because they hold them for the strongest, for they are all of the heresy of the Manichees, believing two principles, the one bad, and the other good; and concerning souls they all think they pass from body to body, insomuch that one of the wisest of the Nestorian priests demanded of me concerning the souls of brute beasts, whether they could sly to any place where they should not be compelled to labour after death? For confirmation also thereof, as the goldsmith told me, a certain child was brought from Cathaya, who by the size of his body appeared to be three years old, yet was capable of any reason, who affirmed of himself, that he had been three times in several bodies, and

knew letters, and how to write. I faid to the aforefaid Tuinian, "We firmly believe with the heart, and confess with the mouth, that there is a God, and there is but one God, and one in perfect unity, what believe you?" He said, fools say there is but one God, but wife men say there are many. Are not there great Lords in your country, and here is a greater Lord, Mangu-Khan? fo it is of the Gods, because in divers countries there are divers. To whom I faid, you make a bad comparison of men with God; for so every mighty man in his own country may be called a God. And when I would have folved the fimilitude, he prevented me, enquiring what manner of God is yours, whereof you speak, that he is but one? I answered, "Our God, beside whom there is no other, is omnipotent, and therefore needeth not the help of another. Nay, all we have need of his help, it is not fo with men; no man can do all things, and therefore there must be many Lords in the earth, because no one can support all. Again, he knows all things, therefore he needs not a counsellor; nay, all wisdom is from him; moreover he is perfectly good, and needeth not our good. Nay, in him we live, move, and have our being: fuch is our God, and therefore you must not hold that there is any other." It is not lo, faith he. Nay, there is one highest in the heavens, whose generation we know not yet, and ten are under him, and under them there is one inferior, and in the earth there are infinite. Then he would have added other fables: so I asked him of that highest God, whether he thought him omnipotent, or of any other God? and fearing to anfwer, he demanded, if your God be fuch as you fay, why made he the half of things evil? It is falle, faid I, whoso maketh any evil is no God, and all things whatsoever are good. At this word all the Tuinians marvelled, and fet it down in writing, as false and impossible. Then he began to ask, whence therefore cometh evil? You ask amis, faid I; for first you should demand what evil is before you ask whence it is. But to return unto the first question, whether do you believe that any God is omnipotent? and after I will answer you to whatfoever you demand. Then he fat a long time and would not answer, infomuch that the writers on the behalf of the Khan were forced to command him to answer. At length he answered, that no God was omnipotent. Then all the Saracens broke out mo a great languter. Silence being made, I laid therefore none of your Gods can lave you in all dangers, because such a chance may happen wherein he hath no power. Again, no man can ferve two mafters. How then can you ferve to many Lords in heaven and in earth? The auditory decreed him to aniwer, but he tield its neare.

"Dand when I was about to alkedee realisate prove the trust of divine effence, and the Tambur to reserve each beginn the Netherland of the control of their was enterpt. who confess one God, yet they make idols, with whom they talked much, shewing all till the coming of Christ to judgment, declaring the Trinity to him, and the Saracens by similitudes; all of them hearkened without any contradiction, yet none of them said, I believe and will become a Christian. The conference ended, the Nestorians and Saracens sang together with a loud voice, the Tuinians holding their peace, and after that,

they all drank most plentifully.

51. On Whitfunday, Mangu-Khan called me before him, and the Tuinian with whom I disputed; and before I went in, Master William's son, my interpreter, said to me, that we must return to our country, and that I should speak nothing against it, because he understood it for a thing determined. When I came before him, I kneeled, and the Tuinian by me, with his interpreter. Then he said unto me, "Tell me the truth, whether you said, when I sent my writers unto you, that I was a Tuinian?" Then I answered, "My Lord, I said not so; but if it please Your Highness, I will tell you the words I spake;" then I recited what I had spoken, and he answered, "I thought well you said not so; for it was a word which you should not speak, but your interpreter hath ill interpreted it." So he reached forth his staff towards me whereon he leaned, saying, "Fear not." I smiling, said softly, "I had feared, I had not come hither; then he demanded of the interpreter what I said? So he repeated my words unto him:

afterwards he began to confess his faith unto me

"We Moalians," faid he, " believe that there is but one God, through whom we live and die, and we have an upright heart towards him; "-" Then; faid I, "God grant you this, for without his gift it cannot be;" and he demanded what I faid, fo the interpreter told him; then he added further, "That God who hath given to the hand divers fingers, fo he hath given many ways to men: God hath given the Scriptures to you, and the Christians keep them not: ye find it not in the Scriptures, that one of you shall dispraise another: do you find it?" said he. "No," said I; " but I signified unto you from the beginning, that I would not contend with any; "-" I speak it not;" faid he, "touching you. In like manner ye find it not that for money a man ought to decline from justice."—"No, Sir," faid I, "and truly neither came I into thefe parts to get money, nay, I refused that which was given me and there was a fcribe present there, who gave testimony that I had refused a jaseot, and certain pieces of filk. "I speak it not," said he, "for that God hath given you the Scriptures, and we keep them not; but he hath given us foothlayers, and we do that which they bid us, and we live in peace." He drank four times, as I think, before he disclosed these things; and while I hearkened attentively, whether he would confess any thing else concerning this faith, he began to fpeak of my return, laying, "You have staid a long time here, my pleasure is therefore that you return to you faid, you durst not carry my ambassagous with you, will you carry my mellenger, or my letters? And from that time I could neither have place nor time to thew him the Catholic faith; for a man cannot speak before him fave what he pleafeth, unless he were an amballador, but an amballador may fpeak what he will, and they always demand, whether he have any thing elie to lav.

But he fulfered me to leesk no more; but I must hear him, and putver as pomerros pateries. Then I miswered that if he would make me underlandings words, and that they were let down in urning. I would willingly carry them to my power. Then he aliest me if I would have roll or sever, an early a suments to a newered. Merceasered those things to but we have not wherever he been our expected, and willout view help, depointed per out, of your court, at I been full, he is a half provide verial provides throughour my courty; and such three new others were a large were at its likes to the large such as the means of th

Then he demanded, "How far will you be brought?" I faid, "Let our pass. bring me to the Armenian country; if I were there, it were enough." He answered. "I will cause you to be conveyed thither, and after look to yourself;" and he added, " there are two eyes in one head, and though they be two, yet there is one object to both: and whither the one directeth the fight the other doth. You came from Baatu, and therefore you must return by him." When he had thus said, I craved leave to speak; "Speak on," faid he; then faid I, "Sir, we are not men of war; we defire that they have dominion of the world, who would most justly govern it according to the will of God; our office is to teach men to live according to the will of God; for this purpose came we into these parts, and would willingly have remained here, if it had pleafed you; but feeing it is your pleafure that we return, it must be so; I will return, and carry your letters according to my power, as ye have commanded. I would request Your Magnificence, that when I have carried your letters, it may be lawful for me to return to you, with your good liking, chiefly because you have poor servants of yours at Balac, who are of our language, and they want a priest to teach them and their children their law, and I would willingly stay with them." To this he answered, "Know you whether your Lords would fend you back to me?" I answered, "Sir, I know not the purpose of my Lords; but I have alicence from them to go whither I will, where it is needful to preach the word of God; and it feems to me as if it werenecessary in those parts: whereupon, whether they send ambassadors or no, if it please you, I will return." Then he held his peace, and fat a long space, as it were in a muse; and my interpreter defired me to speak no more, and I carefully expected what he would answer.

At length, he faid, "You have a long way to go, make yourfelf strong with food, that you may come lufty into your country," and he caused them to give me drink; then I departed from his presence, and returned not again. If I had been endowed: with power to do wonders, as Moses did, peradventure he had humbled himself.

52. The foothfayers therefore, as he confessed, are their priests, and whatsoever they command to be done, is performed without delay; whose office I shall describe unto you, as I could learn of Mafter William, and others, who reported unto me things like to be true. They are many, and they have always one head, or chief priest, who always places his house before the great house of Mangu-Khan, within a stone's cast; under his fludy are the charious which bear their idols, the others are behind the court, inc places appointed for them, and they who have any confidence in that art, come unto them from divers parts of the world. Some of them are skilful in astronomy, and especially the chief of them, and they foretel to them the ecliples of the sun and moon. And when they are to come to pals, all the people prepare them food, to that they need not go out of the door of their house and when there is an ecliple, they play upon their timbrels and organs, and make a great noile, and let up loud thouts. When the eclipie is pair, they give themselves to feature and drinking, and make great cheer. They foresel fortunate and unlicky days for all business, therefore they never levy an ATHER OF EDUCATION AND ADDRESS OF A STREET OF STREET OF

both because they brought presents, and also for that they belonged to him who was dead, to wit, Khon-Khan; no such thing was required of me, because I brought nothing. If any living creature, or any thing else, fall to the ground while they thus make them pass between the fires, that is theirs; they also on the ninth day of the month of May, gather together all white mares of the herd and consecrate them. The Christian priests also must come together with their censors; then they cast new cosmos upon the ground, and make a great feast that day, because then they think they drink cosmos first, as it is the fashion in some places with us, as for wine on the feast of St. Bartholomew, or Sixtus;

and for fruits, on the feast of St. James and Christopher.

They also are invited when any child is born, to foretel its destiny. They are sent for also when any is lick, to use their charms, and they tell whether it be a natural infirmity, or by forcery; in regard to which that good woman of Metz I mentioned before, told me a wonderful thing. On a certain time, very costly furs were presented. which were laid down at the court of her lady, who was a Christian, as I faid before, and the foothfayers drew them through between the fires, and took more of them than was their due, and a certain woman under whole cultody the treafure of her lady was, accufed them thereof unto her lady, whereupon the lady herfelf reproved them. It fell out after this, that this lady herfelf began to be fick, and to fuffer certain fudden pains in divers parts of her body; the foothfayers were called, and they fitting far off, commanded one of those maidens to put her hand upon the place where the grief was. and if she found any thing, she should snatch it away; then she arising did so, and she found a piece of felt in her hand, or of some other thing: then they commanded her to put it upon the ground, which being laid down, it began to creep, as if it had been fome living creature; then they put it into the water, and it was turned as it were into a horfe-leech; and they faid fome witch hath hurt you thus with her forceries, and they accured her that had accused them of the furs, who was brought without the tents into the fields, and received the baltinado leven days together there, and was after wards tormented with other punishments to make her confess; and in the mean time her lady died, which she understanding, faid unto them, "I know my lady is dead, kill me that I may go after her, for I never did her hurt;" and when the confelled nothing. Mangu-Khan commanded the should live.

Then the locerers accused the lady's daughter's nurse, of whom I spake before, who was a Christian, and her husband was the chief among all the Nestorian priests; so she was brought to punishment, with a maid of her's, to make her confess, and the maid confessed, that her mistress sent her to speak with a certain horse to demand answers. The woman also herself confessed something she did to be beloved by her lady, that the might do her good, but she did nothing that might hart her. She was demanded also whether her husband were privy to it, she excused him, for that he had harm the characters and letters which she had made. Then she was put to death, and Marous Khar sent the priest her husband to the Bishop, who was in Cathaya, to be judged although

he was not found culpable.

In the mean time it fell out, that the principal wate of Mangue-Khan brought forth a fon, and the footherwest were called so break the helimy of the child evaluable rapide held professive, and fail he flould live long, and because at Lord. After a lew days a mappened must be child ded to tensible mother entaged called the foothlawer. I want to to a bid to the flould live and be a day of these they had to Machine behind the first live and be a day of these they had to Machine behind the first live and the flow has been a been a live and the flow that the flow had been a day of the flow and the flo

presently for them in a rage, and caused the young man to be slain by a man, and the maid by a woman, in revenge of her son, whom the soothsayers affirmed to be killed by their mother. Not long after Mangu-Khan dreamed of these children, and demanded in the morning what was become of them? His servant was afraid to tell him, and he being troubled, the more demanded where they were, because they had appeared to him in a vision by night: then they told him; after which, he, presently sending for his wife, demanded whence she learned that a woman should give sentence of death, without the privity of her husband? And he caused her to be shut up seven days, commanding to give her no meat; but the man (who slew the young man) he caused to be beheaded, and the head to be hung about the woman's neck who had killed the maid, and ordered her to be cudgelled with burning sirebrands through all the tents, and after to be put to death; he had also put his wife to death, but for the children he had by her; and he went out of his court, and returned not till after one moon.

The forcerers also trouble the air with their charms; and when the cold is so great naturally, that they cannot apply any remedy, then they fearch out some in the camp, whom they accuse that the cold comes through their means; so they are put to death without inquiry or delay. A little before I departed from thence, one of the concubines was fick, and languished long, and they mumbled their charms over a certain German flave of hers, who flept three days, who, when the came to herfelf, they demanded what she had seen, and she had seen many persons, of all which she judged they should shortly die; and because she saw not her mistress there, they judged she should not die of that fickness. I saw the maid, while her head was yet aching by reason of that fleep. Some of them also call upon devils, and gather them together (who will have answers from the devil) in the night, unto their house; and they put boiled flesh in the midst; and that Knan who invoketh, beginneth to say his charms, and having a timbrel, finites it strongly against the ground; at length he begins to rave, and causeth himself to be bound; then the devil comes in the dark and gives him slesh to eat, and makes him answer. Once at such a time, (as Master William told me) a certain Hungarian hid himself with them, and the devil being upon the house, cried that he could not come in, because a certain Christian was with them; he hearing this, fled with hafte, because they began to search for him. These things, and many other they do, which are too long for me to repeat.

53. After the feast of Pentecost, they began to prepare their letters, which they intend to send unto Your Majesty; in the mean time, the Khan returned to Caracarum, and held a great feast about the 15th of June, and he desired that all the ambassadors should be present. The last day he sent for us, but I went to church to baptize three children of a certain poor German whom we found there. Master William was chief butler at that feast, because he made the tree which poured the drink, and all the poor and rich sung and danced, and clapped their tands before the Khan. Then he began to make an oration unto them, saying. I have sent my brethren far off, and have sent them the danger, into toreign nations moves that appear what you will do when I had send you, that our constrolled head the enlarged. Every day in those sources the baryed grantests, which he gave them, all of one colour, every day, from the last constrolled head. munition; and the ambaffador answered, when you will pluck off your horse's hoofs, we will destroy our ammunition.

I faw also there the ambassadors of a Soldan of India, who brought with him eight leopards, and ten hare-hounds, taught to fit upon the horse's buttocks, as leopards do. When I enquired of India which way it lay from that place, they shewed me towards the west, and these ambassadors travelled with me almost three weeks together, always westward. I saw also the ambassador of the Soldan of Turky, who brought him rich presents; and he answered, as I heard, he needed neither gold nor silver, but men, wherefore he required of him an army. On the feast of St. John, he held a great feast, and I caufed one hundred and five carts, and ninety horfes to be numbered, all laden with cow's milk; and on the feafts of the apostles St. Peter and St. Paul, in like manner. At length, the letters being dispatched which he fent to you, they called me, and interpreted them, the fubstance whereof I wrote, as I could understand them by my interpreter, which is this: "The commandment of the eternal God is this: there is but one eternal God in heaven, upon earth let there be but one Lord, Zengis-Khan, Son of God, and Mangu-Tingii, that is to fay, the found of iron. This is the word which is spoken to you; whatsoever Moals we are, whatsoever Namans, whatsoever markets, whatfoever Mullulmen, wherefoever ears may hear, wherefoever horse may go, cause it to be heard and understood; that such as have heard my commandment, and would not believe it, and would levy an army against us, shall be as having eyes and not seeing: and when they would hold any thing they shall be without hands; and when they would walk they shall be without feet. This is the commandment of the eternal God, by the virtue of the eternal God, by the great Monarch of the Moals, the commandment of Mangu-Khan is given to the French King, King Lodowick, and all other Lords and Priests, and to the great world of the Franks, that they understand my words, and the commanments of the eternal God, made to Zengis-Khan; neither but from Zengis-Khan ever came this commandment unto you. A certain man, called David, came unto you as an ambaffador of the Moals, he was a liar; and with him you fent your ambaffador to Khen-Khan. After Khen-Khan was dead, your ambaffador came to his court; Charmis, his wife, fent you cloth, called Naffick. But to know matters appertaining to war and peace, and to fettle the great world in quiet, and to fee to do good, that wicked woman, more vile than a dog, how could fire know how to do it? Those two monks which came from you unto Sartach, Sartach lent them to Baatu; but Baatu, because Mangu-Khan is the greatest over the world of the Moals, sent them unto us. But now, that the great world, and the priests, and the monks might live in peace and enjoy their goods, that the commandment of God might be heard among you, we would have fent our ambaffadors of Moal with your priests; but they answered, that betwixt us and you there was a warlike nation, and many bad men and troublefome ways, to as they were afraid they could not bring our amballadors fafe unto you. But it we would deliver unto them our letters, containing our commandments to their King Ledowick, they would carry them. For this cause we sent not our ambassadors with them; but we have lent the commandments of the eternal God by your laidpricits. It is the commandment of the eternal God which we have given you townderitand; and when you half hear and believe it, if you will obey us, ferri your amballadors unto us. to shall we be facished whether you will have peace with us or war. When, by the power of the eleman God, the whole world that he manner, for and peace, from the riding of the int mate the guing down of the tame, then that a appear what we wall to. But if ye that fee and hear the commandation of the orders. God, and will not bear any of believe in them. Our cause was ferrill enclosing the

strong, our sea is great; and in this confidence shall lead an army against us to know what we can do; He that made that which was hard eafy, and that which was far off near, the eternal God himself knows that alone." And as they called us your ambassadors in the letters, I faid unto them, call us not ambaffadors, for I faid to the Khan that we were not the ambassadors of the King Louis: then they went unto him and told him; but when they returned, they faid unto me that he held it much for our good, and that he commanded them to write as I should direct them: then I told them they should leave out the name of ambassadors, and call us monks and priests. In the mean time, while those things were doing, my companion hearing that we must return by the wilderness to Baatu, and that a man of Moal should be our guide, he ran, without my knowledge, to Bulgai, the chief scribe, signifying to him by signs, that he should die if he went that way; and when the day came wherein we should have our pass, viz. a fortnight after the feast of St. John, when we were called to the court, the scribe said unto my companion, Mangu's pleasure is, that your companion return by Baatu; and you say you are fick, and it appeareth so: Mangu therefore grants, if you will go with your companion, go, but let it be your own fault, because it is possible you may remain with some Jani that will not provide for you, and it will be a hindrance to your companion; but if you will stay here, we will provide necessaries for you, till some ambaffadors come, with whom you may return more eafily, and by a way where there are villages.

The friar answered, God grant the Khan a prosperous life; I will stay: then I said to my companion, Brother, be advised what you do, I will not leave you. You leave not me, said he, but I leave you, because, if I go with you, I see the death of my body and soul, because I have no patience under intolerable labour. Then they brought us three garments, or coats, and said unto us, Ye will not receive gold or silver, and yet ye have stayed long here, and prayed for the Khan; he entreats you, that, at the least, every one of you will receive a single garment, that ye depart not empty from him. Then we were forced to receive them for reverence of him, for they account it a very evil thing when their gifts are contemmed. First he caused us to be asked what we would have? and we always answered the same thing; so that the Christians insulted over the idolaters, who seek nothing but gifts; and they answered that we were sools, because, if he would give them his whole court they would willingly take it, and would do wisely soo; receiving therefore the garments, they entreated us to make our prayers for the ichan, which we did, and afterwards we went to Caraca-

But it shappened, while we were with the monks, far from the court with other ampaffadors, that the monk couled the table to be firuck to hard that Mangu-Khan heard it, and demanded what it was; they told him; "Upon which he alked why he was removed to far from the court; they told him; because it was troublesome to bring him houses and oxen every day to the court; and laid further, that it were better that he should stay at Caracaram. Then the Khan sent unto him, laying, if he would see to Ciracaram, and say there near about the church, he would give him all things uncertaints has be manufactiveted. There is not the hot land of termilles hather by a communic of fool and tell that city, wherein are a trouting better thurs her into the source and the party that there is no him as fool copromised was a fool to the party for the party for the care and the source and the source and the party for the care and the party of the party for the care.

chief fecretary, placed him before the court, to whom the Khan fet his children that he should bless them.

54. We came therefore to Caracarum, and while we were in Master William the goldsmith's house, my guide came to me and brought me ten jascots, five of which he lest in Master William's hands, commanding him to spend them on the behalf of the Khan, for the friar's use, while he remained there; he also lest the other five in the hands of my interpreter, commanding him to spend them in the way, for my subsistence; for Master William had given them such instructions without our knowledge. I presently changed one into small money, and distributed it to the poor Christians which were there, for all their eyes were fixed upon us. We spent another in buying things necessary for us, as garments and other things, which we wanted. With the third my interpreter himself bought some things, by which he gained somewhat. We spent the rest, because after we came into Persia sufficient necessaries were no where given us, nor yet among the Tartars, amongst whom we feldom found any thing to be sold.

Master William, Your Majesty's citizen and subject, Lends you a certain girdle set with a precious stone, which they used to wear against thunder and lightning, and most humbly falutes you, always commending you to God in his prayers. We baptized there When we departed from each other, it was with tears, my companion in all fix fouls. remaining with Master William, and I returning with my interpreter, my guide, and one fervant, who had directions to take one mutton in four days for us four. We came, therefore, in two months and ten days from Caracarum to Baatu, and never faw a town, nor so much as the appearance of any house, but graves, except one village, wherein we did not so much as eat bread, nor did we ever rest in these two months and ten days, fave one day, because we could not get horses. We returned for the most part by the same kind of people, and yet through other countries, for we went in the winter, and returned in the fummer, and by the higher parts of the north, except that fifteen days journey we were obliged to go and return by a certain river between the mountains, where there is no lodging but by the river fide. We went two days, and fometimes three, without taking any other food but cofines. Once we were in great danger, not being able to find any people, our provision failing us, and our horses tired.

When I had travelled twenty days, I heard that the King of Armenia had paffed by In the end of August I met with Sartach, who went to Mangu-Khan with flocks and herds, and with his wives and children, yet the bulk of his families remained between Tanais and Etilia. I fent my duty to him, faying; I would willingly stay in his country, but Mangu-Khan would have me return and carry his letters. The answered, that I misk perform the will of Mangu-Khan. Then I asked Consessor the children? He answered they were in the court of Baatu, carefully provided for. Lake asket him favour cloads and books again? The answered, did we not brigg them to Gartach? I find I brought them unto Cartach, but I did not give them unto him, as you know and I put him in family what answered, you say trust, and none can reall rath. Lieft your chocks with my take, who remained near Cara, which is a survitown Baata half made upon Pitts of the sall flatts, lead out press laye sense of the refineers. The first time please sense at the refineers. The art time please sense as the sall flatts, lead out press laye sense of the refineers. The art time please sense as the sall flatts, lead out the please sense of the refineers.

The company of the contract of

ach's answer by this man. I was very careful he should not deceive me, yet I dare not contend with him: late in the evening the man came unto me, and brought two coats with him, which I thought had been all of filk, and he faith unto me, behold two garments, the one Sartach hath fent unto you, and the other, if so it please you, you shall present to the King on his behalf; to whom I answered, I wear no such garments, I will prefent them both to my King, in honour of your Lord. Then faid he, do with them what you pleafe; now it pleafed me to fend them both unto you, and I fend them to you by the bearer of these presents. He delivered me letters also to the father of Coiac to reftore me all which apper ained unto me, because he had no need of any thing which was mine; fo we came to the court of Baatu, the fame day I departed thence a year before, viz. the fecond day after the exaltation of the bleffed crofs, and I found our young men in health, yet much afflicted with poverty, as Gosset told me; and if the King of Armenia had not comforted them, and recommended them to Sartach, they had perifhed, for they thought I had been dead. The Tartars also demanded of them, if they could keep oxen, or milk mares: for if I had not returned, they had been brought into fervitude by those people.

After this Baatu ordered me to come to him, and made the letters which Mangu-Khan fends unto you to be interpreted unto me; for fo Mangu wrote unto him, that if it pleased him to add any thing, or leave out, or change, he should do it. Then said he. Ye shall carry these letters, and cause them to be understood. He demanded also what way I would go, whether by fea or land? I faid, the fea was froze, because it was winter, and I must go by land, for I thought you had been still in Syria, so I directed my journey towards Rersia, for if I had thought you had passed into France, I would have gone into Hungary; for I should sooner have come into France, and by a more easy way than through Syria; then we travelled a month with him before we could obtain a guide; at length they appointed me a certain Jugure, who understanding I would give him nothing, and that I would go forthwith into Armenia, caused letters to be made to conduct me to the Soldan of Turkey, hoping he should receive gifts of the Soldan, and that he should gain more that way; then we took our journey speedily sifteen days before the feast of All Saints, towards Sarai, going directly southward, descending near to Etilia, which is there divided into three arms, every one whereof is almost twice as big as the branch of the river of Nile at Damieta.

It divides afterwards into four leffer arms, so that we passed the river in seven places by boats. Upon the middle branch is the village called Sumerkant, without a wall, but when the river overslows; it is compassed with water. The Tartars were eight years about it before they could take it, and the Alam and the Saracens were nine. There we found one German with his wife, a very good man, with whom Gosset stayed in the winter? for Sartach sent him thither to ease his court. About these parts was Baatu on the one side of the river and Sartach on the other about Christmas, and they go no farther down; and when it bappens that all the river is frozen they pass over. Here is great have of grass, and there among the caves, thieves hide themselves till the ice was a large and a summed with time side, as doing a girdle, and a malian characteristic and an armined with time side, as doing a girdle, and a malian characteristic and the little how where he carrier was all which the creater and the little how where he carrier was all which the well with the side of the restaurance sent the sarting of the state of the sarting of the sarting

a great church by the command of Sartach upon the west side of the river, as he said, and a new town; yet I knew that Sartach meant no such matter. Sarai and the palace of Baatu are upon the east side of the river, and the valley through which the arms of the river are spread abroad containeth more than seven leagues in breadth. There is great store of sish there, a bible also in verse, and a certain book in the Arabian language meanth thirty Sultalines, and many other things I never appropriate

guage worth thirty Sultalines, and many other things I never recovered.

55. After our departure from him on the feast of All Saints, going towards the south until the feast of Saint Martin, we came to the mountains of the Alani, between Baatu and Sarai. In fifteen days, we found no people but one of his fons, who went before him with falcons and his falconers, who were many, at one little village; from the feast of All Saints for five days we met not with fo much as a man, and we were in great danger by reason of thirst, one whole day and a night, finding no water till about three of the clock the next day. The Alani in some mountains yet hold out, so that of ten of the fubjects of Sartach two must come and guard the narrow passages of the hills, left they come forth of the mountains, and carry away the cattle in the plain. Between the Alani and Porta Ferrea, which is two days journey from thence, where the plain of the Alani beginneth, between the Caspian sea and the mountains, there are certain Saracens, called Lefgi, inhabiting the mountains, who likewife are free; fo that those Tartars who dwell at the foot of the mountains of the Alani were obliged to give us twenty men to bring us beyond the Iron Gate, or Porta Ferrea; and I was glad, because I hoped to fee them armed, for I could never fee their armour, though I had been very defirous of feeing it; and when we came to this dangerous passage, of the whole twenty there were but two who had harbergions, and I demanded of whom they had them? They faid they had them of the Alani, who were able workmen in fuch things, and excellent fmiths. I think they have fmall store of armour, but quivers and bows, and leather jackets; I faw them prefented with iron plates, and iron skull-caps out of Persia, and faw two alfo who prefented themfelves to Mangu, armed with coats made of hogs' fkins. bent inward, of rough leather, which were very clumfy and unweildy.

Before we came to Porta Ferrea, we found one castle of the Alans, which was Mangu-Khan's, for he had fubdued that country. There we first found vineyards and drunk wine; the day following we came to Porta Ferrea, or the Iron Gate, which Alexander the Macedonian King made, and it is a city whose east end is upon the sea shore; and there is a little plain between the fea and the mountains, through which the city extends in length to the top of the mountain, which bordereth upon it on the west, so that there is no way above for the ruggedness of the mountains, nor below for the fea, but immediately through the midst of the city, where there is an iron gate, from whence the city hath its name. This city is more than a mile long, and on the top of a hill is a strong castle; and it is as much in breadth as a stone's cast. It hath very strong walls. without trenches and turrets, of large polifhed flones. But the Tartars have defliored the tops of the turrets and the bulwarks of the walls, laying the turrets even with the wall. Below that city, the country was formerly like a paradife. Two days journey from hence we found another city called Samaron, wherein there were many Jews, and when we paffed it, we law walls descending from the mountains to the lear and leaving the way by the less by those walls, because it turns towards the east, we went up into the

high countries towards the fouth.

The next day we passed through a certain valley, wherein the foundations of walls appeared from one moments to another, and there was no way through the rope of the mountains. These were in times pass the inclosures, or walls erected by Alexander for religious, the flere autious, the hepheretros the whiterness, that they could not intacted to be the country of the wilderness.

the inhabited countries and cities. There are also other walls and inclosures where Jews The next day we came to a certain great city called Samach, and after this we entered into a great plain called Moan, through which the river Cur or Cyrus runs, from which the Curgi or Curdi have their names, whom we call Georgians; and it runneth through the middle of Tefflis, which is the metropolis of the Curgines, and comes directly from the west, running to the east into the Caspian sea, and in it are excellent falmon. In that plain we found Tartars again. Also by that plain runs the river Araxes, which cometh from the Greater Armenia, from betwixt the fouth and west, from which it is called the land of Ararat. Whereupon in the book of the Kings it is faid of the fons of Senacherib, that having flain their father, they fled into the And in Isaiah it is said that they sled into the land of land of the Armenians. Ararat. To the west then of that most beautiful plain is Curgia. In that plain the Crosmini were settled formerly. And there is a great city in the entrance of the mountains called Ganges, which was their metropolis, stopping the Georgians that they could not come down into the plain. Then we came to the bridge of boats, which was fastened together with a great iron chain, stretched forth cross the river, wherein Cur and the Araxes met together, but the Cur lofeth its name there.

56. We proceeded thence, till travelling up the Araxes, of which it is faid, Pontem indignatus Araxes, Araxes disdains a bridge, leaving Persia and the Caspian mountains on the left hand towards the fouth, having on the right hand Curgia and the Great Sea towards the west; going all the way southward, we passed through the meadows of Bacchu, who is General of that army which is there within the river Araxes; he has likewife made the Curgi, and Turks, and Perfians, subject to him. There is likewise another governor in Persia, at Tauris, over the tribute called Argon, both which Mangu-Khan hath called home to give place to his brother, who is going into those countries. country which I have described to you is not properly Persia, but was sometimes called Hyrcania. I was in Bacchu's house, and he gave us wine to drink, and he himself drank cosmos, which I would willingly have drank if he had given it me; yet it was the best new wine, but cosmos is more wholesome for a half-starved man as I was. We went up therefore by the river Araxes from the eve of St. Clement until the fecond Sunday in Lent, till we came to the head of the river, and beyond the mountains where it rifeth, there is a good city called Arforum, which belongs to the Soldan of Turkey, and near thereabouts Euphrates rifes towards the north, at the foot of the mountains of Curgia, to whosespring I had gone, but the snow was so great that no man could go out of the common path, and on the other fide of the mountains of Caucafus to wards the fouth rifeth the Tigris.

When we departed from Bacchu, my guide went to Tauris to speak with Argon, carrying my interpreter with him; but Bacchu cauled me to be brought to a certain city called Naxuam, which heretofore was the head or capital of a great kingdom; and the greatest and fairest city in those parts, but the Tartars have made it a wilderness; and there were anciently eight hundred churches of the Armenians there; now there are but two little ones, for the Saracens have delirayed them; in one of which I held the teals of Chrismas as Leonid with our clerk, and the next day following the prieft of the charce died to whose being came a certain bullon with twelve monks from the high countries; for all the pulsops of the Armenians are monks; and of the Greeks likewide or the meltage; The relegionship is they have was a claim a sent they claim where it is happerented and the wife St. Pride: I had been very metage, but there was a configuration of the properties of the properties are made as their properties of the properties of the properties are made as their plants of the plants of the properties of the pr

who, when he died, prophefied of a nation of archers that should come from the north, faying, "That they should conquer all the countries of the east, and should spare the kingdoms of the east, to assist them in obtaining the kingdoms of the west; and they fhall possess the countries from the north to the south, and shall come to Constantinople, and shall take the gate of Constantinople, and one of them who shall be called a wife man, shall enter the city, and seeing the churches and rites of the Franks, shall cause himfelf to be baptized, and shall counsel the Franks how they may kill the Emperor of the Tartars, and there they shall be confounded. Hearing this, the Franks which shall he in the middle of the land, viz. at Jerusalem, shall set upon the Tartars who shall border upon them, and with the help of our nation, that is, the Armenians, shall pursue them; fo that the French King shall place his royal throne at Taurinum in Persia, and then all the east countries and all the unbelieving nations shall be converted to the faith of Christ; and there shall be so great peace in the world, that the living shall say to the dead, Woe be unto you wretches! that lived not until these times." And I read this prophecy brought to Constantinople by the Armenians which remain there, but I made light of it. Yet when I spake with the Bishop, calling it to mind, I regarded it somewhat the more. But throughout all Armenia they as firmly believe this prophecy as they do the Gospel.

He faid to us also, even as the souls in Limbo expect the coming of Christ for their delivery, so do we look for your coming, that we may be freed from this slavery wherein we have so long lived. Near the city Naxuam there are mountains on which they say the ark of Noah rested; and there are two, one greater than the other, and Araxes running at the foot of them; and there is a little town there called Comanium, which is in their language Eight; for they say it was so called of the eight persons which came forth of the ark and built it. Many have attempted to climb the great hills, and could not; and the Bishop told me that a certain monk being very much troubled thereat, an angel appeared to him and brought him a piece of the wood of the ark, bidding him to trouble himself no more. That piece of wood they had in their church as he told me, neither is the hill so high in appearance but the men might well get up it. A certain old man gave me however this worthy reason why no one should climb it. They call that mountain Mass; and as this word is of the seminine gender in their tongue, no

man, faid he, must climb up Massis, because it is the mother of the world

In the city of Naxuam, Friar Barnard, a Catalan, of the order of the preaching friars, found me, who lives in Georgia, with a certain friar of the sepulchre, who possessed great lands there, and he had learned somewhat of the Tartar language; he formerly went with a certain Hungarian friar, who returned with me to Tessis, with one servant; but Friar Barnard remained at Tauris with a certain lay friar, whole language he understood not. We went out of the city of Naxuam, about the Epiphany, for we had stayed long there, by reason of the show; we came therefore in sour days to the country of Sabenda, a Curdish Prince, heretofore inighty, but now tributary to the Pariars, who destroyed all his ammunition, whose father Zacharias possessed hunsels of the country of the Armenians, having delivered them from the bunds of the Saraceas, and there are many fair tillages of true Christians, having churches like the branks; and every Armenian bath to his house in an absonourable place, a weoden hand, bolding a cross, and sets a burning lamp before it; and that which we do with holy water, formkling it to drive away wicked joints, they are the with brankingeness, for severe evening these bina tranking its country wicked joints, they are the with brankingeness, for severe evening these binations as a service of the lifetime, to the most all kinds of crosses a service as a service of the lifetime, to be severe evening the bination of the factors a service of the lifetime, they are the service of the lifetime, they are the service of the lifetime, they are the service of the lifetime of the are lifetimes of the factors a service of the lifetimes to the service of the lifetimes to the service of the lifetimes of the service of the lifetimes of the service of the lifetimes.

he should come to you, you would entertain him; for he is so up by under the dominion of the Tartare, that though he hath a plant of the ting, he had rather travelinto a strange country, than obtain the violent actions. In a faid further, that they were true sons or the church of Rome, and the properties of the church of Rome.

From that town of his 1 file and 1, we entered the country of the Soldan of Turkey, on the first Sun a little and 1 this castle we found is called Marfeu gen; all in the castle we hard imas, formenians, Curgines, and Greeks: the Saracers only have the decision. The the castle foil the castle said, he had received commendance to that to 10 the castle foil to an Theoless, or to the ambassador of the King of Armenia, or to deficious, so that from the place where we were the first Sunday in Lent. Castle to 1, and, whither I came cight days before the feast of St. John the Baptis, we were force I to buy our own provision. He with was my guide procured me horse, and too money for the reducts, and put it in his purse. When he came into the fields, seeing a look, away he went, and without more to do, took one sheep, and gave it to be cast, and wondered I would not take part of his robbery. In the publication, I was in a certain city called 11, it which was Sabelia's whose situation is strong; and there are an hundred Arme ian churches, and two mosques, of the Saracene: the Tortars place an officer there.

At this place five preaching fracts that the, whereas four on he from Provence in France, and the fifth joined himself to them in Syrie, they had but one fick boy who could theak the Tura In language and a lattle French, and they had the pope's effect to Sartach, and to Manguake an, and to Buri, fuch as I had High see gave me letters of request, that they would fuffer them to continue in their country, and preach the would of Cod, Fro. But when I told them what I had feet, and how her fear the back again, they directed their jou ney to Tefflis, where there are himself or their order, to confilt what they should do; I answered them, they might well has by those letters of they would; but they should be well affured, to endure much labour, a number an account of their comag; for feeing they had no other methage but the office of proclams, they would care but attle for them, and chiefly because they had no interpretar; what they did

ter, I know not, and cannot therefore report.

56. On the fecond Sur day in Lent we came to the head of Arakes, and pains beyoud the top of the mountain, we came to Euphrates, by which he defended eight Trys coing to the wett a certain cafile called Camath; where Euphraus bends to the fouth towards Halapia. But we passing the river went through very high an untainous countries, and through the deepest snow to the west. There was so great an carthqueke there that year, that in one city called Arlengan, ten thouland persons, according to their register, perished, beside poor men of whom there was no notice taken. Riding three days together, we faw the gaping of the earth, as it was clert by the earthquake, and the heaps of earth that came from the mountains, and filled the vellies. so that if but a little more of the earth had been moved, that which Isaiah speaketh had been literally fulfilled, "Every valley shall be filled, and every mountain and little hill shall be humbled." We passed through the valley where the Soldan of Turkey was vanquished by the Tartars. It were too long to write how he was overcome; but a fervant of my guide's who was with the Tartars faid, that the Tartars were not above ten thousand in the whole; and a certain Curd of the Soldan's faid that there were two hundred thoufand with the Soldans all horse-men. In that plain where the battle was, there broke out a great lake at the time of the earthquake; and it came into my mind, that all the earth opened her mouth to receive yet more blood of the Saracens. We were in Seraffer a major the Lesser A menia in Easter wells; here we visited the tombs of forty lartyrs; there the church of St. Plase should the but I cold not go thither, because it as allowed in the castle.

On the incoording Sunday we came to Castria of Caspadec's, where there is a I nich of St. Pafil the Great. About fifteen days after, vectore to Iconium, making in journess, and refung in many places, because we could not read ty procure horizon are, gude did this on purpose, taking upon him to solicit his eva business three vanicing town, at which I was much diffatished, but durft not speak because he of the layer fold or flain me and our fireants, and there was none to hinder it. and that y branks at Incorium, and a certain merchant called Nicholas de Sancto ytio, who is a companior of his, a Venetian, called Boniface de Molandino, carried I he allument of Turkey, fo that the Soldan could not fell any but to those two; ed they and it to dor, that what was worth but fifteen Bizantmes, is now fold for II, guide present donce to Soldan; the soldan wid he would willingly cause to be conveyed to the fea of Armenia, or Ci ilia, though the above-mentioned here hant knowing that the Sarreens made little account of me and that I was much burexect with the company of my guide, confed to be conveyed to Curuma, a port I ming to the King of Armenia. I came thither before the Afcention, and flaved "the day after Pentecost; then I heard that ambassadors came from the King to his mier: the fix out freedly to the King's father to demand whether he had heard any e. 1 on is fon. and I found him fit with all his fors, one excepted, called Barum In, who resided in a certain custle, and he received news from his for that he was turned, and that Islangu Khon had much eafed his tribute, and had given him a prethe term of ambaffador fhould come into his country; whereupon the old man himfelf, it fall his ions, made a banquet, and he caused me to be conveyed to the sea, to the wence illed \ij.c; and thence I passed over into Cyprus; and at No of a I found out u vi cial, v ho the same day carried me with him to Antiocha, which is in a very weak We were there on the reaft of St. Peter and Paul, and from thence we me to The li, where our chapter was held on the affumption of the blend Virgin. 50. O I promised being determined that I should have my residence in our conrit at Acci, would not luffer me to come to you; but commanding me to write unto on what I would by the bearer of thefe prefeats; and not during to refull contrary om, obedience, I did, according to my power and undertlanding, craving pardon of our demons for my superficities or wants, or for any thing that shall be indifferently resolified to a lor a man of little underflancing, not accustomed to write long ifto icc. The peace of God which paffeth : I understanding preferve your heart and rtify your nind. I would willight fee Your Highness, and certain spiritual friends, bich I have in your kingdom. Wherefore if it should not be contrary to Your M. fty's liking, I would beforeh you to write to our Provincial, that he would let me ome unto you and return flortly again into the Holy Land. Con- rning Turkey, Your Tajefly shall understand, that the tenth man there is not a Mohammedan, nay, they are Il Armenians and Greeks, and children rule over them; for the Soldan, who was onquered by the Tartars, had a lawful wife of Iberia, by whom he had one feeble fon, oncerning whom he charged that he should be the Soldan. He had another of a treek concubine, whom he committed to a certain great admiral. The third he had y a Turk, to whom many Turks and Turcomans being gathered together, they pro-ofed to have flain all the fons of the Christians. They had determined also, as I uncriftood, that after they had got the victory, they would defroy all the churches, and ill as many as would not become Mohammedans; but he was overcome in battle, and miany,

many of his men slain. He recruited his army however, a second time, and then was taken, and is still in prison. Pacester the son of the Greek concubine, procured soon after that he might be Soldan, because the other was weak whom they sent to the Tartars; whereupon his kindred on the mother's side, such as the Iberians and the Curds, were angry; so that, at present, a child ruleth in Turkey, having no treasure, few soldiers, and many enemies. The son of Vestacius is weak, and at war with the son of Assau, who likewise was a child, and worn out with the servitude of the Tartars. If therefore an army of the church should come to the Holy Land, it were a very easy

thing to subdue all these countries, or to pass through them.

The King of Hungary hath not above thirty thousand foldiers. From Cologna to Constantinople, are not above threescore days journey by waggons; from Constantinople are not fo many days journey to the country of the King of Armenia. time, valiant men passed through those countries and prospered; yet they had most vadiant opponents, whom God hath now destroyed out of the earth, and we need not be in danger of the fea, or the mercy of failors; and the price which we should give for freight were fufficient for expences by land. I speak it considently, if our countrymen would go as the Kings of the Tartars go, and be contented with fuch victuals, they might win the whole world. It feemeth not expedient, as I think, that any friar should go to the Tartars any more, as I did, or as the preaching friars do; but if our lord the pope would fend a bishop in an honourable manner and answer their follies, about which they have thrice writ to the Franks, once to Pope Innocent the Fourth, of facred memory, and twice to Your Majesty, once by David, who deceived you, and now by me, he might speak unto them what he would, and also cause them to put these things in writing, for they hear whatfoever an ambaffador will fpeak, and always demand if he will fay any more; but he must have a good interpreter; nay, many interpreters, and be at large expences.

60. Such is the relation of the monk Rubruquis, who had the best opportunity that any man had to that time, of looking into the assairs of the Tartars, of examining their force, of enquiring into the form of their government, and making himself perfectly acquainted with their manners and customs, of which he has given so large, so curious, and so accurate an account. Before we proceed to our remarks thereon, it may not be amiss to clear up a few difficulties that occur in this relation, and which, for want of being clearly resolved, may occasion some doubts in the mind of our inquisitive reader; and this is the more necessary, because hitherto nothing of this kind has been done, at least in our language; but the relation has been left naked and unsupported to the censure of the peruser, without the least notice taken of those facts that must necessarily embarrals him, and in a great measure affect the credit of the author. I am very sensible, that many of my readers may be of opinion, that I might spare myself some part of the trouble I take in illustrating those old writers; but I beg leave to observe once for all, that it is not either for their interest or mine, that I should do

If I had not been thoroughly laushed that thele travels were the best in their and a spould not have inserted them: builtwith respect to the world, this is not enough a change thravelous in its power to give them what seems to be most proper for lach conscious vet to use it is them, and to myself; to make it as exident as it is putfilled builded reaches been the expelse; and there give them requires which is not truly was to be supposed by individual and to dissolve the force, then two reaches every life threatened in a various power of the expense of the

lars, which, though they were well known in his time, and more especially to the Prince, to whom this work was addressed, yet are so imperfectly known to us, that without a strict search into the histories of those times, it is not easy to conceive, how

they can be reconciled to the rest of his narration.

We will state these plainly, and then the truth of my observation will be manifest. In the first place, it seems extraordinary that the King of France should be so much deceived with respect to the embassy that was sent him from the Tartars, which occafioned the whole of this transaction; but with respect to this, it appears clearly from the historians that have written the reign of St. Louis, that thefe ambassadors came from a Tartar prince called Ercalthay, and brought with them letters which are still extant, and which politively affert, that it was the defign of the Khan to co-operate with the Christians in order to reduce the power of the Mohammedans. At the headof this embaffy was one David, who is named in the letters as one to whom the King of France might give entire credit, to which His Majesty might be more inclined, because he had in his company Friar Andrew de Lontumal, whom the pope had formerly fent into Tartary, and who affured the King, that he had known David in a post of distinction. This ambaffador it was, that positively afferted, that the Khan was become a Christian, and that there was no difficulty in procuring a close alliance between him and. the Christians. Upon this the King first fent Friar Andrew with a considerable number of persons in his train, back with the Tartar ambassadors, in the beginning of the year 1250, but as to the fuccess of this negociation, we have no account. There is another thing a little dark in our author's account, and that is with respect to his character, for though it appears plainly, that he was fent by the King his mafter with letters to Sartach, yet he frequently tells us, that he did not affect to be thought anambaffador, but defired rather to be confidered as a monk, who vifited Tartary from his zeal for the Christian Religion.

His reason for acting thus, was to preserve the honour of the King, from suffering through any ill treatment that he might meet with, to which he was induced by many reasons, but particularly by these two. In the first place, he was perfectly fatisfied, that what had been reported as to the conversion of Sartach was falle; and next because he was aware the Tartars were informed, that the King his master had been beat in Egypt, and taken priloner there by the infidels, whence he concluded, that he flould not meet with a very good reception. He therefore takes great care to inform the King that whatever ulage he received, could reflect no dishonour upon His Majesty, because of the precaution he had taken to assume no higher character than that of a monk, who came to preach the Christian religion to the Partars. But the readers may very probably wonder why the Tartar prince. Ercalthay, should take fuch a step as this in order to milead to great a monarch, and yet, if he adverts to the account our author has given of the genius and dispositions of the Tartars, he will easily perceive. that this was a stroke of their policy, and no very bad one. They had a mind to be perfectly acquainted with the delign of the Franks, their forces, and the manner in which they intended to carry on the war against the Saracens), nor could they fall upon a way more proper than this for accomplishing their ends. The character afterded, by our author of the Terrace, is juilified by all writers, both action and modern; for their policy with respect to foreign construes confile entirely in cuming and subplies for hot having the advertages chatcher passent two or free configurations and configuration becomes with the intrapanties of authorizations is they proper themselves with presenting the file intrapanties of authorizations in the property of the file of the property of the file o is to a compression of the compr

the best accounts they can of the regions in which they reside, in order to countrymen whenever occasion offers as haroing as organic; and as if on these ares in time of peace, so they place their a considere in war in ness of their motion, and in that rapidity with which they over-run even going, actor the inhabitants have time to take programs for their desent

It was for these reasons, and to save the holour of the King his maker author denied that any ambersadors had been fent to the galifian, for he Priar Andrew as feat only to the Prince, who wrote to the Ling his an flar, the great King, or whom it does not appear that the Breach had any just they were derived to them by this relation. We may are to all this, that was something diddent as to the character which Dried a summed, by his sunderstand, that is those days there were a correspond to the people, whemever parts of the world, made a profice of giving the makers out for the Princes they score knew, and make a likelyhood by such strongs exhibit ferms to be fully seriesed that the castern Chair land an general was great vivacity, and so fertile in the rank given by they represent they say

came, to serve then own purpoles.

Upon these principles he grounds the political part of his work, in which to I bour with all his force to Arbifa these two maxin. The first, the either life or honourable to aim at indling allimoss with the Taita's, who fentiments a faced but actable fort of people, very proud of their extraording and who understood all applications made to them as proceeding from 1 ar. that their power was nothing near so great as it had been represented, so the far less dinger he to accrue from the regarding them as cremies, than fr with them as friends, into which notion he was led by observing, that the was not exact, that they were utterly unacquainted with the regular art of w way capable of carrying it on against such as stood upon their guard, and we to meet them in the field with well disciplined armies. That which seems to desenceable part of his work, is his strong attachment to the pope, and tions of his power, both of which, however, are in some measure excusabl ing the agc in which he lived, and the conduct of the popes in those time upon them to excommunicate and depose the greatest princes in Christen case then was with the Emperor, or to send them into the most distant world, under pretences of religion, as appears from the expeditions un his master King Louis, which were as unfortunate in their event, as ill four principles.

But it is now time to add a few observations with respect to the useful work, as it stands in this collection, and to shew how far the travels of contributed to make the western parts of the world acquainted with the parts as well as with what was doing there, and the force of the sever that were in possession of those countries at the time he visited them.

61. The travels of Rubruquis are equally aftonishing in whatever light to sidered. Take them with respect to length, and they extend to upwards fand miles one way, and to near fix thousand another. I mean from Co in his going out, and to Acon or Ptolemais in his return, which is fur ground as it will not be easy to find any man that has traversed, and left an account of what he has seen. But if travels are not so considerable length as from the nature of the constrict that are travelled through, the

i a new prof of the value of this performance, francit in certain no European, except John Carpia even as I'ed and below, neither have a confreedounts of travels of the fame Landance, that any access, which is my in the real feeting, and from which we have received feet in Europe is a right of the course of Clare, and the his no we we had at the elicinations led feels from a pare. We shall appeared this matter netter, if we rais a facility wo of the elicination is all oughts lich our neak passed, by the large day at his a notes appeared in a spirit, if a from Constantinople he failed elicinate Black has to the poet of Constantinople he failed. -elled by had all the reflect the way, this is to fay, field through Crim contary then croffing the great rivers Tanais and Volga, he came in the cor any of Bolgar, and to il a camp of Baatu, thence through the vaft country of the Califolicies, and fo northcaftward to the court of Mangu-Klan, which according to his defeription, must have lein in the latitude of fifty degrees north, or somewhat more, and considerably higher than what is now called the Chinese Tactary. In his actuan he pelied through all the vast defurs of Great Tartary, through the country of the Mogule, and so by the head of the Calpian fea, and then along the well fide of it through the countries of Coorgia, Armenia, Curdi lan, Diarbeck, and to into Syria; all v Lich countries then were, and most of them are still, in the hands of the Partars, of whom he has given us such an eccount as is not only very confifient with itfelf, and carries therein the firongeli marks in veracity, but is very agreeable also to the best accounts we have since received of those countrics.

As our author was not acquainted with the language of the Tartars, and did not remain long enough amongst them to acquire it in that degree of perfection which was necessary to read and to understand their histories, we need not at all wonder at some small errors that have escaped him in points of no great consequence. As for instance, in what he tells us of Zingis-Khan, whom he makes a farrier, as other writers have done a blackfuith. I shall not trouble the reader with remarks of the right spelling of this word Zingis, which I have already given them as it ought to be spelt, and have since conformed to our author's manner of writing it, that the read " might find less difficulty in comparing this with other books of the fame kind. I fay, I shall not insist on fuch trifles, but shall content myself with observing, that Zingis, however spelt, is an adjective, and fignifies properly the glittering or shining of steel; whence sprung the notion, that this Prince was originally of some trade in which iron or steel was employed, because all the Tartars represented him as a man who from low beginnings had raifed himself to universal empire, and aspersed him at the same time, from the confideration of his having deprived them of their freedom and independency; but among the Tartars themselves, this appellation was taken in an honorable sense, Zingis fignifying with them illustrious, and Zingis-Khan fignifies literally the most illustrious monarch.

As to the religion of this Prince, it was undoubtedly that of his country, concerning which we have a great deal in Rubruquis agreeable to what he faw or heard, but not to clearly expressed, as that we should be able to say precisely what is the faith of the Tartars. Our author is certainly in the wrong as to Presbyter John, of whom such a noise has been made in the world, and about whom so little can still be said with any certainty. What led him into the mistake was this; Tujan was the Khan of the Naymans, deseated and killed by Zingis-Khan, and it was from the likeness of his name to John, that our author took it for granted he was that John the priest so well known to the world. But after all, the Presbyter John is still in being, and is no other than the Grand Lama, or supreme pontiff of the Tartars, who resides, as we have before obvolver.

ferved, in the kingdom of Tangut, and is, in the opinion of the whole Tartar nation, The truth of the matter is, that he is an ecclefiaftical Prince, whose fame and credit is very extensive, though his power be very restrained. He resides in a monaftery furrounded by his monks, who, whenever he dies, fupply his place from among themseves, and keep this secret so religiously, that all the Tartars are as firmly persuaded that their Grand Lama lives for ever, as that the fun always shines. This serves to explain another circumftance, that at first fight might feem very idle and ridiculous to the reader, I mean the question put to Rubruquis, whether the Pope was not four or five hundred years old. It is very plain from hence, that they confidered the Pope as the Grand Lama of the West, and having heard the Romish priests insist much on the perpetuity of the church, they referred all this to the person of the Pope, and supposed this spiritual monarch to be immortal like their own.

If I durst avow my own sentiments plainly, I should say, that there is no better evidence of the idolatry of the Tartars than of the Papists; and this without intending any high reflection on the members of the Romish church; for both have images or idols, both feem to worship them, and yet both, when charged with it, absolutely deny the fact. Our author plainly owns, that Mangu-Khan told him expressly he worshipped but one God, and that the Tartar priests, whom he charges very freely with idolatry, difowned it themselves, and affirmed that they reverence their images only, and did not worship them. But after all, it plainly appears, that they kept the secret of their religion fo well, that our author never fo much as heard of the Grand Lama. and confequently could know nothing at all of the grounds of their religion, which, to

deal plainly with the reader, remains full as great a mystery to this day.

It is a point that the Tartars will never be brought to explain in any manner whatever; and after all the pains that I have been able to take in order to obtain some fort of certainty on this head, I am able to fay no more of it than this, that what doctrines the lamas or priests teach publicly, are restrained to these three points: 1. That there is one God the fountain of being, the Creator of all things, the Ruler of all things, and the fole object of Divine worship. 2. That all men in general are his creatures, and therefore ought to confider each other as brethren descended from one common parent. and alike entitled to all the bleffings he bestows, and that therefore it is great impiety to abuse those blessings, or to injure each other. 3. That inasmuch as the common reason of mankind hath taught them to establish property, it is necessary that it should be preferved, and that it is therefore the duty of every man to be content with his own; and to be just to his neighbours. This religion these priests not only teach, but practile with irreproachable exactness; and therefore Rubruquis very fairly owns, that the regularity of their manners hindered the progress of the Christian religion, not because the doctrines of the latter were at all inferior in fancity to those of the former. but because in point of purity of manners the Nestonians and other Christians were very deficient.

After fering this indication the best light we are able, the reader will not find it a all difficult to apprehend a thing that extremely puzzled, not only our author, but al who have wrote of the plans of the Tattars, and it is this that they are abloqued in all defendances of the plans of the Tattars, and it is this that they are abloqued in all defendances of the precision of the plans. It will equal respect, whether Christians of the production of t

our ancient historians, under the several names of Hassessius, Assessius, Ass fanites, and Chasians, and were in truth as odd a fort of people as ever existed. They possessed a tract of country which contained twelve castles and villages in the neighbourhood of Tyre, were a mixed race of men, and for a long time made no profession of any religion, but practifed a loofe kind of Mohammedism, and were tributaries, first to the Knights Templars, and then to the Christian Earls of Tripoly. In the eleventh century they would have declared themselves Christians, if they might have been releafed from that tribute; but this was refused, and they grew thenceforward the most bitter enemies the Christians had.

These people were governed by a Prince styled by our old historians, the old Man. of the Mountain, who finding himself surrounded by states much more powerful than his own, devifed a new and strange way of making himself equally dreadful to his neighbours and to strangers. He gave out, that he only was the true vicar of Mohammed, and that he had the keys of Paradife in his hands; to support which notion, he caused a fine garden to be laid out in a valley near his palace, adorned in every respect, so as to refemble the Paradise of that prophet; he likewise provided a fort of opiate. and whenever he saw a young man of a daring and resolute temper, he sent for him. and promifed him the perpetual enjoyment of all fenfual delights, if he would execute boldly whatever he commanded; and by way of earnest, having given him the opiate to drink, caufed him to be carried while afleep into his garden, where, when he awoke. he found every thing he could wish for, and many beautiful women to attend him: when he had remained there a certain time, the opiate was again administered, and he was conveyed back, when afleep, to the palace, where the Old Man of the Mountain promifed him, that provided he fulfilled all his commands during life, he should dwell after death perpetually in that garden.

By this artifice, he established an order of men ready to venture on whatever he commanded, and when any Prince made war upon him, he dispatched three or four of these young villains to his court, or camp, with instructions to murder him, which they never failed to perform. It was by their hands that Louis of Bayaria was killed in the year 1231, and in 1251 he dispatched four of them with the like commission to the court of Louis IX.; but fuddenly altering his mind, he dispatched four more with counter orders, who made such haste, that they arrived at the French court before the former, and discovering themselves to King Louis, remained always near his person, to preserve him from their companions, whom they likewise discovered at their arrival. and for this fervice the French monarch fent them back to their malter loaded with presents. By this means the Old Man of the Mountain became terrible, even to the most powerful monarchs; and from the practice of his desperate prayos, we have the word affailins, and the phrase of affailination, for murders of this nature. This practice was continued to the time of which our author speaks, a little after which the

whole nation was extirpated by the Tartars.

There are all the facts mentioned in his writings, that feem to stand in need of explanation, unless we except what be has delivered concerning the witchcraft and forceries of the Fariars. As to their we can only lay, that sheysarestill much addicted to fuch tuperlithous, and are thereby exposed, as he has heve us, to make impollures, and abundance of michiels that affend them. But it one particular has michien, which is in confounding the foresters with the landstoop Tarrar profits, whereas they are printe Aufferent pendone. West it energy that the united by the fines space.

If the transfer and the second of the secon

other arts of divination, which have prevailed in politer countries, and which are not perhaps wholly extinguished at this day. What he says in relation to the sprinkling of ashes on the floor, relates to another superstitious custom of the same kind, which gave birth to that kind of fortune-telling called geomancy, which was transferred to Europe; and about which several treatises have been written, and one particularly in our tongue, not many years ago, which I mention to shew not only the probability of what Rubruquis has related, but likewise to demonstrate, that the giving into such foolish practices is not peculiar to such nations as we esteem barbarous; though I shall

readily allow, that it is a mark of stupidity and barbarity wherever it appears.

We have no certain account how this relation of Rubruquis was received by the King his master, but in all probability it was very agreeable to him, since, though that Prince, after his return to France, took all imaginable pains to set the affairs of his kingdom in order, and to reform the abuses that had crept into it during his absence, yet he still retained a strong desire of repairing also the disgrace he had sustained in his former expedition, by renewing the war against the Insidels, which determined him to make another expedition against them, and this, notwithstanding all the opposition that could be made to it, he undertook in the spring of the year 1270. He transported on this occasion a numerous army into Africa, resolving to begin the operations of the war with reducing the kingdom and city of Tunis, to which he laid siege. But before he had made any great progress towards taking the place, the plague broke out in his army, and the King being insected therewith, died on the 25th of August the same year.

The best French historians, as well as those of other nations, condemn these kinds of expeditions as idle and romantic; and yet it cannot be denied, that if this spirit of making war against the Insidels had not been raised at that time, it is more than probable, that the Mohammedans would have over-run the best part of Europe; whereas in consequence of this spirit, they were driven out of Portugal and Spain, to which I must crave leave to add, that the travels of Rubruquis and others into different parts of the East, first inspired that passion for discoveries, which has since produced such mighty effects. Before that time, we knew little or nothing in this part of the world of the situation of distant countries; and those who affected to be thought great wits, laboured to discredit whatever was delivered in relations of this kind, which prevailed in some places; and if it had prevailed in all, we had been at this day as ignorant, as poor, and as much slaves as our ancestors were before that spirit of commerce arose, that has not only discovered both the Indies, but has taught men of courage, that the whole world is their country; and that he who improves useful knowledge, if not properly encouraged at home, will be a welcome guest wherever he goes.

THE

CURIOUS AND REMARKABLE VOYAGES AND TRAVELS

01

MARCO POLO, A CENTLEMAN OF VENICE,

Who in the Middle of the thirteenth Century passed through a great part of Asia, all the Dominions of the Tartars, and returned Home by Sea through the Islands of the East Indies.

[Taken chiefly from the accurate Edition of Ramusio, compared with an original Manuscript in His Prussian Majesty's Library, and with most of the Translations hitherto published.]

1. A fuccinct Introduction to this Work.—2. An Account of the Author from Ramusio and other Writers .- 3. The several Editions and principal Translations that have been published of these Travels .- 4. An Account of the Objections that have been raised against them. — 5. The Characters given of this Performance by several eminent Critics. - 6. The Author's introductory Account, containing an Abridgment of his Travels to the Time of his Return to Venice. - 7. A Description of Armenia the Lesser, of the Country of the Turks, of Armenia the Greater, of the Province of Zorzania, the Kingdom of Mosul, of the City of Baldach, or Bagdat, of the City of Tauris, with an Account of a remarkable Earthquake. - 8. Of the Country of Persia, the City of Jasdi, the City of Cerman, of the Town of Camandu, and of the Country where Rhubarb grows.—9. Of several other Countries, and the principal Curiosities in them.—10. The History of the Assassins, and of the Manner in which their Prince was killed, together with the Description of many other Countries.— 11. Of the City of Samarcand, the Town of Lop, and of the great Defart in its Neighbourhood, with other remarkable Passages .- 12. Of the Province of Camul, and several other Countries to the City of Ezina, and another great Defart.—13. Of the City of Caracarum, and of the Tartars, with a complete History of that Nation, and of their Monarchs .- 14. Of the vast Countries to the Northward of Tartary, and many other curious Particulars. - 15. Of the great Power of Cublai-Khan, of his Government, Family, Dominions, &c .-16. Of his Palace in the City of Cambalu, a particular Description of that City, and other remarkable Observations .- 17 Of the Magnificence of the Court of the Grand Khan, and of the Manners and Customs of his Subjects - 18. A copious Account of the Countries between the Place of his Residence, and the Country of Thibet - 19. A large Description of the last mentioned Province, and of many others, with an Account of the Observations made by the Author in his Progress through them.—20. Of the Proxince of Mangi, and of the Manner in which it was reduced under the Power of the Tartars, together with an Account of the Provinces and Cities afterwards reduced. under their Dominion.—21. Of the noble City of Quinfai, and of the wast Revenues drawn from thence by the Emperor of the Partate.—22. Of the Island of Zepangris. and of the Attempt made by the Tarrars to conquer it, and their Miscarriage in them. a.s. A large Account of marious Countries, Provinces; Cities, and Islands in the East indies.—24. Of the great Island of Ceylon, of the Kongdom of Malabar, and the State of other Countries related by the Author.—25. Girthe Kingdom of Marfill, a Diamond Menus Dieres, part abore Countries approxist—20, Lit bit Hand of Atabase

car, the Country of Ethiopia, and other Parts of Africa. — 27. Of the Province of Aden, and of several Countries reputed to be inaccessible. — 28. Many obscure Passages in this Performance explained. — 29. Remarks and Observations.

1. IT is with ancient writers as with ancient coins, such as understand them value them above measure, while such as will not be at sufficient pains to examine them, not only despise them, but also such as admire them. Thus none are more governed by prejudice than those who declaim against it, and none greater bigots than such as are attached to their own opinions, from a notion that they think freely. Yet this zeal for freedom of thought ought to be amended rather than discouraged, as being in itself commendable, though sometimes dangerous, by being misapplied. It may, and to say the truth, to many it does seem a tedious and disagreeable labour to look so far back as the first springs and dawnings of knowledge; yet, however, they may colour this with pretences to refined taste, it is in fact no better than an excuse for idleness, and a dislike to the taking those pains which are requisite to succeed in such enquiries.

The travels of Marco Polo are indeed very old, and are come into our hands with confiderable defects, but they are very valuable for all that, and very well worthy of our attention. He was the Columbus of the East Indies, the first that gave a certain and diffinct account of the fea beyond China, and of the free paffage thereby through all the islands of the East Indies, back into those countries that are very well known. It is true, that a great part of what he related, though delivered with much folemnity, and confirmed by the strongest affeverations, was much called in question, and thought in some measure beyond all belief. But subsequent discoveries have banished this incredulity, and what were once efteemed fables have been fince found true relations; and the discourses of Marco Polo, that were rejected by the supercilious wits of his own time, have been raked out of the dust of old libraries, decyphered in a manner from the barbarous Latin of monkish translators, and brought into the form we now have them by the indefatigable pains of the learned Ramufio; a man whose countenance alone might be fufficient to give credit to this, or any other work; though from the notes we have added, it will appear that there are intrinsic marks of its value in the performance itself: yet we owe to Ramusio the being able to discover these, and therefore to him we willingly ascribe all the glory that results from the vindication of this curious piece, and the honour of its illustrious author. To the same excellent person is due the account we have received of several particulars relating to the per-Ional history of Marco Polo and his family, of which in as few words as possible we shall give the reader a relation; which, though not absolutely necessary to the understanding of the book, will be found uleful and entertaining.

2. Signior Nicolo Polo, the father of our author, and his brother Signior Maffio, began their travels from Constamnople in the year 1250, and having proceeded to the court of the Grand-Klamoof Tartacy, resided there for many years, and returned, as the readen will see, to evenice about the year 1200, where they found the wife of breaght Nicolo deceased, and her for, of whom the was left by at the time of their departure, a well accomplished youth, of nineteen years of age. Him they carried that will she is the readen of them and after having spent events in years more without an experimental precess of them by their transfer of specific court is for states as a substitution of the readen accomplished which are the specific court in the states of th

of the memory of their family and acquaintance, but having lost in a manner the very tokens of their country, being become Tartars in their speech as well as their habit, and therefore under a necessity of taking some extraordinary steps to recover the respect and reverence due to them, by convincing the world that they were really noble Venetians, and the individual persons who had been so long lost to their country and friends.

It was with this view that they gave a magnificent entertainment to their relations, at which they all three came forth in rich fuits of crimion fatin; of which, when the guests were seated, they stripped themselves, and gave them to the servants; appearing next in crimion damask, these also they put off at the last service, and bestowed likewise on the servants, being then dressed in crimion velvet. When dinner was over, and all who waited withdrawn, Marco Polo brought out their coats of Tartarian cloth or felt, and out of their foldings produced an incredible quantity of rich jewels, among which there were some well known to those present, and which indisputably proved these strangers of the Polo family. Signior Mathio Polo became a worthy magistrate:

of Venice, and lived and died in peace.

As for our author Signior Marco, a few months after his return, the Genoele: Admiral Lampa Doria coming with a fleet of seventy gallies to the island of Curzola, they fitted out from Venice, under the command of Andrea Dondalo, a great naval: force, in which he had the command of a galley, and was fo unlucky as to be taken. prisoner and carried to Genoa, where he remained in spite of all the offers that were made for his ransom several years; so that his father, despairing of his return, and defirous that his own offspring might inherit his riches, married a fecond time, and had. three children. In the time of this imprisonment all the young nobility of Genoa reforted to our Marco to hear the recital of his voyages and adventures, which gave them fo great fatisfaction, that one of them prevailed upon him to fend for his notes from Venice; and when thus affifted, wrote from his own mouth the following history in Latin; from whence it was translated into Italian; and this Italian was again translated into Latin, and abridged; whence grew that prodigious corruption to justly complained of in the first printed copies. This work of Marco's was supported by the testimony of his father, and by that of his uncle on his death bed: At last Marco himself obtained his liberty, returned to Vénice, married, and had two daughters. Moretta and Fautina, but had no male iffue. He died as he lived, beloved and admired by all who knew or conversed with him; for with the advantages of birth and fortune he was humble, and made no other use of his great interest in the state than to do good.

3. We have already shewn, that this work was originally written in Latin, and if not by the author's hand, at least from his mouth; but after the Italian vertices that was made of it, the copies of the Latin manufcript became extremely rare, informach that the Italian translation was taken for the original. One Francis Pepin, a monk, translated it into Latin, and abridged it at the command of his superiors, and it is a copy of this manufcript that is in the library of the King of Prussa. It was printed at Balil by the care of the celebrated Reinecius, and atterwards in other places. It was from one of these copies has it was translated by Hakhin, of which Purches is heavily, and at the fame take to milly complains. Ramulio took a great dept of pains, as well in restoring the sense of the text of our author, as in jultify up his character, and the porting the credit of his work by his learned eligionries. He was afulfied therein by copy of the original Latin manufcript, which was deni for by his friend his action by the first of the manuforship with was deni for by his friend his action.

ne now leat

There has been, befides the translations already mentioned, at least two in the German language. It was printed in Portuguese at Lisbon in 1502, and it has been several times translated into Dutch. I have been the more particular in the account of these additions and translations, because they differ very much from each other; so that the only way to come at a complete view of the author, is by collecting and comparing these; a work of infinite pains and labour, in which however we have the affistance of Andrew Muller, a learned German critic, and of Peter Bergeron, a Frenchman, who, next to Ramusio, was, of all others, the most capable of such an undertaking, and has succeeded in it the best.

There was, however, one thing wanting, which was the justifying the dates, verifying the facts, and explaining the obscure names of places which occur in these travels; and this we have done to the best of our ability in this translation, so that the reader may be satisfied that he has the work of this ancient writer as intire, and in as

good condition as it was in our power to give it him.

4. There have been abundance of objections raised against the credit and authority of this writer, many of which, as they were founded on the errors of transcribers and translators, are taken away by restoring our author's genuine sense, and therefore we need not mention them particularly; but there are others which deferve more regard. It is faid, that our author mentioned fome countries and many places that were never heard of before or fince. A shrewd objection this, inasmuch as it seems to represent all the pains that has been taken about his writings, as entirely thrown away. In answer to this we must observe, that he wrote according to the lights he received, and those lights were chiefly from the Tartars; whence it might very well happen that the names of places mentioned by him should appear strange and uncouth in this part of the world. But it fo happens, that we have fince received fuch helps as enable us to get pretty well clear of this difficulty; for though we have retained in the text the names used by our author, yet we have afforded, from the affistance given us by oriental writers, fuch explanations as remove, in every respect, these geographical obscurities. fo as to leave no fort of doubt either as to the capacity, or the veracity of Marco Polo.

Another charge against him is, that he does not agree with other writers, or rather other writers do not agree with him: but when examined to the bottom, this charge will not be found to have any great weight, as having chiefly arisen from the mistakes made as to the true lense of what this writer delivered; so that very often, what was imputed as ignorance to him, was, in fact, no more than temerity in those who pretended to find fault with them. The last, and indeed the greatest objection is, that he has related many things that are absurd, some that are incredible, and not a few that are impossible. Against this charge we cannot pretend to vindicate him, though much may be said to excell him. The facts he tells us of his own knowlede are surprisingly verified by authoric and indisputable evidence; and grant that he might be imposed upon in what he gives us on the authority of others, we must be content, the rather because it is our happiness to live in an age when men are less lights to be cheated and mised; therefore this ought to make us the more ready to bear with sallings in one wine was ed this advantage, who lived in a time of darkness and observer, when creating patients for lights and when consequently errors in this fort were rather a finite magnetic time the lights.

productivate de la collectivate de la collectivate

Munster, the learned naturalist Conrad Gesner, the accurate historian Leunglavius, the celebrated Joseph Scaliger, and many others. The learned German critic William Schickard, in his history of the Kings of Persia, gives our author this character: "Marco Polo, the Venetian, fays he, is a very good writer, and those things which he reports, and were heretofore thought incredible, are now verified daily by later difcoveries." But of all who have undertaken the cause of our author, none has done it with greater capacity, with more good will, or better fuccefs, than Father Martini, to whom we owe the best description of China, and who was consequently a better judge than any other of the merit or demerit of this work. He affures us, that there is not the least reason to doubt the truth of our author's relations on account of the obscurity of the names of places; for, says he, he wrote them after the Tartar pronunciation, whereas later writers study to imitate as well as they are able the pronunciation of the Chinese.

I will add to these but one testimony more, which is that of an author very able to have detected him, if he had caught him in untruths, and who was far enough from being tender of men's reputations if he thought them to blame. The author I mean is Athanasius Kircher, who in his account of China confesses, that none of the old authors have more fully or more accurately described the remotest countries of the east than Marco Polo has done; yet he readily admits, that there are many things in him fo very dark, that they may be in a manner stilled inexplicable; but then, with great good fense and candour, he attributes this to the author's want of skill in geography and astronomy; and if we consider how young he was when his father carried him into Tartary, and how little opportunity he had of acquiring that fort of knowledge that was most necessary for preventing those mistakes, we may easily concur in opinion with fo many eminent and learned writers, that in confideration of the many curious and ufeful paffages in his writings, these blemishes, especially as they were in a manner unavoidable, may very well be forgiven. After having thus cleared the way, we will no longer detain the reader from the perulal of these travels, which their author has thus digested. He first gives a succinct account of his father's and uncle's peregrinations, and then of his own; after which, he enters into a more particular description of the countries and places through which they passed, and relates also such remarkable things as he was informed of in the course of his voyages.

6. At the time that Baldwin was Emperor of Constantinople, in the year of our Lord 1250, two gentlemen of the most illustrious family of Paolo or Polo, at Venice, embarked on board a veilel freighted with various kinds of merchandize on their own 's account; and having traverled the Mediterranean and the Bolphorus, they came with a fair wind, and the bleffing of God, to Constantinople. There they continued for C fome time to repose themselves, and then crossing the Pontus Luxinus, arrived at a certain port called Soldadia, from whence they went to the court of a great Tartar prince, called Barha, to whom they shewed the fine jewels they had brought, and presented him with some of the most valuable. That monarch was far from being ungrateful; he kindly accepted their prefents, and in return gave them others of greater value. They remained a full year at his court, and then disposed all things of their return to Venice. But before they had an opportunity of departing, there dispose a war-between this Prince Barba and another Tariar king, whose many was chian and this injute being decided by a fairle time army of Barneway de-feated. This status is accident expectably majoritated the Senement with street appropriate mentions of this or how of presentably back from from properties of the tangents however, the source deletiment of element properties, they call to constitute the L.Vota VII.

country where they were, and by feveral by-roads escaped to a city called Guthacam. feated on the river Tygris. They continued their journey from hence through a great defart, where there were neither inhabitants nor villages, till at last they arrived at Bochara, a confiderable city on the confines of Persia. It was, at the time of their arrival, the refidence of a Prince called Barach, in whose court, meeting with a good reception, and not knowing how otherwise to dispose of themselves, they remained three years. At that time a certain person of distinction was sent ambassador from the faid Prince Alan to the Great Khan, who is the fuperior monarch of all the Tartars, refiding in the remotest countries of the earth, betwire the north-east and the east, called Cublai Khan; who coming to Bochara, and finding there these two brethren, who were now well verfed in the Tartarian language, he rejoiced exceedingly, and perfuaded these men to go with him to the great Emperor of the Tartars, knowing that he should gratify him in this, and that they also should be entertained with great honour, and rewarded with large gifts, especially seeing, through the conference had with them, he perceived their pleafing behaviour. These men therefore, considering that they could not eafily return home without danger, confulting together, agreed to go with the faid ambaffador, and accompany him to the Emperor of the Tartars, having certain other Christians in their company, whom they brought with them from Venice; and departing towards the north-east and the north, were a whole year in going to the faid court of the faid King.

The cause of their long time spent in this journey, was the snows and waters being much increased, so that they were forced in their travel to stay the wasting of the snow, and decreasing of the floods. Being therefore brought before the presence of the Great Khan, they were most courteously received by him. He questioned them concerning many things; as of the countries of the west, the Roman Emperor, and other kings and princes, how they carried themselves in government, and in warlike affairs; how peace, justice, and concord continued among them; also what manner of life and customs were observed among the Latins, and especially of the Pope, of the Christians, of the church, and of the religion of the Christian faith; and M. Nicholo and M. Maffio, as wife men, told him the truth, always speaking well to him, and orderly, in the Tartarian tongue; infomuch that he often commanded they should be brought to his presence, and they were very acceptable in his fight; having well

understood the affairs of the Latins, and resting satisfied with their answers.

The Great Khan intending to lend them his ambaffadors to the Pope, first confulted with his great lords, and then calling to him the two brethren, defired them to go to the Pope of the Romans, with one of his barons called Chogatal, to pray him to fend an hundred men learned in the Christian religion unto him, who might shew his wife men that the faith of the Christians was to be preferred before all other lects, and was the only way of falvation, and that the gods of the Tartars were devile, and that they, and others, the people of the east, were deceived in the worthin of their gods. He gave them also in wheree, to bring, in their return from lerutalem, of the oil of the king which burneth before the lepulcine of our Lord Jelus-Chrit, Towards whom he had press develope and held him to be the true God; they therefore yielded due reservors to the Court King, promise that they would fairfully exclude the charge constant about their charge promises that they would fairfully exclude the charge constant about their land, and thereas the letters which they received from they encated in the Estapolation according to the configuration and the Estapolation according to the configuration of the con

conveyed through dangerous places, by the governors of provinces and cities, and receive their expences from them; and lastly, how long soever they would stay in any place, whatsoever they needed, for them or theirs, should be furnished them. Taking their leave therefore of the Emperor, they took their journey, carrying the letters and golden tablet with them; and when they had rid twenty days journey, the lord who was associated with them, began to fall grievously sick; whereupon consulting, and leaving him there, they prosecuted their intended journey, being every where courteously received, by reason of the Emperor's tablet; yet in many places they were compelled to stay, occasioned by the overslowings of the rivers, so that they spent three years before they came unto the port of the country of the Armenians, named Giazza; from Giazza they went to Acre, about the year of our Lord 1269, in the month of April.

But having entered into the city of Acre, they heard that Pope Clement the Fourth was lately dead, and that no other was substituted in his place, for which they were not a little grieved. At that time there was a certain legate of the apostolic see at Acre, viz. Master Tibaldo Nisconti di Piacenza, to whom they declared all they had in commission from the Great Khan, and he advised them to expect the creation of a new Pope. In the mean space therefore departing to Venice to visit their friends, Master Nicolo found that his wife was dead, whom at his departure he had left with child, but had left a son named Marco, who was now nineteen years of age. This is that Marco who composed this book, who will manifest therein all those things that he hath seen. The election of the Pope of Rome was deferred two years. They fearing the discontent of the Emperor of the Tartars, who expected their return, went back again to Acre to the legate, carrying with them Marco aforesaid, and having gone to Jerusalem, and setched the oil with the legate's letter, testifying their sidelity to the Great Khan, and that a Pope was not yet chosen, they went again towards Giazza.

In the mean time messengers came from the cardinals to the legate, declaring to him that he was chosen Pope, and he called himself Gregory. Hearing this, he presently sent messengers to call back the Venetians, and admonishing them not to depart, prepared other letters for them, which they should present to the Great Khan of the Tartars, with whom he also joined two preaching friars, men samous for their honest conversation and learning. The one was called Friar Nicholo Davicenza, the other Friar Gulielmo de Tripoli; to these he gave letters and privileges, and authority to ordain priests and bishops, and of absolution in all cases, as if himself were present, with presents also of great value, to present to the Great Khan, together with his benediction. They came to Giazza; a sea-port in Armenia, and because Bentiochdas and the Sultan of Babylon, leading a great army, then invaded the Armenians, the two friars above mentioned began to be asraid of themselves, and delivering the letters and presents to Signiors Nicolo, Masso, and Marco, desiring to avoid the danger of the ways and peril of wars, remained with the master of the temple, and returned with him.

But the three Venetians expoling themselves to all danger, with many labours and much difficulty, travelled many days always towards the north-east and north, all they, after three years and a baif, came to the Emperor of the Taxar's great city of Clemes tally; for in the winter time offer journey had onen long hindrances by realon of the land and extreme cold, with mundations of vaters. However, King Cubia heaving of their coming, though they were very far off, lent mellingers to be a days journey to meet them, who Though they were very tax off, lent mellingers for it days journey to meet them, who Though they were very tax off, lent mellingers for it days journey.

Going therefore to the King's court, and being brought to his prefence, they fell down before him on their faces, yielding the accustomed reverence; of whom being courte-ously received, they were ordered to rise, and he commanded them to declare how they passed the many dangers of the ways, and what they had treated with the Bishop of Rome; then they related it distinctly and at large, and gave the Emperor the Pope's letters and presents, which they brought; at which the Khan wonderfully rejoicing, commended their faithful cares. The oil also brought from the Lord's sepulchre, and offered unto him, he reverently received, commanded it should be honourably preserved, and asking of Marco, who he was? Master Nicolo answered, that he was His Majesty's servant, and his son; he entertained him with a friendly countenance, and taught him to write among other of his honourable courtiers; whereupon he was much esteemed of all the court, and in a little space learned the customs of all the Tartars,

and four different languages, being able to write and read them all.

The great Khan, to make his wisdom more apparent, committed an ambassage unto him to be performed in a city called Carachan, unto which he could scarcely travel in fix months' space; but he carrying himself wisely in all things, discharged what he had in commission with the commendation and favour of the Prince, and knowing the Emperor would be delighted with novelties, in the places which he passed through, he diligently fearched the customs and manners of men, and the conditions of the countries, making a memorial of all that he knew and faw to divert the Great Khan; and in fixand-twenty years which he continued one of his court, he was so acceptable to him, that he was continually fent through all his realms and figniories for the affairs of the Great Khan, and fometimes for his own, but by the Khan's order; and this is the true reason that the said Master Marco learned and saw so many particulars relating to the East, which follow in order in these memoirs; but these Venetians, having stayed in that court many years, and grown very rich in jewels of great value, were inspired with defire to visit their country, fearing that if the Khan (now old) should die, they should not be able to return. One day Master Nicolo, seeing the Khan merry, craved licence to depart in the name of all the three: whereat he was moved, and asked why they would put themselves on so dangerous a journey, and if they wanted riches, he would give them twice as much as they had, and out of pure affection would not permit their

Yet not long after it happened, that a King of the Indians, named Argon, sent three of his counsellors unto the court of the great Cublai, whose names were Ullatai, Apulea, and Coza, to treat with him, that he would deliver him a wife; for his wife, named Bolgana, being lately dead, begged this favour of the King at the point of death, and left in her will, that he should not marry a wife of another family than her own, which was of Catha. King Cublai, therefore, yielding to his request, caused to be sought out for them a fair young marker of seventeen years of age, named Cogalin, descended of the former Queen's family, to be she wife of Argon. Those amballadors departing sour seath mouths the same way they cause, but found bloody wars among the Tanars to that they were constrained to return, and acquain the Great Khan with their processings. It she are a late Master Marco had returned from those parts of India, where he has been considered with the Marco had returned from those parts of India, where he has been considered with the Venezhos, and accurate to the Khan the importance of the places. And the length was an agreed to the Khan the importance of the places. And the latest the constraint has a surface of the cours of the first the constraint has considered with the Venezhos, and agreed that the court of the cours of the constraints.

and caufed Nicolo, Maffio, and Marco to come into his prefence, and after much demonstration of his love, would have them promife to return to him after they had spent some time in Christendom, and in their own house; and he caused to be given them a tablet of gold, in which was written his command for their liberty and security through all his dominions, and that expences should be given them and theirs, and a guide or convoy for safe passage, ordering also that they should be his ambassadors to the Pope,

the Kings of France and Spain, and other Christian Princes.

He caused fourteen ships to be prepared, each having four masts, and able to bear nine fails in failing, the form of which is too long here to be related; four or five of them had from two hundred and fifty to two hundred and fixty mariners in each of In these ships the ambassadors, the Queen, with Nicolo, Massio, and Marco. fet fail, having first taken leave of the Great Khan, who gave them many rubies, and other precious flones, and their expences for two years. After three months they came unto a certain island called Java, and from thence failing through the Indian sea, after eighteen months they came into the country of King Argon; fix hundred men of the mariners, and others, and but one of the women, died in the passage; but only Coza of the three ambaffadors furvived. When they came to the country of King Argon, they found that he was dead, and that one Chiacato governed the kingdom for his fon, who was under age; they fent to acquaint him with their bufinefs, who answered, that they should give her to Casan the King's son, then in the parts of Arbor Secco, in the confines of Persia, with fixty thousand persons for the guard of certain passages against the enemy. Having done fo, Nicolo, Maffio, and Marco returned to Chiacato, and staid there nine months.

After this taking leave, Chiacato gave them four tables of gold, each a cubit long, and five fingers broad, of the weight of three or four marks, in which were written, that in the power of the eternal God the name of the Great Khan should be honoured and praised many years, and every one who should not obey should be put to death, and his goods conficated. In them were further contained, that these three ambasis dors should be honoured, and service done them in all lands and countries as to his own person, and that horses, convoys, expences, and necessaries should be given them; all which was so duly put in execution, that sometimes they had two hundred horses for their safeguard. In this their travel, they heard that the Great Khan was dead, which took from them all defire of returning thither.

They rode till they came to Trebizond, and from thence to Constantinople, and after

to Negropont, and at last came with great riches lase to Venice, A.D. 1295.

Here ends the historical introduction of our author, which shews us how he came to be qualified for writing the following description of the remotest countries in the East. The reader will naturally observe, that our author wrote under very particular circumstances, as having no other knowledge than what he acquired amongs the Tartars and therefore, though the harsh and uncough names that occur in the subsequent relation of his travels, may both disfigure and perplex them, yet they very plainly prove the snocenty and authority of our author's writings, since taking things as he has listed them, it was simply impossible that he should have written them any otherwise than as they fand; for it was his hard to to travel with the Tartars, and to pen the belowy of his travels in a prison, to that their imperfections ought not to be alleged to the man, but so his arguments.

es as l'Highe pre tres demissions, the Creating tree die . de liberthe Letter Ambendation Unity mention in a citra called Schaller englished all autematics d'internation lice dan part protennature. The Ringston dieté fire parts dies l'atrettes l'abdications des foil also is fertile, and the country abounds with every thing necessary, nor is there any want of game or wild-fowl; the air indeed is not very good. The gentlemen of Armenia, in times past, were stout men, and good soldiers, but are become now effeminate and nice, giving themselves up to drunkenness and riot. There is a certain city in this kingdom seated near the sea, which is called Giazza, having an excellent haven, whither merchants resort from divers countries, and even from Venice and Genoa, on account of several sorts of merchandize brought thither, especially spices of sundry kinds, and abundance of other valuable goods brought thither out of the east countries; for this place is, as it were, the settled mart of all the east *.

In Turcomania are three forts of nations, viz. the Turcomans or Turkmen, who observe the law of Mohammed: they are men illiterate, rude, and savage, inhabiting the mountains, and inaccessible places, where they can find pastures; for they live only by their cattle. There are good horses in this country, which are called Turkish horses: mules are also in that country of great estimation. The other nations are Grecians and Armenians, who possess the cities and towns, and bestow their labour on merchandize and arts. They make the best carpets in the world, and they have many cities the chief whereof are Cogno, Iconium, Cæsarea, and Sebaste, where St. Basil suffered martyrdom for Christ, and they acknowledged one of the Khans, Kings of the Tartars, for their lord.

Armenia the Greater is a very large province, tributary to the Tartars, and hath many cities and towns, the chief city whereof is called Arzugia, and the best buckram in the world is made there. Most wholesome hot waters also spring there for the washing and curing of mens' bodies; and the other more famous cities next to the metropolis are Argiron and Darziz. In the summer time many Tartars resort there with their flocks and herds, drawn thither by the fatness of their pastures; and again in the winter depart for a certain time, by reason of the abundance of snow. The Ark of Noah remained in the mountains of this Armenia.

This country hath the province of Moxul and Meridin bordering on the east; but on the north is Zorzania, in the confines of which a fountain is found, from which a liquor like oil flows, and though unprofitable for the feasoning of meat, yet is very fit for the supplying of lamps, and to anoint other things; and this natural oil flows constantly, and that in plenty enough to lade camels. In Zorzania is a King called David Melic, or King David; one part of the province is subject unto him, the other pays tribute to a Khan of the Tartars; the woods there are of box-trees. The country extends to the two seas, Marmaggiere, or the Euxine, and that of Baccu, or the Calpian, which containeth in circuit two thousand eight hundred miles, and is like a lake having no communication with other seas. In it are many islands, cities, and castles, some of which are inhabited by those that field from the Tartars out of Persa;

The people of Lorzana are Christians, observing the lame rices with other Christians. They keep the hair short like the western clergy; the inhabitants have many clies; and their country abounds with filk of which they make very fine manufactures. Moving a pravince in which there are many form of people, some casted Aristians, are Hohannessans of acre are Christians; fitting Methorans, others states and sales are partners called Jacobs, who ordans are the

bishops, bishops, and abbots, and sends them through all parts of India, and to Cairo and Baldach, or Bagdat, and wherever Christians dwell, as is done by the Pope of Rome; and all the stuffs of gold and silk called musleims are wrought in Moxul.

But in the mountains of this kingdom dwell the people called Curdi, of whom some are Nestorians, others Jacobites, and some followers of Mohammed; they are wicked men, and rob merchants. Near to them is another province called Mus or Meridin, wherein grow great quantities of cotton, whereof they make buckrams, and other works; they are subject to the Tartars. Baldach, or Bagdat, is a great city, in which resided the great Khaliss, that is the Pope of all the Saracens; a river runs through it, from whence to the sea is accounted seventeen days journey. They sail by a city called Chiss; but before they reach the sea they come to Balsora, about which grow the best dates in the world. In Baldach, or Bagdat, are many manufactures of gold and silk. There are wrought damasks and velvets, with figures of various creatures; all the pearls in Christendom come from thence. In that city is an university, where is studied the law of Mohammed, physic, astronomy, and geomancy. It is the chief city in those parts.

When the Tartars began to extend their conquests, there were four brethren, the eldest of which, Mangu, reigned in Sedia. These purposing to subdue the world, went one to the east; another to the north; to the south a third, which was Ulan; and the other to the west. In the year of our Lord 1250, Ulan having a great army of one hundred thousand horse, besides foot, used policy, and having hid a great part of his men, brought, by pretending slight, the Khaliss into his ambuscade, and took him and the city, in which he found infinite store of treasure, insomuch that he was amazed. He sent for the Khaliss, and reproved him, that in that war he had not provided himself with soldiers for defence, and commanded that he should be inclosed in that tower

where his treasure was, without other sustenance*.

This feemed a just judgment from our Lord Jesus Christ on him; for in the year 1225, seeking to convert the Christians to the Mohammedan religion, and taking advantage from that place of the Gospel, "That he which hath faith, as the grain of mustard-feed, shall be able to remove mountains." He summoned all the Christians, Nestorians, and Jacobites, and propounded to them in ten days to remove a certain mountain or turn Mohammedans, or be slain, as not having one man amongst them which had the least faith. They therefore continued eight days in prayer: after which a certain shoemaker, in consequence of a revelation made to a certain bishop, was fixed upon to perform it. This shoemaker, once rempted to lust by light of a young woman, in putting on her shoe, zealously had subsided that of the police, and literally had put out his right eye. He now on the day appointed with other Christians followed the cross, and litting his hands to heaven; prayed to Gost to have mercy on his people, and then with a loud voice commanded the mountain in the name of the Holy Tringy to remove; which presently, with great thereof to the Christians of the Holy Tringy to remove; which presently, with great thereof to the Christians all his neople was effected, and that day is since kept holy by fathing allows the evening before it.

3. If the isaggregation in the province of Hugania, and is a mail populate place. The inhabitant live by the exercise of are and appropriately as they make stuffs of gold and like; buring merchants rending there make very great gain, but the inhabitants.

^{*} These is nothing reserve much result to our suppose relation as these digitalistic facts which are no cause of larger vertically after relations. If he prince is neglicial one finites have a larger relation of the prince of

are generally poor. They are a mixed people of Nestorians, Armenians, Jacobites, Georgians, Persians and Mohammedans: these last are persidious and treacherous, thinking all well gotten which they steal from men of other religions; and this wickedness of the Saracens had converted many Tartars thereto. If the Christians kill them in their robbery, they are reputed martyrs. From Tauris into Persia are twelve days journey. In the confines is the monastery of St. Barasam, the monks whereof are like Carmelites; they make girdles which they lay on the altar, and give to their friends, who devoutly esteem them. Persia containeth eight kingdoms, whereof the first is called Casbin, the second Curdistan, the third Lor, the fourth Sussitan, the fifth Spahan, the sixth Shiras, the seventh Soncara, the eighth Timochaim, which is near Arboresecco towards the north. They have sine horses here, whence they are sold into India; there are also very excellent asses fold dearer than the horses, because they eat little, carry much, and travel far. They have camels, but not so swift. These are

necessary in those countries, which sometimes for a long way yield no grass *.

The people of those countries are very wicked, covetous, thieves, and murderers, professing the faith of Mohammed. Merchants are every where flain by those thieves, unless they travel in caravans. There are excellent artificers in the cities, who make wonderful things in gold, filk, and embroidery. The countries abound with filkworms, wheat barley, millet, and other kinds of corn, and plenty of wine and fruits; and though their law forbids wine, yet they have a gloss to correct or corrupt the text, that if they boil it then it changeth the taste, and therefore the name also, of wine, and may be drank. Iasdi is a great city in the confines of Persia, where there is great trade; it hath also many manufactures in filk. Chaiman is a kingdom in the confines of Persia to the east, subject to the Tartars. In veins of the mountains stones are found, commonly called Turquoifes, and other jewels. There also are made all forts of arms and ammunition for war, and by the women excellent needle-works in filks, with all forts of creatures very admirably wrought therein. There are the best falcons in the world, very swift of flight, red-breasted, and under the train less than those of other countries. Proceeding further, you go through a great plain, and having ended eight days journey, you come to a certain descent. In the plain are many castles and towns, but in that steep descent are many trees, and those fruitful, but no habitation, except a few shepherds huts. This country in winter time is intolerably cold. After this you come into a large open plain, where a certain city is feated, which is called Camandu. heretofore large and populous, but now destroyed by the Tartars, and the country is called Reobarle. There grow pomegranates, quinces, peaches, and other fruits, which grow not in our cold countries. It hath also very great oxen, and all white, thin haired, with thick, short, blunt horns, with a camel's bunch on the back, accustomed to bear great burthers; and when the pack-faddles are let upon the bunch, they bow their knee like camels, and having received the burthen, rife again, being to taught. The theep of that country are as big as affes; having to long and broad tails, that they weigh thirty pounds weight. They are very fair, and fat, and good meat.

Moreover, in the plant of this country are many cities and towns, with high walls of

Moreover, in the plain of this country are many ones and towns, with high walls of seath to delend them from the Caraons, that is, Meltizos, that is a mixed for of people between tighten women; and Taxaons, ten thouland of which are commanded by one

Nugodar, the nephew of Zagathai, who formerly ruled in Turkestan. This Nugodar, hearing of the Malabars subject to Soldan Asiden, without his uncle's knowledge, went and took Dely with other cities, erected a new seigniory, and mixing with the Indian women, raised these Caraons, which go up and down to rob and spoil in Roobarle, and other countries. The plain whereof I now speak is sive days journey, extending towards the south; but at the end thereof the way begins by little and little to descend for twenty miles together, and the road itself is very bad, and not without danger by reason of thieves. At length you come to very good plains, which extend themselves

two days journey in length, and the place itself is called Ormus.

That country abounds with rivers and palm-trees; there is also plenty of divers fowls. especially poppin jays, which are not like ours. From hence you come unto the ocean wherein an island is feated called Ormus, to which many merchants refort, bringing spices, pearls, precious stones, cloth of gold and filver, elephants' teeth, and all other precious things from India. That city is a great mart, having cities and castles under it, and is head of the kingdom of Chermain. The King is called Ruchined Ben. Achomach, who yields obedience to the King of Chermain. He makes himfelf heir, if any merchant dies there. In fummer, by reason of the heat, they betake themfelves to their fummer-houses, built in the waters; and from nine till noon there blows a wind with fuch extreme heat from the fands, that it swallows a man's breath, and ftifleth him, which makes them lie in the water. The King of Chermain fent an army of fixteen hundred horfe, and five thousand foot, against the Lord of Ormus, for not paying his tribute, which were all furprized, and ftifled with that wind. The inhabitants of the place eat no bread made of corn, or flesh, but feed upon dates, salt fish and They have not very stout ships, for they do not fasten them with iron nails, by reason the wood is brittle, and would cleave; but with wooden pins, with certain threads made of the shells of Indian nuts. These shells are dressed after the manner of leather, out of which threads are cut, of which threads exceeding strong cords are made which are able to endure the force and violence of the waters, and are not eafily corrupted thereby. Those ships have one mast, one fail, one beam, and are covered but with one deck. They are not calked with pitch, but with the oil and fat of fishes; and when they cross the sea to India, carrying horses and other freight with them, they lose many ships, because that sea is very tempestuous, and the ships are not strengthened with iron *. The inhabitants of that country are black, and have embraced the law of Mohammed. It is the custom of this country, when any master of a family dies, that the wife left behind him should mourn for him four years, once a day. They have women which profess the practice of mourning, and are therefore hired to mourn daily for their dead. Returning from Ormus to Cherman, is a fertile plain, but the bread made there cannot be eaten, but by fuch as are accultanted thereto, it is to bit. ter, by realon of the water put therein: here are excellent hot baths, which cure many difeafes.

9. From Chermain, in three days riding, you come to a defart, which extends to Cobinham, feven days journey from thence. In the first three days you have no water, save a few ponds, and those salt and bitter, of a green colour in thew, as if it were the said of horses, and whoever talteth but a little thereof, cannot escape a loosenes; the side also happenethal any talte the fait made of the water: it is therefore.

It is very evident from this account, that our author extends the pane of Orms to the spull of polite to the plantile called a grid as to the action country he thesis off in its plantily the possess of Abernal.

Come between the cost and north-east from hence, the country is fruitful; but the inhibitalism and mindress, pristious Mohammedans, and drunkards. Their wine is boiled, and truly excellent. They go bare-headed, save that the men bind up their heads with a certain string of ten hands-full long; but they make clothing of the skins of the wild beasts, such as breeches and shoes, and use no other garments. After three days journey is the city Seassom, seated in a plain, and there are many castles in the mountains round about it: a certain great river as o slows through the middle thereof. There are

Q 2 many

It is necessary to observe, that those people inhabited several mountainous countries in the east, and had in uch the same customs in all the countries when they were lettled. At the close of the former section, I gave some account of this nation, and shall only add here, that the Prince was called the Old Man of the Mountain, because they generally made choice of the oldest man amongst them for their chief, who had his residence on a mountain, the strongest and best fortised in the country. They pretended to be the day industry if the royal samply of Arsaccs, and from thence assected to be called Arsacces, from whence came the world Assassing. The last of their Princes was called Moadin, and he and his subjects were entirely destroyed by the before mentioned Halaku-Khan.

many porcupines in that country, which they hunt with dogs, and they, contracting themfelves with great fury, cast their prickly quills at men and dogs, and wound them. That nation hath a particular language, and the shepherds abide in the mountains, having made caves for their habitations. You go hence three days journey, without meeting any inhabitants, to the province of Balaxiam, which is inhabited by Mohammedans, who have a peculiar language. Their Kings, who succeed each other hereditarily, are reported to have derived their descent from Alexander the Great, and from the daughter of Darius, and are called Dulcarlen, that is to say, Alexandrians. There

are found the ballaffas, and other precious stones, of great value.

No man, on pain of death, dare either dig fuch stones, or carry them out of the country, but with the licence and confent of the King; for all those stones are the King's, and he only fends them to whom he pleases, either as presents, or in payment of tribute: he exchanges also many for gold and filver; and this he doth left the stone, whereof there is so much plenty, should become too common and cheap. Other mountains also in this province yield stones called Lapis Lazuli, whereof the best azure is made, the like is not found in the world. These mines also yield filver, brass, and lead. The country itfelf is very cold: there are many horfes, and those excellent, large, strong, and swift, which have so hard and tough hoofs, that they need no iron shoes, although they run over rocks. It is faid, that not many years ago, there were horses of the race of Alexander's Bucephalus, which had the fame forehead mark as he had, in the possession only of the King's uncle, who was killed for refufing the King to have fome of them; whereupon bis widow, in fpite, deftroyed the whole race. There are also excellent falcons. The foil of this country bears excellent wheat and barley without husk, and oil made of nuts, and mustard, which is like flax-feed, but more favoury than other oil. There are straight passages and difficult places. The men are good archers and huntsinen, clothed in beafts' fkins. The hills are steep and high, large plains, fine rivers; and if any have an ague, by living two or three days on the hills he recovers, which Marco experienced himself after a year's sickness. The women in the skirts of their garments put fixty or eighty yards of cotton; the burlier a woman looks, she is in their eyes the handsomer.

The province of Bascia is ten days journey towards the south from the country of Balexiam. The country itself is very hot, which is the reason the people are brown. They have a language of their own, and wear gold and silver ear-rings, with pearls and other stones artificially wrought in them; they eat fish and rice, and are idolaters, crafty, and cruel. The province of Chesmur is seven days journey distant from Bascia, the inhabitants whereof have also their own language, and are idolaters beyond all others, cunning inchanters, forcing their idols to speak, and darkening the day. From hence you may go to the Indian sea. The men and women are brown, not wholly black; the heat being somewhat tempered. Their food is sless and rice, yet are they exceedingly lean; there are many cities and towns in this country; their king is tributary to none. There are certain hermits in this province, who in monasteries and cells worship idols, honouring their gods with great abstinence of meat and drink, and observe great chastity, are very cannous not to affend their idols, and live long; of these are many reputed laints, and the people shew them great reverence. The men of dus province kill no bring creature and she due thought their golds, and if they can she had another some that the creature. Coral is time fold dearer than any traces. Beyond Basician and direct coral same southers are same to the same southers.

idth three days journey, the inhabitants whereof have a peculiar language, and wor-Mohammed. They are however flout warriors and good hunters, for the country unds with wild beafts.

f you depart thence betwixt the north-east and the east, you must ascend for three ole days together, until you come to an exceeding high mountain, than which there aid to be none higher in the world. There also between two mountains is a great , and through a plain runs a very fine river, near which are excellent pastures, so in them a lean horse or an ox may be fat in ten days. There is also plenty of wild fts, especially exceeding great wild sheep, having horns, some of them fix spans 5, of which they make divers kinds of vessels. The plain contains twelve days ney in length, and is called Pamer; nor is there any habitation there; and travelmust carry victuals with them. No bird also appears there, by reason of the cold; it is reported, that if fire be kindled there it is not so bright nor so effectual to boil thing as in other places. From hence the way leadeth forty days journey further ween the east and north-east, through the mountains, hills, and valleys, in which ny rivers are found, but no village or herbs, and the country itself is called Palow, fome huts and cottages of men are feen on the tops of those high mountains, but n as are favage and wicked idolaters, who live by hunting, and are clothed by the is of the beafts they kill. After this you come to the province of Chascar, which is utary to the Great Khan, and the people are Mohammedans. In it are vines, pleagardens, fruitful trees, cotton, flax, and hemp, and a fertile foil. The inhabitants e a particular lan uage, and are merchants and artificers, so covetous, that they eat t which is bad, and drink worfe. Some Nestorian Christians are found there, who have their churches. The country extends itself five days journey.

:1. Samarcand is a great and famous city in that country, where are lovely gardens, l a fertile plain. It is subject to the nephew of the Great Khan; in it the Christians ell with the Saracens, whence little agreement is betwixt them. It is reported, that this account a miracle happened; the brother of the Great Khan, named Zagatai, o governed that country about an hundred years ago, being persuaded to become a riftian, the Christians, through his favour, built a church in honour of St. John the ptift, with fuch cunning, that the whole roof thereof was supported by one pillar in midft, under which was fet a fquare stone, which, by favour of their Lord, was en from a building of the Saracens. Zagatai's fon fucceeded after his death in the gdom, but not in the faith, from whom the Saracens obtained that the Christians uld be compelled to reftore that ftone; and when they offered a fufficient price, Saracens refused to receive any other composition than the stone; whereupon the ar lifted up, that the Saracens might take away their frome, and fo continued.

Departing again from this city, you come into the province Charaban, about five is journey in length. This province hath plenty of provisions, being subject to the minion of the nephew of the Great Khan. The inhabitants worthin Mohammed among them certain Nestorian Christians dwell. They are great attificers, and re most of them swelled legs, and a great wen or bunch in their throat, by reason of waters which they drink. The province Cotam follows between the east and the th-call. It is lubject to the dominion of the nephew of the great Khan, and hath ny clues and towns. The chief city thereof, is called Cotam. The province exde eight days journey in length. I here is no wait there of any thing needful to the intenance of side. It hath plenty of course, flax, being, corne, and sine; this the ple are not wantike. Not good applicate to various manufactures and merchinera evacknowledge Wichausaid for their seculies.

Proceeding farther through the same country, you come to the province Peim, extending four days journey in length; it is subject to the Great Khan, and hath many cities and castles; the chief city thereof is called Piem, near which runs a river wherein precious stones are found, such as jaspers and chalcedons. The inhabitants of the country follow the law of Mohammed, and are artificers and merchants. There is a custom in this province, that when any married man goeth into another place and returneth not home in twenty days, it becomes lawful for the wife to marry another husband; and the men also, whensoever the women go away for the same time, do the like. All those provinces, viz. Cascha, Cotem, Piem, to the city of Lop, are in the bounds of Turkestan.

Ciascian is subject to the Tartars; the name of the province and chief city is the same it hath many cities and castles; many precious stones are found there in the rivers, especially jaspers and chalcedons, which merchants carry quite to Ouchach to sell and make great gain. From Piem to this province, and quite through it also, it is a sandy soil, with many bad waters, and sew good. When an army passes through this province, all the inhabitants thereof, with their wives, children, cattle, and all their houshold-stuff, sly two days journey into the sands, where they know that good waters are, and stay there, and carry their corn thither also to hide it in the sands, after harvest, from the like fears. The wind doth so deface their steps in the sand, that their enemies cannot find their way. Departing from this province, you are to travel five days journey through the sands, where no other water almost than that which is bitter is any where to be found, until you come to the city called Lop, which is a great city, from whence is the entrance of a great defart, called also the Wilderness of Lop, seated between the east and north-east. The inhabitants are Mohammedans, subject to the Great Khan.

In the city of Lop, merchants who defire to pass over the defart, cause all necessaries to be provided for them; and when victuals begin to fail in the defart, they kill their affes and camels and eat them. They make it mostly their choice to use camels, because they are fustained with little meat, and bear great burthens. They must provide victuals for a month to cross it only, for to go through it lengthways would require a year's time. They go through the lands and barren mountains, and daily find water: yet it is sometimes to little that it will hardly suffice fifty or a hundred men with their beafts; and in three or four places the water is falt and bitter. The rest of the road. for eight-and twenty days, is very good. In it there are not either beafts or birds; they lay, that there dwell many ipirits in this wildernels, which caule great and marvellous illufions to travellers, and make them perith; for it any itay behind, and cannot lee his company, heiliall be called by his name, and to going out of the way is loft. In might they hear as it were the note of a company; which taking to be theirs, they periff likewife. Concerts of mulical inframents are forcetimes heard in the air, likewife drams and police of armies. They go therefore close together, hang belis on their besitemeck, and let marks, if any frant

[.] A fine de la caral galeta de novembros dal restant de finos namera, dise collébogem mena. Por de la propieta de la caracter de la caracter

Having passed over the desart, you come into the city Sachion, betwirt the east and north-east, subject to the Great Khan, in the province of Tangut, where, amongst the worshippers of Mohammed, a few Nestorian Christians are found; many idolaters are also there, who have their proper language. The inhabitants of this city live not by merchandize, but on the fruits of the earth. The city hath many monasteries, consecrated to divers idols, in which many facrifices are offered with great reverence: and when a fon is born to a man he presently commendeth him to some idol, and in honour thereof nourisheth a sheep that year in his house, which he presenteth before it, together with his fon, the next festival day of that idol, with many ceremonies, and great reverence. Afterwards the flesh of the sheep is boiled, and left so long before the idol till their prayers are finished, which they make for the conservation of their son; and the idol hath, as they suppose, sucked the savour of the meat; after which, all his kindred being gathered together, eat the flesh at home with great devotion and joy, but religiously keep the bones in certain vessels. The priests have the feet, head, inwards, skin, and

fome part of the flesh for their share.

In celebrating the funerals of fuch as were men in esteem, the dead bodies are buried after this manner; the kindred fend for the aftrologers, and tell them what year, month, day, and hour he who died was born, who, having confidered the confellation, assign the day when he is to be buried; so that when the planet suits not, they preferve the dead body fometimes feven days, and fometimes fix months, preparing a cheft for it at home, and joining the fides together with fuch art that no noisome finells iffue forth. They also embalm the body itself with spices, and cover the cheft, fairly painted, with embroidered cloth; and every day that the dead corple is kept at home. at the hour of dinner a table is spread near the chest, wine and meat let thereon, for the space in which one might eat a meal's meat, supposing that the soul of the dead feedeth on the fayour thereof. The astrologers sometimes forbid to carry it out of the chiefgate, pretending some disastrous star, and cause them to carry it out another way, and fometimes break the wall which is opposite to that place, which the planet makes more lucky; for otherwise the spirits departed would be offended, and hurt those of the house; and if any such evil happen, they ascribe it to the dead thus wronged. When the body is carried through the city to be buried without; wooden cottages are erected in the way, with a porch covered with filk, in which they place the body, and let before it bread, lieft, and delicate meats, supposing the spirit to be refreshed therewith, which is held to be constantly present at the burying of the body; and when they come to the place where the body is to be buried, they diligently and curiously paint upon papers made of the bark of trees the images of men and women, horses, camels, money; and garments, all the inftruments of the city founding, which are burned together with the dead body; for they fay that dead men thall have formary mendetvants, and maidlervants, carrie, and money in another life, as pictures were turned with him, and shall perpetually live in that bonour and riches.

12. The growning of Cappai helb in the wide country of Langus, tubic classifie Great Khain having many cases and names, the chief city is called Camob. This province is beginded by two designs, w. the grandering of which we have booken before and control this is less as three cases covered. It designs with alternates to me convent, and the part of this. The chains are holdings there are peculiar lenguage, that he gas to be presented by the chains are holdings. The chains are holdings there are peculiar lenguage, that he gas to be presented by the chains are holdings to be presented by the chains are holdings to be presented by the chains are holdings to be presented by the chain of the chains are holdings and control of the chain of the chain

all the family, that as long as he will abide with them, they obey him in all things. In the mean time he departs, and returns not follong as the guest remains at his house; and during all this space, the stranger lies with the wife, daughter, and the rest, as with his own The women of the country are beautiful, and ready to obey all these commandments of their husbands, who are so besotted with this folly, that they think it a glorious thing for them, and believe it so acceptable to their idols, that through their favour thus obtained, they prosper, and enjoy plenty of all things. Mangu-Khan, having heard of this folly, commanded them not to observe this detestable custom any longer, and accordingly they forbore it for about three years; and then not feeing their wonted fertility, and troubled with some domestic crosses, they sent ambassadors to the Khan, and earnestly intreated that he would revoke so grievous an edict, and not abolish that ancient cuftom which they had received from their ancestors. The Khan answered, since you defire your reproach and shame, let it be granted you; go and do herein after your wont. The messengers returning with this answer, brought great joy to all the people;

and this custom is observed by the whole nation to this day.

After the province of Camul, a traveller entered the province of Chinchintalas, which on the north is bounded by the defart, and is fixteen days journey in length, subject to the Great Khan. It hath large cities, and many castles; the people are divided into three fects; fome few acknowledge Chrift, and these are Nestorians; others worship Mohammed; and the third fort adore idols. In this province there is a mountain, wherein are mines of fteel, and andanicum, and also, as was reported, salamanders, of the wool of which cloth was made, which if cast into the fire cannot be burned; but that cloth is in reality made of stone in this manner, as one of my companions, a Turk, named Curifar, a man endued with fingular industry, informed me, who had the charge of the minerals in that province. A certain mineral is found in that mountain, which yields thread not unlike to wool; and these being dried in the sun, are bruised in a brazen mortar, and afterwards washed, and whatsoever earthy substance sticks to them is taken Lastly, these threads so cleansed, are spun like other wool, and woven into cloth; and when they would whiten those cloths, they cast them into the fire for an hour, and then take them out unhurt whiter than fnow; after the fame manner they cleanse them when they have taken any spots; for no other washing is used to them, befides the fire. But with regard to the falamander, or the ferpent, which is reported to live in the fire, I could find nothing of fuch a creature in the east countries. They say there is a certain napkin at Rome woven of falamander wool, wherein the handkerchief of the Lord is kept wrapped up, which a certain King of the Tartars fent to the Bishop of Rome *.

After you are past this province, you travel on between the east and north-east ten days journey, in which few habitations or things remarkable are found, and then you come to the province Succir in which are many villages and towns; the chief city is called Succir. In this province, among many idolaters, a few Christians are found; they are subject to the Great Khan. They do not addict themselves to merchandize, but live on

It absents from hemory that our author was not quite to orecatops as fone other weggers who have as used to the present the following the subject of the present the following the subject of the present the following the subject of the subject of

the fruits of the earth. The best rhubarb is found in this province in great quantities, which is carried thence by merchants to divers parts of the world. Strangers dare not go to the mountains where it grows, by reason of venomous herbs, which if their beasts should eat, they would lose their hoofs; but those of that country know and avoid them.

The general name of this province, and of the two following, is Tangut: Campion is a great city, the principal in the country of Tangut. In it are Christians, which have three great and fair churches; Mohammedans, and idolaters. The idolaters have many monasteries, where they worship their idols. Those idols are made either of stone, wood, or clay, fome of which are inlaid with gold, and very artificially wrought. Some are so great, that they contain ten paces in length, fastened to the earth, as if they lay upright, near which little idols are placed, which feem to give reverence to the greater, and both are much worshipped. The religious men seem to live more honestly than other idolaters, abitaining from whoredom, and other base things; yet wantonness is not held there any grievous fin; for they fay, if a woman sues to a man, he may use her without fin, but not if he first fues to her. They reckon the whole compass of the year by moons. In the moons they observe in fome five, in others four or three days, wherein they kill no beast, or bird, nor eat flesh. The laymen marry twenty or thirty wives, or as many as they are able to maintain; yet the first is accounted more worthy, and more legitimate. The husband receives no dowry from the wife, but he himself affigns fufficient dowry in cattle, fervants, or money, according to his ability. If the wife becomes hateful to the hufband, it is lawful for him to divorce her from him when They take for wives, without fcruple, their kinfwomen or mothers-in-law. he pleases. Our author, together with his father and uncle, remained a year in this city for the difpatch of certain affairs. From the city Campion you proceed twelve days journey to the city Ezina, bordering on a fandy defart towards the north, being fill in the province or kingdom of Tangut. Many camels are there, and many other beafts and animals of feveral kinds. The inhabitants are idolaters, living on the fruits of the earth, neglecting merchandize, or manual labour, other than hufbandry. All the provinces and cities aforefaid, Sachion, Camul, Chinchintalos, Succair, Camion, and Ezina, are comprehended in Tangut.

Caracarum, a large place, which is in compass three miles, strongly fortified with earth, for stone they have none. Near it is a great castle, and in it the Governor's fair palace. This was a place, near which in old times the Tartars assembled themselves, and here therefore we will declare how they began to reign. They dwelt in the north parts, viz. in Curza and Bargu, where are many vast plains, without cities and towns, but abounding in pastures, rivers, and lakes. They had not a prince of their nation, but paid tribute to a vertain great king, named, as I have heard in their language. Umcan, which, in some men's opinion, in our language signifies presbyter, or priest some. To have the Tartars gave yearly the tenths of all their beasts. In process of time the Tartars to increased in multitudes that Umcan was atraid of them, and thought to disperse them must several parts of the world, and therefore when any of them rebelled, he tent three or four hundred Tartars into those parts, so dimining their power; and the like be did on other occasions, deputing some of their hobbits for that purpose. They being their rules intended, and lother the separaced one score unstaller, went first the places where they dwelt to the detail towards the more consistent they are they dwelt to the detail towards the more they dwelt to the detail towards the more consistent they dwelt to the detail towards the more consistent they dwelt to the detail towards the more consistent they dwelt to the detail towards the more consistent they dwelt to the detail towards the more consistent they are they dwelt to the detail towards the more consistent towards the more consistent towards the more consistent towards the more consistent towards the more consistent.

tion acculiance or buse

It happened, that about the year A. D. 1162, the Tartars having continued for some time in those parts, chose a king among themselves, a wise and valiant man, named Zingis-Khan; he began to reign with such justice, that he was beloved and feared of all as a God rather than a Prince, insomuch that his same brought all the Tartars in all parts to his subjection, and he seeing himself Lord over so many valiant men, determined to leave these desarts, and commanding them to provide bows and other weapons, began to subdue cities and provinces, in which conquests he placed such just governors, that the people were not displeased. The chief of them he carried along with him, bestowing on them provisions and gifts. Seeing therefore that he was advanced to so great glory and power, he sent ambassadors politicly to Umcan, to entreat that he would bestow his daughter upon him to be his wife, which he taking in very evil part, answered with indignation, and rejecting the ambassadors of Zingis, said, "Doth my servant demand my daughter? Get ye out of my sight, and tell your master, if he ever make such demand again, I will make him die a miserable death."

But King Zingis levying a great army, marched boldly, and encamped in a certain great plain named Tanduc, fending unto the King, and fignifying unto him that he should defend himself; but he commanding a mighty army, descended to the plains, and pitched his tent within ten miles of the camp of the Tartars. Then Zingis commanded his astrologers to shew him what event and success the battle should have. They cutting a reed lengthwise, in two parts, stuck the pieces by themselves into the ground, and wrote upon the one Zingis, and the other Umcan, and said unto the King, In the mean space while we read, it shall come to pass, by the idol's power, that these two parts of the reed shall sight together, and whose part shall fall on the other, the King shall obtain victory in the battle. The multitude therefore running together to behold that spectacle, the astrologers began to mumble their prayers and read their inchantments; when presently the parts of the reed being moved, sought together, until the part of Zingis ascended upon the part of Umcan; which being seen by the Tartars, assured of the future victory, they were encouraged to the battle, and Umcan being slain, the victory and kingdom, and Umcan's daughter, remained to Zingis.

Zingis reigned fix years after this, in which he conquered many provinces; and lastly, when he endeavoured to win a certain castle called Thaigin, and came somewhat too near, being shot in the knee by an arrow, he died, and was buried in the mountain Altai. The first King of the Tartars was called Zingis, the second Khen-Khan, the third Bathyn-Khan, the fourth Esu-Khan, the fifth Mangu-Khan, the fixth Kublai-Khan, whose power is greater than all his predecessors, having inherited theirs, and adding by conquest in a manner the rest of the world; for he lived near fixty years in his government. The name Khan signifieth Emperor. All the great Khans and Princes of the blood of Zingis are carried to the mountain of Altai to be buried, wheresoever they die, although one bundred days journey from it; and they which carry the corpse to the burial kill all those that they meet in the way, saying. Go and serve our Lord the King in another life subject that they meet in the way, saying. Go and serve our Lord the King in another life subject that they meet in the way saying. Go and serve our Lord the King in another life subject that they meet in the way saying. Go and serve our Lord the King in another life subject that they meet in the way saying the mountain Altai to be buried, the preference of Khan-Kublai, was brought unto the mountain Altai to be buried, the lockers accompanying the funeral are reported to have slain above ten thousand meet upon the mountain and the said also the said of the s

PROPERTY OF THE PROPERTY OF TH

The Tartarian women are most faithful to their husbands. Adultery is the greatest shame amongst them; yet it is accounted lawful and honest that every one may marry as many wives as he is able to maintain, although the first be looked upon as principal, and more honourable than the rest. These live together in one house, without one ill word, in admirable concord, make their merchandizes, buy and fell, and procure all things necessary to their husbands and houshold, the men meddling with nothing but their hunting, hawking, and things pertaining to arms. They have the best falcons in the world, and also dogs; they live only on flesh and milk, and what they take in hunt-They eat horses, camels, dogs, if fat; and drink mares' milk, called cosmos, so managed, that it is like white wine. If the father dies, the fon may have all his wives, except his own mother and fifters; fo the brother being dead, it is lawful for the brother who remaineth alive to marry the widow of his deceafed brother. The hulbands receive no dowry of the wives, but they themselves assign dowry to the wives, and their Through the multitude of their wives, the Tartars have many children; nor mothers. is this multitude burthenfome, feeing they gain much through their labour; befides they are very careful for the government of the family, and the preparation of their food, and with no less care execute the other duties of the house; but the men apply themselves wholly to hunting, fowling, and the exercise of arms.

The Tartars feed many herds of oxen, flocks of sheep, and other beasts and cattle, and remain with them in places of pasture, in the summer time, in the mountains, and colder places, where they find pasture and wood; but in the winter, they remove to the hotter countries, where they find pasture for their cattle, marching forwards two or three months together. Their houses are covered with sticks and felts, and are commonly round, which they carry with them in carts or waggons, with four wheels; for they can fold and extend them, set them up and take them down; and they turn, wherefoever they go, the door of those moveable houses always to the south. They have also neat carts of two wheels, covered with felt, so close that the rain cannot pierce through them, drawn by oxen and camels, wherein they carry their wives, children, and necessary houshold stuff, and defend them from the injury of soul weather and rain.

The Tartars, if they be rich, are cloathed in fables, ermins, and cloth of gold, and all their furniture is costly. Their arms are bows, swords, pole-axes, and some lances; but they can best use their bows, to which they are used from their childhood: they are hardy, active, brave, but somewhat cruel, will continue two days and nights on horse-back armed, exceeding patient, and obedient to their Lords; their cattle also are strong and hardy. The law and faith of the Tartars is this, they say, that there is one Great God, supreme in heaven, of whom with daily incense, they define good understanding and health. They have another which they call Naugay, which is a little mage covered

Emperor's will, would have exalted Ugadar Khan to that dignity, which he ablantely refused, became he had an nucle and two effect protters having. This impute talked forty days earnest a great council in elder and gauged became see up and faid. You have nearly an enterer will, your modelly find not conder as githly or implety, we will execute his will, if you will not; and to taking him one by one arm and the other by the other they forced him and the imperial fair ground his content. A 1D 1 are 1 May Prince died and only an exact. with felt, or some other thing, which every one hath in his house. To this God they make a wife and children, placing the wife's image at the left hand, and the representations of the children before his face. This they call the God of earthly things, which keeps their children, and their beasts, and corn, and give it great reverence. Before they eat themselves, they anoint the mouths of the images with fat of the sodden slesh; and they cast the broth out of doors, in honour of other spirits, saying, that now their God with his family has had their part; and after they eat and drink at pleasure.

If the fon of a Tartar die before he has been married, and the daughter of another die also unmarried, the parents of the deceased meet together, and celebrate a marriage between the dead, and making a draught in writing of that contract, they paint men and women for servants, horses, and other creatures, with cloaths of all forts, and monies in paper, and burn them together with the contract; by the smoke whereof they say that all these things are carried to their children in another world, where they are married; and the sathers and mothers conceive they are joined together in such a bond of affinity, as if these marriages had been celebrated while the married couple were still

living.

When the Tartars go to war, their Prince conducts about a hundred thousand horse, appointing heads over tens, hundreds, thousands, and ten thousands, by which subordination commands are easily maintained; every hundred is called a tuc, every ten a toman: when they begin their march, they send out men every way as scouts, that no enemy affault them unprovided. Of horses and mares every man has about eighteen. They carry also their selt-houses, under which they shelter themselves in times of rain. When there falls out some important employment, they will ride ten days together without victuals dry or boiled, and live on the blood of their horses, cutting a vein, and sucking it. They have milk dried like paste, which they make by boiling the milk, and skimming the cream which swims on the top, into another vessel, and make butter; afterwards they set the milk in the sun, and dry it, and when they go to the army, carry with them about ten pounds thereof, and every morning a man takes about half a pound, and puts it in a slask, or leather bottle, with as much water as he pleases, which while he rides, mixes together, and this is his dinner.

When they encounter with their enemies, they ride here and there shooting, and sometimes make a shew of slight, shooting as they sly; and sinding the enemy broken, rejoin their forces, and pursue the victory, having their horses so at command, as with a sign to turn any way. But now the Tartars are mixed and confounded, and so are their fashions. They punish malefactors after this manner; if any steal a thing of small value, and is not to be deprived of life, he is seven times beaten with a cudgel, or seven-teen, or seven and twenty, or thinty and seven, or forty-seven, giving the strokes according to the measure and quality of the offence, and that unto an hundred: some die shrough these strokes. But it any have stoken an horse, or other thing, for the which he deserves to die, he is cut afunder with a sword in the mindle; but it he will redeem he he may by restoring the steel nine-fold. Such as have horses, oxen, or camels, brind them with their marks, and send them to sed in the passives without a keeper. France the city of Caracarner and the monitor of sed in the passives without a keeper to make a started search extends rich process are called searces, and they are images to the Great

they may live in the winter; for in winter fowls as well as other living things fly from thence on account of the extremity of the cold.

14. After forty days journey you come to the ocean, near which is a mountain, where storks and fine falcons breed, which are carried thence unto the court of the Great Khan. Here we must return unto the city Campion; if therefore you proceed farther five days journey from the city Campion towards the east, you come to the kingdom of Erginul, in the province of Tangut, subject to the Great Khan. In this kingdom are many idolaters; there are fome Nestorian Christians and Turks; as also many cities and castles, of which Erginul is chief. From hence, if you proceed farther to the fouth-east, you may go to the parts of Cathay. Going fouth-east towards Cathay, there is a certain famous city named Cinguy, the name also of the province, tributary unto the Great Khan contained in Tangut; the people are some Christians, fome Mohammedans, and others idolaters. There are also found wild oxen, very near as big as elephants, very fair, having white and black hair, short in other parts, and on the shoulder three palms long, fine, white, and in many respects beyond filk, of which hair our author brought fome to Venice as a rare thing. Many also of these oxen are tamed, and made to couple with tame kine, and the breed of them are fitter for business than any other countries, bear great burthens, are yoked to the plough, and do twice as much fervice as others.

The best musk in the world is found in this province, and is taken from a beast of the bigness of a goat, having hair like a stag, feet and tail like a gazel, but without horns. It hath four teeth, two above and two beneath, of the length of three fingers, as white as ivory, and is a very beautiful creature. When the moon is at full, near the navel, under the belly, there grows to this beaft an imposthume or bladder, full. of blood, and at the full moon they go to hunt them, and take away that fwelling, which is dried in the fun, and is the best musk; the flesh is also good to eat: Master Marco brought to Venice the head and feet of this beaft dried. The men live by merchandize and arts, and have abundance of corn. They are idolaters, of a fat body and little nose, black hair, having no beard but four hairs on their chin. The women are wonderfully fair, and when the men defire to marry wives, they rather make choice of the beautiful than the noble or rich. It often happens from hence, that a great nobleman marries a poor wife, if beautiful, affigning a dowry to her mother. This province extends itself five-and-twenty days journey in length, and is very fertile; in it are exceeding large pheafants, having trains eight or ten handsfull long; many other kinds of birds are also found there, which have very beautiful feathers of various excellent colours *.

After eight days journey further east, you meet with the province Egrigaia, in the which are many cities and calties; all but this lies still in Tangut. The principal city is called Callacia, the inhabitants thereof are idolaters; there are three churches of Nestorian Carillans, who are subject to the Great Khan. In this cay camblets are made, woven with white ewood, and the hair of camels than which there are increasing better in the world. (Fast from this province of Egrigaia lies that of Tandach, in which are many cities and calties, and here Proliberer John retides, who now pays its bute to the Erect Khon. The king of that nation is called George, and see pixel and

This account of the made around to one exact, and contains totaling a settleble to exception, which discuss that waster our archive relates things as all the many last sections in the containing and the containing and the containing and the containing are settleble to the containing are settleble to

a Christian, and most of the people are Christians. All the Great Khans after his death (who was slain in battle by Zingis) give their daughters to those kings to wife. This King George holds not all that the Priest John before held, and is the fourth of that family *. There is a nation there called Argons, more fightly men, and fitter for merchandize than the rest, descended of idolaters and Mohammedans. There are also two regions, where they dwell, which in those parts are called Og and Magog; but they which dwell there call them Ung and Mongul; in Ung are Gog, and in Mongul the Tartars. Riding east seven days towards Cathay are many cities peopled with idolaters, Mohammedans, and Nestorians. There is one city called Sindicin, where very excellent arms are made of divers sorts sit for armies. In the mountains of this province are great mines of silver, and much game, and the country of the mountains is called Idisa.

Three days journey from the city last mentioned stands another city Jangamur, that is, the White Lake, where there is a palace, in which the Great Khan delights, because there are many lakes and rivers, many swans, and in the plains, cranes, pheafants, partridges, and other fowls. There are five forts of cranes there, some have black wings like crows, others are white and bright, having their feathers full of eyes like peacocks, but of a golden colour, the neck black and white, very beautiful; a third fort for bigness not unlike ours; a fourth little, and very fair, intermingled with red and blue colours; the fifth of a grizzle, or grey colour, having red and black heads, and thefe are very large; and near to this city lies a valley, where are many cottages, in which a great number of partridges are maintained, which are kept against the King's coming to lodge there for some time. Three days journey northeastward, is the city Ciandu, which the Great Khan Kublay now reigning built, erecting therein a marvellous palace of marble, and other stones, which extends to the wall on the one fide, and the middle of the city on the other. He included fixteen miles within the circuit of the wall on that fide where the palace joins the city wall, into which none can enter but by the palace. In this inclofure or park are pleafant meadows, springs, rivers, red and fallow deer, fawns, carried thither for the hawks. of which are mewed there about two hundred ger-falcons, which he goes once a week to fee; and he often ufeth one leopard or more, fitting on horfes, with which he hunts the flag and deer, and having taken the best, gives it to the ger-falcons, and in beholding this spectacle, he takes much delight. In the midst of a fair wood he hath built a royal house on pillars gilded and varnished, on every one of which is a dragon all gilt, which winds his tail about the pillar, with his head bearing up the roof, as alfo with his wings displayed on both fides; the cover also is of reeds gift and varnished to that the rain can do it no injury, the reeds being three handfuls thick, and ten yards long, fullithrom knot to knot; the house itself also may be pulled in pieces, and taken down like a tent, and erected again to for it is fullamed, when it is fet up, with two bundred filken cords. The Great Khan ulerbite dwell there three months in the year, see ince. July and August. On the 28th day of August he departed to makes a prieme freque. He near an fierd of white horses and white mayes, shout ten thousand, sof the milk whereon home may draik; except he he of the imperial tace

d but, with the relicion of Kalonarias. The groups in Europe week ex-

of Zingis-Khan, and except one family called Boriat, who had this granted by Zingis for their valour; and these beasts, as they go up and down feeding, are much re-

verenced, nor dare any go before them, or hinder them in their way.

The astrologers or sorcerers tell the Khan, that on the twentieth of the moon of August, he shall disperse that milk here and there for the honour of all spirits, and his idols, that they may be careful prefervers of all things which he possesses. There are two forts of idolaters called Chebeth and Chefmu, which in the midst of storms afcend the palace, and fuffer no rain to fall thereon, which they make the people believe comes to pass by their fanctity, and therefore they go slovenly and negligent of their perfons, never washing nor combing themselves. They also have a horrible custom to drefs and eat fuch as are condemned to death, but not those which die naturally. They are called also Bachsi, which is the name of their order, as friars predicants: or minors with us; they feem by magic to do what they lift. When the Great Khan in his hall fits at his table, it is raised eight yards high; and in the midst of the hall, a good distance from the table, is a great cupboard of plate, from whence these forcerers cause wine or milk to fill the goblets, without any hand touching them; this they do in the presence of any man, whenever their lord commands it. These Bachsi also, when they have a mind to make feasts to their idols, go to the Khan, and address him thus: "Sir, you are to know that if our idols be not honoured with facrifices, they will bring plagues on corn and beafts, and therefore we intreat you to give us the flesh of so many sheep, with black heads, and so many pounds of incense, and lignum aloes, that we may make them due facrifice and honour." This they fpake not to him themselves, but by certain lords deputed to that office, who speak to the Khan, and obtain it. On the feast day, they facrifice these beasts, and sprinkle the broth before the idols.

They have great monasteries, some of the bigness of a city, in several of which are about two thousand monks, who serve an idol sequestered from the laity, as appears by their shaving and garments; for they shave their heads and beards, and wear a religious garment. These, in the solemnities of their idols, sing with solemn songs, and lights; some of them may marry. There are some who observe strict abstinence, called Sensim, leading an austere life; for they eat nothing but meal mingled with water, till all the slour be gone, and eat the bran without any savour. These worship the fire; and the men of other rules say, that these, which are so austere, are heretics against their law, because they worship not idols as they do; and there are great differences between them, and these marry not at all. They shave their head and beard, wear black hempen garments, or of a bright yellow. They sheep on thick mats, and live the severest life in the world.

15. In this book I purpose to write all the great and murvellous acts of the present Khan, called Cubia-Khan, which is, if expressed in our tongue. Lord of Lords, the greatest Prince in people, cities, and treasures, that ever was in the world, he being descended from the progeny of Zingis, the first Prince of the Tarrars, the first Enperor of that country, beginning to reign in the year of our Lord 1256, being twenty, teven years old f, and ruling the people with great wildow and greating. He is a visit

liant man, exercised in arms, strong of body, and of a losty mind, for the performance of matters before he attained to the dignity of the empire, which by his wisdom he did, against the will of his brethren. He often shewed himself a valiant soldier in the wars, and carried himself like a wifer and bolder captain than ever the Tartars had; yet since he swayed the kingdom, he went but once into the field, and sends his sons and other captains on expeditions.

In the year of our Lord 1286, his uncle, whose name was Naiam, being thirty years of age, and having the command of many people and countries, so that he was able easily to bring together four hundred thousand horse, being puffed up through youthful vanity, would no longer be subject, but would needs take away the kingdom from his Lord Cubla, and sent to another great Lord named Cadu, Lord of the parts towards Great Turkey, who was nephew of the Emperor Cublai, yet hated him, who yielding to his motion for rebellion, promised to come in person with an hundred thousand horse.

Both of them began to gather forces, which could not be done fo fecretly but Cublai heard of it, and presently took order to set guards on the ways, that no intelligence might pass, and then affembled all the forces, within ten days journey of Cambalu, with great speed, so that in twenty days were gathered together three hundred and fixty thousand horse, and one hundred thousand foot, a great part of them falconers, and men of his houshold; with these he made haste day and night towards Naiam's country, where, at the end of twenty-five days he arrived, altogether unlooked for, and rested his men two days; then he called his astrologers, and caused them, before all the army, to divine who should have victory; a thing they use to encourage their men, and they promifed it to Cublai. One morning, while Naiam was fleeping negligently in his tent, having not fo much as fent out any scouts to gain intelligence, Cublai made shew of his army upon a hill, himself sat in a certain castle of wood, full of archers and cross-bow men, borne by four elephants, on the top whereof was the royal standard, with the images of the fun and moon. He divided his army into three bodies, of which he fent that on the right hand, and the other on the left against Naiam's army. To every ten thousand horse were assigned five hundred foot, with lances, taught to leap up behind the horlemen, if any occasion of slight happened, and fuddenly, on advantage, to light and kill the enemies' horses with their lances. Caydu was not yet come.

The battles joined, and made a cruel fight, which continued from morning till noon, and then was Naiam taken and brought before Cublai, who commanded that he finuld be fewed betwirt two carpets, which should be toffed up and down till the breath was out of his body, that to the imperial blood might not be exposed to the fun or to the air. The remainder of his people tware obedience to Cublai, which were four nations, Cazza, Carli, Barkel, and Saniqui. Naiam was fecretly baptized,

imperial dignies is the month of lanuary. Mureo Pent, who reck me benefting the the Partur sear, places it is 1.250, whereas we compute from the beganning of the month of lanuary, make it is 2.350, and the lanuary make it is 2.350, and the lanuary make it is 3.350, and the lanuary make it is 3.550, and 3.55

and by profession a Christian, but no follower of the works of faith, yet he signed his principal ensign with the sign of the cross, having with him infinite numbers of Christians, who were all slain.

The Jews and Saracens that were in the army of Cublai, began to upbraid the Christians with this disaster of the cross, who complained of it to Cublai; he sharply reproved the Jews and Saracens for this behaviour, and then turning to the Christians, he said, "Surely, your God and his cross would not give any aid to Naiam; but be not you therefore assamed, because God being good and just ought not to defend injustice or iniquity. Naiam was a traitor to his Lord, and contrary to all equity raised rebellion, and sought the help of your God in his mischievous purpose; but he, as a good and upright God, would not savour his designs."

He returned after this with great triumph to Cambula, and staid there till Easter. On that day he called the Christians before him, and kissed their gospels, and made his barons do the same. He does the like on the great feasts of the Saracens, Jews, and Heathens, that Segomamber-Khan, the god of the idols, Mohammed, Moses, or whosoever is greatest in heaven, might help him; yet he made best shew of liking to the Christian saith, but pretended the ignorance of the Nestorian priests, and the

mighty acts of the forcerers, hindered his professing it.

For the better rewarding his foldiers he kept twelve barons or counfellors, who gave him notice of each captain's merit; and accordingly he raifed them from the command of one hundred to a thousand, and from one thousand to ten thousand, and so on, giving them vessels of plate and tablets. The captain of one hundred hath a tablet of filver; and the captain of a thouland, of gold or filver gilded; the captain of ten thouland has a tablet of gold, and a lion's head on it. The weight of the tablets differs also according to the dignity. On the said tablet is written a command in this manner: "By the strength and power of the great God, and by the grace which he hath given to our empire, the name of Khan be bleffed, and let them all die and be destroyed which will not obey him." All officers who have these tablets have privileges in writing of all things, which they are to do and demand; and the generals when they ride in public have a cloth borne over their heads, and when they fit, it is on a chair of filver. Their tablet is of three hundred fagi, which is equal to fifty ounces of gold, with the images of the lun and moon; such as have a tablet with a ger-falcon thereon, may take with them for their guard the whole army of a great commander. Cublai is a comely handlome man, of middle stature, of a very fresh complexion, black and bright eyes, well fashioned note, and all the lineaments of his body confishing of due proportion. He has four wives, who are esteemed lawful, and the first born of them is to succeed him in the kingdom, and every one of them is called: Emprels, and holderly's peculiar court; and that in a magnificent palace, having about three bundred women to afferd her, and many ennuclider vants, and at leak ten thous land perious in their families.

The Grand Khan hadi also many concurres. There is skewife a various of the people among the kertara called Virgit, where every fermic year he fends amballations to make search for the largest young women for him I will require them a four our requirements for the largest makes the property of the largest makes the property of the largest makes the property of the largest makes the larges

not in their sleep, if in smell or behaviour they be not offensive; those which are approved are by fives divided, each fifth part waiting three days and nights in his chamber by course, the other in the next lodgings preparing whatsoever these command them. The less prized are put to cookery and other offices; and sometimes the Khan bestows them on gentlemen, with great portions. The men of that country esteem it a grace and credit to have daughters worthy his liking; and think themselves born under an ill planet if they are not kept when sent to court.

Cublai had two-and-twenty fons by his four legitimate wives, and the first-born of his first wife was called Zingis, who would have succeeded him in the empire if he had not died before his father. He left a son named Timur, a valiant man, wise, and experienced in arms, who is to succeed his grandfather in the empire, instead of his deceased father; but by his concubines he hath five-and-twenty sons, all which are daily exercised in feats of arms, and are great lords; seven of his sons by his wives are Kings

of great provinces, and maintain their states with great reputation.

16. Three months of the year, that is December, January, and February, Cublai refides ordinarily in Cambalu *, which is at the north-east border of Cathay; and there, on the fouth part by the new city, is seated a great palace; first there is a great wall, each square being eight miles, with a deep ditch environing, and a gate in the middle of each; after which is the space of a mile in circuit, where soldiers stand; after this is another court of six miles square, with three gates on the south square, and three on the north; that which is in the midst being in both the greater, and kept shut, except when the Khan passeth that way; the other is always open to others; in each corner of this wall, and in the midst is a fair palace, eight in all, very large, in which are kept the Khan's ammunitions, and furniture of all sorts; horses in one; in another bows and shooting artillery; in a third castlets, cuirasses, and leather armour; and so in the rest.

Within this circuit is another walk like the former, very thick and ten paces high, all the battlements white, the walls fquare, each fquare a mile in length, with fix gates as the former, and eight palaces also very large, wherein are the Khan's provisions; between these two last walls are also many fair trees and meadows, in which are deer with other game, and store of grass, the paths being raised two cubits to spare it; no dirt or puddles of water being therein. Within this last wall is the palace of the Great Khan, the greatest that hath been seen, extending to the wall on the north and south, and opening where the barons and soldiers pass. It hath no ceiling, but a very high roof, the foundation of the pavement ten palms high, with a wall of marble round about it two paces wide, as it were a walk. At the end of the wall without is a fair turner with pillars. In the walls of the halls and chambers are carved dragons, soldiers, brids, beasts of divers kinds, histories of wars gided; the roof is so made that nothing is seen but gold and imagery: in every square of the palace is a great hall, capable of holding a multitude of people; the drambers are disposed the best that may be deviced. The roof is read great as or as and of all colours. Behind the pillade are

The first transfer of the first transfer of

great rooms and private storehouses for his treasure and jewels, for his women, and

other private purpoles.

Over against the said palace of the Khan is another for Zingis his son, whose court was in all things like his father's. Near this palace towards the north is a mount made by hand, a mile in compass, one hundred paces high, adorned with trees that are always green; unto this mountain the King commands all the trees to be brought from remote parts, lading elephants with them, for they are taken up with the roots, and are transplanted in this mountain; and because this mountain is always green, it is called the green mountain: and where the earth of the mount was taken away, are two lakes answering each other, with a small river supplying them with stored fish, and so grated

that the fish cannot get out.

The city of Cambalu in the province of Cathay, feated on a great river, was famous, and the royal feat in ancient times; and this name Cambalu fignifies the city of the Lord or Prince. This city the Great Khan removed to the other fide of the river where the palaces are, for he understood by the astrologers that it would rebel against the empire. This new built city is called Taidu, and he commanded all the Cathavans to go out of the old city into the new; which contains in compals four and twenty miles, every fide of the fquare containing fix miles. It hath walls of earth ten paces thick at the bottom, and at the top but three, as growing by little and little thinner. The battlements are white; every fquare of the wall hath three principal gates, which are twelve in all, having fumptuous palaces built over them. There are also certain pavilions in the angles of the walls where the arms of the garrifon, which are one thoufand at each gate, are kept. The buildings are squared, and the streets laid very strait by line throughout the city; so that from one gate a free prospect opens throughout the city to the opposite gate; having very stately houses built on both sides like palaces. with gardens and courts, divided according to the heads of families. In the midth of the city is a certain noble building, wherein hangeth a very great bell; after the tolling whereof in the night, no man must go out of his house until the beginning of the day following, except it be for fome extraordinary cause; as for a woman in travail, and then they are compelled to carry lights with them.

Without the city of Cambalu are twelve large fuburbs, three or four nules long, adjoining to each of the twelve gates, more inhabiting in the fuburbs than in the city; here merchants and strangers live, each nation having leveral store-houses, or burles, in which they lodge. No dead corpte of any man is burned within this city, but the bodies of idolaters are burned without the shburbs, where the dead bodies of other feets are hursed; and because an huge multitude of Saracens inhabit there, they have above twenty five thousand harlots in the suburbs and in the city, and these have a chief captum appointed over every hundred and thousand, and one general, whose office is, that when any amballadors, come, or such as have business with the Khau, whose charges he defrays, then sigs captum gives every amballadors, and every man of its family, a change of women every ment at tree test, for the is their tribute. The guards, every night, carry lack to pulsa whom siev find walking late, and every man of its family body, but mit y the dealers of the facility of them that it is not produce that have a bed, the dealers of the facility of them that it is not produce that he had a have a facility of the facility of the court every in the facility and the facility of the court every in the facility and the facility of the court every in the facility and the facility of the court every in the facility and the facility of the court every in the facility and the court every in the facility and the court every in the facility of the court every interest in the court every in the facility of the court every interest in the court every interest in the court every interest in the court every an analysis of the court every ment at the court every an analysis of the court every minute.

with he foldiers succeeds; and so, throughout the year, this course of watching Ly tu as is oblered.

When on a ount of any f Ci al day he knaps a foleren court, his table, which is holer then the releast of the relles, is fet at the north part of the hall, his face is to denuth, having the first Queen on his left hand, that is, his principal wife; and he fene and 1 (ph 18, and these of the royal blood, on his right; yet their table is in a lov of place, to that they fearce touch the Ling's feet with their hands, the feat of the clded big higher that the rest; the Princes sit in a lower place than that; there wives ell solder e the like order: Inft, the Khau's fons' waves and his kinfmen fit lower on the litthend, as lefter those of the lords, or lof every capte a and nobleman, each in their d gree and or ier; and the Emperor him of, while he firs at his table, may call his eyes upon all that fealt with him in that hill. There are not tables for them all to fit; but the gracest part of the foldiers and barons eat on carpets. At all the doors stand two gigantic solicits with cudg Is, to see that none touch the threshold, which, is he does, they take he garments away, which he must redeem by receiving so many blows as shall be appointed, or clie lac them. They who firve the King, and those futting at the table, all of them cover their mouths with fill, left their breathing should b, any means touch the King's meat or drink: and when he hath a mind to drink, the de nel who giveth it ooes back three paces and kneels down, and then the batons and all the people kneel, and the musicians found their instruments. There is no cause, fince I would avoid prolinity, why I should write any thing concerning the meats which are brought to the table, how drinty and delicate they are, and with what magnificence and pomp they are ferred in.

All the Tartais observe this custom, to celchiate the birth-day of their lord most henourably. The birth-day of Kublai is kept the 28th of September, and this day he accounts h more folenm then any in the whole year, except the first of February, on which they b sin the year. The King, therefore, on his birth-day, is clothed in a most precious garment of gold, and about two thousand barons and soldiers are clothed in the forme colour of gold, though of filk stuff, and a girdle wrought in gold and filver, which is given them, with a pair of shoes. Some wear pearls and garments of great price, who are next to the Khan; and these garments are not worn but on this teen folemn fealts, according to the thirteen moons of the year; all are then clothed like Kings. This custom is also observed by the Tartars, that on the birth-day of the Great Khan, all the kings, prince, and nobles, who are subject to his dominions, should fend presents unto him, as to their Emperor; and they who desire to attain any place of eignity or office of him, offer their petitions unto twelve barons appointed for that purpose; and what they decree is all one as if the Emperor himself had answered them. All people also, of what faith or sect soever, whether Christians or Jews, Saracens or Tartars, and Pagans, are bound folemnly to call upon their Gods, for the life, fafety, and prosperity of the Great Khan t. On

This method of pulling guards and relieving them, was extremely ancient in the East, as appears from the accounts civelt us by the Greek writers of the economy in this respect of the Persian Emperous; and is a little of the Great Mogul, as we shall he with the first property of the Great Mogul, as we shall are the first agreed exactly with what is related from authors of good credit in Dr. Hyde's most fact that the first property of the first property of the communication of the buth-THE STREET STREET, STR

On the mist of I' broay, which is the beginning of the Tartar year, the Creat Klan, and all the Tartars whereforer they are, colob attended to least, and all, as well men as women, define to be clothed in the grant to be at the grant to be good luck; then fore, that fortune may favour them all the year, they war white at the beginning thereof. The releast of cures, and governors of process, mandam of their duty, and unto the Lappear this day process of good and filter, pearls and precious floors, many white clothes, and other white thing, and many norths or a white colour. The rest of the Tartars, at the beginning of the year, fend white presents one to another. It is the custom of chose who bring presents, if they can, or each to present nine times nine; as, if they tend houses, to present nine nines, that is eighty-one; and so of gold, of cloths, and other things; that sometimes he hath, by this reckning, one handred thousand hories. Also at this happy season, all the elephants which the Emperor hath (sive thousand in number), are brought into the court, covered with tapestry, the similar chests full of gold and solver vessels; many camels are also brought, covered with sine silken cloths, which bring other things necessary for the court.

On this day, in the morning, all the King's captains, barons, foldiers, physicians. aftiologies, and governors of provinces and armics, and other officers of the empire, affemble in the great hall b fore the King, and they who happen to have no place there, for the multitude stand in another place, where they may see them, all being placed in their order and degree. One rifeth, who is amongst their clergy as a prelate, and crueth with a loud voice, "Bow down and adore," and prefently all do reverence, bending down their foreheads to the earth; then he faith, "God preserve our Lord with long life and joy;" and all answer, "God grant;" then he faith, "God increase and advance his empire, and preferve his subjects in peace, concord, and prosperity;" and all answer, "God grant;" and this they do four times; then the adoration being finished, the same prelate suces to an altar, richly adorned, on which is a red table, Thereon is written the name of the Khan; and taking a cenfer, and putting spices therein, they perfume the table and the altar with great reverence, in honour of the Great Khan, and fo return to their places; after which are offered the gifts of which we have spoken; and then the tables are prepared, and a most solemn dinner held, eating and drinking with great joy with their wives, in manner before described. And leftly, a tame hon is brought to the King, which, lying at his feet like a gentle whelp, acknowledgeth and carefles his lord.

In those three months in which we faid before the Emperor resides in the city of Cambalu, viz. in December, January, and February, all the hunters which the Emperor hath in all his provinces round about the province of Cathay, apply themselves to hunting, and bring all the larger wild beasts, such as stags, bears, roe-bucks, wild boars, and deer, to their governors; who, if they be distant from the Emperor's court less than thirty days' journey, send such beasts as are taken by waggons or ships to the Emperor, having first bowelled them; but such as are forty days distant from his court, send only the skins, which are necessary for making of armour. He hath many leopards and wolves for hunting, and many lions also, greater than those which are in Babylon, in the hair whereof certain little beams appear of divers colours, viz. white,

commonly imagined; and I must consels, that I cannot, for my own part, help thinking that the religion of the Taitars is very nearly the same with that of the old Fersians, that is to say, I apprehend the Magi among the others.

ick, and red, and they are bred to catch bears, boars, stags, roe-bucks, wild asses, d wild oxen, and it is marvellous to see the lion's sierceness and dexterity in this fort hunting; two lions are commonly carried in one waggon when they go to hunt, d with them a dog, with which they are tamed; and they carry them in this fashion cause of their fury and unruliness; and they must carry them contrary to the wind, r else the beasts would scent them and slee. He hath also many tame cagles, which e so taught, that they take hares, roe-bucks, deer, and soxes; among which some of em fear not to seize upon wolves, and vex them so grievously, that without labour

id danger they may be taken by them.

The Khan hath in his court two which are brethren, one called Boyan, the other ingan; called in the Tartar language Ciurco, that is, maîters of the game; each of em hath the command of ten thousand men. They which are under one of them are othed in red; the others in sky colour; when they hunt, these keep diverse forts of 198, to the number of sive thousand mastiss and others. In hunting they go with eir people one on the right hand, and the other on the left; and the King and they ke up so great a length of the plain, that from one end to the other is a day's journey, that no beast can escape them; and it is great pleasure when the Khan goes in the idst, to see the dogs follow hares, bears, and all other wild beasts. These brethren e bound by covenant from the beginning of October to the end of March, to bring the court one thousand head of beasts and birds, besides quails and sishes, the best

ey can, in fuch proportion.

17. The month of March coming in, the Great Khan departeth from the city of ambalu, and proceedeth north-eastward towards the ocean, distant thence two days' urney, bringing with him about ten thousand falconers, who have falcons, hawks, er-falcons, and other kind of fowls of prey, fit for hawking. These falcons disperse temfelves by an hundred or two hundred in a company, and the birds that are taken or the most part are brought unto the King, who, by reason of his gout, sitteth in a ooden house, which two elephants carry, covered with the skins of lions, and within ung with cloth of gold, having with him for his recreation twelve choice hawks, and velve courtiers; many noblemen and foldiers ride by, who guard the King's person, no when they fee pheafants or cranes, or other birds flying in the air, speak to the deconers, who are near the King, and they fignify the fame unto the King, uncover ie King's house, and let their falcons and hawks fly, and the King sitting on his bed, cholds the pastime of the birds. Other ten thousand men go also with the King, who t that hawking run hither and thither by two and two, and mark whither the falcon nd hawks fly that are cast from the fift, that if need be they may help them; and these the Tartar language are called Tolcaol, that is to fay, watchmen, or manifemen, eing feilful in a certain kind of whiftle, wherewith they call in the hawks that are own; nor is it needful that the falconer, who let the hawks fly, should follow them, sing thole of whom I now ipsak are builty employed in taking up the hawks, and are reflightian by no means they are hors or foll, and every fiving have carrieting pittle ble of fiver on like foot, ligned with the mark of her malter or talconer, that it the Ell , the my she feltage cover a wine.

Bernfaren Bernfaren Green (1986) en 1900 eta 110 eta 1 Bernfaren Bernfaren 1902 eta 111 eta 1 But if the mark cannot be known, the hawk is delivered to a certain baron, who for this cause is called Bulangazi, to whom are brought all lost things (otherwise the finder would be punished as a thief), and to him losers resort to enquire of things lost. He hath a most eminent place noted by his ensign, that in so great an assembly of people he may always be known. While they are thus busied in sporting and hawking, they come into a certain great plain called Carzarmodin, where the tents of the King and all

the courtiers are prepared, about ten thousand in number.

The first is the Khan's pavilion, under which ten thousand soldiers stand, besides barons and noblemen, with the door to the south, sustained by three pillars, wrought with curious and excellent carved work, and covered with the skins of lions, and other wild beafts, which keep out rain; but within, the walls of the pavilion are covered with most costly skins of ermines and sables, although in those countries these skins are accounted most precious, so that sometimes skins worth two thousand sultanines of gold, are scarce sufficient for one pair of vests. The Tartars call the sable the Queen of surs; the cords wherewith these pavilions are supported are of silk. There are also other pavilions erected, wherein the wives, sons, and concubines of the King remain. Further also the falcons, hawks, ger-falcons, and other birds, which serve for hawking, have their tents; for there is so great a multitude of tents, that to them

that come thither it feems at a distance as if a famous city was built there.

The King remains all March in that plain, and takes innumerable beafts, and infinitemultitudes of fowl; for no man may in this time hunt in all the provinces of that kingdom, at the least within five days' journey one way, ten another, and fifteen a third way, of the Khan's court, nor keep an hunting dog or an hawk from the beginning of March until the month of October. No man is permitted to use any device or engine whatfoever to take stags, deer, roe-bucks, or hares, lest he should hinder their breed; and hence it is, that there is such plenty of game. It is incredible what multitudes of people, merchants, and merchandizes of all forts are feen in Cambalu. The money of the Great Khan is not made of gold, or filver, or other metal; but they take the middle bark from the mulberry tree, and this they make firm, and cut into divers round pieces, great and little, and imprint the King's mark thereon; of this paper money therefore the Emperor caufeth an huge mals to be made in the city of Cambalu. which fufficeth for the whole empire, and no man under pain of death may coin any other, or fpend any other money, or refule it in all his kingdoms and countries, nor any coming from another kingdom dare frend any other money in the empire of the Great Khan. Hence it follows, that merchants, often coming from remote countries unto the city of Cambalu, bring with them gold, filver, pearl, and precious flones. and receive the King's money for them; and because this money is not received in their country, they change it again; in the empire of the Great Khan, for merchandize, which they carry away with them. It is also payeth hipends to his officers and army in the above mentioned money. And laftly, whatever thing he needs in his court, he buyeth with this maney. Wherefore there is not a Kape to be found in the world who

exceptesh luminic treature; not expended on the mint, reselvenhere.

The Great Khan tank oweive parent as is last, before which are the countries or war, who dispose of marrial obsers; and the resulting or disparent of captains of falls tiers. There exists a salked Tan, the is, the high source because they have none above them but the Khan. Chart everys parons are appointed countries for the forecastly them but the Khan. Chart everys parons are appointed countries for the forecastly them produces, which care as the parone is a family appoint in the every parone salked to the forecast a family and prefer that some as the family that the countries of the family are parent and prefer that remark to the family sale. We consider a like the countries and prefer that remark to the family of the countries and prefer that remark to the family of the countries and prefer that remarks to the family of the countries and prefer that the countries of the family of the countries.

the charge of the treasure to collect and dispense the same; their office is called Singh, that is, the fecond court, fubject to none but the Khan, yet reputed less noble than the

former, that being a military establishment.

There are many public roads from the city of Cambalu, which conduct to the neighbouring provinces, and in every one of them, at the end of five-and-twenty or thirty miles, are lodgings or inns built, called lambs, that is, post-houses, with large and fair courts, chambers furnished with beds and other provisions, every way fit to entertain great men, nay, even to lodge a King. The provisions are laid in from the country adjacent; there are about four hundred horses, which are in readings for messengers and ambaffadors, who there leave their tired horses, and take fresh; and in mountainous places, where are no villages, he fends people to inhabit, about ten thousand at a place, where these lambs or post-houses are built, and they cultivating the ground for their provisions. These excellent regulations continue unto the utmost limits of the empire, fo that in the public ways throughout the whole empire, about ten thousand of the King's inns are found; and the number of the horses appointed for the service of the messengers in those inns are more than two hundred thousand, a thing almost incredible; hence it is that in a little while, with change of men and horses, intelligence comes without stop to the court; and if any wonder how so many men and beasts should be provided for, he must consider, that the Moors and Gentiles have many women, and by them abundance of children, fome having thirty fons, which follow them armed; and for victuals they fow three kinds of feeds, rice, panike, and millet, which yield an hundred fold. They make no bread, but boil these with milk or sless. Wheat will not fo encrease with them, nor suffer they any ground which will bear, to lie untilled; and the cattle continually encrease, so that each of them carries with him fix, eight, or more horses into the field, for his own person. The horses are employed by turns, so that of the four hundred, two hundred are in the stables ready, the other two hundred at grass, each a month at a time. Their cities also that are adjoining to rivers or lakes are appointed to have ferry-boats in readiness for the posts, and cities on the borders of defarts are directed to have horses and provisions for the use of such as pass through those defarts; but have a reasonable allowance for this service of the Khan. In cases of great consequence, the post rides with a ger-falcon table, and is equipped so, that he will ride two hundred miles in a day, or two hundred and fifty fometimes; alfo they ride all night, foot-posts running by them with lights, if the moon does not fhine.

They found a horn, that the fresh horses may be brought forth for them to mount prefently; and having their bellies and heads girded, they run as fall as the horse can go; and those which are able to endure this excellive riding, are on that account in great reputation among thems who admire nothing to much as hortemanthin. There are allow between thele inns other habitations, three or four miles diffant one from another, in which there are a few houses, where foot-polfs live, baying each of them dus gridle hung for of their founding belis. Their keep themselves always ready, and The problem of the Kiran's length are tend to them, convey them speedily to the polic at the course of the kiran's length to the polic at the course of the footspolifications when attaching a corpect and a subspective standards are any them course ones water; and is the letters of this through access hards are a new vevel without them to the problem the artists of the policy of pence for their labours from the King's rent-gatherers besides. Some also are appointed to examine these posts monthly, and to punish their faults, if they are fairly convicted.

He fends yearly to the divers provinces of his empire, to enquire whether any prejudice be done to the corn by tempests, locusts, worms, or any other means; and when he hath notice given him that any province or city hath sustained any damage, he remits his tribute to that people for that year, and sends grain for victual and for seed out of his own granaries; for in a time of great plenty the King buys abundance of corn, and keeps it with great care by his officers, three or four years in granaries, that when there happens to be a scarcity of corn in one country, that defect may be supplied out of the King's storehouses in another. He selleth his grain for a sourth part of the common price, and always provides that his storehouses are kept sully supplied. Likewise when any murrain lights among cattle he fends them other cattle, which he has for tenths in other provinces; and if a thunderbolt has striken any beast of any herd or slock, he receives no tribute from it for three years, let the herd be ever so great; neither will he receive any custom of a thunder-stricken sheep, as thinking God is angry with them, that are so stricken.

Likewise that travellers may discern all places able to bear trees, he hath caused trees to be planted, at a convenient distance one from another, near the principal roads; and in the sandy and desart places he hath caused stones and pillars to be erected for that purpose, and officers are appointed to look to these things. He plants trees the rather, because his astrologers tell him that planting trees lengthens the life of man. They make excellent drink, in the province of Cathay, of rice and divers spices, which in the taste thereof excels the slavour even of wine; and they who drink more greedily thereof than is sit, or the nature of the drinker can bear, become sooner

intoxicated than if they had drank wine.

Through the whole province of Cathay, certain black stones are dug out of the mountains, which put into the fire, burn like wood, and, being kindled, preserve fire a long time, and, if they be kindled in the evening, they keep fire all the night, and many use those stones, because that though they have plenty of wood, yet is there such

frequent use of stones and laths, that the wood would not serve.

It is not amifs, having spoken of his provision abroad, to mention his care for the poor of Cambalu. When he hears of any honourable family decayed by misfortune, or of any which cannot work, and have no subsistence, he gives to such families the whole year's expences, each head of such families going to the officer for that purpose, and shewing their bill of allowance, receive provisions accordingly. There is a place set apart for those officers; they are provided also with garments for winter and for summer. The Khan having the tenths of all wool, hik and hemp, which he causes to be made into cloaths, in a house for that purpose appointed, for all gades are bound one day in the week to work for him. He provides also appared for his armies, and in every cry causeto cloth to be made of his typhe

The reader will safely differed, that sphar confluence of here with so much wonders in a reads storting more than a consume, which might appeal very feedings to aims, who very propable had pave feed in passes of any first long to might appeal very feeding be associable, who have harded up this measure with her pictures expected as a ringle volument to destrict to believe that the Chines has true out of the earth, and that they had to approve the very little whatevaries of his continuous control with a part of the earth of the earth

You must understand, that the Tartars, according to their ancient customs, bestowed no alms, but rather upbraided those that were in necessity, as hated of God: but the idolaters, especially those Bachsi, have propounded it as a good work acceptable unto God, and have taught him to be thus bountiful; fo that in this court, bread is never denied to any who ask it, and there is no day in which are not given away twenty thousand crowns in rice, millet, and panike; whence he is esteemed as a God

by his fubjects.

There are in Cambalu, Christians, Saracens, and Catayans, about five thousand astrologers and diviners, which the Great Khan provideth yearly in food and raiment, as he doth those poor abovesaid. These have an astrolabe, in which are marked the figns of the planets, the hours and points of all the year. Herein all those astrologers, each religion apart, view the course of the year according to every moon, observing the disposition of the weather, referring always to God to do more or less after his own pleasure. They write also upon certain squares they call Tacuini, the things which are to come that year, which they fell to those that will buy them, and such as fpeak most truth are most honoured. If any intend any great work, or to go a far journey, and will know the event before hand, he has recourse to these astrologers, to fee it with their eyes in the heavens, which they pretend to do, comparing the prefent constellation with that of his birth, which they demand of him; so foretelling him the good or evil. The Tartars reckon the computation of their years by twelves, the first fignified by a lion, the fecond by an ox, the third by a dragon, the fourth by a dog, and so through the whole twelve; so that if it be demanded of a man when he was born, he will answer, such a point of such an hour of such a day, in the year Lion. This their fathers exactly fet down in a book, and when the twelve is complete, they go over the fame again *.

Of their religion, we have faid, that they are idolaters; and for their gods, have a table fet aloft in the wall of their chamber, on which is written a name reprefenting the high God of Heaven, and there every day with a cenfor of incenfe they adore it in this manner; they lift up their hands aloft, and strike their teeth thrice, praying it to give them a good understanding and health, and defire thereof nothing else. Befides, on the ground they have another statue called Natigai, the god of earthly things, with his wife and children, whom likewife they worship with incense, striking or gnalling the teeth, and lifting up their hands, and defire thereof temperature of the air, fruits of the earth, children, and the like. They hold the foul to be immortal. and that when a man dies, it enters into another body, better or worle, according to the merits of the former life; as of a poor man to become a gentleman, and after a prince or lord, and so higher, fill it be absorbed in God; and if it have ill deferved, to be a poorer man, after a dog, always descending to the lowest rank of baseness. They have a comely speech, falute chearfully and honestly, have a graceful carriage, and feed cleanly. They bear great reverence to their parents, and if any be undufful or regardless of them necessity, there is a public tribunal alligned for this particular in

puriff angentein on diobetien chidren; prieners are releated at direc venteend, and parked in the cheek, that ther may be known for mainlactors.

The factor and record word go to the formal Kinas course making have surfa-angle half purious the page where the Canas is, all a the and ance, without soft

or any loud speech; that every baron carries continually a little vessel to spit in, after which he covers it, none daring to spit in the hall; they have fur buskins of white leather, which they put on when they enter the hall, putting off the former, and giving

them to the fervants, left they should foul the carpets.

18. Ten miles off Cambalu is a certain great river named Pulifangan, emptying itself into the ocean, by which many ships with much merchandize ascend; and in that place there is a very fair bridge, all of ferpentine stone, curiously wrought, containing three hundred paces in length, and eight in breadth, so broad that ten men may ride abreaft; on each fide it is fecured with a wall of marble, and pillars fet in a row, and in the height of this afcent is a great and high pillar, at the feet whereof is a great lion, and on the top another, and so quite through the bridge: one pace and a half distance are pillars with lions on the tops, and a fair wall with wrought marble work betwixt, to keep men from falling. Having passed over the river and bridge, and proceeding thirty miles westward (in which palaces are continually seen, with vineyards and fertile fields), you come to the city Gouza, both fair and great, having many monasteries of idols. Cloths of gold and filk are made there, and the pureft and finest cambricks or lawns; and many common inns for firangers or travellers are found in that city. The citizens are artificers and merchants. A mile without this city the way parteth, one leading west, the other south-east; that to the west leadeth through the province of Cathay, but the other, towards the country of Mangi, from the city of Gouza to the kingdom of Tainfu *.

You ride ten days through Cathay, always finding many fair cities, well furnished with vineyards, and tilled fields, from whence wine is carried to Cathay, where there is none; there are many mulberry-trees for filk-worms, the people civil, and cities very numerous and populous. Tainfu is the name of the kingdom, and of the chief city, which is great and fair, hath much trade, with store of ammunition, fit for the Khan's armies. The wine about this city ferveth the whole province. Seven days further westward is a pleasant country beautified with many castles and cities in which also there is great trade in different mercandize carried on. After which you come to a city very great, named Pianfu, in which there is vast abundance of filk and much trade. Westward from Piansu stands a very pleasant castle, named Thalgin, anciently built by a King called Dor; in it is a spacious palace, wherein is a fine hall, in which are painted all the famous kings which have reigned there, and it is a fair freclacle. Of this King Dor, they fay he was potent, and was attended only by young damfels, of which he had many in his court. These also, when he had a mind to take his pleafure, carried him in a finall light chariot through the caftle, which was to fortified by art and nature, that the governor thereof feared none, no not Umcan his lord, against whom he rebelled.

But leven men, professing fidelity and service to Dor, took him at a disadvantage of hunting, and brought him prisoner to presbyter John or Umcan, who put him on vile cloths, and appointed him to keep his cattle, and let over him a fiving grand, till two years were ended after which he commanded him to be brought before him, and

^{*} It must be acknowledged spacetic telegrees here even a programme a field dark and problems and like and be faired to see the party of leads to place the common a few or the other hands and like and be faired to see the fair to be faired to be a first or the control of the control of the control of the control of the fair of the control of the fair of the control of the fair of the fair

being dreffed in princely apparel, he giving him his pardon, after a sharp admonition, fent him well attended to the re-possession of his kingdom. About twenty miles beyond the castle Thaigin is the river Caramaran, which, by reason of the exceeding breadth and depth thereof, hath no bridge over it in all the space from thence, till it sloweth to the ocean. On the shore thereof are many cities and castles built, wherein great trade is carried on. This country abounds with ginger, silk, and sowl, especially pheasants, so that three of them are bought for a Venetian groat. There grow reeds in vast plenty, so thick that some are a foot, and others a foot and a half in compass, which are applied to many uses. Passing this river, after two days' journey, is the samous city called Cariansu, where many cloths of gold and silk are made. Here grow gin-

ger, galingale spike, and many spices. The people are idolaters.

Proceeding feven days journey westward, many cities and towns, lovely fields and gardens are found, and every where mulberries for filk-worms. As for the people, they are mostly idolaters; but there are also Christians, Turks, Nestorians and some Saracens. There is a vast abundance here of wild beasts and fowl. If you proceed feven days journey farther, you shall come to a certain great city named Quensanfu, which is the chief city of the kingdom, in which have reigned many famous kings; and, at this day, the fon of the Great Khan, called Mangalu, hath the command thereof. That country yields great plenty of filk, cloth of gold, and all other things necessary for furnishing an army, and for the preservation of man's life. The inhabitants worship idols, and there are some Christians, Turks, and Saracens. Five miles without this city standeth the palace of Mangalu, seated in a plain, where are many forings, rivulets and places of game. There is a high wall encompassing a park of five miles, where are all forts of wild beafts and fowls. In the midft is an excellent palace, having many halls and chambers, great and fair, all painted with gold and azure, and numberless statues adorning it. The King, with his courtiers, delights himself in hunting the wild beafts, and taking of fowl, and following his father's examples in justice and equity, is much beloved of his people.

Proceeding three days journey westward from the said palace, through a very beautiful plain, where many cities and castles are, which abound with filk merchandize and manufactures, you come to a country where in the mountains and vallies are frequent habitations, and many villages of the province of Chunchian. The inhabitants as to religion are idolaters; and as to employment, husbandmen. Also in that country they hunt lions, bears, stags, roe-bucks, deer, and wolves. The plain is two days journey over, and the country is about twenty days journey westward, well inhabited, being finely diversified into mountains, vallies, and woods. After these twenty days, towards the west, there lies a province called Achbaluch Mangi, that is, the white city, on the borders of Mangi, which is well peopled. This province, for two days journey, hath a plain, in which are an infinite number of villages: beyond these he mountains, vallies, and wood, all well inhabited. It hath plenty of wild beafts, and of shole creatings that yield must. In this province gauge, grows in great plenty, as also corn and

rice

many places round about, some half a mile over, some two hundred paces, very deep t on them are many bridges of stone, very fair, eight paces broad, fet on both sides with marble pillars, which bear up a timber frame that covers the bridge, each bridge having streets and shops thereupon. When the rivers have passed through the city, they become one great river, called Quian, which runs one hundred days journey hence to the ocean. Near these rivers are many cities and castles, and on them innumerable ships for merchandize. Proceeding four days journey farther, through a very fine plain, many cities, castles, and villages are found, in which five lawns extend in beautiful order. There are also many wild beasts there. Beyond the plain, which we have now mentioned, is the wide province of Thebet, which the Great Khan vanguished and wasted; for in it lie many cities destroyed and castles overthrown, by the space of twenty days journey; and because it is become a wilderness, wanting inhabitants, wildbeafts and lions are increased excessively, and it is requisite therefore that travellers carry victuals with them. Very large cane grows in this country, ten paces in length... and three palms in thickness, and as much from knot to knot. When travellers therefore will rest at night secure from beasts, they take great bundles of the greener reeds, and putting fire under, kindle them, which makes fuch a crackling, and for great a noise, that it may be heard two miles off; which terrible found the wild beafts. hearing, flee away, but it has fometimes happened, that horses and other beasts, which merchants use for their journey, hearing this noise, and cracking, have grown also much afraid, and betaking themselves to slight have escaped from their masters; and therefore wifer travellers binding their feet together detain them in their proper places.

19. These twenty days journey ended, having passed over the province of Thebet, we met with cities, and many villages, in which, through the blindness of idolatry, a wicked custom is used; for no man there marrieth a wife that is a virgin; whereupon, when travellers and strangers, coming from other places, pass through this country? and pitch their pavilions, the women of that place having marriageable daughters. bring them unto strangers, defiring them to take them, and enjoy their company as long as they remain there. Thus the handfomest are chosen, and the rest return home forrowful, and when they depart, they are not fuffered to carry any away with them. but faithfully reftore them to their parents. The maiden also requireth fome toy or fmall prefent of him who hath deflowered her, which the may flrew, as an argument and proof of her condition; and the that hath been loved and abused of most men, and shall have many such favours and toys to shew to her woods, is accounted more nobles, and may on that account be advantageously married, and when the would appear most honourably dreffed, the hangs all her lovers favours about her neck, and the more acceptable the was to many, to much the more honour flie receives from her country. men. But when they are once married, they are no more fuffered to converie with ffrange nigh, and the men of this country are very cautious never to offend one another in this matter.... They are idolaters, and cruel; thinking it no fin if they rob and exercise theft. They live by hunting and the fruits of the earth; many bealts allo are found with them, yielding mulk, called mithis country Gadders. They have a language of their own, and have no money, not formuch as the paper money of the Khan, but ut-corals for maney, and are-closthed with the Kins of beatts, or courte herip. This country releases there provings of Theore, for Theore, is a very large province can have been consented and the right expectates beautic main which are a resolution management lakes, and over a selectory of a solution. The worker well to be a finite management.

try there are very large dogs, as big as affes, which take wild beafts, especially wild

oxen, called Bovamini.

There are in this province many forts of spices, which are never brought into these This Thebet is (as all the former provinces) subject to the Khan. On the west of the province of Thebet bordereth the province of Caindu, which was formerly governed by her own king, now by the governors of the Khan. By the west, you must not understand that the countries are in the west; but that we, departing from those parts which are betwixt the east and north-east, came hither westward, and therefore reckon them westward. The people are idolaters, have many cities, the chief called by the name of the province, Caindu, built on the frontiers of the province. is a large falt lake, in which are abundance of pearls, white, but not round, fo many, that in point of price they would become little worth, if they were fuffered to be carried away at men's pleafure. It is therefore provided, upon pain of death, that none should presume to fish for pearl in this lake, without the licence of the Great There is also a mountain, in which is found a mine of Turquoise stones, the digging of which is restrained by the like licence. Many Gadderi are also in this province, which yield musk. That lake also which breeds pearl in such plenty, abounds with fish, and the whole country is full of wild beasts, that is to say, of lions, bears, stags, deer, ounces, roe-bucks, and divers kinds of birds. Cloves are found there in great plenty, which are gathered from small trees, which have boughs and leaves like the bay-tree, but somewhat longer, and straiter, white flowers, and brittle, as are the cloves, and when they are ripe they are black and dusky. Ginger, cinnamon, and feveral other spices, grow there in great plenty, which are not brought into our countries. Wine, however, though plentiful with us, groweth not in it, but instead thereof they make a most excellent drink of corn, rice, and divers spices.

The inhabitants of this country worship idols, to which they are so besotted, that they think they deserve their favours, if they prositiute their wives, sisters and daughters, to be abused by travellers; for when any stranger cometh amongst them, every master of a house seeketh to give him entertainment, and leaving the semales and house to the strangers, will not return until they depart, which he doth for the glory of his idols, hoping they will be more gracious to him. Certain springs of gold are their money, using weights, and according to the weight of the spring is the value of the money, and this money is their larger fort of money without stamp. They have also a lesser, which they make after this manner. They boil falt in a cauldron, for about an hour, and of this, being congealed they make little lumps like two-penny loaves, which being solid, is signed with the prince's stamp, and they make vast prost thereof in places remote from cities, which have store of must and gold, and want chapmen.

These barter their gold for salt, to use with their meats.

The inhabitants thereof are idolaters; you ride five days journey through it, and find it all well peopled: they live on their beafts and fruits. The country breeds excellent horses, and it hath a peculiar and difficult language. Having finished these five days journey, you come to the chief city called Jaci, which is both great and famous, hath in it many merchants and artificers, and many forts of people, idolaters, Christians, Nestorians, and Saracens, but the greatest part of the inhabitants are idolaters. It hath corn and rice, notwithstanding which they eat no bread of corn, because it is not wholesome, but they make bread of rice; they make drink also of it, and several spices. which is very pleafant; they use white porceione instead of money, and for ornaments, shells which are found at fea. Much falt is made in this city of the water of falt-wells, from whence the Vice-King hath great profit. The men of this country care not if. any man come to their wives, fo they give their content. There is also a lake there very full of fish, containing an hundred miles in compass. These men eat raw flesh of hens, beef, mutton, and buffaloes, but prepared after this manner: they first cut it into small pieces, and after feafon it with excellent spices; but the poorer fort shred it, and lay it in garlic fauce, and eat it as we do boiled meat. Departing from the city of Jaci, having travelled ten days journey westward, we came to the province called, as the chief city, Carazan, which Cogatin, fon of Cublai, governeth. The rivers there yield great quantities of washed gold, and also that which is solid, and on the mountains they find gold in the vein, and they give one pound of gold for fix of filver. They spend porcelane for money brought thither from India.

The inhabitants are idolaters; very great ferpents are bred in this country, some of which are ten paces in length, and in thickness ten spans. They have two little feet before near the head, with three talons or claws like lions, and the eyes bigger than a loaf, shining very bright. They have their mouths and jaws so very wide, that they are able to swallow a man, great and sharp teeth; nor is there any man, or other living creature, which can behold these serpents without terror. There are also some less, of eight, or fix, fome of five paces long, which are taken after this manner : in the day, time they use to lie hid, by reason of the heat, in holes, out of which they go by night to feek their prey, and devour whatfoever they get, lions, wolves, as well as other bealts, and then go to feek water, leaving fuch a track through their weight in the fands, as if a piece of timber had been drawn there; whereupon the hunters faften under the lands great iron spikes, in their usual tracks, whereby they are wounded and The crows prefently proclaim the ferpent's fate, and by their cries, invite the hunters, who come and flea him, taking out his gall, which is used for divers medicines. amongit other things, for the biting of mad dogs, a pennyweight given in wine; and for women in travail, for carbuncles, and other diffempers, and they fell the fielh dear

as being exceeding delicate.

There are front horses pred in this province, which by their merchants are carried into India. They commonly take one hone out of the tail, left he floride bend mis tail in their and thinest and effect it more coursely that it hang downings. They desired larrups as the French swhich the larrars and often navious, for their morning, me flort, because when they floor they rise up. They are targets and armony in the ways made of the hides of buildines; shey have tangent and cross-bows, and point all their arrows. Some of their whereave williams, are lead to carry poster above them continuedly that if they be placed her may findently leading it, and to desig at our present topourer, for which cause the great ions have does above ready, which carry force than it waster to also that makes them regarded to sense. Before the stear a car subjected than, they nied which they if cause them we would be sense. There are a large conjected than they are force that it waster to also they are a fact to sense the stear and the sense that they are the great to a sense the present that they are the present the sense of their places are present that they are the great to a sense of their places and their sense they are a sense to be a sense to be a sense to be a sense to be an all their their their things are the sense of their places.

with them, to kill him by night, supposing that those good parts of that man would abide afterwards in that house; and this filly notion has proved the death of many.

Travelling forwards from the province of Carazan, after five days journey westward, is the province of Cardandan, which also is subject to the Great Khan: the chief city thereof is called Vociam, the inhabitants whereof use porcelane, and weighed pieces of gold instead of money; for in that country, and many others lying round about, filver mines are not found, and they give an ounce of gold for five ounces of filver, and according to this exchange great gain is made. The men and women in that country cover their teeth with thin plates of gold, which they so fit to themselves, that the teeth themfelves feem, as they were, fet in those plates. The men about their arms and legs make lifts, pricking the places with needles, and putting therein a black indelible tincture; and thefe lifts or marks are esteemed with them as a mark of great gallantry. They give their minds to nothing but riding, hunting, hawking, and the exercise of arms, leaving the houshold cares to the women, who are affisted therein by slaves, which they buy, or take in war. When a woman is once delivered, she forsakes the bed, washes the child, and dreffes it, and then the husband lieth down, and keeps the child with him forty days, not fuffering it to depart; is vifited all that time by friends and neighbours, to cheer and comfort him. The woman looks to the house, and carries the husband his broths to the bed, and gives fuck to the child by him. Their wine is made of rice and spice; their ordinary food is rice, and raw flesh, dressed as before mentioned. In this province there are no other idols, fave that every family adoreth the oldest man in the house, of whom they say, come themselves and all they have; they dwell for the most part in wild and mountainous places, but foreigners come not to those mountains,

because the air would kill them, being in summer very corrupt.

They have no letters, but make their contracts and obligations by tallies of wood, one half whereof one keepeth, and the other the other, which being afterwards paid, the tally is destroyed. There are no physicians in this province, nor in Caindu, Vociam, and Caraian; but when any is fick, they call the magicians or idol priefts together, and the fick person declares his disease unto them; then the magicians dance, and found certain instruments, and bellow forth songs in honour of their gods, till at length the devil entereth into one of them, skipping and playing in the dance. Then leaving the dance, they confult with him that is possessed, for what cause this disease happened unto him, and what is to be done for his recovery. The devil answereth by him, because he hath done this or that, or because he hath offended this or that god, therefore he fell into this difease. Then the magicians intreat that god to pardon him this offence, promiting that if the lick person recovers, he shall offer a facrifice of his own blood; but if the devil, or the priest, think the patient to be lick of such a disease that he cannot be freed from the lame, he uleth to answer; this man hath so grievously offended that god, that he cannot by any facrifices be appeared; but if he think he shall recover, he commandeth to offer to many rams, having black heads, and to prepare to recover, he commanded to other to many rams, naving mack needs, and to prepare to many magicians with their wives, by them to offer factifices, and that god may then he appeared naving him. Which being beard this kindner, quickly caule thole things to be alone which the deep commanded. They kill rams, and formula the bloom in the arranged it is appeared from the real exhibits and permits are also become their the real exhibits and permits are also be not exhibit in the case, which is appeared from a children alone, and permits the real exhibits the real exhibits and permits the real exhibits and permits the real exhibits and permits and permits the real exhibits and permits and the real exhibits fwer, no, they prefently prepare themselves to fulfil any other command of his; but if he answer that he is satisfied, they sit down at the table, and eat the stella offered to the idol with great joy, and drink the liquors; and dinner being ended, and the magicians paid, every one returns to his own home; and when the sick hath thus escaped the disease, through the providence of God, and hath been restored to health, they attribute it to the idol, to whom they sacrificed; but if he die, then they say, the idol was defrauded, and that some of the sacrificers tasted thereof first: this is not done to all, but by the richer, the devil, or his priests in his name, imposing on their blindness.

The Great Khan, A. D. 1272, fent an army into the kingdom of Vociam and Gurazan to reduce it, his forces being to the number of twelve thousand veteran troops, under the conduct of a Nestorian, an experienced officer. As soon as the King of Mein and King of Bengala heard of their coming, affembling their forces, they joined horfe and foot together about threefcore thousand, and about a thousand elephants bearing caftles, and in every caftle twelve or fixteen armed men were placed; with this army the King of Mein marched speedily towards the city of Vociam, where the army of the Tartars lay encamped. Nestardin, however, marched forth with invincible courage to fight the enemy, and drawing near them, encamped near a certain great wood, knowing that the elephants with their towers on their backs were not able to enter the wood. Then the King of Mein feeing this, refolved to meet them; but the Tartarian horfe perceiving the elephants which were placed in the front of the battle were terrified, fo that they could not by any means be brought to charge the elephants; the Tartars therefore were compelled to alight from their horses, and tying them to the trees, they came to fight on foot against those beasts, and very wifely shot a multitude of arrows against the elephants, which not able to endure the wounds received by the arrows, betook themselves to flight, and went all to the next wood, broke their castles, and overthrew the armed men fitting in them; which the Tartars feeing, run to their horses, and getting upon them, furiously fell upon the King's army with great violence, and many of either army fell. At length the King of Mein being put to flight, left the victory to the Tartars, who haftened to the wood, and taking many cap ives, used their help to feize two hundred of these elephants, and ever fince the Great Khan hath used elephants in his army, to which before he was not accustomed: hereupon also he vanquished the countries of the King of Mein and Bengala, and subjected them to his empire *.

Departing from the province of Caraim, there is a great defart, which continue the two days and a half, nor is there any habitation there, but a very large plain, in which three days in the week multitudes meet together for trading. Many defcend from the great mountains of that country, bringing gold with them to change for filver, that is, giving an ounce of gold for five ounces of filver, and therefore many merchants from

The great conquests made by the Tariars in the east have so overturned all monuments of antiquity among the nations they have subdued; that if it were not for these travels of Marco Polog we should be at a lots for any of the nationary relating to them. The Chinese inflations, indeed, very fully control that truth of what he has delivered, but in general terms only a for that they add nothing precupitantial, or capable of giving us a clearer or more diffirm tides of what he has land driven in respect to which the subscient for us to otherway shot of the facts he mentions entire happened at the time when he was a chinally presented the court of the Great King, or a very half before it is to hat he could not but be well informable as to the terms of what he affects. Stronge individuals, they have a distinct from their countries and are so in this superior with the members of their individuals that at the requirement with the selection of their countries promoters travelies and more travelles as the office of their countries of money travelles and more travelles as the office and account in the first present as the office of their countries of money travelles and more travelles as the office and account in the first present as the office and account the first present as the office and the first present and more travelles as the office and account in the first present and more travelles as the office and account in Chinese and other accounts.

foreign nations come thither, who bring filver and carry gold away, and bring thither merchandize to fell to these people; for to those high mountains in which they who gather gold in the country dwell no stranger can come, because the way is intricate and unpassable. When you are past that plain, going toward the south, Mein bordereth upon India, and the distance is about sisteen days journey through places uninhabited and woody, in which innumerable elephants, unicorns, and other wild beass wander.

After that fifteen days' journey you come to Mein, a great and noble city, the head of the kingdom, and subject to the Great Khan. The inhabitants thereof have a peculiar language, and are idolaters. In this city there was a King, who being ready to die, commanded that near to his sepulchre there should be erected two towers in the form of pyramids, one at the head, the other at the feet, both of marble, of the height of ten fathom. On the top was placed a round ball; he caused one to be covered all over with gold, a finger thick, and the other with filver; and upon the top round about the balls, many little gold and filver bells were hanged, which, at the blowing of the wind, gave a certain shrill and pleasant found. The monument or sepuichre was also covered with plates, partly of gold, partly of filver. He commanded this to be made in honour of his foul, and that his memory should never die among men. when the Great Khan undertook to fubdue this city, he fent a valiant captain, and the greatest part of his army were cavalry, of which the better part of his troops consists: thefe winning the city would not demolish that monument without the Khan's knowledge; who hearing that the deceased had erected it for the honour of his soul, would not fuffer it to be injured; for the manner of the Tartars is not to violate the things which belong to the dead. In this province are many elephants, wild oxen, great and fair stags, and deer, and other wild beasts of divers kinds.

The province Bengala bordereth upon India towards the fouth, which the Great Khan fubdued when Marco Polo lived in this country. This country has its own proper King and language, the inhabitants whereof are all idolaters; they have mafters which keep schools, and teach idolatries and enchantments, a thing common to all the great men of that country. They eat flesh, rice, and milk; they have cotton in great plenty, and by the manufacture thereof, much trade is there carried on. They abound also with spike, galingal, ginger, sugar, and diverse other spices; huge oxen also are there, comparable unto elephants in height, but not in bulk. Many eunuchs are made in this province, which are afterwards fold to merchants. This province continueth thirty days journey, in the end whereof, going eastward, is the province of Cangigu, which is a country having also its proper King and peculiar language, the inhabitants whereof worthin idols, and are tributary to the Great Khan; their King hath about three hundred wives; much gold is found in this province and many ipices; but they cannot early be transported, because that country is far distant from the sea: there are alfo many elephants in it, and much game. The inhabitants live on milk, flesh, and rice; they have no wine, but they make very good drink of rice and tpices. As well the measurable women place to embroider their faces, necks, hands, bellies, and legs, making the integes of hous, dragons, and birds, and to time; impend them, that they camen early no sup our, and the more fact images any one fractamon his tosty, in models is also makely introduced his many addition. And there are all the comment to take a little bottly in a successful early as Ni to de notable was bounded and the

ent de la companya d La companya de la companya del companya de la companya del companya de la companya del companya de la companya del companya de la companya del companya de la companya de la companya herds of cattle, and have plenty of victuals, and many horses, and these excellent, which merchants carry for fale to India. They have also many buffaloes and oxen, because there are delicate pastures there. As well men as women wear bracelets of gold and filver, of great value, on their arms, as also the like on their legs; but those of the women are most valuable: from Amu to Cangigu are above five-and-twenty days journey. The province of Tholoman is still eight days journey farther distant to the east from Amu, subject to the Great Khan, having a peculiar language, and worshipping idols. The men and women in this country are tall, well-shaped, and of a brown complexion. The country is very well inhabited, having many and firong cafiles and cities. The men are practifed in arms, and accustomed to war; they burn the bodies of their dead, and, inclosing the relics of their bones in a chest, hide them in the caves of the mountains, that they cannot be touched either by man or beaft. Gold is found in great plenty there, and instead of money, they use porcelane brought from India, as also in Cangigu and Amu. From the province of Tholoman the high road leads towards the east, by a river, on the bank of which are many cities and castles, and at the end of twelve days you come to the great city Cintiqui. The country is subject to the Great Khan, and the inhabitants therefore addicted to idolatry. Excellent cloths are made in this country of the bark of trees, with which they are clothed in the fummer. Many lions are there, so that for fear of them, none dare fleep without doors by night; the veriels which fail up and down the river for fear of these lions, are not fastened to the bank. There are great dogs in the fame country fo hardy and strong, that they fear not to attack the lion; and it often happeneth, that two dog and one archer kill a lion: for the dogs, fet on by the man, give the onfet, and the lion's nature is prefently to take shelter from some tree, that the dogs may not come behind him, neither will his great heart fuffer him to run from the dogs, left he should feem afraid; but he holds his stately pace, the man mean while shooting, and the dogs fastening on his hinder parts, but with fuch agility, that when the lion turns on them they are gone; and then this magnanimous beast holds on his way again, to feek a tree for succour, till what with bitings and arrows, he fometimes comes floot, and, with expence of blood, dieth by the way. This country abounds with filk, which by merchants is carried to diverfe provinces by the river; they live therefore chiefly by their merchandize: their money is paper, and they are valiant in arms.

At the end of ten days is the city of Sidinfu, and twenty days from thence is Gingui, and four days thence is Palanfu, towards the fouth, and is in Cathay, returning by the other fide of the province. The people are idolaters, and burn their dead; there are also certain Christians which have a church, are all under the Khan, and tife paper money. They make cloths of gold and filk, and lawns, very fine. By this city, which has many cities under it, runs a great river, which carries store of merchandile to Cambalu, made by many channels to pass thither; but we will leave this place, and proceeding three days journey, speak of Giangu, a great city towards the south, of the province of Cathay, subject to the Khan. The inhabitants are idolaters, and hum their dead. Their money is the (mulberry) paper come of the Khan. In this city, and the territories that depend upon it, they make large quantities of fait, for the earth abounds therewith, and out of a they get fait after this manner, they heap in the earth in the manner of an hill, and pour water upon it, which draws the satings of the earth in the manner of an hill, and pour water upon it, which draws the satings of the earth in the manner of an hill, and cour water upon it, which draws the satings of the earth in the manner of an hill, and cour water upon it, which draws the satings of the earth in the manner of an hill, and cour water upon it, which draws the satings of the earth in the manner of an hill, and cour water upon it, which draws the satings of the earth in the manner of an hill, and cour water upon it, which draws the satings of the earth in the manner of an hill, and cours are upon it, which draws the satings of the earth in the manner of an hill, and course upon it. There are large peakes, high flavoured, and work to the course the course of the paper and white, to the great and of the paper and the paper and the course of the paper and the paper are independent to the course of the paper and the course of the paper and the course of the paper and

pounds a-piece. Five days journey beyond the city Ciangu, in Cathay, fouthward, flandeth another city, named Ciangli, in which road are many cities and castles, subject to the Khan, through the midst of which runs a great river, very convenient for shipping laden with merchandise.

Six days journey hence to the fouth is the noble kingdom and great city of Tudinfu, which had formerly its proper King, before it was subdued by the Great Khan, A. D. 1272, and hath eleven royal cities famous for traffic under the jurisdiction thereof. It is very pleafantly feated for gardens and fruits, rich in filks; their Khan fent to be governor thereof one of his Barons named Lucanfer, with eight thousand horse, who rebelled against this Lord, but was reduced and slain by an army of one hundred thoufand horse, under two other Barons sent against him, and the country reduced to obedience. Seven days off towards the fouth is the famous city named Singuimatu, to which on the fouth a great river runs, which being divided by the inhabitants of the place into two rivers, flows one branch to the east towards Cathay, and the other to the west toward Mangi; by these rivers innumerable vessels, and incredible for their fize and wealth, bring necessaries to both provinces. If you proceed fixteen days journey towards the fouth from Singuimatu, you will meet with cities and towns where prodigious trading is exercised. The inhabitants of these countries are idolaters, subject to the Great Khan. After that, fixteen days, you come unto a great river named Caramoran, which is faid to take its rife in the kingdom of Uncan, or Presbyter John, in the north. It is very deep, and carries ships of great burthen; it is also well stocked with fish, within one day's journey of the sea. There are in this river fifteen thousand sail, each of which carries fifteen horses and twenty men, besides victuals and mariners. This is the Khan's fleet, kept there in readiness to carry an army to any of the islands, if they should rebel, or to any remote region. Near the bank of the river where these ships are kept is Coiganzu, and over against it Quanzu, one a great city, the other a fmall one. After you are past that river, you enter into the noble kingdom of Mangi: but you must not think that we have handled in order the whole province of Cathay, having not spoken of the twentieth part; for Marco Polo passing by the said province, hath only described the cities in his way, leaving those on both hands, and those betwixt these to prevent tediousness, and to avoid writing from hearsay.

20. The province of Mangi is the richest and most famous that is founded in the east; and in An. Dom. 1269, was governed by a certain King, called Fansur, who was richer and mightier than any which had reigned there in an hundred years, but a man peaceable and charitable, so beloved of his subjects, that thereby, and by the strength of the country, he seemed invincible. It was from a persuation of this that the King, as well as the people, lost the use and exercise of war and arms. All the city was encompassed with ditches full of water. He held in pay no horses, because he seared no-body; and, in process of time, the King, betaking himself to pleasure more than was fit, employed his whole time in delights. He maintained about a thousand concubines with whom he passed his sine in pleasure. He maintained publice, and preserved peace, he man duals oftend his sine in pleasure. He maintained publice, and preserved peace, he man duals oftend his seguidour and disturb the peace, for tent of severe and impartial punishment; to that assinces would often leave their shops full of water open by the strength of the strength of the maintained and the strength of the strength

them, which he brought up, and put them, when they were grown up, to some trade, marrying the young men with the maids, which he had in like manner so educated *.

Cublai-Khan was of a different disposition from Fansur, and delighted only in wars and conquests; and to make himself great, he levied an army of horse and foot, and made one, named Chinfan-Baian, i. e. an hundred eyes, General thereof, he therefore coming with his army and a fleet to the province of Mangi, first summoned the city Coiganzu to yield obedience to his Emperor, who refused the same; he departed without any affault given to the city, and required the fame of the fecond city, which likewife refufing, he marched forwards to the third and fourth, and received the like answer of them all; but he affaulted the next with great courage, and vanquished the same by force, and flew every creature of what fex or age foever therein, which fo frighted and terrified the rest, that they all presently yielded. The Great Khan sent out another great army after the former, with both which armies he marched against the chief city Quinfai, where the King of Mangai refided, who being mightily terrified, as never having feen any war, fled with his wealth on board the ships he had prepared, to certain impregnable islands in the Ocean, where he afterwards died, committing the custody of the city of Quinsai to his wife, bidding her to defend it as well as the could, for being a woman, she needed not fear death if she was taken.

It is to be observed, that King Fanfur had been told by his diviners, that his kingdom would never be taken from him but by one who had an hundred eyes, which the Queen knew, and therefore was still in hopes not to loofe the city however straightened, thinking it impossible for one man to have an hundred eyes; but one day she heard the commander of the Tartars was called Baian Chinsan, that is to say, an hundred eyes, and was much terrified; wherefore calling for the commander of the Tartar army, thinking him to be the man which the aftrologers spoke of, she delivered the city unto him, which being heard, the citizens and inhabitants of the whole province yielded to the obedience The Queen was fent unto the court of the Great Khan, and was of the Great Khan. most honourably received by him, and maintained like a Queen. And now we will speak of the cities in the country of Mangi. Coiganzu is a very fair and rich city situate towards the fouth-east and east, in the entrance of the province of Mangi, where are always great numbers of ships, being feated on the river Carama, and a great quantity of merchandize is carried thither; falt is also made there in abundance. Proceeding from Colganzu, you ride towards the fouth east one day's journey on a stone cause. way, on both fides whereof are great fences, with deep waters, through which they may pals with proper vessels; neither is there any entrance into Mangi but by shipping, excepting this causeway.

The Charles agree exactly, as to the character of this Prince, with what we find delivered concerning him by our author; but they differ winely with respect to the name; fince, assorting to them, he was called Tony and from the mone of his family Thong. It is was the litterath Emperor of the nine-teenth dwarfy, and this occident to the throne in the year radii. It was to his indolesses debatchery and exceptive love of pleature, that the filmede attribute the dairuction of their country, and the total complets of it by she Tarrans. This Monaghi shed in the must of his majorianes, and left three young chicken under the thirdings to the Emperication of the must of his majorianes, and left three young chicken under the thirdings of the Emperication of the first she in the name of the first character as the Lessar General messages to the Emperication of the first she had not she made to the considering from the first thind to the computer and in the limit of south and the first should be first than the first she first the first she had been only as fixed before an account of the first should be presented in the major of the sound as the first special before the considering the respect to the majorial of the sound and the special before the confidering the majorial as well as the first shear and account of the present be resided by the the majorial of the considering the special before the majorial of the present be resided to the majorial of the present be resided to the considering the second of the constants and the special before the constants and the special before the majorial of the present before the majorial of the m

At the end of that day's journey is a city called Paughin, large and fair; the people make stuffs of Gold and filk, are merchants, and idolaters. The paper-money of the Great Khan is received throughout the whole country. It is plentiful in all necessaries To the city Caim is from Paughin one day's journey fouth-east; and this is also a famous city. The country thereabouts abounding with fish, beasts, and fowl. especially pheasants, are found in exceeding great plenty, as large as peacocks, of which you may have three for a Venetian groat. Proceeding farther from hence one day's journey, you come through a well manured, most fruitful, and well peopled country, to the city of Tingui, which though it be not over large, yet hath in it exceeding great plenty of victuals. They are merchants, and have a vast resort of ships: there is plenty It is feated to the fouth-east, and on the left hand towards the of beafts and fowls. east, three days journey off the ocean, and in the country between, are very many faltpits, and they make great quantities of falt. After this is Cingui, a great city, whence the country is furnished with falt, whereof the Khan makes immense profit, almost beyond belief: they are idolaters, and have paper-money. From Cingui, riding towards the fouth-east, you meet with the noble city Jangui, under the government whereof are other cities, feven and twenty in number; and in that city refides one of the twelve barons, which are governors of provinces, chosen by that Great Khan; they are idolaters, and live on merchandize. They make arms and harness for war, and Master Marco had the fole government thereof, by commission from the Great Khan, three years together, instead of one of these barons. Naughin is a province to the west, one of the greatest and noblest of Mangi; a place of great merchandize; they are idolaters, have none but paper money, have vast quantities of beasts and fowl, wild and tame. They make cloths of gold and filver, and are rich merchants, and the country is very advantageous to the Khan, especially by custom of merchandize; there is likewise great plenty of corn.

Sianfu is a noble and great city in the province of Mangi, and hath twelve rich and great cities under her jurisdiction. They make great quantities of filks, and cloths of gold; have plenty of game, fowl, and all things pertaining to a city of note; fo strong that it was three years befieged, and could not be vanquished by the army of the Tartars, when the province of Mangi was subdued, for it is encompassed on every side with lakes, that there was no way to it but on the north; fo that ships came and went, continually bringing plenty of victuals, which not a little afflicted the Great Khan. The two brethren, Master Nicolo, and Master Massio, then in his court, hearing thereof, went to him, and offered him their fervice to devile certain engines, after the manner of the well, able to shoot a stone of three hundred weight, thereby to kill men and ruin houles. The Khan appointed carpenters, which were Nestorian Christians, who made three of these engines in a short space, which were proved before him, and by ships sent to his army. Planting them therefore against the city Sianfu, they began to call great Hones into the city; and the first talling upon a certain house, broke the most part of it. with the violence thereof, which the belieged uthabitants leeing, were very much aftonified, and yielded themselves, and became subject to the Great Klain, on the same

condinous with the reft of Mangi, to the great repute of the two Venetian breimen, the one the subtrock fafter, and the eather has units.

"From the put of Surfaces a certain city called Surgue, are me a premising months in the put was a premising months of father than the put was large, and has a premising months of father has been put to be a premising months of father has been a premising months of father has been put to be a premising father than the probability of the probabilit CIL CODE DIRECTO SELECTIONS, IN Orbars cognit, and in quartering page the

thereof extendeth above an hundred days journey from the fource of it into the fea. Innumerable other rivers flow into it, which run through divers regions, and are navigable; and these make it so great, that incredible quantities of merchandize are brought by this river. There are also many other cities, in number about two hundred, which participate of the advantages of this river, for it runs through the bounds of fixteen pro-The greatest commodity is falt, wherewith all the cities which communicate by these waters are supplied. Master Marco saw at one time at Singui five thousand veffels, and yet other cities on the river have more; all these ships are covered, and have but one mait, and one fail, and usually carry four thousand, and so upwards, some of them twelve thousand Venetia Cantari; neither do they use cordage of hemp, except for the mast and sail, but have canes, sifteeen paces long, which they split into thin parts from one end to the other, and binding the cut parts together, and wreathing them, make very long ropes, so that some of them contain three hundred fathom in length; and those ropes are as strong as hemp, and serve for halfes and cables to draw their flips up and down the river, each vessel having ten or twelve horses for that purpose.

On that river, in many places, are rocky hillocks, on which are built monasteries to their idols, and all the way are vallies and places inhabited. Cayngi is a little city. upon the same river south-eastward, where every year is brought plenty of corn and rice, carried for the most part to Cambalu; for they pass thither by lakes and rivers, and by one large canal, which the Khan caused to be made for a passage from one river to another, and from Mangi to Cambalu, without going to fea; which work is beautiful: and wonderful for the fight and length, and more for the profit which accrues thereby to the cities. He hath made also great causeways to go on land by these waters commodiouily. In the midst of the faid river is an island, or rock, on which is erected a great temple and monastery, in which are two hundred idolatrous monks. Cinghianfu is a city of Mangi, rich in merchandize, plentiful of game, having all kind of wild beafts and fowl, and of victual: In it are two churches of Newtonian Christians, built A. D. 1.274, when the great Khan fent a governor thither, Marfachis, a Nestorian who built them. From the city Cinghianfu, in three days journey fouth-eastward, you find many cities, and castles, all idolaters, and at last come to Tinguigui, a great and fair city, abounding with all kind of provisions *...

When Baian Chinfan, general of the army of the Tartars, conquered the province of Mangi, he fent many Christians called Alani against the city, which was double walled; into the inner they retired, into the other the Alans entered, and found there abundance of wine, whereof, after a bad journey, they began to drink so largely, that they were all drunk, and the citizens, in their sleep, suddenly fading upon them, slew

^{*} This happened the year before the death of the Emperor Tou Tiong; and in about four years more all his children; who buckeeded one after the other to the empire, perified. The fifth was taken prioner by the Tartars, and tent by them into their own columns, where he died in captivity. The focund was driven to Canton, where he died of a confirmation at the age of cleven years. The third, whole name was Ti-Ping, having hifted his country, was oblige to take refuge on board the fleet, which was purfued and forced to attend general by that of the Tattars. When this Chinele Lord, who had the care of the Emperor's Fertim, found his relief for country, it is a fine this amine, and jumped with him into the less. The Empirel leeing the laft of her line thus unhappity delivoyed, followed his fate, and threw herieff also acts the its. Drivelook foundations her Chinele fleet through a ballage disocute the whole safety and into Chinele in the chine the whole a bundled disocute the whole safety and into Chinele in the purpose that the battle purpose are not to the Chinele empire, and then the Tartare to the distributions. The loss of this battle purpose to the Chinele empire, and then the Tartare to the distribution.

them all, not one escaping; but Baian hearing this, sent another great army against those citizens which in a short space of time vanquishing the city, in revenge, pur them all to the sword, leaving none alive. The great and excellent city Singui contains in circuit twenty miles: multitudes of people are in it, it hath many rich merchants and industrious artificers, and it hath also very many physicians and magicians, and wise men, or philosophers. In the mountains of this city, rhubarb and ginger grow in great plenty. This city hath fixteen cities under the jurisdiction thereof, in each of which much trade is carried on, and many curious arts are exercised, many forts of filk are made there. The word Singui signifies the city of the Earth: also they have another city which they call Quinsai, that is to say, the city of Heaven. From Singui, at the distance of one day's journey, is Vagiu, where is also abundance of filk, and able artificers, with many other merchants, as there are in general in all the cities in this country.

21. In a journey of three days, you find cities, castles, and villages, well peopled and rich. The people are idolaters, under the dominion of the Great Khan. At the end of these days you come to Quinsai, i. e. the city of Heaven, which for the excellency thereof hath that name; for in the world there is not the like, or a place in which are found fo many pleafures, that a man would think he were in paradife. In this city our author Marco Polo hath often been, and confidered the fame with great diligence, observing the whole state thereof, setting down the same in his memorials, as here from them shall be declared briefly. This city by common report, is an hundred miles in circuit. The streets and lanes are very long, and very wide; there are marketplaces exceeding large; on the one fide a clear lake of fresh water, on the other a great river, which enters in many places, and carries away all the filth of the city, and fo runneth into that lake, thence continuing its course into the ocean. This course of water caufeth a good air, and commodious paffage both by land and by those canals. There may go both carts and barks to carry necessaries; and the report is, that there are twelve thousand bridges great and small, and those on the chief channels are so high, that a ship without her masts may pass under, and at the same time chariots and horses pass over it. On the other side the city is a large canal forty miles long, which encloses it on that fide, large and full of water, from the river, made by the ancient Kings of that province, both to receive the overflowing of the water, and besides that to fortify the city, the earth which was taken out being laid within as a bank or hill encompassing it *.

There are ten great market-places, befides others in the great streets, which are square, half a mile in each square, and from the great entrance is a principal street, forty paces wide, running right from one end of the city to the other, with many bridges crossing it, and every four miles is found such a market-place, two miles, as is said, in compass. There is also one large canal, which runs against the said street behind the market-places, on the next bank whereof are erected great store-houses of

[&]quot;This description of the city of Ountry shacecolloned many reflections upon our author, as it seems of countries as to great a diffrance, he took the laberty of importing on his readers the histories of his many sations for this raths which he included. Under this implication, he for a long time laboured, expensively further write the control of any authority of the production of forgreed and preservation performs by descriptions of any position has the Portugues and specifically appropriate the production of t

stone, where the merchants from India, and other parts, lay up their merchandize, being at hand, and commodious for the market-places. In each of these market-places the people meet three days in a week, to the number of between forty and fifty thoufand, who bring thither all things that can be defired for man's life, beafts, game and fowls, that lake yielding fuch advantages for bringing them up, that for a Venetian groat you may have two geefe, and four ducks for the fame. Then follow the butcherrows, of veal, beef, kid, and lamb, which the great and rich men eat; for the poor eat all the offal, and unclean meats, without respect. There are all forts of herbs and fruits continually, and amongst the rest huge pears, weighing ten pounds apiece, white within like paste, and very fragrant. Peaches yellow and white, very delicate. Grapes grow not there, but are brought from other places dried; very good wine also, but it is not esteemed in those parts as with us, that of rice and spices contenting them. Every day from the ocean are brought up the river, which is the space of five-and-twenty miles, great quantities of fish, besides that of the lake, so much that a man would think would never be bought, and yet in a few hours all his gone. All these marketplaces are encompassed with high houses, and underneath are shops for artificers and all forts of merchandize, as spice, jewels, pearls, and in some only rice-wine. ftreets answer one to another in the said market-places; in some of them are many cold baths, accommodated with attendants of both fexes, a thing to which from children they use themselves. There are chambers also in the same baths, with hot waters for strangers, which are not accustomed to the cold waters; they wash every day; neither do they eat before they have washed.

In other streets are mercenary prostitutes, in such numbers, that I dare not report it, and not only near the market-places, where they have their places appointed, but through all the city; they stand pompously adorned with rich perfumes, many fervants, and their houses finely furnished. These are very skilful in making sports and daliances. and contriving pleasures for ravishing men out of themselves. In other streets are the physicians, the astrologers, they which teach to read and write, and infinite other trades. At each end of every market-place is a palace, where lords and governors are appointed by the King to determine difficulties which happen betwixt merchants and others, as alfo to look to the guards on the bridges, punishing such as are negligent. Along the principal street on both sides are great palaces with gardens, and near them houses of artificers, and fuch multitudes of people going to and fro, that a man would wonder whence such multitudes could be provided with victuals; and Master Marco learned of an officer of the custom-house in Quinsay, that by a very accurate computation, it appeared, the daily expense of pepper in Quinfay was three and forty Somma and every Somma is two hundred and twenty-three pounds. Hence may be gueffed the quantity of victuals, field, wine, and spices, were there spent. The inhabitants are idelators, ule none but paper money, are of a very fair complexion, apparelled for the most part in file, which grows in all that territory abundantly, belides that which is brought from other places. There are twelve principal companies or corporations, each of which have one thousand shops, and in each shop or standing are ten, sisteen or twenty men as work, and in Jame forty ander one malter.

The rich tradefines do not work with their hands, but fland in their shops, well, or rather pumposity draffed, especially their wives, with jewels involuble. And although their ald Kings ordanics, that the shiki should be of the tailer's trade, yet the rich are permitted not to work as up how to keep their shop, and men working in the fame trade. Their bondes are well tonic, and very sichly straight with pictures and other, orda-

moult of inner in it. The natives are perceable, know not how to manage arm. on her time of the first per her is there strike and debute among the n. They the control of the strategy. They live in such artity, that one strates and the strategy of th to the state of the same of th and be a block in deprived of their natural lords and Kings. About the lake ne very timbella age, and great palaces of the principal men, and temples of their idol, vir unpathnics of many monks. In the midst of the lake are two islands, upon each or which is a palace with incredible numbers of rooms, whicher they refort u in occasion of marriages, or other feelts, where provisions of vesiels, linen and other things are mai stanted in common, for fuch purposes, one hunared sometimes acconmutated at once in leveral at oms. In the lake also are boats and barges for pleasure, adorned with fair seats and lables, and other provisions for a banquet, covered above, and flat, upon which man flend with poles to pull the bout on, the lake being but fallow: within they are pointed, without are vil clowe to open and fluit at obtaine; nor can any thing in the world to memore planfant that in this lake to have fuch various oliects, the city of fully prelenting it ilt is the eye, with is nany temples, monaftenes, palaces, gardens, with high trees, and on the water berges and people; for their cuftom is to work one part of the day, and to spend lone part in this diversion with their friends, or with women on the lake, or elle in charlots, riding through the city, which is also another of the Quinfay pleasures; for all the streets of a pived with stone, as also are all the highways in the profince of Mangi only for the took; poss are lest on the fide a space unpaved: the principal street of Qu'alay is paved ten paces on each hand, and in the midfle it is full of gravel, with poffages for the water, which keep it always clean.

In this fixed are innuncrable long close charlots, accommodued with cloths and cushions of tilk for fix perions, who divert themselves in the street, or go to the gardens, and there pals the time in bowers, fine walks, &c. which are kept for that purpose, and return at night in the san e chariots. When a child is born, the futher sets down the exact point of time, and with that note goes to the afterloger to confult of his future fortunes; of these attrologers are a great number in every market palce. These people will not celebrate a marriage without fuch confulation. When one dies that is of now, the kindred cloath themselves in canvas, and so both men and women accompany him to the burying-place, playing on instruments, and singing all the way prayers to their idols, and being come to that place, cast into the fire many papers of cotton whereon are painted flaves, horses, camels, stuffs of gold, and filk, and monies which they think he shall really possess in another world, and make a grand concert of music, in conceit of the joy wherewith the idols there receive his foul, where he beginneth, as they fancy, to live anew. In every strreet are towers of stone, to which, when in danger of fire, they use to carry their gods, their timber-houses being very subject to such casualties. The Khan hath ordered, that on the most of the bridges, day and night, there stand under a covert, ten soldiers, five by day, and five by night, and every guard-room is a tabernacle of wood, with a great bason, whereby they know the hours of the day and night, which at every hour's end the warders strike, to signify what hour, one, two, &c. beginning at the sun-rising; and then again at the beginning of the night. They walk up and down, and if any have

a light or fire after the appointed time, they cause him to answer a before the justices

or povernors atorefaid, or if any valk later.

If any be not able to work, they carry him to some hospital, of which are exceed my many, founded by the old Lings with great revenues, through the city: while they are well again, they are compelled to work. If a fire happen, there from diverpach come to and quench it, and to carry the goods to the illinds, or those towers lo: in the night none of the citizens dare go out, but those who are in danger. The is an eys keeps here a body of his best and most seithful foldiers, as noing the but and richeft place in the world. Within a mile of each other, are both ramparts of wood, where the same precautions are used for like purpos. When the know had reduced all Mangi to his obedience, he divided it, pains before but one kingdon. in mine parts, and fee them a Vice-King over each, who there adminish in justice. I can your they give account to the Khan's officers, of le teven is, and other acci coas and no rythird year are changed, as all other officers are. One of the fe deputy in , i all at at Quinfay, who is governor of above one hundred and forty cities. all . 'ch and great: nor let this be eftermed a wonder, felling in Mangi there are welve the mand cities, all inhabited by rich and industrious people, in every one of which the Whan mintaineth a garrifon, proportionable to the greatness and occusion, one thousand ter a recently thousand, not all Tariars, be Calliavane; for the Testars are holfeme, and keep in fuch places as may be fit to excellife their horses. litto Cathay he 121 Let of Mangi, and Cathayans hither, such as are fit for sums, of which he and a choice every third year, and fends thom for four or five years together, into p c's twenty days journey from their own country, and then fuffers them to return here a med body fucceeding; and most part of the Ahan's revenues are this way spenden, and if any city robel, he fuldenly from the next garrifon composes an armi in reduce or definor them. The city of Quinfay hath in conftant garrifon thirty thouoldiers, and that which hath leaft, hath one thousand regular troops, horse and lotingadin .

I come next to freak of the palace of King Farfur. It's predect for scaled to be incled duplace of ten miles circuit, with high walls, and divided it into three parts. That in the midfl was entered by one gute on the one fide, and on the other were great and large galleries, the roof fulfained by pillars, painted and wrought in pure gold and the cause. These were finaller at the entry, and the further the greater, the fairest at the end; the roof richly adorned with gold, and on the walls were painted the casis of the former kings, done very elegandy. Every year, on certain ided holidays has far keeps his court, and fealts his principal leads, the great merchants and rich artificers of Quintay. Ten thousand are at a time under these terraces. This feasting endured ten or twelve days with incredible magnificence, every guest endeavouring to present himself in greatest pomp. Behind this marble building was a wall, which divided the palace in which were, as it were, a closser with pillars, sulfaining the terrace

The Tartars wishly depended upon a military force for the preferencion of their empire in China, which whether it was an effect of their own policy, or a part of the Chinese lystem of government which they adopted, is uncertain; but it is most probable that it was the latter. However, it was far enough from answeing the end, for the Tartar forces becoming a more standing army, and having nothing to do but to make a lary livelihood of that profession, the foul of which is an office state; they from degenerated, and became as soft and esseminate as the Chinese; while the latter, humbled by the Tartar conquest, improved shed by enduring the burthen of such a numerous army, and, above all, taught the value of theirty by the loss of it, began to form designs for bringing about a new revolution, which at last they were so such as to effect.

round about the cloister, wherein were chambers for the King and Queen, currously From this cloifler was an entrance into a gallery fix paces wide, extending in length to the lake, all covered. On each fide of this gallery were ten courts, aufwering to each other like cloifters, each court having fifty chambers, with their gaidens, and in them one thousand concubines abode, which the king kept for his service, who, fometimes with the Queen, fometimes with them, went on his royal barge on the lake, for recreation, or to visit his idol temples. The other two parts of the Seraglia were divided into groves, lakes, and gardens, planted with tree, in which were enclosed all forts of beasts, roe-bucks, stags, hares, conies, and there the King diverted himself with his damtels in chariots, or on horseback, no man entering there. There the ledies hunted with his dogs, and when weary, they went into those groves, which answered one another over the lalle, and there leaving their garments, came forth naked, and fell to fwimming in the King's presence. Sometimes he would eat a ban quet in those groves, being served by those damsels, without once thinking of arms, which sweet meat cost him the sour sauce ye have heard. All this was told me by a rich old merchant of Quinfay, while I was there, one who had been familiar with King Fanfur, and knew all his life, and had feen that palace flourishing, into which he

would needs bring me.

3

The viceroy now refides there, and the first galleries remain as they were, but the damfels chambers are runed. The walls also which encompassed the woods and gardens are fallen to the ground, the beafts and trees being gone, and all the other ornaments destroyed. Twenty-five miles from Quintay is the ocean, between the east and north-east, near which is a city called Gampu, an excellent port, where arrive the Indian ships with merchandize. While Marco Polo was in Quinsay, account being given to the Grand Khan of the revenues, and the number of inhabitants, he hath feen that there have been inrolled one hundred-and fixty toman of fires, reckoning for a the family dwelling in one house; every toman contains ten thousand, which makes fixteen hundred thouland families, of all which there is but one church of Chaft ans, and those Nestorians. Every housholder is bound to have written over his door the names of his whole houshold, males and females; also the number of hories, the names added or blotted out as the family increafeth or decreafeth; and this is observed in all the cities of Mangi and Cathay. Those also that keep inns write in a book the names of their guests, and the day and hour of their departure, which books they fend daily to the lords or magistrates, who preside at the marketplaces. In Mungi the poor which are not able to bring up their children, fell them to the rich. The revenues which accrue to the Khan from Quinfay, and the other cities pertaining thereto, being the ninth part of the kingdom of Mangi, are first of falt, every year, eight tomens of gold, every toman is eighty thousand Sazzi's of gold, and every Sazzi is more than one florin of gold, which will amount to fix millions and four hundred thousand ducats. The cause is, that that province being nigh the sea, there are many lakes, where the water in fummer is congulated into falt, wherewith five other kingdoms in that country are ferved. There is plenty of fugar growing, which pay, as likewife all spices do, three parts, and a third in the hundred: the like of rice-wine. Also those twelve companies, which we said had twelve thousand shops, and the merchants which bring goods hither, or carry any hence by fea, pay the same price. They which come from remote countries and regions, as for example, from the Indies, pay ten per cent. Likewise all things there breeding, as beasts, and grow. ing out of the earth, and filk, pay tithe to the King, and the computation being made in the presence of Master Marco, besides salt before-mentioned, yearly amounts to two hundred and ten tomans, which will be fixten millions eight hundred-thousard

ducate in gold *.

A day's journey from Quinfay to the fouth-call, are all the way houses, villages, fair gardens, and plenty of victuals; at the end whereof is Tapinzu, a fine city in the jurisdiction of Quinlay. Three days thence, south east, is Uguiu, and two days farther you may still ride that way, anding castles, cities, and well cultivated places, in such a neighbourhood that they seem to travellers all one city, and are all in the jurisdiction or Quinlay; there are great canes fifteen paces long and four palms thick. Two days journey faither is the city Congui, fair and large; and travelling faither fouth-east, are places full of people and trades; and in this part of Mangi are no neep, but beavers, buffaloes, goats, and lwing in great plenty. At the end of four days journey farther is the city Zengian, built on a hill in the miast of a river, which dividing into two bi inches, encompasses it, and then runs one to the louth-east, the other to the north-west. This city is in the jurisdiction or Quinsay, and its inhabitants are merchants also and idolaters; this country abounds with all forts of game. Three days journey from thence, through a most pleasant country, exceeding well inhabited, stands Gicza, a great city, which is the last of the Quinsay kingdom; after which you enter into another kingdom of Mangi, called Concha; the principal city thereof is called Fugiu, by which you travel fix days journey fouth-east, through hill? and dales, always finding places inhabited, and plenty of game, of beafts and fowl; they are idolaters, merchants subject to the Khan. There are stout lions and here grow ginger and galungale in great plenty, with other forts of spices; eight pounds of ginger are fold for a Venetian groat. There is an herb, whose fruit hath the effect, and gives the colour and smell of saffron, but is not saffron, which is used in their meats. They commonly eat man's slesh, if the persons die not of sickness, as better tasted than others. When they go into the field they shave to the ears, and paint their faces with azure: they serve on foot, except the captain, who rides, and uses a sword and lance; they are very cruel, and when they kill an enemy prefently drink his blood, and afterwards eat his flein.

After fix days journey is Quelinfu, a great city, with three bridges, each eight paces broad, and above an hundred long: the women fair and delicately shaped. They have abundance of fill- and cotton, are great merchants, have plenty of ginger and galingale. I was told, but faw them not, that they have hens without feathers, hairy like cats, which yet lay eggs, and are good to eat. Here are many lions, which make the way very dangerous. After three days journey, you arrive in a populous country, inhabited by idolaters, who make abundance of filk manufactures, the chief city is Unguein, where is great pl nty of sugar, sent thence to Cambalu, which they knew not how to make good till they became subject to the Khan. in whose court were Babylonians, which taught them to refine it with ashes of certain trees, they only boiling it before into a black paste. Fifteen miles farther lies Caugiu, still in the realm of Concha, and here the Khan keeps an army in readiness for a guard of the country. Through this city passes a river a mile broad, fairly built on both sides, and abounding with ships

These particulars might very well appear (as indeed they did) absolutely incredible, at a time when there was not so much as an idea of a well peopled and regularly settled courtry beyond the limits of Persia, received among the Europeans. As the Chine se were smazed, and knew not what to think of our manners, when we came first among them, so the sirk news of such an empure as China, so extensive, so well peopled, so admirably governed, and in so flourishing a condition, must needs afternish us not a little. According to the latest account of this empire, its revenues amount to fifty millions starling amountly.

carrying fugar and other lading. The over d tembogues from hence fixed days journe, touth-east at Zaitum, a fea-poin, from which the rich ships of India come to this place fant city, as is all the country bear in which are trees and fluibs of camphire. Zaitum is a famous port, where all the hips arrive with merchandize, thence differfed through all India. There is here fach a quantity of pepper, that what comes by Alex andria to the west is lattle to it, and, as it were, one of a hundred. The concounte of merchants is incredible, it being one of the most commodious ports in the world, exceeding profitable to the Khan, who receives custom at the rate of ten in the hundred of all merchandize. They pay so much for hirc of ships also, that there is not above one half of their merchandize remaining entire to theinfolves, and yet that moiety yields vast profit to them. The citizens are idolatrous, given to pleasure: in it are many artificers on embroidered and arras work. The river is great, very wide and wift, and one arm of it cans to Quinfay, at the parting of which is Tringui founted, where porcelane diffies are made. It is as told of a certain cartly, which they call up in hills, and so let lie capoled to all weathers for thirty or forty years without it ring; after which restoing by time, ther make disher, paint them, and then put then in the furnance. You may there have eight diffies for one Venetian groat. In this kingdom of Concha, the Kn in has as great a revenue a most as that of the kingdon of Quinfay. In this iwo Moster Marco was, and in none of the other nine kingdon of Mangi, in all which one language is used, with variety of dialect, and but one fact or writing; and therefore we will it eak no more of them, but in the next book difference of India the Greater, the In Jille, and the Less, in which he was both in the less of the Khan, and also in his return with the Queen to Argon.

22. We will now enter two the addis of In 'ia, and begin with the 'n, s, which a emade of 'ir, with one week, on which are wenty collins, more or less, according to the bigness of the ships, each for one merchant. They have a good rude and four masts vith rour tails, and some two masts, which the, either rate or take down at pleasure. Some greater ships have thincen divisions on the inside, made with boards enchafed, so that if by a blow of a whale, or touch or a rock, water gets in, it can go no farther than that division, and the leak being found, is soon stopped. They are double, that is, have two courses of boards one within the other, and are well carlked with oakum, and hailed with iron, but not pitched, for they have no pitch, but anointed with an oil of a certain tree mixed with lime and hemp, beach finall, which binds falter than pitch or lime. The greater ships have three hundred mairres, the others two hundred, or one hundred and fifty, as they are in bigness and in burchen, from five to fix thousand bags of pepper '; and they were wont to be larger than now they are, the fea having broken into parts and illands, that the defect of water in some places cause th them to build less. They use also oars in these ships, four men to one oar; and the greater ships have with them two or three Ics ships, able to carry a thousand bags of pepper, having fixty mariners or upwards on board; which small ships serve fometimes to tow the grater. They have also with them ten small boats for fishing and other services failened to the sides of the larger ships, and let down when they please to use them. They sheath their ships also after a year's usage, so that then they have three courses of boards, and they proceed in this manner sometimes till there

^{*} This account of the ships used in the trade of the East Indies agrees exactly with the modern relations; and though, without doubt, they fall very far short of our ships for many purposes; yet for some, the nature of those is a considered, they may be, and very probably are, more convenient.

Le ficomifes, eles which they elected up. Ilams spot a of the slape, we will it ak of In iia, and, fuft, of elected in its ids.

a pangu , e. Jaj m, is an ine don thee to or could live traided ill s differe from the mores of Mang', very give, the pople of the complation, of much les he iou, in religion idolators, and have a King of the some. They lake a lit in great plenty, for hew merchants come this her, and the ing parties to experiation of it, and they which have carried on commerce thire, ip kill the King's house covered 1. Foold, as churches here with lead, gilded wind no, floors of gold. There are also any years. Once the fame of thef, wishes made Cubl i-Khan to fend to conquer it two of his Barons, with a great fleet of faips, one nursed Abbaca, and the other Vanfamin, who going from Zaitum and Quinfay, arrived there, but falling out between to m' lies, could take but one city, and there behaded all they took, except eight perfore, which by an enchanted precious flone, enclosed in the 1 ght arm between the Tan and flash, could not be wounded with iron; whereupon, with wooden clubs, at the command of the two Barons, they were flain. It happened one day that a northern wind blow hard, which was dangerous to the flips riding there, fo that fome were loft, find put out faither to fea, and others, with the two leaders and a few pin cipal perfor s, returned home. Out of many broken flyps fonce afcaped by boards and initiating to an island not inhabited, four miles off Zipangu, and were about thirty thousand, without provision or arms, against whom the Zipanguaners, after the tempest was c. m.d, Int out a fleet of ships, and an army. These coming on land to seek the wacked Tariais without order, gave occasion to the Tariars to wheel about, the iffend boing high in the midft, and to get unfeen to their ships, which were left unmanned, who the streamers displayed, and in them they failed to the chief city of Zirangu, where they were admitted without suspicion, and found few others but women. The King of Lipangu besieged them six mouths, and they having no relief, yielded hemselv s, and their lives were faved. This happened A. D. 1264 *.

The Klian, for the ill conduct of his two commanders, cut off the head of one, and fent the other to a defart island called Zerga, where he caused offenders to die, by fewi on their hands bound in a new flayed hide of a buffaloe, which drying, shrinketh to as 't puts them to vast tortures, which lead to a miserable death. idols in this and the adjoining islands are made with heads of kine, fwine, dogs, and in other ladions more monstrous, as with faces on their shoulders, with four, ten, or even an I undred hands; and to these they ascribe most power, and do most reverence, and fay, that so they learned of their progenitors. They sometimes eat their enemies which they take, with great joy, and for great dainties; at least so it is reported of them. 'I he sea, in which this island lies, is called the sea of Cin, or Chin, that is, the sea against Mangi, and in the language of that island Mangi is called Chin or Chint, which sea is fo large, that the mariners and expert pilots, who frequent it, fay, that there are seven thousand four hundred and forty islands therein, the most part of them inhabited; that there grows no tree which yields not a good fmell, and that there grow many spices of divers kinds, especially lignum aloes, and pepper black and white. The ships of Zaitum are a year in their voyage, for they go in winter, and return in fummer, having winds of two forts, which keep their featons, and this country is far from India; but I will leave them, for I never was there, nor are they subject to the Khan, and return to

[•] This attempt made by the Tartara to conquer Japan is a very curious circumstance, and of great confequence to the history of this country, because mentioned by no other author, which is the reason that Father Martini refers us hither on that head, in his most accurate work of the empire of China.

Zaitum; from hence sailing south-westward one thousand five hundred miles, passing a gulph called Cheinan, which continues two months sailing to the northward, still confining on the south-east of Mangi, and elsewhere with Ania and Toloman, and other provinces before named. Within it are infinite islands all in a manner inhabited: in

them is found abundance of gold, and they trade one with another.

22. This gulph feems like another world; and after one thousand and five hundred miles, sailing across this gulph, is the county Ziambar, rich and great, having a King and a language of their own, idolaters, and paying tribute to the Grand Khan of twenty elephants, and lignum aloes in great quantities yearly. A. D. 1268, the Khan hearing of the riches of this island, sent thither Sagatu with an army to invade it. Acambate the King thereof was old, and made his composition by paying the tribute, which has been mentioned. There are many woods of black ebony there, which are of infinite value. Sailing thence betwirt the south and south-east one thousand five hundred miles is Java, at present supposed by mariners the greatest island in the world, being above three thousand miles in circuit, under a King who payeth tribute to none, the Khan not offering to subject it, because of the length and danger of the voyage. The merchants of Zaitum and Mangi fetch thence abundance of gold and spices. South and south-west-ward six hundred miles from Java are two islands, one Sondur, which is the greater, the other Condur, less, both desolate.

Fifty miles fouth-east from them is a province, or firm land, very rich and great, named Lochae, the people idolaters, having a language of their own, as well as a King. There grows Brasil wood in great plenty, much gold, elephants, wild beasts, and sowl, a fruit called Bercias, large as lemons, very good; the place is mountainous and favage, and the King permits not any one to come thither, lest they should know his country, and attempt to conquer it. There are abundance of porcelane shells for money transported to other places. Five hundred miles southward from Lochae is the isse Pentan, a savage place, which produceth in all the woods sweet trees; sixty miles in the way, the sea is in many places but four fathom, after which failing to the south-east thirty miles further, is the island and kingdom of Malaiur, which hath a peculiar King and language to itself, and here a great trade is carried on in spices from Pentan. One hundred miles south-east is Java the Less, in compass about two thousand miles, and hath in it eight kingdoms, and the people as many languages; they are idolaters, have abundance of treasure, spices, ebony, and Brasil, and are so those kingdoms, that the north star cannot there be seen. Master Marco was in six of those kingdoms,

of which he gives following account, leaving the other two which he faw not.

One of these eight kingdoms is Felech, where the idolaters, by frequent trade with Saracens, are converted to the law of Mohammed. In the cities the mountaineers are very beastly, eating man's stell and all kinds of impure food, and worship all day what they first see in the morning: next to that is Basma, which hath a language by itself; they live without law like beasts, and sometimes send hawks to the Khan, who lays claim to all the island. For savage beasts they have wild elephants, and unicorns much less than elephants, like the bussales in hair; their seet are like elephant's feet, they have one hom in the midit of the sovehead, and fourt none therewith but with the tongue and time, for on their tongue are certain long prickles, and sharp, and when they fourt any they trample on him, and preis him down with their knees, and then sar lime to peres with time tengue. The head is like a wild boar's, which he carries downwards to be accounted. The head is like a wild boar's, which he carries downwards their are find to be an our parts, which likes themselves to be taken to track that the carries food to be an our parts, which likes themselves to be taken to track that the carries food to be an our parts, which likes themselves to be taken to track that

ck as ravens, great and good for prey. There are certain finall apes, in their faces men, which they put in boxes, and preferve with spices, and fell them to mernts, who carry them through the world, shewing them for pigmies, or little men. Jamare is the next kingdom, where Mafter Marco staid five months against his will, ned by ill weather. There none of the stars of Charles's Wain are seen. He once at on thore with two thousand people, and there fortified for those five months, for of those brutish men-eaters, and traded meanwhile with them for victuals. They e excellent fish, wine of the date-tree, very wholesome for phthisic, dropsy, diseases the fpleen; fome white, fome red, and Indian nuts as big as a man's head, the idle whereof is full of a pleasant liquor better than wine; they eat of all forts of i without any difference. Dragoian is another of these kingdoms claimed by the in, having a King and language of their own. I was told of an abominable cufthat when one is fick, they fend to enquire of the forcerers whether he shall ipe? If the devils answer no, the kindred fend for some, whose office it is to ngle the fick party; after which they cut him in pieces, and the kindred eat him h great jollity, even to the marrow of the bones; for, fay they, if any substance of 1 should remain, worms would breed thereof, which would want food, and so die, to great torture of the foul of the deceafed. The bones they afterwards take and ry into some caves in the hills, that no beast may touch them. If they take any nger, they eat him in the fame manner.

ambrai is the fifth kingdom of Java, in which is great plenty of Brafil, of the feeds ereof Master Marco brought to Venice, and sowed them, but in vain, the soil being cold. They have unicorns in great abundance, and choice of beafts and fowls. ifur, the fixth kingdom, bath the best camphire, which is fold weight for weight h gold. In that province they make meal out of great and long trees, as thick as men can fathom; whence, paring off the thin bark and wood about three fingers k, the pith within is meal, which they put in water, and ftir it very well, the lightest is fwimming, and the finest settling to the bottom, and then the water being cast ly, they make paste, of which Master Marco brought some to Venice, tasting not ch unlike barley-bread. The wood of this tree thrown into the water finks like n, of which they make lancets, but short; for if long, they would be too heavy to These they sharpen, and burn at the tops, with which so prepared, they will rce through armour fooner than if they were made of iron. About one hundred I fifty miles from Lambri, failing northwards, are two islands, one called Nocueran, which the inhabitants live like beafts, go all naked, both men and women, and woro idols, have excellent trees, cloves, fanders white and red, Indian nuts, Brafil l other spices; the other Angaman, savage as the former, and where I was told

y had dogs' heads and teeth.

24. Sading hence one thousand miles to the well, and a little to file north-well, is ilan, two thousand and four hundred miles in circuit, and anciently three thousand I fix hundred miles, as is feen in the maps of the marmers of those places; but the rin winds have made a great part of it feat. If is the finest island in the world; the ig is called Sendernaz. The men and women are idolaters, go naked, fave that they er their priviles with a cloth, have no corn, but rice and oil of Selamino, milk, h. wine of trees, abundance of Braill, the best rubles in the world, supplies in res, amethylis, and other pents; the king is faid to have the very fittell ruby this was a seen as long as one's hand, and as but as a man a strip, without fiot, shippe like a not to be bought for money. Cubia Khan ferr and offered the value of a circumstance. The King aniwered, he would not give it for the treature of the world, for bittantia.

it, because it I ad been I sancesters. The men are unsit for soldiers, and hire others when thry have occasion. From Zellan, failing fixty mil s to the west, less the great province of Malabar, which is not an island but firm continent, called India the Greate; the richest 100 · Cin the world · there are in a four le &, the chief of which is Sinder Cardi, in wase Ingd . it as sile to pearls, viz. bet vice Malabar and Zollan, in a bay where the t a is not above ten ce twelve fethom; in which defeeted and in bags or nets tie! to then be so, long up the o fiters in which are the popula: and because there are some great 11th when all the fishermen, they mue certain Branuns to charm them, and there taxe the treaticin, and the King the tenth. Thele offers are found through the whole menth of April, and till the middle of May, and not at any time effe. In September they fird to m in a place above three hundred miles oil, and till the midst of October. The Klimgers as naked as the reft, fave that he wears fome honourable enfigns, as a () of pictures flories about his neck, and a thicad of fills to his brevit, with one humand and four fair pearls flaung thereouth countries prayers by, of which he must I my tay to meny to his idols. A fort or bracel is he weareth on three places on his arms, and lik-wife on his legs, on his linger, and on his toes. The prayers which he lays are P cauca, Pacauca, Pacauca, one hundred and four times. This King hath one thousand concubines, and if any place him, he takes her, as once he did from his brother, where wars had followed; but the mother threatening to cut off her breafts, vl..ch had now the d them, if they preceeded, the quariel was composed. He bath ir my horfem n fer his guard, which always accompany him, who, when the King die, throw themfel es voluntarily into the fire when he is buint, to do him fercice in the next world.

This Prince and his brethien, the Lings of Malabai, buy their horfes from Clinus, and other parts; the country breads none, and if it fometinges fails out that it does, yet we they there bied ill-favoured and naught. Condemned persons will offer themselves to die in honour of fuch an idol, which is performed with twelve knives, and twelve wound, in divers parts of the body, at every blow, taying, "I kill myfelf in honour of that idol," and the last he thrusts in his heart, and is then burnt by his kindred. The wives also cast themselves into the fire with their husbands, disrepute following those who refuse it. 'They worship idols, and most of them adore cows, and would not eat fo holy flesh as beef for all the world. There are some called Gaui, who eat such oxen as die of themselves, but may not kill them, and daub over their hours with ox-dung. These Gaui are of the posterity of those which slew St. Thomas, and cannot enter the place where his body is. They fit on carpets on the ground in this kingdom: they have no corn but rice; are not a martial people; kill no beafts, but when they will eat any, get the Saracens to do it, or other people; wash twice a-day, morning and evening, both men and women, and will not otherwife eat, which they who observe not are accounted heretics. They touch not their meat with their left hand, but use that hand only to wipe, and for other unclean uses. They drink each in his own pot, and will not touch another man's pot, nor fuffer their own to touch their mouth, but hold it over, and pour it in. To strangers who have no pot they pour drink into his hands, and oblige him to drink with them. Justice is severely administered for crimes, and a creditor may in some cases encompass his debtor with a circle, which he dares not pass till he hath paid the debt, or given fecurity; if he does, he is to be put to death; and Mafter Marco once faw the King himfelf on horfeback thus encircled by a merchant. whom he had long delayed and put off; neither would the King go out of the circle which the merchant had drawn, till he had fatisfied him, the people applauding the King's justice. They are very scrupulous of drinking wine made of the grape, and they

a high do neare not thought worthy or honeft men, or a limited to Le witness s, a thing denied also to him who fails by sea, for they say such men are desperit. They this k lechery no fin. It is a ry hot, and they have no run but in June, July, and August, without which achefling of the art they could not live. They have not phose and mers and forthlayers, which observe beasts and bit do, and have an unluster house, every day in the week called Choiach, as on Mor day, between two and three, on Tuci by the had bour, and on Wednesday the ninth, &c. through all the year, set down is there 2001-3. They curiously observe nativities. At thirteen years old they put their box- to cor heir own livings, who run up and down to buy and fell, I aving i finell finell or in then, to begin, and in pearl featin they buy a few pearls, and fell them again to the merchants, which cannot well endure the tun, for hall gain, what they got they bring to their mothers to die's fee them, for they may not eat at their father's celt. They have idols, make and temale, to whom they offer their daughters, who, the the monlis or priests appoint, fing and dones to the idels, and very often fet victu to before them, faying that they eat, leaving it the force of a meal, finging all the while, and then they full to eating in earnest, after which they return home. The cause of their facrifice is the houshold quarrels betwirt the god and goddess, which, it th the old appeare, they should lose their blessing. The great men have litters made t tresiones, which they fafter attificially to fom upper place to present tarantulis bit is and I'o flees and other vermin, and for hefh air.

The p' ce of St. Thomas's sepulchie is a small city, not much bequented by meahants, but very much by Christians and Saracens for devotion. The Saracens hold In m a great prophet, and call him Ananias, that is, a holy man. The Christians take of ing earth whole he was flain, which is red, and carry it with them with great reverence, and gre it, mixed with water, to the fick. A.D. 1238, a great Prince, having more rice than room to lay it in, made bold with St. Thomas's church, in the room's have pilgims were received, but by a vision of St. Thomas in the night, was so terrified that he quickly left the place. The inhabitants are black, not fo born, but became so by often anointing themselves with ressamine oil, to obtain that beauty. They paint the devil white, and their idols black. The cow-worshippers carry with them to battle It me of the hair of a wild ox, as a prefervation against dangers, and therefore such

I vis are fold at a high price.

25. Murfili, or Monful, is northward from Malebur five hundred miles; their labit his are idolaters. They have diamonds in their hills, which they feareh for after great rams. Westward from St. Thomas is Lac, whence the Brainins have then engine nal, who are the horestest merchants in the world, and will not lye for any thing, and fathfully keep any thing committed to their cuflody, or as brokens fell or barter merchandife for others. They are known by a cotton thread, which they wear over the floulders, tied under the arm crossing the breast. They have but one vise, are great aftre logers, of great abilinence, and long life; observe their own thadow in the fur, when they are to buy, and thence conjecture according to the rules of their art. They constantly chew a certain herb, which makes their teeth good, and helps digestion. There are some religious among them, called Tangui, who go altogether naked, live aufterely, we flap cows, of which they have little brafs images on their forcheads, and of the ex-bones after in he an continent, wherewith they ancient their bodies in divers places with great revenence. They neither kill or eat any live creature, nor herb green, or root before it is dued, effecting every thing to have a foul. They use no dishes, but lay their victuals on dry leaves of applies of paradife. They case themselves in the fands, and then disperse it hither and thither, lest it should breed worms, which must

must die for want of food. Some of them live to one hundred and fifty years, and their bodies, after death, are burnt.

In Zeilan I had forgot to mention a high mountain, which none can ascend but by iron chains, as I was told, in the top whereof the Saracens say is Adam's sepulchre; the idolaters say it is the body of Sogoman Barchan, the first idol founder, son to the King of that island, who betook himself to a solitary life on the top of this hill, from whence no pleasures nor persuasions could draw him; his sather made an image after his death to represent him, all of gold, adorned with garments, and commanded all the islanders to worship it: and hence, as they say, began idolatry. Hither they come from remote places in pilgrimage, and there his fore-teeth, and a dish of his, are referved, and as holy relics solemnly shewed. The Saracens say they are of Adam, which report caused the Khan, A.D. 1281, to send ambassadors thither, who obtained two teeth and a dish, and some of his hairs, by grant, from the King of Zeilan, which he caused to be received by the whole people of Cambalu without the city, and brought

to his presence with great honour.

Cael is a great city, governed by After, one of the four brethren, who is very rich, also very kind to merchants; he hath three hundred concubines. All the people have a custom to be continually chewing in their mouths a leaf called Tembul, with spices and lime. Coulam is five hundred miles fouth-west from Malabar; they are idolaters. There are also Christians and Jews, who have a speech by themselves. They have pepper, Brafil, Indico, lions all black, parrots of divers forts, all white as fnow, others azure, others red, and some small peacocks and peahens, very different from ours, and larger, as are their fruits; they are lecherous, and marry their fifters and near kindred: there are many astrologers and physicians. In Camari are apes so large, that they feem to be men: and here we had a fight of the north-star. Delai hath a King, and the inhabitants have their own language: the people are idolaters, and have plenty of spices; the ships of Mangi come thither. Malabar is a kingdom in the west, in which, and in Guzerat, are many pirates, who fometimes put to fea with above an hundred fail, and rob merchants. They bring with them their wives and children. and there remain all fummer. In Guzerat is abundance of cotton, the trees fix fathoms high, and last twenty years; the cotton of these trees is not fit to spin after they are above twelve years old, but for quilts: there are many Rhinoceros's. In Canhau is store of frankincense. It is a great city, where is great trade for horses. In Cambaia is much Indico, buckram, and cotton. Semenath is a kingdom of a peculiar language, they are idolaters, merchants, and a good people. Refmacoran is a great kingdom of idolaters and Saracens. The last province of the Greater India, towards the north-well, is five hundred miles, near which are faid to be two illands, one of men and the other of women, those coming to thele, and there stay in March, April. and May. The women keep their fons till twelve years, and then fend them to their fathers. It feems the air of that country admits no other course: they are Christians. and have their bilhop, fubject to the Bilhop of Socotora; they are good fiftermen, and have store of amber. Secotora bath an archibition, nor subject to the Pope, but to one Zatuli, who retides at Baldach, who chooleth him. The Socotorans are inchanters, as agreed as any in the world, though excontinunicated therefore by their relater and write wines to being back buch this as have wronged them till their obtain

en en proponio males dicerco i survivordos. A certica con en el el presso planta en esta la companya de la companya del companya de la companya de la companya del companya de la companya del la companya del la companya de la compa teeth. The currents in these parts are of exceeding force. They report strange stories of fowls called Ruch, like an eagle, but of incomparable bigness. Zensibar also is said to be of great length, &c. There are elephants, giraffas, and sheep, very unlike to ours; the men and women very deformed. I have heard mariners and skilful pilots of those parts report, and have seen in their writings, which have compassed the sea of India, that there are in it twelve thousand and seven hundred islands inhabited and defert. In

India Major, which is from Malabar to Chefmacoran, are thirteen kingdoms.

India Minor is from Ziambi to Murfili, in which are eight kingdoms, besides many The second, or Middle India, is called Abascia, the chief King a Christian. There are fix other Kings, three Christians, and three Saracens, subject to him; there St. Thomas having preached in Nubia, came to Abascia, and there did the like, and went afterwards to Malabar. They are very valiant foldiers, always in arms against the Soldan of Aden, and the people of Nubia. I heard that A. D. 1288. the Great Emperor of the Abissines would have visited Jerusalem, but being dissuaded by reason of the Saracen kingdoms in the way, he sent a Bishop of holy life to perform his devotions, who in his return was taken by the Soldan of Aden, and circumcifed by force; whereupon the Abiffine Monarch raifed an army, discomfitted the Soldan, with two other Mohammedan Kings, took and spoiled Aden. Abascia is rich in gold; Escier is subject to Aden, forty miles distant south-east, where is plenty of white frankincense, very good, which drops from small trees by incision of the bark, a rich merchandise, &c. Some in that country, for want of corn, make biscuit of fish, of which they have great plenty: they also feed their beasts with fish. They take them in March, April, and May.

27. After having spoken of the provinces on the coast, I will now return to some provinces more to the north, where many Tartars dwell, which have a King called Caidu, of the race of Zingis-Khan, but subject to none. These observe the customs of their ancestors, dwell not in cities, castles, or fortresses, but dwell with their King in the fields, plains, vallies, and forests, and are esteemed true Tartars. They have no fort of corn, but live on slesh and milk, in great peace. They have multitudes of horses, kine, sheep, and other beasts. There are found great white bears, twenty palms long, black foxes, very large, wild asses, and little beasts called Rondes, which bear the sable furs, and variarcolini, and those which are called Pharaoh's rats, which the Tartars are skilful in taking. The great lakes which are frozen, except for a few months in the year, are the cause that in the summer it is scarce to be travelled for mire, and therefore the merchants in going to buy their furs, for sourteen days journey through the desart, have set up for each day a house of wood, where they barter with the inhabitants, and in winter they use sledges without wheels, and plain on the bottom, rising with a semicircle at the top, or end, which are drawn on the ice by beasts like great dogs, by couples, the

fledge-man only with his merchant and furs fitting therein.

At the extremity of the region of these Tartars is a country reaching to the farthest north, called the obscure land, because the most part of the winter months the sun appears not, and the air is thick and darkish, as bettines in the morning with us. The men there are pale and squar, have no Prince, and live like bealts. The Tartars often rob them of their cattle in those dark months, and, less they should tole their way, they ride on makes which have colts tacking, which they leave with a guard at the entrance of that country, where the light beginnesh to fail, and when they have taken their prey, give rems to the mares, which failers to their colts. In their long committed in more, they take many of the inoil story objects for the Fastars going to rebute in a which I have heard some are broaded up. Russ. Russ a great country tear

At a there diseases. The people are Greek Christians, the men and communities, and proventions to the Ring of the last us of the welt, on whom they border. On the east there is planty of fairs, wax, and mines of filter, it reaches, as I was told, to the

ocean fea, in which are islands that abound in ger-falcons and falcons.

29 We are now unived at the close of this author's writings, and therefore are there expable of judging of the particulars they contain, which was the reason that I it forse points to be confidered bare, which I should otherwise have thrown under the 1 - d of objections. Some critical readers have offected to doubt, whether our author. or rather his performance, deferves credit, from the account that is given of the manner in which it was wrote, and from the different flories that we have told of the original. We have already accounted for the mistakes that have been made on this head, and shall here only take notice, that Franc's Pipin, of the order of preachers, who made a Latin translation of our author's work, tells us in his preface, that from the report of his domestics, he was faisfied that Marco Polo was a man of great prudence, remarkably honest, and one who had the fairest character that could be. It is not very call, to conceive, that fuch a man should expose that credit which he had been at formuch pains to establish, by fending into the world an indig of ed heap of fictions and romances. But the same person informs us farther, that Signior Nicolo Polo, the father of our at thor, was the most oftened and bost beloved man of his time, and that he constantly reported the very fame tacks during his whole life, which his for published in his works: and as for his uncle Signior Maffio, who enjoyed fome of the principal offices in the government at V nice, and diffinguished himself by his wildom and integrity, when he was upon his death-bed he took particular care to affure his confessor, that he had reviewed his nephew's work, and that he was fully fatisfied that there was nothing in n that was not strictly true, and this he gave him leave to declare for the satisfaction of the world. Here then are three credible witnesses to the same facts, and ther fore, according to all the laws of evidence, they ought to be looked upon as thoroughly establ hed.

We must however distinguish between such facts as our author reports from his own knowledge, and those which are grounded only on hearing and information. We may accuse an author of credulity or imprudence, who inserts strange and improbable things in his writings, but we cannot with justice charge him with insidelity or falsehood on that head, and we ought also to make some allowance for the genius of the time in which he wrote, because it cannot be presumed, that even the witest and most prudent men can be totally free from the errors of the age in which he flourished: it may not be

amiss to give a few instances with regard to our author.

In the twenty-fifth chapter there is an account of diamond mines, in the kingdom of Murfili, where we have omitted a passage that is to be met with in most of the editions of our author, because it is reported on the credit of the inhabitants, and we were willing to examine it by itself, that the reader might perceive we had no intention to impose upon him those improbabilities which had been imposed upon our author himself. After having told us that diamonds are found there at the bottom of the rocky mountains, after the rainy season is over, he proceeds thus: "They also in the summer-time ascend these mountains, though with great difficulty, because of the vehemence of the heat, and find abundance of those precious stones among the gravel. In this they are likewise much exposed to danger from the vast number of serpents of enormous size, which shelter themselves in the holes and caverns of these rocks, where, nevertheless, they find diamonds in the greatest abundance. Among other methods of obtaining them, they make use of this: there are abundance of white eagles that rest in the upper

part of those rocks, for the sake of feeding on the serpents, and in the deep vallies at precipices, where men are afraid to venture themselves, they throw pieces of raw men which the eagles percei ing, immediately stoop and ferze r, with all the little ston and gravel that adhere to these most pieces of meat. Such as search for an mon watch the eagles' nests, and when they leave them, pick up such little stones, and search likewise for diamonds among the eagles' dung. The Kings and great men in the cuntry keep the fairest and finest of these stones to themselves, and suffer the meanist to fell the rest."

The fundas Julius Cæsar Scaliger was extremely offended with this relation, which he treats with the utmost contempt, and seems to wonder at the assurance of a weat that expects stories of this kind should gain credit; yet after all, I do not see that the is any great harm in our author's relating this tale, however improbable it may seem since without doubt he received it from the inhabitants and what motives they had tell min such a stery is not very difficult to guess. The native Indians, in all the review their own hands, and by fables of one fort or other kept strangers from attempts to interfere with them. Our author was very probably the first Furopean that was even the diamond mines, and therefore we have the less reason to be surprised at his being the strangers.

ampoled upon in an affair of which he could not be a competent judge.

But to make the reader some amends for so imperfect a relation of the manner which this valuable trade is carried on, I shall take this opportunity of inferting the b account of the matter that I believe has been hitherto given, by one who was an co witness of it in the year 1650, and that too in the very country known to our authority by the name of the kingdom of Murfili. "The diamonds are fo featured and c peried in the carth, and lie fo thin, that in the most plentiful mines it is rare to find c in digging, or till they have prepared the stuff, and scarched purposely for them: it are also frequently enclosed in cleds; and some of those of Molwilleed, and the n wines in the kingdom of Golconda, have the earth fo fixed about them, that, till the grand them on a rough stone with fand, they cannot move it sufficiently to discover the are transparent, or were it not for their shapes, to know them from other stones. At 1 full opening of the trane, the unflulful labourers formtimes, to try what they have found, lay them on a great stone, and striking them one with another, to their col experience discover they have broken a diamond. One I know who had an excellent Itone of eight mangellans, that is, thirty-two grains, ferved to by ignorant miners he ϵ ployed. Near the place where they dig they raise a wall, with such ranged stones they find at hand, whereof all the mines afford plenty, of about two feet high, and feet over, flooring it well with the lame; for the laying of which they have no ot mostar than the earth tempered with water. To strengthen and make it tight, the throw up a bank against the side of it, in one part whereof they leave a small vent about two inches from the bottom, by which it empties itself into a little pit made in the ea to receive small stones, if by chance any should run through. The vent being stopp they fill the ciflern they have made with water, foaking therein as much of the earth it dig out of the mine as it can conveniently receive at a time, breaking the clods, picki out the great stones, and stirring it with shovels till the water is all muddy, the grave stuff falling to the bottom; then they open the vent, letting out the foul water, and fo ply it with clean, till all the earthy substance be washed away, and none but a gravelly c remains at the bottom. Thus they continue washing till about ten of the clock before not when they take the gravelly fluff they have washed, and spread it on a place made plain a smooth for that purpose near the cistern, which being so dried by the heat of the sun

that time of the day, they very curiously look it over, that the smallest bit of a stone can hardly escape them. They never examine the stuff they have washed, but between the hours of ten and three, lest any cloud, by interposing, intercept the brisk beams of the sun, which they hold very necessary to assist them in their search, the diamonds constantly restecting them when they shine on them, reudering themselves thereby the

more conspicuous.

" Some of the expertest labourers are employed in searching, he that sets them at work ufually fitting by, and over-looking; but it is hardly possible, especially where many are employed, to watch them so narrowly but that they may steal part of what they find, as many times fome of them do, and felling it privately, convert it to their own use. If they find a large stone, they carry it not presently to their employer, but keep on looking, having an eye on him, till they observe he takes notice of it, when, with the turn of their hand, they give him a glimple of it, but deliver it not till they have done work, and then very privately, it being the general endeavour to conceal what they find, lest it should come to the knowledge of the governor of the place, and he requires a fhare, which in the kingdom of Golconda is usually practifed, without any respect to the agreement made with them. The miners, those that employ them, and the merchants that buy stones of them, are usually Pagans, not a Musselman, that ever I heard of, followed the employment. These labourers, and their employers, are Tellingas, commonly natives of or near the place. The merchants are the Banians of Guzerat, who for some generations have forsaken their own country to take up this trade, in which they have had fuch fuccess, that it is now folely engrossed by them, who, corresponding with their countrymen in Surat, Goa, Golconda, Visiapore, Agra, and Dilu, and other places in India, furnish them all with diamonds.

"The governors of the mines are also idolaters. In the King of Golconda's dominions a Tellenga Brammee rents most of them, whose agreement with the adventurer is, that all the stones found under a pagoda weight are to be their own; all of that weight and above is to be his, for the King's use. But although this agreement be signed and sealed, he minds not at all the performance thereof, but endeavours to engross all the profit to himself, by tyrannically squeezing both merchants and miners, whom he not only taxes very high, but maintaineth spies among them of their own people. On the least suspicion that they have been any ways fortunate, he immediately makes a demand on them, and raises their tax; else on a false pretence they have found a great stone, drubs them till they surrender what they have, to redeem their bodies from

torture.

"Belides, the excise is so high on all forts of provisions, beetle, and tobacco, which with them are esteemed necessaries, that the price of all things is doubled; by which course there is hardly a man to be found worth five hundred pounds amongst them, most of them dealing by monies taken up at interest of usurers, who reside there purposely to surnish them, who with the governor cat up their gains, so that one would wonder any of them should stay, and not betake themselves to places where they might have better usage, as there are many in other governments, and some sew that have the sense to remove; but many their debts, others hopes of a great hit, detains. Both merchant and miner go generally naked, only a poor cloth about their middle, and then solves much sense; they dare not wear a coat, less the governor should say they save they make and on them. The wiell when they save they make they are soon conceasing that they have an opportunity, and then they save they save they are soon conceasing the strange of the are they are some and constant and the save provides the save they are some and constant and the save provides the save they are some and constant and the save provides the save provides and constant and the save provides the save provides the save provides and constant and the save provides the save provides

and no fuch impositions on provisions; the merchants go handsomely clad, among whom are several persons of considerable estates, which they are permitted to enjoy peaceably, by reason whereof their mines are much more populous, and better employed than those of Golconda."

It is for the fame reason that I have omitted another improbable story of a bird called a Ruc, of such a monstrous fize as to be able to carry an elephant into the air; which abfurdities our author was probably induced to believe, by the strange things he daily faw in these parts of the world, and of which the people in Europe had not so much as the least idea. These omissions I thought requisite for keeping the work within bounds. as having no inclination to try the patience of my readers, by inferting any more of thefe old travels than feem absolutely necessary for connecting the several parts of this difcourfe, and shewing how, in what manner, and by whom those great discoveries were made, which enabled the different nations in Europe to carry on fo great a trade as they do to all parts of the East Indies. This, without doubt, was originally owing to this work of Marco Polo, who, though no geographer or feaman himself, yet left such clear and evident proofs of the possibility of reaching the most distant parts of Asia by sea. that his work was more esteemed in Portugal, where the first spirit of discovery appeared. than in Italy itself. It remains, in this place, to give a short account of the names by which he has distinguished the countries he visited, and particularly to answer the great objection raised against his work, from his not making any mention of the famous wall in China for keeping out the Tartars, which shall be done in as few words as possible.

Our author following exactly the fentiments of the Tartars, diftinguishes all this great country into two parts, viz. Cathay and Mangi, about which many doubts have been raifed, and many disputes set on foot without any just grounds, since it is very plain, that, under the denomination of Cathay, Marco Polo comprehends the fix northern provinces of China, and under that of Mangi the nine fouthern provinces, which are feparated from the former by the great river Kiang; and when we come hereafter to treat of the present state of the empire of China, we shall take occasion to flew, that this description of his agrees very well with the best accounts of This will be the more intelligible to the reader, when he is informed, that empire. that the Tartars still preserve these very forms of speech, that is to say, give the name of Cathay to the northern parts, and that of Mangi to the fouthern provinces of China. As to this latter, it is a name of contempt, for Mangi, in the Tartar tongue. implies Barbarians, and to they effected the Chinese to be, not from the brutality of their manners, but from their extravagant haughtiness and pride, and especially from that intolerable hatred and contempt with which they treated the Tartars themselves. The plain reason why our author did not mention the famous wall in China was, because he entered it by the fouthern provinces; and as he confines himself to the places be law, or to furth as were in their neighbourhood, and profecutes his description from the weltern parts of China to the lea, it was impossible he should take notice of it; so that when we consider this matter attentively, it is very plant, that this circumstance, inflead of lessening the credit of Marco Polo, ought, in truth, to strengthen it very much, fince it is a convincing proof of the truth of what he has affected in relation to his own travels, and his defenitions of the commises through which he passed; and evidently shows he did not ambie himself with accounts of countries and provinces of which he could say nothing but from a front, to which it he had liftened, his relation will jave been much more obscure and perplexed that we find that preferry. But it is easy this to proceed to the coherinal of this terror. In the world, the neverthese that the obtained of Marko Polo's Travels, in order to the thorough understand-

wol. Vil

ing of our subject. And this we shall perform as concisely as possible, and in such a manner as may disengage us from the necessity of looking into any more of these old writers for the suture.

29. As the inhabitants of Europe, received the first distinct account of the vast country of China from our industrious Venetians, so from them likewise they had the clearest and best account of the revolutions that had happened in that empire by the power of the Tartars; a thing of fuch consequence to the right understanding what fubfequent travellers have related, that I will be bold to fay all the difficulties and difcouragements that have been thrown in our way, and have so long hindered our making a right use of the many collections of travels already published, have arisen in part from a humour that for some time prevailed, of treating Marco Polo's relation as a romance, and partly through the mistakes made by those, who for want of having sufficient lights, and the materials that were requifite, undertook to explain the history of the irruptions of the Tartars into China, and endeavoured to make the dates and facts mentioned in these travels, fall in with their accounts, accusing, at every turn, the author of errors and faults, of which themselves only were guilty. To remedy these disorders, and to make the way plainer for the future, we shall, without running into a long discussion of what other writers have advanced, observe, that there have been three diffinct conquests of China made by the Tartars, of each of which we shall give a clear and distinct account in very few words. The first of these was by the Eastern Tartars, who, before the time of Zingis Khan, made themselves masters of the northern provinces of China, and fixed the feat of their empire at Khanbalick, Cambalu, or Pekin; and this, as I conceive, gave rife to what is called the empire of Cathay; concerning which, all our antient writers in general deliver themselves with so much confufion, fometimes reprefenting Cathay as a part of Tartary, fometimes again comprehending under that name the whole empire of China; and at others, diftinguishing it from both. But from this distinction, it clearly appears, that though the ancient empire of Cathay was fituated in China, yet it was an empire raifed by the Tartars; and that from want of attending to this, so many mistakes have been introduced.

The prince who governed Cathay in the time of Zingis Khan was Altan Khan, against whom that great conqueror made his first attempt, in the year 1206, and that with such success as to oblige this monarch, after various defeats, to shut himself up in the city of Cambalu, and to sue for a peace, which, with much difficulty, he obtained; for the confirmation of which he gave his daughter in marriage to Zingis Khan. This peace was of but very short continuance; for Altan-Khan, having a jealousy that some of his nobility held intelligence with his enemy, he put many of them to dearh; and finding the northern parts of his dominions in a manner wasted and depopulated by the late invasion, he retired to the city of Nankin, which his father had fortstied with three walls the last of which was forty leagues in circuit; and left his son in possessing the instances of twenty before mentioned, and at the same time doubting their own after, and ammediate recourse to Zingis Khan, and diew him a second time into the other where the instance is made limited matter of the imperial city of Cambalus, the new of which second the variety of and allow the strength of the instance of the instance. The city of and his protoned family. This imperies some the variety of and dies the larges because the large of the instance of the in

and the plantage continues to complete the control of the property of the section of the section

18

The bounds of Zingis-Khan's conquests on this side, was the river Hoang; but his fucceffors annexed all the country between that river and the river of Kiang. rest were subdued by Coplai-Khan, and his general Pe Yen. This was the second conquest made by the Tartars, who not only destroyed the empire formerly established by their countrymen in Cathay, but also that of the native Chinese, which had subsisted for fo many ages. This short recapitulation fets this affair in its true light, and not only explains what Marco Polo has told us, and reconciles his accounts with those of later authors, but also connects his relation with that of Rubruquis, and even those of the Arabian travellers; so that taking the whole together, we have a clear and satisfactory view of the affairs of China, to that which I call the second conquest by the Tartars; but as the affairs of this country were entirely changed again before the arrival of the Portuguese by the way of the Cape of Good Hope, I think it will be for the reader's eafe and advantage to have this hiftory conducted to its close before we enter upon the discoveries and conquests of the Portuguese; because otherwise, when we come to speak of the Chinese as again in the possession of their country, and again driven out and conquered by the Tartars, it must necessarily introduce infinite confusion. It is from the Chinese writers that we have the reigns of the Tartar emperors who succeeded Coplai-Khan, and of whom there is very little mention made in the histories of the Tartars.

The Chinese, as I before observed, called this new imperial family Yuen, and bestowed the name of Chi-Tsou upon Coplai-Khan, of whom their histories speak with the utmost reverence, and whom they celebrate, for his having opened the great canal mentioned by our author, and which has been ever fince justly confidered as one of the wonders of China. It is three hundred leagues in length, and nine thouland imperial barks are constantly employed thereon, in transporting the tributes of the fouthern provinces to Cambalu or Pekin, and in other fervices. These writers place the death of this Emperor fomewhat lower than the Tartar historians; for the former say, that he lived to the age of fourfcore, and died A. D. 1295, whereas the latter place that event in 1292. He was fucceeded in the empire by his grandfon, whom our author calls Timur, but in the Chinese chronicles he is stilled Tching-Tsong; and as his grandfather excelled in power to he diftinguished himself by his clemency and the love of his subjects. After him reigned feven other princes of his family, all whom were no less illustrious. on the fcore of their perfonal virtues, than glorious from their polletling to large an empire: and it is very remarkable, that the Chinese history renders to great justice to this foreign race of Princes, as to stile the period in which they ruled over China, the "Wife Administration." The last of them was Chun-u, a prince of great natural endowments, but who unfortunately gave himself up to priests and women, leaving the management of the affairs of the empire entirely to his prime minister. The Tartan foldiers, through to long a piece, had fold the original discipline, and were become flothing and efferminate, which to railed the courage of the Churcle, that they began to thew a disposition to revolu; and one Tchou, an obscure person who had been no better than a footman, having put himlelf at the head of a body of malecontents, reduced many of the great cities in the empire; and became, by degrees, to powerful, that he twice describe the superior arroy and at left located the Extraps to abendon Chine after they had been policifed of throsely nine wasta. This revolution happened in 1970 and Echou bring by his tis easy this was reach hundred to be imperial thrones all tunied the name of Tarribas and night his imperial reflicing invene and through the name of Tarribas and night his imperial reflicing invene and translate. And thus traps that the finish a large translate that the finish is large to the name of the name of the night of artiniolis et l'indicativals solutions

As for the Emperor Chun-ti, he retired with his Tartar subjects northwards, and died of grief and vexation about two years after this revolution happened. The Tartars that were thus expelled, having a strong tincture of the Chinese customs, did not join with the rest of the Moguls, but settled themselves in the country of Leaoton, and were, from this time forward, stiled the Nieuchen Moguls, or "Moguls of the East," to diffinguish them from the other Moguls, who were called "Moguls of the West."

This defart country they cultivated with the utmost care, built therein several considerable cities, and practifed that industry which they had learned by conversing so long with the Chinese; yet, in some respects, they still retained a tincture of their ancient manners; for, instead of remaining firm and united, which seemed to be the only means left for recovering again the dominions they had loft, they fplit themselves into feveral little principalities, under so many Khans; who though their territories were not very wide, maintained nevertheless their independency. Among the most confiderable of those cities which they crected, were Kirin, Ula, and Kinkrita, all three of them feated on the west bank of the river Sangoro, which falls into the great river Amur, about twelve days journey above its mouth. The city of Kirin is diffant from the province of Leaoton, about three hundred and fixty miles. The city of Ula is in latitude forty four degrees twenty minutes north, and was confidered as the capital of the Nieuchen Moguls. The Khan of Ula however was far from being a confiderable prince, had no fort of superiority over the rest of the Khans of the Eastern Tartars, was without allies or refources beyond the power of his own fubjects; and yet, as we shall shew hereafter, it was this Khan Ula, that had the courage to undertake, and the good fortune to accomplish the third conquest of China : but at present we will leave the Tartars cultivating their defarts, and return to the new-founded empire of Tchou. and his descendants.

The dynasty, founded by this prince, was called Ming, and the Emperor, who, as I have faid before, assumed the name of Tai Tsou, reigned thirty-one years with great glory, and left the empire to his grandson, who perished in a civil war, and was fucceeded by his uncle, who, having been formerly King of Pekin, transferred the feat of the empire thither. The fixth Emperor of this family was Yng Tfong, under whose reign the Tartars made new incursions into China; to oppose them, the Empefor marched at the head of a great army, and pursuing them considerably beyond the famous wall, they fuddenly faced about, attacked and defeated the Chinese, making the Emperor prifoner. His fon who was but two years old, was advanced to the empire, and the brother of the captive Emperor, whose name was King Ti, declared protector, which promotion gave him an opportunity of feizing the empire. The Tartars, some time after, released. Ying Tiong, who choic however to lead a private life, and teave his brother in pollation of the empire; which he enjoyed to his death; and then the old Emperoravas again feated on the throne.

The eleventh emperor of this race was Chi Mong, who had the good fortune to deleveling Lautain in leveral battles; and abwas under his reign that the famous francis

As present all the Earliern Partary is Subject to the Chinese Emperors, and is divised may two parts.

In sometimes what may be easilist the Hereditacy committees of the family now retgining in China. The same of the process of the major o

Xavier preached the Christian religion in the east, where he died in 1552. ror Chi Tfong reigned forty-five years, in the latter part of which the government began to decline very fenfibly, as it continued to do under all his fucceffors, down to Hoai Tlong, who was the fixteenth and last Emperor of the family of Ming. It was under his reign that Zungt-hy, who was Khan of Ula, formed the defign of making himself master of China, notwithstanding that all the force he was able to raise did not exceed fifteen thousand horse. He began with entering into private intrigues. with fome of the Chinese mandarins, who were exiled into the province of Leaoton, by whose affishance he soon became master of great part of that province. The Emperor fent against him an army more than sufficient to have forced him back into his own country; but he had so much address, as to prevent the principal officers of this army from doing their duty; fo that by degrees he mastered all the rest of that

province, and at last took possession of its capital *.

While this scene was transacted in the east, and the whole force of the Chinese empire employed there to so little purpose, new troubles arose in the western provinces, where several bands of thieves and highwaymen committed the most extragant outrages; and, at last, under the command of one Lycoungz, an obscure and infamous fellow, plundered feveral cities, and even whole provinces, which increasing the number of their forces, the rebel had at last sufficient power to attempt the subversion of the empire. It was with this view that he marched directly to Pekin, where in three days he became mafter of the place, and the Emperor finding himself abandoned, hanged himfelf on a tree in his garden. Lycoungz immediately took the title of Emperor, and endeavoured, by all the methods he could devife, to bring over to his interest Ou-sanguei, who was general of the army fent against the Tartars, and the only person capable of disputing with him the possession of China. That general however rejected all his offers with contempt, which obliged Lycoungz to take the field once again, and to march against him with his numerous army: Ou-fan-guei, who faw that it was simply impossible for him to think of making head at once against the usurper and the Tartars, refolved to make terms with the fairer enemy of the two, and thereupon invited Zungthy to come to his affiftance †.

This was precifely what the Tartar prince defired, and therefore he made no difficulty of complying with his demand. He left five thouland of his own troops in the province of Leagton, and then marched with ten thousand Tartars and twenty thoufand of the inhabitants of that country to the relief of the Chinele general, who received him with great joy. They marched together directly towards the uturper, and when they were upon the point of giving him battle, Zungt hy observed in a conference. he had with the Chinese general, that is the best part of the forces of the empire, and especially those of the southern and western provinces were extremely alraid of the Taxons it would be very expedient for him to cut the talls of his hories after their manner; by which means the army of the uturper would take them all for Tarms. Ou fan quel following the advice of the Khan, it had forgood an effect, that the rebels were totally defeated, and Lycoungs obliged to fly with the remainder of his army to-

As at it not my intention to give the reader here a lithout of Chink, but harely to menting facilificate as may be increding at explain what has been related before, and may occur in face-eding voyages. I display think my fair ediligent to meeting all the Emperors of the family, and displayed never routing only as the reigns of facilities in might be frankly my purpors.

I Thate facilities the therewise differents related in different all there is not a face grain them its paper from the collection of a performance which pass sense by thick indicates that it is the Chink all the may probably its recommed upon to Fundilly when he standard a perfect, accordingly the free collection of the recommed upon to Fundilly when he standard a perfect, accordingly to free collection of the collection.

wards Pekin. The victorious allies continued their pursuit without the least intermisfion; and on their drawing near the city, the Chinese general made proclamation, that all such as did not take part with the usurper, should trim their horses after the manner of the Tartars, that they might the more easily distinguish them on all occasions. This stratagem had as great an effect as a second victory: such multitudes declared themselves against the usurper, that finding it absolutely impossible to maintain his ground, he first plundered the imperial city, and then retired with his army loaded with booty. When the allies where in possession of Pekin, it was agreed that Zungt-hy, with his forces should remain there for the security of the place, and that Ou-san-guei with his army, should pursue the usurper till such time as an end

could be put to the war.

The fame arts, or rather the fame virtues by which the Tartar Prince had gained the affections of the people of Leaoton, produced the like confequences amongst the inhabitants of Pekin; and as, on the one hand, they were weary of living without the support and protection of a governor, so they flattered themselves, on the other, with enjoying all imaginable happiness under a Prince of so much humanity and so great abilities as Zungt-hy, and therefore almost of their own accord, they declared him Emperor in the absence of the Chinese general, who had himself views upon the throne, in which he had very probably fucceeded, if he had not been thus out-witted by the Tartar Zungt-hy, who foreseeing how different a thing it might prove for him to maintain himself in possession of so great an empire, with such a handful of forces, was no fooner feated on the imperial throne, than he inftantly dispatched advice of his good fortune, to the Khans of East Tartary, who were Princes of his own family, inviting them to come, and share with him in so rich a conquest. This was certainly a good expedient for fecuring himfelf against the fickleness or infidelity of the Chinese; but at the same time it visibly exposed the new Emperor to the danger of being undone by his auxiliaries; for the Khans of the Tartars, who on the first summons hastened to his assistance, had certainly in view the dividing the Chinese empire amongst them; but Zungt-hy was a Prince of fuch wisdom and penetration, that he immediately discovered the danger to which he stood exposed, and provided against it with a sagacity equal to its penetration. He divided these corps of Tartars as soon as they entered his dominions, sent for several of their princes to Pekin, and in a short time so separated them from each other, that they became absolutely his subjects, and were unable to act otherwise than was conducive to his service. In the conquest and settlement of China, this Tartar Prince shewed all the courage and capacity of Julius, all the policy and conduct of Augustus. Ceelar, by which he thoroughly accomplified the third conquest of China by the Tartaxs; which happened in one thousand fix hundred forty and four, after the Chinese had preferved their freedom for two hundred fixty-fix years *.

This new race of Tartar princes, which full continue to reign in China, for the twenty-fecond dynalty of their monarchs, is diffinguished by the name of Timp; jets however very remarkable, that Zungr by is not accounted the first of those emperors, because he died almost as foon as he was stated on his throne, and before he was entirely

A The Crime houses therefore error that his ear of Emperor weething person are flavour of property that the following the property of the first of t

possessed of China, leaving the empire to his son Chun-Tchi, who was then no more than fix years old, and to whom his dying father assigned his brother Ama-Van for his guardian. So early a minority, one would have imagined, must have been fatal to the new raised empire; but Ama-Van, during the non-age of his nephew, conducted all things with so much wisdom and fidelity, that when the young Emperor came to take the reins of government into his own hands, he found himself in as full possession of his dominions, as if they had descended to him from a long line of ancestors. The Emperor Chun-Tchi was himself a person of extraordinary abilities, easy and affable amongst his foldiers, wise and prudent in his councils, and so refined a politician, that under colour of executing the laws with exactness, he took off all the great men in China that were capable of giving him either jealousy or disturbance, so that after a reign of seventeen years, he left the empire persectly settled to his son, who was but eight years old.

The name of this prince was Cang-hi; he was raifed to the throne in the year 1662, and, during his minority, the empire was governed by four great ministers, who executed their offices with the greatest wisdom and integrity, so that this second minority proved not in the least dangerous to the empire. It is true, that the famous Chinese general Ou-fan-guei took the advantage of it, and endeavoured to shake off the yoke of the Tartars, of whom with equal wit and wifdom, he faid, that he had called in lions to affift him in hunting dogs. He had fome fuccess at the beginning, and might probably have fecured at least some part of the empire for himself and his posterity if he had not been very old at the time of his revolt, and died not long after, which gave the Emperor's ministers an opportunity of taking such measures, as put it out of the power of the Chinele to rebel for the future. Cang-hi fell nothing short, either of his father or his grandfather, fo that it may be reckoned an extraordinary felicity in this family, that for three generations there were as great princes of it as perhaps of any other in the world. This Emperor was extremely careful with regard to two points. the encouraging and diffinguishing his Tartar subjects, and behaving with the utmost; justice and moderation towards the Chinese.

In the beginning of his reign, indeed, he committed some necessary acts of leverity. but when he found that he had by this means absolutely broken the mutinous spirit of the people of China, he changed his conduct entirely, and applied himself wholly to the putting every thing in the best order possible, for the benefit of all his subjects. It was with this view that he obliged the viceroys and other governors of provinces to adminifter justice with impartiality and mildness, taking from them the power of punishing capitally, and obliging them to fend all fuch fentences to the function tribunal of the empire. In order to take away all diffinctions, and to render his Tartar and Chinele fullights but one people, he established this regulation; he obliged the Tarrars to wear the Chinele habit and obliged the Chinele to out their hair; after the mode of the Tartars, and this upon pain of death. It may feem firange; but it is nevertheles true, that many refuted folkomply with this order, and choic rather to part with their lives than their hair, and that many more abandoned their native country; to fly into places where they might wear their mair as lone as they were wint. But the Lasperor stedict had notwish tanding the defined affect, that is to lay, freed him from facts multinous theres as might have diffurbed the tranquillary of his regul

The molesusportant employments, and the mole honourable offices in the powers ment; he gave only to the Crimers, but their he made a law, by turns the employees farmes by a briefly omen, or of Chinefe by Lantacian women, who were in a family the colorest of the Cartest women, who were the family of the colorest of the Cartest women, who seem in a family of the colorest of the Cartest women, who care the parties of the Cartest work despite the parties. He was not more careful of the classical care.

than of the foreign affairs of his empire, which almost all his predecessors had neglected to a great degree; for he not only reduced all the eastern Tartars intirely under his obedience, but made two journeys into that country where he admitted all ranks of people freely to his presence, and thereby gained the love of the Moguls in the highest degree. As for the Tartars of the west, he forced them to have resource to his protection, and not only drove the Calmucks from his frontiers, but entering their country also in his turn, took from them the provinces of Chamil and Tarfan, which serve as an excellent barrier on that side of Chinese empire *.

In his person, and in his manners, he had nothing of the Tartar, and was so perfectly acquainted with every government in Europe, that he discoursed of them in a manner that surprised even the Europeans themselves. The late Czar Peter the First sent M. d'Ismailoss with the character of his embassador to the Chinese court, whom the Emperor not only received with all imaginable politeness, but at the first audience presented his excellency, a nobleman who accompanied him, and his secretary, each with a gold cup sull of mead, by which they plainly perceived that he was informed of the Czar's custom, who when he had a mind to distinguish any foreigner, was wont to present him with a glass of wine with his own hand. This Emperor Cang-hi reigned with great glory sixty-one years, and died on the 20th of December 1722. He left behind him seventeen sons, the fourth of which he declared his successor, who at his accession to the imperial dignity, assumed the name of Yong-Tching, i.e. peace undisturbed. This prince, who is said to inherit the virtues as well as dominions of his ancestors, was in quiet possession of the empire in the year 1735, since which we have not had any certain, or at least very important accounts from China.

By this deduction of the Chinese history we learn a multitude of things necessary for the understanding such of the subsequent voyages as mention that country, which was the reason that I infifted upon it so long; and we likewise discover the usefulness of this fort of knowledge, with respect to the voyages that have gone before. We see that the Chinese, with whom our Arabian travellers conversed, were quite another fort of people than those that now inhabit China; for they were a pure and unmixed nation, whereas the modern Chinese are in a great measure incorporated with the Tartars; from whence it is easy to discern, that great alterations must have happened in their manners, especially if we consider the character that Rubruquis gives the Tartars, which comes much nearer that of the modern Chinese than any thing we meet with in the Arabian writers. It appears likewife from the comparison of the facts related by the Arabians with those mentioned by Marco Polo of the people of Mangi, that both thele writers must have reported things with great fidelity, fince they agree in a multitude of particulars. The conquest of the northern part of China by the Tartars, though not expressly mentioned, yet is plainly alluded to by the second Arab writer; and as to the intire conquelt of China by the fame nation, we owe the full account of it to Marco Polo; for, without the affiltance of his relations, it would have been a thing very difficult, if not impossible, to have discovered, that Chi-Tiou was the same with CoplarKhan, or Cublai-Khan. Emperor of the Tartars, who before he became maffer of their country was called by the Chinele Ho-mille f.

en de la companya del companya de la companya del companya de la companya del la companya de la

We likewife learn from this fuccine view of the Chinese history that the Tartars, who now possess China, are the very same nation that formerly possessed it, contrary to what some very learned men afferted, and which was generally believed half an age ago. We likewise see, that the reigning family in China are direct descendants of Cublai-Khan and confequently of Zingis-Khan, that famous conqueror, whose empire, as we have elsewhere shewn, was the most extensive that has been hitherto known in the world. There things are of very great confequence, if we read voyages for the take of improving and enlarging our knowledge, and not merely for the take of amusement, which however, is rather increased than lessened, by attending to these circumstances. We can easily apprehend, after a little reflection, that in the time of our Arabian travellers, and even in that of Marco Polo, the Chinese empire must have been in a much better condition, and its trade much more flourishing than when it was first visited by the Portugueze, English and Dutch. Before that time it had not been exposed to those cruel ravages that enfued first on the breaking out of their civil wars, and next from the last conquest by the Tartars. Besides, we can at any time have recourse to this fhort history, when we are at a loss as to the facts mentioned in subsequent voyages, and by comparing the times in which they happened with the dates that are therein fet down, obtain an eafy folution of doubts that perhaps we could never otherwise have got over.

It is from the confideration of these advantages, and that as far as in my power lies I might remove all obstacles whatsoever to the perfect understanding of this subject, that I have determined to give the reader in the next fection a concile history of the other Tartar empire in the Indies, I mean that of the Great Mogul, who was likewife a defcendant from the fame family with the great conqueror I have so often mentioned. purfuing this method, which I have brought into the narrowest compals possible, the reader will gain fuch a previous knowledge of a great number of facts as never to be at a loss in perusing any of the voyages to the East-Indies, either in this, or in any other collection, which, without fuch an introduction, it would have been absolutely impracticable for him to have understood, and that for many reasons, of which I will take the liberty to mention only a few. In the first place then, every voyage brings us not only into a new country, but, if I may fo fpeak, introduces us into a new company, with the character of which, if we have not fome previous acquaintance, it is impossible for us to be at our ease, whereas if we know in general who and what they are, we enter immediately into the true ferile of the relation, and hear all that is told us with pleafure. In the next place, it often happens, that either from the fear of appearing tedious, or from fome other motive, the writers of voyages give us only short hints as to the government of the countries through which they hals, or the characters of princes that reign in them; which would be atterly unimelligible to fuch as never heard of them before, and yet may be inflicient for the information of these who have a general motion of the posture of things in that commit at the time memianed by the muthor. Lailty we are by their means enabled to rectify the mulakes of fach

In the min', a then, every voyage bring, us not only into a new country, but, if I may to the steel introduces us into a new company, with the character of which, if we have not fome previous acquaintance, it is it spellible for us to be at our cale, whereas if we know in general who and what they are, we enter immediately into the true fense of the relation, and hear all that is told us with pleasure. In the next place, it often happens, that either from the fear of appearing tedieue, or from fome other motive, the writers of voyage, give us only fhort hints as to the government of the countries through which they pais, or the characters of princes that reign in them, which would be utterly unintelligible to fuch as never heard of them before, and yet may be fufficient for the information of those who have a general notion of the posture of things in that country at the time mentioned by the author. Lastly, we are by these means enabled to rectify the mistakes of such

that we learn the Tartar appellations, and have thereby an opportunity of comparing them with the Chimic I cannot help remarking upon this occasion, that in all probability Flo-pille is no more than the Tartar name of Khoplai (for io in that language it is written) expected in Chimele characters, but for the name given him, after he attained the majors of Chi-Tlou, it may be rendered the fellow his race, for Chi figuries the beginning, and Them a kind of violet-coloured plutae or first the majors imperial diadem.

writers, to distinguish between the truth and falsehood of what they relate, and to form a clear and certain judgment of the merit of their performances.

It may possibly be objected, that for the same reasons which have been offered in support of these two histories of the Chinese and of the Indian empires, we might be obliged to write the history of all the other princes that have reigned in the Upper Asia, which objection, however, is not at all founded in fact, since in the first place the histories of all the little princes in India are very far from being so necessary as those of the capital empires; and in the next, how necessary soever we might think them, it is impossible for us to write any such histories, because the necessary materials for them are not to be found. When therefore this matter is seriously considered, it appears to be a new argument in favour of our defign; for, fince there have been but two great empires in this part of the world, of which any just and regular account can be given, and to which all books of voyages and travels through the East-Indies must necessarily refer, it would feem very abfurd and unreasonable, after all the pains we have taken in the darker ages of this history, to decline that period of it, which is at once the most useful, and will appear by far the most agreeable to a modern reader, as there is not in the compass of universal history any branch so full of extraordinary events, or in which there occur more furprizing turns and revolutions than in that which we are about to give.

Add to all this, that however deficient the rest of the oriental histories may be, we have abundant materials for this, and those too as excellent in the kind as can be desired; for besides the particular relations afforded us by several writers of credit, who were actually on the spot when those events happened which they record, we have very great lights given us by such of the oriental writers as have undertaken to explain the several expeditions of the Tartars, and especially those of the samous Timur-Bec, known to us by the name of Tamerlane, whose conquests, though less extensive, have, notwithstanding, made a greater sigure in our general histories than those of his glorious predecessor. Zingis-Khan. Besides all which we have the singular advantage of having a great part of this history taken from the very records of that empire which it concerns, by the industry of Mr. Manouchi*, who was forty years in that country, in the quality of physician to its emperors, and had thereby an opportunity of having free recourse to those records, which for the benefit of posterity, as well as his own information, he transcribed.

This Mr. Manquchi was a Venetian by birth, but he wrote his history of Indostan in the Portugueze language, which was then, and is still common in the east. We owe the publication of it to the famous Jesut Father Cartrou, who dedicated his French translation to the Duke of Burgundy, the father of the present Louis XV. In his presace to that work, he promises some farther memoirs by the same hand; but I cannot find that these were ever published, which is the more wonderful, considering the great reputation that the first pair of the work acquired. As Father Cartrou is lately dead, it is very possible those papers may fall into other hands, and yet see the light.

AN ACCOUNT

OF THE

TRAVELS OF TWO MOHAMMEDANS THROUGH INDIA AND CHINA,

IN THE NINTH CENTURY *.

Translated from the Arabic by the Abbé RENAUDOT.

1. A concife Account of the original Editor of these Voyages, and of the Works which render him famous. — 2. The Antiquity of these Relations, and of the Manuscript from which they were translated. - 3. Of the Sea of Herkend, and of the Islands therein. -4. Of the the Island of Serandib, or Ceylon; the riches it contains, and the Manners of its Inbabitants. — 5. Of feveral other Islands, particularly those of Andaman, the Inhabitants of which eat human Flesh .- 6. Of an Island in which are Silver Mines, and other extraordinary Things in these Seas.—7. Of the Trade of China, and of the Respect shown there to the Mohammedans.—8. A very clear and distinct Account of the Navigation of China, which is probably the first Account of it that was ever published. -9. Of an Island in which there are no Women seen, - 10. Of the Port of Canfuin China, and of the Irregularity of the Tides there. - 11. Of many remarkable Things observed in the Countries touched at in this Voyage to China. — 12. The Customs and Manners of the Chinese in civil and religious Affairs .- 13. An Account of the four great Kings, viz. the Khaliff, the Emperor of China, the Emperor of the Greeks, and the Balbara of the Indies. — 14. A succinct Account of several other Kingdoms in the Indies. — 15. The Account of China refumed, the Number of the Cities in that Empire, and the extraordinary Discipline maintained in them. - 16. Of the Burials of the Chinese, and of their demestic Affairs. - 17. Of the Power of the Viceroys, and of the Emperor of China. - 18. Of the public Revenues of the Chinese Empire. - 19. Of the Passes requisite for travelling through that Country. - 20. Of the Administration of Justice in China. 21. Their Laws with regard to Bankrupts. — 22. Other wife Regulations practifed in that Country. — 23. Miscellaneous Customs among the Chinese; — 24. Of the Methods practifed for discovering Truth in Trials in the Indies. — 25. Some other extraordinary Customs among the Indians, - 26. The Vices of the Chinese, and the Panishment of bad Governors among them. - 27. Several Laws in India and China. - 28. Strange Customs that prevail among the Inhabitants of both Countries. - 29. A Companyion betrueen India and China.—30. Of other Countries bordering upon China.—31. The Preface of the facond Author in Confirmation of what the former had activered.— 23. The Highway of a great Revolution in China, by the Rebellion of one Basebu. 33. The Emperir of China reflored, and the December of their Empire. — 34. Of yariaus Puniffements in Use appong the Chinese: —35; A curious Account of the Maintes nance of public Nomes in China — 15. Of various Revolutions in the Chinese Embirous — 39. Of the Excellence of the Chinese Chinase — 18. The History of Chinase Chinase an Acade, who made a Vouge into Perfor, — 19. The Conservate suff the conservation—19. Some very instance Palloyee in repring to the Kauspiedge of the Emberor softs regard to the Religious In piblic Chinases. — 15. Consider of the Acade Chinases.

A Haven (2.2) The marking of proper the country becomes being other the later and the first of t

with the Emperor of China. — 42. Other Circumstances from that Traveller's Relation. -43. Of the Communication between the Ocean and the Mediterranean. -44. Of the Province of Zapage, and of the Commodities it produces. — 45. A remarkable Story of an ancient Prince of this Country. - 45. The War between the King of Komar and the King of Zapage. — 47. The Conclusion of that War. — 48. Of the Doctrine of the Metempsycholis, or Transmigration of Souls, with a remarkable Story on that Subject. — 49. A most singular Act of Instice done by the Emperor of China, on behalf of an Arabian Merchant, against his Favourite. - 50. The great Care taken with respect to the Administ tration of Justice in China. — 51. Of the Situation of the Province of Cherassan — 52. Of the Animal that produces Mufk; the Reason why the Musk of Thibet is better than that of China, and of the several Sorts of that Perfume. - 53. Of certain Customs in China that resemble those of the Arabs. - 54. The Custom of the Indians to burn themselves on particular Occasions, and of their great Constancy in Acts of this Nature. - 55. An incredible Story of the desperate Courage of a certain Indian - 56. Other Instances of the same Nature. — 57. Of the immense Riches of Serandib, or Ceylon, and of the Laws of that Country. — 58. Of the flagrant Vice, and excessive Debauchery of those People. — 59. Of the rainy Season in the Indies. — 60. Of the Indian Brachmans and Penitents. — 61. Monstrous Errors proceeding from religious Mistakes. — 62. Ships built, rigged, and laden from a Plantation of Cocoa Trees. — 63. Some farther Particulars as to the Customs of the Indians. - 70. The Use of this Section with regard to the History of the Indies in the ninth Century. — 71. Additional Remarks and Observations.

1. THE most natural, easy, and certain method of attaining a perfect knowledge of the discoveries made in the East Indies, is unquestionably that of reading the best voyages and travels into those parts, in the order of time in which they were made; for by this means they illustrate each other, and serve as a kind of commentaries, deliver the history of places and persons with the least possible confusion, and shew us at once the different state of the countries mentioned in them in different periods of time, and the advances that were made in perfecting the knowledge of those countries by such as undertook to go thither, and to report what they had seen and heard, for the information of others and of posterity. Of all the travellers into these parts of the world, whose writings are still preserved, those which are contained in this section are beyond all doubt the most ancient, and in that respect, as well as in many others, extremely curious. To render these as clear and as intelligible as is possible to our readers, we shall first rive some menous of that emment breach critic who translated and made them public, and shall next prive a succinful account from the materials be has assorbed us of the authors themselves, the nature of their works, the circumstances which peculiarly recommend them, the reasons which induce us to believe they are genuine, and the credit with the that account is due to them.

1631, under the patronage of Cardinal Richlieu. His father was first physician to the Dauphin, son to Lewis XIV. This gentleman addicted himself chiefly to the study of divinity and the oriental languages, which might have raised him to some eminent station in the church, if, from his great modesty and unaffected love of privacy, he had not studiously declined it. He was very early taken notice of at court, where the politeness of his manners recommended him as strongly to the principal ministers, as the severity of his studies endeared him to most of the learned men of his time.

In the year 1689 he was chosen a member of the French Academy, and in 1691 became a member of that of Inscriptions, and of the Belles Lettres. He accompanied Cardinal Noailles to Rome in 1700, and was with him in the Conclave in which Clement XI. was raised to the papal throne, by whom the Abbe Renaudot was so much esteemed, that he kept him at Rome seven or eight months after the Cardinal's departure, and forced upon him a benefice, which he had the modesty to resule, though his circum-

stances were not such as made it unnecessary to him.

In his return to France, the Grand Duke of Tuscany kept him a whole month at Florence, where he had an apartment in the palace; and during his stay there, was received into the famous academy of La Crusca; after which the Grand Duke loaded him

with prefents, and fent him to Marfeilles in his own veffel.

He published after his return to France many learned works, and particularly in the year 1713, "The History of the Patriarchs of Alexandria, from St. Mark to the Close of the Thirteenth Century," with an Appendix, containing the history of the Mohammedans in Egypt, from their own writers; which gained him great reputation. In 1716 he published, in two volumes in quarto, "The History of the Oriental Liturgies," which was also much esteemed. And in the year 1718 he sent abroad these voyages and travels, which were likewise received with universal applause. Besides these, he published many other learned treatises; and having for many years weakened his constitution by an affiduous application to his studies, he died on the 1st of September 1720, of a severe sit of the choic, in the seventy-fourth year of his age, with the reputation of being one of the most learned men, and one of the exactest critics of his time *.

2. As to the first of these voyages, we know not by whom it was written, the beginning of it being imperfect; but it appears clearly that it was written in the year of the Hegira 237, At D. 851. The latter, which is no more than a commentary or discourse upon the former, appears to have been the work of Abu Zeid al Hasan of Siraf, who penned it about the year of the Hegira 303, At D. 915. It appears therefore, that both of them are, at least, two centuries older than any accounts that had been published before. They were translated from an original manuscript in the library of the Count de Segmelay, the age of which was ascertained by the character in which it was written. But there is fill a planner proof of its being penned in the year of the Hearing for the extent of the walls and fornications of the circuit Damaseus, under the reign of the famous Suitan Noureddin, and of other cities under his dominion; in which the written beaks of him as it. It was and therefore as that mosarch died the lame year this manuscript is clearly between five and the huntred years old?

Must allowers apparent, that there is nothing in either of their units. That the treat the least substant that they are been than their dates speak them; but, on the contrary all the fat mentioned in them, which are capable of being examined and compared with other hillories, afford the clearest testimonies of their being genuine and authentic. The great value of these relations arises from their giving us a large account of Clina, above four hundred years earlier than the Travels of Marco Polon, who, till these accounts were published, was always essented the first author we had on that subject.

There are abundance of very curious and remarkable passages in both these writers, that inform us of customs and events not mentioned any where else; and, though it be true that some of these appear to be fabulous, yet it is no less true, that the greatest part of them are confirmed and justified by the best writers in succeeding ages. But without spending time to little purpose in remarking on what will be obvious to the reader himself in the perusal of these pieces, we shall proceed to the relations themselves. Observing only, that the first of them begins abruptly, on account of there being a page or two wanting in the original manuscript, which very probably contained the name and country of its author, and the occasion of his voyage, the loss of which there is great reason to regret.

3. The third of the leas we have to mention, is that of Heikend †. Between this sca and that of Delarowi are many islands, to the number, as they say, of nineteen hundred; which divide those two seas from each other ‡, and are governed by a Queen §. Among these islands they find ambergis in lumps of extraordinary bigness, as also in lester pieces, which resemble plants torn up. This amber is produced at the bottom of the sea, as plants upon carth; and when the sea is tempestuous, the violence of the waves tears it up from the bottom, and washes it to the shore in the form of a mushroom or truffle. These islands are full of that kind of palm-tree which bears the cocoanut, and are from one to four leagues distant from each other, all inhabited. The wealth of the inhabitants consists in shells, of which even the Queen's treasury is full. They say there are no workmen more expert than these islanders; and that of the sibres of the cocoanut they make shirts all of a piece, as also vests or tunics. Of the same tree they build ships and houses, and they are stilful in all other workmanship. Their shells they have from the sea at such times when they rise up to the surface, when the

The subsequent accounts we have had of the Maldives do not justify this particular, if the intent of the author was to inform us that these islands were always governed by a woman. It might perhaps be so include, where, by accident, one woman might have succeeded another, as Queen Ehrabeth did Queen have succeeded another, as Queen Ehrabeth did Queen have succeeded another.

^{*} Marco Polo returned from his voyage, A.D 1295.

By the lea of Herkend, in all probability, our author means the sea about the Maldives; which, according to the eastern geographers, divides that part of the Indian Ocean from the sea of Delarows, which is the gulph called by the ancients Sinus Magnus. The eastern writers frequently speak of the seven seas, which seems to be rather a proverbul phrase, than a geographical definition. The seas, without comprehending the ocean, which they call Bah-Mahit, are the sea of China, the sea of India, the sea of Kolzuma, or the Red Sea, so called from a town which is thought to be the Classima of the ancients; the sea of Rum, or of Greece, which is the Mediterranean; the sea called Al-Chozar, or the Caspian, and the sea of Pont, or the Pontus Euxinus; but these are not all the names they give them, for the sea of India is very often called the Green Sea; that of Persia, the sea of Bassora, and other names they have for part cular parts of these seas.

It is no vonder that the Arabs had but a very imperfect knowledge of these islands, since we are not very well informed about them to this day. The reader may probably think that our author has multiplied them, from the number he speaks of; but the truth is, that he rather diminishes them; for the most accurate writers we have assure us that there are twelve thousand of them, and this is faid to be the signification of their name in the Malabar tongue, viz. Male dive, i. e. a thousand islands; that round number being put for the true number of them, let it be what it will. We shall hereafter give the reader a full account of these islands, and therefore shall insist no longer on them here

inhabitants throw branches of the cocoa-nut true into the fer, and the shells stick to them. They call them Kaptaje in their language.

4. Beyond these islands, in the sea of Herkend, 1. Serendib, or Coylen, the chief of all those islands, which are called Dobyat. It is all compassed by the sea, and on its coast they sish for pearl. In this country there is a mountain called Rahun, to the top of which it is thought Adam ascended, and there left the point of his soot in a rock, which is seventy cubits in length; and they say that Adam at the same time stood with his other foot in the sea. About this mountain are mines of rubies, opils, and amethysts. This island, which is of great extent, has two Kings; and here are sound lignum aloes, gold, precious stones, and pearls, which are sished so on the coast, a salso a kind of large shells, which they use instead of trumpets, and are much valued.

In the same tea towards the Screndib, there are other isles, but not so many in number, though of vast extent, and unknown. One of these islands, called Ramni, is under several Princes, in which there is great plenty of gold. The inhabitants here have cocoa-nut trees, which supply them with food, and therewith also they paint their bodies, and oil themselves.

The custom of the country is, that no one may marry till he has slain an enemy in buttle, and brought off his head. If he has killed two, he claims two wives; and if he has slain they, he may marry fifty wives. This custom proceeds from the number of energies which turround them; to that he amongst them who kills the greatest number the mest considered. These islands of Rammi abound with elephants, red-wood, and trees called Chairzan, and the inhabitants eat human steff.

- 5. These islands separate the sea of Herkend stom the sea of Shelahet, and beyond them are others called Najabalus, which are pretty well peopled; both the men and the women there go naked, except that the women conceal their private parts with the leaves of trees. When shipping is among these islands, the inhabitants come off in embarkations, and bring with them ambergris and cocoa-nuts, which they truck for iron; for they want no clothing, being free from the inconveniences either of heat or cold. Beyond these two islands lies the sea of Andaman: the people on this coast eat human slesh quite raw; their complexion is black, their hair struzted, their countenance and eyes stightful, their feet are very large, and almost a cubit in length, and they go quite naked. They have no forts of barks or other velicle; if they had, they would seize and devour all the passengers they could lay hands on. When ships have been kept back by contrary winds, they are often in these seasons coast to the sake of water, when they have expended their stock; and upon these occasions they commonly lose some of their men.
- 6. Beyond this there is a mountainous and yet inhabited island, where, it is said, there are mines of silver; but as it does not lie in the usual track of slupping, many have

4 In some of the Arabian geographers, these are called the Islands of Ram; we shall give the reader

fome account of them in a sublequent voyage

It is most certain that, upon a strict inquiry, most of the stories of man-eaters have been found to be fables void of all foundation; but it must be allowed, in regard to our author's account, that what he says has never yet been disproved; for the very latest accounts we have of the Indica, give these people the same, character that he does.

10

fought

^{*} This, as we have shown elsewhere, is the Tapiobana of the anzients; and I think scarcely any island has been called by more names than those which have been bestowed on this; but whereas in the ancient work of Cosmas Indopleustes, it is called Sielendsha, it is very easy to account for this, and to show that it is only a Greek termination given to the true name; for b is often put for u, as d consequently Sielendsha is the same with Sielendive, that is, Sielen Island; whence the modern name, as we usually write it, viz the Island of Coslon.

fought for it in vain, though remarkable for a very lofty mountain, which is called Kaihenai. It once so happened, that a ship failing in this latitude had sight of the mountain, and shaped her course for it, and falling in with the land, sent a boat on shore, with hands to cut wood: the men kindled a fire, and saw silver run from it, which plainly indicated there was a mine of this metal in that place; they shipped therefore as much of the earth or ore as they thought sit; but as they were proceeding on their voyage they met with such a storm, that to lighten their ship, they were under

a necessity of throwing all their ore overboard.

Since that time the mountain has been carefully fought, but it has never fince been To conclude, there are many fuch islands in the sea, more in number than can be fet down, some inaccessible by seamen, and some unknown to them. In these seas it often happens, that a whitish cloud at once spreads over a ship, and lets down a long thin tongue or fpout, quite to the furface of the water, which then is turned round as by a whirlwind; and if a veffel happens to be in the way, she is immediately swallowed up thereby. But at length this cloud mounts up again, and discharges itself in a prodigious rain. It is not known whether this water is sucked up by the clouds, or how this comes to pass. All these seas are subject to great storms, which makes them boil up like water over a fire. Then it is that the furf dashes ships against the islands, and breaks them to pieces with unspeakable violence; and then also it is that fish of all sizes are thrown dead ashore upon the rocks. The wind, which commonly blows upon the fea of Herkend, is from another quarter, viz. from the north-west, but the sea is also subject to as violent agitations as those just mentioned, and then ambergris is torn up from the bottom, and particularly where it is very deep; and the deeper it is, the more valuable the ambergris.

It is likewise observed, with respect to that sea, that when it is thus tossed by the tempestuous winds, it sparkles like fire, and that it is insected by a certain kind of sish called Lockham, which frequently preys upon men. This is probably no other than the shark, which is common enough on all the coasts of the Indies. Here there is a part of the manuscript lost, wherein the author treated of the trade to China, as it stood in his time, and of the causes which had brought it into a declining condition. He then pro-

ceeds thus:

7. Amongst others, the fires that frequently happen at Canfu are not the least. Canfu is the port of all the ships of the Arabs who trade in China, and fires are there very frequent, because the houses are built with nothing but wood, or else with split cane; besides thips are often lost in going and coming, or they are plundered, or obliged to make too long a stay in harbours, or to sell their goods out of the country subject to the Arabs, and there make up their cargo. In short, ships are under a necessity of wasting a considerable time in resisting, not to speak of any other causes of delay.

Soliman, the merchant *, relates that at Cantu, which is the principal refort of merchants, there is a Mohammedan appointed judge over those of his religion. By the authority of the Emperor of China; and that he is judge of all the Mohammedans who rejors to those pares. Upon feltierly days he performs the public levings with the Mohammedans, and prenounces the termony or Korbat, which he concludes in the ninal three with prayers for the Sulvan of Mohammedans. The merchans of training

e. Persia, who trade thither, are no way distanssified with his conduct or administration in this post, because his decisions are just and equitable, and conformable to the

Koran.

8. As for the places whence ships depart, and those they touch at, many persons affirm, that the navigation is performed in the following order: most of the Chinese. ships take in their cargo at Siraff*, where also they ship their goods which come from Basra, or Bassora, Oman, and other ports; and this they do, because in this sea there are frequent storms, and shoal water in many places. From Basra to Siraff is an hundred and twenty leagues; and when thips have loaded at this last place, they there water alfo; and from thence make fail for a place called Mascat, which is in the extremity of the province of Oman, about two hundred leagues from Siraff. On the east coast of this feat, between Siraff and Malcat, is a place called Nalis Bani al Safak, and an illand called Ebn Kahowan; and in this fea are rocks called Oman, and a narrow frait called Dordur, between two rocks, where veffels do venture, but the Chinele ships dare not. There are also two rocks called Kossir and Howare, which scarce appear above the water's edge: after they are clear of these rocks they steer for a place called Shitu Oman, and at Mascat take in water, which is drawn out of wells; and here also they are supplied with cattle of the province of Oman: from thence flips take their departure for the Indies, and first they touch at Kaukammali; and from Mascat to this place it is a month's fail with a fair wind.

This is a frontier place, and the chief arienal in the province of the same name; and here the Chinese ships put in and are in safety: fresh water is to be had here, and the Chinese pay a thousand drams for duties, but others pay only from one dinar to ten dinars. From Malcat to Kaukammali it is a month's sail; and then having watered at this place, they begin to enter the sea of Herkend, and having sailed through it, touch at a place called Lajabalus, where the inhabitants understand not the Arabic, or any other sailed guage in use with merchants. They wear no clothes, are white, and weak in their seet.

9. It is faid their women are not to be feen f; and that the men, leaving the illand in cances, hollowed out of one piece, go in quest of them, and carry them cocoa-nuts, canes, mousa, and palm-wine. This liquor is white, and, if drank fresh, has the taste of the cocoa-nut, and sweet like honey; if kept somewhat longer, it becomes as strong as wine; but if it is kept for several days it turns to vinegar. They give it in exchange for iron; and in like manner they truck the little quantity of amber, which is thrown on their coasts, for bits of iron. The bargain is driven by motions of the hand. But they are very quick, and are apt to carry off iron from the merchants, and seave them nothing in return.

From hence thins freer rowards Calabar, the name of a kingdom on the coall to the right-hand, beyond the Indies. But liquides a coalf in the language of the country and this depends on the kingdom of Zapage. The inhabitants are dreffed in those forts of flipped parments which the Arabs call Fanta, and they commonly wear but one at a time, which is equally objected by perions of every degree. At this place they com-

^{*} Leak very differentiation to diffugation at the Service of the cine of a divisit to entarther chieffs by entarth of the crisingent information to be a perfect that it is an arrival to the crisingent of a part of the crisingent of a part of the critical and the critical and

monly take in water, which is filled from wells fed by springs, and which they like better than what is drawn out of cisterns and tanks. Calabar is about a month's voyage from a place called Kaukam, which is almost upon the skirts of the sea of Herkend. In ten days after this, ships reach Betuma; from whence, in ten days more, they come up with Kadrange.

It is to be observed, that in all the islands and peninsulas of the Indies, they find water when they dig for it. In this last mentioned place there is a very losty mountain, which is peopled by none but slaves and sugitives; from thence in ten days they arrive at Senis. Here is fresh water, and hence comes the aromatic wood we call Hud al Seness. Here is a King; the inhabitants are black, and wear two striped garments. Having watered at this place, it is ten days' passage to Sanderfulat, an island where is fresh water; then they steer through the sea of Sanji, and so to the gates of China; for so they call certain rocks and shoals in that sea, forming a narrow strait, through which ships pass. It requires a month to sail from Sanderfulat to China; and it takes up eight whole days to steer clear of these rocks.

ro. When a ship has got through these gates, she, with the tide of slood, goes into a fresh water gulph, and drops anchor in the chief port of China, which is that of Canfu; and here they have fresh water both from springs and rivers, as they have also in most of the other cities of China. The city is adorned with large squares, and supplied with every thing necessary for defence against an enemy, and in most of the other provinces there are cities of strength, fortisted in the same manner.

In this port it ebbs and flows * twice in twenty-four hours; but with this difference, that whereas from Bafra to the island called Bani Kahouan, it flows when the moon is at full, and ebbs when she rifes and when she sets; from near Bani Kahouan quite to the coast of China, it is flood when the moon rifes, and when she is towards her height it is ebb; and so, on the contrary, when she sets, it is flowing water, and when she is quite hidden under the horizon, the tide falls.

It. They fay, that in the island of Muljan, which is between Serendib and Cala, on the eastern shore of the Indies, there are negroes quite naked, and that when they meet with a stranger, they hang him with his head downwards, and slice him in pieces, which they eat quite raw t. These negroes have no King, and feed upon sish, mausa, cocoanuts, and sugar-canes; they have ponds and some lakes in the country. They report also, that in some parts of this sea there is a smallish kind of sish, which slies upon the water, and which they call the sea-locust; and that in another part there is a sish, which leaving the sea, gets up to the cocoanut trees, and having drained them of their juice, takes to the sea again. To all which they add, that in the sea there is a sort of sish like a lobiler, which petrifies as soon as taken out of its element; they pulverize it, and it is good for several diseases of the eyes.

[•] It is very probable, or rather certain. From the account gives by our author, that this mult be the port of Canton, and the creeniarity of the tide is a circumfance that floogly confirms it; and account flances which there, at the time time. That the Arabs were not to generally in those matters as they are generally magnetic.

telli quali ling altrevit, that these are thundrance of recy post-accounts in these criation is but it must be qualified and the street substitution of them, each higher been different. Who substitute apparent expectations to interest the property of the post of the post of the property of the post of the

They say also, that near Zapage there is a mountain, called the Mountain of Fire, which no one can approach; that in the day-time it sends forth a thick smoke, and in the night it throws out slames. At the foot of this mountain there are two springs of

fresh water, the one hot, and the other cold.

12. The Chinese are dressed in filk both winter and summer, and this kind of dress is common to the Prince and the peasant. In winter they wear drawers of a particular make, which fall down to their feet. Of these they put on two, three, four, five, or more if they can, one over another, and are very careful to be covered quite down to their feet, because of the damps, which are very great, and of which they are very apprehensive. In summer they only wear a single garment of filk, or some such dress, but have no surbans.

Their common food is rice, which they often eat with a broth, like what the Arabs make of meat or fish, which they pour upon the rice. The Kings eat wheat-bread, and all forts of animals, not excepting swine and some others. They have several forts of fruits, apples, lemons, quinces, moulats, sugar-canes, citruls, sign, grapes, cucumbers of two forts, trees which bear a substance like meal, walnuts, almonds, silberts, pistachies, plumbs, apricots, services, and cocoa-nuts, but they have no store of palms; they have only a few about some private houses.

Their drink is a kind of wine made of rice; they have no other wine in the country, nor is there any brought to them: they know not what it is, nor do they drink of it. They have vinegar also, and a kind of comfit like what the Arabs call natef, and some

others.

They are not very nice in point of cleanlines, and wash not with water when they ease nature, but only wipe themselves with paper; they eat of dead animals, and practise many other things like the Magians; and in truth; the religion of the one and the other is much the same. The Chinese women appear uncovered, and adorn their heads with small ivory combs, of which they wear sometimes a score together; the men are covered with caps of a particular make. The law they observe with regard to thieves is to put them to death as soon as they are caught.

Our author feems here to interrupt his narration, and to take occasion from what he has before reported (and which in the main is confirmed by later writers), to compare the customs of the Indians and Chinese, intermixing his discourse also with other

matters.

13. The Indians and Chinele agree, that there are four great or principal Kings in the world; they all allow the King of the Arabs to be the first, and to be, beyond dispute, the most powerful of Kings, the most wealthy, and the most excellent every way; because he is the Prince and Head of a great religion, and because no other impasses into.

The Emperor of China reckons modelf next after the King of the Arabs, and after him the King of the Greeks, and lastly the Balhara, King of Mohami at Adon, or of those who have their ears bored.*

This Balliars is the most illustrators prince in all the tradies; and all the other Kings there, shough each is maker and independent in his kingdom, acknowledge this star

The very highly probable, that his Barner, we manage of the major which have there in any military plants in Property of the Control of the C

his pre-eminence. When he fends ambassadors to them, they receive them with extraordinary honours, because of the respect they bear him. This King makes magnificent presents after the manner of the Arabs, and has horses and elephants in great numbers, and great treasures in money. He has of those pieces of silver called Thartarian drams, which weigh half a dram more than the Arabian dram. They are coined with the dye of the Prince, and bear the year of his reign from the last of the reign of his predecessor.

They compute not their years from the æra of Mohammed, as the Arabs do, but only by the years of their Kings. Most of these Princes live a long time, and many of them have reigned above fifty years, and those of the country believe, that the length of their lives and of their reigns is granted them in recompence for their kindness to the Arabs. In truth, there are no Princes more heartily affectionate to the Arabs, and

their subjects profess the same friendship for us.

Balhara is not a proper name, but an appellative common to all these Kings, as was Cosroes and some others. The country under the dominion of this Prince begins on the coast of the province called Kamkam, and reaches by land to the confines of China. He is surrounded by the dominions of many Kings, who are at war with him, and yet

he never marches against them.

14. One of those Kings is the King of Harez, who has very numerous forces, and is stronger in horse than all other Princes of the Indies, but is an enemy to the Arabs; though he at the same time confesses their King to be the greatest of Kings, nor is there a Prince in the Indies who has a greater aversion to the Mohammedan faith. His dominions are on a promontory, where are much riches, many camels, and other cattle. The inhabitants here traffic for silver, which they watch for, and they say there are mines of the same on the continent. There is no talk of robbers in this country any more than in the rest of the Indies.

On one fide of this kingdom lies that of Tafek, which is not of very great extent. This King has the finest white women in all the Indies; but he is awed by the Kings about him, his army being but small. He has a great affection for the Arabs, as well

as the Balhara.

These kingdoms border upon the lands of a King called Rami, who is at war with the King of Harez, and with the Balhara also. This Prince is not much confidered either for his birth, or the antiquity of his kingdom; but his forces are more numerous than those of the Balhara, and even than those of the Kings of Harez and Tasek. They say, that when he takes the field, he appears at the head of fifty thousand elephants, and that he commonly marches in the winter season; because the elephants not being able to bear thirst, he can move at no other time. They add likewise, that in his army there are commonly from ten to fifteen thousand tents. In this time country they make cotton garments in such extraordinary perfection, that no where elle are the like to be seen. These garments are for the most part round, and wove to that degree of line nets, that they may be drawn through arms of a moderate size. Stells are resenting that they may be drawn through arms of a moderate size. Stells are resenting that they have gold and filling the property of the says of which they make the furnisher for laddles and the says of the fallow, and the furnisher for laddles and the says of the fallows, and take the furnisher for laddles and the says of the fallows.

In this fame country is the famous karkandan *, that is, the (rhinoceros, or) unicorn, who has but one horn upon his forehead, and thereon a round lpot, with the representation of a man. The whole horn is black, except the spot in the middle, which is white. The unicorn is much smaller than the elephant; from the neck downwards he pretty much refembles the buffalo; his strength is very extraordinary, for he excels therein all other creatures; his hoof is not cloven, and from his foot to his shoulder is all of a piece. The elephant flies from the unicorn, whose lowing is like that of an ox, with something of the cry of the camel; his flesh is not forbidden, and we have eaten of it; there are great numbers of this creature in the feas of this kingdom, as also in all the other provinces of the Indies; but the horns of these are most esteemed; and upon them are generally feen the figures of men, peacocks, fishes, and other relemblances. The Chinese adorn their girdles with these fort of figures, so that some of their girdles are worth two or three thouland pieces of gold in China, and fometimes more, the price augmenting with the beauty of the figure: All the things we have here enumerated are to be purchased in the kingdom of Rahmi for shells, which are the current money or the country.

After this kingdom there is another, which is an inland state distant from the coast, and called Kaschbin; the inhabitants are white, and bore their ears; they have camels, and their country is for the most part desart, and full of mountains; farther upon the coast there is a small kingdom called Hitrange, which is very poor; but it has a bay where the sea throws up great quantities of ambergris; they have also elephant's teeth and pepper; but the inhabitants eat it green, because of the smallness of the quantity they gather. Beyond these kingdoms here mentioned, there are others of number unknown, and among the rest that of Mujer; the inhabitants are white, and dress after the Chinese mode; their country is full of mountains, with white tops, and of very great extent; here are very great quantities of musik, esteemed the most exquisite in the world.

They have war with all the neighbouring kingdoms.

The kingdom of Mabed † is beyond that of Mujet; therein are many cities, and the inhabitants have a great refemblance to the Chinele, even more than those of Mujet; for they have officers or eunuchs, like those who govern the cities amongst the Chinese; the country of Mabed is bordering upon China, and is at peace with the Emperor; but not subject to him. The Mabed tends every year ambassadors and presents to the Eurperor of China, who on his part sends ambassadors and presents to them. Their country is of great extent; and when the ambassadors of Mabed enter China, they are carefully watched, and never once allowed to survey the country, for searthey should form designs of conquering it, which would be no difficult task for them, because of their great numbers, and because they are divided from China only by mountains and

15. They ky, that in the Kungdom of China there are above two hundred cities, with purifdiction over others, and have each a governor, and an entach or heutenant. Canthis one of their cities, being the port for all thipping, and preliding over twenty fowns. A town is digmited with the trie or city, when it is allowed fome of those great Chinese trumpets, which are tabloned after this market; they are three or four cultivity.

We have thence give note large as account at the stude error, long we find you provide the greater with any continue the student of the student of the student endoughers between the student of the stud

length, and as much about as can be grasped with both hands; but they grow narrow towards the end, which is fitted to the mouth; on the outside they are coloured with Chinese ink, and may be heard a mile off. Each city has four gates, at each of which are five of these trumpets, which the Chinese sound at certain hours of the day and of the night. There are also in each city ten drums, which they beat at the same time; and this they do as a public token of their obedience to the Emperor; as also to signify the hour of the day, and of the night, to which end they have also dials and clocks with weights.

They coin a great deal of copper money, like what the Arabs call falus: they have treasures like other Kings; but they have only this fort of small money, which is current all over the country; for though they have gold, silver, pearls, silk, and rich stuffs in great abundance, they consider them only as moveables and merchandize, and the copper pieces are the only current coin; from foreign parts they have ivory, frankincense, copper in pigs, tortoise-shells, and unicorns' horns, which we have mentioned, and with which they adorn their girdles. Of their own stock, they have abundance of beasts of burden, horses, asses, and dromedaries; but they have no Arabian horses.

They have an excellent kind of earth, wherewith they make a ware of equal fineness with glass, and equally transparent. When merchants arrive here *, the Chincse seize on their cargoes, and convey them to warehouses, where they remain six months, and till the last merchantman be arrived; then they take three in ten, or thirty per cent. of each commodity, and return the rest to the merchant. If the Emperor hath a mind for any particular thing, his officers have a right to take it, preferably to any other persons whatsoever, paying for it to the utmost value. They dispatch this business immediately, and without the least injustice; they commonly take camphire, which they pay for after the rate of fifty fakuges per man, and the sakuge is worth a thousand salus, or pieces of copper. When it happens that the Emperor does not take camphire, it fells for half as much again.

16. The Chinele do not bury their dead till the day twelvemonth of their decease. Fill the expiration of this term they keep them in cossins; for having previously dried them with quick-lime that they may keep, they place them in some part of their houses. The bodies of their Kings are embalmed with aloes and camphire. They mourn for three whole years; and whosever should not do so would be chastized with the bamboo, a punishment both men and women are liable to; at the same time they are repreached, "What then, thou art not concerned at the death of thy parent?"

They bury their dead in deep pits, much like those in the among the Arabs; till this is done they constantly let victuals before the corpie; and as it is in the evening that they thus exhibit meat and drink to their dead, if the next morning they find nothing tent, they imagine that they have contained all, and say. The deceased hath earen. They cease not from bewaring their dead; nor from letting meat and drink before them as long as they are kept to the house, intomuch that their expenses upon those occasions, and in those as wire their fall drives to their departed relations, are to exorting as of in the line, and continue their weath and effaces. Formerly they, with the dead

t formation and the control of the large of the control of the production of the control of the large of the control of the co

bodies of their Kings, or others of the royal blood, buried very rich apparel, and those forts of girdles which we have observed cost so much; but this custom is now out of date, because it has happened that the bodies of some have been dug up by thieves, for the sake of what was buried with them.

The Chinese, poor and rich, great and small, learn to read and write; the titles of their Kings or governors, are varied according to the dignity and rank of the cities under them. Those of the smaller cities are called Tusing; and this word signifies the governor of a town; those of the greater cities, as Cansu, for example, are styled Disu; and the cumech, or licutenant, is styled Tukam. These cumuchs are selected from the inhabitants of the cities. There is also a supreme judge, and him they call Lakshimamakvan; other names they have for other officers, which we know not how properly to express.

17. A man is not raised to the dignity of a Prince, or governor of a city, till he has attained his fortieth year; for then, say they, he hath experience. When one of these Princes, or Vice-Kings, keeps his court in a city, he is seated upon a tribunal, and receives the petitions or complaints of the people. Behind this tribunal there is an officer called Lieu, who keeps standing, and according to the order he receives from the Prince, indorses his answer on the petition, for they never answer otherwise than in writing, or admit of any applications, but what are committed to paper. Before the parties present their petitions to the Prince, they get them examined by an officer, who, if he discovers any fault, sends them back again; for no man may draw up these writings which are to be presented to the Prince, except a clerk versed in business; and at the bottom of each writing they put, "Written by such a one, the son of such a one;" and if in this case there happen any blunder or mistake, the clerk is bambooed *.

The Prince never feats himself on his tribunal till he has eaten and drank, for fear he should be mistaken in something; and each of these princes or governors has his substitution the public treasury of the city he commands. The Emperor of China, who is above all these Princes or petty Kings, never appears in public but once in ten months, fancying, that if he shewed himself oftener to the people, they would lose the veneration they have for him; for he holds it as a maxim, that principalities cannot subsist but by force, and that the people know not what justice is; and that thus constraint and violence must be used to maintain amongst them the majesty of empire.

18. They have no duty imposed upon their lands, but are subject to a poll-tax, which is levied upon men only, and that according to their condition and capacity. When any arabs, or other strangers, are in this country, the Chinese tax them according to their substance. When any dearth makes necessaries dear, then the King opens his store houses, and fells all forts of provisions much cheaper than they are to be raid at market; and hence to dearth is of any long continuance among the Chinese. The sums that are gathered from this capitation-tax, are said up, in the public freasure, and I believe, that from this tax sixty morniand dinars are paid every day into the persury of Cantu alone, although this city is not one of the largest in China.

The Emperor referves likewife to bundle the revenues which arise from the fait-milies, and from a certain herb which they display with hor water, and or which great quantities

The Self of profit is the given as any constant of the first configuration of the first constant of the first

are fold in all the cides of Caina, to the amount of great fums; they call it Ttolia, that is tea, and it is a finus more buffly than the pomegrapate tree, and of a more pleulant finall but has a kind of bitternels with it. There way is to boil water, which they pour upon this leaf; and this drink cures all forus or difeates. Whatever fums come into the treading, ande from the poll-tax, the duties upon the falt, and the lax upon this leaf.

13. In each city there is a small bell hung to the well above the Prince's or Governor's head; and this bell may be rung by a string, which reaches about three miles, and crosses the high reproduct the people may get at it; when the string is pulled, the bell strikes over the governor's head, and straight he commands that the perion who thus demands justice be brought before him; and accordingly the complanant sets forth his case in person; and the same practice is in use throughout all other provinces.

If a men has a mind to travel from one place to another, he must take two pesses with him, the one from the Governor, the other from the eunuch or heutenant. The Governor's pass permits him to set out on his journey, and takes notice of the nan e of the traveller, and of those also of his company, the age at I family of the one and the other; for every body in China, whether a native, or an Alab, or any other foreigner, is

obliged to declare all he knows of himself, nor can be possibly be excused.

The cunuch, or li u ment's pals, frecifics the quantity of goods or money which the traveller and those with him take along with them; and this is done for the information of the frontier places, where these two passes are examined; for whenever a traveller arrives at any of them it is registered, that such a one, the son of such a one, of such a family, passed through this place on such a day, in such a month, in such a y as, and in tack company; and by this means they prevent any one from carrying off the money or effects of other persons, or their being lost: so that if any thing hath been carried off unjustly, or the traveller dies on the road, they mimed at ly know what is become or the thing, and they are either restored to the claimant or to his h-irst.

20. The Chinese administer justice with great structures in all their tribunals. When any person commences a suit against another, he sets down his claim in writing, and the desendant writes down his desence, which he signs, and helds between his singers. These two writings are delivered in together; and being examined, sentence is delivered in writing, and each party has his papers returned to him; but nirst they give back to

the defendant his writing that he may acknowledge it.

When one party denies what the other affirms, he is ordered to return his writing: and if the defendant thinks he may do it fafely, and accordingly delivers his paper a fecond time, they also call for that of the plaintiff, and then they say to him who denies what the other assimps, Make it appear that your antagonist has no right to demand of you what is in debate; but take notice if he makes out what you deny, you shall undergo twenty strokes of the bamboo upon the backside, and pay a fine of twenty sakuges, which make about two hundred dinars. Now this punishment is such, as the criminal could not survive; it is so grievous, that no person in all China may, of his own authority, inslict it upon another, upon pain of death, and consistation of his

It appears from hence, that the custom of drinking tea in China, is much more antient than we have generally imagined it, for it must have prevailed long before our traveller went into this country, otherwise a tax upon it would have been inchestual. It may not be amile to observe here, that the remarks of the author are equally natural add lonicious; for he inside chiefly on those things in which the Chinase differed most from the Mohammadass as that they did not circumcifely were not very exact in washing, and made no conscience of eating blood.

The reader will remained that this was a fettled regulation among the statement to that it is the country of the limited.

goods, and so nobody is ever so hardy as to expose himself to so certain a danger; wherefore justice is well administered to every one. They require no withels, nor do

they put the parties upon oath.

- 21. When any man becomes a bankrupt in this country, they throw him into prison in the Governor's palace, and he is immediately put upon the declaration of his effects. After he has been a month in prifon, he is releafed by the Governor's order, and proclamation is made, that such a one, the son of such a one, has consumed the substance of such a one; and that if he has any effects in the hands of any person, in any shape whatsoever, it must be made known in the term of a mouth. In the meantime the bankrupt is bamboord on the backfide, if discovery is made of any effects of his: and at the fame time is upbraided with having been a month in prison eating and drinking, though he had wherewithal to fatisfy his creditors. He is chastifed in the same mann r, whether he makes any declaration of his effects or not. They reproach him, that he has made it his study to get by fraud the substance of private persons into his hands, and embezzle it; and that he ought not fo to defraud those he had dealings with, by stripping them of their property. But after all, if they cannot discover him to have been gu'lty of any fraud, and if it is proved to the magistrate, that the man has nothing in the world, the creditors are called in, and receive a part of their debt out of the treasury of the Bagbun. This is the ordinary title of the Emperors of China, and fignifies the fon of Heaver; but we commonly pronounce it after a different manner, and call him Magbun. Then it is publickly forbidden to buy of or fell to this man upon pain of death, that he may not defraud any of his creditors by concealing their money. (If discovery be made that he hath any sums in the hands of another, and if the person he entrusts make no delaration within the time limited, he is bambooed to death, and nothing is faid to the proprietor or bankrupt. The fums that they discover are divided among the creditors, and the debtor or bankrupt must never more concern himself with trade *.
- 22. The Chincse have a stone which is ten cubits high, erected in the public squares of their cities, and on this stone are engraved the names of all sorts of medicines, with the exact price of each; as d when the poor stand in need of any relief from physic, they go to the treasury, where they receive the price each medicine is rated at. There is in China no tex upon land; they only levy so much per head, according to the wealth and possessions of the subject. When a male child is born, his name is immediately entered in the King's books; and when this child has attained his eighteenth year, he begins to pay for his head; but they demand it not of the man who has seen his eightieth year; on the contrary he receives a gratification by way of pension from the public treasury; and in doing this, the Chinese say, that they make this provision for him in his old days, in acknowledgment for what they received of him when he was young.
- 23. There are schools in every town for teaching the poor children to write and read, and the masters are maintained at the public charge. The women wear nothing on their heads but their hair, whereas the men are covered. In China there is a certain town called Tayu, which has a castle advantageously seated on a hill, and all the fortresses in the kingdom are called by the same name. The Chinese are generally handsome, of comely stature, sair, and by no means addicted to excesses of whie; their hair is

vol. vii. , , blacker

^{*} This fact is likewife confirmed by later travellers; and though there feems to be a great deal of feverity in it, yet it is well adapted to the genius of the Chisefe, who would not fad to become bankrupts frequently, if they were allowed to trade afterwards; and perhaps the introducing this law in other countries, in case of a fecond or third bankruptcy, might be found very effectual.

blacker than the hair of any other nation in the world; and the Chinese women wear it curled.

24. In the Indies, when a man accufes another of a crime punishable with death, the custom is to ask the accused if he is willing to go through the trial by fire; and if he answers in the affirmative, they heat a piece of iron till it is red-hot. This done. they bid him stretch forth his hand, and upon it they put seven leaves of a certain tree, and upon these leaves they put the red-hot iron, and in this condition he walks backward and forward for some time, and then throws off the iron. Immediately after this they put his hand into a leathern bag, which they feal with the prince's fignet; and if at the end of three days he appears and declares he has fuffered no hurt, they order him to take out his hand; when if no fign of fire is visible, they declare him innocent, and delivered from the punishment which threatened him, and his accuser is condemned to pay a Man of gold as a fine to the Prince.

Sometimes they boil water in a cauldron *, till it is so hot that no one can touch it; then they throw an iron ring into it, and command the person accused to thrust his hand down, and bring out the ring. I faw one who did this, and received no manner

of hurt. The accuser is in this case also to pay a Man of gold.

25. When a king dies in this island of Sarandib, they lay his body on an open chariot, in fuch a manner that his head hangs backwards till it almost touches the ground, and his hair is upon the earth; and this chariot is followed by a woman with a broom in her hand, therewith to fweep dust on the face of the deceased, while she cries out with a loud voice, "O man, behold your King, who was yesterday your master, but now the empire he exercised over you is vanished and gone; he is reduced to the state you behold, having left the world, and the arbiter of death hath withdrawn his foul; reckon therefore no more upon the uncertain hopes of life."

This t proclamation or fome other like it, they continue for three days; after which the dead body of the King is embalmed with fandal wood, camphire and faffron, and is then burned, and the ashes are scattered abroad to the wind. It is a universal custom all over the Indies to burn the bodies of the dead. The island of Sarandib is the last of the islands of the Indies. When they burn a king, it is usual for his wives to jump into the fire, and to burn with him; but this they are not constrained to do if they are

not willing.

In the Indies there are men who profess to live in the woods and mountains, and to despile what other men most value. These abstain from every thing but such wild herbs and fruits as fpring in the woods, and put an iron buckle upon their natural parts, that they may not be able to have any commerce with women. Some of them are

*This manner of finding out the truth by appealing to God in se extraordinary a manner, was in the in most countries. Sophocies mentions it as practifed by the antients. The Caffres on the coast of Molambique, if they are accused of any capital crime, lick is not oppose their innocence. The Indians of Calicut decide their differences in the same manner. If a man is accused of thest, he and the accuser are brought before the judge; a put of oil is heated till it almost boils, and then the purry accused driving in these is in many which are assembled bound up, and opened on the third day; when, it is appears he is tabled, he believe that and it not, the lame leatence falls upon the accuse. All this in the more particular, he may note the common town one was country, as the reader will person by consulting any of one process of the opinion works, have completed in an illustrate surface. The author of crabban accordingly, and many others of the opinion works, have completed in a fallow services. For a surface, the language appears equiently that they were acquired was law works. The ended may remained, the the appears equiently that they were acquired was law works. The ended may remain the control of the manners of beautiful as a fill of the manners of the services of the services of the manners of the services of the s

quite naked, or have only a leopard's skin thrown over them, and in this plight keep standing with their faces towards the sun. I formerly saw one in the posture I have described, and returning to the Indies about fixteen years afterwards I found him in the very fame attitude, and was aftonished he had not lost his eye-fight by the heat of the fun*. In all these kingdoms the sovereign power resides in the royal family, and never departs from it; and the next heirs of this family succeed each other. manner there are families of learned men, of physicians, and of all the artificers concerned in architecture, and none of these are mixed with a family of a profession different from their own. The several states of the Indies are not subject to one king, but each province has its own king. The Balhara is nevertheless in the Indies as King of The Chinese are fond of gaming, and all manner of diversions; on the contrary, the Indians condemn them, and have no pleasure in them. They drink no wine, nor make any use of vinegar, because it is made of wine; and yet they abstain not therefrom as a religious duty, but for another reason. They say, that if a king is given to wine, he ought not to be deemed a king: for, continue they, as there are frequent wars with the neighbouring states, how should a drunkard manage the affairs of his kingdom?

26. The wars, in which they engage with neighbouring princes, are not usually undertaken with a view to possess themselves of their dominions; and I never heard of any but the people bordering upon the pepper country, that have feized on the possessions of their neighbours after victory. When a prince makes himself master of some other principality, he confers the government thereof upon some person of the royal family of the conquered country; and thus he keeps it in subjection to himself, from a persuasion that the natives would never agree to be otherwise governed. When any one of the princes or governors of cities within the dominions of the Emperor of China is guilty of a crime, he is put to death, and eaten; and in generalit may be faid that the Chinese eat all those that are put to death. When the Indians and Chinese are about to marry, the parties come to an agreement; then presents are made, and at last the marriage is celebrated with the found of many forts of instruments and drums. The prefents they fend confift of money, and in this every one does what he can afford.

27. If a man in the Indies runs away with a woman, and abuses her body, they kill both him and the woman, unless it be proved that she was forced; then the man only is punished with death: but if the woman consented to the evil deed, they are both punished with death. Theft is always punished capitally, as well in the Indies as in China, whether the theft be confiderable or inconfiderable; and particularly in the Indies, where, if a thief has stolen but the value of a small piece of money, or a thing of greater worth, they take a long, strong, and sharp stake, which they apply to his fundament, and thrust it through till it comes out at his neck. The Chinese are addicted to the abominable vice of fodomy, and the flithy practice of it they number among he indifferent things they perform in honour of their idels.

The Chinese buildings are of wood, with Hone, plaster, brick, and mortar. The Chinele and Indians are not latisfied with one wife, but both nations marry as many as they pleafe. Rice is the common food of the indians, who sat no wheat; whereas the Chinese sat of rice and wheat indifferently. Circumcition is not practifed either

[•] Thele presence emong the Indians, as furpriting or as incredible as they learn to be, see confirmed by all the travellers that have written or tipole countries, so other, an incident, as we that have an opportunity of theying in the liablequent part of their charges.
C. C. C.

by the Indians or Chinese. The Chinese worship idols, pray to them, and fall down before them; and they have books which explain the articles of their religion. The Indians suffer their beards to grow, and I have seen one of them with a beard three cubits long; they wear no whiskers; but the Chinese, for the most part, have no beard and have all smooth. The Indians, upon the death of a relation, shave both head and face. When any man in the Indies is cast is to prison, they allow him neither victuals nor drink for seven days together, and this with them answers the end of other tortures to extort from the criminal a consession of the truth. The Chinese have judges besides the governors, who decide in causes between subject and subject, and the same they have in the Indies. Both in China and in the Indies there are leopards and wolves, but no lions. Highway robbers are punished with death.

29. Both the Chinese and the Indians imagine the idols they worship speak to them and give them answers. Neither the one nor the other kill their meat by cutting the throat, as the Mohammedans, but by beating them on the mouth till they die. They wash not with well-water; the Chinese wipe themselves with paper, whereas the Indians wash

every day before they eat.

The Indians touch not their wives while their disease is upon them, but turn them out of their houses, and avoid them; the Chinese behave in a quite contrary manner. I he Indians wash not only the mouth, but the whole body also before they eat, which the Chinese observe not. The country of the Indies is larger in extent than that of China, and exceeds it by one half; the number of kingdoms is greater in the Indies than in China, but China is the more populous of the two.

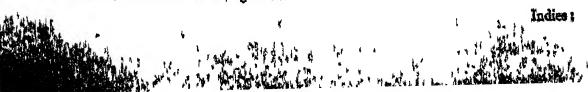

It is not usual to see palm-trees either in the Indies or in China, but they have also other forts of fruits and trees, which we have not. The Indians have no grapes, and the Chinese have not many, but both abound in other fruits; though the pomegranate

thrives more plentifully in India than in China.

The Chinese have no sciences, and their religion and most of their laws are derived from the Indians; nay, they are of opinion that the Indians taught them the worship of idols, and consider them as a very religious nation; both the one and the other believe the Metempsychosis*; but they differ in many points touching the precepts of their religions. Physic and philosophy are cultivated among the Indians, and the Chinese nave some skill in medicine; but it almost wholly consists in the art of applying hot irons or cauteries. They have also some smattering of astronomy, but therein also the Indians surpass the Chinese. I know not that there is so much as one of either nation that has embraced Mohammedism, or speaks Arabic. The Indians have but sew horses, and there are more in China; but the Chinese have no elephants, and cannot endure to have them in their country, for they abhor them. The Indian dominions furnish a great number of soldiers, who are not paid by the King, but when they are rendezvoused for war, take the field entirely at their own expence, and are no charge to the King; whereas the Chinese allow their forces much the same pay with the Arabs.

China is a pleafant and fruitful country; most of the Indian provinces have no cities, whereas in China there are many in number, great in extent, and well fortified: the climate of China is more wholesome, and the country itself is less fenny. The air there is also much better, and there is scarce a blind person to be seen, or any one subject to the diseases of the eyes; and the same advantages are enjoyed by several provinces of the

^{*} Of this doctrine we have already spoken in our account of the philosophy of the Brachmans; and in our notes upon the subsequent treatile, we shall take accasion to shew when it was first embraced in China, and with what modifications it is still taught there.

Indies: the rivers of those two countries are large, and surpass our greatest river; much rain falls in both these countries. In the Indies are many defert tracks, but China is inhabited and peopled throughout its whole extent. The Chinese are hend-somer than the Indians, and come nearer to the Arebs, not only in countrience, but in dress, in their way of riding, in their manners, and in their ceremonies: they wear long garments, and girdles in form of belts. The Indians wear two short vests; and the men, as well as the women, wear golden bracelets, adorned with precious stones.

30. Beyond the continent of China, there is a country called Tagazgaz, from the 1 me of a nation of the Turks, who there inhabit, and also the country of Kakhan, or Tabet, which is bordering on the country of the Turks. The islands of Sila are what fea by white people, who lend prefents to the Emperor of China, and who are perfuaded, that if they did not fend him prefent, the rain of Heaven would not fell upon their country. None of our people have been there to inform us concerning them: they have white falcons.

As we are now arrived to the end of this work, it may not be amiss to offer here some remarks that may tend to enlighten the foregoing discourse, and prepare us at the same time for that which is come. We are informed that the date of this nurration was of the Hegira 237, A. D. 851, which circumstance, though preserved to us in the ensuing discourse, was very probably contained in the first leaf of this, which is wanting in the manuscript. But though it was written then, yet it seems highly probable, that our author's first journey to the Indies was, at least, twenty years before; because he observes, that he made a second journey there sixteen years afterwards; and we may very well allow four years for the time spent in the first journey, and the space that might intervene between his return and his composing this treatise. According to this calculation, his first voyage to the Indies was in the year of the Hegira 217, A. D. 833, and his second An. Heg. 235, A. D. 849.

As to the occasion of his voyages, there is nothing occurs in this account that can give us the least light into it; however, it seems most probable, that he underwent these fatigues on the score of commerce; for it can hardly be supposed, that a man would have made so long a journey a second time, purely out of curiosity, and to satisfy the desire of being better acquainted with these people, which had been excit d by his former intercourse with them. There is not much to be observed with respect to the form of this treatise, or the stile in which it is written; and yet something there is worth mentioning with respect to each of them. We cannot, indeed, boast much of the regularity of his method; and yet it would be unjust to condemn it entirely, because, for want of having the introduction to it, we cannot determine exactly what was his plan, and consequently cannot say how far he came up to or fell short of it. One thing I think is manifest, which is, that the scope of his undertaking is a companison between the Indians and the Chinese; at least he sails into this immediately after he has described the usual navigation from Siraf to China; and considered in this light, his treatise appears regular enough. As to his stile, it is extremely simple and plan, and has nothing

^{*} We shall take another opportunity of acquainting the reader with the history of the ancient Turks, and shall only observe here, that the nations here mentioned are to be considered as dwelling in their native region, before they became famous by their irruption into Persia, which is the country every where meant in this and in the subsequent treatise by the name of Irak, and before they became Muhammedans; which is the more necessary, became from the present state of things it is very natural to connect the ideas which we have of the modern Turks, with these accounts of their ancestors.

of that fwelling hyperbolical eloquence which is generally observed in oriental writers; upon which I beg leave to remark, that, with regard to the irrabe, as well as other nations, this was a vice that prevailed in later times, after poetry and thetorick had been more cultivated than they were in the first ages of their empire, which has been the case in most other nations.

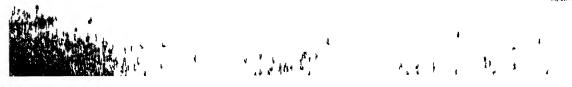

One cannot possibly doubt, that this piece was extremely well received when it first came abroad, and that it had maintained its reputation for a confiderable space of time, appears from the fecond treatife, which we are about to give the reader. It feems, that when the affairs of China were better known, some Prince, or other person of distinction, defired the author of the following pages to look over that discourse, and to inform him, how far the facts contained therein had been confirmed or contradicted, by fuc-What time this happened, we cannot with any certainty fax, from ceeding relations. the comparison of the two pieces, or from the lights given us by the learned and accurate critick who published them. The manuscript which the Abbé Renaudot made use of, was apparently older than the year of the Hegira 569, which answers to the year of Christ 1173; but the discourse must certainly have been written long before that time. In our notes we have shewn that Eben-Wahab travelled into China, A. II. 185, A. D. 898; and the author of this last treatile informs us, that he had converted with this man after his return, and had from him the facts which he has inferted in his discourse, so that the book itself must have been two centuries older than the manuscript from which the Abbé Renaudot published it, and might probably be written fixty or f venty years after the foregoing treatife. These are all the lights which, from an affiduous study of these valuable fragments of antiquity, we have been able to give the reader, and therefore we shall detain him no longer from the piece itself, which in the original bears the following title.

The Discourse of Abu Zeid al Hasar, of Siraf, concerning the Voyage to the Indies and China.

31. Having very carefully examined the book I was directed to peruse, that I might confirm what the author relates, when he agrees with what I have heard concerning the affairs of the sea, the kingdoms on the coast, and the state of the countries; and that I might add upon this head, what I have elsewhere collected concerning them, which is not to be found in this book, I find it was written in the year of the Hegira 237, and that the accounts the author gives in regard to things at sea, were in his time very true, and agreeable to what I have understood from merchants, who from Irak sailed through those seas. I find also, that all the author writes is agreeable to truth, except some few passages.

Speaking of the custom of setting meat before the dead, which he attributes to the Chinese, he says, when they have served up the meat over night, and find nothing in the morning, they cry, The deceased hath caten. We had been told the same, and believed it, till we met with a man of undoubted credit, who being asked concerning this custom, he answered, that the fact was not so, and that this notion was groundless, as well as what is vulgarly said of the idolatrous nations, that they imagine their idols speak to them.

He told us also, that since those days the affairs of China wear quite another face; and since much is related to show the reason why the voyages to China are interrupted,

and fow the country has been ruined, many customs abolished, and the empire divide, a will here declare the causes I know of this revolution.

32. The great troubles which have embroiled the affairs of this empire, which have put a flop to the justice and righteousness there formerly practised, and which have, in the number of the ordinary navigation from Siraf to China, flowed from this source. An officer, who was considerable for his employment, though not of the royal family, revolted some time ago; this man's name was Baichu, and he began with committing hostilizes in the country, marching his armies into many places, to the great loss of the habitants, till winning a party over to him by his liberalities, he got together a multitude of vagabonds and abandoned people, whom he formed into a considerable body of troops.

His army thus strengthened, and himself in a condition to undertake any thing, he discovered his design of subduing the empire, and march distribute to Cansa, one of the most noted cities in China, and at that time the port for all the Arrbian merchants. This city stands upon a great river some days distance from the entence, to that the water there is fresh. But the citizens, shutting their gains against him, he resolved to besege the place, and the siege lasted a great while. This was translated in the year of

the Hegira 264, and of Christ 877.

At last he became master of the city, and put all the inhabitants to the sword. There are persons sully acquainted with the affairs of China, who assure us, that besides the Chinese who were massacred upon this occasion, there perished one hundred and twenty shouland Mohammedans, Jews, Christians, and Parsees, who were there on account of trassick. The number of the professors of these four religions, who thus perished, is exactly known, because the Chinese are exceedingly nice in the accounts they keep of them.

He also cut down the mulberry trees, and almost all the trees of other kin is: but we speak of the mulberry in particular, because the Chinese cultivate it carefully, for the sake of its leaf, on which their silkworms subsist. This devastation is the cause why silk has failed, and that the trade which used to be driven therein through all the countries under the Arabs, is quite at a stand. Having sacked and destroyed Cansu, he possessed himself of many other cities, which he attacked one after another, the Emperor of China not having it in its power to stop his progress. He advanced then to the capital city, called Cumdan; and the Emperor left this, his royal seat, making a precipitate retreat to the city of Hamdu, on the frontiers, towards the province of Tibet.

The rebel, puffed up by these great successes, and perceiving himself master of the countries, fell upon the other cities, which he demolished, having first slain most of the inhabitants, with a view, in this general butchery, to involve all the several branches of the royal blood, that none might survive to dispute the empire with him. We had the news of these revolutions, and of the total ruin of China, which still continues.

* The account here given by our author very plainly proves, that the trade to China was confidered in his time as very ancient, and of very great confequence, infomuch that whatever affected the peace of that country, was looked upon as a thing of common concern to all the nations of the East. But till these travels were published, who could have imagined this? Who would have suspected that the affairs of China were so well known to the Arabs? And therefore when these things are maturely weighed, who can doubt that we had reason to advance it as a thing highly probable, that long before thus, the empires of China and the Indies were in the most flourishing condition, as well in point of foreign commerce, as of slomestic ecconomy.

4 6 1 4

Thus

Thus were affairs fituated, and the rebel stood uncontrolled by any disadvantage that

might abase his authority *.

33. At last the Emperor of China wrote to the King of Tagazgaz, in Turkestan with whom, besides the nearness of his dominions, he was, in some degree, allied by marriage; and at the same time, sent an embassy to him, to implore his affistance for reducing this rebel. Upon this, the King of Tagazgaz dispatched his son, at the head of a very numerous army, to sight this oppressor; and after many battles, and almost continual skirmishes, he utterly defeated him. It was never known what became of the rebel: some believe he fell in battle, while others thought he ended his days in another manner.

The Emperor of China returned then to Cumdan, and although he was extremely weakened, and much dispirited, because of the embezzlement of his treasures, and the loss of his captains and best troops, and because of all the late calamities, he nevertheless made himself master of all the provinces which had been conquered from him. However he never laid hands on the goods of his subjects, but satisfied himself with what was yet left in his coffers, and the small remainders of public money, his condition indispensably obliged him to take up with what his subjects would give him, and to require nothing from them but obedience to his mandates, forbearing to squeeze money from them, because the King's governors had exhausted them already.

Thus China became almost like the empire of Alexander after the defeat and death of Darius †, when he divided the provinces he took from the Persians amongst so many chiefs, who erected themselves into so many kings; for now each of these Chinese Princes joined with some other to wage war against a third, without consulting the Emperor; and when the strongest had subdued the weakest, and was become master of his province, all was wasted and unmercifully plundered, and the subjects of the vanquished Prince were unnaturally devoured, a cruelty allowed by the laws of their religion, which even permit human sless to be exposed to sale in the public markets.

Then arole, as was natural from these confusions, many unjust dealings with the merchants who traded thither, which having gathered the force of a precedent, there was no grievance, no treatment so bad, but they exercised upon the Arabs, and the masters of ships; they extorted from the merchants what was uncustomary, they seized upon

If A later manifes we have group a lifterest engine the divinity of the annure of the senter of the senter of the control of the senter of the control of th

It is a very difficult thing to pretend to fettle the chronology of the Chinefe empire; and the very learned editor of these travels confesses that he is not able to give any satisfactory account of this revolution. It so falls out, however, that Father du Halde, in his History of China, lately published, has enabled us to set this matter right, or at least very nearly right. He informs us, that in the reign of the Emperor Hi Tlong, who was the eighteenth of the dynasty of Tang, the affairs of China fell into very great disorder, from the heavy taxes laid upon the people, and a great famine caused by the numbers of grass hoppers that destroyed their harvels. While shipgs were in this situation, there happened several revolts in the provinces, which encouraged a certain rebel, whose same was Floan Tha, to put himself at the head of the inacontenes, and that with success, as no dive the Emperor restored. It must be owned that there is about twenty years lightenace between the time mentioned by our author, and the date of the travels should the reader will be of the same opinion with ine, an constaining this to be substantially accounted to the travels.

r effects, and behaved towards them in a manner directly opposite to ancient usages, for these things has God punished them, by withdrawing his blessing from them in y respect; and particularly by causing the navigation to be forsaken, and the mernts to return in crowds to Siraf and Omair; agreeable to the all-ruling will of the

lighty Master, whose name be blessed !

4. The author, in his book, notes forme customs and laws of the Chinese, but mension the punishments institled on married persons, when convicted of adultery; this is, as well as homicide and thest, is punished with death, and they execute the crial in this manner; they bind both the hands together, and then force them backeds over the head, till they rest upon the neck; they then fasten the right foot to right hand, and the left foot to the left hand, so that both hands and feet are ngly bound behind the back; and thus bundled up, it is impossible for the criminal ir, nor wants he any body to hold him. This forture disjoints the neek, makes the its start out of their lockets; and dislocates the thighs; in short, the patient is in so erable a condition, that were he to continue therein but a sew hours, there would be need of any thing else to make an end of him; but when they have bound him as we estaid, they give him so many strokes with a bambeo, which they always use upon the occasions, and which alone were sufficient to kill the criminal, and leave off when is at the very last gasp of life, abandoning the body to the people, who eat it.

15. There are women in China who refule to marry, and chuse rather to live a dillo-: life of perpetual debauchery. The cultonies for these women to present themes in full audience before the commanding officer of the garriton in the city, and lare their aversion to marriage, and their defire to enter into the state of public men; they then define to be registered in the usual form amongst these profitures. I the form is this; they write down the name of the woman, her family, the number her jewels, the leveral particulars of her ature, and the place of her abode, thus fie admitted a public woman: after this, they but about her neck a firing, at which igs a copper ring with the King's figuret, and deliver to her a writing which certifies t flie is received into the lift of common profitutes, and entitles her to a rearly pena of so many falus, to be paid her out of the public treatury, and threatens with th the perion who should take her to wife. They every year give public notice what is to be observed with regard to fliple women; and turn out thate who have worn their charms. In the evening thele women walk abroad in drelles of different coirs, without any veil, and proffitute themselves to all new comers that love debauchers; the Chinele themselves lend his them to their houses, whence they depart not till next morning t

76. The Chinele coin no money befoles the little pieces of copper, like those we call us, nor will they allow gold or filter to be coined into specie, like the dinars and into the current with us; for, my they, if a thief goes with an evil intentiate the use of an Arath, where is gold and filter coin, he may carry off ten thousand pieces.

of gold, and almost as many pieces of silver, and not be much burdened therewith, and so be the ruin of the many pieces of silver this loss: whereas, if a thief has the same design on the house of a Clancse artisticer, he cannot at most take away above ten thousand salus, or pieces of copper, which do not make above ten meticals or dinars of gold. These pieces of copper are alloyed with something of a different kind, and are of the size of a dram, or piece of silver called bagli; in the middle they have a presty large hole to string them by: a thousand of them are worth a metical of gold, or a dinar, and they string them by thousands, with a knot between every hundred. All their payments in general as a made with this money, whether they buy or sell lands, furniture, merchandize, or any thing else. There are some of these pieces at Siras, with Chinese characters upon them.

I need fay nothing as to the frequent fires which happen in China, or the Chinese manner of building. The city of Canfu is built in the manner he describes, that is, of wood with canes, interwoven just like our works of split cane; they wash the whole over with a kind of varnish, which they make of hemp seed, and this becomes as white as milk; so that when the walls are covered therewith they have a wonderful gloss. They have no stairs in their houses, nor do they build with different stories, but put every thing they have into chests which run upon wheels, and which in case of sire they can easily draw from place to place without any hindrance from string, and so save their things presently.

As for the inferior officers in the cities, they commonly have the directions of the customs and the keys of the treasury: some of these have been taken on the frontiers and costrated, others of them have been cut by their own fathers, who have sent them as a present to the Emperor. These officers are at the head of the principal assairs of state, of the Emperor's private assairs, and of his treasures; and those particularly who

are fent to Canfu, are felected from this body *.

37. It is customary for them, as well as the kings or governors of all the cities, to appear abroad from time to time, in sclemn procession; at such times they are preceded by men, who carry great pieces of wood like those the Christians of the Levant used instead of bells: the noise they make is heard a great way, and as soon as it is heard nobody stands in the road of the eunuch, or prince: if a man is at his door, he goes into his bouse, and keeps his door shut till the prince or eunuch of the city is gone by; so no soul is to be seen in the way; and this is enjoined, that they may be held in the greater veneration, and to strike a dread, that the people may not see them often, and that they

may not grow fo familiar as to speak to them.

The ennuch, or lieutenant, and the principal officers, wear very magnificent dreffes of filk, so fine that none of this fort is brought into the country subject to the Arabs, the Chinese keep it up at so high a rate. One of the chief merchants, whose words cannot be called in question, relates, that he waited on an eunuch, whom the Emperor had son to Cansu, in order to purchase some things he wanted out of the goods carried thither from the country of the Arabs; and that upon his breast he perceived a short vest, which was under another silk vest, and which seemed to be under two other vests of the same kind; that the eunuch, observing him to look stedsastly upon his breast, said, "I see you keep your eyes fixed upon my stomach, what may be the meaning of it?" The merchant immediately cried out, "I am surprised at the beauty of that little vest, which appears under your other garments." The eunuch laughed, and held out.

bis as good trades for them a

as are attended by last whiters, fo that notwithit and its the lies

his thirt floore to him; " Count, fays he, how many vests I have allove it:" he did for and counted five, one on another; and the waitroat, or fhort will was underneath. There gare up are wove with raw filk, which has never been washed or fulled; and what is worn by the princes or governors, is fill more rich, and more exquittely wrought.

The Chinese surpass all nations in all arts, and particularly in painting; and they perform fuch perfect work as others can but Jaimly imitate. When an artificer has finished a fine piece, he carries it to the Prince's palace to demand the reward he claims he deferves for the beauty of his proformance; and the cultom is, for the Prince to order him to leave his work at the palece gar, where it stands a whole year. If, during that time, no person find a fault therein, the artificer is rewarded, and admitted into the body of artills; but if the least fault be found, it is rejected,

and the workman scnt away empty.

It happened once, as the flory goe, that one of these painters drew an ear of corn. with a bird perchad on it, upon a piece of filk; and his performance was fo admirable, that all who beheld it were aftonished. This piece stood exposed to public view, till one day a crooked fellow passing by the palace, found fault with the picture, and was immediately conducted to the Prince or Governor of the city, who at the tame time fent for the painter. Then he asked this crooked fellow what fault he had to find with this piece; to which he answered, "Every body knows that a bird never settles upon an ear of corn but it bends under him, whereas this painter has represented his ear bolt upright, though he has perclied a bird upon it; this is the fault I have to find." The objection was held just, and the Prince bestowed no reward upon the artist. They pretend by this, and fuch other means, to excite their workmen to perfection, by engaging them to be extremely nice and circumspect in what they undertake, and to apply their whole genius to what is to go out of their hands *.

38. There was formerly a man of the tribe of Korkish, whose name was Ebn Wahab, descended of Hebar the son of Al Asud, and he dwelt at Basra; this man left Basea when that city was sacked, and came to Siral, where he saw a ship ready to fail for Clina. The humour took him to go on board of this ship, and in her he went to China, where in the fequel he had the curiofity to travel to the Emperor's court; and leaving Canfu, he reached Cumdam, after a journey of two months; he staid a long time at the Emperor's court, and presented several petitions; wherein he fignified that he was of the family of the prophet of the Arabs. Having waited a confiderable while, the Emperor at last ordered him to be lodged in a house appointed for him, and to be supplied with every thing he wanted. This done, the Emperor wrote to the Governor of Canfu, commanding him carefully to inform himself among the merchants concerning the relation this man pretended to bear to the prophet of the Arabs; and the Governor, by his answers, consirming the truth of what he had faid, touching his extraction, the Emperor gave him audience, and made him rich prefents, wherewith he returned to Irak f.

This

^{*} There is nothing very furprising in this account, for the very same method had been in use among the Greeks long before, and has been since practiced in Italy and elsewhere; and without doubt it is the true method of coming at the just knowledge of the value of fuch performances; and therefore something of this fort is annually practiced at Paris.

It feems a little firance, that the Newscott his Remarket did not endeavour to fettle the sin this Arabian traveller west to Cabas, "character than the scircumflame which feeders in the plandering of Ballors, upon which it is not small a resolution of spring to Sires. In which this defects I have spokes at Alexanderia and the same in that the state of the plant of the same of

This man, when we faw him, was much advanced in years, but had his fenses perfectly, and told us, that when he had his audience, the Emperor asked him many questions about the Arabs, and particularly how they had destroyed the kingdom of the Persians. Ebn Wahab made answer, that they did it by the assistance of God; and because the Persians were immersed in idolatry, adoring the stars, the sun, and moon.

instead of worshipping the true God.

To this the Emperor replied, that the Arabs had conquered the most illustrious kingdom of the whole earth, the best cultivated, the most opulent, the most pregnant of fine wits, and of the most extensive fame. Then said he, "What account do the people in your parts make of the other kings of the earth?" To which the Arab replied, that he knew them not. Then faid the Emperor to the interpreter, "Tell him we esteem but five kings; that he whose kingdom is of the widest extent, is the Master of Irak, for he is in the midst of the world, and surrounded by the territories of other kings; and we find he is called the King of Kings. After him we reckon our Emperor here present, and we find that he is stilled the King of mankind, for no king is invested with a more absolute authority over his subjects, nor is there a people under the fun more dutiful and submissive to their sovereign than the people of this country. We therefore, in this respect, are the Kings of the human race; after us the King of the Turks, whose kingdom borders upon us, and him we call the King of lions. Next is the King of the elephants, who is the King of the Indies, whom we also call the King of wifdom, because he derives his origin from the Indians. And last of all the King of Greece, whom we style the King of men; for upon the face of the earth, there are no men of better manners, nor of comelier presence, than his subjects. added he, are the most illustrious of all kings, nor are others to compare with them."

Then faid Ebn Wahab, he ordered the interpreter to ask me, "If I knew my master and my lord, meaning the prophet (Mohammed), and if I had seen him?" I made answer, "How should I have seen him who is with God?" He replied, "That is not what I mean, I ask you, what fort of a man he was in his person?" I replied, "That he was very handsome." Then he called for a great box, and opening it, he took out another contained therein, which he set before him, and said to the interpreter. "Shew him his master and his lord;" and I saw in the box the images of the prophets; whereat I moved my lips, praying to myself in honour of their memory.

The Emperor did not imagine I should know them again, and said to the interpreter, "Ask him why he moves his lips?" I answered, "I was praying in memory of the prophets." How do you know them?" faid the Emperor. I replied, that I knew them by the representation of sheir histories. "There, said I is Noah in the ark, who was saved with those that were with him at the same time;" and I made the usual sainte to Noah and his company. Then the Emperor laughed, and said, "Thou are not mitaken in the name of Noah, and thou had named him right; but as for the universal deluge, at is what we knew not. It is true, indeed, that a stood covered part of the earth, but it reached not our country, not even the Indies." I made my

answer to this, and endeavoured to remove his objections the best I could; and then faid again to him, "There is Moses with his rod, and the children of Israel." The agreed with me as to the small extent of their country, and the manner how the ancient inhabitants were destroyed by Moses. I then said to him, "He there, is Jesus, upon an ass, and here are his Apostles with him." "He," faid the Emperor, "was not long upon earth, feeing that all he did was transacted within the space of some-

what better than thirty months."

After this the same Ebn Wahab saw the histories of the other prophets presented in the same manner we have already declared; and he fancied that what was written in great characters, under each figure, might be the names of the prophets, the countries whence they were, and the fubjects of their prophecies. Then faid the fame Ebn Wahab, I saw the image of Mohammed riding upon a camel, and his companions about him on their camels, with shoes of the Arabian mode on their feet, and leathern girdles about their loins. At this I wept, and the Emperor commanded the interpreter to ask me, why I wept? I answered, "There is our prophet and our lord, who is also my cousin." He faid I was right, and added, that he and his people had fubdued the finest of all kingdoms; but that he had not the fatisfaction of enjoying his conquests, though his successors had.

I afterwards faw a great number of other prophets, some of them stretching forth their right hand, and with their three fingers bent down between the thumb and the fore-finger, just like those who hold up the hand to make outh; others were standing, and pointed to the heavens with their finger, and others were in different postures. The interpreter took them to be the figures of their prophets, and those of the Indians. The Emperor then asked me many questions concerning the Khalists, their usual drefs, and concerning many precepts and injunctions of the Mohammedan religion, and L

answered him the best I could.

41. After this, he faid, "What is your opinion concerning the age of the world?" I made answer, that opinions varied upon that head; that some were for fix thousand years, and others would not allow fo many, and that others reckoned it at a fill higher rate; but that it was, at least, as old as I had said. At this the Emperor and his first minister, who was near him, broke out into laughter, and the Emperor made many objections to what I had advanced. At last, faid he, "What does your prophet teach upon this subject, does he say as you do?" My memory failed me, and I affured him

Hereupon I observed that I had displeased him, and his displeasure appeared plainly that he did. in his countenance. Then he ordered the interpreter to speak to me in the following terms: "Take heed of what you fay, for kings never speak but to be informed of the Bruth of what they would know. What did you, mean by giving the Emperor to underlimed, that there are among you various opinions concerning the age of the world? If the per you are also divided upon the things your prophet has faid at the faine-times, that no divertity of opinions are to be admitted on what the prophets have pronounced, all which mode be revered as fure and infallible; take beed then how you talk at tuck a rate day appre "-

To this he full oned many other things; which, through length of time, have of caped my remembrance. At lait he wheel me, "Hew is it that mon halt-toriaken the

or the Charles and and content of the Uniform of State of

King, to whom thou art n arer, not only by the place of they abode, but Is who d allo, than thou art to us?" In return to which, I informed in of the remaining which had happened at Bastora, and how I came to Siraf, what I tow ול גייל עילו will for Chi ia; and that having heard of the glory of his empir, and acund it co in all nec naries, curioficy excited me to a defire of coming into his count of that I might behold it with mine own cyes; that I should form a part for my own country and the kingdom of my coufin, and that I would make a fait ful report of what I had feen or the magnificence of the empire of China, and the vafi extent of the provinces it contains, and that I would make a grateful acknowledgment of the kind usage I there met with, which feemed to please him very much. He then made me rich refents, and ordered that I should be conducted to Cansu upon post-horses. He also wrote to the Governor of the city, commanding him to treat me with much horour, and to furnish me with the like recommendations to the other governors of the provinces, that they might entertain me till the time of my departure. I was thus treated every where during my alay, plentifully supplied with all necessaries of life, and honoured with many prefents till the time of my departure from China.

42. We asked Ebn Wahab many questions concerning the city of Cumden, where the Emperor keeps his court; he told us that the city was very large and extremely populou, that it was divided into two parts by a very long and very broad street; hat the Emperor, his chief ministers, the soldiery, the supreme judge, the cunuchs, and all belonging to the Imperial houshold, lived in that part of the city which is on the right hand eartward; that the people had no manner of communication with them; and that they were not admitted into the places watered by canals from different rivers. the borders of which were planted with trees, and adorned with magnificent polaces. The part on the left hand wellward, is inhabited by the ordinary people and the merchants, where are also great squares, and markets for all the necessities of life. At In eak of day, the officers of the King's houshold, with the inf rior servants, the purveyors, and the domestics of the grandees of the court, come some on foot, others on horseback, into that division of the city, where are the public markets, and the habitations of fuch as deal in all forts of goods, where they buy whatever they want, and return not again to the same place till their occasions call their thither next morning. It is by the same traveller related, that this city has a very pleasant situation in the midft of a most fertile soil, watered by several rivers, and hardly desicient in any thing except palin-trees, which grow not there.

43. In our times discovery has been made of a thing quite new and unknown to those who lived before us. No body imagined that the great sea, which extends from the Indies to China, had any communication with the sea of Syria, nor could any one apprehend the possibility of any such thing. Now behold what has come to pass in our days, according to what we have heard. In the sea of Rum, or the Mediterranean, they found the wrick of an Arabian ship which had been shuttered by tempests; for all her men perishing, and she being dashed to pieces by the waves, the remains of her were driven by wind and weather into the sea of Chozars, and from thence to the canal of the Mediterranean Sea, and at last were thrown on the shore of Syria.*.

This

This is one of the most curious passages in this treatile, insimuch as it plainly proves, that the Arabians had the fathe notions in geography with the Greeks, or, to speak with greater propriety, had their notions of geography from them. Our author says plainly, that, according to his judgmenty the Indian Ocean washed the coast of Great Partany, and so fell into the Caspian Sen, by which passage, he imposses that this ship was driven seen, the ladian Sen into the Mediterranes. The constitute was

This renders it colors, that the training of the country of China and Cin, or Sit, the uncomoff place of York flor, and have mirry of the Chorae; and dated to it country it the Chorae; and dated from the confirmation of the flap we are specifically so put together, that the places are not nailed or bolled, but possess together in the Medican confirmation of the coast of Syria, we make place and not joined together in the Medican mean bea, and of the coast of Syria, we make and not joined together in that y by.

We have also heard it reported, that ambergie has be n found it the fear of Syris, which seems hard to believe, and we unknown to former more. It this be as a fear, it is impossible that amber should have been thrown up in the sea of Syris, but by one sea of Aden, and of Kelzum, which has communication with the seas where ander is found; and because God has put a separation between these seas, if this story be true, it must nee theirly have been, that this amber was driven first from the sadian. Sea into the others, and so nom the one to the other, till it at last come into

the lea of Syrint.

44. We will now begin to speak of the province of Zapage, which is epposite to Clina, and distant from thence a sull month's sail by sea, or less, if the wind be fair. Inc King of this country is stilled Mehrage, and they say his dominions are nine hondred leagues in circumstrence, and that this King is master of many islands which he tound about. Thus altogether this kingdom is above a thousand leagues in extent; among those islands there is one called Serbeza, which is said to be four bundled tagues in circuit; and another called Rahmi, which is eight hundred leagues in compass, and produces a dwood, camphire, and many other commedities. In this same kingdom is the island of Cala, which is the mid passage between China and the country of the Arabs.

This iffund, they fay, is fourfcore leagues in circumference; and hicher they bring if forth of therehandize, wood-aloes of feveral forts, camphire, fandal-wood, ivery, one wood called cabahi, abony, redwood, all losts of spice, and many other things too tedious to chumerate. At prefent the commerce is carried on between this island and that of Oman. The Mehrage is the sovereign over all these islands; and that in which he makes his abode is extremely sertile, and so very populous, that the towns

almost

wion; but there is ft il formthing in it very bold, and well imagined, and at the bettom formthing of tirth too; for though it was impossible that this thip should come into the Mediterian on in the mainer of a other manners, yet it is not impossible but it might have come through the north-set past of his supposition; and if by the lea of Chozais, we underland that it Milicovy, he would be quite in the

I very much doubt, whether the confinction of this yealed, as one wither defende, it, be fufficient evidence of its coming from the Indies. It is very possible that it might have be it bout belonging to the inhabitives of Greenland, or of some orbit country Lordering upon Hudion's Pay; indee it is very certain that there are such willed in these part, and it is not at all may official that this right have come from thence. I do not pictead, however, absolutely to contradict him, but only to it is that the argument he may is not conclusive, though I think, as though then shoot, he had infinitely grounds to believe it was conclusive.

[†] It is most evident, from our author's way of reasoning that he had no notion of my possing by the tope of Good Hope; for if he had, he would most certainly have to'en this apportunity of minutating it. At the fame time, however, I leave it to the reader's consideration, whether this veiled, supposing it to have been built in the E ist Indies, might not have come this way into the Mediterranean, more probably than by the north-east passage. It is likewise clear from what our author has delivered, that the Arabians knew no more of Japan, which they called Sila, than they learned from the Chinese, since by the tellimony of the oldest of our authors no Arab had yet set foot there in the year of the Hegura 230, A.D. 844.

almost crowd one upon another. A person of great probity relates, that when the cocks crow at their accustomed hours, just as with us when at rooft, upon trees, they answer each other a hundred leagues round and more, because of the proximity of the villages which almost touch each other; and he adds, that no part of it is uninhabited, nor any of its land uncultivated. Those who travel in this country may stop at every step, and find shelter from the beams of the noon-day sun; and if they are tired, they

may repose themselves every day at noon, go which way they will.

45. Yet what follows from the testimony of several persons, is the most remarkable particular we have heard concerning the island of Zapage. There was formerly a King, or, as he is there called, Mehrage; his palace is still to be feen on a river as broad as the Tygris at Bagdad, or at Baffora. The fea intercepts the course of its waters, and drives them back again with the flood; and during the ebb, it streams out fresh water a good way into the sea. This river is let into a small pend close to the King's palace; and every morning the officer, who has charge of his houshold, brings an ingot of gold wrought in a particular manner, which is thrown into the pond in the presence of the King. The tide rising, covers it with the rest, and quite conceals them from fight. But low water discovers them, and they appear plain by the beams of the fun. The King comes to view them as often as he repairs to an apartment of state, which looks upon this pond. This custom is very scrupulously obferved; and thus they every day throw an ingot of gold into this pond as long as the King lives, not touching them upon any account, but regarding this as a facred treafure.

When the King dies, his fuccessor causes them all to be taken out, and not one of them is ever missing. They count them, and melt them down; and this done, the fums arising out of this great quantity of gold are distributed to those of the royal houshold, men, women, and children, to the superior and inferior officers, each in proportion to the rank he bears; and the furplus is given away to the poor and infirm. they reckon up the number of ingots, and what they weigh, and fay, fuch a Mehrage reigned fo many years; for he left so many ingots of gold in the pond of the kings, and they were distributed after his death to the people. It is accounted a felicity with them to have reigned a long while, and to have thus multiplied the number of those ingots

given away at their death.

46. Their ancient history relates, that one of the kings of Komar would have waged war with him in this island. This country of Komar is the same from whence they bring the wood aloes called Hud al Komari, nor is there any kingdom more populous in proportion than that of Komar. The inhabitants are all very courageous, and the boundlels commerce with women, and the ule of wine, are forbidden among them; nor have they any wine in their country. This kingdom was at peace with that of Zapage, where reigned the Wehrage: They are divided from each other by a pallage of ten or twenty days fail, with a very easy gate. They lay, that in former days there was a very young and high fourted Prince lothis island of Komar. This King was one day in his palace, which looks upon a river much like the Euphrales at the entrance, day in the palace, which constrained the least has prive miniters were with him, and in the ancounter, they sent together, house was taken of the day corner of the Vietname and respect they are prepared and chiracters and architectors, or many which is bright part of the vietname and chiracters and chiracters are all the parts of the vietname which designed free support.

"They had the least of sharing in the indicate a since cased with a denie design is expected with a denie design."

efire? I could wish, replied the King, to see in a dish the head of the Mehrage of apage. The minister, well aware it was jealously that inspired him with this impenous fury, rejoined, My Lord, I wish you would not disturb your mind with such loughts, since nothing ever fell out between those people and us, to surnish matter of omplaint; they never offended us by word or deed, or ever did us the least injury; essentially, nor do they discover any inclination of making a conquest of this kingdom. To one therefore ought to hearken to such discourse, or make a word of answer upon his head. The King was enraged at this reply, and said not a word thereto; but it it it is the principal officers of state; and to such of his courtiers as he thought roper.

19. This matter being rumoured about, at length reached the ears of the Mehrage le, who then reigned, was a wife and an active prince, of confumnate experience, and in the flower of his age. He called for his first minister, and having acquainted im with what he had heard, said to him, it is by no means proper to publish the chaviour of this giddy Prince, or to betray how little we esteem him, because of his outh and slender experience; nor is it expedient to divulge what he said against me; or such speeches cannot but be prejudicial to the dignity of a King. Having thus ensined his minister to conceal what had passed between them, he commanded him to repare a thousand ships of no extraordinary size, and to equip them with all things eccessary, arms and ammunition, and to man them with as many of his best forces they could transport. Then he gave out that he would make a voyage through he neighbouring islands under his dominion, to divert himself. He wrote also to all he tributary princes of those islands, to acquaint them, that he designed them a visit; and this being a public talk, each of those kings prepared for the reception of the slehrage.

When every thing was in readiness as he had ordered, he went on board his ships, and vith a powerful army sailed over to the kingdom of Komar. The King and those elonging to his court were effeminate creatures, who all the day long did nothing but iew their faces and rub their teeth, with mirrors and tooth-picks in their hands, or if hey moved, had them carried after them by slaves. So the King of Komar discovered othing of the Mehrage's purpose, till he appeared in the mouth of the river, on which tood the palace of the King of Komar, and till he had landed his troops, who imnediately invested the capital, and there took him. The King was taken in his pa-

ace, and all that belonged to him fled without fighting.

Then the Mehrage caused proclamation to be made, that he granted entire security if his and effects to all the inhabitants of the country, and feating himself on the himse of the King of Komar, now a captive, he ordered him to be brought into his presence, together with his first minister. Then addressing himself to the King of Komar, he said. Who was a filled your head with a project unequal to your firength, and absolutely impossible for you to compale? What would you have done if you had aimed your point? This Prince, who had nothing to lay for himself, made no answer. Then, continued the Mehrage, it was tall empoyed the plantare you wished, to seing the beat him distribution you would have focused my kink done and related in their you had committed all form of violence. I will not to be prevently regard services use it will research open you wish you willied come ching me, well all the related to the relation to the research of the property of the relation to the research of the relation of the relation

the bounds of his power, the cach may be contented with his own, and that those you

have discurbed may be reflored to pariest security.

This feld, he ordered them to fleile off his head, and then tu ming to the minister. he faid, You have done all a good manfler could do; I know you offered good advice to your master, and that he hearkened not unto you. Consider who may best fuce sed this for I for the good of the kingdom, and let him immediately upon the throne. This done, if a Mehrage departed for his own terrnories, and neither did he or as y of his lay hands or the leafl thing in the kingdom of Komar. When he arrived in his own knigdom, he let down i pon the torone, and being in the pelace which looked upon the pond before n endoned, he caused the head of the King of Komar to be put into a button and let before him, and calling in the chiefs of his kingdo in, he acquilited them with all he had donn, and with the reasons which had it duced him to the expedition we have related, and they approved the deed with acclamations and prayers for his profesity. Then he oldered the had of the King of Koniar to be washed and embal acd, and put it into a coffer, and fent it back to the King of Komar, who had been elected in the room of him he had put to death, at the faine time writing a letter to this new Prince in the following terms: What inclined us to do what we did to your predecessor, and your Lord, was, his known malevolence towards us; and that we might fet an example to his equals, we have been so happy as to treat him as he would have treated us. But we think it convenient to fend his head back to you. having had no defign of de aming it, or of arrogating any glory to outlelves, from the adventage we obtained over him. The news of this action bing reported to the Kings of the Indies and of China, it added to the respect they before had for the Mehrage, and from that time it has been a custom with the kings of Komur, every morning that rice, to turn towards the country of Zapage, to prostrate chemielies on the ground, and to make the most profound inclinations in honour of the Mchrage.

48. All the lings of the Indies and of China believe the metamplychofis or trapfaction of rouls, and make it an article of their religion. A perion of credit report one of these princes being newly recovered of the similar pox, and beholome him if in a gless, was deeply troubled to see how fadly his face was disfigured, and that turning himself towards one of the sive sons of his brother, he said to him, sure it never happened to any man as to me, to remain in his body after such a change? Let this body is only a vessel pussed up with wind, and when the soul leaves it, she passes instantly into another. Go mount you upon the throne, for I am about to separate my body from my soul, until I return into another body: at the same time he called for a sharp and keen cangiar, with which he commanded his nephew to cut off his head, which the other did, and he was afterwards burnt, as is the custom of the country? Our author here quits his subject somewhat abruptly, in order to return

+ This doctrine of the metempsychous is generally held among the Chinese. Their histories say, that one Kekin, or Shekin, an Indian philosopher, who hved about a thousand your before Christ, was the soft that taught this doctrine of transmignation; and our authors add, that the Chinese had it from the Ladians. It over-ran China in the year of Chinit 65, and the chiefs of this less have to this day their

ţ

^{*} This is a very pleafant flory, and well related; but with respect to the country in which it happened, I think it very difficult to say any thing with certainty, and yet this does not at all lessen the credibility of the fact. It is not impossible, however, that this history might relate to some or the islands which are now called Philippines, or perhaps some of the islands in the straits of Sonda. I pretend to determine nothing in such doubtful points, but leave the reader to decide for hunsels, according to the lights given him by the inthor, who appears to have written with great caution and fidelity.

again to the country of Cl ina and the manners of its phabitime. The ration of its not at first fight very evident, but if we consider that lead to so the former ward, we shall very easily discern that this was the true cause or his making to tuited a transition. What he had before said was in consequence or the facts delivered by the sink without in regard to the Indies, and having discussed the court was natural for him to toll in that author in what he says of China and the Chinair, and rule difficult with a lowed, that notwithstanding these small interruptions, the end of the case with the of the velocity of the sale of the ancient a date, written in a clearer or better national in these.

49. The Chinese were wonderfully regular in all takes relating to govern annihistore the last revolution destroyed and reduced them to the same they are in at present. There was a certain nucleant, a native of Chorassa, via coming into leak, the dealt to a considerable amount, and having brought up a quantity of goods went to this. This is a was extremely flish and of incredible avance; it happened that the imperor of China had sent one of his ennuchs to Cansa, the city of all the Arabian raders, there to purchase what he vanted, and was to be had on board of the ship hat was arrived. This ennuch was one of those who had the largest share in his master's good opinion and considence, and was keeper of his treasure and of all that he

cit am d precious.

A diffruite strole between this current and the before mentioned merchant, about for pieces of ivery and other goods, and it ran fo high that the merchant refuled 2) I with him. But this affair making a great noise, the cunuch pushed it so far, the he forced from him the choice of his goods, despising whatever the other rould 1 y to him. The merchant withdra ving himself, went privately to Cumdan where 'm Emperor refides, and which is two months journey from Canfu, and being acrive I be went to the thing of the bell mentioned in the former book. The cuflom was, that a hoever pulled it was thereupon tent ten days journey from thence, into a kind of by fineent; it was ordered also that he should be committed to prilon, there to r and for two whole months; which expired, the vice-king or governor of the provere rel at d him and taid you have involved yourfelf in an affair which may turn to you at critical, and to the loss of your life it you speak not real truth; forasmuch as the Paperor hath appointed miniters and gov mors to dift ibute juffice to you and to t none, nor is there any one of them that would not right you, it when you ap-10 11 tore the imperor your wrongs are not fuch as may could you to have recourse the read that every men who would precent to do a you have done, may be deterred from the tame. Withdraw thereis samedately, and begone about your business. Now if the party cadeavoured to fly, he was challifed with I fly strokes of the lambon, and was then I at buck to the country whence he came; but if he perfifted in his demand of reducts, he was adi littee' to an audience of the l'inperor.

about on or man the mountain Thentai in the province of Chektary. This X kin, a cooling to the Chemic tradition in Natarctic, his been born eight thousand times over, the bulk time in the form of a white elephant. It is he that was called Foberaffer his protheofs. The field of Xekia, is we are to'd by father M rims, hold the meterophychofis; but this less is divided into two branches, the on-behaving the extension retemptivehosis, or if at the inits of men pais after death into other bidies, and these working adola, and to the principal foundation of their morality, which could be impressive the passions, which are a forming different animals proceeding from man; but neither the one not the other expect rewards or divide pun shanches in the world to come.

The Choraffanian strenuously persisted in his demand of justice, and of leave to be admitted to the Emperor, which was at length granted him. The interpreter asking him his business, he related what had befallen him with the Emperor's officer, and how he had forced from him a part of his effects. This thing was foon divulged and noised about at Canfu; in the mean time the Emperor commanded the merchant to be cast into prison, and that care should be there taken that he wanted not for either victuals or drink.

At the same time he ordered his prime-minister to write to the Governor of Canfu, charging him to inform himself concerning the complaints of this merchant, and to examine into the grounds thereof; at the fame time also three principal officers received These officers are called of the right, of the left, and of the midst. the fame order. according to their rank, and have the command of the Emperor's forces under the prime-minister. He trusts them with the guard of his person, and when he takes the field for fome military enterprize, or on any other account, each of them, according to his rank, marches near him. These three officers wrote each apart what they had upon the strictest enquiry discovered of the matter, and assured the Emperor that the merchant's complaint was just and well founded.

These first informations were followed and confirmed by many more sent to the Emperor from divers parts, and the eunuch was cited to appear. He no fooner arrived than the Emperor seized on all his effects, and deprived him of his office as treafurer, and then faid to him, Death ought to be thy doom for giving this man, who is come from Chorassan on the frontiers of my kingdom, cause of complaint against me. He hath been in the country of the Arabs, whence he came into the kingdoms of the Indies, and at last to my city, feeking his advantage by trade, and thou wouldst have had him return cross these kingdoms, and have said to all the people in his way, I have been abused in China, where they have stripped me of my substance. I grant thee thy life in confideration of thy former fervices in the rank thou heldest in my house; but I will confer on thee a command among the dead, forasmuch as thou hast not been able to acquit thyself of thy duty in that thou holdest over the living, and he ordered him to be fent to the tombs of the kings, to have the custody of them, and there to remain

50. One thing most worthy admiration in China before the late commotions, was the good order they observed in the administration of justice, and the majesty of their tribunals; to fill them, they made choice of fuch men as were perfectly verfed in their laws, and fuch confequently as were never at a lofs, when they were to pass judgment, men of fincerity, zealous in the cause of justice upon every occasion, not be biasted by what the great could offer to embroil a dispute, to that justice was always administered to him who had right on his fide.

In a word, they made choice of upright men, of men who neither oppressed the poor, or accepted prefents from the rich. When they deligned to promote any man to the office of principal sudge, they previously feat him to all the chief cities of the empire, in each of which he had a mooth or two. During this bace it was his bu-

^{**} This will a very extraordinary detent prince in the Chinele Emperor, and very agreeable to the mark of the emperor in which there are very food, upon particular accollance of these although of these of the enterthing of these first per annual probability of the enterthing of the

finess most minutely to enquire into the affairs of the people, into all that passed in the city, and into the various customs. He informed himself of all such as deserved to be believed upon their testimony, and this knowledge was of use to him in the sequel, as occasion required. After he had gone through all the cities in the manner aforesaid, and made a stay of some time in the most considerable of them, he repaired to the im-

perial court where he was invested with the dignity of supreme judge.

To him therefore the Emperor referred the nomination of all the other judges, and by him were they appointed, after he had acquainted the Emperor with those who in his whole dominions were most worthy of exercising jurisdiction, each in his own city, or in others; for he knew who were commendable for their understanding; and so one was raised who possessed not adequate endowments, or who bore not testimony according to the truth when he was interrogated. The Emperor allows none of his judges to write to him upon any affair when he is informed that he has done injustice, and even deprives them of their office. The supreme judge causes proclamation every day to be made before his gate by his officers, and in his name they cry out, If any man hath been wronged by the Vice-King, or Governor, who is not to be seen of the people, or by any one of his relations, or officers, or by any one of the body of the people I will do him ample justice, so soon as the offender is put into my hands, and that I have charge of him. This proclamation is thrice repeated.

It is an ancient custom with them never to degrade a vice-king or governor of a city, but by virtue of letters issued out of the council or divan of kings; and this is commonly executed for some flagrant malversation, or when judgement is suspended or delayed: but when the governor avoids these two things, it is seldom he is disturbed with letters of revocation, which are never drawn up but on a legal account. The posts of judicature are conferred on none but persons of probity, and lovers of judice, and so

good order is maintained in the kingdom.

51. The province of Chorassan is almost on the borders of China. From China to Sogd, it is of about two months journey through almost impassable defarts, and through a country all covered with sand, where no water is to be found. It is not refreshed by any rivers, nor is there any habitation in this province; and for this reason it is that the Chorassanians can make no irruptions into China. That part of this empire which lies farthest westward, is the province of Medu, which borders upon Tibet, so that on this side the two nations are at war with each other.

Among those of our time who have travelled into China we were acquainted with one, who told us, he had seen a man that had a vessel with musk in it on his back; and had travelled on foot from Samare, and to Canfu; the porrifor all merchants from Shraf. He had by land travelled through all the cities of China one after another; which he might early do, because the provinces of China and Tibet, where the creature that affords musk is met with, are contiguous. The Chinese carry off as many of these creatures as they can; and those of Tibet, on their part do the same.

As to she country of Tibet, it may not be antic to say forcetting of it here because it will occur in the tubic tent part of this work. To make at this day a mat only of the great kingdom of Tanggat, which, according to the befrecounts that I have not with, is due fituated. It is the empre of China on the early. The kingdom of Area or of Brania, out the touth. The dominions of the Great Moguli me the settly and those of the country, or Great Khan or the Tanggat largest on the north. This kingdom is divided one two prices the country of the north in the highly of Tanggat property is called a but the finish part is the finished. These to the north called the finish part is the finished the finish part is the finished that is the sort of There is the finish part at the finish part is the finish in the first part of the finish of the country of the finish of the finish part of the finish of the country of the finish of the finish of the country of the finish of the country of the finish of the finish of the country of the finish of the finish of the country of the finish of the country of the finish of the finish of the finish of the country of the finish of the fini

But the musk of Tibet is far preferable to that of China for two reasons; first, in Tibet this creature feeds on aromatic pastures, while in China he has nothing to subsist him but what is common; fecondly, the inhabitants of Tibet preserve their bladders or cods of musk in the pure natural state, while the Chinese adulterate all that come into their hands. They dip them also into the sea, or else expose them to the dew; and having kept them some time, they take off the outward membrane, and then close them up; and this musk passes in the country of the Arabs for musk of Tibet, because of its excellence.

The most exquisite of all the forts of musk is what the roebucks that yield it leave behind them when they rub themselves against the rocks on the mountains; for the humour whence it is generated, falling down towards the navel of the creature, it there gathers into a quantity of turbid blood exactly like biles, and fuch-like tumours; when this swelling is ripe, the creature, sensible of a painful itching, seeks out for stones, and rubs himself against the same, till he opens his sore, and the contents run Now as foon as this matter falls from the creature, it coagulates, the wound closes, and the same kind of humour gathers to a head again as before.

In Tibet there are men who make it their business to collect this musk, and are very ready in knowing it; and having found it, they carefully collect it, and put it up in bladders, and it is carried to their Kings. This musk is most exquisite, when it has ripened in the bladder of the creature which bears it. It furpaffes all others in goodness, just as fruit is better when it is gathered ripe from the tree, than when it is pulled

There is still another way of getting musk; they insnare the creature in toils, and shoot him with arrows; but it often happens, that the hunters cut the tumours of the creature before the musk is elaborated; and in this case it has at first an ill scent, that prevails till the matter is thickened, which fometimes does not happen in a great while; but so foon as it coagulates, it turns to musk. This musk is a creature like our roebuck, his skin and colour the same, with slender legs, a split horn, smooth, but somewhat bending withal; on each fide he has two small white teeth, which are straight, and rife above his muzzle, each half a finger, or somewhat less in length, and in their form not unlike the teeth of the elephant; and this is the mark which distinguishes this creature from other roebucks *.

53. The emperors of China write to the kings or governments of cities, to the eunuchs, or lieutenants, and their letters are conveyed by post-horses, with a cut tail, disposed almost like the posts among the Arabs, in such order as every body

knows.

[.] We have formerly mentioned the animal which produces mult, the manner in which it is prepared, We have formerly mentioned the animal which produces musk, the manner in which it is prepared, and the value of that rich perfume. At prefent we shall only remark, that the best writers, ancient and modern agree perfectly with our author in opinions that the richest and highest flavoured musk is that of Tabers or, as others call it, Pinneage i and this because of the aromanic passures in that land, such as are see where alle to be found. That the Indian must comes next in degree of fineness, if to we may term it, will what was properly to Caball, and the other trading towns of the Indias by merchants, who carried to family think be best and disposed once throughout the east. That the Charles must be worst of all, how any because the Charles and create at several ways, but all because what is produced insteading in that suggious a non-common tide to wear as in Tibes. All this is continued by the tellimons of the science tenders and particle distributions of any tide to the family that any one particle that a suggestion of the continued by the tellimons of the science tenders and particle distributions as a present the sing that are not take each trade of the particle state and all the present the sing that of buttons are trade of the particle and distributions as the suggestions of the sing that the actions which is an additional and the present the sing that of buttons are accounted as a suggestion of the sing that the sections.

Besides what we have here related concerning the Chinese customs, it is usual for the princes, and even the people to make water standing. Persons of dignity, as the vicekings, and the principal officers, have gilded canes, a cubit long, which are bored through; and these they use as often as they make water, standing upright all the time, and by this means the tube carries the water to a good distance from them. They are of opinion, that all pains in the kidneys, the strangury, and even the stone, are caused by making water in a fitting posture; and that the reins cannot free themfelves absolutely of these humours, but by standing to evacuate; and that thus this posture contributes exceedingly to the preservation of health. They suffer their hair to grow, for the men will not round the head of a child when he comes into the world, as the Arabs do, for they fay it causes a confiderable alteration in the brain, and that their fenses are very sensibly impaired thereby. They suffer the head then to be all covered with hair, which they carefully comb.

As for their marriages, they observe the degrees of consanguinity after this manner: they are divided among themselves into families and tribes, like the Arabs, and some other nations; and they know each other by the difference of their descents. No man ever marries in his own tribe, just as the children of Thummin among the Arabs take not to wife a daughter of the fame race of Thummin; and a man of one family espouses not a woman of the fame. But, for example, a man of the family of Robayat marries into that of Modzar; and in like manner a Modzar marries with a Robayat; they are of opinion, that fuch alliances add to the nobility of the children by increasing their alliances, and rendering their families more powerful.

Here our author makes, as it were, another break in his work, in order to pass once more to the Indians, and their cultoms. In speaking of the method pursued by the first author, we observed that the main design of his work was, by comparing the manners of the Indians with those of the Chinese, to render them both better known to and more fully understood by his countrymen. His commentator therefore, with great propriety, follows the fame track; and as he had confulted both books and travellers to illustrate what had been faid of China, we shall find him as diligent in what regards India.

54. In the kingdom of the Balhara, and in all the other kingdoms of the Indies, there are certain persons who burn themselves. This custom proceeds from their notion of a Metempfycholis or transmigration, which they firmly believe as a truth never to be disputed. There are kings, who, upon their accession, observe the following ceremony: they dress a great quantity of rice, and pour it upon leaves of the Moula in fight of the King; then three or four hundred perions come of their own accord without the leaft confirmint on the part of the king, and prefent themfelves before him; after he has eaten fome of this rice, he gives a little of it to fome of them as fast as they come up to burn one after another, and they eat at in his prefence *. By eating of this rice, they all engage to burn themselves on the day the king dies, or is slain; and they punc-

[•] This was a very aid-culton in other parts of the world, as appears from what Carlar tells as of the Ambach amongs the Gads. In the indication notion concratly provailed, for notice island of Caron the King has always about bur certain noblemen, who chief themselves faithful to the King in this work, and is the mexic and world enfount; was to burn algorithms when he died. Darbola collectes the lame thing with referch to the Name. It fort of Indian orders, who always positive with their chief. In the Ringians of Touchille when the King died, must all his orders detect to be burned with him. In a word, all the Touchille when the King died, must all his orders in further where conferts this and provess many inflances in support of it. The continuous all the Touchille when writings, sees well as the subject themselves in such a manner of Manners in the area of Ambach.

tually fulfil their promise, throwing themselves into the fire from the first to the last, so that not one of them is less behind.

When a mean is determined to burn himself, he first goes to the King's palace to ast leave so to do, and having obtained it, he goes round the public squares of the city, and proceeding after ands to the place where the pile is heaped up with dry wood, while round about it stand many persons who feed the fire, to that it is very violent, and blazes prodigiously. At last the person comes preceded by a number of instruments, and moves round the place in the midst of his friends and relations; during which some put upon his head a garland of straw, or dry herbs, which they fill with burning coals, whereon they pour fandarae, which catches fire as strongly as naphtha; nevertheless, he continues the procedion although the crown of his head be all on fire, and the stench of his burnt sless be finelt, not so much as changing countenance in the least, or betraying the smallest sense of pain: at last he comes to the pile, throws himself into it, and is soon reduced to thes.

55. A certain person, to whom we give entire credit, says, he beheld one of these Indians burn himself, and avers, that when he came near to the pile, he drew out a cangiar, and with it ripped down his breast to the rim of his belly, and that this done he with his lest hand pulled out a slap of his liver, and with the cangiar cut a piece of it which he gave to one of his brothers, talking all the time, and discovering an invincible contempt of death, and a wonderful patience under his torments, till at less he leaped into the fire in his passage to hell.

56. The person who affirmed this added, that in the mountains of this country there are Indians, who in opinions and manners disser but little from those we call Kanisians and Jelidians, and who are addicted to all manner of superstition and vice. There is a great emulation between these mountaineers and the people on the coast, the latter continually going up to the mountains to dare the inhabitants there to do as they do, and the mountaineers on their part as frequently coming down to the coast with desiances of the same nature.

Among others, there once came down a man on this errand, and having gathered a number of the inhabitants of the coast about him, who came as well out of curiosity to see the sight, as with intent to imitate him, he told them to do what he was about to perform, or if they despaired of doing it, to acknowledge themselves overcome. He sat himself down then in a place planted with canes, and directed them to bend one of them down to the ground. These canes are like our sugar canes, bend like them, and have a very large stem; when they are pulled down they lie along, but when let go they rise again with prodigious violence. One of the largest of these he caused to be bowed down to his height, and fastened his hair strongly thereto, when taking in his hand his cangiar, which sparkled like sire, he said to those about him, I am going to cut off my head with this cangiar. As soon as it is severed from my body, let go the cane, and when it slies up with my head, I will laugh and you shall hear me. The people of the coast had not courage enough to imitate him. The person who related

There are many modern authors who attest every circumstance mentioned in this account; but it must be acknowledged, few besides women burn themselves; and that the Bramins, who were wont to behave with so much constancy on such occasions, are now content to die in the same way with other men; and even the women, generally speaking, are far enough from that spirit of herosism for which they were so famous in former ages. They burn themselves, indeed, with the dead bodies of their husbands, as in times pass, but not with so good a will; nor would they do it at all, but that the custom of their country and the power their relations have over them, oblige them to it.

times these facts are very generally known, for this party in last or in the action

Laudood of the country of the Arabs, and we hear from home or my dis.

57. It is a customary thing also for men and a omen of the lab in blood, to defin those of their family to throw them into the hre, or desvarde in hin they are grown old, or perceive themselves fink under the weight of him a tim' believing the the are to return in other bodies. They burn there a. I can often times hip p field in the ifle of Sarandib, where there is a raine of precoust? I am a norman, a call fishery, and other race and extraordinar, thing, that an Ir dian would come into the Burar, or market-place, with his kitis, as they call i kind of cargiar they wear, n ide after a very particular manner, and feize on the mofe very n reliant there prefeat, and holding his Kris to his throat, leading him be the oil of the city in the midst of a throng of people, while not a foul of them deceded upt his rescue; for it any attempt of this kind was made, the Indian vas fore to kill the merchant, and make away with himfelf: when he had got Lim out of the city, he obliged him to redeem himself with a sum of money. This outcage continuing, the kings ordained that fuch Indians should be seized; but when they came to execute this order, the Indian killed the merchant first, and then himself: the same missostume be'el many other nor chants; and after this manner a number both of Arabs and Indian, perithed: the merchants therefore fought after other means to fecure them. I can dille Indians were no longer apprehended.

58. In the mountain of Sarandib they find precious flores of various colours, red, gicen, and yellow, most of which are at certain times forced out of caverns and other iccoffes by rains and tocrents. In these places the king has his officers to keep an eye over those who pick them up: many times also they are dug out of mines in the same manner as metals; and they sometimes find precious stones in the ore, which must be

bird on to get at them.

The King of this island makes laws, which are the fundamentals of the religion and government of the country; here are doctors and assemblies of learned men, like those of the Hadithis among the Arabs. The Indians repair to these assemblies, and write down what they hear of the lives of their prophets, and the various expositions of their laws. Here is a very great idol of the finest gold, but concerning the weight thereof travellers are not agreed. Here also are temples, where great sums of mone, are expended in incense.

In this same island there is a very great multitude of Jewe, as well as of many other seeks, even Tanouis, or Manichees, the King permitting the free exercise of every religion. At the end of this island are vallies of great length and breadth, which extend quite to the sea. Here travellers stay two months and more in that called Gab Sarandib, allured by the beauty of the country, chequered with groves and plains, water and meads, and blessed with a wholesome air. This valley opens upon the sea called Harkand, and is transcendently pleasant. You there buy a sheep for half a dram, and for the same you purchase as much of their drink as may suffice many persons.

It appears, that this island, which is that of Ceylon, has been in all ages famous for its immense we alth and riches. As to the idol that our author mentions, it is not impossible that the priests of this country might practise the same art, which has been used at Siam, where they have a monstrous idol of clay and bricks, very artificially gilt, which was for many ages supposed to be pure gold; though it must be allowed, that there are few countries where such a golden image might be looked for with greater probability, than in this island, the people having been always equally remarkable for their wealth and superfiction

This drink is made of palm-honey, boiled and prepared with Tari (Toddi), or juice which runs from the tree.

59. Gaming is the usual diversion of the inhabitants here; they play at draughts, and their principal pastime is fighting of cocks, which are very large in this country, and better provided with spurs than cocks commonly are; and besides this, the Indians arm them with blades of iron in the form of cangiars. Upon these combats they bet gold, silver, lands, and farms, which are won by the owner of the cock that beats. They play also at draughts, and venture great sums upon this game, but with such fury, that those who have not wherewithal, debauchees, and desperate people, often play away the ends of their singers.

While they are at play they have a fire by them, and thereon a pot of walnut or feafame oil, (they have no oil of olives,) and they place a little but very fharp hatchet between them; when one of them has won a game, the other lays his hand upon a ftone, and the winner cuts off the end of the lofer's finger with the hatchet, and the patient dips the injured part into the boiling oil to cauterife the wound, and yet they cannot fhake off this evil habit of gaming; on the contrary, they fometimes perfift in it so obstinately and so long, that before they part, they have all their fingers thus mutilated. Some of them will take a wick, and soaking it in oil, apply it to some member, set fire to it, and let it burn, so that the scent of the burnt flesh is smelt by those who play with them, while the parties themselves betray not the least sense of pain.

There is much debauchery in this country, as well among the women as among the men, for they are laid under no reftraint. It runs so high, that sometimes a foreign merchant, just arrived from sea, shall send for the daughter of a King of the country, and she shall come to him to the fishing grounds, with her father's consent and privity; wherefore the Mohammedan doctors of Siraf strictly warn young people not to go that way *.

60. In the Indies there are heavy rains, which the people of the country call Jafara; they last three whole months during summer, incessantly, night and day, and scarce does the winter stop them. The Indians, to the best of their abilities, prepare themselves against these rains some time before they fall; and no sooner do they come on, than they shut themselves up in their houses, made of wood and cane, interwoven, and thatched with leaves; they stir not out during all this time, and no soul is seen abroad, no, not even the artificers, who now do their work at home; and during this season, they are subject to several sorts of ulcers in the soles of their feet, caused by the damps. The rains are the life of the Indians; were they to fail, they would be reduced to the utmost want, for their fields, sown with rice, are watered only by rains, and are rendered fruitful thereby; for if great store of water lie upon the rice-grounds, they need no other help either from industry or art; but when the rains are plentifully poured down, the rice shoundardy, and even becomes much better in kind. It never rains in this country in the winter.

62. The Indians have devout men, or doctors, known by the name of Bramins. They have poets also, who compole veries, stuffed with flattery, in praise of their kings. They have also also observe the flight

^{**} Which reverse processive to that descript of manners, for which the Minimmedians were remarkable as feele earth areas, end it shows how except they were to preterve the morals of the ringing of our dependence of the manners of the remarkable for the order of the remarkable of the ringing of the remarkable of the r

birds; and others who pretend to the calculation of nativities, particularly at Kanuge; great city in the kingdom of Gozar *.

In the Indies there are certain men called Bicar †, who go all their lifetime naked, id suffer their hair to grow till it hides their hinder parts, and the rest of their body. hey fuffer also their nails to grow so that they become pointed, and sharp as swords; or do they ever cut them, but leave them to break and fall off as it happens; and this ey observe as a religious duty: each of them has a string about his neck, to which ings an earthen porringer, and when they are prefled by hunger, they stop at the door fome Indian house, and those within immediately, and with much fatisfaction bring it rice to them, believing there is great merit in fo doing, while they eat out of the porager and withdraw, never returning to make the same request, if not urged thereto

62. The Indians have many laws and religious precepts, by which they imagine they ease God; of such as these it is written in the Koran, " The wicked are mighty in ide." One part of their devotion confilts in building of Kans, or inns upon the highays, for the accommodation of travellers, where also they fet up a fort of pedlars, of hom the passengers may purchase whatever they may happen to want t.

downright want.

They there also settle public women, such as are in the Indies, who expose themselves travellers; all which the Indians number among their meritorious deeds. But they ve besides these in the Indies public women, called Women of the Idol, the origin of nose institution is this: when a woman has laid herself under a vow, that she may we children, if it happens that she brings forth a handsome daughter, she carries the ild to the Bod (so they call the idol they worship), and there leaves her. When the rl has attained a proper age, she takes an apartment in this public place, and spreads curtain before the door, and waits the arrival of strangers, as well Indians, or men of her fects, to whom this debauchery is made lawful; she prostitutes herfelf at a rtain rate, and delivers her gains into the hands of the idol's prieft, to be by him difoled of for the use and support of the temple §. We praise the almighty and glo-

* The reader has been to fully informed of the flate of the Brachmans among the ancient Indians, and of e communities formed by them for the promoting of science, that there is no need of infifting long upon is settlement of the Bramins, which, without doubt, was a remnant of some ancient university in the same ace. Some of the Arabian geographers affure us, that this city of the Kanuge lies between two branches the river Ganges in the latitude of 27°, and in the longitude of 131°. Other eathern writers inform us, at Kanuge is also a royal city, the King of which is ftyled the Kanuge, according to the common cut-m of the Indies. It is very difficult to fay when or how this kingdom and university was ruined; but at efent it is very clear, that there is no such establishment as in the text is mentioned.

These are no other than the associated Bramins, or Indian pilgrims, or penitents, mentioned by most wellers, who relate very extraordinary things with respect to the austerity of their manners, and the se-

reflers, who relate very extraordinary things with respect to the sufferity of their manners, and the serity of their penances, as the reader will see in the subsequent part of this work.

I There are many foundations of this fort in the Indies, as well as in Turky, Perfia, and Mognistan at to mention the many holpitals in the Indies for sick animals. Therefore observes, that the charity of a Indians of Cabul conflicts in digging of pits, or sinking of wells, and in erecting a number of small respectes on the highways, for the accommodation of travellers.

This inflamous practices of old standing in the east. Heredotus has a flory of this kind, of women to profittuted themselves in indian of Melitina, who, by the smalley of the Chaldes, must be Venus determined the presence of their women were much like those described by our author. In March Poles ead, that the people of the previous of Grada did the same tange expering their remains in honour of air idole. To women peaks of a Popul scar and any with remains of the courte among the ladies report to make their offenders of a Popul scar and any with remains of the differences of the ladies report to make their offenders of any scar and adds, that old women who have temped together a sum of money due in the Pagus once, and adds, that old women who have temped together a sum of their wife and calling a sum of the view of the previous and a sum of the sum of th

rious God, who hath chosen us to be free of the fins which defile the man involved in infidelity!

Not very far from Almansin, there is a samous idol called Multan, whither they resort in pilgrimage from the remotest parts, even from distances of several months journey: fome of the pilgrims bring with them some of the odoriferous wood Hud al Camruni. so called from the city of Camrun; where they have an excellent wood-aloes, which they offer to this idol, delivering it to the priest of the temple, that he may burn it before his god. Some of this wood is worth two hundred dinars the man *, and i, commonly marked with a feal to distinguish it from another fort of the same wood, but of

less value: it is usual for merchants to buy it of the idolatrous priests.

63. There are likewife at one the Indians certain men who make profession of piety, and whose devotion consists in taking after unknown islands, or such as are newly difcovered, there to plant cocoa-nut trees, and to fink wells of water for the use of ships that fail to those parts. There are people at Oman who cross over to the islands that produce cocoa-nuts, carrying with them carpenter s tools, and having felled as much wood as they want, they let it dry, and then flup off the leaves, and with the bark of the tree they fpin a yarn, wherewith they few the planks together, and fo build a ship, of fame wood they cut and round away a mast; of the leaves they weave their sails, and the bark they work into cordage; having thus completed their vessel, they load her with cocoa-nuts, which they bring and fell at Oman. Thus it is, that from this tree alone fo many articles are derived, as fuffice not only to build and rigg out the vessel, but to load her also when she is completed, and in a trim sit to fail t.

64. The country of the Zinges or Negroes is of vast extent; they there commonly fow millet, which is the charf food of the negroes. Sugar canes clao they have, and other forts of trees, but their fagar is very black. These people have a number of kings, who are always at ar with each other. About their kings they have cert in men called Moharamin, because coches them bore their nose, and wear therein a ring: they have chains also fasteacu. 'ca their necks, and when they are at war and going to fight, they each take one end of his companion's chain, and pass it through the ring that liangs under his note; to men hold this chain, and fo prevent the rest from advancing towards the encry till deputies have been from fide to fide to negotiate a peace; which, if it is concluded, they take their chains about their necks again, and retire without fighting. Let when they once begin to unsheath the swood, not one soul of them qui s his post, but re nains there till he is flain.

· As this kind of money is very often mentioned, both in the former treatife and in this, it may not be arnife to far formething of its value. It is dinar is of very fine gold, and, according to the proportion which that metal bears now to filter, that corr ought to be rekoned at about nine shillings; from whence we conceive at once the value of the copper money of China, fince a thousand of these copper pieces were equal only to one dinar, from whence it follows, that nine of these pieces of copper mency, called by the Araba

Talus, were worth at our one penny.

This passage is very singular, but the facts contained there are incontestably true; the cocoa-tree furnishes every thing he cleary to building and rigging such ships as are used in the Indies, and for a cargo of considerable value when built. The body of the tree summites plank, master, anchors, and oars. That fulfrance like thread, which covers the nut, and which may be drawn out and fpun, makes the mod excel-lent cordage in the world, in afm ich as it never decays in the water. The anchors are not to be boafted of, but they ferve well enough for such vessels. The inquor in the nut when fermented, becomes a kind of wine; when four, it is an excellent sinegar, and diffilled, it affords a fost, pleasant brandy. It is cortain, that the inhabitants of the Maldives, inblift chiefly on their trade in cocca-nuts, cocca plank, and the cordage made from this tree; the manufacture of which they are better skilled in than any other people in the Indies.

They have all of them a profound veneration for the A dis, and when they chance to fee any of them, they fall down before him, and cry, "This man comes from the kingdom where he wishes the date-bearing palm," for they are very fond of dates. Among thele people there are preachers who harangue them in their own tongue, nor may the Cataba or orators of any other nation whatfoever be compared with them. Some of these profess a religious life, and are covered with the fixing a keopard or age. One of these men with a staff in his hand shall present himfulf become them, and having gathere is a multitude of people about him, preach all the day long to the in Hespeaks of God, and recites the actions of their countrymen who are gone before them. From this country they bring the leopard skins called Zingiet, spotted with red and black, very great and broad.

65. In this fame fea is the island of Socotra, whence come the Soco rin aloes. This ifle lies near the land of Zinges and near also to the country of the Arabs, and most of its inhabitants are Christians, which is thus accounted for: When Alexander subdued the kingdom of the Persians, his preceptor Aristotle, to whom he had by letters communicated his corquests, wrote back to him to defire, that by all means he would feck after the island of Socotra, which afforded aloes, an excellent drug, and without which they could not make up the famous medicament called Hiera: that the best way would be to remove the inhabitants thence, and instead of them plant a colony of Greeks, that they might fend aloes into Syria, Greece, and Egypt. Accordingly Alexander gave the necessary orders to disposses the inhabitants, and to settle a colony of Greeks in their Then he commanded the Kings of the nations who divided his empire after he had flain the Great Darlus, to execute the orders he had iffued out for the prefervation cf theie Greeks: they remained then as a garrifon upon this island, till God fent Irsu. CHRIST into the world. When the Greeks of this fame affer being informed thereof, embraced the Christian saith as the other Greeks had done before them, and in the profession of this faith have they persevered to this day, as well as all the inhabitants of the other ifles.

In the former book, no mention is made of the fea which stretches away to the right, as ships part from Omin and the coast of Arabia, to launch into the great sea; but the author describes only the fea on the left, and in which is comprehended the seas of India and China, which he seems to have particularly had in his eye. In this sea, which is as it were on the right of the Indies as you leave Oman, in the country of Sihar or Shihr, where transmente grows, and the other countries possessed by the nations of Cedd, Ham, er, Josham, and Theoteba. The people in this country have the Soura in Arabic of very antient date, but in many things different from what is in the hands of the Arabs, and containing many traditions to us unknown: they have no villages, and they lead a hard and a very miserable life.*.

The country they inhabit exceeds almost as far as Aden and Judda, upon the coast of Yaman, or Arabia the Haj py; from Judda it stretches up into the continent as far as the coast of Syria, and ends at Kotzum. The seas in this part divide by a slip of land, which God has fixed as a line of separation between these two seas, as it is written in

^{*} The Araba, befides the Koran, have made traditions relating to the Mohammedan religion, which they received from the companions of their Proplet and his disciples; from these traditions and stones they form the body of their Sonna, which therefore is very different in different places; so that not only the Sonna of the Persians differs from that of the Arabians, but that of the Asiacans varies from that of Mecca, and the Arabians of the Deiert; in a word, the houna, with respect to the Mohammedans, is pretty near the same thing with the Pelinud among the Jews; and it is owing to both, that there are so many different sects, and such a variety of falulous notions among the people of both religions.

the Koran: from Kolzum the sea stretches along the coast of the Barbarians to the real coasts, which is opposite to Yaman, and then along the coast of Æthiopia; from whence you have the leopard skins of Barbary, which are the best of all, and most skiltuity dressed; and lastly, along the coast of Zeilah, whence you have amber and tor toile-shell.

When the Shaf ships arrive in this sea, which is to the right of the sea of India, they put into Judda, where they remain, for their cargo is thence transported to Kehira (or Cairo) by ships of Kolzum, who are acquainted with the navigation of the Red Sea, which those of Siraf dare not attempt, because of the extreme danger, and because this sea is full of rocks at the water's edge; because also, upon the whole coast there are no kings, or scarce any inhabited place; and, in sine, because ships are every night obliged to put into some place of safety, for sear of striking upon the rocks. They sail in the daveime only, and all night ride sast anchor. This sea moreover is subject to very thick sogs, and to violent gales of wind, and so has nothing to recommend it either within or without.

66. It is not like the sea of India or of China, whose bottom is rich with pearls and ambergris, whose mountains of the coast are stored with gold and precious stones, whose gulchs breed creatures that yield ivory, and among the plants of whose shores are there, red-wood, and the wood of Hairzan, aloes, camphire, nutmegs, cloves, sandal-tood, and all other spices and aromatics; where parrots and peacocks are birds of the forest, and muck and civet are collected upon the lands: in short, so productive are those shores of inestimable things, that it is impossible to reckon them up.

Ambergris, which is thrown upon the coast of this same sea, is washed to shore by the swell: it begins to be found in the Indian sea, but whence it comes is unknown. We only know that the best of it is thrown upon the Barbary coast, or upon the consines of the land of Negroes, towards Sihar, and places thereabouts: it is of a bluishwhite, in round lumps. The inhabitants of this country have camels trained up to the business, which they mount, and go in search of it by moonshine, and ride for that purpose along the shore. The camels are broke to this, and as soon as they perceive a piece of ambergris they bend their knees, and their rider picks it up †.

There is another fort, which fwim in great lumps upon the furface of the fea, almost like the body of an ox, or a little less, and weigh a great deal. When a certain fish of the whale kind, called Tal, sees these floating lumps, he swallows the same, and is killed thereby: then they see the whale floating upon the surface, and instantly the men who are accustomed to this kind of fishery, and know when these whales have swallowed amber, go out to him in their boats, and darting him with iron harpoons, they tow him to have, where they split him down the back, and take out the amber; what they find about

This is at once a very magnificent, and a very just account of the wealth of the Indies, and it proves very plainly, that scarce any past of its riches were concealed from the Arabs at this time; so that what some writers report of the designs formed by the Khaliss and Sultans of Egypt, for making themselves masters of the coasts of India, and even of its islands, hath nothing in it absurd or incredible.

† Amber-gris, or as it ought to be wrote, umber grise, is a very rich persume, and it is certain that there

† Amber-gris, or as it ought to be wrote, amber grise, is a very rich persume, and it is certain that there is more of it, and in greater persection in the Indian sen, than in any other of the whole world. How it is formed, or from whence it comes, is as great a secret to us as it was to the Arabs. It is of different colours, viz. dark grey, light grey, black, and red; but the first is the most esteemed, as having by far the richest seent. What our author reports of its being found in this manner by camels, is not very improbable; for the best ambergris in the world is driven on the shore of the island of Prince Maurice, and the Dutch assure us, that their hogs smell it out at a great distance, and run surjously to the shore in order to shower it.

the belly of the creature is commonly spoil d with the wet, and contracts an unplea-

You may buy the bones of this fill, of the dent of Problem and Boffers. The amber which has not been infected by the ord in match billy at the wale, is perfectly good: it is a usual thing to make flools of the vertice of the bulb by the ord this whale, called Tal. They fay, that in a village con lengual mode of the bulb by the cold this whale, called Tal. They fay, that in a village con lengual mode of the bulb by the cold thouses neatly enough built, the limits of whole doors are of the told than the second floor floor floor the coal not vertical from Siraf, and that going to view him, he faw people of this, up not the back of this creature with ladders, and that the fithermen exposed limits the lan, then a way his flesh, and having digged a pit, gathered up the greate which was melted by the fun, and that having drained off all the oil, they fold into the masters of ships. This oil mixed up with another kind of stuff, in use with seamen, terves for caulking of ships to secure the seams of the planking, and to stop up leaks. This whale oil is a valuable commodity, and produces great sums of money.

67. Our author proposing next to speak of pearls, breaks out first according to the custom of the Arabs, into the following pious soliloquy, which I would act on it, breake it is a kind of characteristic in their manner of writing, and may enable the reader to account for tuch apostrophes in other pieces of this nature. Let us, before we speak of pearls, and the manner of their formation, magnify the great God, who in violom has created all things out of earth, and so fashion d living creatures, as that they produce their like. Wherefore for these things which we know, and for many rare which we know not, all glory be unto the Almighty, and all reverence paid unto his most holy and tremendous name.

Pearls begin to be formed of a fubstance at first somewhat like the point call danged no, being in fine the same, in colour and figure pretty much alike, small, thin, and tem's, just like the leaves of this plant; at first it swies feebly on the surface and sticks to the tide of ships under water, where in time it hardens, grows and gets covered with a shell. When these of sters become heavy, they tall down to the bottom of the sea, while they tabish after a manner to us unknown. They appear in other than a piece of red sless, like the tongue towards the root, without belies, has vs, or veins.

But there are various opinions touching the preduction of pools, for some say when it rains the oysters rise up to the surface, and that gapine, the drops of water they catch turn to pearls. Others hold, they are generated in the oysters themselves, which is mod likely, and is consistent by experience; for nost that the found in oysters are fixed, and move not. When they are loose, the merchants call them seed pearl: God alone knoweth how this matter is.

68. Now this is the most wonderful thing we have heard concerning the subsistence of oysters. A certain Arab came sormerly to Bassora, and brought with him a pearl worth a great sum of money; he shewed it to a druggist of his acquaintance, and, ignorant of the value thereof, asked him what he thought of it? The merchant telling him it was a pearl, the Arab asked him what he thought it might be worth? and he valued it at a hundred pieces of silver. The Arab much astonished at his words, asked if any

perion

The Abb. Renaudot, in his notes upon this treatife, speaks very slightly of this story, and seems to think it subulous. There is however no fort of cause for this suspense; since this fort of whale is very often found in the West Indian seas, and especially on the coast of Bermudas, and vast quantities of amberguis are taken out of its guts. It is also very certain, that though the best of this persume is found in the Indian seas, yet amberguis has been frequently found on the shore even of our own slands, as well as in some other parts of Europe, and in America it is very common.

person would be willing to give him what he had said it was worth: upon which the merchant counted him out a hundred drams, and with this money the Arab purchases corn to carry back into his own country. The merchant, on the other hand, brough the pearl to Bagdad, and sold it at a very high rate, which enabled him afterwards to deal very considerably. This same merchant declared that he had examined the Arab touching the origin of pearls, and that he delivered himself to the following effect: "I was going along," said he, "by Saman in the district of Bahrein, not very fai distant from the sea, and upon the sand I saw a dead fox, with something at his muzzle that held him sast. I drew near, and saw a white glittering shell, in which I sound the pearl I took. Hence he gathered, that the oyster was upon the shore, driven thither by tempest, which very often happens. The fox passing by and leering at the meat of the oyster, as the shell stood open, jumped thereon, and thrust in his shout to seize the sish, which in its defence closing, locked him sast, as has been said; for it is a property of theirs never to let go their hold of any thing, except forcibly opened by an iron instrument at their edges."

This is the oyster that breeds pearls, which it as carefully keeps as a mother her child; when therefore it was sensible of the fox, it withdrew, as to avoid an enemy, and the fox feeling himself squeezed, beat the ground on each hand, till it was stifled, and so died. The Arab sound the pearl, and God would have it that he should apply

himself to the merchant; a very happy thing for him *.

69. The Kings of the Indies wear ear-rings of stones set in precious gold. They wear also collars of great price, adorned with precious stones of different colours, but especially green and red; yet pearls are what they most esteem, and their value surpasses that of all other jewels; they at present hoard them up in their treasures with their most precious things. The grandees of their court, the great officers and captains wear the like jewels in their collars †; they dress in a half vest, and carry an umbrella of peacock's feathers to shade them from the sun, and are surrounded by those of their train.

There are certain Indians who never eat two out of the fame dish, or upon the fame table, and would esteem it a very great sin if they should. When they come to Siraf, and are invited by any of the considerable merchants who are in that city, they must, though they are a hundred in number, each have a separate dish, and without the least communication with the rest. The Kings and persons of high quality have fresh tables

I must confess this story seems to me by far the meanest passage in the whole work, and all the remarks upon pearls are very low and trissing; but at the same time it must be allowed, that we know very little more about them than either the ancients or the Arabs. What seems most probable is, that pearls are not the natural produce of any oysters; by which I mean, that they are an irregular and accidental production, occasioned by some infirmity or disease in the fish. I am led to this notion from two reasons: the fish is, that when animal substances, begin to corrupt, they commonly shine, which perhaps may be the effect of some intessine motion; the other, that pearloysters are not eatable, but tough, takeless, and very unwhole-some.

[†] The princes and other inhabitants of these countries, were by this time better acquainted with the flature and rature of all four of precious homes than formerly they find been, and of these shey had at all kinds been the mass in the fland of Cevins. It is being table that the flats have but one weights being the characteristic flature of the second being the countries of a court which that is preating, in these against the colours of the second being the next the second being the colours of these entereds and darknings, there and the same of the colours of the dime. It is not preating that peaks we encountries there is that our arrangement is second in the colours of the second in the second in

made for them every day, together with little diffies and plates wore of the cocoa-nut leaf, in which they eat what is prepared for their fubfiftence; and their meal once over, they throw the table, the dishes and plates into the water, together with the fragments they have left. Thus at every meal they have a new fervice. To the Indies they formerly carried the dinars, called Sindiat, or gold pieces of the Sind and the Dinar, which there passed for three of ours and even more. Thither also are carried emeralds from

Egypt, which are fet for rings.

70. These two authentic pieces are of very great use in filling up this period of Indian history, of which, till they appeared, we had no memoirs at all. It is plain enough from the account given us by the first author, that voyages from Siraf to China were not very frequent, till about this time, for otherwise he would not have described that navigation so particularly. But it appears no less clearly from the second treatise, that these long voyages were grown into much greater use between the time the first voyage was made, and this commentary upon it was drawn up; for otherwise the second writer would have been but indifferently furnished with materials, whereas we find that he stood in no fort of want of them, but was able to mention the voyages and travels of four or five different persons into China and the Indies, exclusive of the author, whose voyage gave occasion to this discourse.

The most remarkable of these was Eben Wahab, whose adventures are equally singular and instructive, since from them it is very evident that the Chinese Emperor, to whose presence he was admitted, had, as we observed, very perfect intelligence as to the Jewish, Christian, and Mohammedan religions, and as to the history of their founders and propagators. We might indeed suspect the truth of this, if there were not some other circumstances in this discourse which render them not only probable but certain. I mean the destruction of the capital of China at that time, which our author calls the city of Cumdan, and which without doubt was no other than Nankin, and Canfu, or Canton, in which fo many thousand Jews, Christians, and Mohammedans were slain; a clear demonstration that multitudes of all these religions had been long before settled in that empire, and consequently the Chinese monarch had it fully in his power to be well acquainted with all the particulars before mentioned.

Neither does this fact stand entirely upon the credit of this treatife, fince an ancient monument has been discovered in China, which plainly proves that Christians from Syria were fettled there in ancient times, though none were to be found when the first travellers from Europe went thither, which is as strong a confirmation of the truth of what our author relates, as in the nature of things can possibly be expected. The missionaries also that were first sent to China found there visible marks of Christianity. though they found no Christians. The Jews have been settled in that empire for time immemoral; and many of them for the take of riches and preferment have abjured their own religion, and embraced the opinions of the Chinese, which is also an unquestionable

argument of the truth of these relations.

We may add to this the conformity between the accounts given by our travellers and the best Chinese biltories, which never could have happened, if the former had not been.

^{*}This ancient inclument was first monitoned by the famous select Kitcher, who mere many missions about it, and from thence there grew force questions as to the matter of fact, which however upon inquire has been fince clearly made out, and from the property is settled; that the Christian retroins was select in which A.D. 646, that is, upwards of two hindred trees before the middle of our suttons. We have not decrease abcommental to the Herbitan in this factor, the parties and when the Force greecement of the force made. Do Force at the second the control of the factor was the factor of the members of the force of the factor of the factor

in every respect agreeable to truth. All this is not only supported by our knowledge of many of the customs of these people, which remain to this day the same with those reported in these relations, but they are still more plainly verified by such are now no longer in use, because many Chinese writers, and Christian missionaries from them, take notice of fuch obfolete customs, and inform us when they were laid aside or began to grow into difuse. On the whole, therefore, we may fafely affirm, that these treatises are free from all just grounds of suspicion, and ought to be regarded as the earliest and best accounts we have of this empire and its inhabitants.

They are, considered in this light, of very great use in many respects, but more especially in correcting those errors that have been introduced by authors who depended more upon their own conjectures, than on any light they received from experience, endeavouring to impose upon their readers their notions of things as facts of undoubted credit, of which it may not be amis to give a few instances. Our author is the oldest, and indeed almost the only Arabian writer that mentions the Chinese drink, so univerfally used in our days all over Europe, and known by the name of Tea. He says that it is an herb or shrub, more bushy than the pomegranate-tree, and of a more pleasant scent, but somewhat bitter to the taste. That the Chinese boil water and pour it in scalding hot upon this leaf, and that this infusion preserves them from all distempers. This, to be fure, is an imperfect description; but it is plain enough to evince, that nothing can be meant but the plant we know by the name of tea; the fame with the Tcha Catyai, or Sini of the orientals.

The tree which bears this leaf is but fmall, and ought to be reckoned among fhrubs. It has a pleafant kind of violet scent, is bitter to the taste, and it is common for them who are fond of it to imagine it doth them good, and preferveth their health. It is certain then, that Father Trigaut * is mistaken, when he imagines it is but of late date among the Chinese, because there is not, as he says, any character in their tongue to fignify this drink; for by the testimony of the oldest of our authors (who does not fpeak of it as any new thing, but as a herb very much in vogue with them; nay, to that degree, that the Emperor thought fit to lay a duty upon it) it appears, that the Chinese have been addicted to it above eight hundred years. Nor is it possible to believe with Pifo t, that it grew a long time wild and uncultivated, or that the Chinese, or Japonese, have been but lately acquainted with its virtues and the manner of preparing it; which, he fays, he was told by fome Dutch commander, who had been a long time in the country.

Father Martini, who has written more accurately of China than almost any other person, lays no such thing. He assures us, that it grows particularly in the province of Kiangnan, or Nankin, where the best of it is. It is, adds he, a small leaf, perfectly like that of the Rhus Coriarius, or Sumac of the curriers. It grows not wild, but is domestic, and cultivated; nor is it a tree but a shrub, which spreads out in little branches, with a bloffom very much like that of the Sumac, except that the former inclines more to a yellow than the latter. It blows first in summer, when it emits no great from: Inentify pairs out a berry, which is first great; and afterwards blackish. In the lighting it is when they gather the leaf to make their Tcha, for then it is most facenion and render. The preparation of there leaves confile in gathering them, drying

en de la company de la comp de la company d

them by a fmall fire, rolling them upon a cotton mattrefs, and packing them up in tin-chefts or boxes, for the fake of preserving them, and the conveniency of transporting them. Such is the account given us by this learned and accurate writer, whose

work is still deservedly esteemed, after so many later accounts of China *.

But as it is natural to suppose that every man is the best judge of what regards his own profession, I persuade myself that my readers will not be displeased at my inserting here a very curious passage from the writings of the celebrated Doctor Kæmpsert, wherein he gives us a very entertaining account of the manner in which the virtues of tea were first discovered; neither is this at all foreign to my subject, since it is an additional proof of the varacity of our author, and clearly points out the time when this plant came first into use among the Chinese, and at the same time, fully resutes the objection that had been raised from this herb's not having a proper character assigned it by the learned.

"This herb, fays he, which the Japonese call Tsjaa, has as yet no character assigned it by the Literati, but there are several in use, some expressing only the sound of the word, and others alluding to its virtues. Among the latter, that is to be accounted which gives it the likeness of the eye-lids of Darma, a holy man, much famed among them. There is something very witty in this allusion, and the explanation of it deserves the greater notice, because it very plainly points out the time when this herb first came

into use. Thus then the story is told.

- "This Darma was the third fon of an Indian king, whose name was Koojuwo, and was the head of a religious order instituted by a famous Indian saint, called Sjaka, who shourished in the year before Christ 1028, and to whom this Darma was the twenty-eighth successor in a regular order. It so fell out, that in A. D. 519, he was driven into China, where he applied himself intirely to the teaching of mankind the knowledge of God, and, as he called it, of the only true religion, and the sole means of acquiring happiness. He was not content to enlighten the world only by his doctrine, but studied to do it still more by his example, striving by the purity of his life, the afflicting his body and bringing all his passions under perfect subjection, to secure the affistance of the divine grace. He cat nothing but the wild herbs of the field, and, which is esteemed the very perfection of holiness in man, spent his nights without sleep in the contemplation of the Supreme Being; for he considered it as the highest degree of piety to forego ease and rest, that his thoughts might be wholly employed in meditating upon God
- "It fell out, that after many years watching, he was so overcome as to fall fast ascep; his vow thus violated, he was so afflicted when he awaked, that partly to expiate his crime, and partly to secure himself from falling again into what he essented to great a weakness, he cut off his eyelids, as the instruments of his offence, and threw them make of holy zeal upon the ground. The next day, coming to the place where he had inflisted this punishment upon himself, he saw, with amazement, a most wonderful transformation, for behold each of his eye lides had taken root, and had sprung

A. The selded long in China, was a man of great fidelity and candour, one who did not love to contradich others, as to impose the rows feets of things upon biaseader, and dogmatic fixle. up into the shrub called tea, which hitherto the world had never seen, or at least mankind were unacquainted with its virtues.

" By taking the leaves of this herb, but whether the chewing them, or prepared by infusion, I cannot say, he found a wonderful chearfulness of mind, and a disposition perfectly fuited to his divine meditations. As he recommended the use of this herb to his disciples, and as the benefits derived therefrom were every-where published, the cultom of drinking tea grew quickly into use among all forts of people; and the mighty virtues of this wonderful herb became univerfally known and admired. it is, that as hitherto no certain character has been assigned for expressing the herb tea, and its virtues, the custom of distinguishing it by the figure of Darma's eye-lids has grown into practice." So much fays my author for the name of this The story is plainly fabulous and extravagant *; but, like the extravagances of the east, full of fire, and of that fort of enthusiastic eloquence which conveys ideas with fuch force as prevents their impressions from ever wearing out of mind.

We learn likewife from the first of our travellers, that at the time he visited their country the Chinese were perfectly well versed in the art of pottery, and made a kind of porcelain, as fine, as beautiful, and almost as transparent as glass. It is certain that for many ages after this we had very dark and confused accounts of this matter; and the stories we are told in almost all the accounts we have of China upon this subject have apparently the air of fables, and look as if they were imposed upon their authors by the Chinese, on purpose to conceal from them the truth. It is a point now universally agreed, that the porcelain formerly made in this country was infinitely better than what has come from thence of late years; but the Chinese themselves carry this much farther, and maintain that the old China we so much admire is very far inferior to what was made in these early ages.

Doctor Kæmpfer † tells us from the Chinese historians, that this most excellent porcelain was made in a certain island not far from Formosa, or at least of the earth found in that island, which, for the same crimes in its inhabitants, has long ago shared the fate of Sodom, and lies now buried in the fea. Yet it feems it is not funk fo deep, but that their fisherman and divers frequently bring up vessels of this old porcelain, which are fold at a most extravagant price in China and Japan, from a persuasion that they not only keep tea better, but even heighten its quality, and restore its slavour when lost by long keeping in other veffels.

Father Charlevoix, in his history of Japan, blames Doctor Kampfer for inserting this story, which he calls a ridiculous fable; but I beg leave to fay, that he had not well confidered the intention of the parable, the genius of the eaftern nations, or the eaftern languages; for if he had, he would probably have been of another opinion. There is a wide difference between fables in religion and fables in natural philosophy, especially when they are known to be fach, and introduced with no other view than to convey useful knowledge in an easy, familiar; and effectual manner, all which were visibly confused in the framing of this itory or parable, which declares the virtues of this herb, by whom discovered, and when brought into

H. Amonitat: Exolic, p. 521. Our learned author tells us, that the Japonese name of this fine percelain is Maars also, and that the illind in which it was made was Mauri, ga Sima. I do not pretend to make myself answerable for the truth of these facts; but I mention them only to shew, that in the opinion of these prople, who are undoubtedly the best judges of their own manufactures, the porcelain made at the time our author speaks of was really superior in quality to any that has been made since. should be demanded, whether any proof can be had of the truth of this fact, exclusive of what our author delivers, I answer, there is. For in a manuscript preserved in the French King's library, the credit of which cannot be doubted among the articles of a noble present sent Noureddin by Saladin, soon after he became master of Egypt, mention is made of a fervice of China-ware, confifting of forty pieces of feveral kinds*. It is very true, that this prefent was not fent till the year of the Hegira 567, which anfwers to the year of our Lord 1171, which is some ages after the time in which our author wrote; but then it is to be confidered, that this China-ware had been long before brought to Egypt; and if it had not been much superior in beauty to what was brought from the fame country, even at that time when the trade to Bassora was in a slourishing condition, it would not have been thought worthy the acceptance of fo great a prince; and therefore when thoroughly confidered, this objection proves, at least in its necessary consequences. a confirmation of the fact.

I have dwelt the longer upon these instances, and have taken the more pains to support and confirm the truth of them, because I am persuaded that an intire credit is due to the matters of fact afferted by both of our authors, and that consequently we may absolutely depend upon what they have delivered us to the state of China and the Indies, within this period of time; that is to say, from A. D. 833 to 950, or thereabouts. This being clearly established, let us see what will follow from it. In the first place, it is most evident that these eastern countries were in a very happy and flourishing condition, were governed by their own princes, and knew not, generally speaking, what it was to suffer by such sudden and violent revolutions as have since happened in those parts. It must, however, be at the same time observed, that though their state was far better than it is now, yet both our authors agree that it was beginning to decline, that the dignity of their princes began to sink, the severity of their discipline to relax, and the manners of their people to become much more corrupt than they had been.

In the next place, it is very evident, that in China, a country still more remote than the Indies, the people were in this period very well acquainted with the condition of their neighbours, to whom they must also have been tolerably well known; and yet within the space of two hundred years, the face of things was so entirely changed, that the Chinese lost almost all knowledge of us in Europe, and we of them, as from the subsequent part of this chapter will clearly appear.

Laftly, we ought to conclude from the confideration of these facts, from the state of things in Chings and the Indies, and especially from the superiority of their manufactures, that this empire was in every respect in a much better fination than in increeding times; that is to lay, was better governed; more populous, the industry of the people better conducted, and their foreign commerce far more extensive than in the ages immediately preceding the discovery of the pussage thinter from Europe by the Cape of Good Hope. The fixing all this firmly in the reader's mind, will contribute to his apprehending rightly

[•] The tale of the Assisten manufaction is Victorial, sellicities is probably the formule of its authors but as to the perticular lightest of the book I care by noticing, the pullage I have mentiosed from 30 being related by the Abbe Renaudor, in the noterior authorisis; p. 200.

ad that it is s, and will product his running into the opposite vice of mor dulice, ex

avoid being thought credulous.

If all real beamage I when he hears of potent princes in a governor in the I diese of a Chora, many hundred years before we know an thing with certainty of those countries; he will not be altonified at the extent of their terratories, or what is reported on their prodigious revenues; he will not be at a few to associate for the all rent conditions of place, when find vined by the Europeans who that they are orbit in the first their conductive, or tradition. On the contrary, he are the object perceive, by comparing the facts bill down in the formal fections of the which time of eat all this is not only contrary, he are trained and the facts believed to notion, which to me of eat critics have a transcolute contrary, we to not to much founded in greater to ming, or superior abilities, a to firm a few yources in layour of their own countries, and in might contains or their own in blace.

In thing, or the name, all abliteded realoning ought to be laid at its, and we deleted aw our conclusious from facts or ly. It the ladders ftopped the progress of the layran, Perfect, Greek and Parthan empires, this is a firong, or, to ip it is in instable a gument to prove, that their government was then make tail vigorr. If we fee the hacins now for the most part a broken, diperied, dejected, and defended people, preferring, have or, still, in their manners and customs, a fible marker of the policy arcided to them to the Greek and Roman, as well as these Arabian writers, we ought to conclude, it is this difference has been oning to mighty revolutions in these parts; after the lasting of a high we must enquire, and not protein to take up with offerences given us by fanciful men, that these people were sever in a retter condition.

I do not however pretend by this to establish by any means if e opin its entire entire et al. by fomevery great men as to the learning of the Chinese; with regard to which our travellers speak very freely, and I think there is reason to believe very truly, affirming, that in regard to the firmers the Chinele had very little knowledge, that is, in comparison of the Arabs, who is the time the last of our authors wrote well very skilful in moff fei nec; and though their famous commander Mufa, who conquered Spain, was the first the delivered; in the form of a maxim, yet it is very probable that the Alabims had long before this to be the fentiments of the progress of filence which he for happily expressed. Visidors, first he, deteending from above, settled in the heads of the Greeks, in the hands of the Chinele, and on the tongues of the Acabs. It plainly appears from hence, that what they most admired in China was the industry of its inliabitants, which was claiefly the effect of their wife government, derived to them, as indeed every thing of confequence they knew feems to have been, from the Indies ... All therefore that from the authority of our authors I infer is, that the political flue of China was at least as perfect anciently as it is at present in all its branches; and not that they were better acquainted with sciences than they are now.

^{*} The progress of science from the Indies to China, and from thence to Japan, is very natural and agreeable to ancient history; but it does not at all follow from thence, that the Indians received their learning from the Egyptions. It is far more probable that they had it from the Chaldeaus; for mankind spread a ginally from that country, as Moses informs us, and as all ancient history plantly proves. From Circles to the Indies these suit colonies might have easily proceeded by land; whoreas their own writers allow, that the drill attempts by the Fig. pptions towards the conquest of India were by sleets sitted out by the Red lea.

THE EMBASSY

41

PETER DE GOYER AND JACOB DE KEYZER

TROM THE DUTCH EAST INDIA COMPANY TO THE EMPEROR OF CHINA IN 1657.

By John Nieumon, Steward to the Emballado's

[Franslated from the Dotter.]

on which the Park States are

IN PRODUCTION.

LTHOUGH China was discovered over land by Marco Polo the Venetian, to Lands the end of the thirteenth century, yet it was very little known to Europeans, till the Portugueze arrived there by sea towards the end of the fisteenth, and the Romish missioners found admittance into the empire. In 1517, they established a trade at Quantona, commonly celled Kanton: afterwards they settled a factory also at Ning Po, called by them Liampo, on the eastern part of China, and drove a considerable trade along the coast, between these two tamous ports, ti'l their unsufferable pride and a blance brought on their destruction every where but at Ma-kau, or Makao, an island at the most short of the river of Kanton, which they still hold, shough under great restrictions.

The Dutch being arrived in India to the height of power chiefly on the ruins of the Portugueze, endead suced to get access into China to trade with the natives. This they had long attempted in vein, having still met with opposition, as was supposed, says Nieuhoss, from an eld prophecy among them, that a render them of results cleathed an over, should one day course their country. But a pone led a transfer trom Mekaled by the jefuit Mertini, (who had concealed himself ten years in China propegaing) that the Manchew Tertars had conquered that empire, it was concluded by the government of Betavia, to renew their attempt. This was performed by a ding certain merchants to try the pulse of the China at Kanton, upon whose report ambusiadoes were dispeatched from Batavia to the court of Pe-king, there to social like ty to trade.

An account of this embaffy was drawn up by John Ni-uar it, (lamous for his voyages into feveral parts of the world,) who was fleward to the ambalactor, which has been published in different languages and forms. In 1665, there appeared a French relation of this embaffy, printed at Leyden, in folio, by Jacob de Meurs. It is called a translation, and feems to have been made from Nieuhoff's manuscript, by John de Carpentier. It is divided into two parts, the first containing a narrative of the embaffy, in two hundred and ninety pages; the second a general description of China, in an hundred and thirty-four, besides the preface and dedication to M. Colh rt, minister of state to Louis the XIV. of France. But Nieuhoff's relation is only the basis of this large work, which de Carpentier has formed by the addition of almost all the second part, and at least one half of the first.

The

The cuts, which are very numerous, are finely engraved, and, as the editor affirms, from the author's own draughts; confifting of the habits of the Chinese, processions and state of the magistrates, prospects of the cities and temples, animals, birds, vegetables, &c. Most of these are small plates printed on the respective pages of the book. The large ones are in separate sheets, and are chiefly the prospects of cities, palaces, or great processions. In the first part, An-hing or Anking. Viceroy of Kanton's feast. Batavia. Hoay-gan (Whay-gan). Hu-kew. Kanton. Plan of the same. Ka yu tsiu. Kan cheu. Kin-nun-gan. Ku-ching. Makow, or Makaw. Nam-hun, or Nan-hung. Nan-chang, or Kyang-si. Nan-gan. Nan-kang. Nan-king. Pau-lin-shi. Pe-king. Plan of the imperial palace there. Inside of the palace. The porcelain tower. Single. Tyen syen way. Tong lieu, or Tong lou. Tung chang. Tung ling. V-fu. Van nun gan, or Van gan. Shan tsui. Shaw chew. Yam se fu. In the second part the inside of a temple. Musa fruit. Order of the horse in marching.

The year following, M. de Thevenot published Nieuhoff's relation of the embaffy in his French collection of voyages and travels, taking up fixty folio pages. These are accompanied with thirty-three figures, in fourteen or fifteen half sheet plates. It is followed by a journal of the route of the Dutch from Kanton to Pe-king, an exact description of these two cities, the way of making china, &c. confishing of twenty-seven pages; with a large draught of the road, twenty-three inches long, made by the

author.

Therenot informs us that this translation is conformable to two Dutch copies, of which he had the manuscripts, one of them signed Nieuhoss, and that he has neither changed nor added any thing from other authors. He judged it wrong to have mixed the description of the provinces with Nieuhoss's remarks, since it appeared from his own confession, that the Dutch never stirred out of their lodgings either at Kanton or

Pe-king.

Whether these descriptions were inserted in Nieuhoff's manuscripts, as they are in his printed relation in Dutch, or Thevenot faid this by way of censure on Carpentier's work, we cannot determine; but it is certain, that the manuscripts were accompanied with cuts. Nieuhoff declares, that he made accurate maps and plans of the countries and towns, befides draughts of the beafts, birds, fishes, plants, and other rarities. He might have added of the inhabitants and the magistrates, their state and processions. But Thevenot has omitted those of all the cities except Pe-king and Nan-king, because he fays he found they did not tally at all with the description he gives of them, and fuspected they were merely the fruits of invention. He alledges another reason for this omission, that the cities of China being all alike, (according to the Chinese geographers) when one has feen one, he has feen all. How far this plea would justify such a proceeding, were the draughts genuine, we cannot lay; fince, let the uniformity in building and laying out the ffreets be what it will, there would always be a confiderable variety in the prospects, ariling from the different situation of the places, and disposition of the objects. As for the figures of plants and animals, which Thevenor has likewife left out, most of them are inferted in his general description of China. taken tion. Martinla

A ship with a fort of wheel or low net instead of sails. 33. The ordinary dress of the Chinese.

In 1670, a Dutch relation of the same embassy was published at Amsterdam in solio, under the name of Nieuhoff, embellished with a great number of cuts, and augmented with a description of the provinces in the manner of Carpentier's edition, but not swell-

ed fo much with foreign matter.

Soon after Ogilby published an account of the same embassy in English. The title agrees more with the Leyden than the Amsterdam edition; nor is it mentioned whether the translation was made from the Dutch or the French: however, as it appears from the manner of introducing and relating things (not to mention its being free from a great number of superfluities with which the latter abounds) that it was not done from thence, we conclude that it is a version from the Dutch copy. The cuts which are of the same kind with those in the French edition, but not near so well engraved, are, doubtless, the cuts of the Amsterdam impression, taken from the original plates; for the explanations are given both in Dutch and English.

Of these several editions of this work, we think that of Theyenot to be both the most exact and genuine. For which reason we have used it as a check upon the English translation, and have often supplied it from thence; which additions, for distinc-

tion's fake, are placed between hooks.

SECT. I.—Attempts of the Dutch to fettle in China previous to the Embaffy.—Schedel faits to Kanton.—Lands there: fent for by the Vice Roy: is well received: opposed by the Partigueze.—Free Trade granted him, and revoked.—Waggenaar's attempt.—Fortugeze arts.—The Design miscarnes a second Time.

MARTINI the jefult having reported, among other things, that the Tariars had proclaimed a free trade in the city of Kamon to all foreigners, the government of Batavia reloved to know the truth of this report, by lending a thip thither from Taywan in Formola.

Accordingly, (the twentieth of lanuary, idig). Frederick Schedel, a merchant fer that in a forgate called the Brownship, etchir freighted, to the value of forty-flathous land feven mondred and owents feven cropped, a and monte days landed at Heyleschut, in Kanton river.

There the Hayto-nu, or admiral of the fea, came aboard to falute him in behalf of the magistrates of Kanton. Schedel treated him handsomely, and then accompanied him ashore: but coming near the city, he landed in great state, without speaking a word to Schedel, who was put into another vessel in a very slighty manner, and carried to the farther end of the city. There he was searched and treated with ill lan-

guage by Emanuel de Lucifierro, a Portugueze, and others.

Towards night feveral Tartars came to visit him, who after awhile carried him to an idol temple, where the priests had spent all the night at their devotions to foretel the success which these strangers were to have. In his absence some mandorins, by order of the two viceroys, who rule in Kanton, with equal power, came and opened his chests, where the presents lay. After taking an account of them, they slung them scornfully about. They were likewise carrying off the general of Batavia's letter to the viceroys, but meeting Schedel, slung it in his face, reproaching him as if the Hollanders came only to betray their country.

Schedel finding himself thus unhandsomely dealt with by the Kantonians, began to consider which way to pacify and undeceive them. Having bethought himself of some bottles of rare wine among the presents, he called for one, and desired the mandorins to taste of it. The liquor pleasing their palates, they tossed off their cups freely; and at length became so well reconciled to the Dutch merchant, that they begged his pardon for what had passed: acknowledging that the Portugueze had insufed those notions into their heads; but that now they were convinced they were false, and he might de-

pend on civil usage for the future.

Next day, by fun rife, Schedel was fent for by the old viceroy Pig-na-mong. He was followed by crowds of mob, giving him ill language. Some cried, How finely iron fetters would become his legs; others pointed at him with their fingers, and some blew lice upon his followers: at length two mandorins brought him to the court. The viceroy was seated on his throne, which stood in the midst of the palace on an high, square platform, and was covered with rich silk. Round him stood about two hundred gentlemen, with the admiral, all cloathed in the Tartar fashion. The viceroy having received the letter and presents from Schedel, as well as heard what he had to say against the calumnies laid to the charge of the Dutch, he was so well satisfied, that he caused him to sit down next his throne among his chief grandees, and invited him to a splendid dinner prepared on purpose. The table appointed for Schedel and his company was covered with thirty-two silver dishes, heaped with dainties; and drink was served in gold cups.

During the entertainment, the viceroy fent to alk feveral queffions concerning the condition and government of Holland: after which he was diffinified with great respect, and conducted by the Hay-to-nu, with the letter and presents, to the voting viceroy signa-mong, who received him likewise very politely, and invited him to dinner, but teemed rather to fide with the Portugueze. His mother, but newly arrived from Tartary, being definous to see the Durch, sent for Schedel and his followers: who broke off aphrophy in the middle of his speech, and went. He found her with her attendants whing for him in an open half, and was constearfly received. During his the research his munification bounds which might deligibled and obliged the ladder than the research to the vices and finished his difficulty. From himself constraint has been during a lad finished his difficulty. From himself constraint has been during a lad finished his difficulty. From himself constraints are a supported by the difference of the product of th

the least civility in his house, so that he was forced to provide another lodging for him-

felf and his company.

The governor and council of Ma-kaw, to stifle this negotiation in its birth, not only endeavoured to corrupt and prejudice the Hay-to-nu, but sent a formal embassly to Kanton, in order to represent the Dutch as a faithless people, and kind of pirates; who, having no proper residence on land, had made themselves formidable by sea, had taken Hay-tay mon, at the mouth of Kanton river, made peace with the Chinese pirate Koxinga, plundered their merchants, and were now come to force their way into China. The Pori, or philosophers, also at Kanton joined in representing them as fraudulent dealers.

But the viceroys, by the advice of the Hay-to-nu, whom Schedel had engaged, returned for answer, thad notwithstanding reports, they had a good opinion of the Dutch, and judged that China would receive much benefit from a commerce with them. Hereupon they published in writing their consent to a free trade; and gave Schedel leave to erect a factory. Matters were at this pass, when a commissioner, newly arrived from Pe-king, distuaded the viceroy against what he had done; alledging, that although he might grant a port for trade to foreigners, he ought not to allow them a constant residence in the country without the Emperor's content. This remonstrance so much perplexed the viceroy, that he advised Schedel forthwith to depart for that time; lest, as he said, the King of Batavia (meaning the general) might think they were kept prisoners at Kanton. Schedel accordingly, two days after, set sail, with two letters from the viceroys to Nicholas Verburgh, commander at Tay-wan; wherein they offered the general their friendships, and advised him, in case he desired a free trade in China, to send an ambassador with rich presents to the Great Khan.

The government of Batavia hereupon wrote to their principals in Holland for directions; and in the mean time, to keep the business on foot, sent Zacharias Waggenaar to China with two loaden vessels, the Shellsish and Brownsish. (To him Schedel was joined as an assistant.) Being arrived at Wang-su, within three miles of Kanton, they remained three days without sending any assore; but finding none came aboard, they sent one of the company (Schedel) to land, who applied himself to the Hay-to-nu. This officer referred him to the Tu-tang, whose secretary acquainted him, that the Portuguese had obtained a letter from Pe-king to the magistrates of Kanton, advising them to have a watchful eye over the Dutch, especially if they came without an ambassador, for that they were a treacherous lying people; and that for fear of being known in

China, durst not appear at Pe-king.

At the same time there came an officer from Ma-kaw with a request, that an embargo might be laid on the Dutch ships there, under pretence that they had formerly, in a mirancal way, taken several of their ships. The Portuguese likewise, to prevent the Hollanders from obtaining a liberty of trade, paid an arrear of four years tax. In short Waggenzar despaired of success, although the men in power statered him with hopes meanture notody was instruct to pais to or from him, by two or three of the vice-rows wisfelds. At saft the messenger came back with the Tou sang's secretary, and two mandorn's paths orders for the ships to come within half-amile of the city and the there till the Pointiguese offices, who was to know nothing of the arrival of the Dorth) was good. So this occasion. Waggenaar was presented with several rappes to show that they were received as triends; but none of us company were suffered to the called.

Armonical into Electrical in calmin dispeditor (dance) (i.e. of especial set coincil. (i.e. of the call of the second set of the call of the second set of the second seco

brought any letters for the Great Khan, or the Tou-tang. They added that the Portuguese were the cause of this misunderstanding; and that if the Dutch would appear before the vice oy, they must be very liberal to all about him. Waggenaar made answer, that he was willing to bribe the viceroy or his courtiers to take the letters and presents which he brought; but yet he would give a good sum of money to the person who should procure them a free trade for that year at Kanton. During this conference, the Hay-to-nu, returned with word, that the viceroy could not fee him, but that he would read his letter. Waggenaar fent it, and the viceroy's interpreter came from after to inform him; that the reason why he could not be admitted to the freech of his mafter, was, because the Dutch had not trought with them any letters or presents for the Emperor, as had been earnestly recommended by him.

When Waggenaar faw that he could effect nothing at Kanton, he returned to Bata-Those people were not assumed to demand ten thousand tael of filver only to render the letter and prefents acceptable to the viceroy; before any conference could be had about carrying on a trade.

SECT. II.—The Embaffy of Peter de Goyer and Jacob de Keyzer to Peking.—The Ambossador set out from Batavia.—City of Ma-kaw. Hey-1a-mon Port.—Arrive at Kanton.—Visited by a Mandorin.—Arc obliged to return on Board.—The Vicerov's Feast.—Order of it.—A favourable Answer from the Emperor.—The old Viceroy's Entertainment.—They prepare for their Journey to Pe-king by Water.

ACCORDING to the proposal of the general John Maatzuiker, and the council of India, the governors of the East India company at Amsterdam ordered an embasty to be fent from Batavia to the Great Khan; whereupon Peter de Goyer and Jacob de Keyzer, merchants, were chosen for that purpose. Their train consisted of sourteen perions, viz. two merchants, fix watters, a fteward, a furgeon, two interpreters, a trumpeter, and a drummer. They took with them also two merchants more to take care of the traffic at Kanton during their journey to Pe-king. Their presents confisted of feve all rich pieces of woolen cloath, fine linen, feveral forts of fpices, coral, little boxes of wax, perspective and looking glasses, swords, guns, feathers, armour, &c. The purport of their commission was to cstablish a firm league with the Emperor, and obtain a free trade for the Dutch throughout his dominions. The fourteenth of June, 1655, they fet fail in two yatchts, which were to carry them to Kanton and thence to Pe-king; and on the fame day, in July following passed by Ma-kaw.

This city is built on a very high rock, furrounded by the sea on all sides, except the northern, where it joins the island of Ma-kaw, by a narrow neck of land. There is no port for large ships, the sea there not being very deep. It is samous for cannon, which are made of Chinese and Japan copper. The town is walled, and towards the land defended by two castles, erected on little hills. The name is compounded of Ama, an idol formerly there, and Gaw, a fafe harbour, in Chinefe. The Portugueze having been allowed this waste spot to build a town upon, it soon became a stourishing city, and the greatest mart in Asia. They have the priviledge of trading twice a year at Kanton. It is entered in their custom books, that when commerce slourished there, they exported from Kanton above three hundred chefts of filk, an hundred and fifty pieces in each: two thouland five hundred ingots of gold, each weighing thirteen ounces; eight hundred weight of musk, besides great quantities of gold thread, liben,

raw filk, precious ftones, pearls, &c.

The Part

. . . .

Supply 1

The eighteenth, they cast anchor in the port of Hey-ta-mon, an exceeding pleasant place, and commodious for trade. Presently a bark sull of soldiers came on board in the governor's name to know the occasion of their coming. The ambassadors sent their secretary, Henry Baron, to inform him by word of month. He was conducted to the governor's bed-chamber, who received him courteously; but asked him, why the Dutch returned thither, and whether they were not forbidden to come to kenton?

Six days after, there came two mandorins from that city to inspect the ambassador's credentials, for whom they sent to the governor's house near the village of Lam-me, a little higher in the river. The governor sat between the two mandorins, guarded by soldiers. They were received very courteously, and having she and their credentials at a distance, chairs were set for them to sit down.

On the twenty-ninth, a new Hay-tow and a vice-admiral came to conduct them to Kanton. The ambassadors at their request went again ashore, and were led to an idol temple, where being received after the usual manner, they spread their credentials on the table. Then the Hay-tow asked them several questions concerning their voyage, the ships, their letter and presents. He wondered that there was no letter for the Towtang of Kanton, and that the Emperor's was put up so meanly; giving them to understand, that it ought to have been wrapped in a gold purse or box. At parting, the commissioners promised to come on board the next day to receive the presents.

Accordingly they came with a numerous attendance in vessels decked with streamers; and carried the ambassadors with their secretary and sour others in one of their vessels to Kanton: where being arrived, the Hay-tow and vice-admiral went into the city without speaking a word to them. After waiting about two hours at the gate, they were sent for by the viceroy, and conducted to the lodging which Schedel sormerly

had, where they were attended by the city-marshal.

The thirty-first, they were visited by the Pu-tsyen-sin, the Emperor's treasurer, who was the toursh man in the city. Here they underwent a new examination; as, How long they had been married? Their names and employments? If the Emperor's letter was not written on better paper than the viceroy's? How their prince and king was called, and the like? They seemed to be displeased at the slight sashion of the credentials, and asked whether the prince and government of Holland had no stamp or teal for their letters. To the request of the ambassadors, that they might have audience of the viceroy's, and leave to go to Pe-king, it was answered, that they could have no audience of any one in Kanton till an answer to the letter came from court: however, the viceroys promised to visit them.

August the second, the ambassador's retinue in the yatcht were conducted up the river by four great war ships of the viceroy's. The shires were full of populous villages and fruitful fields. Arriving the fourth before the ambassador's lodgings at Kanton, they were obliged to return on board: under pretence that no ambassadors to the Emperor were to reside there without express order, and that the governors could not answer it to his Majesty in case any accident should happen to them ashore. Two mandorins also brought the credentials opened, saying, the viceroys durst not receive them till they had received advice from Pe-king.

The ambassadors, after three weeks stay on board, had leave to land with their followers, and possess their former lodgings, but were not permitted by their guards to

walk the streets.

Two days after, there came a mandorin from the viceroy to inform, that to obtain their fuit, they could not give the Emperor's council at Pe-king less than three hundred

tail of filver. The ambassadors answered, that if their business could not be done without busies, it would be petter for the n to depart, and finding, after they had offered an hundred and thing-five to the time demand it as daily repeated, they began to find their goods on board in oid to be give. The vicerous foring this, fent word, that they must not the all fartles addice from Nething, and accept it a note for an hundred and thing-fix tool after which, on heart heart of repeated in, they invited the ambassadors to a plendid feast in an open I had accept the rodgings, where ten stately tents were pitched for that purpose. In it of the victory was erected in the middle, on the left of which should the ambassadors, and or the right the tent for the music. The ambassadors were led from their continuous point by two of the chief mandorins in the presence of the viceroys, and also for the complianents conducted back again.

Meantime the old viceroy's fleward, dreffed in thy-color and fil', or be ordered with gold and filver dragons, and a corol chain about his neck, (v had is the hibit of the mandorins) advancing through the dividing crowd, ordered two of his attendants to ferve up the dinner. There was a table spread with rich carpets for the viceroys. another for the Teu-tang, and a third for the annualiadors; each covered with forty little diffies, or plates, heaped with delicious victuals and fweet meats. After the viceroys had drark to their healths in tea, the steward defired them to fall to. were very merry, drank to the ambaffadors, made apologies for the entertainment, and asked several questions relating to Holland. About the middle of the treat the ambas. ladors drank their healths in a glais of Spanish wine, which pleased them so well, that for it they quitted their Sam zou, which is made of rice, and not much inferior to any European wincs. During the feast they were diverted with both vocal and instrumental music. Every thing pessed with as much silence and order as in a private family. The viceroy's children discovered the most polite education. A little before dinner was over, they rose from table, and as they passed by their father's tent, fell on their knees and bowed three times, with their faces towards the ground.

After four or five month's delay, came the Emperor's answers to the Tu-tang's two letters. By the first, the ambassadors, with a few followers only, and four interpreters were permitted to repair to court to treat about commerce; but by the second, his Majesty was pleased to grant a free trade to the Dutch, and expected the ambassadors to

come and give him thanks for that favour.

The fecond of November, the Tu-tang of Heriju came with feveral vessels in great state purely to visit the ambassadors in a most courteous manner. December the thirtieth, the young viceroy departed by water with a great army to quell a rebellion in the province of Quang-si. Before he set out, he consulted his sorcerers, who declared that his undertaking would prove unfortunate; but falling out quite otherwise, at his return he demolished their temples and images instead of themselves, who were sted. These viceroys were not relations but friends, bred in Pe-king; where their sathers having been put to death by the last Chinese Emperor, they sted to Quantong, at that time invaded by Great Khan, to whom they applied for redress, and were promoted to the dignities they then enjoyed.

The ambaffadors having taken their leave of the old viceroy, and obtained his pais, on the twenty-feventh of February he invited them to dinner at his palace; the galleries, courts and halls of which were richly furnished with pictures, filk hangings, and any pets. During the entertainment, which was iplended, he iported with his children, of where the interpreter faid he had fifty-fix. Next day they were treated at the ordinary of the interpreter faid he had fifty-fix. Next day they were treated at the ordinary of the fair the fair was proposed with a farce, opinion of

persons dancing in the shapes of lions, tygers, and other wild beasts. This prince's nother often appeared at a window in the apartment to view the company. She was ichly dressed after the Tartar fashion, middle sized, slender, of a brown complexion and taking countenance. At their entrance they found a very task painted chair an

minted ton her Majesty, to which, in honour to her, they paid their respects

The ambassadors being to perform their journey to Pe-king by water, hired a large restel to their eleves: there were besides fifty more procured at the Emperor's charge to carry their attendants and goods. The command of this flect was given by the In-tang to Pinxenton, with whom were one of two other mandorins. Besides t'e interest and rowers, there was slore of soldiers on board, under the command of two considerable persons. As soon as the ambassador, emburked, they caused Prince William of Nassau's slag to be hung out; and post boy, were dispatched to the magistrates of the next towns in the way, with notice of their approach, and orders for their reception.

SECT. III.—The Ambassadors Journey from Kanten to-Nan-gan-su, in the Province of Kyanz-si.—They have Kanton.—San-sheri-hy.n.—Chinese misery under the Tartars—San-unn, or ywen.—Dreadful Mountains.—In-ta-hyen.—Mong-ley Gity.—Thaw chiw-siw.—Lu-zu, a Chinese Saint.—Five-Ilorsi-heads Huls.—Nan-hyong su.—Goods not surched here.—The Governor seasies the Ambassadors.—Mountain Mulin.—Arrive at Nan-gan-su in Kyang-si.

LEAVING Kanton the feventeenth of March, they were rowed up the spacious river of Tay, close to the city, which made, most delightful prospect. The small towns, which are very numerous between Pe-king and kanton, welcomed them by their cannon as they passed by. After sometime, they struck into the Zin called by 'creigness the European stream. Towards evening they came to the village Sa-bil, about its miles from Kanton: the soil is very fruitful, and the place, though inhabited mostly by peasants and silk weavers, has many good buildings.

The nincteenth, they got to Shan-shevi, the eleventh small city depending on Kan

on, and about twenty iniles distant.

It flands (about a league from the river on the right fide) in a vety plasant vale: it is not very large, but was formerly exceedingly populous, and full of trade. The imagistrate, caused the fide of the river to be lined with soot soldiers to receive the ambassadors, and tent them a few presents for their table: but anderstanding that it was not the tenth part of what the Emperor allowed for that purpose, they thought fit to refuse their civilities both here and in other places. Here they refreshed in a tent by the river fide, before which the Tartars exercised their arms with much dexterity. One of them shot an arrow thrice together through the mark, but sour inches broad, at the distance of thirty-sive paces; for which he was rewarded with a finall piece of money.

The vicercy's fecretary, who had conducted them thus far, took leave, and returned to Kanton, having been nobly treated the night before. They went forward very flowly, being towed against the narrow stream with vast fatigue by the poor Chinese, whom the Tartars compel to hawl their boats. They often slip into narrow paths, and are drowned; and if any grow faint and weary, there is one who follows and never leaves beating them till they go on or die: however they are relieved from

time to time.

The twenty-first, about midnight, they came to San-ivin, about forty miles from Shan-shivi. The magistrates of this city met them on the vay. It is not large now, though strongly situated and populous, till the Tartars destroyed it.

Here the river becomes rapid from the torrents that descend from the mountain Sang-wan-hab, the highest and most uncouth in all China. Its many tops are wrapped

in clouds, which make the passage at the bottom dark and gloomy.

On the fide next the river flands a curious idol temple, richly adorned, to which they afcend by steps to make their offerings. They were three days getting clear of these dismal mountains, where they saw but one solitary village, called Quam-ton-low. In some places between the hills lie pleasant corn fields. Theyenot's copy adds, that Sang-wim-thap signifies the slying mountain, on account of a temple now ruined, which was conveyed thither in one night's time from some place to the north.

The twenty fourth, they came to In-ta. This small city lies very pleasantly on an angle of the river on the right (or west) side, over against the mountain Sang-wan-hab: its walls are high and indifferently strong, the houses and temples stately. It was formerly very rich and populous; it has a safe harbour for vessels against the impetuous current of the river, at the entrance whereof, on the right, appears a very curious high tower. The ambassadors vessel was hereabouts in great danger, having been driven,

by the violence of the stream, against a sunk rock.

Next day, they came in fight of the wonderful temple of Konianfiam, held in as great veneration as that of Sang-won-hab: it stands on the river side, in a solitary, mountainous country: the way to it is first by stone steeps, and then through dark passages. After the Chinese had performed their devotions, the ambassadors visited it.

The twenty-seventh, they reached Mong-ley, which makes a most pleasant prospect at a distance. You ascend from the water side by stately stone-steps to the gate of the

city: the walls are high and fortified with tall bulwarks and watch-towers.

The twenty-eighth, in the night, there happened a most dreadful tempest, with thunder and lightning. Many ships were shattered: some lost their masts with all their tackle and rigging; others, driven ashore, were beaten in pieces, and all their men drowned.

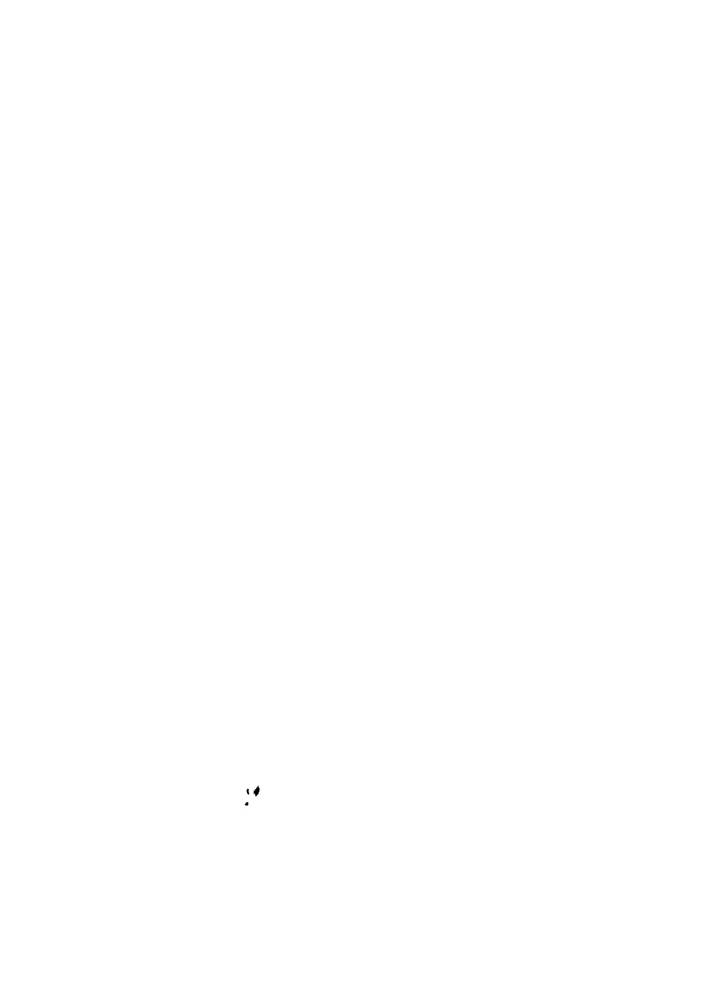

On the twenty-ninth, they came with the remainder of the flect before Shaw-chew, the fecond city in the province. It lies about thirty miles from In-ta, upon an angle near the west side of the river, its situation and safe harbour rendering it a place of a very great trade.

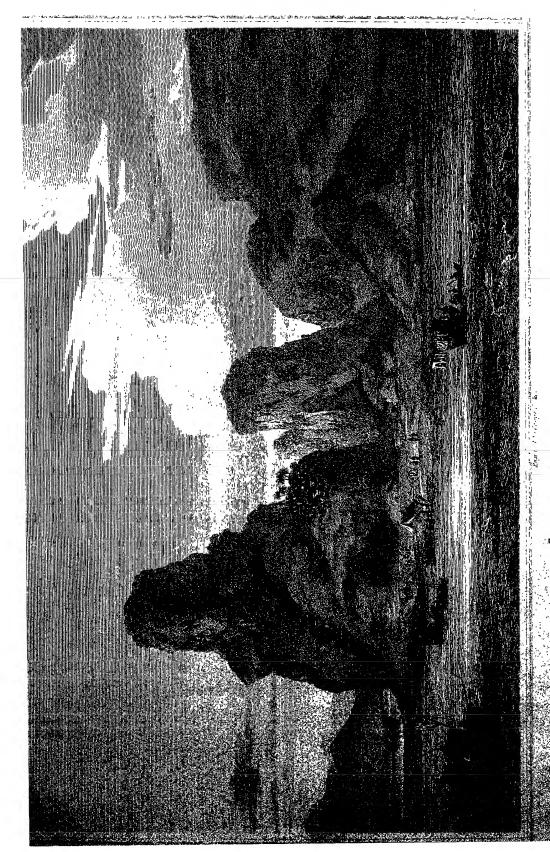

This city on the west side is inclosed with high and delightful hills, and on the other side, beyond the river, has a very populous, rich, and well built suburb. In the middle of the water stands a curious tower upon a small rock; there is a pretty good wall about it, but within nothing but ruins; which, however, witness its former splendour.

Toward the fouth this river is called Si-an, and fomctimes Si-ho. It is formed by the rivers Chin and Vau, which meet not far from this city, and make an impetuous stream over funk rocks, often satal to vessels, in spite of the idol temple built by the

water fide for their protection.

Upon the Maw-wha, near a delightful valley, stands a monastery with a spacious temple. It was built by Lu-zu, a reputed faint, who spent all his time to grind and sist rice for the monks, and wore iron chains day and night on his naked body. These made holes in his slesh, which, for want of drelling, putrissed and bred pests of worms: yet Lu-zu would not suffer them to be removed, but when any one dropped off, he would take it up again and say, Have you not sufficient to season your selections to season. The

tain of the Time Miles Hours.

ambassadors pitched their tents near the walls, where the magistrates and governor brought several presents for their table, which, not being upon the Emperor's account,

were accepted, and themselves nobly treated.

Next morning carly, they drew near a mountain, which the Tartars, for its strange shape, call the Eve-horses-heads. Upon the tops of these hills, which are covered with clouds, and feemed inacceffible, frood feveral odd fiructures, fome entire, others ruinous. July beyond this mountain they were in great danger among other rocks and steep assents, called the Live ugly Devils, the river being full of split ships lying under water. At length they got to Sure jeen, whose hills, intermixed with charming vales, stand along the river in as much order as it placed by art. The tops of them afford a furprising prospect.

The fourth of April, they came to Namhung, the third chief city of Quang-tong, and frontier on this fide. It lies about forty, miles from Thau-chew, is very large and well fitnated, fortified with walls and bulwarks: it is divided by the river, covered with a bridge: it is full of idol temples, and noble structures. There is also a custom house, where they receive the Emperor's dues for all goods exported or imported: but there is no tumbling of the commodities, or fees to fearthers, the bills of lading be-

ing taken on the merchant's word.

Not far from There is no better mould in all China for making earthen ware. hence is a river, called Me-kyang, or Ink-water, from its blackness, whose fish, which

are commonly very white, are much effected.

The ambaffadors on their arrival going immediately on thore, the governor and magiltrates fent a letter of compliment, and not long after came themselves in person, and were nobly treated. Next day the governor gave the Durch a splendid dinner. He and the magilifates fat all at one fide of the table, that the diffies might be removed without any diffurpance to the company. They were not ferved up all at once, (according to the cultom of the Chinese, but only two at a time to each person, in fixteen courses. When dinner was over, every guelf laid a piece of money at the governor's feet, to be divided among the municians and waiters. The amballadors prefented them with fix tast of filver, and fome filks, which the governor at first refused, but at last accepted it.

At Nan-hyong they quitted their veriels to go to Nan-gan, the next city on the road, by land, but the high hills and rugged afcents make travelling very troubleiome. The mountain called Mu-clim that was more difficult than all the rest, one of the governors levelled at his own charge, to that it is now very pallable; for which the mnabitants erected to his honour a fately temple. They were carried over the mountains to horse litters, and to project them against robbers that intelled the road, had a grand apparated of ent hundred and hiry folders; which, with those who car-

med the group and the regundent of he leads like authoried men.

FIF amb. Fact.'s being arrived at Nun-gan, the governor fent to receive them at the city gate, and with some persons of quality visited them at their lodgings: he sent them likewise a hande me collection at the charge of the town, whose puncipal inhabitants of an earle to be them.

The commissions appointed to furnish them with boats here, not being able to get them used so for as he defined, Pinnenton rated him with such bitter expressions, that taking it to hear, he drew his knife and would have stabled himself, had he not been prevented by one of trat mandoin's fervents.

The country about this city is very pleasant and fruitful, surrounded with hills, one of which, for its delightfulness, being called 51-hoa, that is, a place of pleasure.

This city is divided equally by an arm of the river Charg, which renders it a place of great trade; all merchandizes defigned for Quang-tong and other neighbouring parts being unladen here.

The fouth part of this city is well built and populous, but it falls short of Nang-hung for bigness and strength; although the Tartars were more favourable to it, for-bearing to destroy such fabricks as were of any note. On the north side is an idol temple, surprizingly rich and well contrived. The ambassadors staid here four

The river Kan runs here as swift as an arrow from the bow, and is full of banks, fanks, and shoals; so that, though they went down the stream, their ships were often in danger. In this passage the bank, in which was one of the ambassadors, with the presents to the Great Khan, fell into a whirlpool, and being whirled about by the eddies, at last ran aground, and could not be gotten off till they had unladen her: the mandorins commanded the waterman and master to be severely lashed with a thick leather whip for their neglect; but the ambassadors interceded for the latter.

The fourteenth, they pass d by the small city Nan-kang, on the lest side of the river Chang: it is square, inclosed with a strong wall twenty-sive soot high: it has four gates near a mile asunder. It was totally ruined in the Tartar war, and its trade destroyed. They landed here at their return. On the river side stands as high tower, strong and well built. In the street leading from the south gate, is the governor's palace, and at the end of it a noble triumphal arch, which the Tartars spared.

The fifteenth, they came to Kan-chew, the twelfth city of the first rank in Kiang-si, and were visited aboard by some great mandorins in the name of the magistrates. The ambasiadors in return visited the great Tu-tang of this city, who received them with extraordinary courtesy, and conducted them into his private apartment, where he placed them on his right hand. This officer had the command over the provinces of Kyang-

a norgil the most end ert in all Chir i.

Round the valls of this to ple ware fever I bedfords for travellers and inicial to lodge in; for these places generally slave in mass. In the position on each and it and two giants of planter, one ughang with a dragon, the oblished a care is larger under list feet, with a drawn fword in his hand. Beyond the man, upon an high hill, stands a temple, with a small but curious chapel near it, where pushenges more offerings to escape the rocks and shoals. If they unicarry, they impute the cause to the meanness of the gift, or some other fault in themselves.

At the place where the two rivers Chang and Kan meet, the firem is croffed by a long bridge of boats, covered with planks, at the end of which funds a toll house.

The eighteenth, they passed by the rumous city of Valunungam, which has close to the river Kan, on the cast side. The Tattars left nothing standing that was any ways remarkable: it appears to have been a wondrous delightful place, very regularly built, and full of inhabitants. The adjacent country produces two crops a-year; and not far off has an hill with a silver mine, but the law sorbids the degging for silver.

On the east fide of this city is a mountain, called Chan, whose top reaches to the

clouds; yet it is covered with trees and plants from bottom to top.

About half a mile from this place they faw lying the firsth small city, called Lingeisen, which has a small inlet of the river Kan running up to it; but the whole lay

in ruin, the Tartais having left nothing flanding but one triumphal arch.

They came next to an eminent village called Pekkinfa, most planfarly situated, where is a good trade for all naval materials. A great way on this fide you see teveral chills cut in a surprising manner, but ruined by the Tartars. The author sound one of them to be forty loot high. The like artiscial rocks are to be seen in the Emperor's palace.

Late in the evening they came to the small city Tay-ko, on the west side of the Kun, towards which it hath high and throng walls. It stands in a charming country. The streets are well enough paved, but very small and narrow. All the startly edifices

were defirejed by the Tartars, except an high tower and lone idel temples.

The twenty-ninth of April, they arrived at Em-un-gam, called by four Kyegan, the ninth prime city of Kyang-fi: it flands in an hilly country, about forty miles from Tay-ko, or the wittern fide of the Kan. It is defended with tall battlements: but within all its noble itructures are destroyed by the Tartars, whom it reflect; except a few idol temples, one of which of modern building flands in an island opposite to the city. There are fail to be gold and filver mines in its neighbourhood.

The river near this city is very dangerous, from the rocks and shoals, called by the

natives, Ze-pa-tan, which require expert pilots.

At night they got beyond Kye-shwi, (a city of the third rank), on the river Chang along which is a strong wall sisteen neet high. It is a mile and a half in compass, and surrounded with hills.

Next day they passed by Kyz-kyang, (another city of the third rank.) It stands or the north side of the Kan, about thirty miles from Kye-shevi, at the soot of a mountain. A good part of its wall is built on the hile, and enclose ploughed grounds. Most of the houses were demolished by the Tertars. Here is an ancient idol temple, famous for two bates, each being of on a entire stone. Not far off stands the mountain Mung, whose top reaches the clouds, and sides are cloathed with woods and pastures.

Towards evening they got to Sin-kin, (a third rank city,) about twenty miles from Kya-kyang, which it resembles in fize and ruins. In the middle of the wall toward-

the Kan, is a very high and well built gate.

The twenty-second, setting sail early, they arrived at noon before Fung-ching, (a third rate city.) It stands in a flat soil, is built square, and surrounded with an high wall above a mile in compass. On the north side is a populous well built suburb. Two great and high triumphal arches are much defaced, among other sine structures, by the late wars. From the mountain Pe-chang, not far distant, falls a mighty torrent of water with a most hideous noise.

The twenty-third of April, they came to Nan chang, the chief city of Kyang-si, by which name also it is called by some. The magistrates immediately sent sour very commodious boats to setch them alhore, by reason of the lands. Not long after they came themselves to welcome them, and crused the mandorin Pinxenton to restore to the ambassadors one of the two boats which he had taken for his own use.

Next day the ambaifador de Goyer (for de Keyzer was out of order) with all the train went to visit the Tu-tang, or governor. He shewed his displeasure at his interpreter for bringing the ambaifador asoot, saying, that such persons as came from so remote parts, to congratulate his imperial angely upon his victories and prosperities, ought to be received in great state: he was also very much offended at the Kanton mandorins, calling them asses. After the ambaisador had taken his leave, one of the governor's gentlemen brought him a sine horse, and his secretary another, on which they rode to the water side. When the ambassadors set sail, they were saluted with the great guns from the walls of the city; nor would the Tu-tang receive the presents they offered him for the reason given by the great Tu tang of Kan-chew.

Nan-chang slands about five miles from Fung-ching, near the great lake Po-yang, and is enclosed with a stream like an island: it is square, with high walls and seven gates, four of them very handsome. This city boasts four stately temples, which are very richly adorned, and full of images. The most famous of them, called Thi-skong, is covered with glittering pantiles. At the entrance stands three buildings together; in the first is an idol, called Kou-ya, he sits amongst a great many others on a rich seat, cloathed after the manner of the old Romans, with a crimson mantle hanging over his shoulders: on each side upon an high pole are two terrible dragons, with their necks extended, hissing. Round the second structure is a broad gallery full of idols.

On the right hand, as you enter the first of these edifices, there is a square well full to the brim, twelve paces diameter, and curiously adorned with white stone.

The Chinese believe strange things of this idol Kou-ya and the well: they say, that formerly be dwelt here, and was very charitable to the poor; that his treasure was never exhausted, because, being a great alchymist, he was possessed of the elixin, which converts all metals into gold: that by order of their gods, he once, like a second St.

A CALL OF A CALL

George, overcome a mess budeous discon, which there and destruction to the city, and ving bound him to an iron putar, the property well. That at laft he with all the family a retaken up into heaven; and a retaken up for he tervices, the inhabut mis credied this tempte to him. It my or 'r flee, were told us or this their deity. Dott of the other rare building, a cre delirer in the Tatters. In the last war, the produce having revolted from those conque of the last the governor Kums, been in In autong, after feveral battles, he was to be a methic city. After four months, being preffed by famine, he forced howay with hos followers though the Taitar arm; which, enthring the city, there a fregular with all the inhabit ant.

The twenty-nith, they came to the dige V-ly n-yea, famous for this ing. was then a great relort from all parts of the en pire to lade with China ware. It lies near to the like Po-yang, on the fide of the inter Kan, and is above a mile long: it is full of trade, and very hindiomely built. On the fide of a mountain in ar this place stands a well built idol temple, with a great many black lamp be unit day and night. Here those who cross the lake sacrifice a cock or hos, it able to the hideous idol for a tufe and speedy parlage, sprinkling the blood on his body and claws. They offer up likewife the feet of the dead fwine, and the spurs and comb of the rock. th y real on the roll as in honour of the idol. The author law this facilifice.

The mbil time told them, that the china was made in the village of Sinktesuno, an nund ed miles eafth rd near the city Fu-lyang, subject to Yan-chen; and that the earth 125 brought from the city Whey-chew, in the province of Nun-king, but that the interior state could not make it, because they knew not how to temper the

earth with the water.

4

The twenty-first they came to the chief city Nan-kang, fifty miles from Kan-chang. or is con the west side of the lake, which is very broad and long, on an hilly ground. the vert we both high and flrong, fortified with bulwarks, and a well built tower in the city. The flacts are very encoked, the first on the left hand as you erter has sesee 145 trees, hal reches, but the houles are mean.

Tryics, of the city stand several stately temples: the chief of them are built upon the mountains Quantaly and Yven-flyn, where dwell a great company of priefts and rives, each in a little hut or cell, where they daily discipline themselves with lashing; Tich the people believe to be very meritorious in another world, for they hold the · in migration of fouls. They told the Dutch, that on Quantyu, there were as many clerk is is days in the year. The country abounds with hemp, whereof the natives make closthes for fammer.

The twen-y-ninth, they got to the city Hu-kew, forty miles from Nan-kang, upon the narrow of the lake Po-yang, and right fide of the river Kyang. To the north of the city appears an autique rock, which hangs fomewhat over the river, and makes a most delightful prospect, being covered with trees. At the bottom of this mountain Han Is a large and be untiful idol temple. The walls of this city are very thick and high. It drives an handiome trade, is full of people, well built, and abounds with provisions.

Near this city is the hill She-chung, that is, Stone-bell, fo called from the noite which the waters of the lake make in itermy weather, beating against the hill.

At their arrival both old and young came running to view them with great admiration; but on founding their trumpets, thinking to delight them, they were fo allrighted, that they ran roaring back again.

From hence they failed caltward down the Kyang, which divides China from west to east, to Peng-se. This place lies behind an illand on the east side of the river, and at the probability of it are very high hills. It is well built, but far less than Hu-kew, which is droy all softent.

I so the coyle a mountain called Siau-ku, fo steep and high, that it is inaccessible I so though d with water, and has on the fouth side a safe road for ships. On the fouth side of the Kyang lies also a hill called Ma-kong, talked off with terror through

all Clina for the ab indunct of shipwrecks which happen near it.

The Chinese pilots seeing the cook going to make a fire to diess dinner, came and soil on their knew before the ambassadors, and earnessly entreated them to forbid any such thing to be done, for that there was a certain spirit in this lake in the shape of a strong, on great sith, who had the command over this country, and could not endure the meet of roasted pooling, boiled bacon or the like; for as soon so he was sensible of ray such thing, he immediately raised a storm, which did infallibly cast awa, the veisel. The arroalisadors to please them sent word to the cook, that they should be content

in a cord dinner for that day.

Mout noon, they passed by two pillars which stood in the middle of the river, as three the province of Kyang-si from that of Nan-kurg.

SECT. V.— The An african's Journey continued from the Entrance of Kyarg-nan to Nun-king.— To g-l, "w-hj n. — Gan-king-fu. — Chi-chew-fu. — Ton-ling-liver. — V-finyon.— Tay-pi g fu.—Arrive at Nan-king — The City discribed.— Hoyes and Shops.

— Annual Presents to the Emperor.— Pau-lin-shi Temple.— Famous Porcelain Tower.
— Coarotter of the Inhabitants.

IIAVING entered the province of Nan-king, or rather Kyang-nan, on the twentycinth of April they came to Tong-lou, or Ton-lyew; a small city subject to Chi-chewfu, on the south bank of the Kyang, in a very delightful soil, encompassed with fine hil's. It is enclosed with a pretty strong wall, fortisted with bulwarks: but except one street and the governor's house, all the rest is destroyed by the Tartars. Its trade consists wholly in tamber. Not far from the city, by the river, rises the Kyew-wha, or nine headed mountain, much like the sun flower hanging down his head.

Two miles beyond, they came to an island called Song-lo, and saw in their passage the first rank city Gan-king, eminent for wealth and trade, all ships stopping here in

their way to Nan-king.

The thirtieth, they passed by Anhing, called by some Chi-chew, another capital city on the south side of the river, where lies a sine suburb: the walls two miles in compass, and above twenty-sive soot high, are scanced with watch towers and redoubts on an hill. Near the river stands a temple, with a stately steeple seven stories high.

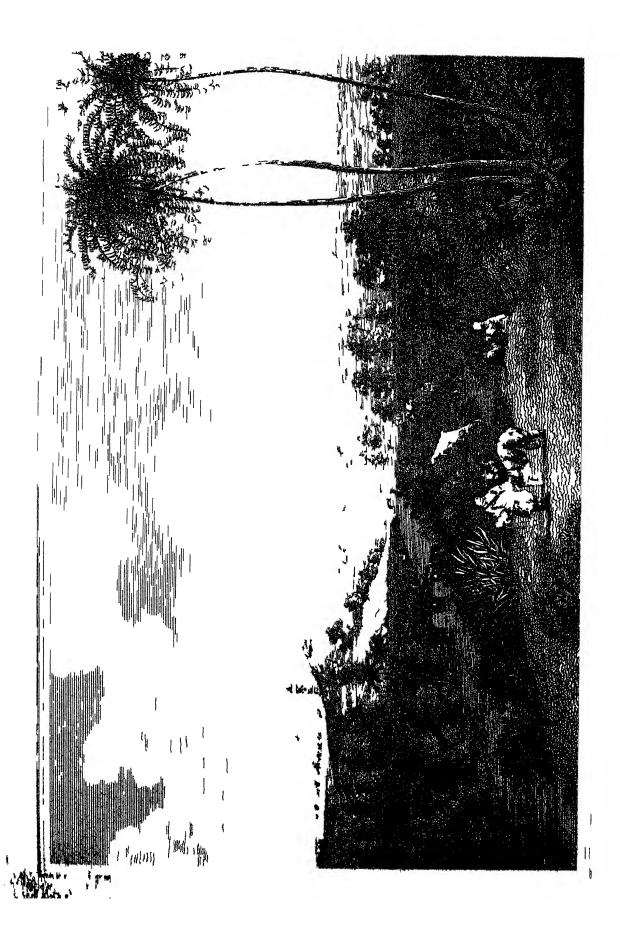

Towards evening they came to Tong-ling, subject to Chi-chew, delightfully surrounded with woods, hills, and dales. This city, though but little, is well built, and encompassed with walls. It has a land locked harbour, guarded by a strong castle, which very much enriches the place. Near it is a hill, remarkable for its echo; likewise the mountain Hing, so named from the plenty of apricots which grow there.

Departing hence the first of May, they came on the third to the castle V-pun. It stands near the river, is square, and begin with a strong stone wall. In the middle is

a well built temple, with a high roof, adorned with curious pictures.

They cast anchor a little beyond, under the walk of II-fo. Some in an island, on whose

4. Mar

whose corners strong block houses are excited; but they have not her men nor gains to

defend them. This city is cried up through all China for aims and lamps.

On the fourth, they passed by Tey-tong, which some call Lay-ping, lying in an island. The adjacent country, though full of hills and rocks, in yet exceedingly furtice, being watered by carals cut from the like Tang-yang, which has a strain off to the south east, as well as from the river. At a distance they fire a high reconstant called Tyen-mewen, that is, Heaven's gate; because the Kynzy runs here he ween two small hills belonging to it, as through a gate. Once ag mile the city was another island, all of one entire rock, called Hyau, from the might bands which broad in the cavities thereof.

They were told, that this had been a flately city, and fall of trade, which appeared by three gallant towers upon the river fide; but it was totally runced by the faiths.

The fame day, they cast anchor before the Su-si-mon, or water gate of Nan kins. Next day, the ambassadors went in palanlens, or icure, as I then tolk news on horse-back, to wint the three governors of this city: the two cars were Chistophian I you tong. They were conducted in great state by the agent of the years, we can who resided here and by two mandorins of the same place, Persenton state, is bland.

The chafgovernor showed the ambassadors his withdrawing 100m, and made them fit I in next to him: the second was no less courteous, but neither would receive pre-

icais, for reafors already given.

The third, who dwelt in the old imperial palace, feat for the amball loss into his chamber; which was liquide, with benches found it covered with risk, as I a feat for winter. This governor was a Tariar, a young, well fit may but not uncertaining the Chinefe language, his fons were interpreters. His way, a c in 1 ledy, who vas prefent, spoke more than her husband, and stemed very map fittive be i Holland: far from being dismayed at their arms, she drew out their twords, and did hinged their pistots, which much delighted her. The foom was prefently silled with Tartar gently women, who waited on her, and brought a great filter kettle full of tea, not led with milk and falt, which they placed in the middle of the chamber, and served about with wooden laddes. This fort of tea i always drank out of voor in vessels.

Visiting over, the agent conducted the ambifilders to he own house, and tree ted them with a fumptuous dancer. At high they return d about this well is an which they by all their voyage, both to and from Peking, except as Kanson, Nati-

gan, and Pe-king.

This study city, which is by far the best in all China, lies about hirty sive rules from Tay-hung, on the east side of the Kyang, and in thirty-two degrees of latitude. Her situation is most pleasant, and the soil luxurous. The river runs, quite through this city, whereof some streams, covered with bridges, are navigable for great ressels. This had been long the imperial court, till removed to Pe-king (by Hong vii, about 1368) the better to prevent the invasions of the Tanar; and at present the go-

vernor of the fouthern provinces refides here.

brom the river, you pais up to the town by a broad and deep canal, about half a mile long; and then pais over, on a bridge of boats, into the city, which is round, close, and well built. The wall is fix Durch unles in compais, excluding the suburbs, which runs out much farther. It is built of stone, above thirty soot high, with breast works and watch towers. It bath thereon gates, whose doors, plated with iron and guarded continually with horse the store built on four or five arches. So great a number of people passed continually with horse the gate they lay before, that there was no getting to the past without this wall, another strong inclosure

inclosure for defence of the city, two days journey in compass, if you will believe to Chinefe.

The chief streets of this city are twenty-eight paces broad, very nearly paved, and straight. There is, in no other part of the wolld, such good ord r coses sed for the

venting housebreaking, or other disturbances, in the 1 311.

The common houses are but mean, built without an convenience, and fund this the cross ridges next the street. They are but one flory high, has but one door to go in and out at, and but one room to eat and sleep in. Next the discrepance to live fquare hole for a window; which is commonly covered with needs, infinited of sleet, or prevent people from looking in. They are covered with white partitios, at I the o fides white washed.

Those who dwell in such houses, have a very poor test; but the hops of the beter fort are filled with all manner of rich commonties of the en pire, as course, take, china ware, pearls, diamonds, and the like. Before each from it has a least, with the name of the maffer, in gold letters, and what goo she clib. On one fide of the board there is a high pole, which reaches above the house, upon which they have the nons and flags, or fome hing alle, by way of a i ga.

Instead of coined money, they ale here (as indeed all over Cha) finall pieces of filver, of different fize. To avoid being cheated, you mall carry feal's alout you, and watch the Chinele, who have two forts of weights, and are very devictors

at changing them.

Although there are above a million of it habitants in Nan-king, befides a garrifon of forty thousand Tartars, yet provisions of all forts are exceedingly cheap all the yen

round. Amongst other fruits there are most delicious cherrics.

As no city escaped better in the late war than this, it excels all others in China for itately idol temples, towns, triumphal arches, and other bulldings, of which the Linperor's palace, fituate on the fouth fide, was the chief. This was the only part which the Tartars destroyed. It was a square, surrounded with a (high brick) wall, now much decayed, which incloses the greater part of the city, each side being three miles and a half long; fo that it was as big as Haerlem in Holand. Within the first gate lay a large court, which led to the four fquares and was paved with fine imouth stone.

The Tartars feated themselves in huts, near an idol temple colled Pav-lin-shi, leaving the city to the Chinese. The buildings are all of a hard fort of slone, curiously paint-

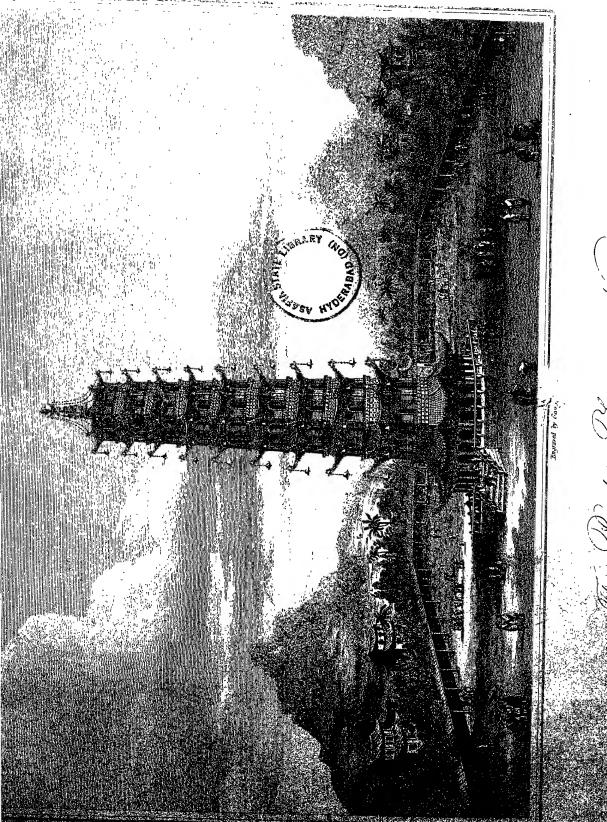

ed with yellow; fo that when the fun shines, they glitter like gold.

Over the gate of the fecond court of this palace hangs a great bell, about ten or eleven foot in height, three fathoms and an half in circumference, and near a quarter of a yard thick. The Chinese boasted much of its loud sound; but the Dutch found it very dull, and the metal not fo good as that of European bells.

Every three months five ships are sent from hence to Pe-king, laden with all manner of filks and woollen cloths, as prefents to the Emperor; for which reason they are called Long-i-chwen, that is, ships with dragon cloths. The author never faw any thing like them. They were most curiously contrived and adorned with images; and so thickly gilded and painted on the outsides, that it made his eyes dazzle to look on them.

Among other prefents are certain fish, taken here, in the river Kyang, in May and June, called by the Chinese, St-yu, but by the Portugueze, Savel. These being fent in boats, drawn by men day and night, are conveyed often twice a week fresh and good, to Pe-king, more than two hundred Dutch miles, in eight or ten days.

It is ambaliadors often went to take the air and view the city one day they

fee the famous temple before mentioned, and plain of Pau-lin-shi, which contains several curious structures. In one, exceeding the rest for art, beauty, and cost, they saw at least ten thousand images, all made of plaister (some six foot high but most of them only one) placed round the gaileries and walls, in handsome order. The priests received the ambassadors with great respect, and set open all the doors of their temples.

In the middle of the plain stands a high steeple, or tower, made of porcelain, which far exceeds all other workmanship of the Chinese in cost and skill. It has nine stories, and an bundred and eighty-four steps to the top: each story is adorned with a gallery still of images and pictures, with very handsome lights. The outside is all glazed over, and painted with green, red, and yellow. The parts or materials of which this fabric is composed are so artfully joined, that the work seems to be all one entire piece. Round the corners of the galleries hang little bells, which make a very pretty noise when the wind jingles them. On the top of the tower was a pine apple, as they say, of massy gold. From the upper gallery, you have prospects over the whole city and adjacent country, to the other side of the Kyang. This wonderful pile the Chinese built by command, and in honour of the Tartar, who conquered their country seven hundred years ago.

This plain is furrounded with woods of pine, where formerly stood the fepulchres

of the emperors, now totally demolished by the Tartars.

The Dutch found the inhabitants of Nan-king to exceed all the rest of the nation in fincerity, civility, knowledge, and understanding. The Tartars allow them very great privileges, that being the best method, in their opinion, to prevent rebellions.

I hey found here one Manual of Lisbon, a Jeluit, who often visited them, and pro-

fessed great kindness.

The ambaffadors were very defirous to have written from hence to Japan, but were informed, that the paffage thinker had been forbidden three years before; on complaint of the unfhaven Chinele, that some of Koxinga the pirates men in that ifland, had injured them. These unfhaven Chinele are such as will not submit to the government of the Great Khan, nor cut their hair after the Tartar fashion, as the conqueror had commanded, leaving only one lock behind. Rather than comply with this law, many thousands choic to suffer death.

SECT. VI.—Continuation of the Journey from Nan-king to the Province of Shan-tons.—
They leave Nan-king.—A Sacrifice.—Je-Jeu-liyen.—Sturdy Beggars.—The Pirate Kosinga's Attempt.—Quan-chew.—Famous Temples.—Jang-Je-Ju.—Handfome Women.—The City deforibed.—Feaft of the New Year.—Odd Saped, but fumpious Barks.—Kayu-tyja, or Kau-sew-chew. deforbed.—Pau-ing-liyen.—What-ngan-tu.—Sluces.—Kayu-tyja, or Kau-sew-chew. deforbed.—Pau-ing-lyen.—What-ngan-tu.—Sluces.——Rivers and Lakes.—Fift from a Jefuit.—Stang-or Village.—The Whang-lio, or Yellow Roser.—Tai-ben-liyen.—The Jang.—Ilouting Village, deforbed.—They enter the Crounce of Sciences.

(HE ambalishors who had lithered made the of producty backs and hours, were now accommodated said; eve of the Emperor's reliefs, which were very large and commodate all ribrets and papers with diagons, laying a place for mulic at one end. They are only descriptions are reliefed by the kerning particle in the control of the particle and papers.

Beiog come to the farthest point of the city walls, about two miles from the Su-fi-mon. or water-gate, Pinxenton, with the whole fleet, stopped to make an offering to a famous idol in a temple which itood there, in order to obtain a prosperous voyage. The facrifice, which confifted of fwine, goats, and cocks, was performed after this manner: the fwine and goats, after being killed and cleanfed, were laid upon the altar, behind which stood the chief image, and on the side several little ones; these were sprinkled with the blood of the cocks, and afterwards wiped clean. During the ceremony, the priefts, upon their knees, made feveral grimaces and mutterings to themselves, as if they and the God had been in some earnest dispute, great tapers burning all the while,

From hence, failing eastward down the river Kyang with great speed, they came in the evening to a famous village, called Wangfien. They proceeded next morning, and on the twentieth of June reached Je-jen-jeen, which some call Ho-ho, on the north side of the Kyang, about fixty miles from Nan-king. This city, though but finall, is very pleafant and of great trade. It is built mighty close, and adorned with temples. The walls are firong, but not very high; and without is a populous well built fuburb.

Here feveral beggars came aboard to shew their tricks. Amongst the rest, there were two, who knocked their heads with great force one against the other till the company bestowed their charity on them; otherwise they would continue tolting them till one or both had been killed, as hath often happened. The author faw likewise in this city another beggar, who kneeling down, and after muttering to himself, struck his forehead against a round stone with so much violence, that he made the earth shake under him. I hefe and feveral other arts they practife to squeeze alms from strangers.

They were told here, that the famous pirate Koxinga had landed fome force, thinking to furprize this city, but was obliged by the inhabitants to retreat to his ships with the loss of a great number of men; however, he burnt several of their vessels, and carried away a confiderable number: likewife, that he had feized five great and fruitful islands in the river, about twenty miles from Je-jen-jeen, to harbour his ships in stormy weather.

Next morning, fetting forward, they found upon the north fide of the Kyang, near to the castle of Quam-chew, a large stone sluice, through which they passed into a canal made for a communication with the Yellow river. This artificial channel being cut at the Emperor's charge, is called the royal water. There is nothing more pleafant to be feen in the world: the banks on each fide are smooth and large, planted with stately and shady trees, the adjacent country embellished with rich pastures and delightful woods, (the like not to be feen in all Asia,) interspersed with abundance of wealthy towns and villages, pleafant feats, and stately dwellings.

Towards the entrance of this canal stood a famous temple of the idol Kin-kang; and farther on they faw at a distance another great temple, called Quang-gua myau, adorned with a very fine tower of fix stories. The Chinese and Tartars who accompanied the Dutch would fain have stayed to offer up cocks, hogs, and gozts, for a prosperous voyage, but the amballadors could not be prevailed with to lofe to much rime; ouly they gave leave to fome to go lee the place, which is let round with images, and the

alian with lamps that burn day and night

The twenty study, they came to long-le-fur called by lone Lang-shewer, the fewerith capital city of the province. It lies about twenty noise from a specificant is bout found at least twe meeting and throughout and throughout walls and through belongs belonged accepting moderness in Christian wealth and make which contins there in the continuence of the

This city is famous throughout China for comely and good humoured women. They have very small feet, and handsome legs; so that it passes for a proverb, that if a man would have a wife with a slender shape, brown hair, and a handsome leg and soot, he must come to Jang-se-fu; yet they no where bear so low a price, for parents may sell both their servants and daughters for profitutes.

The emperor hath here a custom-house to receive the duties on all goods that pass. The city is well built and full of canals, covered with stone bridges. On the west side are very large suburbs, most of which were destroyed in the last Tartar war, but they are rebuilding them fast. Near this city is a very high mountain called Heng.

The twenty-fifth, departing, they saw on the bank of the canal twelve stone ovens; and not far from thence, on the left, lies the burial city of a great Soltan, much reverenced by the Chinese. About noon they came to a village called Saw-pu, where the inhabitants were celebrating the feast of the new year, it being then full moon, with great acclamations and signs of joy, making bonsires, and lighting up candles. They ran likewise up and down the streets as if distracted, with tapers in their hands twisted together in the form of dragons. The mandorin Pinxenton and his lady assisted at this solemnity.

They found here a great variety of strange built vessels. Among the rest were two barks or sloops, called Long-schon, that is, serpent boats. They were curiously painted with all manner of colours, and seemed much to exceed those boats which carry the fish from Nan-king to Pe-king for the Emperor's use. They were shaped like a water-snake, and had three masts. The stern was full of serpents, fastened with ribbons of several colours, and decked with standards, set off with tassels of hair, silk slags and long feathers. At it hung two nimble boys, who played tricks to divert the spectators, Upon the top of each mast stood an idol, adorned with silk slags and pennants; and on the poop another, dressed with ducks and drakes, whom a Chinese was continually torturing with a fork. The edges of the bark were hung round with gold and silver fringe. Under a losty pavilion, thick set with slags and standards, sat twelve lusty seamen cloathed in silk, with gilt crowns upon their heads, and their arms naked: they came aboard the ambassadors to make their compliments, and were required with some presents.

The twenty-fixth of May, they came to Ka-yu-tiya, called by some Kau-yew, a city of the second rank or order, near a great lake, named Pye-she, which supplies the royal canal with water. Formerly, when the passage was through the lake itself, barks used to lie weather-bound at this city, not daring to venture out in bad weather; for this reason a canal was made on the eastern side of it sixty surlongs in length, with white stone.

Kau-yew is very populous, and has stately suburbs, built very close and full of large houses. The bands round it produce great store of rice, and is so thick set with dwellings, that it looks like one continued village. The country to the west lies much under water. As no trees will thrive hereabout, their only string is reeds, which grow on the sides of the lake. The chief produce of the lost is rice, which must be looked after very narrowly, less a people by much mosture or drought. hence wind-mile with must sails are so numerous in this country, being used to draw out the water in a most season, and in a hot one to let it in. By this means the introductions have two plents full harvelle in a year.

The twenty-repent, tenting Kambeer, they enne to Pateing, (by some called Paul Ayen) a city of the third order towers, unsescillant, and one the call the cyling govern canal. It is the contest with these wilks and if a circular term, being about a suite and an half round. On the east it has the lake She-yang, and on the fouth west that

of Pye-she.

This city, which was quite destroyed by the Tartars, appears, by the ruins of the wall and great edifices, to have been very stately, rich, and populous. Amongst the buildings yet standing is a famous temple without the wall, on the north side of the

city.

The twenty-eighth, they arrived at Whay-ngan, the eighth capital city of Kyangnan: it lies on the east side of the royal river, about thirty English miles from Pau-in, in a flat and marshy soil. It is surrounded with a wall, and divided by another into two parts; that to the south called Whay-ngan, the other to north east Yen-ching. The former of these has stately suburbs.

This viceroy keeps his court here in great fplendour, commanding over the feven foutherly provinces immediately under the Emperor. His office is to infpect the grand

Khân's revenue, confifting chiefly in provisions of rice, &c.

To prevent the river Whay from overflowing the adjacent country, they have made two great fluices, with strong and high banks, which confine his stream when swelled by the torrents that are on the north side of the city.

There are two custom houses in the suburbs of Whay-ngan, one to receive the

duties on goods, the other those on the barks passing this way.

The city is well built, and full of wealthy inhabitants. Not far from hence, on a very high mountain, called Yo-chew, stands a stately temple, with cloisters to lodge devotees.

The country is full of rivers and lakes, particularly that great one called She-ho, another to the cast called Hung, producing reeds, which serve for firing, wood being

very scarce throughout this province.

It being very foul weather when the ambassadors arrived, the viceroy and magistrates excused them from making the visit intended. The mandorin Pixnento, according to his custom, gave them a very noble dinner, and in the evening, one Gascomez, a Jesuit, came to salute the ambassadors aboard their vessel. He seemed to be a very openhearted person, professed great affection for the Dutch; and hinted, that they would meet with great opposition from the Portuguese, which proved true enough.

They departed next morning, passing through luxurious fields, and in the evening shot a very great sluice, at the entrance of a famous village called Siampu, which is of a very great length, and handsomely adorned with temples and houses on both sides of the canal. It has a custom house for the Emperor, one of whose officers searched all

the barks, but those which carried the ambassadors.

The next night they came to another village called Ney-ne-myau, into which they were let by two great fluices. They faw the ruins of a great caffle, which defended

the Yellow river and the canal, but the Tartars destroyed it.

The day following they fet fail, and came into the great Yellow river, called by fome the Saffron river; which is forthick and muddy, that it is fearee paliable, and at a different it feems to be a markly plath; yet the current is lo violent, that no vehels are able to fail against the dream, but must be towed by a great number of bargemen. Its time places as a half a mile broad, and in some more. The Change make this water they be the by diagram about its

terms places it is half a mile broad. and militarionae incres. The Chinese make this water safe clear by diagrap airon and it.

On the ard of lague, they came to the little cut of Tau-readingers, which is direct miles (seed) lade of the Tellow river, and senced with a proad and transplant wall, it is replaced with little to me the little to me the little to me the late of the sent wall.

The country is very fruitful in pears, apples, prunes, cherries, and the like; and

abounds likewife in quails, pheafants, and other forts of fowl.

From hence, they failed three days, before they came to any confiderable place; at last, on the fourth, they arrived at the small town of Tsi-sang, situate in a very delightful foil, at the foot of an high hill. Though it has no walls, or any remarkable buildings, except a strong castle, yet its trade is great, and inhabitants are rich.

trance into the town stands a stately temple upon a steep eminence.

They faw on this Yellow river, which is continually plowed with great and finall vessels, several floating islands, very artfully contrived, of Bambû canes, twisted so close together, that no moisture can penetrate. Upon these foundations the Chinese set up huts, or little houses of boards, and other light materials, in which they live with their wives, children, and cattle. Some of these floating towns are large enough to contain two hundred families, which subfift, for the most part, by traffic up and down the river. Wherefoever they come, they ftay for fome months before they remove, fastening their island with poles fixed in the ground.

After fome hours failing, they passed into another royal canal, called Inn-yun, cut from the Yellow river westward through the whole province of Shang-tong, into which

they now entered.

SECT. VII.—The Journey continued from the Entrance into Shan-tong to Tyen-tfing-wey, in the Province of Pe-chi-li, or Pe-king.—Royal Canal of Yun.—Kya-kya, fine Village.—Sining-chew City.—Fishing with Birds, Manner of it.—Strange Phanomenon.—Shantfui-hyen.—Fine Country and Temple.—Tong-chang-fu.—Fruitful Soil.—Sort of Bezoar found in Cows.—Lin-tfin-chew: the City described.—Famous Temple: its beautiful Structure. Vu-ching-hyen. Ku-ching-hyen. Ta-chew. Ton-quan-hyen. Sanglo .- The Governor's Lady .- Sing-ki-tfyen .- Sing-ko-tfyen .- Elegant Temple .- Singye.—Swarms of Locusts.

THE province of Shan-tong, into which they entered, is much enriched by this great artificial channel Yun; which beginning in Kyang-nan, at the city So-fyen, on the Yellow river, passes thence into Shan-tong to the city Si-ning-chew, and on forwards to Lin-fing, where it enters the river Guey. This canal hath at least fixty stone fluices, without which it would not be navigable, the water in some places running very low. Each fluice is attended by eight men to help through with the veffels,

On the fixth of June, they came to a famous village called Kya Kya, which is very rich, and well built, containing feveral handfome edifices. It is encompassed with plea-fant and fruitful fields, full of rotemary; for that their venion taltes of it, as they found by the fleft of feveral flags and deer which they ran down. They faw likewife abundance of all forts of fowl, especially phealants, and delighted the Tartars with thooting them flying.

They were three days on the canal without leeing any confiderable place; but on the eleventh, arrived at another noted village called lack-libin no, in and about which

Rands thirty-fix stately rowers. They let kerward, putting for two days through a

country full of com fields; with high hills to the eart.

The introcently they came to brompropew, a fecond rank city under Teng theory the full thate above the middle of the toyal case! You, and encompalist suit introduction and encompalist suit in a suit for an artific and suit of peak and givers anouncing with the chief cultimate middle for the theory and giver another artific and the chief cultimate and they buy suit gives. It exceeds evaluate that the chief city trade, with the chief city and gives a those of the chief city.

people of figure. Among other stately edifices, there are two famous temples beautified with pictures. On each fide of the royal canal there is large suburbs, and a great fluice to keep off the out water, which sometimes rises six foot higher than the water within.

Here they faw them catch fish with a bird, called Lou-wa, somewhat less than a goose, and not much unlike a raven. It has a long neck, and a bill like an eagle. They go out in small boats, made of Bambû canes, placing the bird on the outside, which on sight of a fish shoots down and swims after it under water. As soon as she has caught her prey she rises, and the sishermen having taken it from her, sends her out to seek more.

To prevent the bird from fwallowing the prey, they put an iron ring about her neck. If the fish is too big for her to bring up, she makes a noise in the water for the master to come to her help. When they have caught enough for their owners, the ring is taken off, and they are left to fish for themselves. In case they are averse to dive, they are brought to it by beating. The sishermen pay a yearly tribute to the Emperor for the use of these birds, which are much valued by the Chinese. One of those, which are well taught, is often sold for sifty tack of silver, which is about an hundred and sifty guilders. The Dutch would have bought a couple of an old sisherman, of whom they had some carp, but he refused to sell them, because they served to maintain his family. He could not inform them either whence those birds came, or how they were instructed; only he said they were left him by his ancestors, and bred very seldom.

All the public inns and victualling houses have their fidlers and comedians to recreate their guests at meals. Provisions are very cheap in those parts: the Dutch paid but two shillings a piece for their dinner, which consisted of several

dishes.

Next day they left Si-ning, and after a few hours failing, passed by the village Namwaig, where the royal canal joins the river Luen. The Tartars and Chinese told the Dutch strange stories of this river: amongst the rest, that if you sling in nine sticks, six would drive to the south, and three toward the north; which the Dutch, upon

trial, found to be true, but none could account for it.

The nineteenth, they came to Shan-tsui, a small city about thirty miles from Si-ning, and subject to Yen-chew. It is divided into two parts by the royal canal, and guarded at each end with a strong castle. It is square, well built, and encompassed with high walls, fortified with strong bulwarks. Here they saw the ruins of several great buildings, defaced by the Tarrars. The adjacent country is often overslowed by the Yellow river, which sometimes drowns and carries away whole towns and villages.

Next morning they proceeded, passing by many fair villages and corn fields, as well

as through several strong stuices.

Not far from Shan-tim stands one of the most famed temples in all China, called Tey-wan-myan. It is built very high and strong, with grey stone, and nobly adorned. The top is covered with yellow glazed siles, and the walls are painted with the same

colories to that when the lun fames, it glitters all over like gold.

The twentieth of times they came to Tong-chang, the third capital cuty of Shantong. In formula tentare and walls defended with bullwarks? The fireers are large the well-highly the buildle of the city dands on high and curious tapic, with feat pole surfees at as tenes a will fiften a wells and sowers, in which are feweral at the theory is encountried with a broad wares, anyears on the north-hide by a build and carried out the polyeen operation. Carlos Joseph Wiles are all the fireful and the number of inhabitants, fine buildings, and greatness of trade, may pass for another city. Toward the east they were shewed a very large iron tomb, erected above feven hundred years before in honour of some great lord, who lost his life in the wars for defence of his country.

The land round Tong-chang is very low and flat, but wondrous fruitful. No part of China produces so much filk as this, the inhabitants thereof living chiefly by this

manufacture.

Here is fometimes found, in the maw of the cows, a stone called Nyew-whang that is, the yellow of the cows, from its colour. It is about the bigness of a goose egg, of a fost, chalky substance, and by some thought to be the bezoar stone. It is esteemed sovereign in fainting sits.

Next morning, fetting fail, they passed over the lake Nan-yang, which abounds with fish, and that night came to the city of Lin-sing, about thirty miles from Tong-chang, and situated on both sides of the royal canal, which, at the end thereof, enters the

river Guey, separating the province of Shan-tong, from that of Pe-king.

They were no fooner arrived at this city, but the governor appeared upon the wall to welcome and receive the ambaffadors; intimating, that he could not entertain them at his court, because they had not yet appeared before the Emperor, and for the fame

reason resused their presents.

Lin-fing exceeds all the other eighteen cities depending on Tong-chang, in number of people, inlandour of buildings, plenty of all things, and greatness of commerce; neither gives she place to any inferior city in the whole empire. Near the city stand two strong and large castles, one on each side of the royal canal, and opposite to the other, so that no vessel can pass without paying the duties. Between Shan-tsui and this city there are sifty-eight sluices. There are two strong ones just before the city, made to force back the upper water which runs from the river Guey, and is sometimes two or three foot higher than the water of the canal. On the north side of the city lies a wooden bridge of nine arches, with a drawbridge in the middle to let through the barks.

Ling-fing stands in a flat, fandy soil, is very large, and surrounded with a mud wall, coped with stone. It abounds with all manner of fruit, and amongst the rest well re-

lished pears.

Without the wall, on the north fide, flands an eminent temple, with an high tower, built after an exceeding curious manner. It is afcended by a pair of winding flairs, which are not built in the middle of the tower, but in the wall, which is double. The tower itself is an octagon of eight flories, each thirteen foot and an half high, whence the neight of the whole is an hundred and twenty foot, and proportionably thick. The outward wall is of the same mould as the China dishes, and talk of fretworks: the walls within are of polished marble of several colours, as smooth as a looking glass. The calleries which are nine, are of marble, cut in figures or images, with fine copper bells at the comers, according to the Chinese tailion. The windows belonging to thele galleries are full of gided bars. Upon the top of the tower stands the statue of the goldes to whom the remple is dedicated, made of plaifer works: it is thirty toothigh, and inlaid with gold and filter. The images standing frond this tower are for circuitly avoignt that they may be recovered amongst the greatest curiosities in China.

Provention left his wife and children in the city; and a Danch than better, which have the machined there will be started in the start tempte with the copient of the machines.

Leaving Lin-fing, they quitted the result caselend on red to iter Cases of realist affective affect the first and arrived on the transfer little. It easily of Vu-case, thirty miles from Ling-fing. It is delightfully fitured—the for a fide of the result, in the borders of Shang-tong, and encompatied with a case well. On the north fide are large fuburbs, close built with fittly houses; but the great calificative all ruined by the Tertars, and the inhabitance inverty in tod.

The twenty-fixth of June, they got to KE-clarz, the crit place they came at in the province of Pe-king, a city of the third rank, dependent on I o-hydreft. It is about twenty-three miles from Vu-ching, on the (rough) inde of the Gary, in a delightful flat country. The walls are high and well built, the factors very magnificent, and the whole full of people and communes. They made no flay here, but proceeding, flaw by the way, on both fides of the incr. whole fiches full of conton trees, which occasions a mighty trade in the neighbouring parts.

of conon trees, which occasions a mighty trade in the neighborn, parts.

The twenty-eighth, they came to Ta-chew, which force all U-kyau, about eighteen miles from Kû-ching. It is fituated on the (east) fide of the river, and furnounded with a wall thirty foot high, strengthened with bulwarks and watch-towers. It depends on Ho-kyen-fû, is well built, ma aborned with several temples, having also a large suburb, which extends for on both sides of the river.

This city is the great tweet for the Zam-zou, which is made of rice, and drank

instead of wine. It is export . hance to all parts of Chira.

The Chinese told them, that about the miles of, near to the city Hyen, there was a pool called Vo, whose water, if a flick be though into it, turns as red as blood, and that if any leaves fell from the trees which grow about the fides, they are instantly changed into swallows.

The twenty-eigh h of June, they failed by Tong-guan, which lies in a flat-country that extends to the ocean, about a musket shot from the Guey (on the east side), subject to Ho-lan. This place alone enjoys the privilege of having a guard only of Chin set it is a square, surrounded with a strong wall, and a duch both broad and deep. The fields near the town are curiously planted with all manner of fruit trees.

At the motion of Pinxenton, the author and some others were sent, with twelve Tartar soldiers, into the city, to see a lion made of iron that stood in the market place, which they reported to be extraordinarily large and scrable: but the Chinese,

when they faw them coming, thut the gates for fear of the Dutch.

On the fecond of July, they can anchor before the city of Sang-lo, about fifty-five niles from Tong-quan, (on the right fide of the Guey.) It is a little diffaut from the river, is walled and has on both banks of it very fine fuburbs, which are well built, like the city, and full of people and trade. The Tartars who dwell here are more numerous, and of better quality than they had found in any other place. These immediately came aboard in great state to bid them welcome; and the Dutch going ashore passed through five old triumphal arches on the east side of the city.

The governor's lady fent a foldier to the author, and some others of the retinue, desiring them to come to her. They were conducted into a very large parlour, where she, attended by several Tartar ladies richly dressed, expected them. She made Nieuhoss sit down, and asked him several questions concerning Holland. Afterwards they were treated with a noble banquet. Her husband was in great favour with the Emperor, and then at Pe-king.

The fame day they left Sang-lo, and came in the evening to the village of I are a fituated over against a strong castle, with a large antion of I a table. The her confinued, and fit only for dog-kennels, or the uncivil inhibitant, with live by pland.

ing those who pass without a guard.

On the third they came to Sing-ki-tfyen, which, for brevity, four call Sing, a divided rank city under Ho-kyen. It lies on the (right hand of the) river Galgain and about ten miles from Sang-lo. This towa, though not very large, in a pulous, and has a great trade, like most of the cities on this river. It would not thruchures yet standing in and about it show, that this was seemerly a more magnifice to place.

The adjacent country, (which is flored with cattle, and the rivers with fish) is all stat, only there is one hill not far off, called Si, whose top is a pleasant and fruitful

plain.

Next day they failed by Sing-ko-tfyen, another third rate city under Ho-kyen, about tight miles from Sing-ki-tfyen. It is neither large, populous, nor of much trade, but a 13 ftrong, having leveral watch towers and I ulwarks for its defence, and though a 13 ft d with fome it to buildings, most of the houses are very mean and little.

its greatest ornaments are the temples; but one, which stands without the walls, is no open field, exceeds all the rest, and shows the wonderous architecture of the Chincle in former ages. It consists of three stages, raised on a stone padestal, into what you ascend by steps. The first is adorned with great gates, and each corner of the roof supported by suraptuous columns: the second and third rounds have stately windows and large pillars like the first. The whole outside is embellished with free work, and at each corner hang little bells: but the inside of this same is not equally be utiful.

The idolaters here feemed nothing fo devout as those in other parts; for in some places their images were left quite naked, in others only covered with mats, and having

arew hats on to keep off the weather.

The same day they passed by Sing-ye, a third rank city under Ho-kyen, on the left of the river, twenty miles from Sing-ko, enriched with noble suburbs. On the west side of the place stands a great and high temple, senced in with a wall, having also a very curious garden. It being a cloyster for nuns, the Dutch could not be permitted to see it, for no men have that liberty. On the east side there is another stately sane, besides three curious obelisks, or pyramids, erected by the city, in honour of a great commander, who lay interred there for his faithful services done to his country.

Towards night the people were gathered in troops to defend their country against the grasshoppers, who visit them annually about this time; being brought by an easterly wind in such mighty swarms; that in a few hours they devour all before them, if once they alight: to prevent which, the inhabitants march to and again through the fields with their colours slying, shouting and hallooing all the while; never leaving them till they are driven into the sea, or some river, where they fall down and are drowned. It happened, that one of these hunted squadrons sell down on the vessels which carried the ambassadors, and quite covered them; but they cleared them, by slinging their unwelcome guests into the river.

I he same slay they arrived at the sea-port of Tyen-thing-wey.

SECT. VIII.—The Ambassadors' Arrival at Pe-king, and Reception at Court.—Tyentsing-wey.—The Ambassadors treated.—Jo-si-wo.—Fo-chew.—San-tsyan-wey.—Journey by Land.—Tong-chew.—Arrive at Pe-king.—Visited by Grandees.—Suspected for Rovers.—Strictly examined, by the Emperor's orders.—Sent for to Court.—A Jesuit Mandorin.—The Presents viewed.—The Jesuit's Knavery.—The Dutch feasted.—Ambassador from Russia.—The Presents liked by the Emperor.—Great Mogol's Ambassador.—Fmperor's Mandote, in sevour of the Dutch.—Diceitful Ministers.—Intriguing Jesuits.—Cheating Viceroys.—Equitable Monarch.—Custom of saluting the Imperial Throne.—Emperor's Brother dies.—Russian Ambassador's departure.

TYEN-TSING-WEY is reckened the greatest trading town of all China, and one of its three chief ports, the other two being Kanton, in the province of Quantong, and Je-jan-jeen in that of Nan-king. Tyen-tsing-wey is situated in the utmost border eastward of the province of Pe-king, near an arm of the sea called Kang, where three rivers meet, defended by a strong fortress built on the point of confluence. This city lies about thirty miles from Sang-lo, in a very low and marshy soil, surrounded with strong walls twenty-sive soot high, thick set with watch towers and bulwarks. It is very populous, and full of temples. As all vessels bound from any other part of China must touch here, and it is a free port where no duties are paid for goods either imported or exported, the resort of shipping is very great.

The governor and magistrates came aboard to welcome the ambassadors, but Pinxenton subtilely contrived to get the first visit from them: afterwards the Dutch were invited to an entertainment, prepared in a splendid idol temple. The design of this meeting was to consult in what manner the Emperor was to be applied to, and the grandees gained over to their interest. These matters being settled, the old viceroy of Kanton's mandorin was sent before to Pe-king to give notice of their approach, they

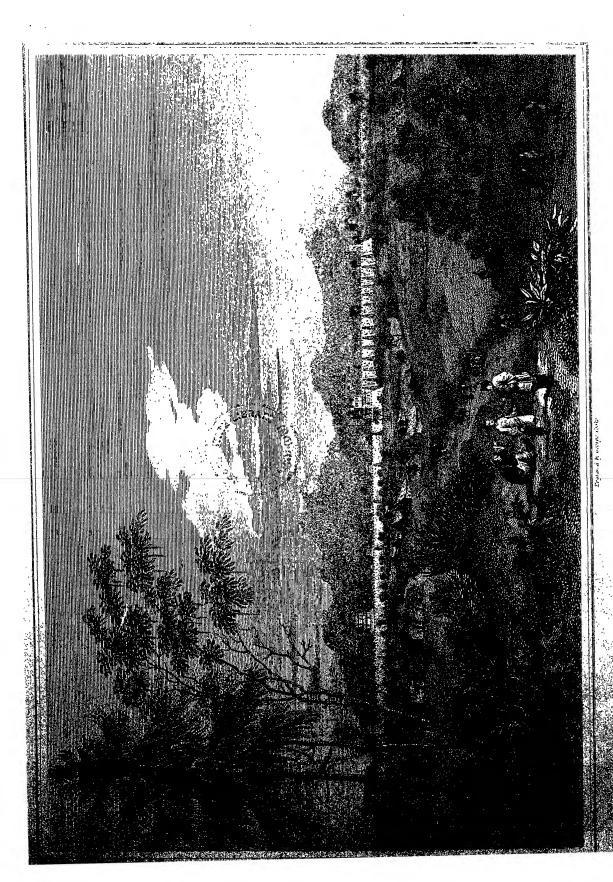

following with all expedition.

On the eleventh, got to Jo-si-wo, a third rate city under Pe-king, about forty miles from Tyen-tsin, (and on the left hand of the river.) This place is small, but well built, hath a wealthy suburb, and drives a great trade. The revenue arising from the custom paid by vessels is very considerable. The ambassadors were entertained by the governor at his house in much state; and though he would not receive the presents offered him for the reason before mentioned, yet he made no scruple to ask some glasses of rose water, which were sent him.

Next they passed by Fo-chew, called by some Que, a third rank city under Pe-king, on the (left) side of the river, about sisteen miles from Jo-si-wo, in a very pleasant soil. This place is not very large, but is well built, and full of handsome edifices; among the rest are several triumphal arches. On the east side, without the walls, which are high and lengthened with watch towers and bulwarks, stands a very sine temple, with a curious tower of nine stories.

On the fixteenth, they came to San-tíyan-wey, or San-ho, about twelve miles from Fo-chew, and four from Peking, to which it is subject. It is a third rate city on the (left) fide of the river: it is very populous and well fortified, having a strong castle. In the middle of the town stands a curious triumphal arch, of grey stone, and on the fourh side a broad stone bridge of sive arches, forty-two paces long, with houses on the fide.

are the smballadors were allions to perform the semaintee at the smarter is included.

and commonly all goods defigned for Pe-king are unladed here, or at the next city called Tong-chew, and so carried by land either in waggons, or on mules or affes; which are always kept in readiness by the owners, this being the only subsistence of

many poor people.

The faine day the manderin, whom the ambassadors had sent before to Pe-king, returned; and next day there arrived twenty four horses, with several waggons and carts, which the cotined sent to fetch up their baggage and the presents. All things being ready, they began their journey in this order: two trumpeters rid at a distance before, then followed the standard bearer, with the Prince of Orange's slag; next to him the ambassadors, accompanied by several Tartar lords and gentlemen well mounted; the officers and foldiers, who had thus far conducted them, and were about fifty in number, came after in good order with the presents and goods. The road to Pe-king was exceeding bad, being very deep and uneven, so that the horses were up to the belly almost every step, yet it was so full of people, horses, and waggons, as if an army had been upon the march.

The feventeenth, they rode through Tong-chew, fituated in a very low and deep foil. It is very large, and fenced with strong walls: it is likewise divided into two parts by a wall. The streets are not paved, but have many fine buildings: the country is very pleasant and fruitful. The ambassadors having refreshed themselves in a temple near the road, proceeded, and in the afternoon came to the suburbs of Pe-king.

distant from Kanton one thousand five hundred and thirty miles.

They passed through two magnificent gates into the city, and lighted at a magnificent temple, into which they were invited to repose awhile, and wait for their carriages. They were no sooner entered, than saluted by the Emperor's kappado, who carried a salcon on his hand, by the agents of the Kanton viceroys who reside here, and by several grandees of the court. After they had refreshed themselves with victuals, and several sorts of fruit, and their carriages had been visited by the kappado, who told all the waggons, they were conducted in great state to their ledgings, provided for them by the Emperor. This house was not far from the palace, and had an high wall about it, with three stately gates, between which were very large courts.

At night same two Tartar officers with twelve foldiers to guard the gates, and take

care that the ambailadors thould be supplied with all things convenient.

Next morning they were vilited by some lords of the imperial council, attended with the chief fecretary Tong lau-ya, a Chinese, and two other mandorins, Quan-lau-ya, and Hú-lau ya: this last fecretary to the council, shough a stranger to the Chinese language. These came to welcome the ambastadors in the name of the Emperor and his council, so enquire their healths, the number of their followers, and quality of their breitens, as well as the person who sent them, and place they came from They like the council from the person who sent them, and place they came from they like the council from the council as the person who sent them, and place they came from they like the council as the person who sent them, and place they came from they like the council from the council as the council to all other questions are some first them at the council of the cou

Agenes on the special content of the South Liceans lectured of the continue of the special content of the continue of the cont

for no foreign ambassadors are suffered to bow their heads before the Emperor's throne, unless they were a-kin to the prince who fent them, (like those of Korea and the Liquese islands, who came to Pe-king the year before) having a notion that the majesty of the Emperor would be much leffened by giving audiences to perfons of inferior quality.

The ambassadors replied, that they were not in the least allied to their prince; and that it was not the custom in their country to fend his relations abroad in such employ. Then they asked them, what posts they held at court, what their titles were in Dutch, how many men they had under their command, and by what means they fubfifted. Mention happening to be made of the governor-general of Batavia, they were inquisitive to know the quality of both. The ambassadors told them, that the governor-general, in regard of his commands, might be compared with the viceroys of Kanton, his jurifdiction extending over all the Dutch dominions in India; and that Batavia, the place of his residence, was the chief city of the whole.

The mandorins then presented each of the ambassadors with fifty tael of silver, and took their leave, but foon returned again one after another to ask more questions. The first came by order of His Imperial Majesty and his council to fetch the credentials, which were carried to him in great state, being put into a large silver dish, covered with three pieces of scarlet. Another came to see their arms, and know how they were made: the third asked, what fort of weapons the Dutch used in war, what nations they had been at war with, and whether they were at peace with the Portugueze? they went and came again, fix or feven times on the fame errand: at last, they asked pardon for the trouble they had given them, faying, that what they did was by the Emperor's order, who was always very inquisitive in things of this nature.

On the report of the commissioners, to the grand master, or rather chancellor of the empire, he fent next day two gentlemen, with orders, for the ambassadors to appear with the prefents before the Emperor's council. It proving a very rainy day, they would fain have put off going till another time, lest the presents should be spoiled with the rain; but no excuse would be allowed of. At last they went to court without the prefents; but were not admitted till fuch times as they had brought them: for the Emperor was refolved to fee them that day. As foon as the prefents came, they were admitted, and ordered to fit down, without shewing any manner of respect to that great affembly.

The chief commander fate at the upper end of the hall, upon a broad low bench. with his legs across, like the taylors: on his right hand fate two Tartar lords, and on his left, Adam Scaliger, a Jesuit, and native of Cologn in Germany, who had lived in great honour at the court of Peking near thirty years. He was a very comely old man, with a long beard, and went shaved and cloathed after the Tartar fashion. All the great men who were at this council, late one among another, without any regard to order, state, or gravity; the chancellor himself being with his legs naked, and a little flight mantle about his body. As foon as this ford had made a fhort freech to the amballadore, and ordered them to fit, the Jefuit came to falute them; which he performed with great simility in his own language, and aiked after leveral of his religion in

curious appeared, he fetched a deep figh. The chancellor commended feveral of the

presents, and said they would be very acceptable to the Emperor.

Meantime came an order to the council, from His Imperial Majesty, that Scaliger should ask the ambassadors several questions, such as have been mentioned before, concerning the Dutch and the form of their government, and set their answers down in writing. The Jesuit did so; but deceitfully added, of his own accord, that the country which the Dutch then possessed was formerly under the dominion of the Spaniards, and did of right still belong to them: but the chancellor caused him to blot out those words, which he supposed might give offence to the Emperor; telling him, it was enough to know, that these people were possessed of a country, and had a form of government among them.

Whilft the clerks were making feveral copies of this writing, the chancellor found himself hungry, and sent for a piece of pork; which, though half-raw, he eat most heartily, and in so slovenly a manner, that he looked more like a butcher than a prince. As soon as he had done, he ordered the son of the old Kanton viceroy, who resided at court, to provide an entertainment for the ambassadors. When dinner was brought up, the chancellor and the rest of the Tartar lords fell on again, as greedily as if they had eaten nothing all that day; but neither the ambassadors nor Scaliger could taste of their cookery, most of the meat being raw. This His Excellency perceiving, caused the dishes to be removed, and a banquet of fruit and sweetmeats set upon the tables, urging the ambassadors to send home what was left; which they civilly refused.

Scaliger informed them, that about four months before, there came an ambaffador from Muscovy, with a train of an hundred men, to defire leave to come once a year to trade in China; but that the Great Khân seemed very unwilling to grant their suite. Night coming on, the ambaffadors took leave of the affembly, and returned to their lodgings, conducted in great state by the Jesuit; who was carried by four men in a

palankin, or fedan, attended by feveral confiderable persons on horseback.

Next day, at the request of the chancellor, the ambassadors set down in writing for whom the several presents were designed, and sent Baron, their secretary, to answer some farther questions: which having done, Tang-lau-ya and the two other mandorins returned to acquaint the ambassadors, that the presents were very acceptable to His Majesty, his mother and the Empress; and that His Majesty would be glad to have sitty pieces more of the white linen, to present to the wives of the Kanton viceroy's sons:

but they could muster only thirty-six pieces.

On the third of August, they understood, that an ambassador from the Great Mogol was arrived at Pe-king, with a numerous train; in order to accommodate some differences lately arisen between the two nations, and procure liberty for their priests to preach, which had for some time been sorbidden under severe penalties. The presents which he brought consisted of three hundred and thirty six very sine horses, two of-trickes, a diamond of an extraordinary bigness, and several other precious stones. These, being no less acceptable to His Majerty than those of the Dutch, procured him a quick dispatch in his business.

The ambaffadors were frequently visited by lords of the court and mandorins, who teazed them with questions on the lame subjects over again. At length, on the thirtys first of July, the Emperor sent the following mandatory letter to the lords of his

council.

CREAT SAD WORDER BER

THE ambathilous of Folknot are come but he win their oxelents revices reconstruction. The Trapelly and pay their obscious to blank their physics of the company of the comp

May San by

and because this is the first time, I think fit to accept of them as ambastadors, and grates them leave to appear before me, and do homage, when I shall be feated on the till once in my new palace; to the end that they may obtain a favourable answer and a quick dispatch, in order to their return. Moreover, after the happings of having feet me has caused them to forget the fatigues of their long travels both Ly fla and land, and they are able, without shutting their eyes, to behold the brightness of the sun in the heavens, how can we be unkind to them, or deny them their requells?

On the perufal of a new translation of the ambassacor's credentials, by Scaliger, the Emperor fent a fecond letter, of the fame nature, to the council. The chancellor hereupon defired to know of the ambaffadors, whether the Dutch could not fend annually to Pe-king, or at least every second or third year, to do how age to the Emperor? they answered, that every fifth year would be more convenient for them; but defired, that they might be allowed to trade annually with four ships to Kanton. Afterwards the chancellor furmioning the Tartar and Chinese courcils together, to consider of the proposals of the Hollanders, alledged, that it would be sufficient for them to come

every fifth year to falute the Emperor.

Most of the Tartars were of this opinion: but the Chinese, preterding to shew them much more favour, would have had the time enluged to nine year; imagining that the Dutch were not to be permitted to trade at Kanton in the mean time. They likewife fuggested, that under the name of Hollanders, the English might find access, who, about thirty years before, came with four ships into the harbour of Heytamon; where they took away four veffels laden with falt, made the mandorin prisoner, and that down a fort: for which outrages they and been declared enemies of the empire. They added, that befides it being contrary to the custom of the country to let them have a free trade in any part of the empire, it did tot appear by the ambassadors credentials, that any fuch thing was defired; fo that tray concluded they had exceeded their orders.

The ambaffadors were not a little furprifed at these proceedings; for they took it for granted, that the Emperor had already, by his letters to the viceroy of Kanton, fully agreed to allow the Dutch a free trade in that port; and that they were come to Pe-king only to return His Majesty their thanks for that favour. They were well informed of the practifes of Scaliger, and fome other Jesuits, who had been bribed by the Portugueze to oppose the designs of the Dutch. These missioners, to compais their end, endeavoured to prejudice the Tartars by such false reports as were spread at Kanton, and infinuating, that Ma-kaw would be quite impoverished by granting them a trade.

What most surprised the ambassadors, was to find themselves desirauded of the money paid to the Kanton viceroys, in order to gain the chancellor, and some other of the Emperor's council over to their interest. In these straits they tried several expedients: one was, to propose to the council, to admit them to live and trade in China on the footing of subjects; on which condition they promifed to pay the usual duties, like those of Liegiow, Amiam, and Siam, and to salute the Emperor, with presents every third year.

But the ambassadors, after all their endeavours, were not able to effect any thing for want of money; and being unwilling to take up any at eight or ten per cent. a month, they refolved to apply to the Emperor himself. Meantime, His Majesty, having sent to know how far the council had proceeded in the business, and understanding, that the ambaffadors offered to come every five years to falute him, he was pleafed to infert the number eight in place of it; alledging, that five years was time little enough to go

1 1 4

and come, if they travelled only by day; and that they ought to be allowed two or three years to rest at home: besides, why should we strain then, said he, in such a point, who neither stand in need of me, nor sear me, but came, out of mere respect and affection, to salute me, and offer me their goods and pres me?

This favourable answer of the Emperor gave the amba'ladors great hopes: but the chancellor's chief fecretary did all he could to diffuade them from making any farther request, faying they ought to be content, for the first time. In being admitted as friends; and that for them, who were never there before, to demand a free trade. would unhing all. However, the ambafladors did not think to follow his advice. because the time drew near that the Emperor was to make his entrance into his new palice: but before they could have an audience, they were fuft to perform obedience in the old palace, where His Majesty's treasure and seal are kept; otherwise they would be difmifled without one, as it happened to the Mufcovy ambaffador; who, thinking it derogated from the dignity of his mafter, would not perform that ceremony. All the grandues of the kingdom must pay their respects to this throne before they appear before His Majesty; nay, the Emperor himselt, before he is installed, is obliged to come and bow to it. The reason they give for this is that it is older than the Emperor and descrives that respect. This cultom is usually performed by anibassadors three days before their audience.

On the twenty-scond of August, the agents of the Kanton viceroys, with the mandorin Pinxenton and others, came early in the morning to the lodgings of the Dutch; and not long after also appeared three Chinese doctors, and some of the court, in very rich habits. These persons conducted the ambassadors and their followers, in great state, into a room of the old palace, much like a library; for they saw none there but scholars and gownnen, with book in their hands. From hence, after some short star, they were led into an open court, within a high wall, were they were commanded, by a netald, to kneet three times and bow their heads to the ground. After a short pause, the herald spoke aloud, in Chinese, the following words: Ka shan; that is, God hath sent the Limperor: Quee; fall upon your knees: Kan to; bow the head three times: Ke e; stand up (this he repeated three times:) lastly, Ko e; that is, range yourselves on one side. These ceremonics were performed in presence of at tend a hundred Chinese doctors: after which the Dutch returned to their lodgings.

On the twenty-fifth of August, the day appointed for their audience, they were prevented by the tedar of death of the Emperor's youngest brother, about sixteen years of age, not without suspice in of posson by some of the council; who, it seems, did not think him worthy to live, because he had provoked His Majesty by some ill language before their arrival at Perking; but others ascribed his death, to drinking a glass of ice water, when very hot, which carried him off in a few hours. The Emperor seemed much to lament lived ash; for he would not be seen by any person in three days. This young prince was kept unburied a whole month, which gave so much delay to the audience.

On the fourteenth of September, they underflood, that the ambaffador of Russia went from thence without audience, for the reason before mentioned; and about noon one of his retinue came and took leave in the name of all the rest: he desired the favour of a letter to show in Russia that he had met with the Dutch at Pc-kin, which was readily granted. They were informed afterwards, that this ambassador was not fusfered to depart, till such time as the Emperor had given him a pass.

THE prince's funcial being over, the Emperor fent word to the chancellor, that he should conduct the Dutch ambassadors two days after, as also those of the Great Mogol before his throne: of this the minister gave notice, by proclamation, to all the

grandees in Pe-king, v ho were I kewife to be present.

Accordingly, on the first of October, about two in the asternoon, the Fanton mandaria, and others of the court, came, in very sich habits, with lanthorns, to conduct the ambassadors, and six of the attendants, who were selected from the rest, the author being one. When they came to the palace, they passed into the second court, by were scarce scated, before the airbassador of the Great Mogol accompanied with sive persons of honour, and about two y servants, came and placed himself next the Dutch ambassadors: those of the Lammas and Su-ta-see did the same in the them say several loads of the empire. Here they were obliged to fit all night on the bore stones and in the open air, in expectation of His Majesty's appearance, early in the morning, on his to one.

Of all the foreign ambassadors, those of the Su-ta-tse, who may be called South Tatars, were in most esteem at the court of Po-king. All Nieuhoss could learn of his hassiness, was, that he was first with presents to the Great Khan, according to the custom of the bordering nations. This ambassador had on a coat made of sheepskins, dyed crimion, which came down to his knees, but was without sleeves; his aims being naked up to the shoulders: his cap, turned up with sables, fat close to his head, and had on the crown a tust of an horse's tail, coloured red also: his breeches made of a slight stuff, hung half way down his legs in a clouterly manner: the boots he were were so heavy and large, that he could hardly walk in them: on his right thigh hung a broad heavy sword. All his attendants were cloathed after the same manner, each with a bow and arrows at his back.

The Mogol ambassador had a very costly blue coat on, so richly embroidered, that it looked like beaten gold: it reached almost to his knees, and was girt about his waist with a silk girdle, which had great tassels at both ends. He wore neat buskins of

Turkey leather, and a large turban of feveral colours.

The ambassador of the Lammas was cloathed in yellow; his hat much like a cardinal's; with broad brims. At his side hung a pair of beads, on which they say their prayers like the Romanists. These Lammas are a sort of religious (or priests) who enjoyed a toleration for a long time in China: but having been banished by the last Chinese Emperor, went and settled in Tartary; from whence they sent this ambassador to crave

SECT. IX.—The Ambassadors' audience of the Emperor, and other Transactions.—They are conducted to the Palace.—The Kalmuck Ambassador.—Great Mogol's Ambassador.—In the Lama Ambassador.—In cred.ble Concourse of People.—Hall of the Throne.—Splended Appearance.—All reverence the Throne in appointed Stations.—Stage of the Throne—The Emperor's State and Person.—His curiosity.—The Ambassadors feasted.—Turtar Cookery and Slovenlines.—Regaled with Sam-sou.—Jesuitical Filtions.—The Second Feast.—The Third Banquet.—Emperor's Presents to the General; to the Ambassadors, their Secretury and Followers; to the Kanton Mandorins, Officers and Soldiers.—Form of delivering his Letters.—Emperor's Letter to the Dutch General.—Alliewance of the Ambassadors, and their Retinue.—They leave Pe-king.—Arrive at Kanton.—How treated by the Vicinoys.—Sail from thence.—Return to Batavia.

THE prince's funeral being over, the Emperor fent word to the chancellor, that he should conduct the Dutch ambassadors two days after, as also those of the Great Mogol before his throne: of this the minister gave notice, by proclamation, to all the grandees in Pc-king, who were lakewise to be present.

Accordingly, on the first of October, about two in the asternoon, the Kanton mandolins, and others of the court, came, in very rich habits, with lanthorns, to conduct the a rbassaders, and six of their attendants, who were selected from the rest, the autil or being one. When they came to the palace, they passed into the second court. They were searce seated, before the air bestador of the Great Mogol accompanied with five persons of honour, and about twenty servants, came and placed himself next the Dutch ambassadors: those of the Lammas and Su-ta-tse did the same: next to them sat several lords of the empire. Here they were obliged to sit all night on the barassand in the open air, in expectation of His Majesty's appearance, early in the morning, on his throne.

Of all the foreign ambassadors, those of the Su-ta-tse, who may be called South Tartars, were in most esteem at the court of Pe-king. All Nieuhoss could learn of his business, was, that he was sent with presents to the Great Khàn, according to the custom of the bordering nations. This ambassador had on a coat made of sheepskins, dyed crimson, which came down to his knees, but was without sleeves; his arms being naked up to the shoulders: his cap, turned up with sables, sat close to his head, and had on the crown a tust of an horse's tail, coloured red also: his breeches made of a slight stuff, hung half way down his legs in a clouterly manner: the boots he wore were so heavy and large, that he could hardly walk in them: on his right thigh hung a broad heavy sword. All his attendants were cloathed after the same manner, each with a bow and arrows at his back.

The Mogol ambaffador had a very coftly blue coat on, fo richly embroidered, that it looked like beaten gold: it reached almost to his knees, and was girt about his waist with a filk girdle, which had great tassels at both ends. He wore neat buskins of Turkey leather, and a large turban of several colours.

The ambassador of the Lammas was cloathed in yellow; his hat much like a cardinal's; with broad brims. At his side hung a pair of beads, on which they say their prayers like the Romanists. These Lammas are a sort of religious (or priests) who enjoyed a toleration for a long time in China: but having been banished by the last Chinese Emperor, went and settled in Tartary; from whence they sent this ambassador to crave

liberty

The rety to return. What fuccess he met with, Nieuhost could not least, but says, his

repetion at court was very friendly.

At the court gate, where they fix expeding the dawn, I not three black dephants is centicals, with curious towers carved and galded, on their lands. The concourte of pupils here was incredible, as did a number of guarde all in very sich habits for rifugly to the

At the break the grandees, who had been here blowing all night, come gozing at 10.1 with great admiration, but he avery even me mer. About an hour after, on a 10 given, all flatted up. At the lance the two larves for its, who afoldly where find any chadors, came and conded a third through another gate into a fecond court, ned round with Tartar foldiers and local rous; and from through the transfer of the Great khan, his wife and children. This court, or nothing from anythed press in company was lined likewife with a firring guard, all of their in tich costs of crimfon coloured fatin.

On each fide of the throne stood an hundred and twelve is like a convergence holding a different flag, and in cloaths of a colour soitable thereto; only he had all black hats with yellow feathers. Next to the throne stood twenty-two gentlemen with rich yellow heren, in their hands resembling the sun; and next to these ten persons holding alt circles in the same form; then six others with circles imitating the moon at sull; after these stood fixteen with half pikes or poles in their hands, hung sull of silk tables of several colours; and near them thirty-six more, each bearing a standard adorned with dragons, and such other monsters. In this manner were both sides of the throne guarded, not to mention an infinite number of courtiers all in very rich habits, of the same colour and fort of silk, as if a livery; which added greatly to the splendour of the place. Before the steps, leading to the throne, stood on each side six snow-white horses, with rich embroidered trappings and bridles belet with pearls, rubies, and other precious stones.

Whilst they were admiring the pomp and splendour of this court, they heard a larum bell, or chimes, which ceasing, the old Tu-tang, with thirty more of the most eminent persons of the empire, stepped forth; and at the motion of a herald paid their obedience to the throne, by falling on their knees and bowing their heads nine times to the ground, whilst delightful music, both vocal and instrumental, silled up the vacancies of the ceremony. These were succeeded by another set of lords. The next who performed the ceremony were the ambassadors of the Su-ta-tse and Lammas, conducted in

extraordinary state by the first and second chancellors.

Then the chancellor coming up to the Dutch ambassadors, asked them what rank or degree in dignity they possessed; and being answered that of viceroys, he went to the Mogol ambassador, who returning the same answer, the under Tu-tang informed them, that their station was the tenth stone of the twentieth, which are set for that purpose in the pavement opposite to the middle gate of the hall where the throne stands. These stones are inlaid with plates of brass, on which are engraved in Chinese characters the quality of the persons who are to stand or kneel upon them. Then the herald called to them aloud, go stand before the throne: this done, he said, step into your place, which accordingly they did. His next command was, bow your heads three times to the ground; then rise up; and, last of all, return to your place. All which the Dutch personned.

They were afterwards along with the Mogol ambaffador, conducted to a stage curiously built, which propped the seats of the throne, about twenty seet in height, and wol. vii.

adorned with feveral galleries of alabafter: here having kneeled and bowed their heads once more, they were ordered to fit down, and then treated with Tartar tea, mingled with milk, in wooden dishes and cups. Soon after, the bells tinkling again, all the people full on their knees, while the Emperor ascended the throne. The ambassadors being obliged to keep their stations, could see very little of his Majesty; but their attendants, who staid below, could not get the least glimpse of him for the crowd of courtiers that was about him.

He fat about thirty paces from the ambassadors. His throne so glittered with gold and precious stones, that it dazzled the eyes of all the beholders. Next, on both sides of him, fat the viceroys, princes of the blood, and other great officers of the court, served with tea in wooden dishes. These grandees were all blue satin coats, curiously intervious with golds of dragons and serpents. Their caps embroidered with gold were decked with diamonds and other precious stones, which denoted their degrees and qualities. On each side of the throne stood forty of his Majesty's life guards, armed with bows and arrows.

This mighty prince having fat thus in magnificent state about a quarter of an hour, rose up with all his attendants; and as the ambassadors were withdrawing, de Keyzer observed the Emperor to look back after them. For what that gentleman could discern of him, he was young, of fair complexion, middle stature, and well proportioned, being cloathed in cloth of gold. They much admired that His Majesty suffered the ambassadors to depart without once speaking to them; but this is a custom generally prevailing among the Asiatic princes. The courtiers, soldiers and life guards, marched off in much disorder. Though the Dutch had a sufficient guard to clear the way, they had much ado to pass the street, for the multitude.

They were scarce sotten into their lodgings, when two of the chief of the council arrived in his Majest j's name, to request (the fight of) a furt of cloaths in the Dutch fashion. The ambassadors delivered to them a black velvet suit and cloak, a pair of boots and 'purs, a pair of filk slockings, boot-hose tops, drawers, a band, shirt, sword belt, and beaver hat: all which seemed so very rich to the Emperor, that he said, if the ambassadors wear such habits, how must their kings go cloathed? In the evening his Majesty sent back all the cloaths by one of his council, who very much admired the stuff of the hat.

It is the custom in China to treat ambassadors on the tenth, twentieth, and thirtieth days after their audience, in token that their assairs are dispatched; but the Dutch being in halte to return prevailed to have their seasts on three successive days, and the first was given them on the day of their audience.

At two o'clock, in the afternoon, the ambassadors were conducted with all the Kanton mandorins, officers and folders, to the Li-pu, or first minister's house, where the entertainment was given. To the same were invited the ambassadors of the Great Mogol, the Su-ta-tie, and Lammas. These two last, with their followers, sat on one side of the table, the two former with theirs on the other side. The first course was of fruits and dried sweetmeats; the second of boiled and roasted mutton, beef, and other meat. The dishes were brought to table by persons of quality, dressed in cloth of gold. For each of the ambassadors, and two of their attendants, a particular table was covered, with thirty silver dishes full of rare fruits and sweetmeats. The Emperor's steward sat alone upon an high bench, and next him two other great lords, all cross legged, who took care to see the ambassadors well entertained.

Before the ambassadors fat down, they were obliged to turn themselves towards the north, and bow three times, as if the Emperor had been present. The meat was brought

Nex dept a percura e often, the course, or of notler, come to vir il o i i findere; e e the que flue s, he afte d, chevier it was time, that the anne's central visual or visit for three days and nights together? for to the form neze points hid given eas. The ambelladors almed him it wis falle, and on acquaintic his highness, that is yet they had done or y little in their business, the andwered, that at prefent it could be no oth to ne; but flued them, that if they would come once more and falute the Emperor, a new trade fhould be grinted dream at the

expenses of only a few prefents.

At noon, they went to the fecond banquet, at which affifted forms of the prime perfons of the empire; with the Mogol ambaffador, who fit opporte to them. Oblerv ing, that the under Tu-tang was more open-heart I to him, the Moors, and other guests, than to them, they asked the interpreter the cause, and found that this great lord had received no prefer ts from them; although Pinxenton and the other Kanton mandorins had goods delivered to them at Nan-king fufficient for distributing to all the grand, es. Upon this they defired to know how their goods had been disposed of, but the truftees refused to give them an account; alledging, that they doubt not name those persons to whom thy were presented, lest it should come to the Emperor's knowledge: for this reason, and because their business was not yet dispatched as it out hi, the last banquet was defined till the fourteenth of October.

The under Tu-tang in the interim having had his prefents, the ambaffadors were received by him on that day, feemingly with the greatest respect and assection. After they had fat about an hour at the table, and drank once or twice about, the prefents were delivered to them in the name of the Emperor. They were spread in great order on two long tables that stood on one side of the hall. First, the present for the General Maatzuiker was delivered, which the amb Madors received kneeling, with both their hands: then the names of themselves and their followers being called over, their respective pretents were delivered to them bleewise upon their knees. Lattly, when they were ready to depart, they performed their obedience to the imperial throne, by thrice kneeling and bowing their heads.

The prefents were as follows:—To the General John Maatzuiker, three hundred tael of filver, four pieces of damaik, four pieces of black, and four of blue fatins; four picces of cloth of gold, two embroidered with dragons; four pieces of Thuys, twelve pieces of Pe-lings, ten pieces of Ho-kyen, four pieces of blue flowered damps, three

pieces of Ga-sen, sour pieces of Foras, and sour pieces of black velvet.

To each of the ambassadors, one hundred tacl of silver, four pieces of belings, four pieces of Ga-sen, four pieces of Ho-kyens, three pieces of blue fatius, three pieces of black, and three of blue damask, and one piece of black velvet.

To the fecretary Baron, fifty tael of filver, two pieces of Pe-ling, two pieces of Ca-fen, one piece of damak, one piece of cloth of gold, and one piece of yelvet.

To cash of their followers, fifteen tael of filver, and two pieces of Ploskyens. To the interpreter Carpentier, thirty tael of fil cr. To the interpreter Paul Durette, a

damask gown.

The mandoin Pinxenton had given him, a mandetin's gown, embroidered with golden dragons, which he was to wear immediately. Each of the other two mandoin's received one horse without a saddle. Each of the two captains, who had the command over the foldiers, who conducted them from Kanton to Peking, a gown of blue filk damask. Lastly, each foldier, to the number or twenty, received a coat of black and blue filk damash.

On the fixteenth, the Tatter loads, who had been often fent to the amballadors, caused fifteen waggons to be brought to early their goods; after which Plaxenton sent them notice to repair to the court of Li-pû, to receive the Emperor's letter to the governor-general at Batavia. They rode thisher about one o'clock, and were concluded into an anti-chamber, where one of the court of took the letter off the table, which was covered with a yellow carpet, and opening the same, declared to them the contents. It was written both in the Chinese and Tartar tongues, gilded on the edges, and painted on both sides with golden dragons: then miking it up again, he wapped it in a filk scars, and putting it into a box, delivered it to the ambassadors, who received it kneeling. Afterwards he took the letter again from them and bound it to the back of one of the interpreters; who went along with it before the ambassadors through the middle gate of the court; which was set wide open for the purpose. This ceremony was performed in great silence; neither was the least mention made at any of their entertainments of the Dutch negotiations.

The Emperor's letter runs thus:

The King fends this Letter to John Maatzuiker, the Dutch Governor-General et Batavia.

OUR territories being as far afunder as the east from the west, it is with great ditficulty that we can approach each other; and from the beginning till this present the Hollanders never came to visit us: but those who sent Peter de Goyer and Jacob de Keyzer to me, are a brave and wife people, who in your name have appeared before ne, and brought me feveral prefents. Your country is ten thousand miles distant from nine, but you fhew your noble mind in remembering me; for this reason my heart loth very much incline to you, therefore I fend to you -.. (Here the prefents are menioned.) You have asked leave to come and trade in my country, by importing and exporting commodities, which will redound very much to the advantage of my subects: but in regard your country is fo far diftant, and the winds on these coalts so oifterous, as to endanger your ships, the loss of which would very much trouble me; herefore, if you do think fit to fend hither, I defire it may be but once every eight ears, and no more than an hundred men in a company, twenty of whom may come p to the place where I keep my court; and then you may bring your merchandizes shore into your lodge, without bartering them at sea before Kanton. This I have TO thought thought good to propose for your interest and falety, and I hope to will be well liked of by your and thus much I thought to to make known uncomes.

In the appreenth year, eight month, and twenty-muth day of the tryn of Song-te.

Understablished Hong-ti Ho-pe.

The ambeffadors, on their return to their lodgings, were used by the commissioners to depart; all dging, that by the alage of the expire, they could not continue two hours in the city after having received their dispatch, if they would avoid falling in o term inconvenience: so that they were necessitated to quit the plantation, the taking leave of the grandees. By the means they had no time to take a view of anything also that you work notice; for duting their flay, they were that you in their had justicated to the transfer of the plantage of the provided with a plantage abroad to the their plantage, although they were provided with a plantage of the ambeful as received daily, for themselves only, fix action in flags, one goods, two pullet, loar or, of familiar, two tall of 11, the tall of tea, or tall, and one mediate of oil fix and of milon, one mediate of pappers, the lot i of head, now that i of meals, two hall fishes, and two tall of lutitions.

I his secretains only allowance was, one ketti of fresh meat, five measures of tea, one ketti of n le one measure of taufoe, sive coudrine of pepper, sour tack of suttati, four measures of oil, sour tack of mison, one katti of herbs, and one cup of arrac. Each of their followers received one ketti of fresh meat, one cup of arrac, two tack of herbs, and one katti of rice.

Wood and fruit of all fects were fent in daily in great abundance, besides China dishes: but the ambassadors sont and bought several other things for their table, and had them served up in a stately mover, to I tab. Chinese see what way they lived in Holland. After they had been before the Emperor, they received a double allowance, which was a favour seldom done to soreigners.

Leaving Pc-king, they travelled by lead to San-than-wey, where the imperial vessels, that brought them from Nan-king, lay expecting them. However, certain large junks, by his Majesty's orders, were provided to carry them: but these being slow, heavy failers, the ambassadors hired lighter vessels for more expedition; lest, arriving late at Kanton, they should be obliged to winter there. In these they embarked with the sartarian lords sent to attend them, and the Kanton mand rine returned by the way they went.

The thirty-first of October, they got to Lin-tsing, where they were treated nobly for two or three days by Pinkenton. Departing, with the wind at north, it blew so very hard and cold, that they were hardly able to endure it. The twenty-sirst of November they arrived at Nan-king, where they staid till the tenth of December; but the weather was so very bad and cold, that they could not stir abroad all the while they were there.

January the fifth, 1657, they got to the city Van-nun-gan, whose governor presented the ambassadors with some refreshments and caudles; which were made of a thick oily juice, issuing from trees, and burnt very clear as well as sweet. The eleventh was extremely cold. The sisteenth they arrived at Man-gan, from whence they crossed the mountains in chairs carried by thirty soldiers, and got, in one day, to Nan-hyong, where they again took water. The twenty-seventh, they came to Fa-san, a delightful village, (which in going they passed in the night), and next day arrived at Kanton.

In the way to their lodgings the Emperor's letter to the general was carried by Baron the fecretary upon both his hands, having a fereen before him: next followed the ambifiadors. The cannons aboard the ships were discharged twice. They alls and streets of the city were crowded with people to see them pass. Next day the embassisadors went in state to salute the viceroys, the young king's mother, and the Tale g. The vicer as received them very friendly with a d'sh of tea, and had some discourse concerning their business. The Tu-tang, after suffering them to wan two hours at his secretary's house, sent them word, that he would give them audience when Pinxent in was come.

The first of February, they were treated nobly by the old viceroy; the second by the young one; and on the third, by Pinxenton. The ambassadors waiting money to purchase a new year's gift for the viceroys, at last obtained a sun by the interest of Lantsman, which he had made during his abode at Kamon in their release: but when the presents were brought to the viceroys, they seemed distalished with them, and demanded not only interest for one thousand sive hundred call of silver, which they had disbursed for the use of their servants upon their departure to Po-king; but likewise insisted, that the ambassadors should immediately pay the three thousand size hundred tael of silver which they had promised to the viceroys for a free trade at Kamon. This business occasioned much trouble, and at last the ambassadors were necessated to comply with their demands, to prevent turker mischief: for they sound that the common people had been dealt withal, to affront them as they were along the streets; and not long after, Paul Duretti, one of their best interpreters, was barbarously murdered in his own house.

Hereupon the ambassadors went immediately to take leave of the viceroys: but they refused to give them audience, and only fent out word, that they were not to export That night they went aboard, and fet fail early in the morning: but any Tartar arms. in a few hours, the wind changing, they were forced to come to an anchor again not The twenty-third, the stewards of the viceroys, and the captains of far from Kanton. the guards, with the mandorins who had accompanied the ambas adors in their journey, came and treated them in the name of their masters with their Sam-sou, in their king's own diffies, wishing them a fase voyage, and speedy return. As soon as their visitants were gone, they hoisted sail and came upon the twenty-eighth, about sun set, into the harbour of Hey-ta-mon. The fecond of March, passing in light of the famous village of Lantam, they shot beyond Ma kau. The eighth, they came to Pulo-Timon: here they met with shoals of slying fish. The twenty-first, they saw the island Linga, on the coalt of Sumatra; and through the straits of Banka, between Sumarra and Java, arrived on the thirty-first at Batavia, having spent twenty months and six days in this tedious and expensive voyage. The value of the presents amounted to five thousand five hundred and fifty-five pounds one shilling and seven-pence sterling: the expences of the voyage, four thousand three hundred and twenty-seven pounds and ten-pence. In all, nine thousand eight hundred and eighty-two pounds two shillings and five-pence.

Nicuhoff was of opinion, that as the Emperor was at war with Koxinga, the Dutch might obtain a free trade by proposing to affish his Majesty with their ships to subdue that arch pirate; which expedient they some years after went upon.

.

TRAVELS

FR(I

ST. PETERSBURG IN RUSSIA, TO VARIOUS PARTS OF ASIA, In 1716, 1719, 1722, &c.

By JOHN BELL, of Antermony

To the Governor, Court of Affistants, and Freemen of the Russia Company and to the Brill H Fredoric, in Russia, the following Relation of Travels, &c. is respectfully inscribed, as a Testimony of Gratitude for the Favours received from many of them,

By their most obedient, and very humble Servant, THE AUTHOR.

Antermony, O.7. 1, 1762.

THE PREFACL.

In my youth I had a strong desire of seeing foreign parts; to satisfy which inclination, after having obtained, from some persons of worth, recommendatory letters to Dr. Arcsking, chief physician and privy-counsellor to the Czar Peter the First, I embarked at London, in the month of July 1714, on board the Prosperity of Ramsgate, Capt. Emerson, for St. Petersburg. On my arrival there, I was received by Dr. Areskine in a very friendly manner; to whom I communicated my intentions of seeking an opportunity of visiting some parts of Asia, at least those parts which border on Russia. Such an opportunity soon presented itself, on occasion of an embassy then preparing trom His Czarish Majesty to the Sophy of Persia.

Artemy Petrovich Valensky, a gentleman of a family of distinction, and a captain of the guards, was appointed ambassador by His Majesty. Upon his nomination, he applied to Dr. Areskine to recommend a perion who had so no knowledge in physic and surgery, to go in his suit in the embassy. As I had employed some part of my time in those studies, the Doctor recommended me; which he did in so cordial a manner as produced to me, from the ambassador, many marks of triendship and regard, which substituted not only during the journey, but also continued from that time to the end of his days. The Doctor, at the same time, recommended me to the College of Foreign Affairs at St. Petersburg, by whom I was engaged in the service of Petersthe First.

Having acquainted the reader with the manner of my entering on the travels, which are the principal subject of the following sheets, I shall take the liberty to say, that I have, through the whole, given the observations which then appeared to me worth remarking, without attempting to embellish them, by taking any of the liberties of exagnostics or invention for exactly invented to travelless.

geration or invention frequently imputed to travellers.

I took notes of the subject of the following treatife, by way of diary, from time to time during the course of my travels, intending nothing further at that time than to keep them as helps to my memory, that I might, as occasion offered, communicate, in conversation with my triends, what I had observed worth remarking; and that I might be caralle of giving information to others who might be desirous of it, on their being to make the same journies.

About four years ago, spending some days at the house of a Right Honourable and most honoured friend, the subject of my travels took up a great part of our conversa-

Ą

tion, during which, upon his enquiring occasionally, whether I had taken any notes of the places, &c. through which I had passed in my several journies? and, upon my an-Iwering in the affirmative, he was plcased to take some pains to engage me to promise that I would collect my notes and observations, and form them into journals, as complete as the time elapsed would admit, and communicate them to the world.

It was not without reluctance that I fet about this work, which, had I thought it worth the public's acceptance and perufal, I would have done long ago. Such as it is, I now offer it to them; and flatter mysclf, (with hopes at least,) that the pleint is of the style in which it is written will be of no prejudice to it with candid readers, who may find in

it fome things new, and of which they would choose to be informed.

In regard to the translation of Mr. De Lange's Journal, I have given it for two renfons: -First, because it continues the negociation begun by Mr. De Ismaylofi, in the course of which Mr. De Lange furnishes the reader with a distinct detail of the manner of transacting affairs with the ministers of state, of their chicaneries, &c. at the court of Secondly, because I do not apprehend it hath ever appeared in the English language; at leaft, have made what inquiries I could, to find if it had been translated, which have been all fruitless.

As I well knew the worthiness and integrity of Mr. De Lange, and I am fully perfunded that his Journal was genuine, though perhaps obtained furreptitiously by the editor, I have cloted the translation with the end of Mr. De Lange's Journal, on his arrival at Selinginsky on the frontiers of Siberia; having omitted an addition to it, made by the editor, of the trade and monies of China; concerning which, the editor, when he enters upon it, acquaints the reader that he had not the means necessary for fusficient information. For the rest, the translation is just, as may be seen by comparing it with the original.

Antermony, Oct. 1, 1762.

JOHN BELL.

Names of the principal Persons who composed the Train of the Ambassador Artemii Petrovich Valensky, viz.

Secretary,

Gregory Christopher Venigerkind.

Captain Engineer,

Jaques de Vilette.

Gentlemen of the Embassy,

Matphe Parfilich Kartzoff,

Adrian Ivanovich Lopuchin,

The Author of this Journal.

Pricft,

Hylarion, a Monk.

Interpreters,

Vassile Kurdestsky,

Alexie Tulkatzoff,

Demetry Petritz.

Clerks or Writers,

Vassile Shadayoff,

Alexie Buchtaryoff.

With many others, viz. a band of music, consisting of trumpets, kettle-drums, violins, hauthoys, &c. carpenters, smiths, tailors, valets, and footmen, amounting in all to above one hundred persons; besides a troop of twenty-five dragoons for our escort, from Altrachan to lipahan.

CHAP. I.— From &t. P to jh re to Cyfur.

Venigerkind, De Villette, and a nade by the country with the natural of the confiderable, was then in its infarcy, having been found the confiderable was then an Peter the built, to violate a natural of the rest and quarter.

St. Petersburg is situated in firsty degrees north latitude, partificing the could not of ingria and Carelia, and partly on different idends for and by the river Neva, which charges itself by sour channels into the Cult of Finland, a little below the city. It is defined by a strong castle, built with some and brick, necessible to this of sorce, there is ingred but eight feet water on the bar. As the Czar had detended to some a city 'less and not to trust to time for the growth of a place which he had charm for the teat of government, he assembled inhabitants from every province of his confine, and ellured strangers from most parts of Europe; so that the place was even well peopled, and had not the appearance of a city so lately founded.

The adjacent country is generally covered with wood, confisting of various kinds of

pines, birch, alder, aspine, and other trees natural to the northern climates.

To the fouthward, especially along the shore towards P-terhosi, the country in sun-

mer is very pleafant with country-feats, corn-fields, and med dows in enipericd.

The river Neva falls out of the Ladoga lake at Sluffelburgh, a strong castle about fixty verst above St. Petersburg. It is a noble stream of clear wholesome water, with this peculiar quality, that it is seldom muddy. It contains a great variety of excell nt sish, which supply the market all the year, and is navigable to the Ladoga by stat-bottomed veilels.

The woods on each fide are stored with game; such as hare, which are white as snow in winter, and turn brown in summer; wild-deer, bears, and wolves; the last are to bold that I have known them in the night-time carry off a dog from a man's foot in crossing the river on the ice. There are also elks about the Lake of Ladoga. As for wild sowl, sew places can boast of greater variety. The chief are these: the urhain, ralled in French coq limoge; this bird is black, with bequisted red streaks about its head and eyes. The cock is about the fize of a turkey; the han is less, and of a brown colour. The heath-cock, in French coq de brusere, of the same colour and marks as the former, but not so large. The partridge, which the French call gilinot. These three kinds perch on trees, and in winter feed on fir-tops, and on crane berries, which they scrape from under the snow. There is also found here the common English partridge; it is however but rare. The tarmachan, a bird well known in the northern parts of England and Scotland, are here in plenty.

As foon as the ice goes off in the fpring, vall flocks of water fowl come hither from the Caspian Sea, and other southern regions, to hatch. These consist of swams, gette, a

variety of wild-ducks, teal, &c.

Snipes and wood-cocks breed here; many of which are catched by the Russians, who are excellent fishers and sportsmen.

* Some small portions of these valuable travels do not relate to Chine, but it was thought adviseable to present them in one continued narration, as published by the author,

VOL. VII. N N From

From St. Petersburg we directed our course along the western bank of the Neva, till a came to the brick-works. The weather being very hot we halted here a few hours, and in the evening pursued our journey to a small river which falls into the Nevamout thing verse above St. Petersburg. At this place we let our horse go ac grade, and lay in our waggons till the morning; but were much molested by the gnots and mass itse.

West morning, we command our journey, and passed a village called Ishora, where the inhabitants speak a language, and wear a dress different from the Russian, though they profess the some Creek religion. It is probable they are the descendants of a co-

long formally brought lither from fome of the provinces of Livonia.

fluit day we came to the Volchova, a great river issuing from a lake called Hmen, not far distant from the city of Nevogorod, which discharges itself into the Ladora. Here we left our horses, and, putting our waggons and carriages on board buts, were up the river, using overs or falls by turns as necessity obliged us. The baths of the Volchova are covered with many villages and fruitful constitutions mixed with natural woods. We found, as we went along, plenty of fish and count provisions.

The 19th, we arrived at Novogorod Vell'oi, or the Creat Novogorod, so called to distinguish it from many lesser to us of the some name. This city stands about two honored vest south-east from Petersburg. The Velchora runs through the weldle or it, over which there is a wooden bridge desended by a fortress. There are many well-built churches in the rown, and a great number of atomasseries in the neighbourhood, pleasantly situated, which form a very agreeable prospect. It was formerly a place of great note, but is now much decayed. Here is an archbishop who enjoys a very considerable revenue.

July 22d, having put our carriages on board another bank, we failed up the river to the Lake Iman; and, leaving it on our right hand, entered a finall river called Mfl., and at night carre to Branitz, a large village, thirty verif from Novogorod. Here is a nicharged our boats; and, having procured horses, we proceeded next morning thirty verif to the village of Zaytzoff, from thence to Krasnyslanky, and then is knowledge, where we changed horses, with which we travelled to Yashibitza. Here begins the Valday hills, which run to a great distance from east to west, but are only about twenty or thirty verif broad. They are mostly covered with wood. We came next to the town of Valday. This place is pleasantly situated at the foot of the hills, adjoining to a large lake of the same name, in the middle of which is an island, whereon stands a morastery. The country in the neighbourhood is hilly, but not mountainous, enhibiting a beautiful variety of plan and rising grounds.

The next stage is Zimögory, and after that Vishnoyvolotzke. Here is a conal of considerable extent, cut by Peter the First, which opens a communication by water from St. Petersburg to all the places on the Volga, and many other parts of Russia, and proves a great encouragement to trade, and very advantageous to the merchant, in such

extensive tracts of land.

Next day we came to Torshoak, a small town.

The 29th, we arrived at Tweer, a populous and trading town, defended by a crite; it is the capital of a province, and a bishop's seat. It derives its name from a rivukt in the neighbourhood, called Tweertza, and stands on the banks of the famous river Volga.

The Volga, known formerly by the name of Rha, has its fource not far to the west-ward of Tweer. At a small distance from the source of the Volga, two other noble

rivers take their rife; the Dnieper, or Bor sthee s, which runs into the Buch one of Otzakos and the Duine, which allo into the Ballo et Righ.

The Volga, after visiting it is come to the for herar more for independence, at this into the Calpin S a, about Tay veril below Varechin; and, it is high fong course, the is not a single-catalact to entercapt the navious. As to take, no liver in the world can assord greater variety, better or their hand, it is high.

cuantities.

Here we tailed the fields, a fifth much and gene the flactual; it is of the fire a kind, but foldom grows above thirty inches long. It is form, in other research to but the Volga produces the best and in one total region to contain, after being cleaned and dealed. In the could find a line on the had from the infig.

The fame day, having changed borks, we proceed a on our our just to Comban, a large village, on the west bank of the Volga. From the process are the last to the land

icabe, containing a full view of the windings of that liver

From hence, attain affing many villages, we cannot a kind, protest a get to the lad flage to Blote. The country between tileen and Meder is given to the many tults of wood, of unequal liquels, leathered among the corn fields, but to a final

to beautify that country, which had no great appearance of le tility.

About I ver verif from Mesco, we passed through a less vallege, called I at at a similabited by Christians of the Lesson church, named Georginians; their ancient country was Guesislan, now one of the northerly provinces of tends; they were driven from their nuise country by the perfecution of the Persians; and, laying into Russis, they there found an hospitable reception, many of them being couployed in the service of the Emperor.

From this place there is a view of the city of Mosco, and, at the did noe, for cities in the world make a finer appearance: for it flands on a using ground, and contains many flately charcles and monatteries, whole Treples and monatteries are ground, covered

either with copper gilt or the plates, which 'in e like gold and fiver in the lun-

August 2d, we arrived at the city of Moleo. I have omitted the name and districts of meny inconsiderable places through which we paid ; let it suffice, this the district between St. Petersburg and Moseo is about seven hundred and thirty year; and, although the hot weather detained us long on the road, in winter the paragree is easily performed with steel ses in three days.

On the 10th August, my friends Messe. Large and Girvin, arrived here in their way to China, on a message from the Czar to the Emperor of China: the first was a

Swede, and the other a physician, from the county of Air in Scotland.

We staid in Mosco about three weeks, having many things to prepare for so long a journey. This city, standing on an eminence, as was already observed, commands an extensive prospect of a fine plain country, adorned with woods and clumps of trees, monasteries, and gentlemen's seats: the river Mosco runs almost through it, which emptying itself into the Volga, preserves a communication with all the southern parts of Russia, and even with Persia. From these advantages in situation, this place is very convenient for trade, which slourishes here to a considerable degree.

The city is fortified with a strong brick wall, called Beligorod, having embrasures and a ditch. Within this is another wall, called Kitaygorod; this last includes what is called the Crimlin, in which is the old imperial palace, compounded of a number of buildings, added to one another at different times. Some of the apartments are very spacious, particularly that called Granavitapallata, where audience was given to foreign ambassa-

dors; adjoining to the palace are many edifices, where were held the course of just a here also stands a losely tower, wherein is hung the langust tell and would, called be Veleke, weighing about ten thousand poods; which, recleaning each pood at mean thirty-six pounds English, will amount to about an handred and first tou weight. The sides these, there is a cathedral church, and an arsenal, well surpfined with brass cannon, mostars, and other warlike stores. Beyond the brick walls already mentions in there is an earthen one, of great circumference, round the whole; and without this the suburbs also are very extensive.

The great plency of provisions in this place surprised me not a little; I sound be fruits of different kinds, which I did not expect, particularly excellent melons, and a

boozes, or water-melons.

August the 21st, we shipped our baggage on board six small barks, adapted by their construction, either for sails or oars, as should be most convenient, and fell down the river. The ambistador only remained at Mosco, waiting for some dispatches from court. In the evening we passed Koluminstra, a village pleasantly situated on the south side of the Mosco liver, near which is a large country-house with gardens and orchards, belonging to the court.

October 3d, we came to Kolumna, a fortified town. Next day, the wind being favourable, we hoisted sail; and, after going about three verst, entered the river Oka, into which the Mosco falls, and loses its name. The Oka rises in the Ukrain, and runs to the south-east, it contains a great quantity of water, and is navigable very far

up the country.

The 9th, we arrived at Pereslave-resansky, a large town to the left, situated about a verst from the river Oka. It is the seat of an archbishop, and the country around is

very fruitful in corn.

The 16th, we came to Kassimova, formerly the residence of a Tartar Prince; but the samily is now converted to Christianity, and retains only the old name of Kassimovsky Czarevitz. The place is at present inconsiderable. There are still here a sew I salvemetan Tartars, who are allowed the free exercise of their religion, and have a small oratory. I accompanied our interpreter to visit one of them, an old acquaint are of his: he was a very decent man. We saw a horse newly killed, which they intend the eat. They prefer this kind of food to beef, and invited us to share their repost; which we declined, pretending we had not time.

The 17th, we left Kassimova; and the 21st arrived at Murum, a pretty large town, and a bishop's see. The country produces plency of corn. About this place there are a few idolatrous Tartars, who live in little dirty cottages, thinly scattered; they are a very simple and harmless people; how or when they settled here is not known.

The 22d, we passed a large village called Paulovoperevoz, the property of Prince Tzerhaskoy. Its situation is on the south side of the river: here the banks are much

higher than above this place.

We came the 23d to Nishna-novogorod, a great town, defended by a castle standing on the high banks of the Oka, opposite to where it loses itself in the Volga, which now forms a mighty stream.

The following day we dined at the governor's, where I saw General Creutz, and several other Swedish officers who had been taken prisoners at Poltava, and lived here

at large.

The 25th, we failed from Nishna, and soon entered the Volga. The wind being northerly, we run along at a great rate; but, in the night, the river was suddenly filled with sloating ice, which drove us on a sand-bank, where we lay a-ground that night and

all the next diver however, after the little and latigue, we got clear, change it to floating ice for coming d. ! id charged to the path, and the weather turned and a which we let a co

med and the which we let a to the to the second to the second towns, both on the

right.

Hovember 3d, vercame to the color of a second, on the fame hand.

In this country are caught to the second of the second ones, which they must expect the second ones. Tarrars fly them at anti-lep soul bases. I have a make a tall a raid duck out of the waer, when nothing of l'or could be perceived but the bul, which the was obliged to put up for air. Some or them are as white as a dive. The the mer of catching them is very simple: they creet a tall pell upon a hill, free four wood, on a bank of the river, near which is placed a day-not; under the not forme finall but's are lattered by a cord, which the hawk-catcher pulls to make them shares, on to apprarance of the hawk, who observing his prey, first perclus on the pol; and who h though to scize the birds, the person, who is conscaled by the bulles, draw the not and cover-

The 4th, we passed Kay-gorod, and the 5th, Swiio i; the first on the lest, and the other on the right hand. This evening to arrived before the town of Cazan; and hauled our boar into the mouth of a faull river, from which the town has its name, cilled Cazuki. We in inded to continu our voyage directly to Aftrachan; but, before we had made the necessary preparations at Cazan, the winter fet in, and on the Cah of September the Volga was filled with floating ice; this determined us to winter at that place; we there'ere unloaded the boats, and came to the city, where we were hospitably received by the governor.

C IAP. II.—Occurrences turing our Stay at Gazan; our Journy thence to Aftiacher.

CAZAN is about I was hundred and thirty-five york from Mofco by land, but much more by water: it is attest disbott five verit to the aceth of the Volga, on a high bank of the rivulet Cazanke, which is navigable from this place to the river. The town is firing by fituation, and as ended by a coffe, fortified with walls of brick: within the cited I are the cathedral church, the palaces of the archbishop and governor, and the apartments for the courts of justice: the town is funced with a ditch and palifades. The fuburbs are inhabited chically by mechanics, except a first or two possessed by Maho. metan Tartars, the posterity of the ancient natives; they live very decently, have the free exercife of their religion, and many other privileges; fome of them are very rich by the trade they carry on to Turkey, Persia, and other places.

Cazan was anciently the capital of a part of Tartary, and the feat of government, where the royal family refided. It was taken from the Tartars by Czar Iyan Vafiloviz, in the year 1552, in consequence whereof, an extensive country to the southward eafily fell into his hands. The conquered princes were converted to Christianity, and

had lands affigned them in their own country, where the family flill subfifts.

The country adjacent is very pleasant and fertile, producing wheat, rye, barley, cats, and feveral kinds of pulse. The woods to the fouth and well confift of stately oaks, fufficient to supply all the navies in the world; and from honce St. Petersburgh is abundantly furnished with timber for all the purposes of ship-building, by an easy conveyance

all the way by water. The woods to the north and east, which are of prodigious extent, confist of thees of all forts.

In the spring, when the snow melts, the Volga overflows all the low grounds, screetimes to a great distance; the consequence is the same with that produced in Egypt, by the inunctations of the Nile; for the mud carried down by the stream, fertilizes the country to a great degree; so that on the islands in the Volga, some whereof are verlarge, and overgrown with tall trees, I have found plenty of excellent asparague.

Besides the steelett, there are plenty of sturgeon, and a fish about it e size and near the shape of the largest falmon, which is very delicious, and for the whateness of its steel.

is called the white fish.

The woods afford abundance of game; and, in the spring, great numbers of water-fowl come hither to hatch from the Caspian Sea. At Cazan, we found good beef,

muttor, and tame poultry, and provisions of all kinds very reasonable.

There is here a confiderable manufactory of Russia leather, the hides here being reckoned the best in the empire: great quantities of this leather are exported to Leghorn, and other parts of hurope, and may be confidered among the steple commodities of this country: the strong smell of this leather is acquired in the dressing, for instead of oil, common in other places, they use a kind of tar, extracted by size from the bark of the birch-cree; which ingredient the Russe call deuggit, and which tree is here in greater abundance than in other parts of the world; and then they dye them with logwood.

Besides the idolatrous Tariars, formerly mentioned, there are two pretty numerous tribes called the Tzerimish and Tzoowash; they speak a language quite different from the Mahometan Tartars in these parts, who use a corrupted dialect of the Arabic. The Mahometans likewise have some learning; but the Tzerimish and Tzoowash have none. They have a tradition among them, that, in former times, they had a book on religion; but as no body could read it, a cow came and swallowed it. They pay great veneration to a bull. From whence they came is unknown; but, from their complexion, it is probable they are from Asia. They live by agriculture; and seem to be an inostensive kind of people. Their huntsmen offer in sacrifice, to some deity, the sirst creature they catch. Hence some curious men have imagined these people part of the ten tribes of the lews, expelled by Shalmanezer. I advance this only as a conjecture, which every reader may sollow or not, as he pleases.

By accident, I met with an Englishman at this place. He was by trade a carpenter; and had been in the Russian service; but, being suspected of descring, he was condemned to banishment, to this country, for a certain time; and, notwithstanding that was elapsed, the poor man, deprived of all means of afferting his liberty, remained still in the same situation. He bought a Tzerimish wife from her father, for six roubles, about thirty shillings sterling. He brought her to visit me. She was a woman of a cheerful and open countenance, and dressed in the manner of her country; of which,

for its fingularity, I shall give a short description.

Her hair was plaited round her head, in many locks, but that on the back part longer than the rest, at the end of which was tied a tassel of red silk, and in the middle a small round brass bell. About her head was a sillet set with small shells, instead of jewels, and hung all round with silver pence. Above this was a piece of linen so artfully plaited and done up, that it looked like a grenadier's cap; at the top was a silk tassel, with another brass bell, which gingled as she turned her head. The rest of her dress was clean, though homely; and the whole seemed becoming enough.

and fail, on the 4th of June 1716, we left Cazen in eight backs, and rowed down the river with greet velocity. In the night, one of our boats was driven, by the a pidit, of the current, to none the velocity and fluck fail between two trees, upon which the perfection of the confequence, however, various for the veffel was got off next day vith inconfiderable damage.

The 7th, we passed a small town called Tetoosk, and the 9th, Sinbirs v, pretty kere; and the capital of a previoce of that name, both to the right. Sinbirs v is left nded by a castle. Near this place are evident marks of camps and entrenchments, which I was teld were the works of the great Tartar general called Timyrak-tack, or Lame Timyr, or Tamerlane, who came to this place with a great army; but, being informed of an

infurraction in his own country, Samarkant, now Bucharia, returned home.

The 10th, we put oil from Sirbirtky with the wind contrary, which greatly retarded our progress. We passed two hills, one of them exhibiting a very beautiful prospect, the other containing mines of sulphur, as clear as amber. We passed also a mound of fand, of considerable bigness, in the middle of a plain, where they say was buried a famous Tartar Prince called Mamay.

The 20th, we arrived at the town of Samara, fituated to the left, in a fine plain. The place is but finall, and fortified only with a ditch and palifades, with wooden

towers at proper distances, mounted with cannon sufficient to defend it against the incursions of the Tarrars, called Kara Kalpacks, or Black Kaps, who inhabit the desert to the eastward of this place.

This tribe of Tartars is not very confiderable; and, when their chiefs are united, which feldom happens, can fcarce raife above ten or twelve thousand men, who are all mounted on horseback; because, in their long marches, to rob and plunder their neighbours, nothing but horse could be of any use. They live always in tents, with their flocks, removing from place to place, as led by inclination or necessity. Their weapons are bows and arrows, and sabres; some of them use fire-arms. While we were at Samara, the inhabitants were alarmed with the approach of two or three thousand of these people, who encamped about three miles distant. From one of the towers I could plainly see their camp, and them riding about it. As they had not artillery, the garrison was in no danger, though so weak, however, that it durst not at this time attack them. The people were obliged to keep a constant watch to defend their cattle. This place is reckoned about three hundred and fifty verst distant from Cazan.

The 21st, having provided fresh hands for the navigation of our barks, we departed from Samara; and, the weather being calm, rowed down the river, which is here very broad. The western bank is very high, but the eastern quite flat. The fields on both sides are very fruitful, but especially to the west, where the grass grows very high, intermixed with sage, thyme, and other herbs; there are also some woods of oaks. A few hundred acres of such land would be of great value in England, though it is here waste and uncultivated.

We came the 25th to the Ismeyovi-gory, or Serpent-hills, so called from the windings of the river at this place; and, after passing several towns, and many villages, all on the right, we landed at Saratof, a large town on the same side, about eight hundred and sifty verst from Cazan. It is but slightly fortisted with a ditch, wooden walls, and towers mounted with cannon, and defended by a garrison of regular troops and Cossacks.

We dined next day with the Governor, who entertained us with great variety of provisions, particularly fish, and very fine mutton.

After dinner, a party of us crossed the river, to visit a great horse-market, held by the Kalmuck Tartars. We saw about five or six hundred of these people assembled in a field, with a number of horses, all running loose, except those on which the Tartars were mounted. The buyers came from different parts of Russa. The Tartars had their tents pitched along the river side. These tents are of a conical figure. There are several long poles erected, inclining to one another, which are fixed at the top into something like a hoop, that forms the circumference of an aperture for letting out the smoke, or admitting the light. Across the poles are laid some small rods, from four to six seet long, and saltened to them with thongs: this frame is covered with pieces of self, made of coarse wool and hair. These tents afford better shelter than any other sind, and are so contrived, as to be set up, taken down, solded, and pasked up, with the self-and quickness, and so light, that a camel may carry sive or six of the

The continue of the continue o

They are armed with bows and arrows, a fabre, and lance, which they manage with great dexterity, acquired by constant practice from their infancy. They are men of courage and resolution; but much afraid of cannon, which puts their horses in disorder.

As they are almost always on horse-back, they are excellent riders.

The dress of the women differs little from that of the men; only their gowns are somewhat longer than the coats of the men, a little ornamented, and bordered with party-coloured cloth. They wear ear-rings, and their hair all plaited in locks. The better fort dress in filks in summer. It must be observed, for the honour of their women, that they are very honest and sincere, and sew of them lewd. Adultery is a crime scarce ever heard of. The Tartars make very good and faithful servants; and the more mildly they are used the better they perform their duty; for their wandering unconfined manner of life naturally inspires them with sentiments of liberty, and aversion and hatred to tyranny and oppression.

All their wealth is their flocks. Like those who lived in the early ages of the world, they have camels, horses, cows, and sheep. The horses are of a good size for the saddle, and very hardy; as they run wild till they are sometimes six years old, they are generally headstrong. They are sold at this fair at sive to sisteen or sixteen crowns, and the strong well-shaped natural pacers much higher. They have sew camels, but many dromedaries, who have two protuberances on their backs. Their cows are of a middle size; the sheep large, having broad tails like those in Turkey; the wool.

coarse, but the mutton very fine.

In the preceding century, a Kalmuck prince, named Torgott-Chorluke, came from Alack-Ulla, (which fignifies the spotted mountains), a country situated between Siberia on the north, and India on the south, to the borders of Russia; and brought along with him about fifty thousand families or tents, as they sometimes reckon. In his march westward to the Volga, he defeated Eyball-utzick a Tartar prince, who lived in tents beyond the river Enbo. Advancing forward, he met three other Tartar chiefs, named Kitta-haptzay, Malebash, and Etzan, whom he also defeated; and at last settled to the east of the Volga, under the protection of the Russians. Chorluke had fix sons. Dangtzing, the eldest, succeeded him in the government or chanship.

The present chan, named Aijuka, is the fourth from Chorluke, and is much effected in the East for his fagacity and justice. I am informed that the reason why Chorluke left his own country, was a dispute about the successfully tried his fortune in the being engaged on the weakest side, and having unsuccessfully tried his fortune in the field, at last took the resolution of abandoning his own country altogether. These people are generally called the Black Kalmucka, though they are not black, but only

Iwarthy.

Gee have no money, except what they get from the finding and their other needs pours, in exchange for came. With this they buy meal formetings, but stable cloth, fill from, and other appared, for their women. They have no mechanica except those who make make. They would all labour it the greatest flavery, then only employ their make appared so can menaphy their notice, and human. If they are suggested a feet and so can make appropriately and so can always the make the base place and work also a Russian. Their contains a period stable special and contains a Russian. Their contains a period stable special and contains a Russian. Their contains a period stable special and contains a Russian in their contains and the special special and appropriate special and appropriate special special and appropriate special spe

kind of food fails, they have always many spare horses, which they kill and eat. They broil or roaft the steff before the fire, on pieces of broken arrows, and never eat it raw, as is commonly believed, unless compelled by necessity. They have, indeed, large thick pieces of horse slesh, smoked or dried in the sun, which they eat; but this cannot properly be called raw. I have tafted fome of it, and thought it not amifs.

As to their religion, I can say little: they are downright heathens; and have many lamas or priefts, who can read and write, and are diffinguished by their yellow habits.

Their high priest is called Delay Lama, and lives far to the eastward.

July 1st, we put off from Saratof; and the 2d, 7th, and 9th, passed the towns of Kamoshinka, Czaritza, and Tzorno-yarr, all situated on the west bank, and fortified in the same manner as Saratof. At the first of these places, Captain Perry, an Englishman, with many workmen, was employed in cutting a canal between the Volga and the Don, which would have opened a passage to the Euxine Sea; but the ground being very hard, and rifing in some places considerably above the level, the enterprise was laid afide, though the distance was not above fifty verst.

From Tzorno-yarr to Aftrachan, it is not fafe for Russians to travel on the western banks of the Volga, on account of the Cuban Tartars, who are their To the east, however, there is no danger, as the Kalmucks are friends. On the islands in the Volga, I observed great quantities of liquorish growing wild.

The 13th, we arrived fafe at Astrachan, and were lodged in the citadel. This place was taken from the Tartars in the year 1554, by the warlike Czar Ivan Vasiliovitz; whereby all his conquests on the Volga were secured, and the way prepared for farther extending the Ruffian dominion to the fouth and east, which hath been fuccessfully attempted fince his time.

CHAP. III.—Occurrences during our Stay at Astrachan; our Journey thence to Shamachy.

ASTRACHAN is fituated about fixty verift from the Caspian Sea, on an island in the Volga, having the main branch of that river to the westward. It is fortified by a firing brick wall, with embrafures, and square towers at proper distances. cliadel are the cathedral church, governor's palace, and the public offices. There is a creek or haven for ships that navigate the river and the Caspian Sea. The houses are generally built with wood, conveyed in rafts along the river; for the neighbouring country produces nothing, being all a barren delert. To the westward there is no water to be found for many miles. The islands, however, adjacent to the town, are very fruitful, and produce excellent grapes, transplanted hither from Persia and other parts; allo water-melons, eftermed the best in the world; and various kinds of muskmeions, peaches, cherries, pears, apples, and apricots.

there are leveral targe vineyards, belonging partly to the court, and partly to private There is a Frenchman who imperintends them. The wines are very good Canal and the last, but carnot bear carriage, for the leaf, motion readers them Company of the Compan

a mile below the town are collected great quantities of common falt. The g pits, into which they introduce the water; which, being exhaled by the heat 1, the falt is left upon the bottom. After gathering, they transport it along in large barks of about five or fix hundred ton. The gun-powder manua little above the town; in which, and in the mines of faltpetre, near this employed a great number of workmen for the service of the government. imate is healthy, though very hot. The weather is generally calm, during eat numbers of gnats and mulkitos infest the inhabitants. These vermine indeed imes dispersed by a breeze from the sea, which renders this place very pleahey are hatched and sheltered in the marshes towards the sea, which are so in with strong tall reeds that they are altogether impassable.

lahometan Tartars here live without the town, and have the same privileges as places. I met several of their women in the street with rings in their noses, ere of different value, according to the rank of the person who wore them; gold, and others fet with precious stones. On inquiring the reason of such a ornament, I was told, that it was the consequence of a religious dedication of fons to the fervice of God: it is made by the parents, even while the mother ant; in token whereof, as foon as the child is born, they put a ring in the oftril, which continues there till death. I have seen some with two such

chan is a place of confiderable trade to Persia, Chiva, Bucharia, and India. ple of these nations have a common caravansery, where they live and expose ods to fale.

Armenians carry on the greatest part of the Persian trade; for the Persians ves feldom go out of their own country. There are a few Indians, or Banians, blace, who have a streak of yellow down their forehead, made with faffron or her vegetable. They are a good-natured, innocent kind of people, and live on fruits.

market is plentifully supplied with provisions of all kinds; but especially fish, h no place that I know abounds with fuch variety. After the fale is over, which ly about ten o'clock, what remains of the common forts is thrown to the dungiere the hogs and poultry feed upon them; and hence it happens that their very nd fowls tafte of fish. It would be tedious to mention all the different kinds ce affords: I cannot, however, omit the carp, which for fize exceeds all of that ever heard of. I have seen some of them of more than thirty pounds weight, t and luscious. Those caught in autumn are carried to Mosco frozen, and fold nd in the places adjacent.

lexyed also a great variety of uncommon birds, whereof I shall describe a few that most extraordinary.

first I shall mention, called by the Austiana Baba, is of a gray colour, and larger (wan; he has a broad bill, under which hangs a bag that may contain a quart e; he wades near the edge of the river, and, on leeing a floal of try, or imall ipreads his wings and drives them to a litation, where he pobbles as many of the can appear he least and then going albore, lests them, or carries them to his

e cear lives are page and the second of the

There is another about the same size, also white; but its feet are long and red, and its bill crooked and round, and as red as coral: its wings are adorned with some bright scarlet feathers.

Besides these, I saw a kind of duck, something bigger than the common fort, called Turpan; it is easily tamed, and much admired for its beauty, and a certain kind of noise peculiar to itself. I have cat of all these sowns; but did not much relish them, on account of the fishy taste with which they are all insected.

There are also patridges and bustards, which need no description. The Kalmucks, who are keen sportsmen, particularly at hawking, in which they have arrived to a great perfection, kill the bustards with bows and arrows: when they see them feeding, they ride in upon them at full speed; and as the bustard is a heavy bird, and mounts slowly, they have an opportunity of shooting them with broad-headed arrows.

On the banks of the Volga, there is a species of deer of a brighter red, and somewhat larger than the fallow-deer; they have green horns, but not branched, about nine inches long, and covered with circles, rising one above another to the point, which is very sharp. This deer is very swift, and its flesh excellent; it has a high snout of gristle, which rises very near to the eyes—a circumstance which I have not observed in any other animal.

I faw also a small lively creature, called an Astrachan hare, about the fize of a squirrel, and of a reddish colour, remarkable for having the fore-feet very short in proportion to the hind-feet; its tail is long, with a tust of hair at the extremity; it burrows in the earth, and, being a very pretty creature, I have sometimes seen them in cages. The Kalmucks eat them very greedily.

While we were at Astrachan, an ambassador arrived there, from the Chan of Chiva, going to St. Petersburg. On his arrival he sent, according to the eastern custom, some small presents to our ambassador; they were brought by a part of his retinue, and consisted of a hawking glove, a small knife, an embroidered purse, and some fruits.

Chiva is a large territory, lying about two or three days journey eastward from the Caspian Sea; bounded by Persia on the south, and Bucharia to the east. The capital, which bears the same name, is large and populous, and governed by a Chan, elected by the people. They are very troublesome and dangerous, both to travellers and their neighbours, being frequently employed either in robbing the former, or making depredations on the latter. And though Chiva is well fortified, its situation, in so sandy and barren a defert, is its best defence.

One day, as I was walking through the streets of Astrachan, I observed a very singular appearance: it was a pretty Tartar lady, mounted astride upon an ox; she had a sing in her note, and a string drawn through the note of the ox, which served instead of a bridle: she was dressed better than common, and attended by a footman. The singularity of the equipage, but particularly her extraordinary beauty, drew my attention. The Mahometan must not be confounded with the Kalmuck Tartars; the first well-looked carillated people in comparison of the other.

Construction of the proper to receive the property of the prop

partakes of animal as well as vegetative life; that it eats up and devours all the grass and weeds within its reach. Though it may be thought that an opinion fo very abfurd could find no credit with people of the meanest share of understanding, yet I have converfed with some who have seemed much inclined to believe it; so very prevalent is the

prodigious and absurb with some part of mankind.

In fearch of this wonderful plant, I walked many a mile, accompanied by Tartars who inhabit these deserts: but all I could find out were some dry bushes, scattered here and there, which grow on a fingle stalk, with a bushy top, of a brownish colour; the flalk is about eighteen inches high, the top confifting of sharp prickly leaves. It is true, that no grafs or weeds grow within the circle of its shade; a property natural to many other plants here and elsewhere. After further inquiry of the more fenfible and experienced among the Tartars, I found they laughed at it as a ridiculous

At Astrachan, they have great quantities of lamb skins, gray and black; some waved, others curled, all naturally, and very pretty, having a fine gloss, particularly the waved, which, at a small distance, appear like the richest watered tabby: they are much esteemed, and are much used for the lining of coats, and the turning up of caps, in Persia, Russia, and other parts. The best of these are brought from Bucharia, Chiva, and the countries adjacent, and are taken out of the ewe's belly, after she hath been killed, or the lamb is killed immediately after it is lambed; for such a skin is equal in value to the sheep.

The Kalmucks, and other Tartars, who inhabit the defert in the neighbourhood of Astrachan, have also lamb skins, which are applied to the same purposes; but the wool of these being rougher, and more hairy, they are far inserior to those of Bucharia or Chiva, both in gloss and beauty, as also in the dressing, consequently in value. I have known one fingle lamb skin of Bucharia fold for five or fix shillings sterling, when one

of these would not yield two shillings.

On the 5th of August, we quitted Astrachan in five vessels, three of them stat-bot tomed, and of about an hundred and fifty tons burthen, with three mails and ten gun each; the other two common barks. We failed from Aftrachan about noon; and a night came to an anchor at a fishery, called Utzugg. Both the banks are now flat; t the westward barren sands, and to the east marshy and tall reeds, abounding with ver mine; to that we neither ear nor fleep in quiet, norwithstanding all the precautions w could use. I must confess this place had an aspect of horror, especially when it is cor fidered, that, befides the wild and difmal appearance of the banks, we were cause down a mighty river, into a great gulf, in many places of dangerous navigation, an whole thores are inhabited by inholpitable and barbarous nations; for fuch I reckons of them, except the Ruffians and Perfiaus.

Next meaning, at break of day, we got under fails and about ten entered the Galpic Seat into which the river discharges ideal by seven or eight large channels, and mar Jeffer ones! two entry of these channels are havigable by ships of any burthen. his, we call section more four billocks of day land, eath up by the less called T select computed to he spour thirty werlt from the mouth of the Volga : all white as each depth is very narrow

us to come to an anchor, where we lay for near three weeks in calms and contrary winds.

All this time we did not fee a fingle ship besides our own, except one Russ vessel that came from Guilan in Persia, with some Armenian merchants, who made a present to the ambaffador of a basket of oranges, melons, and other fruits, which was the more acceptable, as our own provisions of that kind were all spent. As often as the weather would permit we got under fail, and endeavoured to reach the road of Terky, a fmall fortified town belonging to the Russians, on the north-west corner of the Caspian Sea, where we might be supplied with provisions, but the continual calms prevented our fuccess.

On the evening of the 26th of August, the wind changed to the north-west; we hoisted all the sail we could, steering our course south south-east, and, before night, passed the island of Tullen, i.e. of Seals; many of which animals haunt this place. It continued to blow hard the whole night; and next morning we were in fight of the mountains called Skaffkall, which were diftant about fifteen leagues. We proceeded

the whole day, edging always a little nearer to the shore.

The 28th, in the evening, it fell calm; and, being about fix leagues off the land, we cast anchor. Next day, the wind blowing fair, in the afternoon we passed the town of The ambaffador ordered the castle to be faluted with nine guns; but it seems Derbent. the people are not accustomed to make any return. It is a place considerably large, and the frontier of Persia in this quarter. It is fortified in the ancient manner, with a strong stone-wall, which reaches from the mountains to the shore, so that no army can pass this way except mountaineers, or Tartars, who find roads every where. Derbent being a place of great confequence, is provided plentifully with cannon and ammunition, and a strong garrison, governed by a commandant appointed by the Chan, or governor of Shamachy, on which province it depends. It is reported that it was built by Alexander the Great. About the place there still remain several monuments of antiquity: particularly large stones, with inscriptions in uncommon characters. South from Derbent stands a very high mountain, called Shachdagh, the top of which is covered with fnow the whole year round, though the vallies are exceedingly hot.

August the 30th, we arrived at Niezabatt, the place where we intended to land, on the territories of Persia. It lies about two days journey east from Derbent. There being no harbour nor creek, we hauled up our ships upon the shore, which we per-

formed with little trouble, as they were all flat-bottomed.

The thip in which was our fecretary Monf. Venigerkind, and feveral other officers, did not arrive till three o'clock afternoon. The wind was now very high, and a great fea upon the beach, which obliged them to drop an anchor in the open road; but the wind blowing still harder, it became dangerous to ride there; the skipper therefore slipt the cable, and stood out to lea. The gentlemen, however, did not like their situation on board; and, being eager to get to land, ordered the mafter to run the thip athore, and they would be accountable for the confequences; which he, a Hollander, in the Secretaries, unwillingly complied with; under an easy fail, about two miles eastward the place where we lay. All hands went to their affiltance, but without effect; for, Cool | Co

the falt-water, and the road lying through deep fands, he was foon fatigued; and therefore retired nearer to the woods, in hopes of finding a more fmooth and easy path. He discovered what he sought; but, instead of leading him to the ships, it carried him away from the shore, and the right course into thick encumbered woods; and in these circumstances night overtook him, utterly ignorant of the dismal and dangerous wild into which he had wandered. Thus destitute of all assistance, he climbed a tree to save himself from the wild beasts with which these woods abound; and in this situation continued all the night, and till noon next day; for the people in his own ship never doubted of his having fafely reached our tents; while we, on the contrary, had not the least suspicion of his having come ashore. At last, however, about noon, his servant came. enquiring for his mafter, who, he told us, left the ship the night before. This account filled us all with anxiety and apprehension; as we certainly concluded he would either be torn to pieces by the wild beafts, or murdered by the favages who inhabit thefecoafts. Immediate order was given for all our people to repair to the woods in fearch of him. He was at last found wandering from path to path, without knowing one direction from another. When he came to the tents he looked ghaftly and wild, and related many strange stories of what he had heard in the night. All possible care was taken to alleviate his diffres. During his sleep, which was very discomposed, he often flarted, groaned, and fpoke; and, even after he awaked, he perfifted in affirming that there were numbers of people round the tree in the night talking different languages. The imagination, no doubt, will naturally have a strong effect on any man in such uncommon circumstances; for, though the secretary was a man of penetration and found judgment, in vain did we endeavour to undeceive him, by representing that it was nothing but the jackals which made the noise he had heard; and that, to be convinced of the truth of this affirmation, he needed only, at the approach of night, to step a little from the tents, where he would hear the same founds repeated. All was to no purpose, fince he infifted that the noise he heard was quite different from the yelpings of the jackals. He fcarce ever recovered his former fagacity and foundness of mind. I must confess the situation of this gentleman moved me not a little, as he was a man of parts and learning, with whom I had contracted an intimate friendship.

Since I have mentioned the jackals, it may not be improper to give a short account of these animals. They are of a size larger than a fox, of the shape and colour of a wolf, with a short bushy tail. They dig burrows in the earth, in which they lie all day, and come out in the night to range for prey. They assemble in slocks among the woods, and frequently near towns and villages, when they make the hideous noise formerly mentioned, resembling, in some measure, a human voice, or the noise of the Tastars and Cossacks when they attack their enemies. They have sine noise; and hence the vilgan opinion has arisen, that they hunt prey for the sion. They are in great plenty all over

Perfia, and effectmed harmless creatures:

As foon as we landed, the ambaffador dispatched an interpreter to Shamachy, to notify his arrival to the governor of that place, and to defire him to lend camels and horses to transfaort him thither. The interpreter was kindly received, and an order was immediately iffued out for answering his demands.

Two days journey eift viid from Nind it fland Alfbe con and Beckin, two confiderable towns. At the former is a good harbour, reckered the best in the Circum Sea, except that of Astrabett, which has in the outlier it corner of it. All the rest a e to dangerous, that they feared discount the name of harbours.

In the neighbourhood of Backu are many fountains of Naphilia; it is a list of petroleum, cl a brown colour, and inflairn able nature. The Perfians burn it in their lamps; no rain can extinguish it, but the smell is disagreeable. I have seen of it as cle in

as rock-water.

The Calpian Sea is of an oblong irregular figure, about one hundred and fifty league in length from north to fouth, and forty or fifty leagues broad. The water is excel-fively falt, except where it is freetened by the Volga, which is at least to the distance or

ten leagues from the influx of that river.

The navigation of the Caspian belongs solely to the Russians; the Persians and other borderers having nothing but sishing-boats. It contains abundance of sish, but no shell-sish, except a kind of cockle, the shells of which are very prety. In some places there is a great depth of water. The Persians observe that, of late, the sea has retired considerably from the shore; which they reckon ominous, prelaging some calamity to the kingdom. It has no tides but such as are caused by the wind; and, notwithstanding the great quantities of water daily received, it continues nearly about the same lieight. Dr. Halley has demonstrated, that exhalations in so hot a climate is sufficient to account for this phenomenon, without having recourse to subterraneous passages.

The 4th, I was conducted by an Armenian merchant some leagues from our tents to visit a Persian. We were received in a very complaisant and triendly manner; the house was clean, and the sloor spread with carpets. Our entertainment consisted of

coffee and boiled rice.

On the 11th, arrived two Jesuits stom India, named Valery and Martinet, on their way to Rome. They petitioned the ambassador for a passage in one of our ships to Astrachan, which was granted. About this time many of our retinue began to be seized with different diseases, particularly severs, shuxes, and agues, which, in a sew days, made such progress, that, at the ambassador's table, where seldom sewer than ten dined, he and myself only were present. These distempers exhibited a most disagreeable prospect, and made us wish earnestly to leave a place that threatened our destruction. For this purpose mellengers were daily sent to the Chan of Shamachy to dispatch the camels, and made. Some of them, indeed, were already come, but not near the number we needed; for our numerous sick could only be transported on litters carried by mules.

The soch, a conductor, palest Mamander, arrived with a guard of Pertian folders and force more settle, which when the too few. This officer is reproduced by the

or King, to guide ambas won to court, and furnish them with provisions, carriages, and lodgings, at the Shach's expense, from the time they enter the kingdom.

Having accommodated ourselves in the boil manner we could, we quitted Niezabatt on the 13th, keeping along the shore, and at 13th came to a small village, about three again from Niezabatt. We found the house, all empty, the people having sled to the

woods or mountains on our approach

The 20th, we reached a virage about four again (an again is reckoned to be four English miles) from the former, where we lodged again in empty houses; and the 21st, proceeded four again further to a brook of white and muddy water, where we pitched our tents. About noon a striday we came to a fount un of pine wither, under a great oak. Here we halted two hours to refresh the fick; and, after travelling that again further, arrived at an old car vansery; a long day's journey for people in such diffracts.

The criavanters are our fally life, iquire buildings, with a court in the mildle All round there are rooms for lodging travellers, and on one fide a flable for hories. They are of different fizes and confituction, according to the boundy or the my or the founder. Some are built by charable people, other by good Kings. They are faurated as near fresh water as possible, and about a day's journey from one another.

As there are no inns in the east, these cavaranteries in some measure supply that descent, though nothing is sound in them but shelter. They are, however, very convenient for travellers; and some of them can contain sive hundred men, with their horses. There is commonly an old man, who cleans the rooms, and setches necessaring from the next town or village.

The 23d, we halted to refresh the fick; and here we buried two of our mechanics.

The 24th, we travelled to a ruinous caravanicity, about four agatz from the former. This was the first instance that occurred of remissions and inattention in the present government of Persia; for the King, without attending to his own affairs, allows himself to be guided entirely by those whose interest it is to decrive him. Nothing, in the judgment of a foreigner, can render any people more contempuble than the notorious neglect of such useful public edifices. This day we received another supply of provisions from the Chan.

The 26th, we travelled to a plain within a league of Shamachy, where we lay all night, to be received into the town the day following in form and ceremony, according to the custom of Persia. At this place died my stiend Capt. Jaques de Villette. He was a gentleman of a good family in France, and a very worthy man. And, besides the captain, two servants died here.

CHAP. IV. -- Occurrences during our Stay at Shamachy. -- Our Journey thence to

THE 27th, in the morning, came the Kalenter and Dorruge, with many of the inhabitants, to provide the pompliments to the ambailistics. These officers are next in standard the condition of efficient in his absence. They brought standard to the condition of efficient retinue. As we approached the condition of the condition of these standards and the conditions are not the conditions.

ing them above with a thin stone neatly pasted about the edges, for the better preservation of the liquor. When they give an entertainment they spread carpets round the jar,

which is generally placed in a shade, and on these the guests are seated.

About two miles to the northward of the city, stands a high mountain, named Guilistan-dagh, where are seen the ruins of an ancient castle built of stone; it appeared not to be of eastern architecture. I could procure no information who was the founder, or by whom it was demolished. Adjoining to this mountain is another, on which are the tombs of two faints, or heroes; whither great numbers of devout people come annually to worship. I observed near these tombs several hallowed rocks covered with small shells brought hither by the worshippers; I observed likewise, on the common rocks, many shells imprinted and petrified, which seemed very extraordinary.

December 4th, all things being prepared for our departure, we were furnished by the conductor, or maymander, with one hundred and fixty camels, and near two hundred horses and mules, on which we left Shamachy, travelling along the rising grounds. We

halted two days at an Armenian village, called Kalckanii.

On the 7th, we descended into a desert plain, called by the Russians Mugan, and by the Persians Kurdistan. At midnight we came to some wells of brackish water, where we lodged in such tents as are used by the inhabitants, which were prepared by the conductor.

We proceeded the 10th five agatz to a little copfe-wood where was found tolerable water; and the 11th arrived at the river Kure, or Cyre, which we passed on a bridge of boats, and pitched our tents on the other side. The water of the river is sweet and wholesome.

About half a league above the bridge the river Araxis, now Arras, falls into the Kure, which together form a confiderable stream, that discharges itself into the Caspian Sea, about a day's journey below the bridge, running northward all the way; but the mouth of the river is so choaked up with fand, that it is navigable by no vessel of

any burden.

The river Kure divides the province of Shirvan from Kurdistan. The Kurdy, probably so called from the name of the river, are a very ancient people, and seem to be the same whom Xenophon, in the Anabasis, calls Karduchi, who so strenuously opposed his passage in his samous retreat from Artaxerxes. They are still reckoned a brave people. Their horses are most esteemed of any in Persia, both for beauty and strength.

We left the Kure on the 13th, and proceeded feven agatz to Chuda-tzoolatzy, where the water was very brackish and muddy. The country around appeared plain

as the fea.

Setting out early next morning, we travelled ten agatz, and in the evening reached a brook of tolerable water, called Bolgar. This was the last day's journey in the plain of Mugan. The inhabitants, the Kurdy, live in tents all the year. The foil is very dry and barren, notwithstanding the cattle are in good condition, and the mutton parties.

arly very good

While we halted about noon tome Perlian sportimes, who by their dress teemed persons of difficultion purehed their tens near ours, they sent the ambaliador a present of whitelows and an antelope. The ambaliador invited them to thate a traveller's dunier, Three of the gradients accepted the invitation, but exculate themselves from enough any than a presenting they had already since a but a travel stream some fire Managaret from the first of the

of large hawks, which were trained to fly at antelopes: the hawks cannot hold indeed fo ftrong a creature as an antelope, but they fly about its head and thereby retard its velocity, till the greyhounds or horsemen overtake it; for the antelope far out-runs any greyhound I ever saw. In this desert I have seen slocks of them consisting of two or three hundred.

In manning hawks to fly at antelopes, they stuff the skins of these animals with straw, and feed the hawk between their horns, placing food there for that purpose: hence they are accustomed to hover round the head, which proves the destruction of these creatures. I was informed, that it is in this manner the Tartars manage hawks to sly at foxes and wolves. These particulars may possibly appear immaterial; however as they may contribute to amuse the reader, it was thought not improper to insert them.

After resting the 16th, we travelled next day four agatz, to the foot of a very high mountain, where we found a few poor cottages, deserted by their inhabitants on our approach. The water was in plenty and good. The weather was very cold, and no fire-wood could be got, except a little we brought along with us. One of our people, straggling too near the rocks, was dangerously wounded with a stone, throw by some of these cottagers who had retired thither. On these rocks I saw a creature like a goat, called by the Germans Steinbuck; it is much bigger than the common kind of these animals, and its horns are of a prodigious size.

The 18th, we advanced five agatz farther; and the 19th, seven agatz, to a large village called Katchoochana, where the Chan of Mugan has a good house. The weather being cold and frosty, we continued here all the 20th.

The 21st, we travelled five agatz to a village under a great mountain, where was a

water-mill for grinding corn, the first machine of that fort I saw in Persia.

The 22d, we came to a small town called Aggar. The Kalentar ordered the citizens to arm and oppose our entry; and, notwithstanding the remonstrances of our conductor, he persisted unalterable in his purpose, affirming he had no order to admit such a body of armed men. He did not however refuse us provisions, wood and water, for money. We were therefore obliged to content ourselves with these, and lodge in our tents on an open field in cold weather.

Next day, we proceeded two or three agatz, to a large populous village, where the people, in imitation of those at Aggar, assembled in arms, and barricadoed all their entries, refusing us admittance; they heat our quarter-masser, a Persian officer belonging to the conductor, for offering to force his way into the place. We therefore lodged again in the open air. They sent out some fire-wood, and whatever else they could spare. I must consess I could scarce blame these people for their behaviour; because, had we been admitted, the inhabitants must all have less their own houses, and where could a parcel of poor women and children have found shelter in such extremity of cold.

The 24th, we continued our journey between two great mountains, where the north wind was very piercing. We patied an old rumous caravantery, and arrived in the evening at an empty-village, which the natives had forfook the day before. All next day we halled, being Christmas.

The a6th, we mareted about four agains, to another village. The inhabitants were to horpitable as to afford us ledging, but charged dear for every thing we needed effectably wood, arbiclesors bought at the rate of white pence for feven pounds.

On the graf, we graveled over executing bigs mountains, from whence, I was fold

On the 27th, we travelled over excepting bigh mountains, from whence. I was add by an averaginal measurement of chromosomy amount be zero, in a clear day, the too of the labour mount. Arara: called by the Portions Argery, by the Armenius dieling, the fummit is constantly covered with show, and often with a cloud: it is the highest of all that chain of mountains in Armenia on which we then stood.

How far my information might be true I cannot determine, but certain it is, that when the Armenians fee this mountain, they make a fign of the cross, and fay their prayers, as

is their custom when they approach any place which they esteem facred.

In the evening we arrived at the city of Tauris, Terris, or Tebris, as it is pronounced by some. The ambailador was met about half a mile from that place by the Kalentar, and chief officers, who, after the common falutations, conducted him to his lodgings. Our baggage was deposited in a large caravansery in the neighbourhood.

CHAP. V .- Occurrences during our Stay at Tauris. Our Journey thence to Ispahan.

TAURIS is a large and populous city, the capital of the province of that name, and the residence of the Chan. It is situated in a fruitful plain, encompassed by the high rocks of mount Tauris, about ten days journey from Shamachy and twenty-five from Ispahan, I mean to a caravan. It is supposed to be the ancient metropolis of Media. It is still of considerable extent, but not near what it has been. There are yet to be feen many curious remains of ancient grandeur, particularly an old temple, converted into a mosque, now neglected and ruinous. The roof is supported by many stately pillars of porphyry, almost entire, some whereof are of a greenish colour, with other colours and veins of gold interspersed. The proportions seemed to be regular, and the workmanship very fine and curious. In short, I am unable to describe the symmetry and beauty of these pillars, and wonder how they have escaped the fury of so many barbarians. It is no less surprising where were got such massly pieces of marble, seeing nothing like them is now to be found in this country. These particulars demonstrate the ancient grandeur and riches of this place. It is however a deplorable truth, that this country in general hath undergone to many revolutions fince the time of Alexander the Great, her first conqueror, that, a few places excepted, the present names and defcriptions of cities and provinces bear almost no resemblance to those of antiquity, so that one can fearce imagine them accounts of the same places; to such a degree hath time and barbarous invaders changed the appearances of things! Fire and fword have raged to destroy magnificent cities; stately temples and palaces are demolished; whole provinces depopulated, and fruitful fields converted into a defert, by diverting the forings, or turning the rivers that watered them into other channels. Such are the confequences of lawless ambition on the finest productions of nature and art: the last is a circumflance to which few countries are to much exposed as Pertia; for, in the inland part of it, there is almost no rain, which obliges the inhabitants to water all their vegetables from springs and brooks. They often convey even rivers feveral leagues, in channels under pround, for this purpole. The dev indeed is very plentiful, but

would be infufficient of itell for the purpoles of vegeration.

The devets of I amis are narrow and Frequer The hopies are built of bricks made of still, artised with chapped from and dred in the functible governor's palace, indeed, and a low prove libbles are built of hope, and make a good appearance. The corage generally but and covered with a service. The wais are want walled on the utility and look was very libe and dean. The floors of every library are appearanced with carpeta at major, according to the organity of the appearance of the condition of the appearance of the register outropic and sector of the appearance of the register outropic and particles of the appearance of the register of the appearance of the

There are feveral well-built mosques, with stately minorets, or pillars, which the moulla afcends to call the people to prayers; also a high building for the music that: plays evening and morning, as mentioned at Shamachy. There are also some largecaravanseries: so that no stranger can be at a loss for lodging at a small expense. The city is quite open, having no castle or fortification to defend it. Indeed one would imagine the defert mountains, fearcity of water, and other obstructions, would be a fusficient defence against all invasions: the fury of the Turks, however, in their wars with Perfia, furmounted all these obstacles.

Tauris is supplied with water from a brook, called Shankuy, which runs through the city, and some springs in the neighbourhood. The inhabitants are mostly Persians, though there are among them many Armenians. They have a considerable commerce in raw filk, and manufactories of carpets, and filk and cotton fruffs. They have great crops of wheat and barley, when at the trouble and expence of watering the fields but their principal hipport is rice, brought from the province of Guilan, where it grows very plentifully: for this kind of grain, which of all other thrives best on wet land, agrees wonderfully with that rich moilt foil near the Caspian Sea.

The Capuchin millionaries have a convent at this place, for the use of the Armenians of the Roman Catholic profession; which is superintended by two Fathers of that order.

About a league from the city, on the road to Ilpahan, are feen the ruins of a bridge, on the top of a hill, where, I believe, no water has run fince the deluge. It is laid: that it was built by a whimfical prieft, in order to introduce himfelf to the King, Shacks Abbals, who could not avoid taking notice, when he passed that way, of such an extra-

ordinary appearance.

About four or five leagues from Tauris, in a plain called Roomy, there are feveral? fprings of water that petrify wood, and, I have been informed, even reptiles, fach as lizards. One thing is certain, that, after a stagnation of this water, for a certain time, there is a substance like marble found at the bottom, which the Perlians cut into any breadth or length at pleafure. I have feen of it two or three linches thick. It is callly polified; and is diaphanous, but not transparent. After fawing it into liabs, they fix them for windows in their bagnios and private apartments. Perhaps it is not improbable the large pillars, formerly mentioned, might be hewn out of this kind of marble.

During our flay at Tauris little material happened. The weather continued very cold, which, together with want of horles and camels, detained us longer than we expected. I could not but pity the poor people of this place; the cold was to exceptive, and bread and other necessaries to dear, that I was informed many of them perificulting the lineets.

January ed, 1717, Mont Ricard, a French Jeluit, arrived, in his way to Unahan. with long-lefters from Rome to the Sophy. The fem Mond Divine, one of his estimate.

with his compliments to our ambalisher.

The Chan being efficie; the Vizza, who is his hentenant; came the out, incress tale, (C. 1913) the spotalisator, who, in the state retrained the compliment attender with all me group. The state received in a magnificant dual, increase such one current. Shere we show the state has another than the state of the company and actual agreement the company and actual agreement the company and actual agreement. The company and actual agreement the company and actual agreement the company and actual agreement. The company and actual agreement the company and actual agreement the company and actual agreement.

The 23d, having with great difficulty procured horses and camels, we left I and travelled two agatz through deep snow, which incommoded us not a little, procularly on account of the camels, which cannot bear deep roads.

The 24th and 25th, the roads were impassable. I saw here a male camel traces one of his keepers under his feet: for, at this season, when the semales are ting, the males are very furious and ungovernable, and must be managed with caution.

The 26th, we travelled two agatz to a fpacious well-built caravanfery, founde Shach Sephy, fufficient to contain fome hundreds of men and horfes. Here we he fome time, and proceeded in the afternoon five agatz farther. In this day's jou you have the choice of two roads, both leading to Ispahan: one through the citi Ardeville and Casbin, and the other by Zengan and Sultany: the last whereo choosed, being somewhat shorter.

Ardeville is reported to be a very fine place, and is famous for the monumen Shach Sephy the First, and other Persian princes and heroes esteemed for their v and piety. A great many devout people come from all parts of the country to wor at these tombs, where a considerable charity is daily distributed to the poor pilgri to support which, there is a fund settled by the King, with proper officers appointe superintend the management of it, and prevent frauds. I wanted much to visit place, but found it impracticable.

The 27th, we advanced three agatz, through deep fnow, to a caravanfery builbricks. We were at no lofs for water while the fnow lay upon the ground. The day we reached a large village, called Kara-China, inhabited by Perfians and Arnians. About a mile from the place we were met by an Armenian prieft, attended a company of country people, who came to welcome us as fellow-Christians. On them carried a painted crucifix, raifed on a long pole, others played on flutes and he boys, and other mufical inftruments, to which one or two perfons kept time, by beat two thin brafs plates against each other; and many of them fung hymns and psal In this manner they accompanied us to our lodgings, where we were better accompanded than we had been hitherto. We received from these people, in particular, v good wine and grapes, which they preserve through the winter by hanging them in and open places.

About this time many of our people had fore eyes, and swelled faces, caused by strong reflection of the sun-beams from the snow. The Persians themselves are liable the same disorders. As a remedy they wear a fillet of net-work, made of black hor hair over their eyes, which I found, by experience, altogether effectual.

The 31st, we let out early, and travelled four agatz to Turkoma, a large villar. The snow continued very deep. Here we were obliged to want for our camels, some which did not arrive till next day.

February 2d, we travelled eight agatz, to a little town called Mianna, where is a ca vanfery for hories only. Here we buried another of our people.

The 4th, after two hours march, we pasted a river over which is a stone-bridge (anding under a fugal mountain, called Kaptanton. Leaving that place, we say the left bank, the runnier an old fortification. We repasted the river on another flor bridge, altered to a particularly called T samatura, and at high reached another, called another, and at high reached another, called another is a same form than a lifere we have all our countries arrive that prescribe parts whereast cause and before next day. We percented the deput of the process and the same and the fourth to history as the other called and the fourth.

The 7th, we travelled five agatz to a small town named Zengan, where we lodged in a good caravansery. The Sultan, or chief magistrate, waited on us, and gave us a friendly and hospitable reception. He has under his jurisdiction both this place and Sultany; at each he resides half the year by turns.

Here we met a Russian merchant, who had about fifteen or twenty camels loaden

with various kinds of merchandife, going to Bucharia.

We halted two days on account of the deep fnow in this neighbourhood; and the roth, after travelling fix agatz, came to Sultany. This place is at prefent finall and inconfiderable, though it appears to have been a great and famous city in former times. There are still to be seen several stately mosques and minorets; one of these mosques is the tomb of a Persian prince, called Chudabendie, which has a brass gate of latticework, seemingly of great antiquity. In the same mosque is the tomb of Sultan Bajazat, son to Chudabendie.

On the 12th, we travelled four agatz to a village, where we staid all night; and the 13th, three agatz to another, through deep fnow, which prevented our proceeding

next day.

The 15th, we travelled five agatz, and the 16th, four, to a large village called Guiga Zayn. At this place a Russian youth applied to the ambassador for freedom and protection. He had been carried away by the Tartars from some of the southern provinces of Russia, and was sold some years before in Persia. He was forced to turn Mahometan; had almost forgot his mother tongue, and was obliged to explain himself by an interpreter. The ambassador afforded him the protection he sought. His master claimed either his slave, or the money he had paid for him; neither of which demands could be granted.

The 18th, we arrived at Sexabbatt, a village four agatz from the former; where we

quartered that night, and rested all the next day.

The 20th, we advanced three agatz to Arazant, a small village. This district being much pestered with strong gangs of highwaymen, we marched with great circumspection; and in the night the baggage was guarded, both by our own people and the conductor's soldiers.

The 21st, after a journey of three hours we came to an old caravansery, called Idjoop, where we rested; then advanced sour agatz to another, called Kockera, situated in an extensive plain. The snow was now altogether gone, and the water at this place very bad. In an upper room of this caravansery I saw the names of many Europeans cut on the wall, in different languages: among which was that of Oleanus, secretary to the Holstein ambassadors, who published a very exact account of that fruitless embassy.

The 22d of February, we let out very early, and in three hours reached Denggie, a caravaniery, where we halfed for refreshment; and at night arrived at Saba or Sava,

feven agatz from Kockera.

Saba appears, from many cuits, to have been a place of great note. It flands in a fruitful and extending plain, which produces all formed truit natural to the climate, particularly pomegrapares, the forget? I have feen. The trees were now in full bloom, and had a very fine appearance. Some years ago this place was almost rained by a delugate has the firepairms ever fince, but is this from its former condition.

The eagly one man by through a defert afterous en plant about this with Litheric We reveiled the agree to Jeff short, a new caravanicity, 40% the exclusive agree to

About two leagues from Koom we faw a round hill to the left, called Gedeen-Gedmaze, which fignifies, that whoever goes up never returns; Persians say was the sate of a page sent up by Shach Abbats, with a lighted to hand. However this be, it is certainly no easy matter to ascend this place; I whole hill consists of sand, which is shifted from place to place by the wind,

foon tire whoever attempts to climb it.

Koom is reckoned among the chief towns in Persia, and is the residence It is situated in a fertile plain, well watered by a pretty large river, over whic stone-bridge. In the town is a spacious caravantery, and several well built and minorets. One of these mosques is highly esteemed by the Persians, becare specific fepulchre of Shach Sephy and his son Shach Abbass the Second, and that of thima, grand-daughter to their prophet Mahomet. These tombs are much stopping simulations from all parts of Persia, who resort hither once a-year to pay their and are supported by a fund appropriated to that purpose.

Before you reach the mosque you pass through three neat courts, and, in the of the fourth, where the mosque stands, there is a large bason of clear water. the gate are engraven in gilt letters the names of the deceased princes, with so in their praise. The monument of Sidy Fathima stands in the front of the encompassed with a grate-work of pure silver, very valuable. To each of the are consecrated magnificent apartments, where the priests read the Korz

and day.

This is also a place of refuge for debtors, and unfortunate people, who are meant the public expense. Adjoining to the mosque is a large hall, where alms a distributed to the poor. Few Christians are admitted into this facred place. bassador, however, with a few of the retinue, obtained this favour. Koom is far manufacturing the best blades in all Persia for fabres and poinards.

The 27th, we travelled from Koom five agatz to Kassim-abbatt, a considerable where we lodged. The weather now began to be so hot, that we could travel

the morning and evening.

On the 28th, after travelling fix agatz, we came to Sinnbzyn, another village

our huntiman caught a porcupine, and brought it home alive.

March 1st, we arrived at a place called Kashan, fix agatz from the former, a distance we were met by the Doroga, or judge, attended by about fifty horsems came to talute the ambassador, and conducted him to his lodgings. The his longed to the Shach, and was pleasantly fituated in the middle of a fine garden, with various kinds of fruit-trees.

Kafran is a large and populous city. It is firmred in a fertile plain, which plenty of all necessaries, and contains several well-built molques and caravanteric market-place is well-furnished with merchandile of different kinds. The common influes of Fertile are found here, viz. lilk and corton fulfis, parpets, bendes found.

apheles/which make this place of confiderable trade.

The sales of small confidence with for more appearable the plant trade of the sales of the sales

fcorpion may sting him. They are the more terrible, as few houses are free from them; for most of the floors being of earth, and covered with carpets or mats, below these the scorpions find or make holes for themselves, where they lurk unseen. They do not indeed often hurt, unless touched suddenly. It is adviseable for all travellers to examine diligently the place where they are to sleep, before they go to bed. As the scor-

pion is well known, it will be unnecessary to say any more of it.

The 5th, we reached Buzabbatt, five agatz from Kashan. The weather was very hot. At this place I saw a creature called the stellio, or tarantula, and by the Persians in kureck. It is in shape and size somewhat like a large spider, but overgrown with hair. I was informed that it neither stings nor bites, but drops its venom upon the skin, which is of such a nature that it immediately penetrates into the body, and causes dreadful symptoms; such as giddiness of the head, a violent pain in the stomach, and a lethargic stupe-saction. The remedy, as in the former case, is the application of the same animal when brussed to the part, by which the posson is extracted. They also make the patient drink abundance of sweet milk, after which he is put in a kind of tray, suspended by sopes fixed in the four corners; it is turned round till the ropes are twisted hard together, and, when let go at once, the untwining causes the basket to run round with a quick motion, which forces the patient to vomit.

They also make them dance to musical instruments, which the sick person sometimes does of his own accord, till he drops down upon the spot. One of the sterrible creatures happened to fall out of the ceiling upon my hand as I was going one night to bed; I shook it off instantaneously without receiving the least harm. Every thing was moved and searched for it, but to no purpose, there being many holes in the sloor. It may easily be imagined that apprehension would prevent my sleeping much that night.

The 6th, we travelled five or fix agatz to Kaltabbatt; and the next day five, to Nattanee, a small town fituated under some high mountains. Here the Shach has a pretty little palace, with gardens, fountains of fine water, and calcades. We lodged in the palace. The jackals were so bold that they howled under the windows all the night long, and carried off some of our poultry. On the top of a mountain near this place, stands a high tower, built by Shach Abbas, which is seen at a great distance.

The 8th, we left Natiance, and in three hours passed a fine house, with gardens, built by Shach Abbais, and fituated by rielf in a pleasant plain. About three hours after we came to Turin, an old caravaniery, where we lodged. The heat increased daily as we advanced to the fouth. The 9th, we reached Ruck, eight again distant from Lutin.

and four hours journey from the city of Hosban.

The 10th, being the vermal equinox, when the new year commences among the Porfians, we halted all dity. In the exeming thirty fine Hories, with rich farmitire, were less from the Shach's flables to the amballador. Some of the brides were ornamented with gold, where with filter. I wo have were brought by a Perfan to be them to she amballador. There were test into a court-vard and less loose upon a good, but, indeed of the gons, shey are not lone of our people, who harrowing elapsed by general interactions and thusing the clears. It feems the fight of to many france is not frightened decay for the search publish, with difficulty channel them, and one of them even in

The 14th, in the morning, came a number of horses sufficient for the ambassador and all his train; this being the day appointed for our public entry.

About noon the Maymander Basha returned to conduct the ambassador to his lodg.

ings in the city. He was attended by many persons of dislinction.

After noon we mounted, and entered the city. We passed through many streets crowded with spectators, as were also the tops of the houses. It was said that the Sophy himself was at a window incognito, with some of his ladies. Curiosity had caused such a crowd, that, had not the way been cleared by the Persian guards, it would have been impossible for us to pass along. At last, we reached the end of our journey; a noble palace in the middle of the city, with a garden, three courts, and apartments sufficient for the ambassador and all his retinue.

The Order of the Latry.

An Officer.
Three dragoons.
A kettle-drum.
Four trumpeter:

Thirty dragoons, three a-bread, with drawn fwords. Six space horses, with sumptuous trappings.

CHAP. VI.—Occurren es during our Stay at Ispahan.

THE 15th, the agents of the English and Dutch factories, viz. Mr. Coppin the English agent, sent Messrs. Batson and Reynardson, the Dutch agent likewise sent two

gentlemen of their company to falute the ambaffador.

The 16th, the Maymander Basha invited the ambassador to an audience of the Etmadowlett, or prime minister, which he would not comply with till he had an audience of the Shach, and delivered his credentials, though it is usual first to take an audience of that minister. This day I visited the English factory, where I met with a friendly reception.

On the 27th was a great fall of rain, fuch as had not been feen at Ispahan for seven years: it was the cause of great joy in this fultry dry climate, though to me it seemed

nothing extraordinary.

April 1st, I went to Julifa to see a friend, accompanied by Mr. Batson. It is a large place in the suburbs, inhabited by Armenians, who have the free exercise of the Christian religion. On the 19th, I direct at the Durch mouse, the westber very hot.

May 4th, the ceremonial part of the amballador's introduction to the black being previously agreed on, a was this day to have I's first and nee. In the metang hours were for from the king's stable,, ail or them magnifectable equipped, with greenal to attend them; many of the faddles and bralles were garnished with all and filver.

attend them; many of the faddles and bralles were garnished with all and filver.

We marched in the same order a at over entry at overmentioned, mythe dragoens had not their swords drawn. After passing through several streets we came to the great market-place, called Bazar, and then to a gard called Alla-capy, inc. Cod's Cate, where we dismounted. Across this give is hun, a chain, and none are permitted to cater on horseback except the Shach him life. We walke I through the grands drawn up on each side, to an inner court, and thence to an arched gate, forrounded with benches and spread with carpets. Here the subassader was defined to fit down till the Shach was ready to receive him. We waited at latt two hours, during which time all the ministers of state and officers of the household passed us in great state; after them came a large elephant, mounted by his keeper and adorned with gold and silver stuff;

then two large lions, led by their keepers with chains of maffy gold.

When this parade was over, an officer informed the ambastador that the Shach waited for him; whereupon, proceeding immediately through the gate, we entered a spacious garden. The first thing that presented was a noble view of twenty horses standing in a row, richly caparisoned, having all their saddles and bridles ornamented with gold and silver, and some of them set with supphires, emeralds, and other precious stones of great value. The horses were all tied to a rope sixed to the ground at the extremities by a stake of gold, near which lay a mallet of the same metal for driving it, according to the cuttom of Persia; the hind-teet were also sastened to a rope to prevent kicking; this is an excellent precaution, for, though they were all stoned horses, they could neither burt one another nor any thing else; the chains that bound their hind-teet, with the stakes and mallets, were also of gold. The Persian horses are well managed, neither do I think them so vicious as those in Europe; whether they are naturally more gentle I shall not determine, perhaps it is entirely owing to the milder treatment of their grooms. At each end of the row stood a large vent of gold full of water for the horses to drink.

Approaching nearer to the hall of audience we passed the two lions, chained to the ground, one on each side of the passage; near them were placed two basons of gold silled with water for drink; next to the lions stood the elephant, with his k-eper on his back. As the ambassador passed both the lions couched, and the elephant bent his fore-knee, at the word pronounced by the keepers.

We now turned to the left and had a full view of the hall of audience, about an hundred yards distant. It seemed to stand by itself in the middle of the garden; it is indeed contiguous to the seraglio on the south, but is quite open to the north. Before the entry is a large sountain of pure water, which springs upward in three pipes, and falls

into a bason filled with roses, jessamine, and many other sine slowers.

When we came to the stair, we were defired to put off our slippers, and our servants were no further admitted. The ambassador only and six of his retinue (among whom I was) entered the hall. We ascended by eight steps of marble, the whole breadth of the hall. From the roof hung a canvass, which was stretched out over the stair, and shaded the whole inside of the edifice. The hall is a spacious square building with a terrace roof; the ceiling is very magnificent, being all arched and set with mirrors of different magnitudes till within three feet of the sloor, which is quite covered with silk surpets, incovered with branches and foliage of gold and silver. In the middle the two basons, into which several pipes, with about eight feet high, spound with the same basis.

١,

falling upon roses and other flowers, has a fine effect on a hot day. The farther end of the hall is a femicircle; here fat the Shach upon a fofa, raifed about a foot from the floor, which was elevated four steps above the rest of the hall; he was attended by twenty eunuchs; one carried his fabre, another his bow, a third the quiver with arrows, a fourth the calianne, or tobacco-pipe, so that each had his office of state.

The ambaffador was received in the hall by the master of the ceremonies, called Ishaggan Basha, to be by him introduced to the Shach. He continued fitting upon his fofa, with his legs across, while all his ministers of state stood in their places, clothed magnificently in their robes; which they never wear except on folemn days, and, when these are over, they leave them in a wardrobe at court, appointed for keeping them. I must confess the appearance was very splendid, and put me in mind of the accounts left

us by the ancients of the magnificence of the Kings of Persia.

At our entry into the hall we were stopped about three minutes at the first fountain, in order to raife the greater respect; the pipes were contrived to play so high that the water fell into the bason like a thick rain; nothing could be discovered for some time, and the Shach himself appeared as in a fog. While we moved forward every thing was still as death; the master of the ceremonies took the ambassador by the arm, and conducted him within fix yards of the throne, who, offering to advance, in order to deliver his credentials, was prevented by the Etmadowlett, or prime minister; this minister received the credentials and laid them before the Shach, who touched them with his hand as a mark of respect. This part of the ceremony had been very difficult to adjust; for the ambassador insisted on delivering his letters into the Shach's own hands, the Perfian ministers, on the other hand, affirmed that their Kings never received letters directly from the ambaffadors of the greatest Emperors on earth.

The ambaffador now made a fhort speech, which the Sophy answered, through the Etmadowlett, in very obliging terms. He then enquired after his Czarish Majesty's health, and asked several questions about the Swedish war, and whether the ambassador had fuffered any hardships on the road during so long a journey? To all which he returned answers fultable to the occasion. At last he was defired to take his feat; to which he was led by the mafter of the ceremonies: it was about a foot high, and placed at the distance of ten yards from the King. A little behind the ambassador were placed his attendants, on fears nearly of the fame height. During all this ceremony mufic played, confilting of a variety of inftruments which were not unharmonious, and

the Mufti, or high priest, read, without intermission, chapters of the Koran.

Bafore the ambaffador was leated the prelents from His Czarilh Majefty to the Sophy. carried by fifty men, were brought to the entry, and received by the proper officers; they confilted of lables and other valuable fors, falcons, a variety of fine tea, mutical clocks; gold watches let in diamonds. &c.

As toon as the ambaffador, had taken his leat all the ministers of state in down on their hams, on both fides of the hall, in rows; for none are allowed to lit crofs-legged in

Freferice of the Sophy

There was now placed before the company little tables on which were terest kieds

of two-investor and confections— the Depose the Amballator was local approach and processed the second seco

In the mean time some pure water, with a bit of ice in it, was brought in golden basons to drink. About an hour after victuals were brought by a number of servants, who carried them on their heads in large fquare balkets. First the Shach was served, and next the amballador with his revinue, then all the officers of state that fat in the The grand fleward of the household waited on the King, and his affishants on the rest of the company, according to their different ranks. At the same time our servants

were entertained in the garden.

The entertainment confifted mostly of different kinds of rice boiled with butter. fowls, mutton, boiled and roafted lamb. The whole was ferved in large gold or china dishes, and placed in the baskets, which stood on a long cloth spread above the carpet. The diffies were interspersed with faucers filled with aromatic herbs, lugar, and vinegar. But, according to the cultom of the country, we had neither napkins, ipoons, knives, nor forks; for the Shach himself eat with his singers, and every one followed his There were indeed, besides the common bread, some very large thin cakes, which we used instead of napkins to wipe our fingers. They are made of wheat flour; the Persians sometimes eat them; they are not disagreeable. Our drink was sherbet, and water cooled with ice. Formerly it was usual on such occasions to drink wine, and have women to dance and fing. But the prefent Sophy, being a fober and devoor prince, thought it proper to abolish a custom productive of so many indecencies, and directly contrary to the rules of the Koran. We had therefore only men to ling, and no dancing.

The ambaffador, and all the gentlemen who were admitted into the hall, continued with their heads covered during all the time of the audience. They only, on entering

the royal presence, uncovered once, and bowed to His Majesty.

When the entertainment was over the ambaliador took his leave, and returned to his lodgings, conducted by the Maymander Balha, in the fame manner as in the morning, The streets were lined with the Sophy's guards, to prevent any inconvenience from the

vast crowds of people.

The fame evening the Shach lent a prefent to the amballador of the golden callanne he had used at court; it was neatly wrought in filigree, and valued at forty or filly pounds flerling; also twenty large dithes of folid gold, filled with various of tweetinests. Those who brought them returned immediately, leaving the plate, which remained at the amballador's lodgings above fix weeks. All this time it was uncertain whether fuch a valuable treasure was forgot, or intended as a present. The disher however were at last demanded, and delivered. They weighed about thirty pounds a-piece, but were of mean workmanship, being all bear out with a manner. From this and many fimilar infrances, fome conception may be formed of the immune riches whereof the Sophy is policifed.

The Shach's name is Huffein: be is about thirty years of upe. of a middle dature. open condenance; and has a floor black beard. It is laid has legs are remarkably fiors, in proportion to his body. He is very good natured cand of whenever diffefrom the fix reverse children overtherent lates. I schemiz the official profess in the minority leston appears out of the Larging Hullen hindely charge of woners, appears out of the Larging Hullen hindely charge of woners, as disposed with reason visition, yet being efficient in the Element among the woners, as increasing a state of the capture wholly substitute accordance of the capture wholly substitute and successful successful and the residence of the capture wholly substitute and the second successful succe

of India by Mery-Mahmut, an enterprifing and powerful chief, who took

the weakness of the present administration.

The Persian ministry neglected and despised these rebels, threatening, i to fend some troops to cut them all to pieces. Time hath shewn the va high words. I must observe, that they want neither men nor money; diers were undisciplined, and, above all, they had no officers of sufficient command them.

The 9th of May, the ambassador had his first audience of the Etmadowl conducted in the fame manner as when we went to court. The entertainmen of the fame kind, but much more magnificent. The palace was grand a garden adjoining. The Etmadowlett, whose name is Phatalychan, was Georgian, of Christian parents, but educated in the seraglio. He is a ta man, of a friendly aspect, and a great favourite of the Sophy. After we re the Etmadowlett fent the ambassador a present of a fine horse, with a sadd richly mounted, after the Persian fashion, and a gold calianne, little in given by the Shach. It was reported that no foreign ambassador had ever with so much respect.

The 11th, the ambassador had a second audience of the Sophy, at the s formerly, called Tavalea Telear, i. e. The Palace near the Stables; it w and no entertainment was given. Next day he received from the Shach fome excellent Sherras wine, and a gold bottle that contained about two

fmall cup of the fame metal.

On the 15th, the ambassador had a second audience of the Etmadowle

the subject of the embassy.

Three days after the Hackim Basha, or chief physician, sent me an inv him. He received me in a very courteous obliging manner; and detain two hours, talking on different subjects. He told me that the physicians i vegetables, and their virtues, their chief study; they dealt but little in minera cal preparations. Then he asked me, whether the European physicians ad in their prescriptions? I told him they did, with great success. To which that the qualities of that drug were known to very few. He enquired when how it should be made? and what were its virtues? All which I answere faction. Hence it is evident, that the Perlians have no correspondence n with the Chinese. The physician is an elderly man, of a grave dep might pals for a doctor any where. On taking my leave, he told me he could not converse with me but by means of an interpreter, which wa difagreeable:

The same day the Dutch commissary, Mynheer Vonkettler, made his p Inalian, as envoy from the governor of Baravia to the Shach of Perfia. ceded by fix elephants, fent as a prelent to the King by the governor. mempayening, and was attended by leveral gentlemen, and made as grai successive had been a minuter from surveyor of Europe. The took up ste the Busch Berner. Were Kerner toldene that he was born in Contraind south a that is a substitution of the Direct East India of the Contraind of the Contrai

The 28th, I dined at the Dutch house, where we had a grand entertainment. June 2d, the ambaffador intended to go a-hunting, and to take a view of the country about Ispahan. But an officer came from court, defiring him to delay it till another opportunity; for the Shach had pitched on that day to visit a country-house, in company with his ladies; on which occasion it is death for any one to be seen near the place where the court passes. To prevent accidental transgressions in this respect, a cryer is previously dispatched to warn the inhabitants, who proclaims through the streets and along the road, that nobody, under pain of death, shall appear either in the way, or from any house near it, by which His Majesty and the ladies are to march. The Shach rides on horseback, attended only by eunuchs. The ladies are mounted aftride, fome on horses, others on mules and affes. They are all veiled with white muslin, so that nothing can be seen of them but the eyes and nose.

The Perfians tell a pleafant flory of Shach Abbas's behaviour on an occasion of this nature. The Shach at a certain time was riding along, attended by his concubines, when he happened to meet a poor country-fellow upon the road. He was immediately brought before the King; and, expecting instant death, fell on his knees, most submissively begging pardon for so heinous an offence, and pleaded ignorance in his excuse, having neither seen nor heard of any cryer. The prince was pleased with the fimplicity and innocence of the peafant, ordered him to take courage, and all the ladies to unveil; then defired him to pick out any of his concubines he liked best, and he This treatment dispelled his fear; he pitched on one that should have her for a wife. pleased him most. The Shach approved so much of his taste that he carried him to

court, where he foon became a great favourite.

The 9th, I dined at the English factory, where Mr. Coppin, and the other gentlemen belonging to the company received me in the most friendly manner. The day was very hot, and in the evening we supped near a fountain in the garden. On a sudden we felt a gust of wind, as hot as if it had come from the mouth of an oven. It was soon over without any bad effect. But I was informed that these hot winds are very dangerous in travelling over the deferts, and often kill people immediately. The only refource, on perceiving them coming, is to fall down flat, with the face to the ground, and continue in that posture till they are gone.

On the 12th, the ambaffador had a third audience of the Shach at Farrabbatt, a country-house near the city. It is an extremely pleasant place, adorned with gardens, fountains, and cascades, surrounded with parks for all kinds of game. While we were at fupper on the terrace we had a fqual of wind, which almost carried away every thing, and actually fwept off the thin broad cakes which the Perfians use instead of napking w

The 16th, Monf. Ricard, whom I mentioned at Tauris, and twelve inflictures of different orders, were invited to dine with the ambaffador. Several of these gentlemen had been long in India and Ethiopia, which rendered their convertation very الإصلح والثوالي بالمارية

entertaining.

The 21st, the ambassador was invited to dinner by the Devettar, or keeper of the great feal and flandiffa. Here, as in all other countries, this is an office of great walt. We were entertained with more magnificence than by the prime minister, or even at court. Soon after we entered there were lerved up a great variety of Iweetmeals, and all kinds of fruit that the climate afforded. Coffee and therbet were carried about by turns. We were placed cross-legged on the carpets, except the ambabaton, who are a feat. During this part of the feat we were entertained with vocal and infroments a feat. The feat of the feat we were entertained with vocal and infroments. raulic, descing theys, fumblers, puppers, and sugglers: all the performers ca their parts with presidenterity. Two of their counterfering a quarret contin . TOL. VII.

the other's turban with his foot, out of which dropped about fifted ferpents, which run or crawled about the room. One of them cam great fpeed, which foon obliged me to quit my place. On feeing us us the creatures were altogether inoffensive, as their teeth had been a fellow went about the room and gathered them into his turban: eels. The victuals were now ferved in a neat and elegant manner. well dressed in the Persian fashion. Our host was very cheerful, and thing in his power to please his guests. He excused himself hands not having wine, as it was not then used at court.

On the 23d, the Maymander Basha brought a message from the bassador, intimating, that the business of his embassy being now is choose his own time to depart. This was not very agreeable news who alledged, that before he could procure shipping to transport him season would be far advanced, and oblige him to winter in some part of

July 1st, the Shach sent the ambassador, and the principal parts of the Persians call the kalatt. It consists of a tunic, a long robe c stuff, a sash and turban, and some pieces of Persian silk, whereof ab fell to my share. The whole value was not considerable; but the smark of favour to all foreign ministers who come on friendly e occasion, he sent the ambassador, in particular, a present of two sit own stables.

The 3d, the ambassador had his last audience of the Shach at a 1 when he received an answer to the Czar's letter, and immediately to without further ceremony.

The 8th, the Shach fent the ambassador another present, consistin two lions, two leopards, fix monkies of different kinds, three parro one green, three fine horses, and an Indian bird called Myana; it is and fize like a blackbird, and whistled a very fine note.

August the 3d, we began to prepare for our journey homeward, wh time. The 18th we removed from our lodgings in the city to a house the control of the city to a house the control of the city to a house the c

Shach in the northern fuburbs, called Tauchtzy.

The 26th, I took leave of my friend Mr. Coppin, who set our journey to England, by way of Aleppo. The English factory at Ispal situated in the middle of the city, have a spacious garden adjoining, from the rest of the town by a wall. Most of the great houses in the ci in the same manner, which renders it very extensive.

Ifpahan is fituated nearly in 32 degrees north latitude, on a fruitful vince of Hierack, anciently the kingdom of the Parthians. About the miles diffant from the city, to the fourth, runs an high ridge of moun well. Shach Abbass the Great transferred the feat of the Persian

Cathin to this place.

If palian is plentifully supplied with water from the river Schendero tween the city and the suburbs, keeping its course to the north. It and is stordable remail every where unless during great rains, which Area palians chas place us course is but flort, for it soon loses like plants. Over the occurate on there are three stately stone-bridges other; but the one in the making between the city and that part of hupbs, which minimizes the seacons street Transbach, far exceed that kind I ever the. It is broad enough for two carriages and a

abreast, and has galleries on each side, which are covered for the convenience of people on foot; and watchmen are flationed at each end to prevent diforders. There are few houses in the town which have not their chauses, i. e. cisterns of water conveyed in pipes from the river: a most falutary and refreshing circumstance, in such a dry and fultry climate.

The city is populous, and, as I already observed, very extensive. As most of the inhabitants have their houses apart, furrounded with gardens, planted with fruit and other trees, at a distance it appears like a city in a forest, and affords a very agreeable

prospect.

The streets are generally very narrow and irregular, excepting that leading to the great bridge already mentioned. This noble street is very broad and straight, and near an English mile in length. On each fide are the King's palaces, courts of justice, and the academies for the education of youth, with two rows of tall chinar-trees, which af-These trees have a smooth whitish bark, and a broad leaf, like the ford a fine shade. plane-tree. At certain diffrances there are fountains of water that play continually, round which are foread carpets; and thither the Persians resort to drink coffee, smoke tobacco, and hear news: which I must confess is very agreeable in hot weather.

About half a mile below the city is a fine plain upon the banks of the river, where the Persians every evening exercise their horses in riding, and accustom them to the discharge of fire-arms. They also shoot at butts with bows and arrows, and throw blunted

darts at one another: at which they appear very dextrous.

The city is almost quite defenceless, having only a slight wall round it, built of mud dried by the fun, which is broken down in many places: fo that if the army is defeated in the field, Ifpahan cannot defend itself one day; for even all the artillery I faw confifted of about twenty brafs cannon, which flood in the grand court before the palacegate, and were more for parade than real use.

The houses here, as in other places of Persia, are generally built with bricks hardened by the fun. The roofs are flat, and covered with a terrace. They make but a mean appearance from the street, though within they are neat and clean, and very convenient for the Persian manner of life. The Shach's palaces, the public edifices, and 化对邻氯醇氯 医施维蚊病

the houses of all persons of distinction, are built with stone.

As the streets are not paved, when it is windy, the city is sometimes involved in such This obliges the inhabitants to water the a cloud of dust that the sun is scarcely visible. streets at least every evening. These guits of wind are very disagreeable, but they hap-

pen feldom, and are of fhort duration

At Ispahan are many manufactories of filk and cotton, and a great many filk worms in the neighbourhood. As the confumption of filk is very confiderable at this place, little of it is exported. The making carpets, however, employs the greatest number of hands, for which the demand is great; as they are preferable in quality, design, and colour to any made elfewhere.

The fields about the city are very fertile and produce plentiful crops of excellent wheat and barley; but then they must all be watered on account of the dryness of the foil, which is a work of labour and expence. Belides thele I law no other grain.

The Perfusis tread out their com with oxen or affes. For this purpole they make a circle about twenty or thirty less in diameter, on the circumference whereof the therees. are laid. There is a light ledge or mirdle drewn by the carrie, in which has driven are laid. There is a light menter of the second as often as a receffing and second sec foliens the firsty, and renders it very root provender. There also beyon it

the best horses are kept in a condition for any service by this food, and a small quant.

of dried barley, twice a-day.

They have flocks of large sheep, whereof the mutton is very good, but the wool coarse. In the province of Karamenia, indeed, they have exceeding sine wool, some of which I have seen little interior to silk. Their horned cattle are bullator, which as and them malk, and are on I in ploughing the ground, and drawing carrier. The, are also the common kind of cattle of different sizes. The better fort or proplement chiefly mutton and sowls, but very little best.

Befides the catte I have mentioned there is another kind, having a high rifing upon

the should r, with clean limbs, which are very handsome

As I have the reliable wed that the Persans make use of ice to cool their water in summer, it may be taked, where are got such quantities, in so hot a climate, as are that sold in the streets for that purpose? I was informed, that there were people who make at their business to watch the frosty rights in the winter season; on wonh occur, they went to the mountains near the city, and threw water on certain places, which being trozen, any continued to repeat the operation till the ice was of convenient thickness; then they cut it in pieces and curry it into caves hewn in the rocks, where it is proserved during the summer. What they cannot carry off before the sun rises is covered to defer at it from his heat.

Value I remained at I pahan I visited the Shach's aview. It contains a great variety of all kinds of birds, many of which had come from India and other toreign parts. Among the rest were a couple of turkeys, which it seems are rare birds in Persia. The place is very neat and elegant. The aviary is about sisten seet high, and covered with a net-work of brass-wire to prevent the birds slying away.

Provisions of all kinds are very dear at Ispahan, which is sufficiently apparent from the number of poor that go about the streets. Nothing, however, is so extravagantly

high as fire-wood.

The Roman Catholics have three convents in the city, viz. those of the Carmelites, Capuchins, and Augustins. The Jesuits and Dominicans have their separate convents in the suburbs of Julpha, which is inhabited by Armenians, who are allowed the sree exercise of their religion.

There is a confiderable number of Jews in the city, who are either merchants or

mechanics.

In the neighbourhood of the city is a tribe of people, called by the Persians Giaur, who worship fire, being the pesterity of the ancient inhabitants of this country, who paid divine honours to that element. They are a poor indolent race, and live in nasty huts, or in tents. They speak a different language from the Persians, have black hair, and are of a swarthy complexion. They have some sheep and cattle, but many of them go about the streets begging.

About three or four niles to the fouthward of the city are to be feen the ruins of a tower on the top of a mountain, where it is faid Darius fat when Alexander the Great fought the fecond battle with the Persians. I was also told that, about two days journey from Ispahan, are distinguishable the remains of the tomb of Queen Esther, a lady celebrated in holy writ for many virtues. These, and many other places, I intended to have

examined on the spot, but was unluckily prevented for want of time.

While we lay at Tauchtzy waiting for horfes and camels, two of our fervants were fung with feorpions, but were foon cured, by timely application of the oil of feorpions, prepared after the Persian manner, without any other remedy. The jackale, made a difficult howling under our windows every night.

I have

I have now finific I wood action on whitever to a density remarkable in and about the city of Ispolan. I shall only aid, that, and to me to large and pempons tales which this mighty notice that it is, there are not very critice entry; of which I shall mention one; to I'm the great of Krim of the critic may think it as honour to drink out of his horse's southers. The reactions is trace much the given in the oriental style fully as extremand.

- Perfia is at prefent divided into fixteen provinces, many of them of great e.c. nt. I shall mention their prefent names, togeth r with those they from to have borne among the ancients, distinguishing the latt r by Italies.
 - 1. Turkomenit, Gr at Armenia.
 - 2. Diarbeck, Mejopotamia.
 - 3. Kurdistan, Part of fyria.
 - 4. Hierack Arabee, Chalden, or Bab lon.
 - 5. Hierack Aggenry, Region of the Parthians.
 - 6. Shirvan, Lowards the north-week court of t'. Cuspium Sea.
 - 7. Guilan and Melanderan, Hyrcania.
 - 8. Aftrabatt, Marzama.
 - 9. Uibeck,—Buchria.
 - 10. Korallan, Aria.
 - 11. Sablestan, Paraponisia.
 - 12. Sigiltan, Drangiana.
 - 13. Arachofia.
 - 14. Machran.
 - 15. Karamenia, Reac' my to the Gulf of Ormus.
 - 16. Pharfiftan, Old Perfia, whereif Perjepolis was the capital edg.

I have added the ancient names according to the best information I could procure; for, under the various revolutions of this country, the records have been almost wholly either lost or destroyed: fo that the Persians themselves know very little of the ancient history of their country.

CHAP. VII .- From Ifpahun to Shamachy; Occurrences during our Stay there.

SEPTEMBER 1st, having procured horses and camels and every thing meeting, and having also got a conductor from the Shach, we this day left lipshan in order to return to Russia. We travelled short stages along the same road by which we came to sipahan. Little material happened for a considerable time, and I shall not repeat what I formerly observed; I shall only take notice, that many of the places through which we passed were much insested by strong gangs of highwaymen. We were therefore obliged

obliged to travel very cautiously, and to keep our people together near the baggage but particularly to procure a safe caravansery for our lodgings. The weather continuit very hot was the reason of our making easy marches; and these chiefly in the mornin and evenings, and sometimes in the night, when it could be done with safety.

We travelled in this manner till the 26th of September, when we arrived at a village called Arrazant, where we lodged. Next day, instead of pursuing the same route a Tauris, we turned to the right, and took the road leading to Cashin and Guilan.

The 27th, we proceeded five agatz, to Membereck; and the 28th four, to the city (Casbin. This place is situated in a spacious plain, having a ridge of high mountain to the north. I mentioned formerly that Casbin was once the seat of government, an the residence of the Persian monarchs. There are still to be seen the ruins of man stately mosques, palaces, and other public edifices. The city appears to have been it former times very large and slourishing, but is now much contracted and decayed.

The plague raged here all the preceding fummer, which had almost depopulated the place; and, although the fury of that contagious distemper was much abated, people continued to die daily, which made us resolve to remain no longer than was absolutely necessary, in order to prepare things for our journey to Guilan. This could not be

foon accomplished at a time of fuch public calamity.

In the mean time many of our people were feized with pestilential fevers, who all recovered but one. He died suddenly, with the usual symptoms of the plague. I and several of our people were likewise taken with severs, occasioned by our being lodged in houses where the Persians had lately died. These circumstances made the ambassador resolve to leave the place at all events. During the time therefore which we were obliged to wait for horses and camels, we removed out of town about a mile, to a garden belonging to the Shach, provided for us by the commandant of the city and province. Here we set up our tents, and in this situation, by the help of free air and good water, our people recovered surprisingly, so that in a short time most of them were able to ride; another gentleman only and myself were carried in litters between two mules.

The 12th of October, we set out again, pursuing our journey northward. After travelling about two leagues through a plain we ascended a high and steep mountain, and, proceeding onward about a league, came to a small village, where we lodged. All the inhabitants had forsaken their houses. Whatever else was wanting, we had here the comfort of pure air, which had such an effect on me that next day I was able to mount on horseback, though, at setting out, I was scarcely in condition to bear the easy

motion of the litter.

We continued our journey ascending and descending many steep rocks and mountains for four days, when we arrived at Menzyly, a little town situated in a charming valley, where grow abundance of citrons, oranges, olives, beside grapes and other fruits. These I own were tempting objects, but sad experience taught many of us to value them no more than sloes or bramble berries. Menzyly is governed by a kalentar, or judge; it is a pretty romantic place, encompassed by high mountains on all sides, which decline to the north, and are covered with grass. This is a rare sight in Persia, and is caused by the great autumnal rams; for along the south coast of the Caspian Sea it rains at this leafon almost without intermission, for the space of six weeks or two anomins. In this and the neighborous vallages are bred a great number of silk-worms, which wonders the best and greatest quantities of raw silk made in the produce of Guitan; from whence it is expected by the asympton muscharite party in the produce of Guitan; from whence it is expected by the asympton muscharite party in the produce of Guitan; from whence it is expected by the asympton muscharite party in the produce of Guitan; from whence it is expected by the asympton muscharite party in the produce of Guitan.

Having staid two days at Menzyly, we set out again in heavy rains, through deep roads, which greatly incommoded our camels: for they often slipped, and sometimes fell down under their burthens; however in sive days we reached Reshd, the capital of the province of Guilan.

Reshd stands in a plain surrounded with great woods on every side, about a day's journey from the nearest shore of the Caspian Ses, where is a very good harbour for

thips of fmall burthen.

The houses are thinly scattered, resembling rather a large village than a town. As the ground at this place is very fiat, the inhabitants are obliged to choose the dryest places to build on. In the market-place I saw about eight pieces of cannon, mounted on forry carriages; among which was a neat brass field-piece, with the name of that noted prince the Duke of Holstein Gottorp upon it: it seems to have been left here accidentally by the ambassadors of that Duke to the then Shach of Persia.

The houses are mean in comparison with those in other parts of Persia; the roofs

are raised and tiled to carry off the great falls of rain.

The marshes and pools with which Reshd is surrounded renders it very unhealthy, especially in the heat of summer, when it is often visited with the pestilence; and, although it is a place of the greatest plenty, the inhabitants look as half starved. I was told they were obliged to confine themselves to a scanty diet; that, if they allowed themselves the least indulgence, even so far as to eat their rice with butter, they were liable to agues, the reigning distemper in this climate. Many of our people were actually seized with these agues, though none of them proved mortal. Here, as at the capitals of the other provinces, we were obliged to remain a considerable time, much longer than we inclined; for every province bears the expence of ambassadors from the time they arrive at its capital till they reach the capital of the next province, where sresh supplies of money and cattle are to be procured. The obtaining these things, and the rainy weather, detained us in this disagreeable place. The pools are full of frogs that chatter like magpies, and make such a loud croaking besides their chattering, that a person cannot sleep till he is accustomed to that noise.

The country above Reshd is very fruitful, particularly in rice, which grows plentifully on the marshy grounds, and is sufficient to supply most of the other provinces of Persia; there is also plenty of fruit natural to the climate. The Armenians who inhabit Reshd make good wine, both red and white; and even in the woods you may see the vines loaden with clusters of grapes twisting about the trees, which are left to the birds, as they are not worth gathering amid such plenty.

Great flocks of field fares, thrushes, blackbirds, with vast quantities of storks, cranes, swild-geese, and all other kinds of water-fowl, come hither from the north during

the winter; and return to the northern regions in the fpring.

The staple of Guilan is raw silk, of which they make great quantities, both for their own consumption and for exportation.

While we remained at Reshd two ambassadors arrived from the Aijuka Chan, Prince

of the Kolmuck Tartars, in their way to lipahan.

Movember oth, we left Relid, and travelled through thick woods to the flore, along which we kept to the left, in all about five agetz, and then lodged in a finall empty village.

The region we proceeded his agains in ground score exhict healther. This doy his could be increased by against a ground score with the country of the countr

rived from Ispahan, who arrested the former one for some fault he had committed on the road.

The 20th, we travelled from Keshker to the shore three agatz, and halted a little, then along the shore four agatz farther, and at midnight reached an empty village; a difagreeable circumstance, after marching in constant rain the whole day, which had rendered the rivers almost impassable to camels.

From the 21st to the 27th, we advanced along the shore. The roads were very good. At last we came to a town called Astara, where we halted for refreshment. There is

nothing remarkable about this place, except its pleafant fituation.

December 1st, we reached Siarakent, a large village. And next day Langgara, fituated on the shore at the mouth of a river, an agatz distant from the former. And the 3d to Kyzillagatch, five agatz from Langgara. This day we passed along several large bridges, over very deep rivers. In great rains and strong northerly winds, these rivers fwell above their banks, and, spreading to a great extent round the bridges, render them impassable.

The 5th, we travelled five agatz to Tzamachava. I was surprised at the great slocks of water-fowl near this place: so numerous were they that one of our people killed

eight geese at one discharge.

The 7th, we entered the plains of Mugan. I described what seemed most remarkable in this defert when going fouthward, and shall not recapitulate any thing I formerly ob-The road was very good. We lodged at the river Bulgara, fix agatz from Tzamachava, the water of the river is muddy and brackish. Next day we advanced feven agatz, and lodged again in tents; for there are no houses in this plain, and only pit water, very brackish.

On the 9th, we travelled feven agatz to some small huts beyond the river Kure. which we passed on a bridge of boats. We passed this river about a day's journey above this place, in going to Ispahan, when I made my remarks upon it. Seven agatz from these huts stands a place called Karakurody, the last stage in the desert, where we

lodged on the 11th.

The 12th, we arrived at Shamachy, five agatz from the last stage. Since the time we left this place it had fuffered grievously by the plague, which raged here all the preceding fummer. It was now much abated, though not quite extinguished. This was a difagreeable circumstance; many of our people were fickly, and two of them died of the diftemper: for the empty houses where the Persians had died, notwithstanding every precaution, particularly finoaking the walls, still proved infectious.

I was informed, that about feventy thousand persons had been carried off by the pesti-

lence within the last eight months, in Shamachy and the province of Shirvan.

The 15th, my old acquaintance Monf. Yeiifky, the Dantzicker, whom I formerly mentioned, came to vifit me. He was to altered by fickness that I fearcely knew him. He told me what difinal havoc the plague had made, particularly in his own family. I affect, why he did not retire to the country for better air? His answer was, whither could be fly from God Almighty! This I find to be the general opinion of the Mahometans, both Periums and Turks. The fame day I had a wifit from Father Backond, the only milionary at prefent in these parts, his companion Father Ricard. being dead of the plague.

The leaden being now lar advanced, a became proper to puch on lone place for willter-quarters. The terrible settlence which had prevailed to been sent with included vices, greatly deterrible in front choosing this place. The imperior convenience, increment of in the prefers abstracts of mer plague, and otherly mechanical provides is not obliged. to support the expences of an ambassador till he arrives at the capital, and several other reasons, determined us to winter at Shamachy.

January 15th, 1718, the Chan came to town from the country, where he had been all the last summer.

The 21st, the ambassador paid the Chan a visit, which was returned the 25th.

Nothing material happened during the winter; only we often heard of the bad fuccess of the Shach's forces, which were fent to Chandahar against the rebel Mery Mahmut, and of many incursions into the Persian provinces, made by the mountaineers who inhabit between the Black and Caspian Seas.

March 10th, one of our gentlemen, Monf. Lepuchin, was fent away by land to Aftrachan, with an elephant and all the horses. He was escorted by thirty Russian foldiers, and some Astrachan Tartars. In his march, between Derbent and Terky, he was attacked by some hundreds of the mountaineers, called Shaff kalls, who killed one man and two horses, and wounded several men and the elephant. Meeting, however, with a warm reception, they thought proper to retire, but carried off three of the horses. The gentleman arrived safe without any further missortune at Astrachan.

April 14th, ships, commanded by Captain Rentle, arrived at Niezabatt, in order to transport the ambassador to Astrachan. He could not, however, proceed immediately to embark, for we were obliged to wait for an answer to an express, which the Chan had dispatched to Ispahan on affairs of importance, which did not return till the end of May. All of us impatiently defired to leave Shamachy before the great heat came on. In the mean time we diverted ourselves with hunting. I went often to see the filk-worms feeding on mulberry-leaves. The inhabitants were apprehensive that the plague would break out again in the summer; and we had already buried twenty-two of our people since our arrival on the frontiers of Persia.

On the night of the 8th of May, there were fuch flashes of lightning as had not happened in the memory of man; though the night was dark, I could plainly see the cattle in the adjacent fields by means of the coruscations; the lightning was accompanied with dreadful claps of thunder, which lasted above two hours.

CHAP. VIII. - From Shamachy to St. Petersburg.

JUNE 16th, we left Shamachy, and in four days arrived fafe at Niezabatt, where we found ships waiting to receive us.

On the 21st, we began to load the vessels with all possible dispatch, which was foon accomplished by the assistance of some Russ soldiers who had wintered at this place. Since I have mentioned these soldiers, I shall briefly relate how they suppened to be on this coast.

The people of Chiva, a territory caltward from the Calpian Sea, having leveral times rebbed and plundered fome caravans of Rullian merchants going to Bucharia, His Czarih Maielty determined to fend a finall body of regular troops, and fome Collacks, to demand fatisfaction for such outrages committed in time of peace. For this purpose, Mr. Beckvitz, a captain of the guards, who was appointed to command in this expedition, repaired to Astrachan, in summer 1716, in order to make all the necessary preparations against next spring. Having accordingly embarked his men, provisions, and ammunition at the proper season, he steered his course along the Calpan Sea, and binded at a place called Krainz-voods, i.e. Red Water, as near to Chiva as he convent-

This place was barren an uninhabited. Having therefore moored his ently could.

transports, he erected a small fort to secure his retreat, in case of accidents.

In the mean time, he fent a friendly message to the Chan of Chiva, to notify his arrival, and to defire that he would furnish him with provisions and quarters for his men; for which he offered to pay ready money. The crasty Tartar returned for answer, that he might come to Chiva with the greatest safety, where all his demands should be granted. At the same time sent him a present of truits and fresh a revisions, and guides to conduct him on the road, accompanied with the highest expressions of respect to His Czarish Majesty. Mr. Beckvitz, having lest about three hundred men in the fort, to guard the camp and provisions, proceeded with the rest, and a few field-pieces, towards Chiva.

In three or four days, he arrived in the neighbourhood of the town, where he was met by feveral of the chiefs, who came with compliments from the Chan, and to fettle matters relative to the cantonment of the foldiers. This particular was difficult

to adjust.

Mr. Beckvitz infifted that all his men fhould be quartered in the town, and nothing but infatuation could have influenced him to alter fo prudeat a refolution. But the Tartars flarted many objections against putting it in execution, and pretended that the Chan and themselves were willing to agree to it, but the people were averse, and jealous of having fo many ", med men lodged within their wells; and therefore they proposed, as a means of quieting the minds of the people, that he should separate his men, in order to be quartered more conveniently in the adjacent villages, and that himself should have lodgings in the town, with a fufficient guard to altend him. This motion was flrongly opposed by all the old officers, who locked on it as a firstagem laid for their deftruction. And fuch in reality it proved in the end.

Mr. Beckvitz, deluded by faife promifes, at last confented to canton his men. No fooner were they divided into small parties than they were inclosed, and attacked by great numbers of Tartars, and most of them either killed or taken pulsaners, who were afterwards fold for flaves. A few of them, taking the alarm, flood to their arms, and made a brave defence, for some time endeavouring chiefly to regain their camp and ships; but having a barren defert to pais, and the Tarrar horse harassing them day and night, they were at last obliged to submit to satal necessity. The imprudence of the general was the fole cause of all these misfortunes; for, being it no want of provisions or ammunition, had he only kept his men together, the whole combined power of thefe

Tartars could not have prevented his regaining the camp and hipping

The camp was next attached by the Tartars, but they were repulsed by the garrifon, which having now intelligence of what had paned at Chiva, demolished the fort, reimbarked the men and stores, and set fail for Astrachan. The season was now too far advanced to gain that port; this circumstance, together with hard gales of contrary winds. obliged them to put into Niezabatt, in order to pais the winter. Here they were holdspitably received by the Perfians; and the prefere of the amballador at Shainachy countbuted greatly to the relief of these poor unfortunate people.

Methappy Beckvitz himfelt happened to be taken pritoner. He was Jean for to the Chap's tent, on fone presence of butiness, where they first littlest of his head, the after vening their barbarous rage on his dead body, they slayed it was having factors.

the fair with firms, placed a syntherable speciality on one of the sty saven a Child substitute, production the thirty of a party passes of the of the party of the savent of the control of the savent of the saven delly.

Being now on the point of departing from Persia, called by the Persians Iran, and also Pharsistan, I shall close what I have to offer regarding that country, by giving a list of the principal officers of flate who attend that mighty monarch at the megilifs, i. e. public audience of ambasiadors; they sit in the hall of audience according to their respective ranks, and have all of them, on those occasions, magnificent capes and robes of state, kept in the King's wardrobe for that purpose.

- 1. The Etmadowlett, prime minister.
- Spaffelaar, general in chief. 2.
- 3. Kurtly Basha, general of 12,000 men.
- Kular-agassy, director of the prisons. 4.
- 5. 6. Trengy Batha, general of mulketeers.
- Ishek-agasty Basha, master of ceremonies.
- Divan Begg, chief justice.
- 7· 8. Toptshy Basha, master of the ordnance.
- Vaggian Aviz, fecretary of state. g.
- Merish-kaz Basha, grand falconer. 10.
- Dgevedar Basha, general of the artillery. II.
- Milachurd Basha Giloss, master of horse.
- Milachurd Yaffy Basha, master of the field-horses. 13.
- 14. Kolopha.
- Mamalek, comptroller of the household. 15.
- ı 6. Kchaffa, cabinet fecretary.
- Nazyr Daftar, steward of the household. 17.
- 18. Visir Ispahan, chief magistrate of Ispahan.
- Vifir Kurtfy, general of horfe. 19.
- Visir Kule. 20.
- Chasnadar Basha, chief treasurer. 21.
- 22. Kaliphar Kashkar, chief judge in civil affairs.
- Doroga Taftar, judge of the city. 23.
- Sachapt Tauchtzy. 24.
- Sachapt Narvis, chief aftrologer.
- Hakim Basha, chief physician.

The following officers attend the Shach wherever he goes:

- The Ibrahim Aga, chief of the eunuchs.
- Yeuth Batha, chief of the white eunuchs.
- Achmet Aga, chief of the black eunuchs.
- Klitch Kurthy, (word-bearer, Tzatyn Baiha, quiver-bearer,
- Saddach Kurthy, bow-bearer.
- Trang Kurtihy, murket-bearer. Dend Karrihy, dara-bearer.
- Lucius Kariby, target-bearer.

The following are the chief doctors of the law of Mahomet:

1. Sadyr Chassa; the same office in Persia as that of the Musti in Turkey.

2. Sadyr Mammalek.

- 3. Fazyl.
- 4. Shach Islam.
- 5. Chazy.
- 6. Mullah Basha.
- 7. Mudarafs.
- 8. Pifhnamafh.
- 9. Mutashett Basha.
- · 10. Woasham Basha.

These are the principal; besides whom there are many other officers too numerous to recite. With the foregoing that I close what I have to say regarding Persia.

The 26th, we fet fail from Niezabatt with a fair wind at fouth-east, which lasted only a few hours; after which we were becalmed for three days.

July 2d, the wind became again fair, and carried us with a gentle breeze out of the deep water into foundings; but turning contrary, we came to anchor in thirty fathom water, where we lay till the 10th, when it blew a very hard gale, which drove us from our anchors out to fea; and, continuing for two days, brought us again in fight of the Persian shore, which was at this time no very agreeable object.

The 13th, the wind chopped about favourable, and so continued, with little variation, till the 18th, when we arrived safe at Astrachan, to the great joy of all our company.

September 7th, leaving Astrachan, we failed up the Volga. Our progress, contrary to the course of the river, was very slow and tedious. In calms the boats were drawn up by men, who went upon the banks; but in hard gales, we were obliged to haul them near the side, and lie still.

October 12th, after a voyage of five weeks we arrived at the town of Saratoff, about eight hundred verst distant from Astrachan. The winter drawing on prevented our farther progress by water. We therefore unloaded, and discharged the boats, being resolved to remain here till the snow fell, when we might proceed by land in sledges.

November 1st, there had now been a little fall of snow, sufficient to smooth the roads, and this day we fet out from Saratoss in sledges.

The 3d, we came to a little town called Petrofky, about ninety verst from Saratoff.

The 8th, we came to a large town called Penze, ninety verif from the former. As we advanced to the north the frost and snow daily increased, which made the roads very smooth and easy. Before we left this place, a sudden rain obliged us to halt a few days. Here we met with Brigadier Kropotoss, who, with some regiments of dragoons had winter quarters at this place.

The 14th, the frost and snow returning, we set out from Penze.

The 15th, we reached Saransky, eighty verst from the former. Here we found many Swedish officers taken at Poltava, who were well quartered in a plentiful country.

The 17th, we left Sarantky, and the 21st, arrived at Arzamais, an hundred verififrom Sarantky.

The 24th, we came to Murum, three hundred and fixty veril from Saratoff, which I mentioned in going fouthward by water. From Saratoff to Petrolky the country is

fomewhat dry and barren, but the rest of the country through which we passed is very fruitful, producing all kinds of corn, fine woods, particularly of oaks, interspersed with many villages; and the face of the country, constantly varied by plain and gently rifing grounds, affords a most beautiful prespect. From Musum we came to the town of Wolodimir, an hundred and thirty verlt from Murum. This place is large and well peopled, and famous for being formerly the refidence of a great prince of the fame name.

The 30th, we arrived fafe at the city of Mosco, an hundred and forty versi from the former, and seven hundred and seventy from Saratoff.

December 19th, we proceeded towards St. Petersburg, where we arrived on the 30th. Nothing material happened during our return through Russia; and what was most remarkable in the country I described in going southward. I cannot help taking notice of an extraordinary case of one of our people, in an excessive cold night. The fellow, expecting to banish all feeling of cold from himself, drunk a large quantity of spirits, which produced a drowsiness, that ended in sleep in an open sledge. On arriving at a village, the person was found stiff, speechless, and apparently quite dead; but being carried to a brook hard by and plunged feveral times in the water, and then rubbed with fnow, and brought into a warm room, with proper regimen he foon recovered, and was able to proceed next day.

I have often observed, in other instances, that the use of spiritous liquors in cold weather is the worst of remedies; for, though they warm at first, they leave a chiliness behind them, not to be got clear of for a confiderable time. I have found by experience nothing preferable to weak warm liquors, mixed with a little spirits. The Russian

travellers carefully avoid the excessive use of brandy in strong frosts.

Thus I have finished my account of a long, tedious, and dangerous journey, which lafted for three years, attended with many difficulties, not eafily conceived by those who have not travelled the fame road. At our return to St. Peteriburg we found His Majesty at that place, who, I was informed, was well satisfied with the conduct of his ambaffador, whose principal errand was to cultivate and cement amity, and a good corre-

fpondence between the two crowns of Russia and Persia.

Notwithstanding the war with Sweden had continued near twenty years, this active monarch had not neglected, nor even suspended the building and adorning his new capital. During my absence the appearance of things was so changed, that I could scarce imagine myself in the same place; so surprising was the alteration in so short a time. Besides, this prince had fitted out a navy of thirty ship of war, and three hundred gallies: enterprises which might have been the work of ages, but not superior to the fingle industry and activity of Peter the First. ille fingle industry and activity of Peter the First.

A JOURNEY FROM ST. PETERSBURG IN RUSSIA, TO PEKIN IN CHINA, WITH AN EXBASSY FROM HIS IMPERIAL MAJESTY, PETER THE FIRST, TO KAMEI EMPERC OF CHINA, IN THE YEAR 1719.

Names of the principal Perfons who composed the Train of the Ambassador,

Leoff Vassilovich Ismayloff.

Secretary of the Embassy,
Laurence de Lange.
The Ambassador's Secretary,
Ivan Glazunoss.
Gentlemen of the Embassy,
Kneaz Alexander Saseckin,
Nicolaus de Pauli Krestitz,
Lukian Nesteross,
Alexie Divioss,
Alexie Divioss,
The Author of this Journal.
Gregory, a Priest.

Interpreters, clerks, a band of music, valets, footmen, &c. in all to the number of about fixty persons; besides a troop of twenty-five dragoons, for our escort, from Tobolsky to Pekin, and back.

CHAP. I.—From St. Petersburg to Tobolsky, the Capital of Siberia.

WHEN I arrived at St. Petersburg from Ispahan, I met with a very sensible mortification, on finding that my very worthy friend, Dr. Areskine, was no more; he died about six weeks before my arrival. Not long after which, upon being informed that an embassy was preparing for China, and that His Majesty had nominated Leoss Vassilovich Ismayloss, a gentleman of a family very well known and much respected in Russia, and a captain of the guards, for that employment, I became very desirous of making that journey in his train.

Upon my acquainting my very good friend, Artemy Petrovich Valensky, with my defire, he, without loss of time, recommended me to Leoff Vasiliovich Ismayloss, the appointed ambassador, in such a manner as produced, on all occasions, marks of friendship and regard for me, as well during the journey, as also after our return, until he died in 1736.

The time between my return from lipshan and my fetting out for Pekin, I spent with much satisfaction with my friends and acquaintance at St. Petersburg. Among whom I esteemed as such, not only several worthy persons of my own countrymen, as well in trade, as in the service of His Majesty; but also not a few of the Russian gentry, to whom I became known on occasion of my journey to Persia, and of whom I sound many to be persons of much worth and honour.

At length the prefetts for the Emperor of China being got ready, as well as the ambaffador's dispatches, I fet out from Sr. Petersburg the 14th of July, 1719, in company with Mésseurs Lange and Grave, attended by a few semants sinc first was a make of Sweden. Sweden, and the other of Courland. We travelled to the city of Mosco in small parties, the more easily to produce post-horses. The weather being very hot obliged us to make short stages, confining us mostly to the mornings and evenings. Having in my Persan journal described what is most remarkable on this road, I have nothing to add to what I have these observed.

Nothing material happened during our journey to Mosco, where we arrived on the 30th of July, and joined the ambassador, who had arrived there two days before, having passed us on the road. We took up our lodgings at the house of Mr. Belayof, near the triumphal arch. Here we spent sive weeks in preparing barks to go by water to Cazan, and necessaries for so long and unfrequented a road. This interval we passed very agreeably, being invited to all the entertainments the place afforded.

September 9th, having shipped our baggage, and prepared every thing for our departure, we went ourselves on board; and, after firing nine guns, rowed down the river Mosco. There is a shorter way from Mosco to Siberia through Yaroslave; but as we were incumbered with heavy baggage, confishing chiefly of presents from His Majesty to the Emperor of China, it was thought best to proceed as far as possible by water.

Accordingly, we continued our course down the Mosco river to Kolumna, then into the river Ocka; and, passing Pereslave-Relansky, Murum, and other towns of less note, we arrived at Nishna-Novogorod, situated to the right hand, on a high bank of the Ocka, at its consuence with the Volga. Leaving Nishna, we entered the river Volga, and proceeded towards Cazan.

After a voyage of fix weeks, we arrived at Cazan on the 20th of October. We intended to have continued our route farther down the Volga to the river Kama, which falls into the Volga about fixty verif below Cazan, and then up the Kama to Solikamiky; but the advancement of the leafon, and the frost coming on apace, made us resolve to remain at Cazan till the winter set in, lest we should run the hazard of being frozen up near some uninhabited place on the Kama.

In consequence of this resolution, the barks were discharged, and we took up our lodgings in the city. Here I found many of my old friends and acquaintance, particularly the Swedish officers; among others General Hamilton, General Rolen, and Barron Wachmaiter, who still remained prisoners of war, regretting the hard sate of their long captivity. We staid here about five weeks, waiting for the show falling to smooth the roads; and in the mean time were employed in preparing stedges, and other necessaries for our journey. Having formerly made my remarks on this route, and particularly on Cazan and its neighbourhood, I shall now pursue our journey towards Siberia.

November 24th, we fent off the heavy baggage; but Monfieur Ifmayloff, with a few of the gentlemen, remained some days longer, because it was disagreeable travelling on rough roads with loaded sledges. At last, on the 28th, late in the night, the ambastador quitted Cazan, keeping to the north-eastward. There being many villages on the road, we changed horses as often as occasion required.

The 20th, we travelled through woods, confilting chicily of tall oaks, fir, and birch. This part of the country is very fruitful, producing plenty of cattle, corn, and honey. The hives are not made like those in England; the inhabitants take the trunk of a lime tree alpin, or any fost wood, of about five or fix feet long; having scooped is hollow, they make a large aperture in one fide, about a foot in length, and four inches broad; they then fix cross rods within the trunk for the bees to build upon, and having done this, close up the place carefully with a board, leaving intall notches for the

bees to go in and out. These hives are planted in proper places, at the side of a wo d and tied to a tree with strong wythes, to prevout their long districted by the blans, who are great devenues or honey. The wax and howevery itted vorly for Cozan, nick a very considerable article of trees. I have to a cheek an hunter a more interest and was informed the first and of local country he has a wax without killing the bees, we show all considerable a vorticely that I could be a uncertainty in any fact no opportunity are invited at four distinctly that I could be a uncertainty in any fact no opportunity are invited at practified.

The village through which we maid were mostly unbit I by the Termila are Tzoowath in this, whom I save to the tip meat and the three following day the rolds occurred hand that the first hough dark the private with form villages and companies.

There being no verse-pots on the, thou had not other roads in Russa, I compute the distance between Case cand I but to be about two his divery rat; each verst measures one thousand one hundred and fraging yield and two accellingship. Here I that with several Swedish others, who passed a foliant life in a pleasant and plentital country. We halted one day to refresh ouncless; and the next, being the 5th of December, we left the baggage to follow histority, and let out again towards Solikam-Ry. On the 7th, we reach it Kay-gorod, a finall town. We perceived the old becoming daily more intente as we proceded northward along the banks of the Kama.

The 8th, we quitted Kay-gorod, in a vehement cold. Though there was little wind, and a thick log, the frost continued to penetrating, that fiveral of our people, who were most exposed, had their impers and tees troven. Most of them recovered by the common method of rubbing the numbed parts with inow; but, had we not halted from time to time at villages to let them warm themselves, they must have perished by cold. On the oth, we arrived at the town of Solikamsky, derived from Sole sake and Kama the river, on the banks of which it is situated. Que arrival was a most agreeable circumstance, as the piercing trost still prevailed.

THE SILE FRANCE A

" Solikamiky,

Ether of is a transition to the content of heapital or proving fitting as a content of a state over a telesiberral its fituation is very free my end a a built of the kind. Soll-tambly is face to an in a many falt-profit in the bibourhood, the property of my word for the Land Stogan foby virtue of a grant from the Mandy. The contact in model there you we do not perfection, that he is all to fave all Radia villed and could be files surpling conjiderable quantity for expectation, you have the de-

mand. The falt is of a brownish colour, and very good or the kind.

The common method of procuring this falt is as follows: they dig pics in the circuitil they come to the falt rock, which scens to lie in these parts at a certain distance from the sure of, as could do in other places of the world. When the pit is sinished, it is trivially, and occurre, filled with water; which, standing for a convenient time, till his studicieally impregnated with salt, is then drawn out, with pumps and other counts, and put into large iron cauldrons, where it is boiled to a proper configure;

when, the water being evaporated, the falt is left upon the bottom.

I was informed of another curious and extraordinary process, by which they draw falt-water from a fresh-water river, which I cannot omit taking notice oi. In the rivers near this place, there is a mixture of fall-water arising from the springs, which either have their fource in the falt-rocks, or run through them. It is the business of the inhabitarts to discover the places where these springs empty themselves into the rivers, which they do by diving, or some other manner; having done this, they make a large frame of flrong thick balks or beams joined very close, about fifteen or twenty feet fquare, and of depth enough to reach the bottom of the river, while part of it remains above the furface; when the ice is very firong, they fink this machine into the river, over the place where the falt fpring iffues, and drive firong piles of wood all around, to hinder its being forced from this position by the current, or by floating ice in the end of winter. During the winter, they draw out all the water, mud, and fand, contained within the machine, and fink it still deeper until it hath penetrated the bottom of the channel of the river, and prevented all further communication between it and the falt-spring. The frame is now filled only with the falt-water, issuing from the fpring, from whence it is drawn, and the falt extracted, as formerly described.

However tedious and expensive this process may seem, these people perform it with great readiness and ease; and, what is still more extraordinary, without regular instruction in any art subservient to that purpose, but by the mere force of natural genius. The Baron has a great number of hands constantly employed in this service. And the

woods for fuel are inexhaultible.

When the falt is made, it is laid up in granaries, till the feafon of transporting it to Mosco, St. Petersburg, and other places. The barks for this purpose, called by the Russians lodia, are of a construction somewhat uncommon. I have seen some of them longer and broader than any first rate man of war in England, and not one from mall in the whole sabric. All of them are stat-bottomed, having one tall tree for a man, and you, vii.

a fail or light cawafs in proportion. To manage this mighty with my fix or cigl hundred men are necessary. The rudder is needy as long as the back, and fo use they, that sometimes in equires forty or fifey when the cer it. They load these ships a vecep, and let them float down the kama into the Volume where, if the whad in the graphe, they are obliged to draw thim, against the stream, to the place of their death tion.

I cannot leave So'rkamsky without mentioning the rich iron-mine, in the countraduce no, at Kathenaburg, and other places of that diffrict, which produce iron equal perhaps, in quality to the best in the world. These works have of lat been brought ogreat perfection, by the skill and indefatigable industry of Mr. Demidos, a native c Russia, enabled and encouraged to carry them on by a beneficial grant from His Mz jesty, vho is always ready to assist and protect those who, by their injurialty, form projects to the advantage of his country.

These works, I am informed, are still capable or great improvement. The ore i very good, and rises in many places to the very surface of the earth, and may be dug at a small expense. As for wood to smelt it, no place in the world can have greate advantage. Besides, all the machines may be driven by water; and there is an east communication by the rivers to St. Petersburg, for exportation, and to many other part

of Russia, for inland consumption.

In these mines are often found magnets of various sizes. I have seen some of their

very large, and of high virtue.

There are feveral other iron-works in Russia; for instance, at Tula, Olonitz, and other places; but the metal is of an inferior quality to that of Siberia. Besides these of iron, there also rich mines of excellent copper at this place, which, being lately discovered, are capable of great improvement. The copper-ore also rises to the very turk ice.

In the neighbourhood of Solikamsky is found the fossil called asbestos; of which is made a kind of cloth like linen, that may be put into the fire, and taken out again unconsumed. This cloth was known among the ancients, and used by them on several oc-

casions. At present, it goes by the name of the incombustible linen.

The afbeftos, like many both curious and useful discoveries, was found out by mere accident in these parts. I shall briefly relate in what manner: a certain huntsman being about to load his fowling piece, and wanting wadding, observed a great stone in the woods, which seemed to have some slakes upon it like loose threads; he soon sound that, by rubbing, it turned into a soft downy substance sit for his use: he therefore silled his pocket with it; but, having fired his piece, was surprised to see that the gunpowder had no effect upon the wadding. This raised his curiosity so far, that he kindled a fire on purpose, into which he put the asbestos; but still took it out entire, and of the same use as sormerly. This experiment so frightened the poor sportsman, that he imagined the devil had taken possession of the sossil. On returning home, he narrated what had happened to the priest of the parish, who, amazed at the relation, repeated it so frequently, that at last he told it to a person who was acquainted with that quality peculiar to the asbestos; and, on examination, found the slakes to be that sossil.

'The weather is much colder at Solikamsky than at other places situated several degrees nearer to the north pole. Perhaps its great distance from any part of the ocean may be partly the cause of the excessive cold which sometimes prevails.

December noth, the ambaffador took post-horses, and set out for Tobolsky, leaving the baggage to follow as should be most convenient. About midnight we came to a village

village called Martinfly; here havin classification in the continued rehaturfly-gory, where we to mit in the continued. We kept on our journey, at a firm that it is a fact and in the high a different mountains for the space of fitteen hour. The most in village will peopled. A data here the woods are cut if with the appeared a houriful landscape even with his high a fact.

appeared a beautiful landscape, even at this bleak teason.

These mountains divide Russia from Scheen. This

These mountains divide Russia from Saberia. They run in a ride, the rest rest to fouth, inclining a little to the east and west of these points. They are quickers I with wood, confisting of tall first of different kinds, becomes, birch, and other the tural to the climate; and abound with game, and various kinds of wild be still be length, from north to fouth, I cannot ascertain; but compute these breaders with passed, to be about forty English miles. But in your test means to high the rest.

tains I have feen in Persia, and other parts of the world.

Having passed these mountains, we detectaded, on the rith, is a country of varied with plains and rising grounds, interfered decided to be to a country and passurage; and, in the evening, reached that an easied Varbatic form the which signifies high, and Tura, the name of the river on which the too food. It river is navigable, and runs to the east till it empires itself into the Tobol. Which is pleasantly situated upon a rising ground, and brussed with a dischard probability of a lar troops and Coslacks. What makes Verchaumia considerable in its large for a town, and commanding the only enter from Russia into Sabatic Harry and house, where all merchants are obliged to make entry of what sum of no means a chandise they carry into Siberia, or from Sibatic Russia; on Makich and a duty of ten per cent. to His Mapshy. Though this impost may appear his had really very moderate, considering the profits which the trade vields, and it cat addition his expences, free of all duty.

The country adjacent to Verchaturia is inhabited by a race of people called Vog !litz, who differ in language, drefs, and manners, from any nation I ever faw. I'm or features and perfons have a refemblance of the Tzoowafhians near Cazan. They have fome obfcure notions of the Deity, and are very fond of a kind of wizards called Shamans, whom they hold in great effects. I shall have occasion to speak mere fully ! thefe Shamans afterwards. The Vogullitz know nothing of agriculture, but live it huts in the woods, and fubfift by hunting and tilling. They are an Lonell inotherite people, but not very numerous; arising, perhaps, from their unfocial and uncomforable manner of life. The Archbithop of Toboltky bath of late, by his pious labours, converted many of them to Christianity; who now begin to build boules, and cultivate fome appearance of fociety, and probably, in time, the refl will follow to lendable at example. This, however, will depend much on the encouragement they meet with from the clergy and fub-governors of provinces. I vilited them as often as any oppositunity offered, both in their huts and houses, and endeavoured to procure some intermation about their original, or from whence they came to fettle in their northern part. but could obtain nothing fatisfactory on either of these heads.

Before we enter Siberia, it will not be perhaps improper to give a flore account of the fingular manner in which this most extensive country was discovered by the Rushians.

About the beginning of the last century, a certain Don Cossack, named Yhrmaks Timetheovitz, being obliged, by some accident, to leave his native country, and having

TT 2

1) means of subsistence, he, with a few accomplices, betook themselves to robbing cith Lateray. He for i become famous and powerful; for he robbed only the 11 h; and, he a generofity uncommon in fuch a character, liberally bestowed to fach as very in want. He never killed, nor even hurt any perion, unless comp lled to feeh outages in his own defence. This behaviour fo raifed his reputatio, that all the fellows in the country enlifted themselves in his gang, proud to follow for rave and enterprising a leader. He became at last so troublesome, that the givernors of the fouthern provinces fent out troops to applichend him; but, being previously informed of the design, he withdrew from the land; and proca mg boats upon the Volga, commenced pirace on that river. Being attacked here also, he was forced to cross the Caspian Sea, and shelter himself on the Perfian thore, where he passed some time under the disguise of a merchant. and n discovered, he was obliged, by the Persians, to quit their coast: and now his only refuge was to return to the Volga, where he behaved with great circumspection, of en lurking in woods and villages; and, being in no want of money, paid the inhabitants liberally for every thing he needed. Forefeeing, however, that such a numerous gang could not be long concealed, he took the resolution of leaving the Volga, and freered his course up the river Kama, at that time little frequented by the Russians, or any other nation; here he hoped to find, at least, a fafe retreat during the winter. Yarmak, therefore, with his followers, amounting to the number of two hundred, continued their veyage up the Kama, till they were stopped by the ice, at no great distance from a large village, now belonging to Baron Stroganof. The inhabitants were alarmed at the fight of so many armed men, whom they were not able to oppose, and therefore gave them an hospitable reception. Yarmak demanded only provisions and value greature for his money, promising to leave them unmolested next sping. In consequence of this declination, he and his followers passed the winter very querty in this come to place: asiald, however, at the approach of funmer, of being discovered by the government, are uncertain what course to steer, it was at last determined to cross the viount are of Verchaturia, and go to the eastward, in hopes of finding some inhabited country, or at least a fale retreat.

Having passed the mountains, they arrived at the river Tur; and, finding it navigable, soon made a sufficient number of cuoes for the whole gang. After rowing for some days down the Tur, they discovered several villages of Mahometan Tartars, who were surprised at the fight of such a number of strangers, of whom they had before never so much as heard. Yarmak, having got what intelligence he could procure of the situation and government of the country, pursued his voyage to the river Tobol, where he found the towns populous, and the land well cultivated. His approach alarmed the King of the Tartars, who assembled a numerous body of horse and foot, armed with bows and arrows, lances, and other such weapons, with whom our adventurer had many skirmishes, and defeated great multitudes, by means of his fire-arms, which had never before been known in these parts. The poor Tartars were as much amazed and terrified at the fight of the Russians, and their arms, as the inhabitants of Mexico on the arrival of the Spaniards in America, to which Siberia may, in many respects, be compared.

Yarmack, finding his enemies daily more numerous the nearer he approached the relidence of the Tartar King; having also lost many of his men, in continual appointers, and spent the greatest part of his ammunition; knowing, besides, of

no place of fafety, where he might pass the winter, which is both long and the this quarter, at last determined to retreat. He therefore structed his construct of the thin up the Tobol and Tur rivers. The furious last as gave him no rest, by hard different all perpetually from the banks. He himself and a few more cleaped, with a consideral booty, and returned to the village, where they wintered the preceding year. The inhabitants, on seeing the rich furs and other spoils, gave them a welcome rest the rand Yarmak did not forget to dispense his favours liberally among those who had preceding him in his distress, when he fled from justice.

Our adventurer had now time to reflect on his militable circumstances. He ore sidered, that his lurking in these parts, though remote from any town, could be long a secret: to make another attempt against the Tarms, and a him he lead to provided with arms and ammunition, in his perior; but mous, and certain and cessful. He therefore resolved to submit his self to His Majerty's of mency, in lapts of obtaining a gracious pardon for himself and his accompance, on condition expositing out the way to a rich and easy conquest of a court make his head to be neglected. In short, Yarmak was brought to Hosco, under a rate conduct, where he communicated the whole assume the begged His Majesty's pardon, and asted a certain number of troops, which he promised to lead to a glorious conquer. He majesty granted him a pardon, approved of the expedition, and gave immediate ord as for the troops to attend him. They marched to Solkkamsky, where it y privative winter in making preparations for the enterprize, which was to be undertaken in the spring.

During this interval, Yarmack behaved with furnishing prederice and acholic, and discovered himself to be a person of uncommon genius. He collected tuck of the former followers as remained, and tormed them into a company in whom he could

confide on all occasions.

At the proper featon, the troops fet out t wards Sile. a. On coming into the indirbited part of the country, they found many straggling particular larters in arms, ready to oppose them, and a number of boats upon the river, sull of armed m in The King of the Tartars hardelt was on board of one of their vell 1. This expedition was of thort duration; and, in the iffuc, fully articized the expectation of the Ruffians. I cannot omit a few particulars of the lath action. The Tartars in the boats, being purfued by the Rufh me, a battle enfued on the river Irtifle. Yannak chferving the king's baige, ordered his crew to board his; which hier deav unit to do at the head of his men, pumped thort, fell into the river, and was dir uned, to the great grief of all his followere. Thus fell poor Yarmak! Non validanding this mistertune, the Rushans gained a complete victory. The brave king of the Lattars left his life in the action. His fon, and the reft of the royal lamily, were taken pris nors, and fent to Mosco, where they were honourably received by the Car, and treated accord-The Prince had an extensive property granted him in Rullia, ing to their quality. which the family enjoys to this day, together with the title of Sibiolky Czereviz, or Prince of Siberia; which, I believe, is a more generous treatment of the conquested than any of the mighty monarchs of Peru or Mexico, or any cl their lines c, have experienced.

December 11th, we left Verchaturia, in deep fnow. The cold was excellive, and

the fky clear.

Next day, we came to a large village, having a few of the Vogullitz Tartars in the neighbourhood; and the 13th, arrived at the town of Epanthin. From Verchaturia

to this place the country is mostly covered with woods. About the villages there are large plains, for corn or pasturage. The cattle are in good condition. The horses, particularly, being of the Tartar breed, are larger and better shaped than ordinary, and sit for any use.

Epantihin is but a small place, fortified with a ditch and pallisades, and defended by a few soldiers in garrison. This place is sometimes alarmed with incursions of the Tartars, called Kossathy-Orda, and Kara-Kalpacks; but the Russians have of late so fortified their frontiers, that these rovers appear seldomer than formerly. Both these tribes are Mahometans, live always in tents, and spread themselves, with their slocks, in the great desert. Both are very numerous, and own subjection to different chiefs, whom they call Batteer, which signifies a hero. These are chosen by themselves; and are the most samong them for their abilities in military exploits. They are at continual war with the Kalmucks, who inhabit along the Volga, and with all their other neighbours. They are not able to stand against regular troops; and when attacked by them, retire into the wild desert, with their families and cattle, whither none, but people accustomed to their manner of life, can follow them.

The country of the Kara-Kalpacks, or Black-Caps, so called from a kind of caps they commonly wear, turned up with black lamb-skins, lies to the south-west, towards the Volga. That of the Kossatshy-Orda extends to the south-east, as far as the river Irtish.

The course of this river I shall have occasion to mention afterwards.

The 14th, we came to a pretty large town, called Tuma, fituated upon the north bank of the river Tuma, from whence the place takes its name. The banks of the Tuma are high and fleep. There is a very convenient wooden bridge at this place. The Tuma has its fource far to the west; and in its course is augmented by the Tura, and several other rivers. It continues to run to the east, till meeting with the Tobol, it loses itself and name.

The country between Epantshin and Tumen begins to be more open, and better peopled, than that westward of these places. For, besides the Russians, who make the greatest part of the inhabitants, we meet several villages inhabited by the descendants of the ancient Mahometans, who were natives of these places. These Tartars subsist by agriculture, and pass their lives without care or disturbance, in the free exercise of their religion, and other privileges.

Tumen is a pretty neat place, and well fortified: the streets are spacious, and the houses built in a straight line. The adjacent country is covered with sine woods, interspersed with villages, corn-fields, and pasturage; and provisions of all kinds are very plentiful. The merchants of this place have a considerable trade in surs, particularly the skins of foxes and squirrels; which, indeed, are not so valuable here as they are to

the eastward.

Early on the 15th, we left this place, keeping on our course along the banks of the Tuma, till we arrived at the river Tobol, which we crossed, and proceeded along the eastern bank, through a fine country, and well peopled. Though the frost still continued strong, it was not near so violent and piercing as about Solikamsky, which may proceed from the woods being cut down, and the country cultivated. On the other side of the river, indeed, the face of the country appeared stat and morally, abounding with tall and dark woods.

The rock, about moon, we were in light of the city of Tobolsky, though distant from a shout twenty English miles. It slands upon a very high bank of the Tobol. Alle walls are white, and the crosses and cupolas of the churches gided, and make a very entrepresented. About two o clock we arrived late at the city of Tobolsky, the capital

his mighty province, and the residence of the governor. We lodged in the broadet, leading to the governor's palace, and the courts of justice.

We travelled betwen Tumen and Toboliky, about two hundred and fifty verst, in space of thirty hours. Sledges are the most simple and convenient machines for relling on snow that can be imagined. And the person in the sledge may either sit ie along upon the couch, according to his inclination.

AP. II.—Occurrences at Tobolfky, Observations on the Kalmucks, Sc. and Journey continued to Tomfky.

FOBOLSKY is fituated in latitude 58 degrees 40 minutes north, at the conflux of Irtish and Tobol. From this last the city has its name. Both these rivers are naable for several hundred miles above this place. The Irtish, after receiving the bol, becomes a noble stream, and discharges itself into the Oby. This situation was sen by the Russians, both for its strength and beauty. Formerly the Tartar princes I their abode at a place about thirty verst south from Tobolsky, which is now negted and ruinous.

Toboliky is fortified with a strong brick wall, having square towers and bassions at per distances, and is well furnished with military stores. Within the town stand the remor's palace, courts of justice, several churches built of brick, particularly a large hedral, and the palace of the Archbishop. From the walls you have a very extension prospect of a fine country, especially to the south. To the west the land is stat, and overgrown with tall woods. The inhabitants are chiefly Russians, of erent professions; many of them are merchants, and very rich, by the profite trade they carry on to the borders of China, and many places of their own intry.

These live mostly upon the hill. Under the hill, in the suburbs, along the banks of river, are several large streets, called the Tartar-streets, occupied by the remains of ancient inhabitants of these parts. Here, as at other places, these people enjoy the exercise of their religion, and the privileges of trade. They resemble, in their sons, religion, language, and manners, the Tartars of Cazan and Astrachan: their uses are cleanly: they are very courteous to strangers, and esteemed honest; on ich account they get credit in their commercial affairs. Besides the fortification merly mentioned about the town, the whole suburbs are surrounded with a ditch and lisades.

When we were at Toboliky, Siberia was superintended by Mr. Petros Solovy, vice-vernor, a person well acquainted with the business of the government, and a Captain the guards. The former governor, Kneaz Gagarin, had incurred His Majesty's disastire, and was recalled: and his successor, Kneaz Alexie Michaylovitz Cherkasky, a bleman worshy of such an important trust, was not yet arrived.

As in melt other towns through which we palled, we found here many Swedish officers distinction. Among others, Monsieur Dittmar, formerly secretary to Charles XII. 19 of Sweden. He was a native of Livenia, and equally esteemed for his progrand capacity. He was much respected by the late governor, who, indeed, was a and to sit these unfortunate gentlemen. They were allowed to walk about at large, mains or fishing, and even permitted to travel to other places, to visit their counters.

For any form Think the greatest favour His Majesty shewed these prisoners, has

the cantoning them in these parts, where they may live well at a small expence, and

enjoy all the liberty that perfons in their circumstances can expect.

I cannot but observe, that the Swedish prisoners, dispersed in most of the towns in this country, contributed not a little to the civilizing the inhabitants of these distant regions, as they were the means of introducing several useful arts, which were almost unknown before their arrival.

Many of the officers, being gentlemen of liberal education, the better to support their tedious captivity, devoted their time to the study of the more agreeable and entertaining parts of science, particularly music and painting; wherein some of them attained to great perfection. I was present at several of their concerts; and was not a little surprised to find such harmony, and variety of musical instruments, in this part of the world.

They fometimes amused themselves with teaching young gentlemen and ladies the French and German languages, music, dancing, and other similar accomplishments, whereby they gained many friends among the people of distinction; a circumstance to men in their situation both honourable and useful.

In Tobolsky there are always about five or six thousand regular troops, horse and foot, besides a number of irregulars. These troops, added to the natural strength of

the place, effectually fecure it from any attacks of the neighbouring Tartars.

The woods and fields about Toboliky are ffored with all kinds of game natural to the climate; fuch as the coq-limoge, coq-bruiere, and gilinots; the last are about the fize of a partridge, their flesh is white and very agreeable. There is another kind of these gilinots somewhat larger, with rough feet, which, in the winter, turn white as a dove. Also the common partridge, which, on the approach of winter, slies off to more temperate climates; woodcocks, a great variety of snipes, which sly off in the autumn, after having hatched their young. As for water-fowl, no country in the world can produce such numbers and variety; they are also birds of passage. In my Persian journal, I gave an account of the vast slocks of these sows on the shores of the Caspian Sea.

Here also you meet with several kinds of small birds about the size of a lark, particularly those called snow-birds. They come to Siberia in vast slocks in autumn and remain till the spring, when they disappear. Many of them are white as snow, some speckled.

and others all over brown. They are reckoned a very fine and delicious dish.

I observed another very pretty bird about the size of a thrush, having beautiful red and yellow feathers in the wings and tail, with a tust of brown feathers on its head, which it raises at pleasure. These are also birds of passage; and, as they breed no where in Europe or Asia, that I know of, perhaps both these and the snow-birds may come to Siberia from the northern parts of America. This conjecture will appear not improbable, when it is considered, that these birds are of a hardy nature, and the slight

not to far as is generally imagined.

In the woods are various kinds of wild beafts, such as bears, wolves, lynxes, several forts of foxes, squirrels, ermins, sables, martins, and rosto-macks, called feelfress by the Germans. The furs are better of their kinds than those of any other country. The ermins commonly burrow in the open fields, and are caught in traps baited with a bit of field; this is some only in the winter, when they are altogether white, and the fur most variable. In summer most of these animals turn brown, when they are not killed because at this featon, the fur is of little sie. There are also others in the rivers and takes, whose skins yield a considerable profit. Indeed furs of all thris, in this country, are very prostable. At present see tables are caught in this win thoughout it is faint.

PARTY SEE SEP

they fly from smoke, which, perhaps, is partly true; yet I am apt to believe, that these poor animals are chased away towards the north to the wild woods, on account of the

high value of their skins.

The woods of Siberia abound also with venison of several sorts; as elk, rein-deer, roe-buck, together with an incredible number of hares, which change their colour from brown in summer to white in winter. The hares are generally caught by the country-people in toils, more on account of their skins than their flesh, of which they make but little use. The skins are bought by the merchants, and sent in great quantities to St. Petersburg, and other ports, in order to be exported to England, Holland, and other countries, where they are chiefly manufactured into hats.

Having described the land animals, I shall now give some account of the fish. In my opinion, there are sew countries in the world so well watered with navigable rivers and lakes as Siberia; and sew rivers and lakes produce greater quantities, or more variety of excellent fresh water sish, than those in this country. For, besides sturgeon, white-sish, sterlet, and others, to be found in the Volga, and the rivers in Russia, there are several kinds peculiar to this part of the world; particularly the muchson, about the

fize of a large carp, and much esteemed by persons of delicate taste.

Southward from Tobolíky the foil is fruitful, producing abundance of wheat, rye, barley, oats, and other grain. The cattle also are very numerous, and in winter are fed with hay. In a word, provisions of all kinds are extremely reasonable. From what I have said, it will appear, that Tobolíky is by no means such a disagreeable place as is generally imagined. Whatever the opinions of mankind may be, it is the business of a traveller to describe places and things without prejudice or partiality, and exhibit them fairly as they really appear. This principle it shall be my study to keep always in view.

Captain Tabar, a Swedish officer, was at this time writing a history of Siberia. He was a gentleman very capable for such a performance; and, if it shall ever be published,

it cannot fail of giving great fatisfaction to the curious.

Before I leave Tobolsky, it will not be improper to give a short account of the samous river Irtish, that passes this place. It continues its course a little to the eastward of the north, in a strong but smooth current, visiting several small towns and villages, and receiving many lesser streams, and a large river called Konda, running eastward, till it discharges itself into the Oby, at a town called Samariossky-yamm, about six hundred

verst below Tobolsky.

The Irtish takes its rise from a great lake, named Korzan, in a mountainous country, about fifteen hundred verst to the southward of Tobolsky. The country about this lake is inhabited by the Black Kalmucks, a mighty and numerous people, governed by a prince called Kontaysha. From these the Kalmucks on the Volga are descended. After the Irtish hath run for many miles through a hilly country covered with wood, it passes through a fine fruitful plain, inhabited by the Kalmucks, till it comes to a house called Sedmy-passty, or the Seven Rooms, stuated to the right in coming down the river. It is very surprising to find such a regular edifice in the middle of a desert. Some of the Partars lay is was built by Tamerlane, called by the Tartars, Tempr-ack-sack, or Laine-tempt; others by Gingeez-chan. The building according to the best information I could obtain, is of brack or stone, well finished, and continues still entire. It consists of several of these rooms are filled with scrolls of glazest paper, fairly written, and many of them as gift characters. Some of the scrolls are black, but the greatest part strick they are written is that of the Tongus, or Kannucks. It takes the same of the Seven Palaces. The language of the scrolls are black, but the greatest part stricks they are written is that of the Tongus, or Kannucks.

was at Toboliky, I met with a foldier in the fireet with a bundle of those papers in his had: he affect me to buy them; which I did for a finall furn. I kept them till my write I in England, when I distributed them arrong my friends; particularly to that I are it diquation. Sir Haus Sloane, who valued them at a high rate, and gave them a place it has clobrated museum.

Two or it is seconds were feat, by order of the Emperor Peter the First, to the Royal Activated Pilis. The Acad my riturned a translation, which I saw in the rarity-chamber at 5t. Petersburgh. One of them contained a commission to a lama or priest; and the other a form of player to the Deity. Whether this interpretation may be depended on, I shall not determine. The Tarturs esteem them all facred writings, as appears from the case they take to preserve them. Perhaps they may contain some curious pieces of antiquity, particularly of ancient history. Above the Sedmy-palaty, towards the source of the Irish, upon the hals and valleys, grows the best rhubarb in the world, without the least culture.

Several day jo many from the Pairces, down the Irtish, on the western bank, sands an old tower named Kalbazinshabasina, or the tower or Kalbazin. Below this is the lake Yamishoss, to the right, where the Russians have built a small fort, for the conveniency of making and gathering falt from that lake, great quantities whereof are made by the sun; it is brought in banks down the river to 'obolsky, and other places. This sort created some jealousy to the Kontaysha; he sent an ambassador to the governor of Siberia, requesting to have it demolished; but this demand not being granted, the disserned came to an open rupture, the event of which time must discover.

Descending farther, you must with another settlement of the Russians, called Shelezinsky, from a rivulet of that name in its neighbourhood. A little below Shelezinsky it ands Omuska, a considerable town, which also derives its name from a river. Both these places are situated on the eastern bank of the Irtish. You now pais some incontiderable places before you arrive at Tara, a little town situated on the western bank, on the road leading from Tobolsky to Tomsky, through a country called Baraba, of which I shall give some account as ye proceed to the east.

Bet veen Tara and Toboliky are a few small towns, and many vidages, inhabited by M hometan Tartars. And the country abounds with corn, cattle, and the

pake age.

I have now pointed out the course of the Irtish till it reaches Toboliky, and from then a till it empties itself into the river Oby. I have nothing surther to remark concerning Toboliky and the country around it, and should therefore now pursue our journey to the eastward; but, before I leave this place, I imagine it will not be improper to suppoin a lew more particulars relative to the Kontaysha, Prince of the Kalmucks, whom I sormerly mentioned. I am the more inclined to do this, as I can entirely depend on my intelligence, having procured it from persons who have been in that country, and seen this prince; but particularly from an ingenious and penetrating gentleman, who sills a public office in this place, and was employed in several messages to him from the late governor of Siberia.

The territories of this prince are bounded by three of the most potent empires in the world; on the north by Russia, by China on the east, and by the country of the Great Mogul to the south. From the two first he is separated by defert plains, and from the third by almost impassable mountains. To the south-west his frontiers reach near to Bucharia. The Kontaysha is a very powerful prince, and able to bring into the field, at a short warning, an hundred thousand horsemen, who are all of them able-bodied men, well mounted, and armed with bows and arrows, lances and sabres. This is a

greater number of horse than every place that he is controller, except 11's it has Majesty, and the Emperor of Church and the final live in the first the weather ing from place to place, as called to not any conclusion. The interest of the most entire and pleasant manner of life. It was a controller to the measurement of the most entire confined to one place of abode, and of a property of the controller by labour, that they reckon the greatest slavery.

The Kontaytha has along a restlicted deciding to excrept the 12ml h, who treat him with a cure acraion and respect. And, in Just to king it must be correspond to the interest of this people, and mathidustria the along the corresponding to t

ministration or justice, in particular, a little y ware broom alpharen.

The Kalmacks we not both live people they are generally represented; for Laminformed, a person may travel among them with general to the tothe has performed.

effects, than in many other countries.

The Kontaysha received the deputies from the coverage of Silveria, He all helifadors from foreign princes, and treat I them are rainely. This shows what high respect these eastern princes out rain for the Country of the control of the new princes as not of Silveria is regarded a a foreign. The country on an independent of solutions as follows:—

The deputy with his fervants were admitted into the tent, where the Kontayfin fat with his queen and feveral children about him. He depret all of them to fit down on carpets or mats; for the Kalmucks, like most Atarias, as no closs. They were entertained with tea before dinner; and after it, the Kontaythe dinnested the depaty in a friendly manner, telling him he would tool for him next day to no we an answer to the governor's letter, which he puncturity performed. There were never field in very plain and concide terms. These Tantars in general write with brevity and peripicuity. I have seen several of their letters traditated, which pleated me extremely, as they contain no tedious preambles, nor difficulting repetition, which termed to perplex the reader.

The Emperor of China was some time ago engered in a var with the Kontaytha, about some frontier towns, of which the latter to kere there, and main in a delication with a strong army. The Emperor sent against him as acress of three toracles of thousand men, under the command of his sourteenth ton, who is reckeined to best a neral of all his children. Notwithstanding their superiority in number, the Konty has defeated the Chinese in several actions. The Emperor, at lad, thought is less than commodate the difference, and a peace was concluded to the static record in both

parties.

It must be observed, that the Chinese, being obliged to undertake a long and dishcult march, through a desert and barren country, lying verticard of the long with he is also incumbered with artillery and heavy carriages, containing as visious for the whole army during their march, had their force greatly diminished before they reached the enemy. The Kontaysha, on the other hand, having intelligence of the great country coming against him, waited patiently on his own frontiers till the enemy was vision a few days march of his camp, when he sent out detachments of light horse to fet face to the grass, and lay waste the country. He also distracted them, day and night, with repeated alarms, which, together with want of provisions, obliged them to redre with considerable loss.

This method of carrying on the war, by walting the country, is very ancient among the Tartars, and practifed by all of them from the Danube callward. This circumstance renders them a dreadful enemy to regular troops, who must thereby be deprived of

of the subfift nee, while the Tattare, having always many spare horses to kill and ex-

re at no los for provisions.

I have only to add, that the Kontay in must be the same prince who, in our Exposed maps, is generally called the Great Cham of Tartary. As no Luropeans travit through that country, these maps right be very erroneou. It is, however, to be peeted, that the Russians will make make a more complete discovery of the costum truth of Asia.

Our bangage of linet and call Tobolsky till the 23d of December. The people relicible the relicibilities will the 27th, vir they again icc out, taking the road along the line in the to land. The ambassed in the his retinue remained, to pass the relicibilities.

January 9th, 1720, we proceeded towards Tara. We pisted through many Tarta villages, and a night 10d jed in one of their little hut, and warmed ourselves at a 200 a fire on the hearth. That's hour a consist generally of one in two rooms, according to the ability of the landlord. Near to the hearth is in it in mone kettle, to die finde victuals. In one end of the appearanch is placed a body at uncertainties high, and six sees the original inches high, and six sees the original inches high, and six sees the night. The walls are built of wood and moss, consisting of large beams, had one above another, with a layer of most between every two beams. All the roots are raised. A square hole is cut out for a window, and to supply the want of glass, a piece on consistent of fit the place exactly, which lets in a good light. Two or three pieces will last the whole winter. These Tartars are very neat and cleanly, both in their persons and houses. They use no stoves as the Ruslians do. Near the house there is commonly a shade for the cattle.

We continu dour journey along the banks of the Irtish, having the rive: to the right

or left, as the road lay from one Tartar village to another.

The 15th, we reached Tara, a finall town, reckoned about five hundred verst from Tobolsky. In all this road we did not meet with a Rushim village, except a small one near Tara. The country abounds with woods, corn-fields, and fine parlurage; which appeared sufficiently from the quantities of hay, and the good condition of the cartle, though the face of the country was covered with deep show. We found the an at Tara much milder than at any place since we left Kazan.

Tara is fituated on the Irtish, and fortified with a doop ditch, strong pallisades, and wooden towers, sufficient to defend it against the sudden attacks of the Tartars, called Koslatshy-orda, who inhabit westward of the Irtish, and are very troublesome neigh-

bours.

Here we laid in provisions for our journey over the Baraba, which fignifies, in the Tartar language, a marshy plain. Its inhabitants are a mixture of different Tartar tribes, called Barabintzy, from the name of the country in which they live. They are a poor miscrable people, being treated as subjects both by the Emperor and the Contaysha, and obliged to pay a tribute, in fur and skins of wild beasts, to each. They have no grain or cattle of any kind, except a few rein-deer, and subsist by hunting and sishing. What sish they consume not in the summer, are dried and smoked for their winter provisions. They are partly of the Mahometan, and partly of the Kalmuck religion; but this difference causes no disputes.

It is generally reckoned, that more robberies are committed in Baraba than in any country on the road to China; not by the natives, for they are very honest and hospitable, but by the Kalmucks, who come to collect tribute for the Contaysha, who sometimes pick up travellers, and carry them off, with all their effects. It was fail, that a

firong party of them, best in a me that a me by a by Lieuwe to put the var, waited to intercept him; on which is only technique, and tem Contacks, from the gardest of Tobelt years. The technique of the wasten in guard against any soldiers who might the sold to the temporal to the politic a prince to authorise his fubbolly to the last of the temporal to the him no injury, notwithstanding the differences that subside discovered in and Ha Charult Majelly.

Our bagings having waited at Tara till our arrival well from Tara, and the lot to the control of the lot of th

Liteu by Russians, till you pas the Baraba, and come to the real Oby.

In the places through which we pelled, the ambified tent for all the har orse and foortinen, that he might a quite what lends of game and wild beats, were in their abbourhood. Hunting is the couple near of most of the venus of least in this course, and is very just by a the till do not give and wild be a true. We tand that the place podes descripted, to not give and wild be a true, a true of cikes and it come before the rath to the left; true, of which a killed by the inhabitant, both on a court of their if the and there his is. When of the theft is not conformed furth they falt. The hides are very luge, and are dreft dimensional to built. The huntiman having found the track of a flag upon the show, pursue it upon his inow shoes, with his bow and arrows, and little dog, till the animal is quite fatigued; for, the show on the further being melted by the heat of the sum, and congealed at night by the frost, but nor strong enough to be at the weight of such an animal, he sinks deep at every step, and the sharp ice cuts his anches, and lame, him; so that he becomes an easy prey to the hund.

One of these hunters told me the sollowing story, which was confirmed by several of his neighbours: that in the year 1713, in the month of March, being out a hunting, he discovered the track of a stur, which he pursued; at overtaking the animal, he was somewhat startled, on observing it had only one horn, stuck in the middle of its forehead. Being near this village, he drove it home, and showed it, to the great admiration of the speciators. He afterwards killed it, and eat the sless, and sold the horn to a comb-maker in the town of Tara, for ten alteens, about insteen-pence sterling. I inquired carefully about the shape and size of this unicorn, as I shall call it, and was told it exactly relembled a stag. The horn was of a brownish colour, about one archeen, or twenty-eight inches long, and twisted from the root till within a singer's length of

the top, where it was divided, lik a lock, into two points very tharp.

The 19th, we entered the Baraba, and continued travelling through it for ten days, when we came to a large Russian village called Tzautl.y Ostrogue, from a rivulet of that name, which discharges itself into the Oby, a little distance eastward from this place. Here is a small fort, surrounded with a ditch and pallisades, mounted with a few cannon, and garrisoned by some militia of the country, in order to prevent the incursions of the Kalmucks. We staid a day at this place, to refresh ourselves, and hav-

ing changed horses, proceeded towards Tomsky.

Baraba is really what its name fignifies, an extensive marshy plain. It is generally full of lakes, and marshy grounds, overgrown with tall woods of aspin, alder, willows, and other aquatics; particularly many large birch-trees, having their bark as white and smooth as paper. The lakes abound with various kinds of fishes, such as pikes, perches, breams, eels, and particularly a fish called karrais, of an uncommon bigness, and very fat. These the inhabitants dry, in summer, for winter provisions, which are all the food to be found among them. I have eat of it often, and thought it not disagreeable.

In vinter they us melted fnow for water. They are very hospitable; and desire nothing in return of their civilities, but a little tobacco to smoke, and a dram of brandy, or which they are very fond. The dress, both of men and women, consists of long couts of sheep-skins, which they get from the Russians and Kalmucks, in exchange for more valuable turs. As they wear no other apparel, nor even shorts, they are very naily. Their hats are most miserable habitations, and sunk about one half under ground. We were glad, however, to find them, as a baiting place, in such a cold teaton.

The Balabintzy, like most of the ancient natives of Siberia, have many conjurers among them, whom they call Shamans, and sometimes priests. Many of the semale tex also assume this character. The Shamans are held in great esteem by the people; they pretend to correspondence with the shaytan, or devil; by whom, they say, they not into med of all past and suture events, at any distance of time or place. Our ambailador resolved to inquire strictly into the truth of many strange stocies, generally believed, concerning the Shamans, and sent for all of same in that way in the places through which we passed.

In Phaba we went to vifit a famous woman of this character. When we entered her house, the continued busy about her domestic affairs, without almost taking any notice of her guest. However, after she had smoked a pipe of tobacco, and drunk a dram or brandy, the began to be more checiful. Our people affect her fome trilling questions about their friends; but the pretended to be quite ignorant, till the got more tobacco and fome inconfiderable prefents, when the began to collect her conjuring tools. First, she brought the shaytan; which is nothing but a piece of wood, wherein is cut something refembling a human head, adorned with many filk and woollen rags of various colours; then a finall drum, about a foot diameter, to which were fixed many braft and iron rings, and hung round also with rags. She now begon a dismal tune, keeping time with the drum, which she beat with a stick for that purpose. Several of her neighbours, whom she had previously called to her assistance, joined in the chorus. During this scene, which lasted about a quarter of an hour, she kept the shaytan, or image, close by herselt, stuck up in a corner. The charm being now finished, she defired us to put our questions. Her answers were delivered very atfully, and with as much obscurity and ambiguity as they could have been given by any oracle. She was a young woman, and very handfome.

On the 29th of January, we reached the Oby, which we croffed on the ice, and entered a country pretty well inhabited by Russians, where we found provisions and fresh horses, as often as we wanted them. The country is generally covered with woods, except about the villages, where are fine corn-fields and good pasture grounds. Our course lay a little to the northward of the east from Tzausky Ostrogue.

February 4th, we arrived fafe at the town of Tomsky, so called from the noble river Tomm, upon the eastern bank of which it stands.

CHAP. III.—Occurrences at Tomfky: Observations on the Taulimm Tartars, &c. and Journey continued to Elimsky.

'IHE citadel of Tomsky is situated on an eminence, and contains the commandant's house, public offices, and barracks for the garrison. The fortifications, like most others in this country, are of wood. The town stands under the hill, along the banks of the river Tomm. The country about this place is pleasant and fruitful. From the

rop of the hill you have a very stendish view engrees, where is interrupted by hills. Beyond there hill there is a large, dry, and op in plain, which thretches a great way fouthward.

About eight or too days journey from Terry's, is this plane, as found many tombs and Larying-places of arcer't here; who, in all probables, in notable. The founds are easily diffinguished by the mean door earlier of the content of the content. When, or by who is, these battles year for the content of the content of the content of the content. I was informed by the Pactar in the Battle's, the Tarry's people for the content. I was informed as particular, as the content of the content

I have feen feveral pieces of armour and other curiofities that were du, out of their tombs, particularly an armed man on horfeback, call in brafs, of no mean define net workmanship; also figures of deer, east in pure gold, which were split through the middle, and had some intall holes in them, as intended for ornaments to a quiver, or the furniture of a horfe.

While we were at Torollay one of these grave-diggers told me, that once they lighted on an arched savit where they found the romans of a man, with his bow, arrows, lance, and other areas, lying teachter on a filter table. On touching the body it fell to dust. The value of the table and arms was very confiderable.

The country about the fource of the river Tomm, near which these tomboure, is very fruitful and pleasant. At the fource of the Tomm the Rushans have a small town, called Kuznetky. The river is formed by the Kondoma, and many lesser rivers; all which run to the north.

In the hills above Kuznetiky, there had be ly been discovered rich mines of copper, and some of filver; which, since I was in this country, have been greatly improved.

On the hills and in the woods near this place are many fort, of wild bealts, particularly the urus, or uhr-ox, one of the fiercell animals the world produces, and exceeding in fize and firength all the homed species. Their force and agility is such, that now it, bear, nor tiger, dare to energy with them. These animals are found in the woods of Poland, and some other parts of Europe. As they are well known, I med not describe them.

In the same woods is found another species of oxen, called bubul by the Tartars; it is not so big as the urus; its body and simbs are very handsome; it has a high shoulder and a flowing tail, with long hair growing from the rump to the extremity, like that of a horse. Those I saw were tume, and as tractable as other cattle. Here are also wild asses. I have seen many of their skins. They have in all respects the head, tail, and hools of an ordinary ass; but their hair is waved white and brown, like that of a tiger.

There is besides a number of wild horses, of a chessut colour, which cannot be tained, though they are catched when foals. These horses dister nothing from the common kind in steps, but are the most watchful creatures alive. One of them waits always on the heights to give warning to the rest, and, upon the least approach of danger, runs to the herd, making all the noise it can; upon which all of them sty away, like so many deer. The stallion drives up the rear, no ghing, biting, and kicking those who do not run saft enough. Notwitstanding this wonderful fagacity, these animals are often surprised by the Kalmucks, who ride in among them, well rounted on swift horses, and kill them with broad lances. Their slich they esteem excellent sood, and use their shins to sleep upon instead of couches. These are the animal peculiar to this part of the country; and besides these, there are many more common to this place with the rest of Siberia.

The river Tomm, having passed Kuznetsky, Tomski, and several other towns of less note, empties itself into the Oby, at a place called Nikolsky, about an hundred verst below Tomsky, in a country overgrown with thick woods. Here the Tomm lose its name, and makes a great addition to the Oby, which now commences a mighty stream.

The Tomm abounds with variety of fine fish; such as sturgeon, sterlet, muchsoon, and the largest and best quabs, called in French guion, that I have any where seen. The method of catching these fish is by planting pales across the river, in which there is lest one narrow opening for the fishes to pass through. Above this opening a hole is cut in the ice, and near it is placed a fire upon some stones laid for that purpose. The sish, on seeing the light of the fire, stops a moment in its passage; and, at this instant, the sisherman strikes it with a spear through the hole in the ice. This exercise requires great quickness, for the fish is gone in a trice. I killed several of them myself.

Thus, having made a short excursion up and down the Tomm, and given a brief

description of the country adjacent, I return again to Tomsky.

Tomsky is a good market for furs of all sorts; but particularly of sables, and black and red foxes, ermins, and squirrels. The squirrels called Televisky, from the name of the district where they are caught, are reckoned the best of that species. They have a

blackish stripe down their back.

Befides the common squirrel, there is another species sound here called the slying squirrel. There is little peculiar in its shape or fize, only it has, at the upper joint of the thigh of the fore-leg, a small membrane, stretching to the shoulder, somewhat like the wing of a bat, which it extends at pleasure, and is thereby enabled to spring much farther, from tree to tree, than it could do without the help of these wings. Both the ermins and squirrels are caught only in winter, because in summer their sur is quite brown, short, and of little use.

We waited some days at Tomsky for the arrival of our baggage. Here we sound several Swedish officers, who had good quarters in a plentiful though distant place. After our people had refreshed themselves for two days, they set out again on the road

to Yeniseysky.

During our abode in Tomiky, we diverted ourselves with fishing and hunting. We were present also at several concerts of music, performed by the Swedish officers, at Mr. Kosloff's, commandant of the place. These gentlemen were not less expert in touching their instruments than their companions at Tobelsky. Mr. Kosloff is a goodnatured and chaerful gentleman, and treats these officers with great humanity. They had along with them a Swedish parson, Mr. Vestadius, a man of genius and learning.

The 9th, we were entertained the commandant, where were affembled for their dreds of his Coffacks, or light here, and it is box and arrows. Alter going the nech their usual exercise, they showed their distributions of horse here is a fixed. They erected a pole for a mark in an open field, and polen, it, at full gold pylon for it arrows, and soon split it all to shivers

The 12th, about midnight, we went into or rfl drs, and let out on our jest act to wards Yenifeytky. For the 1600 to low in days we had tolerably good root, thing through a pretty fine country, inhalaced by Radian. The whates are but the byte.

rered, yet fufficiently near one another to that I provide as and fresh here's a

On the 1.4th, we reach d a large navial deriver, called Tzulimm. We were not this river upon the ice. We met with neather house not inhabitate for the figure of fidays. We could get no iresh hories, and were obliged to carry but previous and forage along with us, which made this part of the road very tedoods. Dut the all this time, we had no where to warm ourselves, or dress our victuals, but in the that hovergrown woods, which occupy both sides of the river. There is great plenty of tallent trees in these woods, of which we made large sires. The troes are childly pich far, rising like a pyramid, with long spreading branches hanging to the ground, which render these woods almost impassable to man or beast. We frequently set sire to the most, and dried sibres of these firs. In the space of a minute, the fire mounts to the top of the tree, and has a very pretty effect. The kindling so many fires warmed all the air around.

In fummer, the banks of this river are inhabited by a tribe of Tarturs, called by the Ruffians Tzulimmzy, from the name of the river, who live by fifthing and hunting. We found feveral of their empty huts as we went along. In autumn, these people retire from this inhospitable place towards the fouth, near to towns and villages, where they can find subfifience.

The 20th, we arrived at a Russian village called Meletsky Ostrogue, where we staid a day to refresh ourselves and horses. In the neighbourhood of this place, we found many huts of the Tzulimm Tartars, who seem to be a different race from all of that name I have yet mentioned. Their complexion indeed is swarthy, like that of most of the other descendants of the ancient natives of Siberia; but I have seen many of the having white spots on their skins, from head to soot, of various signers and sizes. Many imagine these spots natural to the people; but I am rather inclined to believe they proceed from their constant diet of fish and other animal sood without bread. This, of course, creates a scorbutic habit of body, which often breaks out in infants; and the scars falling off, leave that part of the skin as if it had been scalded, which as yet recovers its natural colour. I have however seen several children with these spots, who seemed healthy.

The Tzulimms, like other Tartars, live in huts half-funk under ground. They have a fire in the middle, with a hole at the top to let out the finoke, and benches round the fire, to fit or lie upon. This feems to be the common method of living among all the

northern nations, from Lapland castward to the Japanese ocean.

The Tzulimms speak a barbarous language, composed of word, from many other languages. Some of our people, who spoke Turkish, told me, they had many Atabic words which they understood. They are poor, miserable, and ignorant heathers. The Archbishop of Tobolsky in person came lately hither, and baptized some hundreds of them, who were inclined to embrace the Christian faith. As they are a well-disposed and harmless people, probably in a short time they may be all converted.

The river Tzulima has its source about three hundred verst above Meletsky Oftrogue; from this plact it continues its course to the northward till it meets with the twee Obv, at a place called Shabanusky Ostrogue. Ostrogue, in the Russian language, signatics a strong palisade, inclosing a certain piece of ground. On the first settlements made by the Russians in these parts such inclosures were necessary to prevent any surprise from the inhabitants.

The 21st, carly in the morning, we left Meletiky, and travelled through thick woods, along narrow road. Next day we came to a small Russian village, called Melay-keat; where we found our baggage, for the first time since we quitted Tomsky. Near this place the river Keat has its source; and runs towards the west till it meets with the Oby. Having changed horses at Melay-keat, we left our baggage and proceeded on our journey.

On the evening of the 22d, we came to a zimovey, where we halted a little to refresh ourselves and bait our horses. A zimovey is a house or two, built in a place at a great distance from any town or village, for the convenience of travellers; and is a fort of inn, where you generally find a warm room, sresh bread, and a wholesome and agreeable liquor called quas, made of malt or rye-meal, steeped and sermented; with hay and

oats at eafy rates.

From this place we travelled to Beloy, a large village, where we changed horses, and proceeded. From hence to Yeniseysky the country is well cultivated. Upon the road are many Russ villages, where we got fresh horses as often as we pleased, without halting ten minutes. Thus we continued travelling day and night till we arrived, on the 23d, at the town of Yeniseysky, where we had a friendly reception, and good entertainment from the commandant Mr. Becklimishof, who had come some miles from town to meet his old friend the ambassador.

Here I found Mr. Kanbar Nikititz Aikinfiof, with whom I got acquainted at Cazan, while we wintered there, in the journey to Persia. Some cross accident had been the occasion of his coming to this place. He enjoyed full liberty to walk about at pleasure. He understood several languages, was well acquainted with history, and a cheerful goodnatured companion.

Here we passed the holidays called Masslapitza, or the Carnaval, which is held on the week before Lent. In the mean time our carriages arrived, which were dispatched

again as foon as possible.

The town of Yeniseysky is pleasantly situated in a plain, on the western bank of the river Yenisey, from which the town takes its name. It is a large and populous place, fenced with a ditch, palisades, and wooden towers. Here is a good market for furs of all sorts; particularly of the animals called piessy, which are of two colours, white and dove-colour. These creatures are caught far to the northward of this place. They are nearly of the shape and size of a fox; having a short bushy tail, and a thick soft downy fur, very light and warm, which is much esteemed by the great men in the northern parts of China; and, by them, made chiefly into cushions, on which they sit in winter.

Besides the above there is here another creature called rossomack in Russ, and feel-fress by the Germans; because they imagine it eats a great deal more in proportion than other animals. I have seen several of them alive. They are very sierce, and about the shape and size of a badger; the neck, back, and tail are black, but about the belly the hair is of a brownish colour. The blacker they are the more valuable. The skin being thick is only used in caps and muss. Also elks, rein-deer, and stags. The latter

retire to the fouth on the approach of their ordination in the property wite an incredible number of what the establishment perhaps I may mention afters and a

I must not omit the black toxes, which are in great abundance about Yenis yiky. Their fur is reckoned the most beau stilled and and it is even preferred to the fable, with respect to lightness and warrances. I say here on of their sking varied at sive hundred crowns, and some of them say exceed this sun.

Before I leave this place, I shall give a short deteription of the counse of the samous river Yenisey, according to the best information I could produce. It rates in a hilly country, at a great distance southward from this place: being wined by many river, in its course, it grows into a mighty stream, and i, at Yeniteysky, full as large a, the Volga. It runs the longest course of any river on this yard continent. The first town of any note in coming down this river is Krassno-yarr, which slands on the west was bank. It is a place of considerable trade, particularly in surs. From this place along the banks are many villages, till the Yenisey meets the lower Tongusta, a large river, coming from the east, a few verst above Yeniteysky. Below this place if it is a many inconsiderable settlements till you come to Mangaseysky, a town the same for teles and the shrine of an illustrious saint called Vassile Mangaseysky, much see a tented by the devorpeople in these parts.

Above this place the Yenifey receives the Podkamena-Tengusta, a large over, running from the fouth-east; and at Mangascysky it meets another river called I prochansk coming from the west. The Yeniscy now continues its course almost due north, till a discharges itself into the ocean. This river abounds with variety of excellent such such

as I have already mentioned, but in lesser quantities.

The 27th, we left Yenifeysky, and travelled about eight or ten verit along the son he bank of the river, when we came to thick and tall woods, which obliged us to leave the land and march along the river on ice, which was very uneven. This roughtest is caused by the frost setting in about autumn, with a strong westerly wind, which drives up great cakes of ice upon one another, in some places sour or five seet high. It the frost happens to begin in calm weather, the ice is very smooth, and easy for sledges.

The 28th, we proceeded along the Yenitey, meeting fometimes with villagers. The rigour of the cold was much abated, but the face of winter as peared every where, without the least fign of spring. At evening we entered the river longuist, which we found as rough as the sormer; but, as both the banks were over rown with thick

woods, we were obliged to keep along the icc.

Next day, we fill proceeded along the river, in blowing weather and driving frow. The 1st of March, we overtook our baggage, which we passed; it being thought more convenient, both in order to procure lodging and fresh hories, that the heavy

carriages should travel behind.

We continued our journey for feveral days along the Tongusta. We found, now and then, little villages, or single houses, on the banks. One day, we chanced to meet a prodigious slock of hares, all as white as the snow on which they walked. I speak within compass, when I say there were above sive or six hundred of them. They were coming down the river, very deliberately, on a small path of their own making, close to the beaten road. As soon as they saw us, all of them run into the woods, without seeming much frightened. I am informed, that these hares travel to the south, in much greater slocks than this, every spring, and return in autumn, when the rivers are frozen, and the snow salls. In most of the villages we lound plenty of this sort of venison; the inhabitants, however, value it but little; for they catch these hares

XX 2

more on account of their skins, of which they make considerable profits, than their slesh.

The Tongufy, so called from the name of the river, who the along its banks, are the posterity of the ancient inhabitants of Siberia, and differ in language, manners, and dress, and even in their persons and stature, from all the other tribes of these people I have had occasion to see. They have no houses where they remain for any time, but range through the woods, and along rivers, as pleasure; and, wherever they come, they erect a sew spars, inclining to one another at the top; these they cover with pieces of birchen bark, sewed together, seaving a hole at the top to let out the snoke. The fire is placed in the middle. They are very civil and tractable, and like to snoke tobacco, and drink brandy. About their huts they have generally a good stock of rein-deer, in which all their vealth consists.

The men are tell and able-bodied, brave, and very honest. The women are of a middly size and virtuous. I have seen many of the men with oval figures, like wreaths, on their foreheads and chins; and sometimes a figure resembling the branch of a tree, reaching from the corner of the eye to the mouth. These are made in their infancy, by pricking the parts with a needle, and rubbing them with charcoal, the marks whereof remain as long as the person lives. Their complexion is swarthy. Their faces are not so flat as those of the Kalmucks, but their countenances more open. They are altogether unacquainted with any kind of literature, and worship the sun and moon. They have many shamans among them, who differ little from those I formerly described. I was told of others, whose abilities in fortune-telling far exceeded those of the shamans at this place, but they lived far northward. They cannot bear to sleep in a warm room, but retire to their huts, and lie about the fire, on skins of wild beasts. It is surprising how these creatures can suffer the very piercing cold in these parts.

The women are dressed in a sur-gown, reaching below the knee, and tied about the waist with a girdle. This girdle is about three inches broad, made of deer's skin, having the hair curiously stitched down and ornamented; to which is fastened, at each side, in iron ring, that serves to carry a tobacco pipe, and other trinkets of small value. Their gowns are also stitched down the breast, and about the neck. Their long black hair is plaited, and tied about their heads, above which they wear a small sur-cap, which is becoming enough. Some of them have small ear-rings. Their seet are dressed in buskins made of deer-skins, which reach to the knee, and are tied about the ancle with a thong of leather.

The dress of the men is very simple and fit for action. It consists of a short jacket, with narrow sleeves, made of deer's-skin, having the fur outward; trowsers and hose of the same kind of skin, both of one piece, and tight to the limbs. They have, besides, a piece of sur, that covers the breast and stomach which is hung about the neck with a thong of leather. This, for the most part, is neatly stitched and ornamented by their wives. Round their heads they have a ruff, made of the tails of squirrels, to preserve the tips of the ears from the cold. There is nothing on the crown, but the hair smoothed, which hangs in a long plaited lock behind their backs.

Their arms are, a bow, and feveral forts of arrows, according to the different kinds of game they intend to hunt. The arrows are carried in a quiver, on their backs, and the bow always in their left hand. Besides these, they have a short lance, and a little hatchet. I hus accounted, they are not afraid to attack the siercest creature in the woods, even the strongest bear; for they are stout men, and dexterous archers. In winter, which is the season for hunting wild beasts, they travel on what are called snow shoes.

-withou

without which it would be in petible to raile their way through the deep frow. The are mode or a very thing, a cold, at very the first and two or fix inches broad, inchning to a point better, a country to the indices of a data or a through very how hashed to the are put. Country to a part of a very very controlled in the state of the state o

they slided a mane of a constant.

The notion of the last of a variety to a constant of the much diminished by definal-pose, he is a mereble, that the kind properties of the inflemper fill the Ruthian arrived to orgation. They are to much above of this due to, that, if any one of a simily is a red a pin, there is a mechately make the part of that, and for by his some variety one dectades; then pecked, power, the principle off to the windward, each of crising an cord in pet, with carriers construction as the realong. They is a result that the array to which is is tack to the position of the property of the property of the property that the property the past. If the property of t

with strong without to prevent his fellows.

When they go a-hunting into the woods, they carry with them no providens, but depend entirely on what they are to catch. They enter my animal that comes in their way, even a bear, fox, or well. The fquirrels are reckined delicate food; but the entire lave fach a firong rank tate and fmell, that nothing but flarving an obligation to cat their delth. When a Tongule kills in alk or door, he near many strong the place till he has cat it up, unless he happens to be near his tendly, in which a deche carries part of it home. He is never at a loss for a fire, having dways a finder-box about him. If this should happen to be wanting, he kindles a face, he rubbing two pieces of wood against each other. They eat nothing raw, but in great extremity.

The lables are not caught in the fame menner as other animals. The turisto tender, that the leaft mark of an arrow, or rolling of the hair, spoils the lab of the skin. In hunting them, they only use a little day and a net. When a hunter finds the track of a leble upon the lack, he follows it path a for two or three days, till the poor animal, quite fired, tak sactage in some tall tree; for it can climb like a cat; to hunter then spreads his net are used the tree, and makes a me; the stable, until the endure the smoke, immediately deterneds, and is caught in the net. I have be not liby some of these hunters, that, when land purched with hunger on fuch long class, they take two thin boards, one of which they apply to the pit of the stomach, and the other to the back, opposite to it; the extremities of these boards are tied with code, which are drawn tighter by degrees, and prevent their he ling the cravings or hanger.

Although I have observed, that the Tongus, in general, worship the sun and most, there are many exceptions to this observation. I have found intelligent people an agreement, who believed there was a being superior to both sun and moon, and who created

them and all the world.

I shall only remark farther, that, from all the accounts I have heard and read of the natives of Canada, there is no nation in the world which they so much resemble as the Tongusians. The distance between them is not so great as is commonly imagined.

The 4th of March, we came to a little monastery, called Troytza, dedicated to the Holy Trinity; where we found about half a dozen monks, who gave us an holpstable reception in their cells, and furnished us with provisions and fresh horses. The monastery hands upon the north side of the river, on a very pleasant though solitary hand, encompassed.

encompassed with woods, corn-fields, and good passurage. Most of the villages are on the north side of the river, as it is higher than the south side.

The same day, we proceeded on our journey along the river. We met with, daily, great flocks of hares in their progress to the westward, and many Tongusians in their liuts. It is to be observed, that, from this river northward to the Frozen Ocean, there are no inhabitants, except a few Tongusians, on the banks of the great rivers; the whole of this most extensive country being overgrown with dark impenetrable woods. The soil along the banks of this river is good, and produces wheat, barley, rye, and oats. The method taken by the inhabitants to destroy the large fir-trees is, to cut off a ring of bark from the trunk, about a foot broad, which prevents the ascending of the sap, and the tree withers in a sew years. This prepares it for being burnt in a dry season; by which means the ground is both cleared of the wood, and manured by the ashes, without much labour.

The Ruffians observe, that, where the fort of fir commonly called the Scotch fir grows, the ground never fails of producing corn; but it is not so where the pitch, or

any other kind of fir, prevails.

zatiky to the north-east.

The 7th, we came to the head of the Tongusky, which is formed by the conflux of two other rivers, the Angara and the Elimm. The first issues from the great Baykall lake, and runs towards the west, till it meets the Tongusky, when it loses its name. We left the Angara and Tongusky on our right hand, and proceeded along the Elimm, which we found much smoother than the Tongusky. The Elimm is a considerable large and navigable river. The banks on the south side are very high, and covered with rugged rocks, overgrown with woods; but, to the north, you meet with several villages, corn-fields, and pasturage.

We kept on our course up the Elimm, a little to the northward of the cast, till the 9th, when we arrived at the town of Elimsky, so called from the name of the river, which stands in a narrow valley, on the south side of the river, encompassed with high hills and rocks covered with woods. This place is but small, and is only considerable, as it stands on the road to the eastern parts of Siberia; for travellers to China generally take to the south-east, towards Irkutsky; and those who travel to Yakutsky and Kamt-

CIIAP. IV. — Observations on Yakutsky and Kamtzatsky, &c. — Journey continued to Irkutsky; and Occurrences there, &c.

AT Elimsky I met with General Kaniser. He was adjutant general to Charles XII. of Sweden, and much esteemed by that great warrior, for his military exploits. Kaniser was a native of Courland. He was taken prisoner by the Russians in Poland, and sent hither, where he lived in ease and solitude, and was regularly visited by all travellers.

This gentleman had a creature, called kaberda, which was brought to him when a fawn, by some of the Tongusy. It is the animal from which the sweet-smelling drug called musk is taken. The musk grows about the navel, in form of an excrescence, which is cut off, and preserved, when the creature is killed. There are many of them in this country; but the musk is not so strong scented as that which comes from China, and more southern climates. The general had bred this creature to be very familiar. He fed it at his table with bread and roots. When dinner was over, it jumped on the table, and picked up the crumbs. It followed him about the freets like a dog.

I must confess it was pleasing to see it cut capriole, and play with classical ake a kid.

The kaberda is a fize left than the fallow-deer, and its colour darker. It is of a pretty shape, having erect horns, without braiches; is very swit, and hunt a rocks and mountains of difficult access to men or cops; and, when hunt d, pumps from this to cliff with incredible celerity and firmnel of fact. Their this estermed by the endon than any of the deer kind of larger size, whereof there is great veries in their parts.

Before I leave Elimity I shall, as usual, give a short account of som on the proceeding adjacent, particularly those to the north-cest, towards the river Long and Y. ..., according as I have been informed by travellers, on whose veracity I could enter y

depend.

The people, who travel in winter from hence to these places, generally do it in 🐓 nuary or February. It is a very long and difficult purney, and which in me in Terguitans, or fuch hardy people, have abilities to perform. The Rustin inequality finish it in fix weeks. The common method is as follows: all recording a few in fledges, when the road becomes impaffible by hories, they let in melves or a row fhocs, and drag after them what is called a nart, containing providens and other recoffaries, which are as lew and light as possible. This mart is a kind of fledge about the feet long and ten inches broad, which a man may callly draw upon the despett in w. At night, they make a large fire, and lay themselves down to sleep in these narrow fledges. As foon as they have refreshed themicives, they again proceed on their snowshoes, as before. This manner of travelling continues about the space of ten day, when they come to a place where they procure dogs to draw both themselves and their nare The dogs are yoked by pairs, and are more or fewer in number according to the well he they have to draw. Being trained to the work, they go on with great spirit, buking all the way; and the person, who lies in the sledge, holds a small cord to guide the dog that leads the reft. They are fastened to the sledge by a fett rope, which is tied about their middle, and passes through between their hind legs. I have been surprised to fee the weight that these creatures are able to draw; for travellers must carry along with them provisions for both themselves and the dogs. These watchful animals know the time of fetting out in the morning; and make a difinal howling, till they are ted, and purfue their journey. This way of travelling would not, I believe, fult every co-ditrution; the very fight of it latisfied my curiofity. Thus, however, thele people proceed for near three weeks, till they arrive at some villages on the Lena, where, having the dogs, they procure horses, with which they travel to the town of Yakutiky. place has its name from a rivulet, called Yakut, which empties ittelt into the Lena.

I have been, perhaps, too particular in describing the method of travelling with snow-shoes and dogs; but as these things are known to sew Europeans, I concluded an account of them would not be disagreeable. I have seen several Swedish officers who have travelled to Yakutsky in this manner. I tried the snow-shoes myself, and tound

them very fatiguing; but time and practice make them easy and familiar.

There is a more agreeable road from Elimiky to Yakutiky than that I have mentioned, which is by water, down the river Lena; but this route will not agree with the time and circumstances of every traveller. Those who travel from Irkutiky by this course go by land to a place called Vercholensky Ostrogue, situated near the source of the Lena, where they embark, and fall down the stream. Those who go from Elimiky, cross the country directly, about two days journey, to the first convenient place upon the Lena, where they procure vessels, and fail down the river to Yakutiky, or any

other place; but in this passage by water they are pestered with numbers of large gnats and muskitoes, which lessen the pleasure of the voyage.

Be fore I proceed to the northward, it will not be improper to give a short description of the famous river Lena; which, for the length of its course and quantity of water.

may be compared to any of the largest rivers in the world.

The Lena rifes at a small distance northward from the Baykall lake, and runs to the north, with a little variation, till it discharges itself into the Northern Ocean. I compute the length of it from the source to the ocean, to be about two thousand five hundred English miles, though it is much more by common report. It is navigable during this whole course, having no cataracts so great as to prevent the parage of vessels of considerable burden. It receives many great rivers, most of which come from the cass. It may be castly magned, that the Lena can not fail of being stored with various kinds of excellent tills, when the other rivers in Siberia assorb furth plenty and variety. The banks are generally overgrown with tall thick woods, wherein are abundance of game, and wild beasts. The country between its source and the Baykall lake is well peopled, abounding with many Russ villages and corn-fields along the banks of the river.

Having formerly mentioned Yakutiky and Kamtzatiky, I shall add a few observations

on these two provinces.

The town of Yakutíky, capital of the province of that name, is fituated on the west bank of the river Lena, and governed by a commandant; whose office is reckoned very

lucrative, as many tables and other valuable turs are found in that province.

The winter here is very long, and the frost so violent that it is never out of the earth, in the month of June, beyond two feet and a half below the surface. When the inhabitants bury their dead three feet deep, they are laid in frozen earth; for the heat of the sun never penetrates above two feet, or two feet and an half; so that I am informed all the dead bodies remain in the earth unconsumed, and will do so till the day of judgment.

The town and many villages in its neighbourhood are inhabited by Russians, who have horses and cows, but no sheep nor corn. They are plentifully supplied with corn from the southern parts of the country, by water-carriage along the Lena. And, in

fuminer, they make hay enough to feed their cattle in winter.

The province of Yakutiky is inhabited by a numerous tribe of Taltars, by which name the Russians call the whole of the natives of this country, however they differ from one another in religion, language, and manners. Those of this province are named Yakuty. They occupy a great space of territory round this place, especially to the cust, where they

border with the extensive province of Kaintzatiky.

The Yakuty differ little from the Tongusians, either in their persons or way of life. Their occupation, like that of the other natives, is sishing and hunting. They have statish faces, little black eyes, and long black hair plaited, and hanging down their backs. Many of the men are marked in the sace with charcoal, after the manner of the Tongusians. I have, however, seen many of these people, both men and women, of good complexions. They often sell their children to the Russians, who are very fond of them, as they generally make trusty servants.

These people, though otherwise humane and tractable, have among them one very barbarous custom: when any of their people are infirm through age, or seized with distempers reckoned incurable, they make a small but for the patient, near some river, in which they leave him, with some provisions, and seldom or never return to visit him. On such occasions they have no regard to sather or mother, but say they do them a good

effice in faulte there in a but to the term of the ter

ignorant p c₁1 's c 21 's c

the Mexicans on the arrival fire Spanist in Arriva. The health is a fine dispersed by a few Russians with means, which, is that do, all ruses in the d a small bore, which killed at a crew did nee. In present did no, f people fall without my vifible wound, and all his to the total of the unpowder, left the told in the ut noth constant on. In it is to we what'y inclined to proceed any total of the told in the ut nother told in the ut nother told in the unit of the told in the ut nother told in the ut nother told in the ut nother told in the ut not constant on. inclined to peace; and a two of their chief or not a subset. Rules, or do to obtain it. They profirated if rufet, is, in the most to mile, where, is the it of leader of the party, and begged of him to grant the replace; a bind a like a surface of their paying to His Majeffy an annual tribute of lables, or edge to so that a ridition they have punctually performed ever fince.

Many parts of Kaintzatiky are hilly and mountain my, particular to the month a fi covered with tall woods. As Ochodky is a good harbour, and it is a car't to a fix a royal navy. There are many great and imail rivers that run through the entry and empty themselves into the Eastern Ocian, among which is a pick time call it Anadeer. To the north of this river towards the ocean lie, in extention trace of land, little known, and inhabited by a fierce and lavage people, called by the Ruffier. At t-

deertzy, who continue very untractable.

I have nothing further to add concerning these remote provinces, only I am perfuaded that the islands of Japan can be at no great diffuse from the fouthern parts of Kamtzatíky. What confirmed me in this opinion is ti at I faw at St. Pet athury a young man, a native of Japan, who, I believe, is yet alive in the Academy of Sciences at that place. I asked him, by what accident he was brought so far from his own country; and he gave me the following account: -That his father and himself, with a tew perfons more, being at a noted town called Naggifaky, on the west coast of the island, employed about some affairs of trade, and having swished their business, intended to return to their own habitations on the north shore, by failing round the coast. Therefore went they on board a finall boat, and began their voyage home ward; but, neeting with a firong gale off the land, they were unfortunately driven out to fea, and in a few days were cast upon the coast of Kamtzatsky half starved, and in the greatest diftrefs. In this condition they mer with a Rushian Officer, who afforded them all that affiftance which common humanity dictates on fuch occasions. Notwithstanding all his care, feveral of the old people died, being quite fpent with fatigue, and want of vi turbs. That he and another youth, who was fince dead, were fent to St. Petersburg, where His Majesty was pleased to order that they should be provided for in the Academy. This young man could read and write both the Japanele and Russian languages.

We fet out from Llimiky on the 12th; and next day, in the evening, came to a fmall village upon the north bank of the river Augura, about eighty verit difficult from 1 1 VOL. VII.

Elinder. During these two days, we law no hoose remain inhabitants, the whole of the continuous which we pussed in my cover divide that and thick woods. There is an a sea at our for fledge, and the tree on each fide receing at the top shade it to an arm in the night make it very dark, and almost it timal.

We get I define to the inches where we truth horfer; and next morning the door purpose alm if due east up the river Angrea up on the rece. Along the riverse from what I had form for feveral mentles; I maximes we faw a fine champer received the country had now a difference for extra exclusion, a beautiful and extends prospect, at other times, the view is a receiver with woods and riting ground. The north fide of the river is the receiver with woods and riting ground. The north fide of the river is the receiver with woods and attack to the country along the banks where we form with a spand alumidume of eattle and privifor.

The 15th, we arrived at a large village called Balagardky, fit tated on the fouth fide of the Angara, near a rivale training from the touth called Unga. The fit action of this place is very pleafant, as it flands in a fruitful plain, and has many corn-fields and woods

in the neighbourhood.

Here we found another tribe of the natives of siberia, who differ in fome particulars from all those I have formerly described. They are called by the Rushins Bratiky, but by themselves Buraty. They live meets all the year, and, having large slocks of sheep, and many cows and houses they remove from place to place, as the convenience of grazing requires. Their language has a great attriby to that of the Kalmucks; and they have priests among them who can read and write that language. As to their dress and manner of life, I could observe little difference between them and the Kalmucks on the Volga; and therefore conclude they have both descend a frem the same original. Their faces, however, are not quite to flat as those of he Kalmucks, there has being semewhat higher, and their countenances more op n.

The Buraty are flow active men, but have all king of labour: for the ugh they have the example of the Ruilians ploughing and fowing their ground, and transplentifully on the produce of this rich and fertile foil, they clooke all to live in fact tents, and tend

their flocks, on which their fubliflence entirely depends.

The chi t exercise of the men is hunting and riding. They have a god breed of saddle-horses, and their horned cattle are very lease. Their the phase is call taits, and their mutton is excellent. They have also great al undance of goats; for all these animals they make no provision of folder, but leave them to feed in the open fields. When the snow falls to a great depth, which feldom happens in these parts, they drive them to the southwards to rising grounds, where little snow less.

Their arms are bows and arrows, lances and falores, all of which are used on horf-back; for, like the Kalmucks, they have no infantry. They are dexterous archers, and

ikilful horfemen.

These people were formerly subject to a prince of the Mongals, but now live very quietly under the Ruslian government. They are at present a very numerous people, reaching towards the east and south of Baykall lake, and are generally reckoned very honest and sincere.

As to their drefs, the men wear a coat, or rather gown, of sheep-skins, girt about the middle, in all seasons; a small round cap, suced with fur, having a tassed of red silk at the top, which, together with a pair of drawers and boots, makes up the whole of their apparel. The women's drefs is nearly the same, only their gowns are plaited about the waist, and hang down like a petticoat. The married women have their hair hanging in two locks, one on each side of the head, drawn through two iron rings, to prevent

-

is firming on the break, and looking very like a tyc-wip. The region of the Protect in the distribution of the control of th

aturvari.

In piling the tents of the Bursty, I often obferved a long pole, where on was han, by the horns, the head and ikin of a theep. On enquiring the reafon of this appearance, I was told that the animal, whole head and ikin these were, had been thain, and oftered in facrifice to the god who protected their flocks and herds. I could observe no images among them except some relicks given them by their priests which they had from the Delay-Lama; these are commonly I ung up in a corner of their tents, and sometimes about their necks, by way of an amulet, to preserve them from missortunes.

The 16th, we came to another large village, called Kamenka, fituated on the north bank of the river, where we found many of the Buraty in their tents. This day we had fome rain, which melted much fnow, and made it dangerous to travel upon the ice, fo that we were obliged to leave the river, and make the best of our way along the banks; for several of our horses broke through the ice, and were got up again with no

finall difficulty.

The 17th, our route lay to the fouth-calt. The alteration of the weather was now very perceptible, the heat of the fun was very intenfe, and the fnow fuddenly disappeared, leaving no marks of winter, except the ice upon the river, which was vanishing very fast. I hus, in the space of a few days, we passed from a cold winter to a warm spring; and one would almost have imagined we had been imperceptibly dropped into another climate. Our sledges, in which we had travelled and lodged, for most part, during the winter, could now be of no use; and we left them to be put on wheel-carriages, in order to follow us as should be convenient.

Having procured such horses and furniture as the place assorded, we proceeded along the north bank of the Angara, towards Irkutsky. We were escorted by some Cossacks, and a party of the Buraty, armed with bows and arrows. We hunted all the way as we travelled; and were not a little surprised to see the Buraty kill many hares with their arrows. This exercise was very seasonable, as we had been confined to sledges for

more than three months, during our journey from Cazan to this place.

On the 18th of March, we arrived at the town of Irkutsky, so called from the rivulet Irkut, which falls into the Angara near it. It stands on the north bank of the Angara, in a large plain, to the north of which the grounds are very high, and covered with woods. On the fouth side of the river, towards the Baykall lake, are high hills, rising to the fouth, and covered with tall trees, among which are many larines and Siberian cedars. The larin, called in Russ lifvinitza, is a well known tree in these

ports; near the root of it grows a famous drug, called against, in form of a mullinoom; it fliens its leaf in an orn, ord in funiour it locks like a pine; it grows very flraight and tall, and is reckoned good to ober to. Ship-building; in bears a cone like the fir-

tree, containing the feed, but not hill fo large.

What is called the court is a large tall the, which never flieds the leaf; it is white and knooth, but has not the leaff I nell of code. They use it chiefly in building houses, and it makes the finest a fire stoom, and freed from knots, of any word I know. The I was are like those of a pine, but grow in tall is, is y beautiful. The cones are large, and, instead of feed, take the fir, contain a small nut with a learnel, of which the people in this country are very food, and can inply way of a desert, in place of better muit. It has a pleasant take, like that of it sine, and is estermed good for the stomach.

The council Likutha is finificate with a disch, and frong pullified a having towers at certain data is. The gardion confines of former total a tempor, belief a number of Collecks, or the matta of the country. The tox: contains about to a toutland houses, and the inhabitants are plenufully supplied with a fions or all kinds from the neighbouring villages. The adjacent woods abound with variety or game. The river affords stargeon, and many other kinds of fish but no sterlet; because, as I appr hend, they delight in muddy streams, and the water at this place is so clear, that, in two fathoms deep, one may see the pebbles at the bottom.

At Irkutsky is a good market for furs of all sorts, and likewise for many kinds of Chinese goods. All merch and se must be entered at the custom-house in this place, and pays a duty of 10 per cent. which produces a considerable revenue to His Majesty.

The 25th of March, our bagginge arrived, after furmounting many difficulties on the road. They had been obliged to leave many of the fledges, after taking the baggage off

them, and putting it on wheel-carriages.

Our defign was to have croffed the Baykall Sea upon the ice, and then proceeded by land to the town of Selinginsky, but we came too late for that purpose. The season was so far advanced, that before our carriages arrived, the river was almost free of ice. We were informed, indeed, that the ice upon the lake was sufficiently strong to bear harses, but, upon considering the matter, it was thought most adviseable to remain here, till the ice in the sea was also melted, that we might go by water to Selinginsky; and orders were immediately given that vessels should be prepared for this purpose.

April 1st, we crossed the river, accompanied by Mr. Rakitin the commandant, in order to take a view of the country towards the fouth. We rode through fine woods of stately oaks, and other trees, formerly mentioned. We hunted all the way, and round abundance of game. At last we came to a small Russian village, in a fruitful valley, encompassed with hills covered with woods, where we lodged. Next day we went ten or a dozen miles farther, in search of wild beafts, but, finding none, we re-

turned to the same village, and the day sollowing to Irkutsky.

The 10th, we were entertained with a famous Buratsky Shaman, who was also Lama, or priest, and was brought from a great distance. As these shamans make a great noise in this part of the world, and are believed by the ignorant vulgar to be inspired, I shall give some account of the behaviour of this one, in particular, by which it will appear that the whole is an imposition.

He was introduced to the ambassador by the commandant, accompanied by several chiefs of his own tribe, who treat him with great respect. He was a man of about thirty years of age, of a grave aspect and deportment. At his introduction he had a

After some conversation, he was defired to ext ibit some 'reci nen of his art; but he replied, he could do nothing in a Ruffian house, because there are fonce anages of faints which prevented his fuccess. The performance was three valuarity adjournal to a Bunni y tent: the fuburbs. Accordingly, in the evening, we went in the new appointed, whire we found the shaman, with several of his company as, round a little (, striking tobleco, but no women among them. We placed out wes on the und of the tent, leaving the other for Jim and his countrymen. After fiving about half an hour, the finaman placed hims if cross-legged upon the floor, close by a tew burning coals upon the hearth, with his face towards his companions; then he took two flicks about four feet leng each, one in each hand, and began to fing a demal tune, beating time with t'ie slicks; all his followers joined in the chorus. During this part of the prefermance, he turned and differted his body into many different postures, till at list he wrought himfulf up to fuch a degree of fury, that he foarned at the mouth, and his eyes looked red and flaring. He now flarted up on his legs, and fell a dincing, like one diffracted, till he trode out the fire with his bare feet. These unnatural most is were by the vulgar attributed to the operations of a divinity; and, in truth, one would almost have imagined him possessed by some demon. After being quite spent with dancing, he retired to the door of the tent, and gave three dreadful flicieks, by which his companions faid he called the demon, to direct him in answering such questions as should be proposed. He then returned, and sat down in great composure, telling he was ready to resolve any question that might be asked. Several of our people put questions in abundance; all which he answered readily, but in such ambiguous terms that nothing could be made of them. He now performed feveral legerdemain tricks, it ch as stabbing himself with a knife, and bringing it up at his mouth, running himself through with a fword, and many others too trifling to mention. In short, nothing is more evident than that these shamans are a parcel of jugglers, who impose on the ignorant and credulous vulgar.

The 6th of April, we went to a monastery, about five miles to the eastward of this place, where we dired with the Archbishop of Tobolsky. This prelate had lately come hither to visit some monasteries, and in his way had baptised a number of Ostcaks and other heathens. From this time till the 8th of May little material happened. We waited patiently for the dissolving of the ice on the Baykall lake, of which we expected to receive the most certain knowledge, by means of the floating ice on the Angula; for, when this happens, that river is filled with sloating cakes, which are driven along

with great fury by the wind and current.

The 11th, the river was now clear of ice. Our baggage was shipped on board large slat-bottomed boats, and drawn up the stream; the wind being southerly, made the progress of the boats very slow. The ambassador therefore resolved to remain at this place, till he heard they had nearly reached the lake, which is about forty verst from Irkutsky.

Before we left this place, Mr. Kremensky, our interpreter for the Latin tongue, died of a hectic disorder. He was a Polish gentleman, and had laboured under this distemper for some years.

CHAP. V.—From Irkuisky, cross the Lake Baykall, to Selinginsby.—Some Account of the Kutuchtu, &c.

THE 15th of May, the weather being very hot, we did not fet out till after dinner, when we left Irkutsky, accompanied by the commandant and some other officers of the place.

place. We rode along the north bank of the river, through pleafant woods, and some open fields, till we came, about midnight, to a few fishermen's huts, where we halted for a few hours, and repeated our journey early next morning.

At noon, ve arrived at a small chapel, dedicated to St. Hicolas, where travellers usually pay their devotions, and pray for a prosperous passage over the lake. About this religious house there are a few sishermen's huts. Two monks constantly attend, to put people in mind of their duty, and receive a small gratialty from the passengers.

Here we found our boats waiting for us below the falls of the Angara. From hence you can fee the lake, bursting out betwixt two high rocks, and tumbling down over huge flonce, that lie quite cross the river, which I reckon to be at out an English rule broad. The whole channel of the river is covered with these rocks, from the mount of the lake Jown to the Chapel of St. Nicolas, about the dilance of an Puga Tamile. There is no passage for the smallest boats, except along the east shore, through a narrow strait, between the rocks and the land. In the next shallow places, there is about five or fix feet water, and breadth all the way fufficient for any fingle veff-l Bu if, by stress of weather, or any other accident, a boat shoul have the mi to tune to miss this opening, and be thrown upon the rocks, she must immediately be dushed to pieces, and the whole crew inevitably perish. The waters, dashing upon the flores, make a noise like the roaring of the sea, so that people near them can scarce hear one another speak. I cannot express the awfulness with which one is struck, at the fight of fuch aftonishing scenes of nature as appear round this place, and which I believe are not to be equalled in the known world. The pilots and failors who navigate the lake speak of it with much reverence, calling it the Holy Sea, and the mountains about it, the Holy Mountains; and are highly displeased with any person who speaks of it with difrespect, or calls it a lake. They tell a story of a certain pilot who always gave it that appellation, but was feverely punished for his contempt. Being on a voyage in autumn, he and his crew were toffed from fide to fide of the lake, till they were half starved, and in great danger of perishing. Necessity, at last, forced this hardy mariner to comply with the prevailing custom, and pray to the Holy Sea and Mountains to have compassion on him in such distress. His prayers were effectual; and he arrived safe to land; but was observed, ever after, to speak of the sea with the greatest respect.

The afternoon was spent in adjusting the tackle, and preparing the barks for being

drawn up the strong narrow current.

The 17th, the wind being contrary, and blowing pretty fresh, the pilots would not venture out. I, and three more of our company, took this opportunity of walking up to the top of the mountains, where we had a full view of the sea, and the land to the south on the other side of it, and also to the west, as far as it extends. The land on the south side of the lake rises gradually, till it terminates in hills mostly covered with wood; but, on the western shore, there are very high mountains, several whereof are overspread with deep snow, which we could easily discern, though at a great distance.

The Baykall Sea, opposite to the mouth of the Selinga, is reckoned about fifty English miles broad, though it is much broader in some other places, and about three hundred miles in length. It is wholly fresh water, and is supplied by the Selinga, and many other rivers, from the south, and by the higher Angara from the east. The course of the sea is from south-west to north-east, and has very sew shelves or rocks. There is only one large island, near the middle of it, called Olchon. It is bounded on the north by a ridge of high rocks, which run from one end of it to the other. The only opening by which it discharges itself is that into the Angara, which, though it is a natural passage, appears as if cut through the rocks by art. In my opinion, one cannot imagine

imagine a more beautiful prospect of nature than is seen from the top of these mountains, which may easily be perceived from the short and impersect sketch I have drawn of it. The woods on the summit of the rocks are short and thinly scattered; but, on their declivity towards the north, and in the valleys, the trees become gradually both taller and larger. There is abundance of game and wild beasts in these woods, particularly the wild boar, which was the first of that species we found in this country; a certain sign of a temperate climate; for these animals cannot endure the excessive cold in more northerly parts. The hunting of these animals being a dangerous kind of sport, we carefully avoided their haunts. In the evening, we returned to our barks at the chapel of St. Nicolas.

The Baykall is abundantly furnished with various kinds of excellent fish, particularly sturgeon, and a fish called omully, in shape and taste resembling a herring, but broader and larger. The sea produces also great numbers of seals, whose skins are preferred in quality to those of seals caught in salt-water. I am of opinion, that both the seals and fish in the Baykall came originally from the Northern Ocean, as the communication

between them is open, though the distance be very great.

The feals are generally caught in winter, by strong nets hung under the ice. The method they use is to cut many holes in the ice, at certain distances from one another, so that the fishermen can, with long poles, stretch their nets from one hole to another, and thus continue them to any distance. The feals, not being able to bear long confinement under the ice, for want of air, seek these holes for relief, and thus entangle themselves in the nets. These creatures, indeed, commonly make many holes for themselves, at the setting in of the frost. In this manner, they catch not only seals, but fish of all kinds, in winter.

The 18th, the wind being favourable, we put off from St. Nicolas's. As we had workmen enough, we left part of them on board, to affift the pilot, by fetting poles, while the rest were employed on shore in towing the barks against a strong current. In about the space of three hours we got clear of the current, and all hands came on board. We were now quite becalmed, and obliged to take to our oars. We rowed along fhore to the eaftward till about noon, when we had an eafy breeze, which foon carried us two thirds over the fca, under our main-fail. The wind now chopped about to the east, and blew so fresh, that we could not make the river Selinga, which was the port where we intended to land. As these barks cannot turn to windward, we were drove about ten miles to the westward of the Possolsky monastery, which stands about fix miles to the westward of the Selinga, in a pleasant and fruitful plain, furnishing an extensive view in all directions; where, endeavouring to get to land at any rate, we fleered into a bay in which we fancied we faw the shore covered with cockle-shells or white fand. On a nearer approach, our mistake appeared. For what feemed shells or fand, at a distance, was only great and small cakes of ice, beating with the waves against the main body of the ice, which lay firm, and covered the whole bay. Our people, on distinguishing the ice, immediately struck sail, and were in no small confusion. But Mr. Ismaeloss ordered the fail to be again set, and to steer directly for the ice. In the mean time, all hands were employed in hanging boards about the bow of the vessel, to prevent the cutting of the planks, and in setting poles to push off the large cakes. At last we came among the ice, which made a terrible rattling at first; but the farther we advanced, the easier our bark lay, till we came to the main body of the ice, where she remained as unmoved as if she had been in a mill-pond, though it still continued to blow hard. We now quitted the ship, and walked about upon the ice, which was yet strong enough to carry horses. By this time the sun was

Let viich 1 . c. ou cur'de ign of going ashore, for the districe was at least five English

miles; and the we agent pap in the ice near the place where we lay.

About imaght, the wind turned vefterly, and, at break of day, we'll ft our feation, and the dotter three heals. They having been two or three miles before us the preceding night, had time crough to reach anchoring ground, and, by this means, cleaped the nee, to little especied at this feafon of the year. We ourselves, before entering the law, had founded, in order to discover whether we could come to an anchor; but he bettom could be found, though we joined several lead-lines together, amounting to above one hundred and fifty fathoms.

The mouth of the Selinga is furrounded with tall reeds, and contains feveral islands. The cut y mit it is very difficult, except the wind be fair, because of many slats and sand-banks, thrown up by the current of the river. Here we found great flocks of all

kinds of water-foul, particularly inipes.

The wind continuing fair, we failed up the river to a small oratory, dedicated also to St. Nicolas, where all hands went ashore to return thanks for their safe passage. The prior of the Possoliky monastery came to this place to salute the ambassador, and brought a present of sish, and such other provisions as these religious houses assord.

In the evening, we proceeded up the river, till night overtook us, when we hauled our boats close to the bank, and lay till next morning, which was the 20th of May. This day being calm, the bank was towed up the river; and we walked along the banks, hunting all the way in a very pleasant country. At night, we lay by, as formerly.

The 21st, the weather was very hot. We continued our voyage in the same manner

as before.

The 22d, the wind being fair, we hoisted fails; and in the evening arrived at a large village, well built and peopled, called Kabbansky Ostrogue. This place is pleasanly situated, on a rising ground upon the west bank of the river, surrounded with many corn-fields and much pasturage. Here we took new hands on board our barks, and disnisted the former to return in open boats to Irkutsky.

The 25th, we reached another large village, called Bolshoy Zaimka, situated in a fertile country. In the neighbourhood is a small monastery, and many lesser villages. It must the Buraty were encamped, with their slocks and herds, on both sides of the

river.

The climate on this fide of the Baykall lake is much more temperate than on the north fide. The land produces rich crops of wheat, rye, barley, oats, buck-wheat, and peafe, befides kitchen roots, and other garden stuff. The inhabitants have not yet begun to plant any kind of fruit-trees, which I am persuaded would thrive exceedingly, as the winters are short, and the snow does not lie above six weeks or two months. The banks of the river appeared very pleasant, being sinely varied with plains and woods.

The 26th, we came to a large town, called Udinsky, from the rivulet Uda, which runs into the Selinga, on the east bank. This place also stands in a fertile plain, having hills covered with woods towards the east. In these hills are found several rich ores, particularly of lead; in digging which many hands are now employed. The miners say it is of too hard a quality; however, they have extracted considerable quantities of silver from it; and I have been informed that they also found some veins of silver ore. As these works are but lately begun, it is not doubted that they are capable of great improvement, at an easy charge, as the metal lies so near the surface. Samples

Samples of these ores have been seet to St. Petersburg; and, I am informed, His Ma-

jesty has engaged some German milious to make experiments upon them.

Both here and on the Angara iron is to be found in great abundance at the very furface: but as the distance is too great for exponation, it is not worth the labour. To supply the common confumption of the counter the mine, and smelts and works as much iron as a needs. I have seen some of this iron of an excellent, fost, and pliable quality.

Besides the above mentioned, there are at this pace very rich mines of copper. I have seen some of the ore with large veins of pure copper running through it. I make no doubt but time and suture discoveries will bring these mines to perfection, to the

great emolument of the Russian empire.

All this country is under the jurisdiction of the commandant of likutiky, who sends deputies to all the towns of this extensive province, to administer justice, and take care of His Majesty's revenues. The power of nominating sub-governors and commandants, is vested by His Majesty in the governor of Siberia, which gives him an authority equal to a source of prince.

The ambaffador, finding the progress of the boats against the stream very flow and clous, being besides much pestered with gnats and muskitoes, resolved to go by land the rest of the way to Sclinginsky: for which purpose, the superintendant of this place ordered borses, and a proper escort, to be got ready against next morning on the other side of the river, the road on this side being interrupted by thick woods and deep rupers.

The 27th, having fent off our banks, we crossed the river, and, having no baggage, we foon mounted. The road lay through a fine plain, covered with excellent grass. In the evening, we came to a fountain of pure water, where we lodged in the tents of the Buraty, and slept on bull-hides.

The 28th, early, we proceeded, travelling over some pretty high hills overgrown with wood. About noon, we came to a river called Orongoy, which we crossed, on a tall camel, it being too deep for horses. At this place, we found a number of the Bu-

raty encamped, with their flocks grazing in the neighbourhood.

Our horses having swam the river, we went into one of the Buratsky tents till they The hospitable landlady immediately set her kettle on the fire to make us fome tea; the extraordinary cookery of which I cannot help describing. After placing a large iron kettle over the fire, she took care to wipe it very clean with a horse's tail, that hung in a corner of the tent for that purpose; then the water was put into it, and foon after fome coarfe bohea tea, which is got from China, and a little falt. When near boiling, fhe took a large brass ladle, and tossed the tea till the liquor turned very brown. It was now taken off the fire, and, after subsiding a little, was poured clear into another place. The kettle being wiped clean with the horse's tail as before, was again fet upon the fire. The mistress now prepared a paste, of meal and fresh butter, that hung in a skin near the horse's tail, which was put into the tea-kettle and fried. Upon this paste the tea was again poured, to which was added some good thick cream, taken out of a clean sheep's skin, which hung upon a peg among other things. The ladle was again employed, for the space of fix minutes, when the tea, being removed from the fire, was allowed to stand a while in order to cool. The landlady now took fome wooden cups, which held about half a pint each, and ferved her tea to all the company. The principal advantage of this tea, is, that it both fatisfies hunger and quenches thirst. I thought it not difagreeable; but should have liked it much better had it been prepared in a manner a little more cleanly. Our bountiful hosters, however, gave us a hearty welcome; and as these people know not the use of money, there was nothing to pay for our entertainment. We only made her a present of a little tobacco to sinoke, of which these people are very fond. I have given this receipt

with a view that some European ladies may improve upon it.

After this short repast, we mounted again; and, in the evening, came to a neat Rusfian village, on the front of a pleasant hill covered with wood. This place is surrounded with extensive valleys and fine pasturage, and our accommodation was better than the preceding night. Here we met Mr. Firsoff, colonel of the costacks, or militia of Selinginsky, with a squadron of horse, armed with bows and arrows, and some firelocks, who came to escort the ambassador to that place.

The 29th of May, we mounted early, and, by means of our cossacks, hunted and ranged the woods, as we went along, in the manner of this country, called oblave in the Russian language. Their method is to form a semi-circle of horsemen, armed with bows and arrows, in order to inclose the game. Within the semi-circle a few young men are placed, who give notice when the game is sprung; those only are permitted to pursue, the others being confined to keep their ranks. Our cossacks with their arrows, killed three deers, and several hares: and, if killing harmless animals can be called diversion, this may properly be reckoned one of the finest. After this fashion

they hunt bears, wolves, foxes, and wild boars.

About noon, we came to a village on the Selinga, where we halted a few hours, and then croffed the river in boats, which was near a mile broad at this place. Our coffacks, however, fought no boats, except one to transport their arms, cloaths, and faddles; which being done, all of them mounted their horses, and plunged into the river without the least concern. As soon as the horses were set a swimming, for ease to them the men dismounted, and laying hold of the mane with one hand, guided them gently by the bridle with the other. This is the common method in this country of transporting men and horses, which I look upon to be both safe and easy, provided the horse is managed with a gentle hand, without checking him with sudden jerks of the bridle.

We halted a little, after croffing the river, till the horses were dried; after which we mounted, and, in the evening, arrived at the town of Selinginsky, where we intended

to wait for our barks, and the rest of our people.

Selinginsky is situated on the east bank of the noble river Selinga, in a deep, barren, sandy soil, that produces almost nothing. The choice of this situation was extremely injudicious; for, had the founders gone but half a mile further down, to the place where now the inhabitants have their gardens, they would have had a situation, in every respect, preserable to the present.

This place confilts of about two hundred houses and two churches, which are all of them built with wood. It is defended by a fortification of flrong pallifades, on which

are mounted fome cannon.

About a mile eaftward of the town is a ridge of high fills, quite covered with wood. On the other fide of the river the country is open, dry, and fomewhat barren, but afterds excellent pasture, particularly for sheep, whereof the Buraty, the inhabitants, have large slocks. They are of that kind which bath broad tails; and their mutton is very good. These people have, besides, a large fort of horned cattle, and abundance of horses and camels, wherein all their riches consist. Here ends the tribe of the Buraty; and the nation of the Mongalis begins.

The Mongalls are a maniferous people, and occupy a large extent of country, from this place to the Kallgan, which figures the Everlashing Wall, or the great wall of

China.

China. From this wall, they stretch themselves northward, as far as the river Amoor, and from the Amoor westward to the Baykall Sea, where they border with the territories of the Kontaysha, or prince of the Black Kalmucks. On the south; they are bounded by a nation called Tonguts, among whom the Delay-Lama has his residence. One may easily imagine, from the vast tract of land which the Mongalls occupy, that they must be very numerous, especially when it is considered that they live in a healthy climate, and have been engaged in no wars since they were conquered, partly by the Russians on the west, and partly by the Chinese on the east; to whom all these people are now tributaries. In former times, the Mongalls were troublesome neighbours to the Chinese, against whose incursions the great wall was built.

Kamhi, the present Emperor of China, was the first who subdued these hardy Tartars, which he effected more by kind usage and humanity than by his sword; for these people are great lovers of liberty. The same gentle treatment hath been observed by the Russians towards those of them who are their subjects. And they themselves confess, that, under the protection of these two mighty Emperors, they enjoy more liberty,

and live more at ease, than they formerly did under their own princes.

The present prince of Mongalia is called Tush-du-Chan, and resides about six days journey to the south-east from Selinginsky. The place is called Urga, and is near to where the Kutuchtu or high-priest inhabits. When the Mongalls submitted themselves to the Emperor of China, it was agreed, that the Tush-du-Chan should still maintain the name and authority of a prince over his people, but undertake no war nor expedition without the consent of the Emperor; which has strictly been observed ever since.

It is very remarkable, that in all the vast dominions of Mongalia, there is not so much as a fingle house to be seen. All the people, even the prince and high-priest, live constantly in tents; and remove with their cattle from place to place, as conve-

niency requires.

These people do not trouble themselves with plowing or digging the ground in any fashion, but are content with the produce of their flocks. Satisfied with necessaries, without aiming at superfluities, they pursue the most ancient and simple manner of life,

which, I must confess, I think very pleasant in such a mild and dry climate.

From the river Volga to the wall of China there are three great Tartar princes, the Ayuka-Chan, the Kontaysha, and the Tush-du-Chan. These three mighty nations have almost the same features, religion, and language, and live in the same manner. It will easily be perceived, by casting an eye on the map, what an extent of territory these princes possess, whose subjects go by the general name of Kalmucks. Few languages can carry a traveller over a greater extent of country than that of the Kalmucks. With the Arabic, indeed, a person may travel through many places of the east, from Egypt to the court of the great Mogul; but with the Illyric he can travel much further than with either of the former, viz. from the Gulf of Venice to the utmost boundaries of Kamtzatska; for the Russian is a dialect of the Illyric.

The greatest part of Mongalia is one continued waste, except the places along the Amoor, and towards the Russian borders on the west. The foil allo to the south from Selinginsky, is exceedingly fine, and capable, by proper culture, of producing grain of

feveral forts.

Since I have mentioned the Amoor, I prefume this will be no improper place to give fome account of that river. It is called by the Tartars Shaggalynoulla, or the Black Dragon, I suppose from the celour of its waters, and the windings of its couries. It is formed of two large rivers, whose sources are in the defert, far to the callward of this place. One is called Argun, which issues from a take named Delay; the other is

Ingoda, on the north bank of which stands the samous Russian town Nertzinsky. The conflux of these rivers produces the Amoor, which runs towards the east, augmenting daily by means of the many great and small streams it receives, till it becomes one of the largest rivers in this part of the world, and, after a long course, discharges itself into the Eastern or Chinese ocean. It is remailable, that from Cazan to these parts, the Amoor is the only river that runs eastward. Most, if not all, of the great rivers in Siberia have their courses to the north and north-west.

Our barks arrived at Selinginsky on the 4th of June. After we had taken out of them what necessaries we wanted, they were dispatched with the rest of the baggage, for their greater security, to His Majesly's store-house at Streaka, about four miles

up the river, where the caravan for China then lay.

In the mean time, the ambassador wrote a letter to the Allegada, or prime minister, at the imperial court of Pekin, to notify his arrival, and desire his excellency would give orders for his reception on the borders. This letter was sent to the prince of Mongalia, to be by him forwarded to court; for no strangers are allowed to travel through his territories to China without his permission. The officer who carried the letter to the prince, was treated with great civility, and his letter immediately sent to court by an express. A few days after, the prince sent two gentlemen, one of whom was a lama, to congratulate the ambassador on his arrival in these parts. They were invited to dine with the ambassador, and behaved very decently.

The same officer, who carried the ambassador's letter to the prince of Mongalia at Urga, was ordered to present his compliments to the Kutuchtu, or high priest, who is a near relation of the prince. He received the officer in a very friendly manner, defired him to sit down in his presence; an honour granted to very sew, except ambassadors and pilgrims from remote countries; and, at his departure, gave him a present of

fome inconfiderable things, particularly a few pieces of Chinese tilks.

I cannot leave this venerable personage, without taking some notice of him. I shall therefore relate a few things concerning him, among thousands more ridiculous, which

the people in this country tell and believe.

This extraordinary man essumes to himself the character of omniscience, which is the interpretation of the word Kutuchtu; and the people are taught to believe that he really knows all things pail, pretent, and suture. As his intelligence, by means of his lamas, is very extensive, he is easily able to impose on the vulgar in this particular. They also believe that he is immortal, not that his body lives always, but that his soul, upon the decay of an old one, immediately transmigrates into some young human body, which, by certain marks, the lamas discover to be animated by the foul of the Kutuchtu,

and he is accordingly treated as high pricit.

When the spirit of the Kutuchtu has taken possession of a new body, that is, in plain English, when he is dead, the lamas are immediately employed to discover in what part of the world this wonderful person is regenerated, or born again, as they express it. They need, however, go to no great distance to find him; for, the affair being previously concerted among the chief lamas, they soon determine the choice of a fuccessor, who generally happens to be a young boy, that has been well instructed how to behave on that occasion. When a successor is pretended to be found, a company of lamas are sent to examine the matter, who carry along with them many toys, such as small silver bells, and things of that nature, which belonged to the former Kutuchtu, intermixed with others that did not. All these are laid before the child, who picks out such things as belonged to his predecessor, and discovers the greatest fondness for them, but rejects with disgust whatever is not genuine. Besides this trial,

one questions are put to him relative to wars or remarkable events in his former state, all which are answered to the satisfaction of the concluse; whereupon he is unanimously techned to be the self-same Kutuchtu, is conducted with great pomp and ceremony to

Ursa, and lodged in the tent of the high priest.

Till the new Kutuchtu arrives at a cortain age, he is entired under the government of the lamas, and five are permitted to fee him, except on a great differer, and even then it not eafy to get accels to him. It may feem furprifing, that in for numerous an affembly of lamas no intrigues should be carried on, nor disputes arise among the electors. All is conducted without noise or contention. It is, however, imagined that the authority of the prince greatly contributes to their unanimity.

The Mongalls relate that their Kutuchtu now has lived fourteen generations, and renews his age every moon; for at the new moon he appears like a youth; when she is full, like a full grown man; but when near the change, he is an old man with

gray hairs.

What they call the Urga is the court, or the place where the prince and high priest reside, who are always encamped at no great distance from one another. They have several thousand tents about them, which are removed from time to time. The Urga is much frequented by merchants from China and Russia, and other places, where all rade is carried on by barter, without money of any kind. The Chinese bring hither ingots of gold, damasks, and other filk and cotton studies, tea, and some porcelain, which are gene ally of an inferior quality, and proper for such a market. The Russian commodities are chiefly surs of all forts. Rhubarb is the principal article which is exchanged for these goods, great quantities whereof are produced in this country without any culture. The Mongalls gather and dry it in autumn, and bring it to this market, where it is bought up at an easy rate, both by the Russian and Chinese merchants.

The Kutuchtu and his lamas are all clothed in yellow, and no layman is allowed to wear this colour except the prince. This mark of distinction makes them known and respected every where. They also wear about their neck a string of beads, which are used in faying their prayers. The Mongalls believe in and worship one Almighty Creator of all things. They hold that the Kutuchtu is God's vicegerent on earth, and

that there will be a state of future rewards and punishments.

The following relation which I had from a Russian merchant, to whom the thing happened, will shew the methods taken by these lamas to maintain the dignity and character of their mighty high priest. This merchant had gone to the Urga, with an in-While he was at this place, some pieces of damask tention to trade with the Chinese. were folen out of his tent. He made a complaint to fome of the lamas with whom he was acquainted, and the matter was foon brought before the Kutuchtu, who immediately ordered proper steps to be taken with a view to find out the thief. The affair was conducted in this uncommon manner: one of the lamas took a bench with four feet, which feems to have been of the conjuring kind; after turning it feveral times in different directions, at last it pointed directly to the tent where the stolen goods lay conccaled. The lama now mounted aftride the bench, and foon carried it, or, as was commonly believed, it carried him, to the very tent, where he ordered the damask to be The demand was directly complied with: for it is in vain, in fuch cases, to produced. offer any excuse.

I shall now subjoin a few observations on the Delay-Lama, or priest of the desert, who is reckoned still superior to the Kutuchtu. He lives about a month's journey to the south-east of this place, among a people called the Tonguts, who use a different language from the Kalmucks. I am informed, that the religion of the Tonguts is the same with

if at of it. The realist that they hold the fame opinions with respect to it a consistent in a me Deley-Lamb, as the Mongalis do about the little obtained the indice of the lamb that angle is meditioned. It is not a consistent in the property of the prop

THE Torgets are a sparate people, governs the action which the constraint Chan. One or their princes was lately killed in the agreement with the constraint, King of the Elect Kalmucks. The Delay-Lama and the data owing chapted own, which many disafters, as the consequences of such proceedings. The lamb threater duthe Fontagen with many disafters, as the consequences of such proceedings. The lamb with not ever, restanded them very little, till he had attained his endire after which the former and the Delay-Lama in their former digit. The lamb in the of the same profession with the Delay-Lama, and acknowledges his an unit of religious matters.

I at a informed there is a third lama, called Bog lu-Pontain, of fith greater authority than either of the former. But as he lives at a great uillance, near the fron lers of the Great Mogul, he is little known in these parts. Though I am unalling to throot the least reflection on any society of men instituted for the promotion of religion and virtue, from all I can collect concerning these lamas, they are little better than thanaers of sa-

perior dignity.

The answer to the letter which the ambassador had written to 2 kin was not yet arrived. In the mean time we were obliged to remain at Schinglishey, where we extend

raiced ourselves in the best manner we could.

June the 12th, walking along the bank of the river, I was a little furprifed at the figure and drefs of a man, flanding among a number of boys v ho vere angling for finall hines. The perfon bought all the fithes alive, and immediately let them go again into the river, which he did very gently one by one. The boys were very civil to him, though they looked upon him as diffracted, on account of his behaviour. During this ceremony he took hade notice of me, though I spoke to him several times. I soon perceived, by his arcs, and the streak of sufron on his forehead, that he was one of the Brachmans from India.

After fitting all the fifth a furnishing, he feemed much pleafed; and, having learned a little of the Rufich Impuage, and a imagering of the Portuguese, began to converse with me. I carried him to my lodgings, and offered to entertain him with a dram, but he would take nothing; for he said it was against the rules of his religion to each or drink with strangers. I asked him the reason why he bought the fish to at them go again? He told me, that perhaps the souls of some of his deceased friends or relations had taken possession of these tisnes; and, upon that supposition, it was his duty to relieve them; that, according to their law, no animal whatever ought to be killed or eaten; and they

always lived on vegetables.

After this interview we became so familiar, that he came every day to visit me. He was a cheerful man, about seventy years of age. He had a bulh of hair growing on his forehead very much matted, and at least six seet in length. When it hung loose it trailed upon the ground behind him; but he commonly were it wrapped about his

heac

Fead in form of a turbin. The hair was not all his own, but collected as relics of his friends, and others of his profession, reputed faints; all which he had intermixed and matted with his natural hair. Persons of this character are called Faquers, and esteemed

facred every where.

He told me he was a native of Indostan, and had often been at Madras, which he called Chingatan, and hid it belonged to the English. This circumstance, added to several others, made me believe he was no impostor, but an innocent kind of creature, as are most of that seed. He came to this country in company with some others of his country, men, on a paterimage, in order to pay their devotions to the Kutuchtu and Delay-Lima. They had been twelve months on their journey, and had travelled all the way on foot, over many non-innountains and waste defects, where they were obliged to carry their provisions, and evaluation on their backs. I showed him a map of Asia, whereon he pointed out the coarse of his journey, but sound many errors in the geography; and no worder, since sow Europeans would have had the cooling to undertake such a journey as this man had done.

The 14th, a chief named Tayfna, of those Mongalls who are subjects of His Majesty, came to pay his respects to the ambassador, who gave him a friendly reception, and kept him to dinner. He was a merry old man, near fourscore, but so vigorous that he could mount a horse with as much agility as many young men. He was accompanied with sive sons, and many attendants, who treated him with equal respect as a king, and even his sons would not sit down in his presence till he defined them. I confide it gave me great pleasure to see the decency with which they behaved. One of our company, a pretty fat man, asked the Taysha what he should do in order to be as lean as he was? The old man replied in these words, "Lat less, and work more:" a saying worthy of Hippocrates himsers. In his youth he had been engaged in many battles with the Chinese, whom he held in great contempt. As he was a heen sporting, the ambessador made an appointment with him for a grand hunting match. After which he and his retinue returned to their tents.

The 15th, we dired at Brealka with the commission, Mr. Stepnikoss, of the curavargoing to China. Streether is situated, as I formerly observed, about three or four miles
up the river from Seliagintky, in a fruitful plain of a triangular sigure, formed by the
constux of two sine rivers; the Streakka running from the cast, and the Selings from
the south. This would have been the strongest and most beautiful situation of any in
this produce, for the town of Selinginsky. I am informed that the sounders had a
view to this delightful place, but the choice was determined against them by supersitious lete, to which it was referred. This method of choosing situations by he has hurt
many public cities, and rendered the work of ages incomedy the caree.

The time existing we retained by water to Selingiality, and next day went a hunting to the west of the Selinga. We had about two hundred Cossacks along with us, who followed the common method of ranging the woods, mendoned above. We villed the roe-bucks, and many hares. In the evening we pitched our tents about a fountain,

and feefted on venifon.

The 16th, early, we left the woods to our right, and descended it to a barren plain, where we found great flocks of antelopes. Our people killed about eventy of them. These animals avoid the woods, and frequent the open plains and descended. They are exceedingly swift and watchful; and so far resemble theep, that if one brooks through the circle, the whole flock follows, though an hundred borsenien were in the way, which proves the destruction of many of these creatures. The noise of the arrows with which they are hunted, contributes much to their consuston. The heads of these ar-

rows are broad, and fixed in a round bit of bone, with two noise in it, which makes them whiltle as they fly through the air.

At noon we fet up our tents near a lake of brackish water called So'onoy-osera, or the falt lake. Round the edge lies a thick scuri of falt, as white as frow, which the inhabitants gather for use. Here we found great flocks of water-fine, such as swans,

gecle, ducks. The weather being very hot, we remained tall next day.

The 17th, we hunted along the same waste plain, directing our course to the louth, towards the river Selinga. This day also we had very good sport. In the asternoon we pitched our tents near a spring of tresh water, which is no small rarity in these parched deferts, and is as much regarded here as a good inn would be in other parts of the world. I sound at this place a prickly shrub about three seet high, with a beautiful smooth bark as yellow as gold.

The 18th, in the morning, we had terrible fashes of lightning, accompanied with thunder, and heavy showers of hail and rain, which determined us to leave the plains, and return by the shortest road to Selingiasty. Besides the game already mentioned, we found many large bustards, which haunt the open country. As it is a very large bird, and lifes slowly, our light horsemen killed several of them with their arrows.

The 24th, arrived an officer from the court of Pekin, fent on purpose to discover the number and quality of the embaffy. This proletizen, whose name was Tuludie, was a Mantshu Terrar by birds, and a member of the tribunal for western assairs, with which he was very well accusented. These officers are called Surgutsky by the Mongalls, and by the Europeans Mandarin, a Portuguese word derived from mando. He had formerly been in this courtry, and had learned the Ruffian language. He pretended to have been employed on fome business vith the Tush-du-Chan at Urga, and, hearing of the ambaffador's arrival, had come to pay his respects to him. It was, however, well known, that he was fent to enquire whether the ambaffador came on a friendly errand. He was received very kindly, and, after he had staid three days and made his observations, returned very well fatisfied. At his departure, he told the ambaffador that orders would foon be given for his reception on the frontiers; but these could not be issued till his arrival at court, because on his report the whole affair depended. This wife and cautious nation, jealous of all the world, fuffer none to enter their territories but fuch as bring friendly messages. By this circumstance we were confined some time longer at Selinginsky.

I shall now give a description of the course of the Selinga, according to the best information I could procure from those who had been at its source. The Selinga is formed of two other rivers, called the Idyr and the Tzolato, coming from the mountains of Kungay, far to the fouthward of this place. It is afterwards joined by two inconfiderable rivers, the Orchon from the fouth-cast, and the Tzida from the south-west, and lastly by the Streakka from the east, a little above the town of Selinginsky. At this place it is at least twice the breadth of the river Thames, and is navigable a great way above it. The course now is due north, till it discharges itself into the Baykall lake. The fource of this river is estimated at the distance of ten or twelve days journey above Selinginsky, which is the common method of computation in this country. It is plentifully furnished with variety of excellent fish. I he omuly, which I formerly described, come in vast shoals from the Baykall in autumn up this river to spawn; after which they return to the sca so weak that many of them are carried down floating on the surface of the stream. During the progress of the omuly up the river, the inhabitants of the adjacent villages affemble with their nets, and catch as many of them as they pleafe. On this occasion the poor take what they can use, and the rest are lest upon the banks.

Thele

That fifthe advance on the increase of the first appearance has a trial for the color of the col

In 5th, the Tay in Permantived, is confern to a of his arbola mere with the ambaffidor, and brought in a little to be and a layer and a confernation of the chace. This old gentlement as a model a resolution, and he is given in the along the I mails. It figures, and are constructed in the full or who have for itself and model with the full or success make as a classification galls, we carried with us lifty of our Cultucks and our tents, have propoled to be

air ad form days

Larly or the 6th, we took our way to the eastward, over high him, and through toll well, having almost no underwood to incommode the horses, or interrupt our view, ari it mad it very pleafuit. After riding a few miles, the Taytha, being matter of the abase, ordered his men to extend their lines. The Tay fix and we were in the cenier, and often few the game pals us, purfeed by the horfemen at full speed, without the least noise, but the whithing or errows. The horses, being accused und to this kind of sport, follow the game as a greyhound does a hore; so that the riders lay the bridles on their necks, and attend to nothing but their bows and acrows. One may eafily imagine the exquisite entertainment, in seeing several of these horsemen in pursuit of an elk of that through the valleys. When the animal is driven from the woods, it flies for fafety to the nearest rocks. Some of these creatures are nearly as large and strong as the hories that bunt them. The stags are of two kinds; one called zuber, the ome with the German crownbirsh, but somewhat larger. The zuber is large and beautiful, and carries its head almost upught as it runs, which prevents its horns being intangled with branches of trees. There are none of them in Russia, nor even in Siberia, except about the Baykall lake and entward from it; the places farther to the north being too cold for them. The elk is larger than the flag, and stronger made, having allo long branchy horns, but a little flat.

Tired with sport, we lest the hills in the afternoon, and came down into a fine valley, where we pitched our thats near a pure brook. The Taysha then ordered all the dead game to be brought before him, and ranged in proper order. We found that this day we killed no less than five large elks, four styre, a dozon roe-bucks, several wolves and

foxes, besides fawns and hares.

The Taysha caused the game to be divided among the huntsmen, who began immediately to dress it, some of them by boiling, others by broiling, and eat it without either bread or falt. The tails of the stags, which by these people are reckoned very delicate, sell to the Taysha's share. He cut them into slices, and eat them raw. I cut a bit of one of them, and thought it very palatable. The taste resembled nothing so much as that of fresh caviare. After we had feasted on variety of excellent verision, for we had no other provisions, we went to rest, well satisfied with the diversion of the day.

July 7th, early in the morning, we left the plains, and directed our course castward, in the same order we observed the preceding day. As our sport was much the same, I vol. vii.

need not mention the particulars. About noon we pitched our tents near a fpring ca fresh water, in a valley where the grass was about two feet long. This circumstance is a proof of the goodness of the soil, which in my opinion cannot fail, if properly cultivated, to produce any kind of grain. As the weather was excessively hot, we staid in this place till next day.

July 8th, we continued our fport in the woods till noon, when we came into an extensive plain, in which we fet up our tents, near a spring of brackish water. In this place we observed several slocks of antelopes, which we reserved for next day's

hunting.

In the morning our Teysha dispatched some of his horsemen to the tops of the hills, in order to discover where the antelopes were feeding; which, as I formerly observed, are the most watchful, and, at the same time, the swiftest animals in the world. When they returned we extended our wings to a great distance, that we might surround these creatures with the greater ease, and before noon our people killed above twenty of them. After which, we returned to our tents that were lest standing in the morning.

July 10th, we took leave of the Taysha, whose tents were to the cast of this place, and

returned next day to Selinginiky.

During this short excursion I could not enough admire the beauty of the country through which we passed. The gentle rising of the hills, many of which have their tops only covered with wood, and the sertility of the vales, contribute to form one of the most delightful landscapes the world can afford. To this may be added the temperature and dryness of the climate, in which respect this far exceeds any country with which i am acquainted. After midsummer there is almost no rain till December, when the snow salls, and in such moderate quantities, that it does not hinder the cattle from lying abroad all the winter.

In furveying these fertile plains and pleasant woods, I have of on entertained myself with painting, in my own imagination, the neat villages, country-seats, and farm-houses, which, in process of time, may be crecked on the banks of the rivers, and brows of the hills. There is here waste land enough to maintain, with easy labour, several European nations, who are at present confined to burren and ungrateful foils; and with regard to the Mongalis, whose honesty and simplicity of manners are not unamiable, I should like them very well for neighbours.

From what I have read of North America, I am of opinion, that this country refembles none to much as fome of our colonies in that quarter of the world, particularly the inland parts of Pennfylvania and Maryland. Both countries lie nearly in the fame latitude; in one we find great lakes and mighty rivers; in the other, the Baykail Sea and rivers, which for the length of their course and quantity of water, may be ranked

with any in the western world.

Having rested ourselves a sew days after our satigue, on the 16th of July, we set out on another hunting-match, attended by our own Cossacks, and a sew of the neighbouring Mongalis. We went on this occasion farther northward, and nearer to the Baykall lake than in our former expedition. Our sport was almost of the same kind as already described. I shall only add, that both the stag and elk shed their horns once a year; at which time they retire to thickets and solitary places till their horns begin to spring again. It is surprising that animals so large, with such prodigious weight of branchy horns, should run with almost incredible speed through the thickest woods, without entangling themselves: but, to avoid this missortune, they point their noses always parallel to the horizon. When either the elk or stag are closely attacked, they make a vigorous desence both with horns and hoofs. At rutting-time especially, these crea-

tures are fo very furious, that it is extremely dangerous for any person to approach thekhaunts; they will then run at a man full speed, and, if he escapes being wounded by their horns, will trample him to death with their tharp hops. As the weather was exceffively hot, we kept the field only two days, and then returned to Selinginiky.

July 20th, another Mandarin arrived from Pekin, accompanied by an officer from Arga, who brought a letter to the ambailador from the Tufh-du-Char, acquainting him, that he might foon expect a person, properly authorised, to conduct him to the imperial city. No news could be more agreeable. We hoped now to be foon releafed from this folitary place, and arrive at the end of our journey. We were indeed well enough lodged, and wanted neither the necessaries nor conveniencies of life. The abundance of rural diversions which this place afforded, coinciding happily with the genius of most of our gendemen, and the harmony that subfifted among the retinue, though composed of people from most nations in Europe, and some from Asia, contributed not a little to our paffing the time very agreeably. Notwithsanding these advantages, and the affability and courteous behaviour of the ambafador, which heightened them all, we were uneafy at being detained to long on the frontiers. We were apprehenfive that fome accident might happen to prevent our journey, especially as it was reported among the Mongalls, that the Emperor of China, being far advanced in years, was fometimes fick, and not disposed to receive foreign ministers.

The 2 1th, there fell fuch a shower of hail-stones as no man then alive had ever seen. It was happy for us we were not then abroad, as the open field affords no kind of shelter. The hail lay fome days in the woods and cooled the air, which before that time had been excessively hot. This day the Kutuchtu fent two lamas to compliment the ambaffador, to wish him a good journey, and a happy fight of the Emperor, or Boghdoychan, as he is called by these people.

August 9th, a courier arrived from Pekin, who told the ambassador that he had passed our conductor on the road, and that we should now prepare for our journey to the ca-

pital, as that gentleman would arrive in a few days.

On the 24th, our conductor, called Lomy, at last arrived. He was by birth a Mantshu Tartar, and a member of the court for the western department. After remaining with us for some days, he returned to Yolla, a place upon the border, in order to procure horfes and camels for our journey.

September 8th, we fent our baggage by water to Strealka, and next day we followed We lived in tents while we staid at this place, till borfes and camels were got ready. In the mean time, our people were employed in packing up the baggage into proper loads for camele. Streaka, I formerly observed, is the place where Lis Ma'cfly's commissiry of the caravan has his abode, and the government of Siberia their storehouses. I imagine, therefore, it will not be improper, before we proceed, to give fome account

of the trade carried on from this place.

Formerly the fur trade was free to all IIis Majesty's subjects, both Russians and Tar-The merchants repaired to Siberia at the proper scasons, where they bought at cheap rates, all the rich furs they could find, and disposed of them in Persia, Tuckey, and Poland, at a price much below the real value. The government of Siberia perceived a very confiderable diminution of the revenue in that country, and foon difcovered the true cause of it; which was, that a great part of the furs belonging to His Majesty remained unfold. Upon inquiry, it appeared that this was owing to the foreign markets being supplied with these commodities at low rates, by the subjects, before the goods belonging to the government could be exposed to sale. The government of Siberia represented to His Majesty the loss of so considerable a branch of his revenue; in confection of which, an order was instacted to the modified of the appearance to expect tables in the time. The state of the contract of the c

September 15th, our conductor invite required the ambaffador that the horfest and camels were ready, our biggage via disputated to the frontiers, escorted by our own foldiers and force Contacks, though indeed here as no great occasion for any quaid, as the Mongalls feem to have little use for any thin, that belonged to us.

After diving with the commissary of the creation at Sucress a, or the 18th, we lest that place in the creating, account anied with the court in the anish of the officers at Sclinginsky. After we had travelied about twenty further in the feath-east, through time plains covered with exceeding long grade, we arrived at the end of the first stage called Kolludtzy, where we found our tents, which had been sent off in the morning, ready for our reception. This day we have some scattered tents of Mongahans with their flocks.

Next day, we travelled about twenty miles farther to a fingle house, built by the committing for a shade to his carde in winter. We hunted all the way through a pleatant country, interspersed with little halls covered vith wood, but saw as few manufacts as the day before.

The 15th, about noon, we reached a place called Eara 25n, or the New Moon, Lituted on the bank of a rivulet of the fame name. This is ulse is the boundary between the Rufflan and Chinese territories, and separates two of the most mighty monarchies in he varid. The distance between Selingality and this place is computed to be about the hundred and sour verst, nearly seventy linglish miles.

The conductor was encamped on the cast side of the livilet, and we picked out teats on the other. The ground on both fides thes a little, and the toil feems to be extremely good. The grains is rank and thick, and, as the feafon is very dry, would, with tittle labour, make excellent hay. This graft is often fet on fire by the Mongalls in the foring during high winds. At fuch times it burns most furiously, running like wild-fire, and spreading its slames to the distance of perhaps ten or twenty miles, till its progress is interrupted by fome river or barren hill. The impetuosity of these flames, Their fmoke and crackling noise, cannot eafily be conceived by those who have not feen them. When any person finds hinsels to the leeward of them, the only method by which he can fave himself from their fury, is to kindle immediately the grass where he stands, and sollow his own fire. For this purpose, every person is provided with slints, Reel, and tinder. The reason why the Mongalls set fire to the grass, is to procure early pasture for their cattle. The ashes lest upon the ground fink into the earth at the melting of the fnow, and prove an excellent manure; fo that the grafs in the spring rifes on the lands, which have been prepared in this manner, as thick as a field of wheat. Caravans, travellers with merchandife, but especially armies, never encamp upon this rank graft. And there are feveral inflances of confiderable bodies of men being put in confusion, and even defcated, by the enemy's setting fire to the grafs.

Exforced leave he Ruffian corrections, I shall give four the anti-of the march size-tween these two famous capiets. It monter according to the best information I and thoroure, begins a great way we tward of this place, near the fource of the river Dada; norm thence is proceeds to the east, croffing the Selinga, and roundation, the tops of the river and it is in inclining sometimes to the north, and cometimes to the round, the tops of the river so which divided for ratzyn. It runs then in a very irregular line, they begins a remain according to the course of the rivers and brooks, or from the top of the half to fine other remainded point in view, pointing in general towards the north-east, till it ends at the citer Argan, which, together with the ingody, forms the Amoor. This boundary includes a vote tract of excellent land on the Rufin in fide; and that part of the Mornally who infall it it, being according much at cale, will in time become a numerous people.

The manner were feeled upon the present sooting about twenty-five years ago, or the sollowing occasion: the energells, on the Crimere site, all edged that their country-men, subjects of Russia, encounted on their borders, which are ated some disputes between the two nations. The course of this miss near thing peling represented to the two course, it was agreed to send manisters, with full powers, to terminate the affair in an arricable manner. His single is minister, an enough menhood of Nerthanky, a conclusive preparation on the ironarcs, in the neighbourhood of Nerthanky, a conclusive letown belonging to Russia, near the river Amoor. All matters were soon arcommodated to the mutual suits associated both parties, on the sooting of use popular is in each of the parties retaining the people and territories that then belonged

to thein.

This determination kept all quiet is fone time. The Chinese, however, soon appeared to be distaissfied with the decision, and want to have the statches reviewed; to

which, in my opinion, the Russians will not easily astent

The 21st, the conductor came to congretutuse the ambifiedor on his arrival at the borders, and acquainted him, that the horses and canals being ready, he might proceed when he pleased. I cannot omic an inconsiderable circumstant that happened at this place, as it strongly represents the caution and pandence of the Chinese. Our conductor having seen some women walking in the sieles, assessment or who it waste, and whither they were going? He was take they belong to the retinut, and care going along with it to China.

The replied, they had wo men enough in Pekingle by; who as there never had been an European woman in China, he could not be artiverable on introducing the fift without a special order from the Emperor. But it his Excellency would view for an answer, he would dispatch a courier to court for that norpoid. The return of this medianger could not be sooner than fix weeks; it was the are they but nore reading the tend back the women to Seling alky, with the wage is not because are begange to

'his place.

CHAP. VII.— From passing the Saraizyn, and entering the Change Territories, .o o r Arrival at the Wall of Ch. is.

THE 22d of September, having loaded the camels with our baggage, and precured carriages for the boxes that contained His Majesty's presents to the Emproy, which were too large for camels to bear, we mounted and parted the Saratzyn, and soon entered the Chinese territories. We travelled fifteen miles, when we arrived, about evening, at the river Orchon, running with a smooth stream to the north. The carriages retarded our progress greatly, as the horses were sprightly, and unaccustomed to draught.

TILS

This day we commenced guelts of the Emperor of China, who entertains all ambalfadors, and bears their expences, from the day they enter his dominions, till the time they quit them again. Our relinue confifted of about one hundred perfons, who were allowed lifteen theep every day. The overplus of this large allowance was given to the Mongalls who dreat the camels. Befides mutton and beef, there is no other kind of provision to be found, till you come within the wall of China. The muten is of a middle fize; but, I must confess, exceeding fine. The conductor was attended by an officer from the Pushdu-Chan, who procured, from the Mongalis encomped nearest our road, what sheep we wanted. The camels were very tractable and stooped to take out their loads. But the horses were at first very unmanageable. Many of them had never before been employed for any use, and were faddled with great difficulty, but mounted with much more; for the very smell of our clothes, which they perceived to be different from that of the Mongalls, their masters, made them from and spring with great sury. They were easily managed notwithstanding, when we got upon their backs.

Our road this day lay through fine plains and vallies, covered with rank grafs; but not a fingle tent was to be feen. I inquired why fuch a fine foil was without inhabitunts, and was told, that the Chinese had forbid the Mongalls to encamp so near the Ruslian borders, for fear of being allured to pass over to their territories, as many had formerly done. These fruitful vallies are furrounded with pleasant hills, of easy ascent, whose summits are covered with tusts of trees. Many of these tusts being of a circular figure, and having no underwood, appear as if they had been planted and pruned by art; others are irregular, and sometimes a ridge of trees runs from one hill to another. These objects afford a prospect so pleasing to the eye, and so seldom to be sound, that one cannot help being charmed. And this pleasure is still heightered by the gentle-slowing rivulets, abounding with sish, and plenty of game in the values, and among the trees.

The 23d, we fet out early, and came to a rivulet called Ira, running to the northreft, till it falls into the Orchon, which we passed, and pitched our tents on the other that. The rank grass by accident took sire, and had not water been at hand to extinguish it, and the weather very calm, the consequences might have been fatal. We travelled further this day than the former, as lever inconveniences arose from the restifness of the horses.

The 24th, we continued our journey towards the fouth-east, along smooth roads, arough a pleasant country; and, at evening, reached a rivulet called Shora, or the sellow rivulet, on the banks of which we set up our tents. The vallies now were more centracted, and less wood upon the hills than formerly.

The 25th, we came to a rivulet called Kara, or the black rivulet, from the colour of the water, which is tinged by the richness of the soil.

The 20th, we proceeded. The country retained much the same appearance, and the weather was very fine; but not a single inhabitant was yet to be seen. In the evening, I walked from our tents, with some of our company, to the top of a neighbouring hill, where I found many plants of excellent rhubarb; and, by the help of a stick, dug up as much as I wanted.

On these hills are a great number of animals called marmots, of a brownish colour, having feet like a badger, and nearly of the same size. They make deep burrows on the declivities of the hills; and it is said, that in winter they continue in these holes, for a certain time, even without food. At this season, however, they sit or lie near their burrows, keeping a strict watch; and, at the approach of danger, rear themselves upon

their

their hind feet, giving a loud whiftle like a man, to call in the dragglers; and then drop into their holes in a moment.

I should not have mentioned an enimal so well known as the marmot, had it not been on account of the rhubarb. Wherever you see ten or twenty plants growing, you are sure of finding several burrows under the shades of their broad spreading leaves. Perhaps they may sometimes eat the leaves and roots of this plant. However, it is probable the manure they leave about the roots contributes not a little to its increase; and their casting up the earth, makes it shoot out young buds and multiply. This plant does not run and spread itself like docks, and others of the same species, but grows in tusts at uncertain distances, as if the feeds had been dropped with design. It appears that the Mongalls never accounted it worth cultivating, but that the verist is obliged to the marmots for the quantities scattered at random in many parts of this country; for whatever part of the ripe feed happens to be blown among the thick grass, can very feldom reach the ground, but must there wither and die; whereas, should it fall among the loose earth, thrown up by the marmote, it immediately takes root, and produces a new plant.

After digging and cathering the rhubarb, the Mongalls cut the large roots into small pieces, in order to make them dry more readily. In the middle of every piece they scoop a hole, through which a cord is drawn, in order to suspend them in any convenient place. They hang them, for most part, about their tents, and sometimes on the horns of their sheep. This is a most pernicious custom, as it destroys some of the best part of the root; for all about the hole is rotten and useless; where is, were people rightly informed how to dig and dry this plant, there would not be one pound of resuse in an hundred, which would save a great deal of trouble and expence, that much diminish the profits on this commodity. At present, the dealers in this article think these improvements not worthy of their attention, as their gains are more considerable on this than on any other branch of trade. Perhaps the government may hereaster think it proper to make some regulations with regard to this matter.

I have been more particular in describing the growth and management of the rhubarb, because I never met with an author or person who could give a satisfactory account, where, or how it grows. I am persuaded, that, in such a dry climate as this, it might easily be so cultivated as to produce any quantity that could be wanted.

I omit any computation of the distances of places along this road, as the whole of it, from the borders to Pekin, has been measured by a wheel, or machine, given to the caravan by the governor of Siberia, for that purpose. I shall alterwards subjoin the exact distances taken from this measurement.

The 27th and 23th, we purfued the fame road, over hills and through vallies; for, though few travel this way, the caravans, with their heavy carriages, leave such marks as are not soon essaced. It is only of late that the caravans travelled this road. Formerly they want faither to the north, by a Russian town called Nertzinsky, and thence to a Chinese city called Naun. That road is more convenient than the present, as it lies through places better inhabited; but the present is shorter, and therefore taken by most travellers.

The 29th, we reached a river called Buroy, where we lodged. At this dry feason all these rivers are fordable; and they abound with sturgeon and other sish. Next morning, Mr. Venant, our chief cook, dropped down, as he was coming out of his tent, and immediately expired, notwithstanding all possible care was taken for his recovery. We interred him as decently as time and circumstances would admit; and proceeded to a river called Borgualty, where we pitched our tents for this night.

October

e a per tit, afara leno davis journey, we reached a limber called to the Till Son cit country appealed not list the fine as former'.

tion mail of Chair, for itains and in ings will be on any trages.

the die ser'to at a "old we found many Mong Back comped, with number of C's ca de, bear a fift inhalmants we had been fince our lengthe borter. The Pullars, and the A mails who are judgeds of Rutha, claim all the count of the far from the Toly, which, they way, is the natural boundary bettine to and only has this would indeed be a confideral le audition to the dorainions of Russia. Lu as bo le thele mighty morpichs are abord only provided with a vill extertion to the party this act worth while to dispute about a few hundred miles of property, is ich obremed would perhal since balance the coft, or contribute builting the advantage of zithe .

The appearance of the country was now gready altered to the worse. We fin no more pleatant hills and woods; neither could I find one tingle plant of radoub. The tool was dry and barren, and the grads not to be compared to what we had altered to

paffed over.

The 1th, after every man had drunk his fill of the rule and wholeform water of Tola, and filled his bottle with it, we departed with force regret, as we could hope for no more inversion brooks till we came to the wall of China. We foon entered the defeat, commonly named by the Mongalls the Uniquy Udeat. How fant ceids to that title, will be feet as weld ance

In the evening, we reached to be pic, called Tolitologov, of brackiby after, where ve pitched our tents. The road tall pointed to the fourth-east, with fiele variation, over grounds that rose a little at first, but afterwards gradually declined

and, Mongalian tents and catale dispersed along the desect.

and 5 h, we let out again; and in the evening, came to fome founding, called C's lo- 1000, of presty fresh water. The country was quite level, and appeared to the foil vas dry, Larren, and gravelly, and neither tree

is half to be feen; a prospess not very agrecable.

The 6th, early in the procedule, we proceeded eafly and, through the same ont of slat cun. The weether was very fine, and the roads excellent. In the evening, we arrived at a prolicited Tylick, of brackish water, where we remained the following night. This day ve to a leveral large flocks of ant lopes, and fome Mongalls in their tents, which was no difagrecable object in this continued plain. We paffed few of these tents without visiting them, where we always found an hospitable reception, and were entertained with some zaturan, a kind of tea which I formerly described. And, if we happened to flay till our baggage was gone out of fight, the landlord conducted us by the shortest way to the springs that terminated the next stage.

The next day, we came to the wells called Gachun. Our biscuit being now spent, we were reduced to live on mutton only, during the rest of our journey through this desert; defert; which we accounted no great hardship as it was extremely fine. It is not a little surprising, that, notwithstanding the barren appearance of this unsheltered plain, the cattle are in good condition, but particularly the sheep. The short grass, shough in many places thinly scattered, must be of a very nourishing quality. This will naturally proceed from the climate, and the foil, which every where partakes of a nitrous quality, as plainly appears from the scurf of salt round the edges of the lakes and ponds,

and the taste of the water, generally brackish in the springs and pits.

The 8th, our conductor furnished us with a fresh set of cattle, which detained us later than our usual time of setting out. This day, the soil was very much inclined to gravel, containing a number of red and yellow pebbles, many of which, being transparent, made a fine appearance while the sun shone. We were informed there were sometimes stones of value sound here, which so much excited our curiosity, that each of us, every day, picked up a considerable quantity. On examination, most of them were thrown away, as altogether useless, the sew we thought proper to retain were wrought into very good seals. A man might gather a bushel of such stones every day in this desert. One of our people, a Grecian by birth, who understood something of the nature of stones, found one that he called a yellow sapphire, and valued it at sifty crowns. Perhaps these pebbles might be of that kind which the lapidaries call cornelian; for they are sufficiently hard, and take a sine polish.

The 9th, we fet out early, and travelled to a pool named Oke-toulgu. This day, a lama from the Kutuchtu, going to Pekin, joined our company, who, by his habit and equipuge, feemed to be a person of eminence. In marching along the tedious desert, the conversation turned on a terrible earthquake, which happened during the month of July last in China, between the long wall and Pekin, and had laid in ruins several villages and walled towns, and buried many people in their ruins. The lama inquired what was the opinion of the learned men in Europe concerning the cause of this phenomenon. We told him, it was commonly reckoned to be subterraneous fire; and then asked, in our turn, to what cause such extraordinary appearances were imputed by he country men: he replied, that some of their learned lamas had written, that God, after he had formed the earth, placed it on a golden frog; and, whenever this prodigious frog had occasion to scratch its head, or stretch out its foot, that part of the earth immediately above was shaken. There was no reasoning on a notion so fantastical; we therefore less the lama to please himself with his hypothesis, and turned the discourse to some other subject.

The 10th, we came to the fprings called Korpartu. The appearance of things this day were almost the same as on the preceding days. The soil appeared so barren, that none of the common methods of improvement could make it bear any kind of grain, or even alter its present condition. The dispositions of its inhabitants, the Montellis, seem wonderfully suited to their situation, as they appear more contented with

their condition than those who possess the most fruitful countries.

In the evening of the 11th, we arrived at Khododu, where we found the water clear and pretty fresh, bursting in a strong spring, from the gravelly earth, and running in a stream to a considerable distance, till it loses itself in the land. This was the first running water we had seen since we left Tola. And we were as happy, while sitting round this fountain, and broiling our mutton-chops, as others at a table plentifully surnished with Burgundy and Champaign. Our appetites were indeed very keen; to which daily exercise, the coldness of the air, and drinking nothing but water, greatly contributed.

Next morning, being the 12th, there was a little frost upon the ground. Several flocks of gray plovers came to drink at the spring, of which our people killed as many as our present circumstances required. These poor harmless birds seemed insensible of danger; and, perhaps, they had never before heard the report of a gun; for, no some was the piece fired, than they took a short slight round the sountain, whistling as they slew, and immediately alighted to drink again. The plover is a pretty bird, and pleasant to eat; and the soles of its feet are as hard as so much horn, which prevent its being hurt by the stones or gravel. In the evening, we came to the wells called Bouk-horlike, without any thing material happening, or any difference on the face of the country.

The 13th, we continued our journey to the wells of Burduruy, where we were

again furnished with fresh horses and camels.

The 14th, we came to a place called Kadan-Kachu, where we were obliged to dig a pit four feet deep, in order to procure water, which was very bad, having both a difagreeable smell, and bitter taste; but was drinkable, when boiled with some tea. We could, however, get none for our cattle, as the high wind filled the pits with sand as rast as we could dig them. The sand is of a whitish colour, and so light and dry, that it is driven by the winds into your sace and eyes, and becomes very disagreeable. Most of our people, indeed, were provided with a piece of net-work, made of horse-hair, which covered their eyes, and is very useful in drifts, either of sand or snow.

The 15th, we travelled over deep fands; and in the evening, arrived at other springs, called Tzaganteggerick. The wind continuing high, it was with much difficulty we set up our tents. It is to be observed that, on these deep and light sands, our Luropean tents are of little use, as there is no earth in which the tent-pins can be saftened. The Tartar tents are much preferable; for, their figure being round and taper, like a bee-hive, the wind takes but little hold of them, and they stand equally well on a fandy, or any other surface. They are, besides, warmer, more easily erected, taken down, and transported.

The 16th, we left the deep fand, and travelled along the fame fort of dry gravelly ground as formerly. In the evening, we pitched our tents at the fprings called Sadjin. The variety of objects, in this dreary waste, are so sew, that in this, as well as in other respects, it much resembles the sea. Here one can see no farther than if ne was placed on the surface of the water, out of sight of land; the rounding of the globe, in both cases, being the same. Sometimes, in the morning, I have been agreeably surprised in sancying I saw, at a small distance, a sine river, having rows of trees growing upon its banks; but this was only a deception of the sight, proceeding from the vapours magnifying some scattered shrubs into great trees.

The 17th, we came to fome wells of very bad water, called Oudey, where we found fresh horses and camels waiting for us. Our conductor resolved to lose no time, being apprehensive that we might be overtaken in the desert by the frost and deep snow, which usually happens at this season. Such an event would have retarded our march, and incommoded us not a little in many respects. We therefore travelled as long stages as the convenience of water, and the strength of our cattle, would permit.

The 18th, after a long day's journey, we came to the wells called Ulan-kala. We found, almost every day, Mongalls in their tents, which stood like so many hives, dis-

perfed through this folitary plain.

The 19th, we mounted again, and travelled to the springs named Tzilan-teggerick. This day we saw several slocks of antelopes; and, indeed, sew days passed in which we did not see some of these animals.

The

The 20th, we came to a place called Ourandabu. The veather still confined tain the fly clear, and the mornings frosty. The water at this place was toler ble; but we were obliged to dig for it. When it happened that we had a long stage from one during to another, for sear of coming too late, we usually sent a couple of men before as, in order to gather sewel, and to dig pits, that the water might have time to sealer our arrival.

The 21st, we proceeded, and in the evening arrived at a labe of falt water. After digging, however, we found some tresher. Were it not that these lakes and pits are scattered through this defert, it must have been altogether unintabited, either by man or beast. This consideration, among many others, has oriented me to admire the infinite wildom of Almignty God, in the dispensations of his providence, for the support of all his creatures.

In my opinion, these springs are produced by the rains and melted snow in the spring; for the water, sinking in the fund, is thereby prevented from being exhaled, in summer, by the heat of the sun, which must be very scorching in this desert, in which there is not the least shade to be found.

The 22d, we quitted the falt lake, in a cold frosty morning, and a strong northerly wind, which was very disagreeable. At evening, we reached the wells of Kulat. These pits take their names from the quality of the water, as salt, sour, sweet, bitter, or from the different tribes of people who inhabit the country in the neighbourhood.

In the midst of our fatigues, we had the satisfaction to be among a friendly people,

who did every thing in their power to lessen our wants.

Next day, we reached the wells of Mingat. The weather, though cold, was not unpleasant; and, the 24th, having got fresh horses and cameis, we came, in the evening, to a pond of brackish water, called Korunteer, upon the extremity of a dismal bank of sand, running across our road.

The day following, we entered on the fand-bank, along a narrow and crooked pafage between two hillocks. Every one prayed for calm weather while we travelled over the fand; which put me in mind of being at fea. We continued our journey through deep fand till about noon, when all our horfes and camels being tired, we halted in a hollow place, where we dug, and found very bad water. We remained here till next morning.

Our cattle being a little refreshed, though they had been very indifferently sed among the sand, where nothing was to be seen but some tusts of withered grass, we set our again. Along this bank there is not the least track or path of any kind; for the smallest blast of wind immediately effaces it, and renders all the surface smooth.

We had gone but a few miles, when most of our people were obliged to alight, and walk on foot, the horses being quite tired with the deepness of the find; which made our progress extremely flow. The weather, fortunately, was the very calm. About moon, we pitched our tents in a hollow place, encompassed with high hillocks of sand. I observed that, in the open desert, we had already passed, the prospect was much consined; but here it was quite straitened; for, if you ascended one of these mounts, you could see nothing but mount rising above mount, like so many sugar-loaves, or rather like so many cupolas.

In the evening, it began to blow a little at north-east, which drove about the light sand like snow; but, about midnight, the wind rose to such an height, that all our tents were overset at once, and our beds filled with sand. As it was near morning, we thought it not worth while to pitch them again. We therefore prepared ourselves to set out at dawn, in hopes of getting over the sand-bank before night; which by riding

and walking by turns, in order to haften our progress, we happily effected; and,

in the evening, reached the fprings of Kocatu.

At the place where we passed the fand, it was not above twenty English miles in breadth, which took us up three days. We could have travelled four times that distance on the plain, with more ease both to ourselves and cattle. I am informed this bank of sand runs a great way southward, and, in some places, is above thirty leagues broad. They, whose business calls them often to cross the sands, have thin leather coats made on purpose, and round pieces of glass tied before their eyes.

This land-bank appears like the waves of the fea; for the hillocks, fome of which are about twenty feet of perpendicular height, are of so light a nature, that the wind carries them from place to place, levelling one, and forming another:—and hence it is easy to conceive, that a weary traveller, lying down on the recarde of one of these hillocks, might, in a few hours, be buried in the fand; which

is reported to have often happened in this and other fandy deferts.

The 28th, we proceeded along the plain to the fprings called Chabertu. I called their sheep. They make a slit with a knife between two 1.bs, through which they put their hand, and squeeze the heart till the creature expires; by this method all the blood remains in the carcase. When the sheep is dead, and hungry people cannot writ till the slesh is regularly dressed, they generally cut the brisket and rump, wool and all, and broil them on the coals; then scrape off the singed wool and eat them. This I have found by experience to be no disagreeable morsel, even without any kind of sauce.

The next day, we travelled another stage to the wells of Saminsa, where we found better water than usual. The length and thickness of the grass showed that the soil now began to mend. This day there fell some snow, and the wind

was cold and northerly.

The 30th, we got fresh horses, and proceeded to the springs of Krema. From the appearance of the grass one would conclude, that the soil at this place was very fine. We saw great numbers of horses belonging to the Emperor turned out to graze. Notwithstanding all the haste we had litherto made, we were this day overtaken by a fall of snow, which proved very: "wenicht, not so much on account of the cold, but it covered all sewel, so that we could find none to dress our victuals.

The 31st, we came to a place called Naringkarussu, where, to our great satisfaction, we found a small brook of fresh water, and some Mongalian huts. I observed, that, som the sand-bank castward, the soil becomes gradually better every day. This was now the fortieth day since we left the border, during which time we had not halted one day, nor seen a single house, and the twentieth and eight from the time we quitted the river Tola, and entered the desert, in which we had neither seen river, tree, bush, nor mountain. Though we were obliged now and then to setch a compass, on account of the watering places, yet in general our course deviated but little from the south-east point.

The 1st of November, we halted at this place, that we might have time to put things in order before we passed the long wall, which was now at no great dis-

tance.

Next day, we proceeded; and about noon we could perceive the famous wall, running along the tops of the mountains, towards the north-east. One of our people

people cried out LAND, as if we had been all this while at sea. It was now, nearly as I can compute, about forty English miles from us, and appeared white at this distance. We could not this night reach the passage through the mountains, and therefore pitched our tents in the open plain as usual. We now began to feel the effects of the cold; for the snow, continuing to lie upon the desert, proved very inconvenient on many accounts, but particularly by retarding the progress of our heavy and cumbersome baggage. But we comforted ourselves with the hopes of soon seeing an end of all our toils, and arriving in a rich and inhabited country; for, though all of our people were in good health, they began to be very weary of the desert, and no wonder, as many of them had lain in the open field ever since we lest Selinginsky.

November 3d, after travelling about an hour, we passed the vestiges of a camp, which seemed to have been regularly designed. I was informed that the Emperor encamped here, when he led his troops against the Mongalls, called by the missionaries in

China the Western Tartars.

The nearer we came to the mountains we were the more surprised at the fight of the so much celebrated wall of China, commonly called for its length the endless wall. The appearance of it, running from one high rock to another, with square towers at certain intervals, even at this distance, is most magnificent.

About noon, we quitted the plain, and entered an opening between two mountains. To the left, the mountains are very high. On the right, they decline, as far as they

are within view; but, I am told, they rife again to a great height.

We descended by a narrow path about eight feet broad, between the mountains, till we came to a small Chinese monastery, situated on the declivity of a sleep rock. Curiofity led us to vifit this folitary place: but the road being impaffable to horses, we alighted, and walked thither. On our arrival near the place, the monks came out to meet us, with the usual friendly falutation of the country, which is performed by laying one of their hands on the other, and then shaking them, and pronouncing these words Cho-loy-cho. The compliment being returned, they conducted us into the apartments of their little chapel, and treated us vith a dish of green tea, which was very agreeable. In the chapel was a fort of altar-piece, on which were placed feveral finall brafs images; and, in one of the corners, I observed a sack filled with wheat. The habit of the monks was a long gown with wide fleeves. On their heads was a fmall cap, and their long lank hair hung down over their shoulders. They had very few hairs in their beards. This being the first Chinese house we met with, I have on that account been more particular in describing it. Every thing now appeared to us as if we had arrived in another We felt especially a sensible alteration in the weather; for, instead of the cold bleak wind in the defert, we had here a warm and pleafant air.

We again proceeded along the narrow path, but of breadth sufficient for a wheel carriage. The road being steep, and in many places rugged, we walked down the hill, and in half an hour came to the foot of it, where we found ourselves surrounded on all sides by high rocky mountains. Our route now lay along the south side of a rivulet, full of great stones, which had fallen from the rocks in rainy weather. In the cliss of the rocks, you see little scattered cottages, with spots of cultivated ground, much resembling those romantic sigures of landscapes which are painted on the China ware, and other manufactures of this country. These are accounted fanciful by most

Europeans, but are really natural.

After we had travelled about feven or eight miles, along the bank of the brook, we came in the evening to a Chinese village, at the foot of a high mountain, where we lodged in clean rooms, with warm fires of charcoal. There were no chimneys in the

rooms; but, instead of these, the charcoal was put into a portable grate of brais of iron, and allowed to burn clear in the open air; after which it was brought into the apartment. Though the actern is one continued plain, it lies much higher than the plains and villages of China; for, when we entered the defile, the aftern was very inconfiderable when compared with the descent on the other fide.

Here we began to taile of the fine fruits of China; for soon after our arrival in the village, our conductor sent a present to the ambassador of some baskets of fruits, confishing of water-melons, must melone, fixeet and bitter oranges, peaches, apples, waltus, chesnuts, and several other forts which I never saw before, together vih a jar of Chinese arrack, provisions of several sorts, and some Chinese bread, called bobon, made of wheaten shour, and baked over a pot with the steam of boining water. It is very light, and not disagreeable in taste; at least it seemed so to us, who had seen no bread for a month before.

Next day we halted to refresh ourselves after our long satigue. I took this opportunity to walk up to the top of the mountain, in order to view the adjacent country, but could only see a continuation of the chain of mountains, rising one above another, and to the northward some glimpses of the long wa'l as it runs along them.

The 5th, we proceeded eaftward down the touch bank of the river, whose channel was covered with great stones. The road is cut out of the rock for a considerable length at those places where there is no natural passage between the rocks and the river, which must have been a work of great labour. This river cannot fail to be a complete torrent in time of great rains.

Having travelled about fix or eight miles, we arrived at the famous wall of China. We entered at a great gate, which is flut every night, and always guarded by a thousand men, under the command of two officers of distinction, one a Chinese, and the other a Mantzur Tartar; for it is an established custom in China, and has prevailed ever since the conquest of the Tartars, that in all places of public trust there must be a Chinese and a Tartar invested with equal power. This rule is observed both in civil and military affairs. The Chinese pretend, that two in an office are a fort of spies upon one another's actions, and thereby many fraudulent practices are either prevented or detected.

CHAP. VIII .- From the Wall of China to Pekin; our Entry into that City.

AS foon as we had entered the gate, these two officers, and many subalterns, came to compliment the ambassador on his safe arrival; and asked the favour of him to walk into the guard-room and drink a dish of tea. We accordingly dismounted, and went into a spacious hall on the south side of the gate. This apartment was very clean, he sain benches all around, and is kept on purpose for the reception of persons of distinction. We were entertained with a variety of fruits and confections, and several forts of tea. After staying about half an hour, the ambassador took leave of the gentlemen, and we proceeded on our journey. We travelled about four miles farther, and came to a considerable town named Kalgan. At some distance from the place, we were met by the commandant, and the Mandarie Tulishin, who had paid us a visit at Selinginsky. They accompanied the ambassador to his lodgings, which were in houses apart from the rest of the town; and provisions were sent us in great plenty.

From the wall to this place the country to the north begins to open, and contains

fome villages, corn-fields, and gardens.

The fame evening, the ambaffador and the gentlemen of the retinue were invited to fup at the commandant's house, and horses were fent to carry us thither. We alighted in the outer-court, where the commandant in person waited for us, and conducted us through a neat inner-court into a hall, in the middle of which stood a large brass chaffing-dish, in shape of an urn, with a fire of charcoal in it. The floor was covered with mats, and the room quite fet round with chairs, and little fquare japanned tables. The ambaffador fat at a table by himfelf, and the rest of the company at separate tables, by two and two. We were first entertained with tca, and a dram of hot arrack; after which fupper was brought, and placed on the tables, without either table cloth, napkins, knives, or forks. Instead of forks were laid down to every person a couple of ivory pins, with which the Chinese take up their meat. The dishes were small, and placed upon the table in the most regular manner, the vacancies being filled with faucers, containing pickles and bitter herbs. The entertainment confifted of pork, mutton, fowls, and two roafted pigs. The carver fits upon the floor, and executes his office with great dexterity. He cuts the flesh into such small bits as may easily be taken up by the guests, without further trouble. The meat being cut up is given to the sootmen, who fupply the empty dishes on the tables. The whole is served in China-ware, and neither gold nor filver is to be feen. All the fervants perform their duty with the utmost regularity, and without the least noise. I must confess, I was never better pleased with any entertainment.

The victuals being removed, the defert was placed on the tables in the same order, and consisted of a variety of fruits and consections. In the mean time a band of music was called in, which consisted of ten or twelve performers, on various but chiefly wind-instruments, so different from those of that class in Europe, that I shall not pretend to describe them. The music was accompanied with dancing, which was very entertaining. The dancers were nearly as numerous as the musicians. Their performances were only a kind of gesticulation, consisting of many ridiculous postures; for they seldom moved from the same place. The evening being pretty sar spent, we took

leave, and returned to our lodgings.

The 6th, a great fall of snow, and a cold frosty wind, obliged us to halt at this

place.

Next day, the frost and snow still consinued; notwithstanding, we set out, and passed over a stone-bridge near this place, paved, not with small stones, but with large, square, free stones, neatly joined. After travelling eastward about thirty English miles, we reached a large and populous city called Siangsu. We were met without the gate by

fome of the principal inhabitants, and conducted to our lodgings.

When we arrived, the governor was out a-hunting with one of the Emperor's fons. As foon as he returned in the evening, he waited on the ambassador, and complimented him in a very polite manner, excusing himself for not waiting on him sooner. At the same time, he gave His Excellency a formal invitation to supper; for it is appointed by the court that foreign ambassadors should be magnificently entertained in all the towns through which they pass: but the ambassador, being somewhat indisposed, defired to be excused.

Our route this day was through a fine champaign country, well cultivated, but containing very few trees. We pasted several small towns, and many villages, well built, and inclosed with walls. The roads were well made, and in good order, running always in straight lines where the ground will allow. I had heard a great deal of the order and economy of these people, but sound my information far short of what I daily saw in all their works and actions. The streets of every village run in straight lines.

Upon

Upon the road we met with many turrets, called post-houses, created at cortain distances from one another, with a flag-staff, on which is hoisted the imperial pendant. These places are guarded by a few soldiers, who run a-foot from one post to another with great speed, carrying letters or dispatches that concern the Emperor. The turrets are so contrived as to be in sight of one another; and, by signals, they can convey intelligence of any remarkable event. By this means the court is informed, in the speediest manner imaginable, of whatever disturbance may happer in the most remote provinces of the empire. These posts are also very useful by keeping the country free of highwaymen; for should a person escape at one house, on a signal being made, he would certainly be stopped at the next. The distance of one post-house from another is usually five Chinese li, or miles, each li consisting of sive hundred bow lengths. I compute five of their miles to be about two and a half English.

The 8th, we halted at this place. As we could not be prefent at the entertainment to which we were invited last night by the governor, he had resolved that the delicacies prepared on that occasion should not be lost, and therefore sent into our court evelve tables, whereon were placed, by a number of people, all the victuals that were diested the preceding night, with the desert and several sorts of tea. The whole was afterwards brought into the hall, and there placed in form upon the tables. When this was done, an officer of distinction came to desire the ambassador to taste of His Imperial Majert; 's bounty. We accordingly for down at the tables in great order. Every thing was very good, but mostly cold, having been carried through the streets to some distance. After we had removed from the table, the person who had the direction of the entertainment called to our servants, and ordered them to sit down at the tables and cat. This produced a very diverting scene; but, had it not been complied with, the governor would have thought himself highly affronted.

In the evening, the Emperor's third fon went through the city, on his way towards the capital. He was carried upon men's shoulders in a palaukin, a vehicle very easy for the traveller, and well known in European settlements in India. The Emperor's sons have no other names than those of first, second, third, &c. This prince had only a small retinue of a few horsemen.

Our new conductor, Tulishin, invited the ambassador and his retinue to pass the evening at his lodgings. His excellency excused himself, as he had not been at the governor's. All the gentlemen, however, accepted the invitation. The entertainment was elegant, and something like that I formerly described, accompanied with denoing and music and quail-sighting. It is surprising to see how these little birds say at one another as soon as they are set upon the table, and sight, like game-cocks, to death. The Chinese are very fond of this diversion, and bet as high on their quails as the English do on cocks. They are also great lovers of cock-sighting; but it is reckoned among the vulgar sports. The quails are generally parted before they hure one another too much, and reserved in cages till another occasion.

The 9th, having fent off the baggage in the morning, the ambaffador returned the governor's vifit. We only fluid to drink tea; after which we immediately mounted, and purfued our journey to a small town called Juny, where we arrived in the evening. Near this place is a steep rock, standing on a plain, inaccessible on all sides, except to the west, where a narrow winding path is cut in the rock, which leads to a Pagan temple and numbers built upon the top of it. These edifices make a pretty appearance from the plain; and, as the story goes, were built from the foundation in one night, by a lady, on the following occasion: This lady was very beauisful, virtuous, and rich, and had many powerful princes for her suitors. She told them, she intended to build a temple

and a monastery of certain dimensions, with her own hards, in one night, on the typ of this rock; and whoever would undertake to build a stone-bridge over a river in the neighbourhood, in the same space of time, him she promised to accept for a husband. All the lovers having heard the dissibilitials task imposed on them, returned to their respective dominions, except one stranger, who undertook to perform the hard condition. The lover and the lady began their labour at the same time, and the lady completed her part before the light appeared; but as soon as the tun was essentially strong the top of the rock, that her lover had not half sinished his budge, having raised only the pillars for the arches. Failing, therefore, in his part of the performance, he was also obliged to depart to his own country; and the lady passed the remainder of her days in her own monastery.

The river is about a quarter of a mile from the rock, and the pillars still remain about five or fix feet above the water; they are fix or eight in number, and good substantial work. This tale I relate as a specimen of many sabulous stories, which I heard every day, and the people sirmly believe. In the monastery there are at present many monks and nums.

The chain of mountains running to the north, which bound this plain to the west, are very high, rugged, and barren. Their breadth, from the desert to the plain habitable country of China, I compute not to exceed fisteen or twenty miles, and in many places it is much less. But their length, I am informed, is above one thousand English miles. They encompass all, or the greatest part, of the empire of China, to the north and west. These impregnable bulwarks, together with the almost impassable deserts, have, in my opinion, so long preserved this nation from being over-run by the western heroes. One would imagine, that a country, so fortisted by nature, had little need of such a strong wall for its desence; for if all the passes of the mountains are as narrow and difficult as that where we entered, a small number of men might desend it against a mighty army.

Juny is but a small place; it suffered greatly by the earthquake that happened in the month of July the preceding year, above one half of it being thereby laid in ruins. Indeed, more than one half of the towns and villages through which we travelled this day, had suffered much on the same occasion, and vast numbers of people had been buried in the ruins. I must confess, it was a dismal scene to see every where such heaps of rubbish.

All the best houses being thrown down by the earthquake, we were lodged in the priest's apartments of a temple, which had escaped the general devastation. Our conductor treated the monks with very little ceremony, and desired them to seek other lodgings for themselves. These priests were not all superstitious, as appeared sufficiently from the little reverence they paid to their idols, and statues of reputed sains. They conducted us into the temple, and several apartments adjoining, where stood many images of saints, some of which were monstrous sigures of stone and plaster. One of the priests gave us the history of some of them, which I thought too absurd to be inserted. We then returned into the temple, which was a small but neat building. In one end of it we saw an altar, rising by steps to the cicling, on which were placed a number of small images, cast chiefly in brass, resembling men and women, birds and beasts. We were entertained in the temple with tea, till the priests had removed their beds. At the entrance is hung a large bell, attended by a priest, who tolls it on seeing passengers, in order to invite them to say their prayers; which having done, they generally leave a small gratuity to the temple.

In the night, we were a little alarmed with the shock of an earthquake, which

awakened all our people, but did no damage.

Next day, our conductor notified to the ambaffador, that he could proceed no farther till he received an answer to some dispatches he had sent to court. These news were not altogether agreeable, as we apprehended another shock of an earthquake. Nothing, however, of that kind happened during the two days we were obliged to remain at this place.

The rath, we continued our journey to a little town, where we lodged. This, and most of the towns and villages through which we passed to-day, had suffered greatly by the earthquake; particularly one considerable walled town, where very few houses re-

mained, and the walls were levelled with the ground.

About noon, next day, we came to a large, populous, and well built city, with broad fireets, as finally as a line. Near this place runs a fine river, which appears navigable, having across it a noble stone bridge, of several arches, and pived with large square stones. In the evening, we arrived at a small town, after passing through a very pleafant and fruitful country.

On the 14th, we halted at this little town: but our baggage, and His Majesty's prefents, advanced a stage farther. These, by order of the Mandarin our conductor, were carried on men's shoulders, covered with pieces of yellow silk, as every thing is which hath any connection with the court. Whatever is distinguished by this badge is looked on as sacred; and he who has the care of any thing belonging to the Emperor, needs no other protection; such is the reverence paid him all over the empire. The yellow colour is chosen by the Emperor, because, among the Chinese, it is the emblem of the sun, to which he is compared.

The following day, our road, lying over some rocks, was very rugged. In some places it was cut, for a considerable length, above twenty feet deep, through the folid teck, which appears to have been a work of great labour and expense. Lut no people I ever saw take such pains to make their streets and highways easy to travellers as the Chinese. In some places of the rocks were cut out images of Chinese saints; but the weakman-

fhip very mean.

Near this place, we passed through fix or eight strong semicular walls within one another, which have the endless wall for their common diameter, as I take in a great compass. In all these walls there are large well built gares, year'd by a constant watch, both in times of peace and war. At one of them, the sure lad n was faluted with three great guns, from a tower over the gateway. These wells seem to be of the name materials and architecture with the long wall, having square towers at the distance of a bow-shot from each other. While we stopped at one of the gales to refresh ourfelves, I took the opportunity to walk into one of these towers, where I saw some hundreds of old iron cannon thrown together as useless. On examination, I found them to be composed of three or four pieces of hammered iron, joined and fastened together with hoops of the fame metal. The Chinese have, however, now learned to cast as fine brass cannon as are any where to be found. From this tower I was led, by a broad ftone flair, to the top of the wall, which is above twenty feet in breadth, and paved with large square stones, closely joined, and cemented with strong mortar. I walked along this flat till I came to a rock, where I found a high stair of above a thousand steps, the whole breadth of the wall, which led to a tower on the fummit, from whence I could see like a stair, on the other side, forming a descent to a narrow passage between two rocks. I observed also, that the wall was neither so high nor broad where it was carried over mother rock to the fouth-west, as at the place where I stood. But time not allowing me to go farther, I returned by the same way to our company; and, ofter staying a few hours, we proceeded this afternoon to the town of Zulinguang, where we lodged.

The next day, after travelling about two hours, we came to the last femicircular wall. Here ended all the hills and mountains. Our road now by through a fire champaign country, interspersed with many small towns and villages. In the evening, we reached a large neat city, called Zang-pin-jew. In the market-place stood a triumphal arch, whereon were hung a number of streamers, and silken pendants, of various colours. The streets were clean, straight, and broad; in some places covered with gravel, in others, paved with flat square stones.

As foon as we reached our lodgings, the governor of the place came to falute the ambassader, and invites him to an entertainment, prepared by order of His Majesty.

The invitation was accepted, and we immediately went to the governor's palace. The enter imment was very magnificent, somewhat of the same kind with that I formerly described, and accompanied with music and dancing. This place is situated in a fruitful plain, about thirty English miles northward of Pekin.

The 17th, after travelling about a dozen of miles, we came to a small town called Shach. The weather being very fine and warm, the governor came to meet the ambassador, and defired him to refresh himself a little, by drinking tea. Here we halted about an hour, and then proceeded six or eight miles farther, to a small village, about four miles from the capital, where we lodged.

Next morning, two mandarins came from court, to congratulate the ambaffador on his arival, and brought fome horses, on which he and his retinue were to make their cnuy. The furniture of the horses was very simple, and far inferior to the costly trappings of the Persians.

My lodgings in this village happened to be at a cook's house, which gave me an opportunity of observing the ingenuity of these people, even on trisling occasions. My landlord being in his shop, I paid him a visit, where I found six kettles, placed in a row on furnaces, having a separate opening under each of them for receiving the suel, which consisted of a sew small sticks and straw. On his pulling a thong, he blew a pair of bellows, which made all his kettles boil in a very short time. They are indeed very thin, and made of cast iron, being extremely smooth, both within and without. The scarcity of suel near such a populous city, prompts people to contrive the easiest methods of dressing their victuals, and keeping themselves warm during the winter, which is severe for two months.

About ten of the clock, we mounted, and proceeded towards the city, in the following order:

An officer, with his fword drawn,
Three foldiers.
One kettle-drummer.
Twenty-four foldiers, three in rank.
The steward.
Twelve footmen.
Two pages.
Three interpreters.
The ambassador, and a mandarin of distinction.
Two secretaries.
Six gentlemen, two and two.
Servants and attendants.

The vinoue retinue was dreffed in their best apparal. The soldiers is visite in, ing their muskets like horsemen standing centry; drawn swords being referred

conductor, the officer only had that privilege.

We travelled from the village along a fine road, through a cloud of cult, and tudes of spectators; and, in two hours, entered the city at the great noting ate, opened into a spacious street, perfectly straight, as far as the eyesight could We found it all sprintled with water, which was very refreshing, after the dust

paffed through.

A guard of five hundred Chinese horsemen was appointed to clear the way withstanding which, we found it very difficult to get through the crowd. One have imagined all the people in Pekin were assembled to see us; though I was in that only a small part of the inhabitants of the city were present. I observed all crowds of women unveiled; but they kept in the windows, doors, and in co the street. The soldiers did not behave with roughness to the people, as in som places of the east, but treated them with great mildness and humanity. Indepeople of themselves made as much way as was possible for them, considering numbers. After a march of two hours, from the gate where we entered, we came to our lodgings, in that part of the city called the Tarter's town, which the center of Pekin, and not far from the Emperor's palace.

We lodged in what is called the Russia-house. It was allotted, by the prefer peror, for the accommodation of the caravans from Moscovy, and is surrounded high wall of brick, which incloses three courts. The first from the street is app for the guard of Chinefe foldiers. The fecond is a spacious square, on the sides w are apaitments for fervants. The third is divided from the fecond by a high wall, through which you enter by a great gate. Opposite to this gate is the great which rites a few steps above the level of the court The floor is neatly pave white and black marble; and, on the fame floor, to the right and left of the ha two finall bed-chambers. This hall was occupied by the ambaffador. In the fame are two large houses, divided into apartments, in which the retinue was lodged these structures are but of one story, with large windows of lattice-work, on wi pasted white paper. The cielings are very flight and airy, confishing only of laths, with reeds laid across them, and done over the inside with paper. project confiderably over the walls, and are covered with fine light glazed tiles, as far as I could learn, are of a quality to last ages. The bed-chambers only of tl are neatly finished with lath and plaster.

The same evening, the master of the ceremonies came to compliment the amba-He, in the Emperor's name, inquired into the chief subject of his commission

having received a fatisfactory answer, retired.

This gentleman, named Aloy, was by birth a Mongall Tartar, and a great fav of the Emperor. He was a person of great politeness, and a good friend to the tians, especially the missionaries, who received fresh marks of his kindness ever In his youth, he conversed much with the Jesuits, who taught him geography some other branches of science; which contributed not a little to raise his cha among the Chinese, and recommend him to the notice and savour of the Empero

Thus we happily arrived at the famous and long-wished-for city of Pekin, the of this mighty empire, after a tedious journey of exactly sixteen months. It is i very long, yet may be performed in much less time. I am of opinion that tray might go from St. Petersburgh to Pekin, and return, in the space of six months, were it necessary, I think I could easily demonstrate.

After the departure of the master of the ceremonic, the aleggada, or prime minister, fint an officer to salute the amountaider, and excuse himself for not paying him a visit immediately, as it was then late in the night, but promised to see him next day. At the same time, he same agreat variety of fruits and provisions, as a mark of respect, not withstanding we were abundantly supplied with these things by those appointed for that purpose.

At ten of the clock at night, the officer on guard in the outer court locked our gate, and fealed it with the Emperor's feal, that no person might go out or come in during the night. The ambassed or, not approving of this proceeding, as soon as the gate was opened in the morning, sent his secretary and interpreter to the prime minister, to complain of his being commed. The aleggada said he was altogether ignorant of what had happened, but expressly sorbid any such behaviour for the suture. In Persia, indeed, and some other nations of the east, it is the custom to restrain foreign ministers from conversing with the inhabitants, till they have had an audience of the prince.

CHAP. IX .- Occurrences at Pekin; Audience of the Ambasiador, Sc.

THE 19th, the prime minister, accompanied with the master of the ceremonies, and sive Jesuits, came to compliment the ambassador. As soon as they entered the gate, two of their attendants walked before them, at some distance, making a humming noise, the usual sign that some person of distinction is coming. Aloy desired the ambassador would give him a copy of his credentials; which was not easily complied with, till these ministers absolutely insisted on; alleging that the Emperor never received any letters from his best friends, among whom he reckoned His Czarish Majesty the chief, without knowing the contents. The Latin copy was at last produced, the original being in the Russian language; and the master of the ceremonies and the missionaries having translated it into Chinese, took their leave. But the aleggada remained for the space of three hours, talking on different subjects. This minister, it seems, was a great sportsman. He asked to see the ambassador's dogs, which were a few greyhounds, and some French buck-hounds. He was desired to receive, in a present, any of them which pleased him best; but he would accept only a couple of greyhounds.

In the mean time, the Emperor fent an officer to enquire after the ambaffador's health; who brought along with him a table, carried by four men, and covered with yellow filk, on which was placed variety of fruits and confections, and, in the middle, a large piece of excellent mutton. The officer acquainted the ambaffador that these provisions were brought from the Emperor's own table, and therefore hoped he would eat of them. This circumstance was accounted a fingular mark of the Emperor's favour.

The day following, the ambassador had a visit from the president of the council for western affairs, called Assichinoma, accompanied by four missionaries, two of which were Messrs. Paranim and Fridelii. The conversation turned chiefly on the ceremonial of the ambassador's introduction to the Emperor, which was a matter not easily settled. The principal points, insisted on by the ambassador, were, that he might deliver his credentials into the Emperor's own hands, and be excused from bowing thrice three times on entering His Majessy's presence; to which custom all must submit who appear before the Emperor. The president, on the contrary, afferted, that the constant practice in China, for many ages past, was directly opposite to these demands; that their Emperors never received letters of credence with their own hands; that the custom

was for the ambassador to lay them on a table, at some distance from the throne, or the place where the Emperor may happen to sit; after which they were delivered to the

Emperor by the officer appointed for that purpose.

At the same time, the president invited the ambassador to an entertainment, to be given at a palace in the city, where he said the Emperor would be present, and speak with him. His Excellency replied, he would accept of the invitation, provided he might on that occasion deliver the Czar his master's letter. He was told, this was neither a proper place nor time for that purpose; but that the Emperor intended to give him a public audience very soon, and receive his credentials in form.

The ambaffador was apprehensive that the Emperor, having already seen a copy of his credentials, should he also see himself at the entertainment, his public audience might thereby be retarded; and therefore declined the invitation. It appeared, however, afterwards, that this suspicion was without foundation, and that the Emperor in-

tended nothing more than to do honour to the ambaffador.

The 21st, the aleggada paid a second visit. His servants brought tea ready made, some jars of arrack, with fruits and consections. From this day little material happened, except daily messages from court relating to the ceremonial, till the 27th, when this affair was at last adjusted, on the following terms: "That the ambassador should comply with the established customs of the court of China; and when the Emperor sent a minister to Russia, he should have instructions to conform himself, in every respect, to the ceremonies in use at that court." This affair gave the ministry at Pekin much trouble; and, I must confess, the missionaries took great pains to soften matters on both sides.

On the 28th, the day appointed for the ambassador's public audience of the Emperor, horses were brought to our lodgings for the ambassador and his retinue; the Emperor being then at a country-house called Tzan-shu-yang, about fix miles westward from Pekin. We mounted at eight in the morning, and about ten arrived at court, where we alighted at the gate, which was guarded by a strong party of foldiers. The commanding officers conducted us into a large room, where we drank tea, and staid about half an hour, till the Emperor was ready to receive us. We then entered a spacious court, inclosed with high brick walls, and regularly planted with feveral rows of forest-trees, about eight inches diameter, which I took to be limes. The walks are fpread with fmall gravel; and the great walk is terminated by the hall of audience, behind which are the Emperor's private apartments. On each fide of the great walk are fine flower-pots and canals. As we advanced, we found all the ministers of state, and officers belonging to the court, feated upon fur-cushions, cross-legged, before the hall, in the open air; among these, places were appointed for the ambaffador and his retinue; and in this fituation we remained in a cold frosty morning, till the Emperor came into the hall. During this interval, there were only two or three fervants in the hall, and not the least noise was heard from any quarter. The entry to the hall is by feven marble steps, the whole length of the building. The floor is finely paved with a neat checker-work of white and black The edifice is quite open to the fouth; and the roof supported by a row of handsome wooden pillars, octangular and finely polished; before which is hung a large canvals, as a shelter from the heat of the sun, or inclemencies of the weather.

After we had waited about a quarter of an hour, the Emperor entered the hall at a back-door, and feated himself upon the throne; upon which all the company stood. The master of the ceremonies now desired the ambassador, who was at some distance from the rest, to walk into the hall, and conducted him by one hand, while he held his credentials in the other. Having ascended the steps, the letter was laid on a table placed

The

for that purpose, as had been previously agreed; but the Emperor beckoned to the ambassador, and directed him to approach; which he no sooner perceived, that he took up the credentials, and, attended by Aloy, walked up to the throne, and, kneeling, laid them before the Emperor, who touched them with his hand, and inquired after His Czarish Majesty's health. He then told the ambassador, that the love and friendship he entertained for His Majesty were such, that he had even dispensed with an established custom of the empire in receiving his letter.

During this part of the ceremony, which was not long, the retinue continued standing without the hall, and we imagined, the letter being delivered, all was over. But the master of the ceremonies brought back the ambassador, and then ordered all the company to kneel, and make obeisance nine times to the Emperor. At every third time we stood up and kneeled again. Great pains were taken to avoid this piece of homage, but without success. The master of the ceremonies stood by, and delivered his orders in the Tartar language, by pronouncing the words morgu and boss; the first meaning to bow, and the other to stand; two words which I cannot soon forget.

This piece of formality being ended, the master of the ceremonies conducted the ambassador and the fix gentlemen of the retinue, with one interpreter, into the hall. Our clerks, inferior officers, and servants, remained still without, together with many courtiers and officers of distinction. We were scated on our own cushions, in a row upon the floor, to the right of the throne, about fix yards distance; and, immediately behind us sat three missionaries, dressed in Chinese habits, who constantly attend the court. On this occasion they served by turns as interpreters.

Soon after we were admitted, the Emperor called the ambaffador to him, took him by the hand, and talked very familiarly on various subjects. Among other things, he told him, that he was informed His Czarish Majesty exposed his person to many dangers, particularly by water, at which he was much surprised, but desired he would take the advice of an old man, and not hazard his life, by committing himself to the rage of the merciles waves and winds, where no valour could avail. We were near enough to hear this piece of friendly and wholesome advice.

This conversation being finished, the Emperor gave the ambassador, with his own hand, a gold cupful of warm tarassun, a sweet fermented liquor, made of various forts of grain, as pure and strong as Canary wine, of a disagreeable smell, though not unpleasant to the raste. This cup was brought about to the gentlemen, and all of us drank the Emperor's health, who observed, that this liquor would warm us that cold morning. His Majesty also found many faults with our dress, as improper for a cold clin ato; and, I must contess, I thought him in the right.

On the left fide of the throne fat five princes, fons to the Emperor, together with all the ministers and grandees of the court. The taraffun, however, was handed about to not e but ourselves, and the Jesuits behind us. Eight or ten of the Emperor's grandfon; now entered the hall. They were very handsome, and plainly dressed, having nothing to distinguish them, but the dragon with five claws, woven into their outer garments, and a yellow tunic of satin, bearing the same device, with little caps on their heads faced with sable. After them came the musicians carrying their instruments. By this time the hall was pretty full; and, what is surprising, there was not the least noise, hurry, or confusion. Every one perfectly knows his own business; and the thick paper soles of the Chinese boots prevent any noise from their walking on the floor. By these means every thing goes on with great regularity, but at the same time with wonderful quickness. In short, the characteristic of the court of Pekin is order and decency, rather than grandeur and magnificence.

The Emperor fat cross-legged on his thone. The resided in a short loose confiable, having the fur outward, lined with lamb-I in, under which he were a long tunic of yellow silk, interwoven with figures of gother dragons with five claws; which device no person is allowed to bear except the imperial family. On his head was a little round cap, saced with black fox-skin; on the top of which I observed a large beautiful pearl, in the shape of a pear, which, rejector with a tassel of red silk tied below the pearl, was all the or ament have about this mighty monarch. The throne also was very simple, being made of wood, but of neat workmanship. It is raised sive easy steps from the sloor, is open towards the company, but has a large japanned screen on each fide, to defend it from the wind.

The master of the ceremonies, and a few officers of the houshold, were dressed in robes of state, of gold and silver stuffs, with monstrous dragons on their backs and breasts. Most of the ministers of state were dressed very plain, having nothing like ornaments about them; a sew only had large rubies, sapplieres, and emeralds. These precious stones are cut into the shape of pears, through which a hole is drilled, to six them on the top of their bonnets. These holes diminish the value of the stones, one half at least, at an European market. I once saw, however, one of these rubies, with a hole drilled through it, which was bought at Pekin for a trisse, valued at ten thousand pounds sterling in Europe. But such bargains are rarely to be met with, this being a stone of the first class for bigness and purity. As for diamonds, the Chinese, it seems, do not much esteem them; for sew diamonds are found in China, and these very rudely cut and shaped, and so indeed are all their coloured stones.

It was now about noon, at which time our entertainment began to be ferved up, of which I also give some account. There were first brought neat little tables covered with valuety of fruits and confections, and placed before all the company. It seems to be the fashion of this country to bring the desert first, at least that was the case at all the entertainments where I was present. In this, as in many other things, the behaviour of the Chinese is quite contrary to that of the Europeans. Soon after the fruits, the victuals were served in the same manner, and placed on small tables before the guests. They consisted of sowls, mutton, and pork, all very good of their kinds; and the whole was either boiled or stewed with pickles, but nothing roasted. The Emperor sent several dishes from his own table to the ambassador, particularly some boiled pheasants, which

were very agreeable.

The music played all the time of dinner. The chief instruments were flutes, harps, and lutes, all tuned to the Chinese taste. There was also some vocal music; an old Tartar, in particular, fung a warlike fong, to which he beat time, by ftriking, with two ivory rods, upon a chime of little bells that hung before him. A young Tartar fung a call to war, dancing at the same time, and keeping time by drawing the head of an ararrow across his shield. Then entered two little girls, who danced and sung while the instruments played. After them came tumblers, who performed various feats of activity These were succeeded by wrestlers, fencers, and other in the court before the hall. performers of the fame species. The Emperor sent frequently to the ambassador, to ask how he liked the mufic, dancing, and other entertainments. He also enquired about ieveral princes and states of Europe, with whose power by land and sea he was not unacquainted. But, above all, he wondered how the King of Sweden could hold out fo long against so great a power as that of Russia. After this conversation, the Emperor informed the ambassador, that he would soon send for him again; but, as the night was cold, he would detain him no longer at prefent, and immediately stept from his throne, and returned to his private apartments by the same passage he left them. We alfo

also mounted, and repaired to our lodgings in the city, so well satisfied with the gracious and friendly reception of the Emperor, that all our former hardships were

almost forgot.

The 29th, the Mandarin Talishin came to our lodgings with two clerks, and took a list of the presents sent by the Czar to the Lapperor. These consisted of various rich furs, clocks, repeating watches let in diamonds, mirrors; and the battle of Poltrua, nicely turned in ivory, done by His Czanda . . Cy's own hands, and fet in a curious frame. The ambaffador at the same time, delivered to the Mandarin, as a present from himself to the Emperor, several tops of value, a fine in naged horse, some greyhounds, and large buck hounds.

Every thing was entered in a book very exactly, even the names and qualities of each particular dog. There was also tied about the neck of each dog, a vellow filk cord, drawn through a hole in a little bit of wood which hung from the dog's neck, as a mark of it belonging to the court. The Chinese, in general, are very fond of little harlequin dogs that play monkey tricks. A fervant of ours had one of that kind,

which he fold for an hundred ounces of filver.

The fame day, all the fruits and confections of the entertainment given at the audience which remained, were fent to the ambassador's lodgings. They were carried in great state through the streets, covered with yellow filk; and an officer of the court walked before the procession.

Next day, the Emperor fent to our lodgings feveral large dishes of massive gold, containing a kind of delicate fish, called mu, already dressed, but in such a manner that I did not know to what to compare it. Also some bowls filled with excellent vermicelli. and a fort of pastry-puffs, baked over the sleam of boiling water, exceeding in whiteness any thing of that kind I ever faw. All these things were sent from His Majesty's own table; an honour which he grants but feldom. It feems he was refolved we should have provisions in abundance; for, besides all these, we received our daily allowance. in which we were by no means stinted.

After dinner, the master of the ceremonies, accompanied with the captain of the eunuchs, and three Jesuits, came to visit the ambassador. This eunuch was a great fayourite of the Emperor, on account of the knowledge he had acquired in mathematics and mechanics. He made the ambassador a present of a small enamelled gold watch, and a wind-gun, both of his own making. The Emperor himself is a great lover of the arts, fo far, that whoever distinguishes himself in any useful branch of them, is sure to meet with proper encouragement. The eunuch also made a present to the ambassador of a steel to strike fire, and then defired to see the presents, which was granted. At taking leave, Aloy told the ambassador, that the Emperor intended to give him a Chinese dress, which was more convenient and warmer than the European.

December the first, Merin-Sanguin, a general officer, and brother to the first minister of state, came to visit the ambassador. Notwithstanding the high rank of this military gentlemen, he had no fword about him; for at Pekin, no person, not even officers and soldiers, except when on duty, wears a sword, or any other weapon in the city.

The day following, the ambassador had a second audience of the Emperor at the fame palace. On this occasion, the Czar's presents were carried to court, by a number of people fent for that purpose. The Emperor viewed them all at a distance; after which they were delivered to an officer appointed by His Majesty to receive them. This audience was held in a private hall within the inner-court, where only the officers of the houshold, and the gentlemen of the retinue were present. We were entertained in the fame manner as before. The Emperor conversed very familiarly with the ambaf-

3 D VOL. VII.

fador on various fubjects, and talked of peace and war in particular, in the flyle of a philosopher. In the evening, we returned to the city, in a cold north-wind, which blew the dust about in clouds. Scarcely had we arrived, when fruits and confections, according to custom, were fent to our lodgings.

This evening, one of the Emperor's grandious came to visit the ambassador. He was a genteel youth, about fourteen years of age, and had not above half a dozen of

attendants.

Next day, the weather continued cold and frosty. The sky was clear, and a strong wind at north-west, blowing the dust about. I observed that the north-west winds are the coldest in this place; as they come over the vast tracts of ice and snow in Siberia.

The 4th, there was a fall of fnow, to the deepnels of feven or eight inches, which was immediately thrown into heaps, and the streets clean swept. This day the mission-aries sent a present to the ambassador, consisting of several forts of venison and wild-sowl, and a greater variety of fine fruits and confections than I ever saw in any country, together with a couple of jars of wine made by themselves. Among the fruits there were some species which I had never before seen, particularly a fort of apple, about the size of a common orange, with a smooth skin, of a yellowish colour, very soft and sweet, or rather suscious; also a fruit about the bigness of a walnut, but quite round, resembling in taste a prune, but far more delicious: it contains a smooth hard stone, and the whole is covered with a thin brownish shell, so brittle, that it is easily broken between the singer and thumb. Some of these shells are rough, and others smooth. They serve to prevent the tender fruit from being devoured by birds, and from slying dust; and, what is something uncommon, the fruit does not adhere to the shell, but a small vacuity is left between them. It is not only pleasant to the taste, but is accounted very wholesome.

The 5th, the ambassador had a third audience of the Emperor, in the palace at Pekin. As some assure relating to the two empires were to be discussed, the secretary only, M. de Lange, accompanied the ambassador. After he was introduced, the Emperor told him, he had given orders to the tribunal for western assairs to hear the subject of his commission, and then retired to his own apartments, leaving his ministers to ransact the business, which was soon smithed on this occasion; and the ambassador re-

turned to his longings.

The 6th, being St. Nicolas's day, a great festival in the Greek church, the ambassador went to the Russian chapel in Pekin to hear divine service. This house stands within the city, under the cast well, and was built by the Lounty of the present Em-

peror Kamhi, on the following occasion.

About the year 1688, there happened a difference betwixt the government of Siberia and the Chinese, about a small fort called Albazin, which the Russians had built upon the banks of the river Amoor. The Chinese alleged the fort was erected on their territories; and, jealous of the approach of such powerful neighbours, made several fruitless representations to the governor of Siberia to have it demolished. The Emperor, at last, impatient of longer delay, sent an army of above one hundred thousand men, to do by force what could not be accomplished by negotiation. They invested the place on all sides, and raised batteries against it. After a vigorous defence, the garrison, consisting of about three or four hundred Cossacks, was obliged to surrender for want of provisions. No terms could be obtained; and all the Russians were made prisoners of war. In consequence of which they were carried to Pekin, where the Emperor generously assigned them houses apart from the rest of the inhabitants, permitted the free

exercise of their religion, and gave the near daily allowance equal with his own soldiers. By this raild treat nent they were enabled to build the little chapel which they full The descendants of these prisoners are pretty numerous, and useful to their countrymen, the Rullaus, as interpreteis. I formerly mentioned that these disputes were ended on the following terms; the prisoners on both fides were to remain unexchanged, and the fort of Albazin to be destroyed; fince which time, the two empires have continued in good correspondence. The inhabitants of Siberia, indeed, regret much the loss of their fort, as it stood in a fine climate, gave them possession of a large extent of country northward from the Amoor; and, besides, opening a passage down that river to the Japanese Ocean. It was, however, the occasion of establishing the Greek church in China, which still continues to flourish, though its members are not very numerous. As one prieft dies, another from Siberia fucceeds him, who minds chiefly his own fmall flock, and thinks very little of making converts. This circuitstance prevents their being obnoxious to the Roman missionaries, who can have no sufpicion of their interfering with the interests of their church. These missionaries are conflantly employed in making profelytes, and their endeavours have been attended with fome fuccels.

The 7th, we dined at the alleggada's, where we were magnificently entertained. There was no other company but ourselves, and we staid the whole day. This was the most elegant and complete entertainment of any I saw in China.

About ten o'clock in the morning, chairs were fent for the ambaffa lor and gentlemen of the retinue, and horses for the servants, though the prime minister's house was very near our lodgings. The chairs were carried through two courts, and fet down at the entry into a hall, where the alleggada waited to receive the ambaffador. After entering the hall, we were feated on neat cane chairs, with japanned frames, inlaid with mother of pearl. The apartment itself was very simple, open to the fouth, and the roof supported on that side by a row of well-turned wooden pillars. It had no ceiling, but the rafters appeared finely polished, and perfectly clean. The floor was paved with a checker-work of white and black marble; and in the middle of it stood a large brass chafing-dish, in shape of an urn, full of charcoal. At the entry were placed two large China cifterns, filled with pure water, in which played fome fcores of finall fifnes, catching at crumbs of bread thrown into the water. These fishes are about the fize of a minnow, but of a different shape, and beautifully varied with red, white, and yellow spots, and therefore called the gold and filver fish. I never saw any of them out of this country, though, I imagine, they might eafily be brought to Europe, as they are by no means of the tender kind. I had about twenty of them standing in a window at my lodgings; in a morning, after a frosty night, I found all the water frozen, most of the fishes stiff, and seemingly dead; but, on putting them into cold fresh water, they all recovered, except two or three.

After we had drunk a dish of tea, a collation of broths and victuals were placed on the tables, intermixed with a variety of fruits and confections. Every perion had a table apart, and all were served in the same manner. This repast, it seems, was only breakfast, though it might well have passed for dinner.

After this entertainment, the alleggada carried us first to see his dogs, of which he had great variety. I formerly observed that this gentleman was a great sportsman. He took greater pleasure in talking of hounds than politics; though, at the same time, he had the character of a very able minister and an honest man.

We were now conducted through all the different apartments of his house, excepting only those of the ladies, to which none have access but himself, and the eunuchs

who attend them. We faw a noble collection of many curiofities, both natural and artificial; particularly a large quantity of old porcelain or China ware, made in China and Japan, and at prefent to be found only in the cabinets of the curious. They confifted chiefly of a great number of jars of different fizes. He took much pleature intelling when and where they were manufactured; and, as far as I can remember, many of them were above two thousand years old. He added, that, both in China and Japan, they had lost the art of making porcelain in that perfection they did in former times; and the fault, in his opinion, lay in the preparation of the materials. These curiofities were piled up on shelves to the very roof of the house, and in such order and symmetry

as had a pretty effect.

From the house we went into a little garden, inclosed with a high brick-wall. In the middle of it stood a small bason, full of water, surrounded with several old crooked trees and shrubs; among which I saw that which produces the samous tea. The climate about Pekin being too cold for this shrub, there are only a few bushes of it to be found in the gardens of the curious. I shall not at present enlarge on this useful plant, which appeared like a currant-bush, as an opportunity will occur of giving a fuller account of it before I leave this place. There was a walk round the garden, which, together with that in the middle, was covered with small gravel. At each end of the middle walk was a piece of artificial rock-work, with water running under it, through holes so natural, they looked as if made by the current of the stream. The rocks were about seven feet high, and shaded with some old bended trees. This garden, and many others in China, display the taste of the inhabitants for imitating nature.

From the garden we were called to dinner, where we found a plentiful and elegant entertainment, fet out in the finest order, far exceeding any thing of that kind we had seen before. We had no music nor dancing; and the whole was conducted with surprising decency and regularity. The entertainment lasted about two hours, after which

we returned to our lodgings.

This day, our gates were opened to people of all characters, and merchants and others allowed to go in and out at pleasure. Though all communication was not prohibited before this time, it was, however, difficult, and not to be obtained without permission of the proper officer.

The 8th, we dined at the fouth convent, where the Italian missionaries generally reside. Here all the Jesuits in the place, to the number of ten or twelve, were assembled. We met with a friendly reception, and a most splendid entertainment.

This convent stands within the city, upon a piece of ground given to the fathers by the Emperor. He gave also ten thousand ounces of silver towards building and adorning the chapel, which is indeed very neat, and handsomely decorated with pictures of saints, and scripture-pieces, by the best hands. An account of this remarkable benefaction of the Emperor Kamhi is cut out, in the Chinese language, in letters of gold, and fixed above the great gate, which makes the place more respected. When we arrived, one of the priests was officiating in the chapel, where were assembled about one hundred Chinese converts. At dinner we had a few bottles of wine, made in the convent; but I cannot say it was good, though the grapes were fine, and of an agreeable taste.

After dinner, we were conducted to the Emperor's stables, where the elephants are kept. The keeper asked the ambassador to walk into his apartments till they were equipped; then we went into the court, and saw these huge animals richly caparifoned in gold and silver stuffs. Each had a rider on his back, who held in their hands small battle-axes, with a sharp pike at one end, to drive and guide them. We

stood

ftood about an hour admiring those sagacious animals; some of them very large, who, passing before us at equal distances, returned again behind the stables, and so on round and round, till there seemed to be no end of the procession. The plot, however, wa at last discovered by the seatures and dress of the riders; and the chief keeper told we there were only sixty of them. The climate about Pekin is too cold for them to breed, and all these were brought from warmer countries. The Emperor keeps them only for show, and makes no use of them, at least in these northern parts. Some of them were brought near to the place where we sat, and made obeisance to us, by kneeling and making a dreadful noise; others sucked up water from vessels and spouted it through their trunks among the mob, or wherever the rider directed. The sagacity of these animals is most surprising, and approaches so near to reason, that, in this respect, they surpass all the brute creation. After this show, we took leave of the Jesuits, who had accompanied us hither, and returned to our lodgings.

Next day, all the gentlemen dined at the palace of the Emperor's ninth fon, in confequence of an invitation from his chief eunuch, who is a great friend to the Russia house. As the invitation was not from the prince, the ambassador would not accept of Our entertainment was very magnificent, and accompanied with music, dancing, and a kind of comedy, which lasted most part of the day. The comedians were of both lexes; if the women's parts were not performed by boys dreffed like actreffes. As the play was in the Chinese language, I could understand nothing of it, except from the gesture and action of the performers. It seemed to be a parcel of detached diffimilar interludes, without any principal end, or unity of defign. I shall, therefore, only mention one scene, which appeared to me the most extraordinary. There entered on the stage seven warriors, all in armour, with different weapons in their hands, and terrible vizards on their faces. After they had taken a few turns about the stage, and surveyed each other's armour, they at last fell a quarrelling; and, in the encounter, one of the heroes was flain. Then an angel descended from the clouds, in a flash of lightning, with a monstrous sword in his hand, and soon parted the combatants, by driving them all off the flage; which done, he afcended in the fame manner he came down, in a cloud of fire and fmoke. This fcene was fucceeded by feveral comical farces, which to me feemed very diverting, though in a language I did not understand. The last character that appeared on the stage was an European gentleman, completely dressed, having all his clothes bedaubed with gold and filver lace. He pulled off his hat, and made a profound reverence to all that passed him. I shall leave it to any one to imagine, what an awkward figure a Chincse must make in this ridiculous habit. This scene was interrupted, and the performers dismissed, by the master of the feast, from a suspicion that his guests might take offence. The play being finished, we were entertained with jugglers, who exhibited a variety of legerdemain tricks with great dexterity.

The banquet was prolonged the whole day, excepting the time spent in these inter ludes. No sooner was one course carried off, than another was instantly placed upon the tables, and the whole concluded with deserts of fruits and sweetmeats. One would scarce have imagined, that luxury had made such progress among the sober and industrious Chinese. It must indeed be observed, that there is almost no drinking at their entertainments, as they use no liquor on these occasions but tea, and now and then a dram of hot arrack. The Chinese handle the two ivory or wooden pins, which they use instead of forks, with such dexterity, that they can even take up needles with them.

In place of napkins they sometimes employ a few square pieces of paper.

CHAP. X .- Continuation of Ocean reness at Polin, &c.

THE day following, the ambassader bad a familiar addings of the Lispener, at the palace in the city. This interview was also private, and the ambassador vas attended only by his federary. The Emperor is per disher Turmees of his friendship for His Canish Majesty, talked strongly on the varies of uncertainty of all human assists, a lding, that he was now an old man, and, b, the course of vature, could not like long, and defined to die in peach with Cod and the political. At taking leave, each or them was presented with a consplete Chinese to it of cluths, made of strong size. Interview with grage as claves, and hard with sibile.

The 12th, we disculate the French or well an envert, where we again for ideal the missionaries. The chapel, and other editic, are beneficial, but not so grand as the little convent. Father Pararim is president of this convent; he is a min of parts and adde in, and ingreat savour with the Emperor. I was informed this entertainment was given at the expense of the court, and had some reast not be in a it was so, as it for exceeded what might reasonably be expected from the Jesuis. The Emperor's band of music plant all the time of dinner; after which we had jugglers and tumblers of great a to a Among the many feats and tricks performed by these people. I shall only mention two or three, which seemed most uncommon. The roof of the room where we fit was supported by wooden pillars. The juggles took a gentlet, with which he bored one of the pillars, and asked, whether we chose red or white wine? The question being answered, he pulled out the gentlet, and put a quill in the hole, through which run, as from a cash, the wine demanded. After the same manner, he extracted several forts of liquors, all which I had the curiosity to taste, and found them good of their kinds.

Another of these expert you he took three long sharp-pointed knives, and throwing them up by turns, kept one always in each hand, and the third in the air. This he continued to perform for a considerable time, catching constantly the falling knise by the handle, without ever allowing it to touch the sloor. The knives were exceeding sharp, so that had he missed laying hold of the handles, he must infallibly have lost some

of his fingers.

The same person took a wooden ball, somewhat less than those commonly used in bowling-greens, with a hole through the middle of it, and a rod two feet long, about the size of a walking staff, pointed at the extremity, to fit the hole in the ball. He then tossed the ball above a yard high, and caught it again upon the point of the rod, not in the hole of the ball, but wherever it happened to meet the point; and, in this manner, he continued to throw up and catch the ball for a considerable time. He now placed the ball upon the point of the rod, taking no notice of the hole, and twirled it round like a top so quickly, that the motion could not be observed. This seemed extremely dextero. In some standard of the while he played with the ball in appearance; and, when the motion began to slacken, gave it a fresh twirl with his hand, as if the rod and ball had been fastened to each other.

This perion also placed a large earthen dish, above eighteen inches diameter, upon the point of the same rod, and twirled it round in the same manner as he did the ball. During this swift motion, he did not always keep the point in the centre of the vessel; on the contrary, he often held it within three inches of the brim. I shall only mention one instance more.

There were placed erect, upon the pavement of the floor, two bamboos, which are a kind of cane. The length of them was about twenty-five feet; at the lower end, I

reckon

reckon them to be near five inches diameter, and at the top about the breadth of a crown-piece. They were straight, light, and smooth, and each supported by two men. Two boys then climbed up the poles, without the leat affishance; and, having reached the top, stood upright, sometimes on one foot, and sometimes on the other, and then upon their heads. This being done, they laid one hand on the top of the pole, and stretched out their bodies almost at right angles to it. In this posture they continued for a considerable time, and even shifted hands. I observed that much depended on the men who held the poles; one of the two at each pole having it fixed to his girdle, and they kept a steady eye on the motions of the boys. There were about twenty or thirty of these performers, who all belong to the Empiror, and never display their art without his permission. I am fully persuaded that, in tricks and seats of dexterity, sew nations can equal, and none excel, the Chinese.

After these diversions, we were conducted to the Emperor's glusshouse, which His Imperial Majesty often visits with pleasure. It was creeked by himself, and is the first manufactory of the kind that ever was in China. The person employed to superintend and carry on this design was Kilian Stumps, a German sather, lately deceased; a man in great favour with the Emperor, and well known in China for his ingenuity and literature. His Majesty is so fond of this glass-work that he sent several of the most curious of its productions in a present to His Czarish Majesty. It is surprising that the Chinese, who have been constantly employed for so many ages in the manufacture of Chinaware, should never have stumbled upon that of glass. This shews evidently, that the degree of heat necessary in their ovens must not be very great, or their materials free from sand; for it is certain, they had no knowledge of glass of any kind till this house was erected. I was informed, that, not long ago, some Europeans brought to Canton a parcel of prisms, or triangular glasses, which the Chinese took for natural productions or rock crystal, and bought them at the rate of one hundred ounces of silver a-piece: But, from the quantity imported, they soon discovered their missace.

On the evening of the 14th, on officer came from court, defiring the ambaffador to wait on the Emperor at his prace of Tzanzfaang, and bring his muficians along with him. These consisted of performers on violins, trumpets, and kettle-drums.

Next day, we arrived at the palace about ten of the clock, and had immediate admittance to the Emperor's private apartments, few being prefent but the officers of the noulehold and Father Paranim. After a short conference, the music ves ordered to play. There were in the room ten or twelve of the Emperor's grandsens, who seemed much entertained with the instruments. I asked an elderly seatleman who slood by me, how he liked the music? He said t was very good, but their own was better. No ladies were to be seen, though, I believe, several of them were behind a screen, at the other end of the room.

The music being over, the Emperor ordered one of the princes to conduct the ambassador into the gardens belonging to the palace; into which we entered along a drawbridge, over a canal of pure water. They abounded with shaded walks, arbours and sish-ponds, in the Chinese taste. The young princes entertained themselves by shooting with bows and arrows. Some of them displayed great dexterity, being accustomed from their infancy to this exercise, which is accounted both genteel and healthy; as the drawing of the bow extends and strengthens the muscles both of the breast and arms. One of the princes shewed us a bow and arrows used by the Emperor when young, by which it appeared that he had been a person of extraordinary bodily strength. After we had surveyed the gardens in every quarter, we took leave of the princes, and returned to the city.

This.

This day, arrived in Pekin Signior Mezzobarba, ambassador from his Holiacis the Pope to the Emperor. This gentleman was a cardinal, and patriarch of Alex andria. His retinue was composed of exclesiastics of different orders, and a few tervants, who were all lodged in the Italian convent. They came from Europe to Macao in a Portuguese ship, from thence to Canton, and then by land to this

place.

The defign of this embaffy was to inquire into the disputes and misunderstanding that had lately arisen in this country between the J. suits and Dominious, relating to certain rites annually performed by the Chinese Christians, at the tombs of their decealed parents. or other relations. This coftom feems to be the fame with that of the parentalia anciently in use among the Greeks and Romans. It is universal in China, from the Emperor to the meanest peasant. It feems the lessits permitte ' their converts to visit the tombs of their relations; alleging, that, without fuch include ace, no person would embrace Christianity, and that time would wean them from such separations ceremonies. The Dominicans, on the other hand, affirmed that it was next to idolatry, an I declared it unlawful to allow any fuch custom, strictly prohibiting all conformity in the reconverted These differences, in all probability, will not soon be determined. The Emperor himfelf tried to make the parties compromife matters; but, finding his endeavours incliedtual, he left them to agree or dispute according to their pleasure. He inclined, indeed, to favour the opinion of the Jesuits, which he thought most reasonable. At any rate, it must be acknowledged an instance of uncommon condescension, for an heathers Emperor to interest hinsself so much in the peace of a Christian church.

The 16th, Mr. De Lange and I paid a visit to the Fathers Fridelly and Keaggler, at the Oriental or German convent. This place is large enough; but neither the chapet nor buildings are near so magnificent as those of the other two convents. It is called oriental, because situated in the eastern district of the city. Both these Fathers, and several other ecclesiastics of inferior rank in this convent, are Germans. One of the Fathers was a clock-maker; and, by such means, they frequently infinuate themselves into acquaintance with people of distinction, who protect them in times of danger. For, in China, they have still a great number of enemies, who would gladly see both them and their religion extirpated; but the favour of the present Emperor hath hitherto prevented

or disappointed the design of such persons.

The 17th, I fent to inform the captain of the Chinese guard, that I intended to take a turn through the city, who immediately gave orders for a foldier to attend me. When we paffed through the gate, the clerk marked our names in his book, and dashed them out at our return. I went into feveral shops, where were fold different kinds of merchandife; particularly those of the goldsmiths, whose business it is to exchange gold for filver, or filver for gold. In these shops are found vast quantities of those valuable metals, cast into bars of different fizes, and piled up one upon another; which are sold only by weight, as there is no current coin in this country; except one small round piece of brafs, with a fquare hole in the middle, through which may be run a string, for the convenience of carrying them to market. This coin, called Joss by the Chinese, is about the value of one tenth of a penny sterling, and is extremely useful among the With one of them a man can buy a dish of hot tea, a pipe of tobacco, common people. or a dram of brandy in the streets; and a beggar may dine for three of them. are, indeed, few beggars to be feen in the city; but, notwithstanding the labour and industry of the inhabitants, they are so numerous, that it is hardly possible to prevent many from being reduced to the utmost necessity. There are cooks shops, where dogs and cats, and fuch other creatures are dreffed for the entertainment of these people. These coms have Kamhi, the name of the Emperor on one side, and the words Tum Pao, or the universal price, on the other.

When the Chinese have occasion to buy any thing above the value of sixpence, they

cut off a piece of filver, and weigh it, which is done in a trice.

Although the want of current coin feems ill calculated for the dispatch of business, the Chinese find no inconvenience on that account. It is in so far preferable to money, that it loses little by wearing in the circulation, which coin does perhaps more than is generally imagined.

In most of the shops I sound both men and women unvailed. They were extremely complaisant, and gave me a dish of tea in every shop. These people expose their gold and silver, and other goods of value, with as much sreedom and security, as the mer-

chants do in London or Amsterdam.

The 19th, Lange and I went to the French convent, but not one of the ecclefiaftics were at home, having all gone to attend Signor I Aczzobaiba at an audience of the Emperor, except an old gentleman, Monsieur Bouvett, who had formerly written a small treatise, entitled, Lie Portrait de l'Empereur de la Chiae, which he had printed in Europe.

The 20th, cold and windy.

The 21st, frost and snow, which softened the air, and laid the dust.

Next day, the ambafiador, with Sccretary Lange, went to the council appointed for western assairs, and had a conference on the subject of his embassy.

The winter here lasts only about two months, but is very sharp and piercing, while the wind is northerly. If the wind, indeed, is southerly, the air is mild and pleasant, and the sky clear. I mentioned above, that the Chinese have a method of keeping themselves warm during the cold, which I shall now describe as distinctly as I can.

In building a house, they make two slove-holes, one in each side-wall, about three feet from the gable-end. The holes are a foot square; one serves for receiving the fuel, and the other to let out the smoke, when the stove is sinished. There is a partition of brick, which runs from one fide of the house to the other, about five or fix feet from the gable, and only eighteen inches high, which I shall call the front of the stove-Between this and the gable are built feveral other thin partitions of brick, in a direction at right angles to the first, having a small opening at the extremity of each. For example, suppose the passage in the first partition to the right hand, and in the second to the left, and so on, alternately, to the last, which communicates with the hole, on the other fide of the room, for letting out the finoke. These divisions being made, the whole is arched, or otherwife covered with brick; above which is laid a layer of clay, or plafter, to prevent the finoke from rfing through the furface. It is plain that below this bench there will be a winding channel for the finoke, from one fide of the room to the other. A few handful, of brush-wood, straw, or any kind of fuel, will warm the bench, as much as is necessary, to work or sleep without feeling cold. It is generally covered with mats, felts, or other thick stuffs, according to the ability of the owner.

The 22d, father Kezggler came to visit us. This gentleman had been long in China, and was well acquainted with the language, customs, and manners of the country. In talking of the extent of Pekin, he said that Nankin is at least three times as large. At this rate, Nankin must be one of the largest cities in the world. He added, that it was somewhat diminished since the court had left that place to reside at Pekin. Nankin is a place of the most extensive conumerce, and contains the greatest manufactories, of all forts of silk and cotton stuffs, of any city in the country, besides those of China-ware.

It is watered by a fine navigable river, on which are employed an incredible number of boats, in carrying merchandile and passengers.

The 23d, cold northerly wind, and strong frost.

The 24th, Christmas-eve; the ambasiador heard divine service in the Russ church.

The 25th, the ambasador, and the whole retinue went to church.

The Emperor fant Father Fridelly, accompanied by feveral mondarias, with a prefent to His Czarish Mapity, of six large boxes of tiles, made of China-ware, sit for such sloves as are used in Russia for warming rooms. They were very pretty, blue and white, and, with due care, may last for ages.

January 111, 1721, the Emperor's general of the artillery, together vish Father Fridelly, and a gentleman called Stadlin, an old German, and a watch-maker, dived as the ambiliador's. He was by birth a Tartar; and, by his conversation, it appeared he was by no means ignorant in his profession, particularly with respect to the various or appositions of gunpowder used in artificial fire-works. I asked him, how long the Charles had known the use of gun-powder? he replied about two thousand years, in fire-works, according to their records, but that its application to the purposes of war was only a late introduction. As the veracity and candour of this gentleman were well known, there was no room to question the truth of what he advanced on this subject.

The convertation then turned on printing. He faid he could not then afcertain precifely the antiquity of this invention; but was abfolutely certain it was much ancienter than that of gun-powder. It is to be observed, that the Chinese print with stamps, in the manner that cards are made in Europe. Indeed, the connection between stamping and printing is so close and obvious, that it is surprising the ingenious Greeks and

Romans, so famous for their medals, never discovered the art of printing.

On this occasion, Father Fridelly told me, that several of the inissionaries, who had the good fortune to be in favour with the Emperor, had often solicited that Prince to become Christian, and allow himself to be baptised; but he always excused himself, by saying, he worshipped the same God with the Christians; and that such a change of religion might occasion some disturbance in the empire, which by all means he would endeavour to prevent. However this be, it is certain that, on Christmas day, he sent one of his chief eunuchs to the Italian convent, with orders that prayers should be offered for him; which was accordingly done, and the cunuch remained in church all the time of divine service.

Next day, the ambaffador had another private audience of the Emperor, at the palace of Tzan-shuyang. The weather being very cold, the hall was warmed with several large chafing dishes filled with charcoal. We staid above two hours; during which time His Majesty talked very familiarly, on various subjects, particularly history; wherein he discovered himself well acquainted with that of the Holy Scriptures, as well as of his own country. He said, that the chronology of the Chinese was far more ancient than that of the Holy Scriptures; but observed, that it ended back in fabulous accounts, concerning which nothing certain could be determined.

As to Noah's flood, he affirmed, that, at or near the fame time, there was a great deluge in China, which destroyed all the inhabitants of the plains, but that such as

escaped to the mountains were faved.

He then discoursed of the invention of the loadstone, which he said was known in China above two thousand years ago; for, it appeared from their records, that a certain ambassador, from some distant island to the court of China, missing his course, in a storm, was cast on the Chinese coast, in the utmost distress. The then Emperor, whose

name I have forgot, after entertaining him hospitably, sent him back to his own country; and, to prevent the like misfortunes in his voyage homeward, gave him a compass to direct his course.

The Emperor also confirmed most of the particulars mentioned above, concerning printing and gunpowder. It is from the Holy Scriptures, most part of which have been translated by the missionaries, that the learned men in China have acquired any knowledge of the western ancient history. And their own records, they far, contain accounts of translations of much greater antiquity.

At taking leave, the Emperor told the ambaffador, that he liked his conversation. He defired to be excused for fending for him in such cold weather, and smiling, said,

he knew the Russians were not askaid of cold.

I cannot omit taking notice of the good nature and affability of this ancient monarch on all occasions. Though he was now in the eightieth year of his age, and fixtieth or his reign, he still retained a sound judgment, and sonses entire; and to me seemed more sprightly than many of the princes his sons.

The third, Mr. Secretary Lange and I dined at the French convent, where we found Signor Mezzobarba. I never had an opportunity of feeing that gentleman at our lodgings, as nothing passed between him and our ambassador but messages of common

civility and compliment.

The fourth, I rode from our lodgings, through the city, and went out at the north gate, at which we entered on our arrival at Pekin. I proceeded eastward to the end of the north wall, and then along the east wall to the fouth gate, at which I entered, and returned to our lodgings. This tour took me up about two hours and a half, at a pretty round trot; and, at the same rate, I reckon I could have rode quite round the city in less than five hours; whence a judgment may be formed of the circumference of the walls. The substantial are very extensive, especially to the east and south, and, being interspersed with many burying places, all inclosed with brick-walls, planted with cypress, and other ever-greens, contribute much to beautify the neighbourhood of this great city. The Chinese are extremely attentive to the fencing and ornamenting these groves or burying places; a natural consequence of their uncommon respect for their parents and relations while living, and of their extraordinary veneration for them when dead. Annually, on certain days, they resort to these groves, carrying provisions along with them, and celebrate a kind of feast, in commemoration of their deceased relations.

I shall give an example of the silial duty of the Chinese, in a story I have often heard assirtmed for true.—A youth, finding his parents reduced to extreme poverty, and knowing of no means for their relief, went and sold himself as a slave, and, having received the price from his master, immediately brought it to his aged parents. When this was spent, the boy had no other resource than to run away from his master, and sell himself again to another; and this he practised for several times, with the same view, although he knew the severity of the law in such cases.

The 6th, while walking through the street, I observed an old beggar picking vermin from his tattered cloaths, and putting them into his mouth; a practice which, it seems, is very common among this class of people. When a Chinese and Tartar are angry at one another, the Tartar, in reproach, calls the Chinese louse-eater; and the latter, in return, calls the other fish-skin coat; because the Mantzur Tartars, who live near the river Amoor, subsist by fishing, and, in summer, wear coats made of the skins of sishes. But this habit is used only in summer, for in winter they wear furs.

The 7th, the Emperor fent us a present of various forts of fine fruits, particularly some excellent oranges. On this occasion, Father Fridelly told me, that the tree was

3 E 2

ftill standing at Canton, from which the seed was taken, that the missionaries first sent to Portugal, where at has prospered so wonderfully; and, from the place who exist was brought, bears the name of the China-orange. I doubt not that with due care, some others of the rare fruits and plants in this country, can tea itself, might be propagated in Europe, or in some of the American colories.

I cannot tell whether the coffee-tree is to be found in Chin; but I am certain that none of its feeds are prepared and drunk there, as among the Perium, Turks, and

Europeans.

the 8th, the weather was much miller, the wind foutberly, with a final arizzling

rain, enough to by the diffagreeable du 1.

Next da a secretary Lange and I rode though the firests, to the eaftern convent, to vifit our friend Friderly. As we passed, we observed a pageer diverting a clowd. On our coming near, he played several nicht with great de terries. He took an landful of small penel, formerly mentioned, with holes in the middle or them, and laid them on a table. He then thrust them into his nother, one by one, with his angue; and this he continued to perform, till the whole was exhausted. In cer this, he suspended an iron chain, of round links, about four feet long. The then took a mouse out of a box, and made it dance upon the table, quite loose. Then the mouse, at his order, went in at one link of the chain, and out at another, till it alceaded to the top; from whence is, came down again, the contrary way, without missing so much as one single ring.

The 12th, the Emperor came from Tzan-flu-yang, to his palace in the city.

The 13th, the master of the ceremonies came to invite the ambastador to court on the 15th, the first day of the new moon, and, according to the Chinese computation, the first day of the new year. I his is one of their highest selftivals; and, what added to the solemnity of the present, was its being the beginning of a new seculum or space of fixty years, observed by the Chinese; besides, the Emperor had reigned all the last seculum, and was going to enter on the second. On this occasion were to be affembled several Tartar princes, particularly the Kutuchtu, and the Tush-du-Chan, together with many persons of distinction from Korea, and all the dominions of China. This feast

begins on the first day, and continues during the increase of the moon.

The 15th, we went early to court, and found most of the grandees assembled in the court-yard, sitting on their cussions, and a sew of them in the great hall. We entered the court at the great gates, which are reldom opened, except on such extraordinary occasions. The Emperor soon came, and seated himself upon his throne, which was more magnificent than that at Tzan-shu-yang, but like it plain and unornamented. His Majesty was dressed in the same manner as at our first audience. We were placed within the hall on the right of the throne, and Signor Mezzobarba, with the mission-aries, at no great distance from us. In the mean time, all the people of distinction, who came from distant places, made their nine bows to the ground without the hall: and, as there was not room in the hall to contain one half of the company, many of them remained in the court during the whole time of the audience. Our entertainment was almost the same as at our first audience; which, therefore, I shall not describe.

The Emperor was very cheerful; and fent for feveral of his old acquaintance to fpeak with him. The Tush-du-Chan, and some other l'artar princes, were placed on the lest of the throne, with the Emperor's sons and grandsons. In a word, this assembly exceeded, in number and quality, any thing of the kind I ever saw. I was in hopes to have seen the Kutuchtu on this occasion; but was informed that the Emperor, who shows great respect to this venerable priest, detained him in his private apartments.

This palace occupies a large space of ground, encompassed with an high brick-wall. There are several streets for servants and officers of the household. Many of the houses are high, and covered with yellow varnished tiles, which appear like gold in the tun. Northward from the palace is a large canal, of an irregular figure, where the imperial samily livert themselves by fishing. This canal is artificial; and the earth dug out of it has roised an high bank, from whence you have a full view of the city, and the country adjacent, to a considerable distance. This mount rises to a ridge, which is planted with trees, resembling the wild and irregular scenes of nature that frequently present themselves it this country. The canal and mount are of an equal length, which I compute to be about an English mile. This must have been a work of vast expense and labour; and, it must be confessed, contributes greatly to the beauty of the place.

The 16th, was spent in receiving visits of compliment from the ministers and officers of the court, on occasion of the new year.

Next day, the vilits were returned by Mr. Secretary Lange and Glazunoff, in name of the ambasiador.

The 18th, some of the retinue, accompanied with a Chinese friend, went to a great market, held in the suburbs, about a nule without the city to the south-west. Here we sound a number of toys, and things of value, both new and second-hand, exposed to sale in the open street.

Near this clace flood a magnificent temple, the doors of which being open, we walked into it, and faw, standing at the fouth-end, a monstrous image, about twenty-five teet high, curved and gilt, having twelve arms and hands, a frightful visige, and great goggling eyes. By the touch it seemed to be made of a kind of plaster. This image is called Fo, which signifies God in the Chinese language. Whilst we walked about in the temple, many people entered, who kneeled and bowed several times to the image; after which they retired without taking notice of us, or of any body else. In all the leser temples I had formerly seen, I found a great number of images of inferior deities or repoted saints; but this was occupied by Fo only, without any rival.

From the temple we went to a public tea-house, where we saw many people drinking tea and smoking tobacco, from thence to a tavern, where we dined; and in the evening, returned we the city.

Next day, I was prefent at the representation of a kind of farce, in the public street, not far from our sedgings. There were about twenty strollers assembled on this occasion, who entertained the crowd with many legerdemain tricks, and unnatural gestures.—The stage was covered with fills-strass of various colours.

During the initival there are many such stage-plays performed in all the public streets. You also find often high crosses erected, on which are hoisted a number of pendants, and streamers of party-coloured fills, that make a proxy appearance. At this season all the shops are shut; almost no business is done; and the people go about, dressed in their best cleath, as on holidays in Europe.

The 20th, the ambassador, and all the gentlemen of the retinue, were invited to dine at a public-house in the city, by a young Chinese gentleman.—And all of us accepted the invitation, except the ambassador. Our friend was so polite as to send chairs for his guests about ten of the clock; and, at eleven, we reached the house, which was the largest of that fort I ever saw, and could easily contain six or eight hundred people. The roof was supported by two rows of wooden pillars. This tavern consisted only of one apartment, great part of which was filled with long tables, having benches on each side for the accommodation of the company. During the time of dinners.

dinner, we were entertained with muse, and after it, by a company of players that tained by the house, who daily act plays on a stage creeked at one side of the remains

None but people of fashion come to this place.

When a person intends to treat his friends at one of these houses he sends previous notice of his design, with a note of the company, and the sum to be hid out on e an of them.—Agreeably to these orders, things are executed with the greatest punct unity. The expense on each of our company could not be less than three or four ourses of silver, as we staid the whote day, and had a splendid entertainment, consisting of many courses and deserts, prepared and served in the pest saffino of the counter. It cannot but observe on this occasion also, the order and dexterity with which the servants performed their parts in such a numerous affembly. I shall not pretend to give try account of the play only that the company seemed highly pleased; and the perferences consisted of both men and women, well dressed and of decent behaviour.

At feveral tables the people were employed in gaming; some playing at cards, others at dice and daughts. I saw no money among them, though I was informed some of the Chincse play very high. In the evening, we took leave of our hospitable friend,

and returned to our lodgings.

The day following, Father Paranian fent us a present of a large sturgeon, and some other fresh fish, brought from the river Amoor. These can only be carried to such a distance in the coldest season, when they are preserved fresh, by being kept frozen among the snow. This method is practised with success in the northen countries; for, provided the fish is immediately exposed to the frost after being caught, it may be carried in snow for many miles, almost as fresh as when taken out of the water.

The 22d, I went along with our new Chinese friend, named Siasiey, to see a manufactory of China-ware, standing on the bank of the river Yu, about twelve English miles eastward of the city. After arriving at the place, we passed through several shades and houses, where I saw a number of people at work. The ovens, in particular, seemed very curious. But my view was so carsory and superficial, that I could form no judgment of the materials, or manner of making these cleanly and beautiful vessels, which still remain unrivalled by the similar productions of any other nation. I enquired into the truth of the opinion which the Europeans entertain, "that the clay must lie a cen-"tury to digest before it is fit for us;" and was told by a master-workman, that a few months preparation was jufficient. So far as I could observe, they made no secret at this place of what they were employed about. I was, however, told, that, to the fouth, the Chinese are more cautious, and carefully conceal their art from strangers. One thing I firmly believe, that, although the Europeans understood the art of making porcelain, the Chinese would undersell them at every market in the world. This valuable manufacture is carried on in most of the towns in China; and as it is fold but a little above the rate of common earthon-ware in Europe, the materials of which it is composed can neither be rare nor costly. This important branch of trade brings an inamenfe treasure anto the country, and affords employment to vast numbers of poor, who otherwise would be useld, and burdensome to the public. Besides china, they also make a kind of delf, or earthen-ware, for the use of the lower class of people.

Next day, I happened to meet two gentlemen from the peninfula of Korea. Their phyfiognomies were nearly the fame with those of the Chinese, but their dress different. What surprised me most was, that they were as ignorant of the spoken Chinese language as I was, and delivered themselves by an interpreter. When they have any thing material to communicate they put it in writing, which is easily understood by the Chinese. They write in the same manner as the Chinese, from the top of

the

the page, in straight lines to the bottom, with a pencil, like those commonly used by

painters.

Korea is a fine country, subject to China, situated betwixt the long wall and the river Amoor, and runs out into a point, towards the island of Japan and the eastern occan. The country is very plentiful, and abounds with corn and cattle.

CHAP. XI. — Occurrences at Pekin continued; the Festival held at Court on the New Year, &c.

THE 24th, the master of the ceremonies came to invite the ambassador to the festival of the new year, which is always when the moon is at the full, to be held at the imperial palace of Tzang-shu-yang on the 29th.

in the mean time, the cold continued very piercing, so that I saw horses, with loaded

carriages, cross the ditches, without the walls of the city, upon the ice.

The 29th, chairs were fent from court to carry the ambassador, and gentlemen of the retinue: we arrived there in the evening, and lodged in a house near the palace. Near our lodgings was a pretty garden with a canal, on which was a small pleasure-boat. In the middle of the canal was raised an artificial mount, planted with some barren trees, in imitation of nature. We ascended by a winding path to the top of the mount, from whence we had a fine view of all the country around.

The 30th, being the first day of the festival, we went to court. We were met at the gate by the matter of the ceremonies, who conducted us to the bottom of the stairs of the great hall, where we took our places in the open court-yard, among a numerous assembly of grandees, whom we found sitting cross-legged on their cushions. After waiting about a quarter of an hour, His Majesty appeared, and seated himself upon the throne; upon which all the company stood. The Chincse made their bows, as is usual on such occasious, but we were permitted to make our compliments in our own fashion. It seemed somewhat strange to a Briton, to see some thousands of people upon their knees, and bowing their heads to the ground, in most humble posture, to a mortal like themselves.

We were immediately brought into the hall; and the ambaffador was conducted to the throne, in order to congratulate His Imperial Majesty on the anniversary of the new year. Our station on this occasion, as at the first audience, was to the right of the throne. All the princes, the Emperor's sons and grandsons, together with the Tushdu-chan, and other persons of high distinction, were placed to the lest, opposite to us. As the customs of the Chinese are, in many instances, quite contrary to those of the Europeans, so, I have been informed, that, among them, the lest hand is the place of greatest honour. After we had drunk a dish of tea, the Emperor beckoned to the ambassador to come to him again, and enquired into the customs and ceremonies at the cours of Europe on sestivals of this nature; and sing, at the same time, "he had been informed, that, after drinking the King's health on such occasions, the Europeans broke the glasses. He approved (he said) of the drinking part; but he did not comprehend the meaning of breaking the glasses;" and laughed heartily at the joke.

The great hall was, by this time, almost full of company; and a number of people

of distinction still remained in the area, who could not find room in the hall.

The entertainment now began to be ferved up. The victuals were carried about in great order, and placed before the company on large tables. All the dishes were cold.

cold, except those fct before His Majests, who supplied us plentifully with hot visions from the throne.

Dinner being ended, the sports were begun by a company of violities, composed of Chinese and Tartars. Many of them were almost raid, having to cloud but tight canvals drawers. They performed their part in the area before the all. When any of them was severely bruised by his antagonal, or raids turt by fall, a ich in quently happened, the Emperor sent him a cordial, and ordere that to be precedy, hence read Sometimes also, when he perceived the combatants too easer all ware, and given to part them. These instances of humanity acts very and it leads to the area of these wrestlers received such shocking speciacles in rector robbs. It is may on these wrestlers received such blows and falls, as are sufficient to have known breath out of their bodies.

To the wrestling succeeded many other games and is a figure in the formers, armed, some with lances, others with back a constraint of the first in the formers.

gels, acted their parts with great dexterity.

Then appeared two troops of Tartars, clocked vith a strong in the second as one has bows and atrows, and mounted on hobby-horses. At first, they whered as one has but, after some skirmishes with their arrows, the parties were received, and began to dance to a dismal tune of vocal and instrumental music. The dance was intercupted by a person in a frightful mask, of a tall stature, diested and mounted like the Tartars, who, they said, represented the devil. After making several unsuccessful attacks, on the united body of the Tartars, this formidable hero was at length killed by an acrow, and carried off in triumph. During the dance, each Tartar had a small basket in one hand, and an arrow in the other wherewith he scraped on the basket, keeping time to the music. This scraping sounded a little harsh to an Italian ear; for I could observe Signor Mezzobarba and his retinue smiling at the performance.

While the Tartars performed in the court, one of the Emperor's sons, a prince of about twenty years of age, danced alone in the hall, and attracted the eyes of the whole company. His motions were at first very slow, so that he seemed scarcely to move at all; but afterwards became more brisk and lively. The Emperor was cheerful, and seemed well pleased with the different performers, but particularly with an old Tertar, who played on a chime of little bells, with short ivory rods. The instruments of music were very various, and all tuned to the Chinese taste. The Emperor told the ambassador, that he knew well their music would not please an European ear, but that every nation

liked their own best.

The dancing being over, there was hoisted up a large vessel, resembling a tub, between two posts erected in the area for that purpose. In the vessel were placed three boys, who performed many dexterous tricks, both in the vessel and on the posts, too tedious to mention. By this time the sun was set, and the company were soon after dismitted

for the night.

Next day, the rejoicings were renewed. We did not, however, go to court before the evening, because the fireworks would not begin till the sun was set. On our arrrival, we were conducted through a garden, westward from the palace, in the middle of which stood a large building, with covered galleries all around. Before the house was a canal, having over it a drawbridge. We took our places on the gravel-walk, just under the gallery, where the Emperor sat with his wives and ramily. Hard by us was the Kutuchtu in his tent, having one of his lamas standing at the door. This priest never once appeared out of his tent during the whole show. All the grandees and officers of state were seated on their cushions along the bank of the canal. The machinery for the sire-

works

everks was placed on the other fide of the canal, and melody was purposed to go thither, except the people who makes II

About five of the clock a fig. 1 we have the integration of vot that counks, by a rocket let fly from the pales, that has held; and, in the space of a tewn in this, n any thousand lanterps were able to the clothest were could be proceed different colours, red, blue green, and vot the control on pulls about the control of feathered over all the garden; when exhibited a country and pulls about the control of t

Another figual was then given, for playing off the rockets. They fixing a great value, of beautiful colours. The rockets were eccompanied with what I finall call crackers, for went of a proper name. Their expedient relembled the reports of many great guns, fired at certain intervals, and exhibited a view of many charming colours, and forms of fire. These, with a sew fireworks of different kinds intermixed, continued for the space of three hours.

Opposite to the gallery where the Emperor sat was suspended a large round vessel, about twenty seet in diameter, between two posts about thirty seet high. A rocket sent somethe gallery lighted a match, harging from the vessel, which immediately caused the bottom of it to drop down with a loud roise. Then sell out a lattice, or grate-work, all on fire, and hung between the vessel and the ground, burning suriously, in various colours. This continued for ten minutes, and really exhibited a most curious sight. It seems this lattice-work was composed of materials that immediately kindled on being exposed to the air; for no perion was seen near the machine.

The grate-work bing expire until there appeared a lighted match, hanging from the middle of the vericle, and bunning up to it. As foon as the fire reached the vericle, there is paper-lenterns, of various colours, dropped from it, and hing in a finaight line, blow one another, between it and the ground; which immediately cauched fire of then felves, and formed a beautiful and well proportioned column of party coloured light. After this fell out about ten control we pilate of the function, but of a leffer fize; these also took fire as foon as they expend. This tend continued till the number of one thousand lanterns fell from the vessel, which diminished every time, till the last was very small. I must contast this presented a delightful object to the spectators.

I could not help being furprifed at the ingenuity of the at A, in crowding fuch a number of lanterns into fo finall and firple a machine at this feeted to be; and, at the fame time, with so much order, that all of them dropped and kindled of themselves, with equal regularity, as if he had be them fall from his hand; for not even one of them was extinguished by accident, or in the least en angled by another. This concluded the first day's entertainment.

The 31st, in the evening, we returned to court, where was opened a new scene of fire-works, which continued, with great variety, till ten o'clock at night.

The 16 of February, we went again to court, where the fire-works vere refumed in many different well executed defigns. What pleafed me most, was a finall mount, raifed in the middle of the garden, from which spring a stream of white and blue fire, in imitation of water. The top of the mount contained a cavity, in slape of a large ura, from which the fire rose to a prodigious height.

Opposite to the gallery, where the Emperor sat, were creeked three large frames, about thirty feet high each. On one was a monstrous sigure of a dragon; on the second, a man on horseback; and the third represented an elephant, with a human vol. VII.

figure on his back. All these were composed of a deep blue fire, and were interwoven with vines and grapes, hanging about on all sides, of white, red, and blue fire.

Besides these, there were exhibited, on this occasion, many other ingenious designs of fire-works, which far surpassed any thing of the kind I ever saw, though I have been present at performances of this nature exhibited at St. Petersburg by the artists in Europe. Besides the art displayed in the contrivance and figure, these works furnished, in particular, a wonderful variety of most beautiful colours, far exceeding my ability to describe. I must confess they far outdid my expectations, and even common same, which seldom lessess things of this nature.

The following day, the Emperor gave the ambassador a private audience, and enquired how he liked the diversions and fire-works. On this occasion, the Emperor repeated what has been already observed concerning the antiquity of illuminations composed of gunpowder; and added, that, although fire-works had been known in China for more than two chousand years, he himself had made many improvements upon them, and brought them to their present perfection.

The 3d, we returned to the city, in a cold frosly day, and the wind at north-west. We found the rejoicings still going on at Pekin; for stages were erected, and plays

represented, in all the principal streets through which we passed.

The affairs relating to the embassy being nearly finished, we began now to prepare for our journey to the westward, which was to take place as soon as the extremity of the cold was abated.

The 9th, three missionaries, Paranim, Demail, and Moran, came to pay their respects to the ambassador, and beg the favour of him, that Signor Nicolai, one of their society, might be permitted to accompany him in his journey to Europe, which was granted, provided it was agreeable to the Emperor. The reason of this request was supposed to be, that Signor Mezzobarba having returned to Rome without accomplishing the ends of his embassy, the Emperor, who favoured the cause of the Jesuts, had concerted with them to send Nicolai to the court of Rome, in order to represent the state of this affair before Mezzobarba could a rive.

Next day, the Emperor fent three officers with presents to His Czarish Majesty; the chief of which were, tapestry for two rooms, neatly wrought on a rich silk stuff; a set of small enamelled gold cups; some japanned cups, set with mother of pearl; three slower-pieces, curiously embroidered on tassety; two chests of rockets, prepared in the Chinese sashion; about twenty or thirty pieces of silk, in most of which was interwoven the dragon with five claws; a parcel of different sorts of curious sans for ladies; also, a box containing some rolls of white Chinese paper, the sheets of which were of a size much larger than common; besides several other toys, scarce worth mentioning. From these particulars it appears, that these two mighty monarchs were not very lavish in their presents to each other, preserving curiosities to things of real value.

The 11th, several officers came from court with presents to the ambassador, and every person of the retinue, corresponding to their different stations and characters; and, so minutely and exactly was this matter managed, that even the meanest of our servants was not neglected. The presents, consisting of a complete Chinese dress, some pieces of damasks, and other stuffs, were, indeed, of no great value. They were, however, carried along the streets, wrapped up in yellow silk, with the usual parade of things belonging to the court; a circumstance which is reckoned one of the greatest honours that can be conferred on a foreign minister.

Next day, the Emperor fent to ask the ambassador, whether he included accomparhim to a hunting-match, in a forest not far distant from Pekin; to which his Excellent

readily agreed.

The 13th, I dined with one of my Chinese friends, called Fangfung. In going sluther, I met in the street two men riding on asses, with their servants leading them by the bridle. I soon perceived they were Kawlees; which is the name given by the Chinese and Tartars, to the people of Korea, whom I have mentioned above.

The 14th, the weather was very fine and warm.

The 15th, we went to a fair in the suburbs, which is held the first day of every new moon; where we found many things exposed to sale, not commonly found

in shops.

The 16th, the weather being favourable, I took a ride round the walls of the city; which I performed, at an easy trot, in the space of four hours: whereby the compass of Pekin may be nearly computed. The suburbs, especially to the east and south, are very extensive, and, in many places of them, the buildings are equal to those within the walls.

The 17th, being now on the point of our departure, in order to make the most of the short time we had to slay, I rode about twelve miles eastward from Pekin, accompanied with a Chinese friend, to the banks of the river, which I found crowded with a number of barks, of different sizes, which are constantly employed in carrying provisions, and other stores, to the city, from distant parts of the country. I saw many vessels failing down the stream, towards the south-east. And I was informed, there are nine thousand nine hundred and ninety-nine vessels constantly employed on this river: but why confined to such an odd number, I could neither learn nor comprehend. During a month or six weeks in winter, this river is frozen over; at which season, provisions are conveyed by land-carriage, or along the ice.

On this occasion also, I visited the China manufactory, in order to try whether I could learn any thing of that curious art. But, though the peeple were very complaisant, and shewed me every thing I desired them, I returned as ignorant as I went thither; and I am persuaded, that, before a person can get any knowledge of the assair, he must be bred a potter, and have time to inspect its whole progress; of which these people seem

to make no fecret.

The fields along the banks of the river are well cultivated, producing fine wheat, and other forts of grain. I faw also great plantations of tobacco, which they call tharr, and which yields very considerable profits, as it is universally used in smoking, by persons of all ranks, of both sexes, in China; and, besides, great quantities are sent to the Mongalls, who prefer the Chinese manner of preparing it before every other. They make it into a gross powder, like saw-dust, which they keep in a small bag, and fill their little brass pipes out of it, without touching the tobacco with their singers. The smoke is very mild; and has quite a different smell from ours. It is reported the Chinese have had the use of tobacco for many ages.

I observed, that, in cold weather, the Chinese chewed a kind of nut, about the bigness of a nutmeg, which they called beetle; it is of an astringent quality. They say, it both

keeps them warm, and cleans their teeth.

Next day was spent in preparing for our journey.

On the 18th, all our gentlemen dined with my Chinese friend, named Siasiey, where we met with a friendly reception, and a sumptuous feast. After dinner, our hospitable landlord put about his cups very freely. At last, he took me by the hand, and desired I would let the ambassador return, and remain with him; and he would give me my choice

of which of his wives or daughters I liked best. I could not but return my friend hearty thanks for his obliging offer, which, however, I thought it not proper to accept.

Next day, I went to fee the market where provisions were fold. It was a spacious oblong, spread with gravel, very neat and clean. The butchers had their shops in the shade, running quite round the place. I saw little beef, but a great deal of mutton. In the middle was a great store of poultry, wild-sowl, and venison; but what surprised me not a little, was to find about a dozen of dead badgers exposed to sale. The Chinese, it seems, are very fond of these animals, which are accounted unclean in other parts of the world. All the Chinese merchants have the art of exposing their goods to sale, dressed up in the most advantageous manner; and, even in purchasing any trisling thing, whatever the case be that holds it, it is half the cost, and often exceeds it in value.

The 21st, being the day appointed for hunting with the Emperor, at one of the clock in the morning, horses were brought to our lodgings, for the ambassador and those who attended him. We immediately mounted; and, after riding about fix miles, to the fouth-west of the city, at break of day we reached the gates of the park called Chayza. where we were received by an officer, and conducted through the forest to a summerhouse, about a mile from the gate, in which the Emperor had slept the preceding night. This was a small but neat building, having a double row of galleries, open to the forest on all fides, and an avenue leading to it from the gate, planted with feveral rows of trees. At some distance from the house we dismounted, and were met by the master of the ceremonies, who conducted us into a gallery. As foon as we entered, the good old Emperor, who had rifen long before our arrival, fent one of his eunuchs to falute the ambassador, and ordered us tea and other victuals. On the south side of the house is a canal, filled with clear water, and feveral large fish-ponds, which make a great addition to the beauties of this charming place. At a convenient distance from the house, stood about a thousand tents, where the courtiers and grandees had lodged the night before. Breakfast being over, the Emperor, who was very fond of arms, sent to defire a fight of the ambassador's fowling-piece. He returned it, with several of his own to be shewn to us. They had all match-locks. The Chinese are possessed with a notion, that flints, in their country, acquire a moisture which hinders their firing. But, as far as I could perceive, the air had little effect upon our flints.

A fignal was then given that the Emperor was coming; upon which all the great men drew up in lines, from the bottom of the stairs to the road leading to the forest, all on foot, dreffed in their hunting habits, the fame with those used by the officers and cavalry of the army, when in the field, and armed with bows and arrows. We had a proper place affigned us, and made our bows to His Majefty, who returned a gracious fmile, with figns to follow him. He was feated cross-legged in an open machine, carried by four men, with long poles rested on their shoulders. Before him lay a fowling-piece, a bow, and sheaf of arrows. This has been his hunting equipage for some years, since he left off riding; but, in his youth he went usually, every summer, several days journey. without the long wall, and carried with him all the princes his fons, and many perfors of diffinction, to the number frequently of some thousands, in order to hunt in the woods and delerts; where he continued for the space of two or three months. Their provisions were restricted to bare necessaries, and often to what they caught in the woods of Tartary. This piece of policy he practifed chiefly with a view to harden the officers of his army, and prevent their falling into idlenels and effeminacy among the Chinefe and, at the lame time, to let a good example of the auterifies he recommended by

living on the fame hard fare he prescribed to others.

As foon as the Emperor had passed, the company mounted and followed him at some distance, till we came into the open forest, where all formed into a semicircle, in the centre of which was the Emperor, having on his less thand about eight or ten of his sons and grandsons, and the ambassador on his right, about fifty paces distant; close by him were the master of the chace, with some grey-hounds, and the grand salconer with his hawks. I could not but admire the beauty of these fine birds. Many of them were as white as doves, having one or two black feathers in their wings or tails. They are brought from Siberia, or places to the north of the river Amoor.

Our wings being extended, there were many hares started, which the company endeavoured to drive towards the Emperor, who killed many of them with arrows as they passed; those he missed, he made a sign to some of the princes to pursue, who also killed many of them with arrows; but no other person was permitted to draw a bow, or slir from the line. The same rules of hunting I formerly observed are practised by

the Mongalls.

From the open field, we continued our route westward, to a place among thickets and tall reeds, where we sprung a number of pheasants, partridges, and quails. His Majesty then laid aside his bow and arrows, and carried a hawk on his hand, which he slew as occasion offered. The hawks generally raked in the pheasants while slying;

but, if they took the reeds or bushes, they foon caught them.

After proceeding about two or three miles farther into the forest, we came to a talk wood, where we found several sorts of deer. The young men went in and beat the woods, whilst the rest of the company remained without. We saw much game pass us; but nobody drew a bow till the Emperor had killed a stag, which he did very dexterously, with a broad headed arrow: after which the princes had leave to kill several bucks; among which was one of that species that bears the musk, called *kaberda* in Siberia, of which I have formerly given a description. The Chinese musk is stronger, and therefore preferable to that from northern parts.

We had now been fix hours on horseback, and, I reckon, had travelled about fifteen English miles, but no end of the forest yet appeared. We turned short from this wood southwards, till, coming to some marshes overgrown with tall reeds, we roused a great many wild boars; but, as it was not the season for killing them, they all escaped. The hunting these fierce animals is reckoned the most dangerous of all kinds of sport, except the chace of lions and tigers. Every one endeavoured to avoid them; and several of them run furiously through the thickest troops of horse. The Emperor was so cautious as to have a company of men, armed with lances, to guard his machine.

We continued the sport till about sour o'clock, when we came to a high artificial mount, of a square sigure, raised in the middle of a plain, on the top of which were pitched about ten or twelve tents, for the imperial family. This mount had several winding paths leading to the top, planted on each side with rows of trees, in imitation of nature. To the south was a large bason of water, with a boat upon it; from whence, I suppose, the earth has been taken that formed this mount. At some distance from the mount, tents were erected for the people of distinction, and officers of the court. About two hundred yards from if, we were lodged in some clean huts, covered with reeds. The Emperor, from his situation, had a view of all the tents, and a great way farther into the forest. The whole scene made a very pretty appearance.

As foon as we alighted, the mafter of the deremonies was fent by the Emperor to affect the ambaffador how he liked flieir manner of hunting. He made a furtable return, according, at the fame time, the great honour done him on this occasion.

The Emperor then fent us great plenty of dressed provisions of all kinds; and the officer who brought them pointed out several dishes, which His Majesty sent from hown table, confishing of mutton, venison, pheasants, and other forts of vild fowl.

After dinner, the Emperor fent two of his chief cunuchs to compliment the at mulfador, and inform him, that he intended to entercain him with the baiting of the continuous tigers, which had been kept fome time, cooped up in a ffrong grate-work, for that purpose. The hill where the Emperor's tent stood was fur counded with leveral rank of guards, armed with long spears. A guard also was placed before the ambailador's and the rest of the tents, to secure the whole encampment from the fury of these state. animals. The first was let out by a person mounted on a fleet herse, who on med the door of the coop by means of a rope tied to it. The tiger immediately left his cage, and feemed much pleafed to find himfelf at liberty. The horfemen rode off at rull speed, while the tiger was rolling himself upon the grass. At last he rose, and growled, and walked about. The Emperor fired twice at him with bullets; but the deliance being confiderable, miffed him, though the pieces were well pointed. Upon which His Majesty sent to the ambasador, to try his piece upon him; which being charge ! with a fingle ball, he walked towards the animal, accompanied by ten men, around with fpears, in cale of accidents; till, being at a convenient distance, he took his aim, and killed him on the spot.

The fecond was let out in the fune manner. The horseman, retiring a little, lend the creature rolling upon the grass like the first. He then returned; and shot at him with a blunted arrow; which roused the animal to such a pitch, and made him pursus so closely, that the horseman narrowly escaped within the ranks, where the furious tiger, endeavouring to leap over the men's heads, was killed at the foot of the mount.

The third, as foon as he was fet at liberty, run directly towards the Emperor's tent, and was in like manner killed with the spears. A man must be well mounted and armed who hunts this kind of animals in the woods; where they must be much stronger and swifter than these we saw, which had been confined for many months, and whose limbs, by want of exercise, were become stiff and unwieldly; but, notwith-standing this disadvantage, the courage and nimbleness even of these animals was very surprising. I have seen four forts of them, the tiger, panther, leopard, and lynx, which are all very serce; but the first is the largest and strongest.

The Emperor in his youth was very fond of hunting these creatures in the woods of Tartary; but now he confines himself within the limits of the forest, where there is game

fufficient to gratify any sportsman.

The killing of the tigers finished the diversion of the day; after which we retired to our huts, where we were entertained with a plentiful supper sent us by the Emperor. After supper, an officer was sent from His Majesty to the ambassador, who brought the tiger's skin he had shot, telling him that, by the laws of hunting, he had a right to it.

Next morning, the fport was refumed, and varied little from that of the preceding day. About three o'clock, afternoon, we came to another fummer-house in the middle of the forest, where the Emperor lodged the following night, while we lay in a small neat temple in the neighbourhood, and were entertained by His Majesty in the same manner as before.

The 23d, about eight of the clock in the morning, the master of the ceremonies waited on the ambassador, in order to conduct him into His Majesty's presence to receive his audience of leave. The Emperor received him in a most friendly manner in his bed-chamber. He repeated his assurances of the great friendship he entertained for

His

His Czarish Majesty, and expressed great respect for the personal merit of the ambassador. After which the ambassador took leave, and we returned to our lodgings in the city.

I shall only observe further, that this forest is really a most delightful place, is well stored with a variety of game, and is of great extent, as will easily be conceived from the account I have given of our two days hunting. It is all inclosed with a high wall of brick. The value of this park, so near the capital, shows the magnificence of this

powerful monarch.

The 24th, the ambassador was invited, by the president of the College of Mathematics, to see the observatory, which is situated immediately within the east wall, and commands an extensive prospect. The building is not magnificent, but is furnished with a fine armillary sphere, globes, telescopes, an orrery in good order, and other mathematical instruments of the best European workmanship. This college was erected by the present Emperor, who spares no cost to bring it to perfection; and the meanest of his subjects, who discover a genius for science, or any useful art, are sure to meet with due encouragement.

The Chinese are indebted to the present Emperor for what progress they have made in astronomy. He chiesly promoted this study by countenancing the Jesuits and other missionaries; for I have been informed that, before their arrival in this country, the inhabitants could scarcely calculate an eclipse. The Chinese, it is indeed pretended, understood astronomy previous to that period: but the knowledge of it was in a great

measure lost during the many fatal revolutions of the empire.

From the observatory we ascended, by a broad rising passage, to the top of the city-wall where we saw about sisteen horsemen rising their rounds, which we were told they performed day and night at stated times. The wall is built of brick, and is about twenty-sive or thirty seet high, having embrasures and square towers at equal distances, and a wide deep ditch, which may be filled with water at pleasure. On the top of the wall there is a pleasant walk, broad enough for sisteen horsemen to ride abreast. I suppose the whole is, perhaps, not composed of solid bricks, but the middle filled up with earth and rubbish.

The 25th, we went to all the three convents, and took leave of our friends the missionaries.

The 26th, the ambassador went to the tribunal for foreign affairs, and received a letter from the Emperor to His Czarish Majesty. On this occasion, the president acquainted his excellency, that he must consider this letter as a singular mark of favour to his master, as their Emperors were not in use to write letters of compliment to any prince, or, indeed, to write letters of any kind, except those which contained their orders to their subjects; and that the Emperor dispensed with so material a custom, only to testify his respect for his Czarish Majesty.

The original of this letter was in the Chinese language, and a copy of it in the Mongalian. It was folded up in a long roll, according to the custom in China, and wrapped in a piece of yellow filk, which was tied to a man's arm, and carried in procession before the ambassador. All persons on horseback whom we met dismounted, and stood till we had passed them. Such veneration do these people pay to every thing belong-

ing to the Emperor.

The same day, the ambassador had a visit from a young gentleman, a descendent of the samous Chinese philosopher Consucius, whose memory and works are greatly respected in China. From what I could learn of this eminent philosopher, he appears to have been a person of extraordinary parts, extensive knowledge, and exemperate the same person of extraordinary parts.

plary

plany virtue. On account of fue's rare qualities, his family is fill honoured and esteemed, even by the Emperor his felf.

Char. XII.—So he Account of the profess Emperor of Cilia, it C' nofe Thom & .

BETORE we leave Chira, I field make a few general rune in containing a containing country, drawn from the best information I could procure; and half began with the long wall.

The long, or endless wall, as it is commonly called, encompasses all the not had well parts of China. It was tall, about fix hundred years ago, by one of the Imperors, to present the firea at incursions of the Mongails, and other will in Technic, who made a predict of the bling numerous troops of horse, and invating the country distributions places. The Charte frontiers were too extendive to be guard distributed both in hummerous open to, who after plundering and destroying a wealthy country, returned to their own, leaded with poils.

The Chiefe finding all precisions ineffectual to put a ftop to the inroads of such unbarians, at last rejoived to built this famous wall. It begins in the province of Louise, at the bottom of the bry of Mankin, and proceeds across rivers, and over the appeal the highest mountains, and interruption, keeping nearly along the finding of interruption ocks that the normality to the north and west, and, after remaining for the rads about the level transfer English miles, ends in impatibule mountains and

lendy deterts.

The foundation could be of large blocks of fquare stones laid in mortar; but the responsibility of bridge. The viole is so strong and well built as to need also stone reposition in such a day climate may remain in this condition for many ages. It height to breakly are not equal in every place; not, in lead, is innecessary they should. When the ied on responsible, where we hard can pass, it is about filters or twenty seet high, and or ad in proportion; but when running through a valley, or crossing a river, there has been been about takey seet high, with square towers, at the distance of a box-best from one another, and embrasars at equal distances. The top of the wall is slet, and proved with broad free-stone; and where it rises over a rock, or any eminence, you also ad by a time only slone stair.

The bridges over rivers and torrents are exceedingly near, being both well contrived and executed. They have two stories of arches, one above another, to afford

Inflicient passage for the weters on sudden rains and sloods.

This wait was begun and completely finished in the space of five years; every fixth man in China being obliged to work bindels, or find another in his stead. It is reported, that the labourers stood so close, for many miles distance, as to hand the materials from one to another. This I am the more inclined to believe, as the rugged rocks would prevent all use of carriages; nor could clay, for making bricks or cement of any kind, be found among them.

The building of this wall, however, was not the only burden the Chinese supported on this occasion. They were also obliged to keep a numerous army in the field to guard the passes of the mountains, and secure the labourers from being interrupted by

their natchful enemies the l'artars, who all the while were not idle spectators.

I am of opinion, that no nation in the world was able for such an undertaking except the Chinese: for, though some other kingdom might have suraished a sufficient number of workmen for such an enterprise, none but the ingenious, sober, and parsi-

monious Chinese, could have preserved order amidst such multitudes, or patiently submitted to the hardships attending such a labour. This surprising piece of work, if not the greatest, may justly be reckoned among the wonders of the world. And the Emperor, who planned and completed it, deserves same, as much superior to his who built the famous Egyptian pyramids, as a performance of real use excels a work of vanity.

Besides the main wall, there are several semicircular walls, which have the long wall for their diameter, at the places least fortisted by nature, and at the open passes of the mountains. These are strongly built, of the same materials and architecture with the long wall, and are of considerable extent, sometimes on one side of the main wall, and sometimes on the other. In these walls are strong gates, constantly defended by a numerous guard. They are intended to prevent a surprise, and stop sudden in applicants of the enemy. Even these lesser bulwarks seem works of great expence and labour, but

nothing in comparison with the long wall.

After the Chinese had finished their wall, they had a respite for a considerable time from the invasions of their enemies, reaping the fruits of their labour in peace and quietness. However, about five hundred years ago, the western Tartars found means to get through the wall, and, with a powerful army of horse, entered the country, carrying terror along with them wherever they went. They at last became masters of the greatest part of China, and kept possession of it for many years, till the Chinese, exasperated by their tyranny, took advantage of their negligence, and drove them back with disgrace to their ancient habitations in the deserts. The Chinese now began to re-establish their former government, to restity disorders, and repair desolations made by the Tartars. From this time they enjoyed long peace, till the satal year one then sand six hundred and forty, when the Mantzur Tartars conquered the whole empire of China; which conquest they retain to this day, and, by their prudent management and mild government, seem in a fair way to keep it.

I shall briefly relate in what manner this strange revolution was brought about by so small a nation as the Mantzurs; a people whom the Chinese dispised, and who bear no greater proportion to the Chinese than the inhabitants of Wales to the rest of Great

Britain.

It happened, during a time of profound peace, that a certain prince of Mantzur, going to fetch his bride, from a place bordering on the province of Leotong, was, without provocation, attacked by a party of Chinese, and slain, with most of his attendants,

against all laws of justice and good neighbourhood.

The Tartars, though highly exasperated, behaved with uncommon moderation on this occasion. Before proceeding to make reprisals, or taking any step whatever with that view, they sent ambassadors to the court of Pekin, demanding satisfaction for the outrage committed upon one of their princes. Their complaints were neglected; and the matter, under various pretences, delayed, from time to time, till the Tartars, losing all patience, and positively insisting on an answer to their demands, were affronted, and contemptuously dismissed by the Chinese ministry, to whom the Emperor had referred them. This treatment highly enraged the whole race of the Tartars, who immediately vowed revenge; and having got an army together, entered the province of Leotong, which lies without the wall, wasting all with fire and sword.

Befides this war with the Tartars, several other circumstances concurred to bring about a revolution in the empire; for at the same time there happened a great insurrection in China, which at last became general. The rebels were commanded by one named Li, who, after having defeated the imperial army sent to oppose him, invested and took vol. vii.

Pekin itielf. And the Emperor, rather than fall into the hands of his furious subjects,

first hanged his daughter, and then himself, on a tree in his own garden.

The Emperor's general, Usangue, still kept the field with the small remains of his troops, but altogether mable to resist the powerful army of the robels. He therefore retired northwards; and all hopes of success being lost, came to a resolution of calling in the Tartars to his affistance. He promised them many rewards, and particularly the province of Leotong, if by their aid he succeeded in forcing the robels to obedience. Kum-ti the Tartar chief, readily hearkened to the proposal, and the terms were soon settled between the parties.

In confequence of this agreement, the new allies joined armies, which were both commanded by the Tartar, and advanced towards the long wall: but before they reached the gate, Kum-ti, the Tartar prince, died, and left his fon, Xungfti, a child of feven years of age, for his fucceffor. This accident did not retard the progress of the expectation; for this child was left to the guardianship of his uncle, a man or great abilities and address, and perfectly qualified to conduct the important project then on

foot.

Immediately after the death of the kum-ti, the young prince was proclaimed King of the Mantzurs, and commander in chief of the combined army of Tartars and Chinese. In order to magnify the number of Tartars in the army, and consequently render themselves more formidable to the rebels, they luckily sell upon a stratagem, which was, to dress all the Chinese soldiers in Tartar habits: and, at entering the wall, the real Tartars in the army did not exceed eight thousand men, though indeed they were

followed by strong reinforcements.

When they arrived at the wall, the Chinese, who kept a guard, seeing a child at the head of such an array, which they imagined to consist wholly of Tartars, were so surprised, that they immediately opened the gates, without the least resistance, crying out, long live the Emperor. This circumstance, added to the reports of so formidable an army of Tartars, increasing daily by reinforcements, struck such terror into the rebels, that many of them so sook their leader. The Tartars still advanced, and had daily skirmishes and several battles with the rebels, in which the latter were descated. In the mean time, the guardian took care to leave garrisons in all the towns through which they passed, with strict orders to use the inhabitants with the greatest hu vanity. Such mild behaviour gained the affection of the nation in general. And they he proceeded, from one province to another, till the whole empire submitted to his jurisdiction.

The war, which had lasted some years, being now at an end, and peace re-established, the Chinese thanked the Tartars for their good services, and desired they would return to their own country. But the Tartar Chief, on various pretences delayed his departure, till such time as he found his party sufficiently strong to six his nephew,

Xungshi, on the imperial throne of China.

Xungsti died a young man, and left his second son, Kamhi, to succeed him. On finding himself at the point of death, he called for his cldest son, and asked him, whether he would take upon him the government? but, being young and modest, he was unwilling to accept, and begged his father would excuse him on that account. Then Kamhi was called, and asked the same question. He was better instructed, and briskly answered, he was ready to obey his father's commands, and would take the weight of the government upon him. This answer so pleased the Emperor, that he named him his successor; and accordingly on the death of his father, be was proclaimed Emperor; and his behaviour has shown him altogether worthy of that honour. It is, it seems,

agreeable

agreeable to the laws and customs of China, that the Emperor chuse, for his succession,

which of his fons he pleases, without regard to primogeriture.

Although the Emperor's name is Kanhi, the western Tartas call him Boghdockun, signifying chief governour; but the Chinele, in talking of him, say Vensor, which signifies many times ten-thousand years, meaning, let the Emperor live so long. This is a high title in the Oriental phrase. His sons are called Van, signifying ten thousand years, and are distinguished by the names of Van the signify was the second, &c. according to their age.

Kamhi, the present Emperor, has about twenty sons and, it is said, he intends the sourteenth for his successor. He is a prince eminent for prudence and valour; and

bad, at this time, the command of an army againfulthe Kultaucks.

Kamhi hath yet the remains of a graceful person. His countenance is open, his disposition generous, and he gives great application to business; qualities absolutely necessary to manage the great affairs with which he is intrusted. His reign has been long and prosperous, though sometimes disturbed by dangerous insurrections, and open rebellions; but his good fortune and prudent conduct, overcoming all difficulties, restored public tranquillity; and he has now, for a considerable time, enjoyed persect peace and happiness. Although the government of China is absolute, it requires no small sagacity and skill to rule an empire of such extensive dominions, and containing so numerous subjects.

After Kamhi had fettled his affairs at home, the first step he took was to gain the western or Mongall Tartars to his friendship. The Chinese had no enemics so formidable. The Emperor knew their valour, and had employed many of them in his army, who did him signal services on many occasions. To effect this, he began to form alliances with their princes and chiefs, by intermarriages between their samilies and his, where these could take place; others he allured by rich presents; so that they are at present little better than his subjects: and, by this master-piece of politics, he succeeded more effectually than if he had employed the whole force of China. The friendship of the western Tartars is of great importance to the Emperor; for they not only supply Pekin with provisions, the produce of their slocks, but, upon any emergency, can bring to his affistance sifty thousand horse on a short warning.

It may easily be imagined, that great armies and strict discipline are necessary to guard so extensive territories, and keep such a numerous people on their duty. The number of soldiers reported to be in the empire is prodigious, and almost incredible. I am well informed, that the single province and city of Pekin contain no less than one hundred and twenty thousand effective men, all well paid, cloathed, and armed.

Notwithstanding the vast revenues which are necessary for the support of the government, the duties on inland trade must be very easy; for I was told by a merchant, that he could live in the capital, and trade in what branches of business he pleased, for paying only one ounce of silver annually to the Emperor. Such easy taxes show the great economy and moderation of Kamhi, whose reign is called the reign of great peace and rest; in Chinese Tayping.

The Tartars call China, Kitay, and the people Kitaytzi; but the Chinese call them-

felves Chum-quotigen, that is, the people of the middle region.

The empire of China is, in a manner, separated from all the rest of the world; situated in a fine and healthy climate, surrounded by the ocean to the east and south; by a chain of high rocks and barren mountains on the north and west, along which runs the famous wall as an additional defence. But what, in my opinion, is a greater security to the empire against invaders than any thing yet mentioned, is the barren

3 G 2 desert,

defect, stretching for several hundred miles wellward, where none but T runs can sub-slift, and which scarce any regular a my can pass. The seas, to the south and the cale, are indeed open, and China might be attacted on that side; but, I am pasted a l, no prince will think it proper to distuib his own repose, and that of such a pasted propele, inclined to peace with all their neighbours, and ratissied, as they seem, with their own dominions.

I know but of one nation v ho could attempt the concurst of Chila vish and probability of fuccess, and that is Russa; but the controlles of the expression in this quarter of the world, as to exceed even the bounds of embition ideal, and the Russa's feem to entertain no define of each air; that is further.

Who part of China I faw is modify fair, interspected with hills and rifing grounds. The whole is pleated and violationated, producing wheat and other grain, regether

with abundance of cattle and pour tra-

Besides the necessaries, the Chircle have many of the superstudies of like, particularly fine fruits of various kinds, too tedious to mention. They have likewise mines of gold, silver, copper, lead, and iron. They set a greater value on silver, in proportion to

gold, than the Europeans do; fo that gold is exported to good advantage.

In China are many navigable rivers and canals, cut to great distances, for the convenience of water-carriage. The merchants are immensely rich by their inland and soreign trade, which they carry on to great extent with the Russians and Tattars, besides the vast sums of money they receive annually from the Europeans in exchange for tea, China-ware, and other merchandise. The trade also to Japan, and the neighbouring islands, is very considerable. What is most remarkable in their payments is, that they receive only dollars, crown, and half-crown pieces; undervaluing small receives, of equal veight and standard, though they melt all down directly into bars of different sizes.

The is univerfally used, at all times, and by persons of all ranks. Both the green and bobes grow on the same true, or rather shrab, called by the Chine's may. The green test is called train-tray, and the bobes our-tray. When the leaves are gathered at the proper season, they are put into large ket less, and dried over a gentle sire, which makes them crumple up, and prevents their crumbling to do to which they would infallibly do, without this precaution.

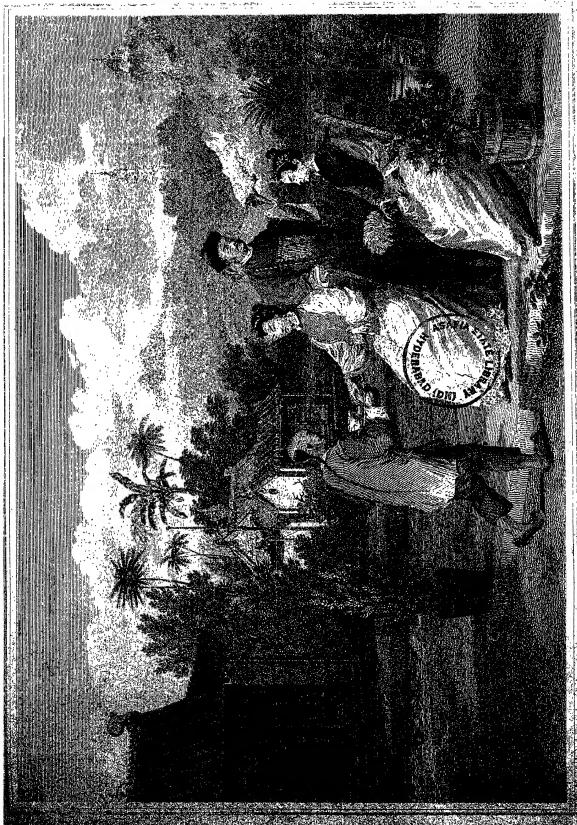

What is defigned for bohea is mixed, in drying, with the juice of a certain plant, which gives it the colour and flavour, and qualifies that flurpness, which, in confirm drinking, is hurtfel to some tender constitutions. The cultivatine, gathering, dressing, and packing, of this useful plant, must employ a great number of hinds, and particu-

larly of old and young people, who would be unfit for hard labour.

The high rates at which tea is fold in Europe are a little furprifing, confidering the prices in China. For, at Pekin, the price of the best tea, either green or bohea, is half an ounce of silver the Chinese pound, which is equal to what it would be at two shillings a pound in England. And, allowing the freight and duties to be high, yet the profits seem somewhat extravagant. I shall only add, on this subject, that the tea commonly sold at Pekin is preferable in quality to what is imported to Europe from Canton; and that the Chinese drink it without sugar, although sugar is a produce of the country, and consequently very cheap.

Several of the Chincse manufactures are brought to great persection, especially that of weaving silk, damasks, and other stuffs, which are partly worn by the natives, and partly exported. Silks are the common dress of the better fort of people, of both sexes, and coarse cotton cloth that of the lower class. They use almost no woollen

Physical B. cold of the

1

cloths, because, they say, in their climate, they gather too much dust. They have great abundance of raw filk. They make no muslins, nor fine chints; neither are

The Chinese, it is well known, are excellent performers in several mechanic arts, particularly as potters, dyers, japanners, joiners, and paper-makers. In the article of these much used.

Their workmanship in metals is but clumfy; except only founding, at which they paper-making, they excel even the Europeans. are very expert. The arts of flatuary, sculpture, and painting, have made but small progress among them. They have excellent water-colours of all forts, but none in oil. The chief study of their painters seems to be landskip painting; and I have seen some They have many quarries of fine marble, of different colours; but not so much as a of their performances in this way very natural.

The making of clocks and watches was lately introduced, under the protection of fingle statue is to be seen in the Emperor's garden. the present Emperor; who, at his leisure hours, amuses himself with whatever is cu-

The Chinese are a civilized and hospitable people, complainant to strangers, and to one another; very regular in their manners and behaviour, and respectful to their surious, either in art or nature periors; but, above all, their regard for their parents, and decent treatment of their women of all ranks, ought to be imitated, and deserve great praise. These good qualities are a natural consequence of the sobriety and uniformity of life to which they

The general regularity and decency of manners among the Chinele, is obvious to all who see and observe them with the least attention. And, as they are fingular in have been long accustomed. many things, beyond most other nations, they are so likewise, in this point of polity,

which I cannot omit taking notice of in my transient remarks. It may eafily be imagined, that, in to populous a city, there must be many idle perfons of both fexes; though, I believe, fewer than in molf other cities of the world, even in those of much less extent than that of Pekin. In order to prevent all diforderly practices, as much as possible, the government have thought fit to permit, or connive at, certain places in the suburbs, for the reception and entertainment of prostitutes, who are maintained by the landlords of the houses in which they dwell, but not allowed to straggle abroad. I have been informed that these ladies of pleasure have all separate appartments, with the price of each lady, defcribing, at the fame time, her beauties and qualities, written over the door of her apartment, in fair legible characters, which price is paid directly by the gallant, by which means, these affairs are conducted without note in the houses, or diffurbances in the neighbourhood. Noify brawls are without note in the houses, or diffurbances in the neighbourhood. Noify brawls are without note in the houses, or diffurbances in the neighbourhood. Noify brawls are virtually every feldom, hardly every known at Pekin. way undergo vers levere penalties. It is likewife to be observed, that these houses are calculated for the meaner fort of people only; to that any perfor who hath the leads regard to his credit or reputation, carefully avoids being feen insthem.

I must, however, take notice of one thocking and unnatural practice, which appears more extraordinary in a country to well regulated and governed as China; I mean that more extraordinary in a country to well regulated and governed as China; I mean that more extraordinary in a country to well regulated and governed as China; I mean that more extraordinary in a country to well regulated and governed as China; I mean that more extraordinary in a country to well regulated and governed as China; I mean that more extraordinary in a country to well regulated and governed as China; I mean that more extraordinary in a country to well regulated and governed as China; I mean that more extraordinary in a country to well regulated and governed as China; I mean that the first of the country of the country to well regulated and governed as China; I mean that the country is a country to well regulated and governed as China; I mean that the country is a country to well regulated and governed as China; I mean that the country is a country to well regulated and governed as China; I mean that the country is a country to the country is a country to the country of the country is a country to the country is a country to the country of the country is a country of the country is a country of the country of t poor, what have more wives than they can maintain. To prevent the death of these shiften, there are public barbakes appointed for their reception, and people feat out children, there are public barbakes appointed for their reception. emparent due.

Announce de la contraction de la in the Christian religion. And of such persons do the greatest part of the Chinese Classification confirms.

I field now make a few remarks upon the ladies, who have many good qualities best of a their beauty. They are very cleanly and modest in their dress. Their eyes are their and to little, that, when they laugh, you can scarce see them. Their hair is that as jet, and neatly tied up in a knot, on the crown of the head, adorned with artificin hewers of their own making, which are very becoming. The better fort, who are succommon exposed to the cir, have good complexions. These who are inclined to the old, take care to add a total of white and red paint, which they apply very nicely.

Line ladies of diffice the are foldom permitted to stir abroad, except to visit their nearest reladicists, and attended by their their is the women of all ranks thay pretty much at home. The smallness of their term with a collers them unable to walk to any considerable distance, makes their considerable distance, their considerable distance, which are renewed as occasion requires, to prevent their growing. This cuttom prevails universally, the Tartar ladies residing in thin a only excepted, who appear to have no inclination to conform to this fashion.

This fashion was introduced into China by a great princes, who lived some ages ago. She was a lady of extravalicary beauty and virtue, and has obtained the reputation of a faint; but, it is a ported, her feet resembled those of birds; on which account she kept them always careled wrapped up, and concealed even from the Emperor her husband. The ladies of the court followed her example, which, of course, soon became general. The Chinese women never pare their nails, but suffer them to grow to the full length. This proves no in pediment in embroidery, and other needle-work, in which they are combantly employed. These they finish with extraordinary neatness,

as fully appears from iome ipecimens of them brought to Europe.

The Chinese deserve great praise for their patience in finishing completely every thing they undertake. And, what is still a greater recommendation, their labours are not the effect of whim or caprice, but calculated to serve some useful purpose. The public works about the city of Pekin are instances of these observations. The streets, in particular, are the finest in the world. They are spacious, neat, and straight. The canals which supply the city with water have, at proper distances, commodious stone-bridges over them; and these canals are not only built with freestone on the side, but the bottoms of them paved with broad cut stones, in the neatest manner imaginable. There are but sew springs of soft water in Pekin. And the water, in general, though a little brackish, is by no means unwholesome.

The Chinese are generally of a middle fize, and stender make, but very active. They are honest, and observe the strictest honour and justice in their dealings. It must, however, be acknowledged, that not a few of them are much addicted to knavery, and well-skilled in the arts of cheating. They have, indeed, found many Europeans as great proficients in that art as themselves. And, if you once cheat them, they are sure to

retaliate on the first opportunity.

As to the religion of the Chinese, I cannot pretend to give a distinct account of it. According to the best information I could procure, they are divided into several sects, among which that of the Theists is the most rational and respectable. They worthing one God, whom they call Tien, the Heaven, or the highest Lord, and pay no religious homage to the images of their countrymen. This sect has subsisted for many ages longer than Christianity, and is still most in vogue; being embraced by the Emperor himself, and most of the grandees, and men of learning. The common people are generally idolaters.

idolaters. The few Jews and Mahometans residing here are supposed to have entered China about six or seven hundred years ago, in company with the western Tartars. There is a very inconsiderable sect, called Cross-worshippers. They worship the holy cross; but have lost all other marks of Christianity; which makes it probable the gospel was preached in this country before the arrival of the missionaries, but by whom is uncertain. The Christians at present are computed to amount to one hundred thousand, of both sexes. I have been told, the Chinese have also some Atheists among them.

I had feveral opportunities of talking with their physicians. They generally both propare and administer their own prescriptions, and are very little acquainted with the modicinal system practised in Europe. As they have but sew chemical preparations, their chief study is the virtues of plants, which they apply on all occasions, and often with success. They seel the patient's pulse for four or five minutes, and very seldom let blood, even in high severs. They compare a sever to a boiling pot, and choose rather to take the fire from it than diminish the quantity of liquor it contains, which would only make it boil the faster. Bathing and cupping are much practised; and they even apply fire, in some cases, particularly for pains in the joints, and gouty disorders. On these occasions, they apply a lighted match, composed of the downy substance that grows on mugwort, to the part assected; which making a scar, either entirely removes, or

confiderably mitigates the pain.

I cannot but take notice, on this occasion, of a famous plant, called Gingsing, which grows in the province of Leotong. The root of this plant is so much esteemed for its physical virtues, that it is gathered by people appointed by the Emperor for this purpose only, and is valued at the rate of about twenty-five pounds sterling the pound weight. It is to rare, that the Emperor fent two pounds of it only in a present to His Czarish Majestv. There are two forts of it; one looks as if candied, the other like small parsley roots, and has something of the same taste. They slice down or pound it; and, after infusion and slight boiling, they give it to the patient. I could never learn from their physicians what specific qualities this plant possetled, only that it was of univerfal use. I have heard many stories of strange cures performed by it; that persons feemingly dead have, by its means, been reflored to health. I believe indeed, it may be a good reftorative plant; but, if it really has any extraordinary virtues, I could never discover them, though I have made many experiments on it at different times. I should irragine this rare plant might be cultivated, with fuccels, in the country, where it grows naturally; and it appears improbable the Chinese would negl & such a sovereign remedy.

The great men in China follow the example of the western Asiatics, in keeping eunuchs to attend them, who are their counsellors, and chief considents, on all occasions. Their business is to take care of the women; and, being in a manner detached from the world, they are much respected. Castrating is a trade in China; and so skilful and dexterous are the performers, that sew die under their hands. I knew a man who, being reduced to low circumstances, sold himself to be made an eunuch after he was

thirty years of age.

The language of the Chinese is composed chiefly of monosyllables, and seems to me easily acquired; at least, as much of it as is sufficient for conversation. The difficulty of learning their letters, or rather marks for words, cannot be so great as is commonly represented; for you scarcely meet a common hawker who cannot read and write what belongs to his calling. It requires, indeed, much labour, and considerable abilities, to acquire the character of a learned man in China.

I have

I have mentioned above a few only of their manufactures. I cannot omit taking nonce of their paper, which is made both of filk and cotton, and is remarkably clean and smooth. They had been in possession of this art for they ages before they had any intercords with the Europeans, as appears from their records. Their sleets are made larger than any I ever saw in Europe; and, though they generally write with hair pentle. I have seen Chinese paper if an bore our pens and ink very well.

Then ink, called tout, is well known to our painters and defigners. I was told the chief ingredient in it is the burn to use of animals. They have several forts of it; but the best is very cheap, and is made up in pastes of various figures, stamped with characters in letters. It is generally put up in little stat boxes, sometimes double the value

or the lik they contain.

I find here infert a specimen of Ch rese numbers, and a few capital words, with those or is relative nations.

The people of Indostan have little or no correspondence with China, being separated from it by impassable mountains, and barren descrits. They call China by the name of Kitat, and the Emperor Amola-Chan.

The Indians call Russia Olt.

The first great Lama, or high Priest near the borders of India, is called Beyngin-Bogdu; and hath his residence at a place called Digerda.

The fecond is the Delay-Lama, refiding at Lahassar. The Indians call him Tamtzy-

Kenna. From Digerda to Lahassar is a month's journey on foot.

The third is the Kutuchtu, called by the Indians Tarranat, who resides at the Urga, not far from Sclinginsky.

The prefent Great Mogul is called Sheyhalim-Patisha. The Indian married priests are the Brachmans; their monks are called Atheits, and their military men Resput.

VOL. VII. g H

The Indian and Tangut numbers, together with these few notes. I had from the Faquian Se'inginsky; who told me, that the greatest penance that could be imposed on any of their order, was a pilgrimage to visit these three high priests. Though I have histed as actaing concerning them during my say at Selinginsky, yet, as I shall have no opportunity in acture to learn any thing more about those great men, I think it will not be

race ptable that I have inferted the foregoing short notes.

held, from my carly youth, a strong inclination to visit the eastern parts of the world; and Providence assorded me an opportunity, far beyond my expectations, of gravilying my curiosity in the most ample manner. For never, perhaps, were those countries in a more flourishing condition than under the samous Emporers Kambi and Peter the First; and, perhaps, such another conjuncture of circumstances may not happen for several ages. I have now finished my account of the observations I made during my residence in China; and, had we returned by the same route we went eastward, I should here conclude my Journal; but, as our route was different in many places, particularly in our passage by water from Selinginsky to Tobolsky, I shall proceed to make my remarks on such places and things only as I have hitherto had no opportunity of mentioning.

CHAP. XIII.—Our Departure from Pekin; Occurrences, &c. during our Journey buck.

MARCII 2d, we fent off our heavy baggage early in the morning; and about noon, left the fine city of Pekin, accompanied by feveral Chinese gentlemen, who were to return with Mr. de Lange, whom His Czarish Majesty had appointed to remain as his agent at the court of Pekin. In the evening, we reached a large town, called Sangping-ju, where we lodged.

The 4th, Mr. de Lange and our friends returned to the city, and we continued our sourney. I have already mentioned most of the remarkable towns through which we passed; and, as little happened on the road worth notice, I shall only observe, that we

were entertained by the governors in the fame hospitable manner as before.

The 9th, we arrived at Kalgan, the last town of any note, and about three miles distant from the long wall. We staid here to o days, in order to provide bread, rice,

and other provisions, for our journey over the Hungry Defert.

Next day, the governor waited on the ambassador, and invited him to see some Chinese troops perform their exercise. We accordingly walked into an adjacent field, where we found about four thousand infantry drawn up in six lines. All their guns had match-locks. The field officers were on horseback, armed with bows and arrows; but the subalterns on foot, having spears, longer or florter, according to their rank. All the troops kept a prosound silence, till the commanding officer ordered the signal to be given for beginning the exercise, which was done by siring a small gun, mounted on the back of a camel. Upon this signal, they advanced, retreated, and performed their evolutions, according to the discipline of the country, in a very regular manner. After sinishing this exercise, the whole corps at last divided itself into companies of sifty men each, and kneeling, as close to one another as possible, continued in this posture for some minutes; they then rose, and running to their former stations, quickly formed themselves, without the least confusion. From what I observed of their motions, I am of opinion they might easily be taught any exercise whatever.

The 12th, we arrived at the gates of the main wall, which we found open. Here the commander, and several officers of the guard, met us, and invited the ambassador

o walk into the guard room, and drink a dish of tea. After this repose, we proceeded few notes farther; but as it was too late to get over the mountains that night, we

ook up our quarters a la village where we had I siged in going to Peki a

what morning early we left the village, and travelled along the banks of a torrest, thick runs through a ne row valley between the mountains. If he corne account the ood, we croffed this rivulet averal times. The weather was very fine and warm, and he face of this country cathe andy pleafant. On the fides of the rocks, we far featcied many near cottages, furrounded with little gardens, and crooked tree, which the hinele have naturally defigned on forme of their panned and China-ware. After traelling about a dozen of English miles, we ascended the rocks by a winning-path, ormed by art; and, as foon as we reached the fummit, we entered on the plain; for here is little or no descent into the desert from the opening between the rocks. I oberved, that all the rivers which firing from the mountains on the north and west of China, run towards the fouth and fouth-east; and those that rise westward of the deert, direct their couries through Siberia, to the north and north-west; which makes t evident, that the rocks and deferts are higher then any places in China or Siberia. We now felt a very fentible change in the cir. In the morning, we left a warm clinate; but here we found the defert all covered with flow. We travelled about five niles farther, and then pitched our tents on the banks of a finall rivulet.

The ambassed or, considering that to travel along with the heavy baggage would render the journey, at this scason, tedious and disagreeable, resolved to leave it under a proper guard, and proceed by the shortest and specdiost way, to Selinginsky. Long, our former conductor, being appointed in the same station, was consulted on this occasion, and agreed to make one of our company; while the Chinese guard, commanded by another officer, took care of the baggage. Our party consisted of the ambassador, Mr. Kreilitz, mysels, and four servance. We packed up beds, and a few necessaries,

and fet out directly.

We rode very hard all the 14th; and, in the evening, took up our lodgings in a Mongalian tent, along with the family. The outfide of the tent was hung round with feveral pieces of horfe-fiesh, on which our landlord and his wife supped, and invited us to share their repail; but as we not provisions of our own, we defined to be excused. The disagreeable smell of this supper made us resolve to sleep in the fields for the future till we came to Selinginsky; for although the nights were somewhat cold and frosty,

the weather was dry and pleafaut.

Next day, having got fresh horses, we proceeded on our journey. Nothing of moment occurred till the third of April, when we arrived, before noon, on the banks of the river Tola. It was now nineteen days fince we left our baggage, during which came we rode very hard, changing hories generally three or four times a day; at I thin was the first running water we had seen. I cannot help taking notice of the pleasure that appeared in every face at the fight of this dream; and I need not mendou how cheesfully we regaled ourselves on this occasion. For my own part, I thought the most delicious wines of Ispahan and Thiras not worthy to be compared to this simple element, so little prized by those who enjoy it in plenty. Our bread was all spent some days before; however, we had still some mutton, with which we had been supplied, from time to time, during our journey. All this time, we observed no road; but kept mostly about one, or fometimes two days journey to the northward of our former route. The greatest danger attending this way of travelling, arose from the arrows which the Mongalls had fer in strong bent bows, covered with sand, for killing antelopes. One of our horses happened to tread on one of these bows; the arrow immediately 3 H 2

diately flew out, and fortunately hit the stirrup iron, otherwise the horse or rider would have been killed upon the soot. We had, indeed, guides to conduct us from place to place; but they were unacquainted with any shares hid beyond their own bounds.

This day, about noon, some Mongalls unluckily set face to the long grass before us, which, by means of a strong wind, soon spread to a giver distance. We immediately retired to the top of a neighbouring hill, (for now the grass around us, travelled near a mile in a dismal cloud of smoke. Some of our people, who were behind us, and unprovided with finte, were put to hard fishes, having their hair and cloaths all singed. We soudd the Tela in pretty does water, and command our journey through pleasent valleys, between gently using hells, some of a hose tops were adorned with

woods, which looked as if planted by art.

Nothing worth mentioning occurred till the morning of the 6th of April, when we reached the river Iro. Lut found the ford to frozen that we could not ride it. As our provisions were now a very all species and we were quite tired of Ising in the open air, we wanted to poss the river at any rate. There I registered is a ford, we at last found a place clear of ice, but extisvely deep. We introduced this place about forty pards broad. After getting all fate to the other side, we lighted a great fire of sticks to dry and warm ourselves, and then set forward to the rivulet Saratzyn, the boundary between the Russian and Chinese territories, which we reached in the evening. From the Tola to this place we had seen no it habitants, but here we found a few Mongalls, whichs of Russia, who hospitably entertained us with such fare as the place afforded.

The 7th, we let our early; and a moon come to a zimovey (a fingle house built for he accommodation of travellers) inhabited by a Russian, who entertained us with good bread and other hersely fare. After a short stay, we mounted, and at night ame to another of these houses, belonging to Mr. Stepnikoss, the committary of the

a avan, where we were well provided with necessary accommodations.

Next dry, we raised in good health at the town of Selinginsky; and all of us had odd resion to return our most grateful thanks to the Almighty Disposer of all events, he conducted us side through so many dangers, without the least accident becalling by of our corpery

The 10th, the an balk I r having made the conductor an handlome prefent, and anked him for his trouble and obliging behaviour, that gentleman took leave, and

turned to China.

Next day, we let out on herfeback for Irkutilly. We lodged every night in villages I the 16th, when we crimed at the Polioliky monastery, fituated on the fouth shore the Baykall Sca, as formerly observed. The superior received a d entertained us the great hespitality, and surnished us horses and sledges for passing the sea upon a ice, which we count persectly firm, though the people on the south shore were

oring and foulig their cets.

April 7th, having taken leave of the monks, we placed ourselves in the sledges, and we along a path-way upon the ice. We found several large gaps in the ice, which is for many miles across the sea, and are generally from two to five or six seet wide, as we passed on long boards, which we were obliged to carry along with us for that the spose. They are made, I conjecture, by the air, which being pent up under the ice, also out through these apertures. I observed also a number of small round holes, ich are made by the scale, who come thither for breath, and to bask themselves in sun. These circumstances render travelling on the ice extremely dangerous, except

in Lay light and clear weather. Towards evening, the ambaffador and myfelf, being provided with light fledges, put on at a great rate, in order to get in with the shore berore night. This we happily accomplished, and a rrived at a fisherman's house near the nameh of the Augara; where we found a warm room, and a boar's head, hot from the oven for forper. But, a little before fun-fet, a thick fog arose to the westward, accomproject vidi terrible thick drifts of flow, which foon covered the road upon the ice, and filled every gap and hole. Our poor people, who had not yet reached the land, were caught in the storm, forced to stop short, and lie on the ice all night, with their horfes and caringes. We had, indeed, dispatched the fishermen to conduct them to the hore; out the how continuing to fall very thick, they returned without being able to ful then. This disappointment created in us some uncasiness; but there was no remady. We are obliged to wait patiently till the morning, when they arrived in a very diffrest condition, half dead with cold and wet. However, by proper accommoaction, and he are warm liquor, they soon recovered. Next day, we sent back the alectics to the monastery; and after our people had refreshed themselves with a little fleep, when the mounted and proceeded about four miles, to the small chapel of St. Nichs. Vie had now passed all the cataracts, and there was no ice to be seen in the river; we immediately, therefore, got boats and rowed down the stream. In the evening, we put allore at a small village, where we lodged, and were plentifully provided with variety of excellent fresh fish for supper.

The 19th, in the morning, we went again on board, and, about two in the afternoon, landed at Irkusky, and dined with our old friend, Mr. Rakitin, the commandant, who met us on the river, about two hours before we landed. Some days after our arrival, Mr. Is applied was seized with a fever, which went off in a few days without any back consequences. We waited here for our baggage, which did not arrive till the second of July. During this time, little remarkable happened. We diverted ourselves with hunting and fishing; and, though we lived much at our ease, the time

grow tedious, and we wanted much to be gone.

About the 10th of May, the ice began to break up in the Baykall, and continued florting down the river, for some days, in great shoals. The weather was very hot before the ice came down; but, when this happened, an alteration was sensibly felt; for the air about the sides of the river became extremely chilly. A small part only of the 10th and the most hot the Angera, sloats down that river; the rest, being scattered to the force by the vides, is tached down as the season advances. This is accounted the most uncertainty season of the year; as people, notwithstanding all possible precautions, are very pt to conclude. I have already made some remarks on that sky, and the country acjacent; I such therefore only add, that, in summer, which is very hot, the country is much pessend with swarms of muskitoes and large grats, which are so troublesome, that those who have occasion to go into the fields are obliged to wear nots of horse hair, to desend their faces from the attacks of those infects.

July 2d, the barks arrived fale from Selinginsky, with our people and baggage. They told us many dismal stories of the hardships they had suffered in passing the deterts; but, on comparing notes, the difference was not great between their missortunes and our own.

After our people had rested a few days, and necessaries were procured for the voyage, on the 5th they shoved off, and rowed down the Angara. The ambassador, myself, and two servents, staid behind, in order to proceed in a small shallop, which had a little cabin in the stern, and was rowed with ten oars. The commandant caused it to be built

for our u'c; and as it failed quickly, and was roundly our own men, we could putfue the voyage at pleafure, without being confined to the id upon the heary banks.

The 7th, we went on boar a recompanied by the coma cast and have dether gentlemen, and fell down the river to a monatery in he neighbourhood, where we were invited to dine with the superior, who made to a read denorminant of excellent fish, and furnished us besides with store of provisions for our voyage. In the exching, we took leave of the abbot and the rest of our friends; and being affect by a rapid current, went down the river at a great rate. At high, we put ashore, and took up our quarters in a village.

As little of importance occurred during the progress of our voyage, I need not be positivalar in describing it. The banks of the river on both fides are pleasant and the trult, and beautifully discrifified with tall woods, villages, and corn-fields; and we rout devery where great abund nee of fish. But what renders this fine country extremely disagreeable, is the fwarms of mushices with which every part or it is infested. The gnats about Ilimsky, in particular, are of a much larger fize, and are reckoned riore venemous than any in Siberia; but have this good quality, that they never enter houses as the muskitoes do. The Tongus's, when they are angry with any person, wish that an Ilimsky gnat may sting him. This may appear but a slight punishment, but it marks

tne character of these simple people.

The 9th, we failed the whole day, with a fair wind and firong current, and in the evening overtook our banks. Next day, we came to a great cutaract, called Padur from the fleepness of the fall. This sall we patied safely, as there was water enough upon the rocks for our vessels. The next cataract we met with, which from its greatength is called Dolgoy, was reckoned more dangerous; for, besides the length and deepness of the pasiage, it was extremely crooked, winding from one side to another by turns, among rocks and great stones. In passing these cataracts, the pilot sits upon the bow of the vessel, and makes signs with his cap to the people at the actaracta which way to steer: for the waters, dashing against the rocks and great stones, make such an hideous noise, that not a single articulate found can be heard. The oars, besides, must be plied very hard, in order to prevent the vessel from running to either side; for, if once she touches the rocks, all the goods must infallibly be lost, and perhaps the men's lives; or which duasters there are many examples.

The 11th, we passed another cataract, called Shamansky, which is reckoned the most dangerous of them all, the channel being very narrow and crooked. Some of our company choic to walk along the banks, rather than run the risk of passing by water: but they repented of their resolution; for they were obliged to scramble over rocks, and through thickers, where they saw many vipers and other venomous creatures. We stopped at the bottom of the fall to take them on board and refresh our rowers. As

the ambaffador flaid on board, I remained along with him.

Besides these three great cararacis, there are many lesser ones, called by the country people Shivers; but, as the passing them is attended with little danger, I make no mention of them.

It is furprifing that loaded vessels should pass these falls against the stream. They are commonly warped up by means of strong anchors and cables, and on the goodness of the tackle all depends; for should it chance to give way, all is lost. This is a laborious piece of work, though not very costly in these parts; and the navigation of this river is attended with no other invonvenience, except that of striking against stumps of trees hid under the water.

The 14th, we less Angara, and entered the Tongusky, a mighty stream, formed by the Angara and another small river called Elim. The Tongusky points to the northward of the west, and is well flored with excellent fish.

We went ashore this day at a little village called Seeza, situated on a high bank of the Tongusky. Here we were met by our old acquaintance General Kanifer, who came from Elimsky to see Mr. Ismayloss. I took notice before of liaving seen this gentleman in our journey eastward. We dispatched our banks, and staid with him two days. After which, we proceeded down the river, and he returned to I limsky by where, attended only by his own servants; for, though he was a prisoner, he had liberty to go where he pleased, as an escape was impracticable in such remote per as.

The 17th, we fet fail with an easterly wind and a strong current, which carried as along with great velocity. We passed many villages, and some Tongusan huts, upon the banks, to which we made several visits. We found the mean generally employed in subject their little canoes, and the women in looking after their children and reindeer, which, at this season, lie near the huts, because the gnats will not suffer them to slay in the woods. In order to banish these troublesome vermin, they light stres all around the place of their abode; and the insects, unable to endure the smoke, immediatel, sly off. For the same reason, no person stirs abroad without carrying in his hund a small earthen pot silled with smoking coals. The canoes slaim upon the water very swilly, but the least touch of an unstillful hand overfets them. The Tonguse places himself on his knees, in the middle of his boat, keeping it as even balanced as possible; and, with a little paddle only, ventures to cross the greatest rivers. I have seen them haul to the side a sturgeon of great weight. When a Tonguse wants to go from one river to another, across a neck of land, he takes his boat upon his back, and carrier it whither he pleases.

The 19th, we were overtaken with such a heavy shower of rain, in the middle of the river, that, before we could reach the bank, our boat was half full, notwithstanding all hands vere employed in rowing, or scooping out the water. However, after much labour and disculty, we at last got to land, wet to the skin; and, what was much worse, all our bedding thoroughly dienched in water. After we had hauled up our boat and sastened it to a tree, we went into a thick wood, and kindled a great fire to warm and dry ourselves; but, the rain being abated, a violent storm of wind arose from northwest, so that we were forced to remain all night in this dismal place, at a great distance from any village. In this condition we lay, round a great fire, till next morning

The 20th, early in the morning, we left the woods, went on board our bout, and proceeded down the river. About noon, we reached a village, on the right hand, where we halted some hours to refresh ourselves and dry our clothes. In the evening, we pushed off again, and came to another village, where we lodged. On this river are great numbers of water-sowl, of different kinds, which come hither to hatch their young in summer, and sly off, to the south, at the approach of winter. I observed also a large sowl of a grayish colour, about the size of a kite; after it has hovered for some time upon the wing, if it spies a fish in the water, it stoops suddenly, strikes its prey, and even dives below water to catch it; after which it slies to the bank and eats it.

There are also wild goats upon the rocks along the shore. They are very large animals with long and thick horns. Their shaggy coat is brownish, having a black ridge down the back. They have long beards, like common goats, but are twice as large; it is surprising to see them leap from one rock to another. They go in pairs about this season; but towards winter retire in herds to the south. On the hills and in the woods are all sorts of game and wild beasts natural to the climate.

The 21st, we overtook our barks and kept in company with them till night, when we arrived at a village where we lodged. In this liver are many islands, some of which are very large, and others are strounded with light rocks shores. Most of them are covered with tall birch and pine-trees, sit so the largest ships and form a beautiful prospect. We had no need to go almore in cident to seek sport, as we found plenty of wild-ducks and other water-foul whence we carrie. As to fresh sist, we had

more of them in every vill go than we could be "ime.

The two following days we continued on veyege, throat recting the arm time worth mentioning, and, on the morning of the 2011, and tells the continue of the very sufficient of the continue of

In the evening, we arrived at the town of Yenleyshy, where we were methy our friend Mr. Becklimishost, the commandant, who conducted us first o our lodgings, and then to his own house to supper. Our banks also arriving in the evening, the whole company met again at this place, not a little happy at having it is y passed the water-tails, and escaped the dangers to which we had already been exposed, though we were

still above a thousand leagues from the end of our journey.

As we had no time to lose, our baggage was landed next day, and the barks discharged. The packing the baggage for land-carriage took up two days; after which it was transported to a place called Makosky, on the river Keat, where it was again put on board other barks, which lay ready for that purpose. The road lies to the workward, mostly through thick and dark woods; in dry weather it is tolerably good; but in harmy autumnal rains scarce passable. We staid at Yeriseysky, through the perfusion of the commandant, till we heard all was ready at the commandant.

the balle long all resped and the pople at work in cutting their outs. This feems very cuty in a climate for far to the north, and must proceed from the heat of the sum and the science of the function and the science of the function and the science of the sum and the science of the science

long upon the ground.

August 2d, we left Yenseys and no seback, accompanied by the commandant, who staid with us all night, at a village about ten miles from town. Next morning, we took leave of our friend, and proceeded to Makolsky, where we arrived in the evening,

and found the barks ready waiting for us.

The 4th, early in the morning, we went on board, and puthing off from the shore, rowed down the river Keat. The water being shallow, we made but little way the first day; but, as we advanced, it increased daily by rivers and brooks from both sides. Before we lest Makossky, we laid in provisions for three weeks, in which time we computed we would enter the Oby; for during this long navigation, there is not a single house nor village to be seen, except one religious house, possessed by three or four monks, resembling more an hermitage than a monastery.

The Keat is really a most district. It is not above the structured of the perfect wilderness, and so entangled with bestive the structure of t

The river Keat takes its rife from a lake at a finall diffurce from the Yerf; a 20, were a canal cut between them, which might easily be done, there would be a period by water from Verchaturia to the borders of (hina. But label anith The water this time employed in works of the fame nature, of much greater import to the country.

The Keat runs in a crooked channel, polaring, in general, to the west. The bostom is ouzy, and sometimes sandy. The brike, at suff, run o ten a-ground of the first banks, and the people were obliged to get into the water, and heave the notification, by the force, with levers and setting poles; besieve the a lattle mean enionices, very leave lessed with gnars and muskitoes, as this consined place, more than we had to early been in any part of our journey. They were not, indeed, to nutricrous a very had been in the heat of summer; for the nights began to be cold, and the wind not serve. However, no wind could reach us in this close place; and I even wished myster in the desert again, where I might breathe the fresh air. In short, the appearance or this place put me in mind of the descriptions given by the Poets of the river Styx.

During our tedious voyage down the dark Keat, our only diversion and exercise was shooting wild-ducks. One day, Mr. Is anyloss and myself went down the river, in a small cance, rowed by two soldiers, at some distance before the barks. We in a vich a large flock of ducks, which swam up a narrow creek, in order to avoid us. We tailed a little way after them; and, in the mean time, our barks passed us, and continued before us till night, still imagining they had not overtaken us. This day's sport cost us dear; for, our rowers being quite satigued, we were obliged to relieve them, and row in our turns, till at last we came up with the barks, both hungry and tired. To make some amends, we had a good dish of wild-ducks for supper.

The 20th, we met with two Ofteacks in their canoes, who had come from the river Oby, to catch fifth, and kill ducks, and had their fifthing tackle and bows and acrows along with them. We were glad to fee any human creature. We called them on board, and they willingly staid with us till we entered the Oby, and supplied us with plenty of fifth and wild-sowl. These were the first of the tribe of the Ofteners I had soon. I shall give some account of them when I describe our voyage down that river, or the banks of which they have their habitations.

I formerly mentioned the great abundance of black currants growing on the balls of the Keat. We found them an excellent and wholesome truit; many of our people eat great quantities of them without the least bad effect.

After a tedious voyage, with little variety, we arrived on the 28th at a 'llage called Ketskoy, a few miles distant from the Oby. After procuring, at this place, what necessaries we wanted, and refreshing ourselves a sew hours, we continued our voyage, making what way we possibly could, for fear of being frozen up, near some desert place on the Oby, before we came to Tobolsky, where we intended to land. We had no usin all the time we were upon the Keat; which was a lucky circumstance, as our oars were upon deck. Had our barks only drawn about eighteen inches water, as was intended, we should not have been above sourceen days on this river, and thereby saved much

time and labour; but, coming from China, every person in the returns had a little, which overloaded the vessels, and retarded their progress. The next day, we entered the famous river Oby, which, from its breadth and depth of water, repear at least

equal to the Volga or Yenifey, and could carry ships of considerable burden.

The 30th, we reached the first town upon the Obx, called Naria, situated on the north bank, about a gun-shot from the river, and a few miles from the mount of the Keal. It commands a fine prospect, up and down the river, and of the wood to the south. Near the town are a few corn-fields, and garden-grounds, abounding with greens and roots. This place has a small fortress, governed by a commandant. The inhabitants are generally dealers in fur, which they buy from the Osteacks; and either carry them themselves to the borders of China, where they are exchanged for the commodities of that nation, or dispose of them to merchants going thither.

The 31st, we dined with the commandant, and spent the rest of the day in laying in a stock of provisions. We found, at this place, plenty of sine sish, particularly sterlet, sturgeon, and mucksoon, and many more too tedious to mention. The last is peculiar

to the Oby and Irtish.

Here I met with Mr. Borlutt, a native of Flanders, who had been a Major in the Swedish service, and sent to this place a prisoner of war. He was a very ingenious gentleman, and had a particular turn for mechanics. The commandant treated him more like a friend than a prisoner; which, indeed, was the case of most of those unfortunate gentlemen whom the sate of war had sent to this country. His Czarish Majesty, well considering their circumstances, sent them to a plentiful country, where they could live at their ease, till peace was restored.

September 1st, having provided ourselves with necessaries, and got new rowers, our former ones returning to Yeniseysky, from whence they came. In the evening we went again on board, and, putting off in fine calm weather, rowed down the Oby at a great rate; our course being much savoured by the rapidity of the current. We pussed several villages, and a little monastery called Troytza. The banks to the north are pretty high, but to the south flat; by which means, on the melting of the snow in the springs they are overslowed to a great extent. The river runs towards the northwest, with little variation. We continued our voyage night and day, except in great darkness, or a gale of contrary wind, when we were obliged to lie by in some creek.

The Osteacks I mentioned above differ from all the other tribes of natives in Siberia, both in complexion and language. Many of them are fair, resembling the people of Finland; and they have many Finnish words in their language. Their manner of life is nearly the same with that of the Tonguse, who border with them to the eastward. In summer, they live in the woods, in huts covered with birchen bark. In winter they dig pits, across which they lay stakes, above them spread earth to keep them warm. They have a fire in the middle, and a hole in the roof to let out the smoke. During this season, they live chiefly on fish, dried and smoked, wild sowl, or what else they catch in hunting. Many of them are stout fellows, fit for any service. Two of them, with their bows and arrows, a short spear, and a little dog, will attack the greatest bear. They are dexterous archers and sishermen. We had always a number of them in canoes round our barks, who supplied us with plenty of sish and wild-sowl, of various sorts, at an easy rate. Give them a little tobacco, and a dram of brandy, and they ask no more, not knowing the use of money.

The Osteacks, though a savage people in their manner of life, are far from being barbarous; for a single Russian will travel about all their abodes, in order to purchase

furs, without fear of any violence. They are also remarkable for their honesty; and it e fmall tribute of furs which they pay annually to His Czarish Majesty, they bring put cturlly to the place appointed.

In fummer, they wear nothing but coats and fhort drawers, made of fish-skins, dressed after their fashion; but in winter, are clothed with skins of deec, and other

wild beafts.

They have no cattle except rein-deer, which fupply their children with milk; and

are, besides, of great service to them on many accounts.

As to their religion, they are ignorant heathens, like the rest of the natives of Siberia. They have many both male and female shamans, who are in great esteem among them. These shamans have many small images, or rather blocks of wood, rudely cut with a knife or hatchet, representing a human sigure, dressed up in rags of various colours, by which they pretend to foretel future events, inch as the good or bad luck of those that go a-hunting. But these are no better than others of the same species, already mentioned, who impose on the ignorance or credulity of their neighbours.

From what I have now and formerly faid concerning these poor favage tribes, it will appear that they are involved in the most profound ignorance. Their manners are so rude, and minds uncultivated, that many of them feem stupid, and altogether unmindful of any thing beyond their prefent employment. I have, however, met with men of reflection among them, who agreed with the rest of mankind in acknowledging one

great Almighty Creator of this world, and of every thing elfe.

The Archbishop of Tobolsky has of late baptized many of the Osteacks, and other natives, in a tour he made through Siberia with that view; and it is to be hoped his fucceffors will follow his laudable example.

CIIAP. XIV.—Our arrival at the Town of Surgute; our Journey from thence to Mosco; some Account of the Creature called Mammon, &c.

AFTER a voyage of ten days from the town of Narim, during which little remarkable happened, we arrived on the 11th of September, at another town, called Surgute, fituated on the north bank of the Oby, and defended by a small fort. The inhabitants, like the people of Narim, are mostly traders in furs. The adjacent country, on both fides of the river, is overgrown with dark and tall woods, where there is no cultivated ground, except a few gardens. Bread is got at a small charge, by water-carriage, from Tobolsky, and other places on the river Irtish.

In the banks of the Oby, about this place, are found great quantities of that kind of ivory called in this country mammon's horn. Some of it also is found on the banks of the Volga. Mammon's horn refembles, in shape and size, the teeth of a large elephant. The vulgar really imagine mammon to be a creature living in marshes, and under ground, and entertain many strange notions concerning it. The Tartars tell many fables of its having been seen alive. But to me it appears that this horn is the tooth of a large elephant. When, indeed, or how these teeth came so far to the northward, where no elephants can at present subsist during the winter season, is what I am unable to determine. They are commonly found in the banks of rivers which have been washed by floods. The commandant of this place had his entry ornamented with feveral very large ones, and made me a present of one of them.

I have been told by the Tartars in the Baraba, that they have feen this creature called Mammon, at the dawn of day, near lakes and rivers; but that, on discovering

them, the mammon immediately tumbles into the water, and never appears in the decident tine. They by it is about the fize of a large elephant, with a monthrous large head and horns, with which he makes his way in marthy places, and under ground, where ne conceals himself till night. I only mention these things as the reports of a rape.

ili ious and ignorant people.

I have observed, in most of the towns we passed, between Tobolicy and Yenesicki, many of these mammons horns, so called by the natives; some of them very entire and i.esh, like the best ivory, in every circumstance, excepting only the colour, which was of a yellowish hue; others of them mouldered away at the ends, and, when sawn alunder, prettily clouded. The people make fnuff-boxes, combs, and divers forts et turnery ware of them.

They are found in the banks of all the great rivers in Siberia, westward of lencousky, when the floods have vaihed down the banks, by the melting of the frow in the ipiling. I have fled of them weighing above one hundred pounds English. (I brought a large tooth, or memmon's horn, with me to England, and prefented it to my worthy friend Sir Hans Sloane, who gave it a place in his celebrated museum; and was of opinion also that it was the tooth of an elephant. This tooth was found in the river Oby, at a place called Surgute.)

The 12th, after we had been supplied with a fresh stock of provisions, and fresh rowers, we proceeded towards the next stage, called Samarofsky-Yamm, near the conflux of the Oby and Irtish. The wind being contrary, we made but slow progress. The near approach of winter, which usually begins about the first of October, made us

haften forward as fult as possible.

Next day, the wind being eafterly, we heifted our fails, and run along at a great rate; and the 14th, arrived at a finall village on the north shore. The south bank still continued low and flat. At this village we faw great quantities of wild geel, picked, and imoked, and hung in shades, for winter provisions. We had some of their drelled; but I cannot much praise them for agreeable food. The people of this place catch va? numbers of them in day-nets, more on account of the down and feathers han of the flesh, which is but of small value. We let our barks proceed, a I detained a beat to follow them, as fron as we had feen the method of catching the wild geefc. iportinian conducted us into a fractious open plain, encompassed with wood and water. Here he had his large nets, with wide mashes spread, and a small hut, made of green branches, to conceal himself. Upon the grass were scattered about a score of geesckins stuffed, some of them standing, others sitting, in natural postures. As soon as he fees a flock hying over his head, he calls, with a bit of birchen bark in his mouth, exactly like the wild geese. On hearing the call, they take a turn round, and then alight among the stuffed kins; which being perceived by the sportsman, he immediately drans a firing, and claps the nets over the whole flock, or as many of them as are within their reach. The geefe always alight and rife with their heads to the windward; to prevent therefore, such as escape the day-net from slying off, he has a deep long net, placed on tall slender poles, to windward, which entangles great numbers in their rifing. I am perfuaded this method might eafily be practifed, in other parts of the world, to greater advantage; though, I believe, there are no where fuch quantities of water-fowl, especially geese of different kinds, as in these northern climates; where, free from annovance, they bring forth their young among woods and lakes, and, at the approach of winter, fly off to the Caspian Sea, and other southern regions.

There is here one species of geese, called kazarky, of a size less than the common wild goofe, having beautiful scarlet spots about the head, and some feathers of the same colour

colour in its wings. Of this fort I faw great stocks about the Caspian Sea in winter. Besides these, there are numbers of swans, and all forts of water-fowl, natural to the climate.

The woods are flored with game, and various forts of wild-foul, particularly the coc-limoge, the heath-cock, and feveral others too teclious to mention.—. he manner

in which the coc-lange is caught by the Offeacks is formed hat curious.

They make a paling, about four or five feet high, running from any wood, along a fandy bank, to the edge of a river, having the stakes set to close that the towls connet pass between them. In this paling they leave openings, at certain distance, have enough to assort a passage for these birds; and, rather than take the wing, the cook will seek a passage from one end of the hedge to the other. In these openings are set springs, on bent branches, which, as soon as touched, sly up, and catch the sowl, either by the neck or feet. The Osteacks brought us these and other wild-sowl in greet plenty.

The 15th, in fine weather, we continued our voyage, using our fails or cars, by turns, as circumstances obliged us. Little material happened till the 19th, in the evening, when we lest the Oby, and entered the river Irtish; and, night coming on, we put ashore, where we staid till the next morning. On entering the Irtish, we had a strong current against our course, which had been down the stream, in all the different rivers,

from Selinginsky to this place.

Before I preced farther, I shall take a view of the famous Oby. It is one of the largest rivers in the world, and runs as long a course as any in Siberia, or perhaps in any other quarter of the globe. It rises in the desert, several hundred miles southward of the Baraba; and is daily augmented, by many streams of desert names, will it reaches a place called Belogarsky, where it takes the name of Oby, at the conslux of two large rivers, the Alley and the Tzaritt. These rivers joined, form the Oby. The Oby signifies both in the Russian language. But I am of opinion this river had that name long before Siberia was known to the Russians, as the natives still give it that name.

In going eastward, we passed the Oby upon the ice, at a place called Tzaustry Offrogue, where it made no great appearance, in comparison of what it does after receiving the rivers Tom, Tzulim, Keat, Irtist, and many others, when, indeed, it may be reckoned in the number of the largest rivers in the world. It points generally to the north, with various windings, till it meets the Keat, when it turns to the north-west; and runs in that direction many miles, till, meeting with the Irtish, it turns short, in a rapid current, towards the pole, swallowing up many rivers and brooks in its course, and at last, it discharges itself into the Northern Ocean, at a great bay called Obskaya-Guba, or the Lips of the Oby.

Few rivers in the world contain greater plenty and variety of fish than the Oby. The banks to the fouth produce woods in abundance, interspersed with corn-fields, and good pasturage. I have been informed, that in these parts are rich mines of copper and iron,

and even filver.

At the conflux of the Oby and Irtish are several large islands, and farther north, several villages; but only one town of any note, called Bergosa, situated on the left hand.

I may here observe, that geographers generally agree, that a line drawn from the place where the river Tanais, now called Don, discharges itself into the sea of Azof, or the Black Sea, to the mouth of the Oby, is the proper boundary betwixt Europe and Asia.

The 20th, early in the morning, we shoved off from the shore, and made the best of our way up the Irtish. In the evening, we reached Samariossky-Yamm, where we

lodged this night.

Next day, having taken on board fresh labourers, and the wind being northerly, and very cold, we put off in haste, hoisted sail, and went along at a great rate. The vind continuing from this point, was a certain sign that winter was at no great distance, and that we might soon expect to be met by shoals of floating ice.

The 22d, the north wind still continued very strong, to our great joy: for, although there are many villages on the Irtish, we dreaded the being frozen up near

fome desert place.

Next day, there fell a little fnow, which foftened the coldness of the air; but, at the same time, the wind unfortunately chopped about to the westward, and retarded our

progrefs.

The 24th, we continued our voyage; and, next day, the wind again becoming northerly, we used our sails all that day and night. We proceeded without any thing material happening, till the 29th, when we reached Demiansky, a town standing on the eastern bank.

Next day, we fet out immediately, after taking in fresh rowers. The fields we en now covered with snow, and the frost so strong, that the ice began to float in the river,

and we expected every day to be frozen up.

These signs of approaching winter insluenced Mr. Ismayloss to leave the barks, to follow as should be possible for them, while himself made the best of his way to Tobolsky, in a small boat. Accordingly, carrying me along with him, we immediately let out towards that place.

October the first, we continued rowing along near the banks, and took in fres rowers as occasion offered. The river was full of great shoals of ice, the frost strong, and much snow. In the evening, we arrived, cold and wet, at a small village, where

we lodged in a warm room, about fifty verst from Tobolsky.

Next day, the river was so covered with ice that we could proceed no farther in our boats; but luckily, in the night, there fell snow enough for sledges. We soon got horses, and such open sledges as the place afforded, and, in the evening, arrived sate at the city of Tobolsky. We went immediately to the palace of Prince Alexie Michael lovitz Cherkasky, the governor, who was an intimate friend of the ambassador. This prince was much esteemed for his capacity, as well as his great probity and honour. We supped with him, and then retired to our lodgings; but could not avoid commisserating the sate of our fellow travellers, labouring with the ice, and afraid of being frozen up every minute.

The 3d, we fent some soldiers to meet the barks, and affist them in coming up the river. And on the 5th, they arrived safe at Tobolsky, where they were next day

discharged.

We were obliged to stay here for the falling of the snow, in order to proceed on sledges, the common method of travelling in winter. At this place we thought ourfelves at home, having good lodgings, good company, and plenty of provisions, so that we waited patiently for the setting in of winter; besides, we had now a frequented road, lying through a well inhabited country, all the way to Mosco.

During our stay at Tobolsky, I was informed, that a large troop of gipsies had been lately at that place, to the number of fixty and upwards, consisting of men, women, and children. The Russians call these vagabonds tziggany. Their forry baggage was carried on horses and asses. The arrival of so many strangers being reported to Mr.

Petroff.

Fe'roff Solovy, the vice governor, he fent for some of the chief of the gang, and demanded whither they were going? They answered him to China; upon which he told them, he could not permit them to proceed any farther eastward, as they had no pastport, and ordered them to return to the place whence they came. It seems these people had roamed, in small parties, during the summer season, cross the vast countries between Poland and this place, substituting themselves on what they could find, and on solding trinkets, and telling fortunes to the country people. But Tobolsky, being the place of rendezvous, was the end of their long journey eastward; and they, with no small regret, were obliged to turn their faces to the west again.

Before I leave this new world, as it may be called, of Siberia, I think it well deferves

a few general remarks, besides the particulars mentioned in my journal.

This vast extent of castern continent is bounded by Russia to the west, by Great Tartary to the south, on the east and north by the respective oceans; its circumference is not easy to ascertain. Foreigners commonly are terrified at the very name of Siberia or Sibir, as it is sometimes called; but, from what I have said concerning it, I presume it will be granted, that it is by no means so bad as is generally imagined. On the contrary, the country is really excellent, and abounds with all things necessary for the use of man and beast. There is no want of any thing, but people to cultivate a fruitful soil, well watered by many of the noblest rivers in the world, and these stored with variety of such sine sishes, as are seldom found in other countries. As to sine woods, furnished with all forts of game and wild-sowl, no country can exceed it.

Siberia is generally plain, fometimes varied with rifing grounds, but contains no high mountains, and few hills, except towards the borders of China, where you find

many pleafant hills and fruitful valleys.

Confidering the extent of this country, and the many advantages it possesses, I connot help being of opinion, that it is sufficient to contain all the nations in Europe, where they might enjoy a more comfortable life than many of them do at present. For my part, I think, that, had a person his liberty and a few friends, there are few places

where he could fpend life more agreeably than in some parts of Siberia.

Towards the north, indeed, the winter is long, and extremely cold. There are also many dreary wasles, and deep woods, terminated only by great rivers, or the ocean; but these I would leave to the present inhabitants, the honest Osteacks and Tonguses, and others like them, where, free from ambition and avarice, they spend their lives in peace and tranquillity. I am even persuaded, that these poor people would not change their situation and manner of life, for the finest climate, and all the riches of the east; for I have often heard them say, that God, who had placed them in this country, knew what was best for them, and they were satisfied with their lot.

During our stay at Tobolsky, a messenger arrived from court, with the glad tidings of peace being concluded between His Czarish Majesty and the crown of Sweden, after a destructive war, which had raged above twenty years. This was very agreeable news to every body, particularly to the officers who had remained so long in captivity. The peace was proclaimed with firing of guns, and other rejoicings usual on such occasions.

November 18th, all the roads being now firm, and fit for sledges, we left Tobolsky in a strong frost. As we returned by the same road we went to the eastward, which I have already described, I shall not repeat the particulars, but only name the towns through which we passed, viz. Tumeen, Epantshin, Verchaturia, and Solikamsky. The weather being excessively cold, we remained two days at this place. From thence we came to Kay-gorod, then to Klinoss; from which, instead of going towards Cazan, we proceeded straight through the woods towards the town of Nishna-Novogorod, situated

at the conflux of the Volga and Ocka. This road is nearest, but very rough and na row in many places, the country being overgrown with large tall woods, of different kinds, according to the nature of the foil. The principal inhabitants are the Tzeremish, who a Tord but indifferent accommodation for travellers; however, the people are very courteous and hospitable. Among them are feattered a few Russ villages, and a very few Rufe towns of fmall note; for which reason, I shall only mention the names of such as lay in our road from Klinoff to Kufina-Damiansko, (which last place is situated on the east bank of the river Volga), viz. Bistritsky, a large village; Orloss, a small town; Yuriefsky, a village; Kotchitzy, a fmall town; a village called Tzorno-Retuky; a large village called Veskrensky; Yaransky, a small town; Tzurevo-Sanchursky, another fmall town; Shumetrey, a village. Befides thefe, and fome others, we passed through many villages, inhabited by 1 zcremishian and Tzoowashian Tartars, to mention which would be too addious. These people, having destroyed the woods about their villages. live much at their eafe, have plenty of corn and cattle, and great numbers of bec-hives, whereby they furnish the markets with great quantities of honey and bees-wax. also furnished us with changes of horses whenever we had occasion for them; but their tackling of harness, &c. is so bad, that much time was lost in accommodating them to our heavy carriages, fo that we thought ourselves happy when we met with Rullin villages, which are far better provided in that respect, and more accustomed to travelling than those poor people, who never go far from their own home.

After a tedious journey, we came out of the woods to the Volga, and travelled along upon the ice, which, in some places, was not very firm. In the evening, we reached Nishna-Novogorod, where we staid some days to refresh ourselves, and kept our Christmas with the commandant.

We proceeded again on the 28th, and, little material happening, arrived fast the capital city of Mosco, on the 5th day of January 1722, where we found His Czarish Majesly, and all the court, who had lately arrived from St. Petersburg, and preparations were making for grand fire-works, triumphal arches, and other marks of joy, on account of the peace: with which I shall conclude my journal.

I think it will not be unacceptable to the reader, if I subjoin a list of the places and distances between St. Petersburg and Pekin.—They are as follow:—

It is to be noted, that the diffances between St. Petersburg and Tobolky, in Siberia are all measured versts, each verst being 500 Russ sathoms, each sathom consisting of seven seet English measure; so that a Russian verst measures exactly 11662 yards.

VOL. VII.

It will be observed, that, in our journey outwards to China, we went by Cazan, which must make the distance we travelled between St. Petersburg and Tobossky. more than the above (which is the shortest road) by at least 200 versts.

The route continued from Tobolíky eastward, down the river Irtish, and up the

rivers Oby and Keat by water.

N. B. The versts between Tobolsky and Pekin are computed, which generally exceed the measured verst.

It will be noted, that the route above recited is that by which we returned from China.

COURNAL OF THE RESIDENCE OF MR. DE LANGE, AGENT OF HIS IMPERIAL MULESTY OF ALL THE RUSSIAS, PETER THE FIRST, AT THE COURT OF PEKING DURING THE YEARS 1721 AND 1722. TRANSLATED FROM THE FRENCH.

TRANSLATION OF THE EDITOR'S PREFACE TO THE READER.

IHIS Journal is very curious, and an authentic piece, and certainly merits the attention of the public, as well for its use, as the novelty of the subject it treats of.

As the world is not so sufficiently informed of what passes in those distant countries, as to form a tolerable judgment of what the court of Russia may have to do with that of China, I am now about to give a succinct relation thereof to the reader, that it may serve him as an introduction to the work.

It is now well known that the frontiers of Siberia are contiguous to those of China; for this reason, it is natural to think that the court of Russia should have more frequent correspondence with that of China than any other court of Europe. Nevertheless, this correspondence between the two courts is of no ancient date, as it did not commence but since the Mongall Tartars made themselves masters of China, about the year 1040; for it was about that time that the Russians, after being possessed of Siberia from the latter end of the sixteenth century, began to spread themselves over that vast country, not having met the least resistance from the ancient inhabitants of those parts; till, at last, they came to establish themselves about the lake Baykall, and the river Amoor, thereby becoming near neighbours to the Mongall Tartars; by intercourse with them, the Russians soon came to understand that their nation had possessed themselves of China; and that it was the Prince who was actually their Chan, who silled at that time the throne of China.

The court of Russia was not ignorant of the extreme opulence of the empire of China; and apprifed that the distance from Siberia could not be great, resolved to try if they could not derive some advantages from that discovery, by establishing a regular commerce between Siberia and China; promising themselves no less than to draw into Russia, from that empire, a great part of its riches, For this purpose, the court of Russia sent, successively, several ambassadors or envoys to China; who succeeded so well, that the Chinese at length consented to the entry of the caravans into their dominions from Siberia, on conditions very advantageous to Russia.

During these transactions, the Russians daily gained ground on the frontiers of the Mongall Tartars; and even made no scruple, when they thought fit, of establishing themselves on their territories, with a design to approach on one side, along the river Amoor, towards the Oriental Sea; and on the other side, along the river Selinga, towards the frontiers of China.

In the mean time, the new government of China was not long of comprehending, that all these new settlements which the Russians made upon the frontiers of the Mongalls, would in time render their power too formidable to the subjects of China; and might come at last to be very dangerous to the repose of China itself, in case any mis-

3 K 2

understandings

understandings between the two nations should arise. On these considerations, they resolved to oppose settlement to settlement, and to build some towns and villages on the frontiers of the Mongall Tartars, at some distance from the last settlements of the Russians; in order thereby to prevent their penetrating farther into the country, to the prejudice of the Tartar subjects of China.

In consequence of this resolution, the Chinese built, about the year 1670, the towns of Mergeen and Naun, and the borough of Xixigan, with several other boroughs and villages thereabouts; which they peopled with colonies of Mongalis, subjects of China.

Thence arose disputes between the two empires, on the subject of their frontiers. And in place of the negotiations being confined to affairs of commerce, and mutual protestations of amity and friendship, on one side and the other, the grand object of all their aims came now to be the accommodation of the affair of the frontiers, and the regulation of limits between the two empires. But, in as much as one would prescrive to themselves the right of doing as they thought fit, and the other would, at all hazards, keep them from doing what they thought dangerous, there arose a great coolness between them; which came to blows in the years 1684 and 1685. It is true, that they laboured inceffantly, both on the one fide and the other, for a re-establishment of good harmony between the two nations; to this end there were held two different congresses, at the town of Nerchinsky, between the plenipotentiaries of Russia and those of China. But those gentlemen met with so many difficulties, in reconciling their different fentiments and interests, that they were obliged to separate without success. At last, F. Gerbillon, a Jesuit, returned again to the town of Nerchinsky, in quality of plenipotentiary of the court of China; and there, in 1689, figned a treaty of peace and perpetual alliance, between the two empires, which was afterwards ratified, in the usual forms, by both the courts.

That treaty was not very advantageous to the Russians, because it set bounds to their establishments on these frontiers, which was a very disagreeable article. And as they believed the Chinese would not regard it very strictly, provided they did not advance suther on the side of the Selinga, and the towns they had lately built to the southward of the frontiers, the Russians again began to make new settlements along the river Amoor; and, at last, to build along the south bank of that river, thirty leagues beyond their limits, a town they called Albazin; in hopes that the Chinese could not be without Siberian surs, and would rather choose to wink at these enterprises than enter into a new war. But they were quite mistaken in their calculation; for the Mongalls surnished such quantities of surs to China, from the time they had orders from the Chan to spread themselves along the banks of the Amoor, that the Chinese began to perceive that they could be sufficiently supplied with surs, without those from Siberia. And in these sentiments they spoke freely their thoughts of these new enterprises of the Russians.

In the mean time, the Russians gave them good words and sair promises, but continued to carry on their point, slattering themselves that they might find some favourable opportunity of pacifying them. Nevertheless, the Chinese growing doubtful of the Russians complying with their demands, which they thought well sounded, at length they had recourse to force; and in the year 1715, made the Mongalls, subjects to China, take arms, and laid siege to the town of Albazin, the place which was the principal ground of their complaints. The siege continued three years; and as the late Peter the Great was occupied in his grand designs to the westward, he would not continue the quarrel with China. Thus, they let the town fall into the hands of the Mongalls, and agreed to a new provisional treaty with the court of Pekin. But as other

The

differences on the frontiers still subsisted, the court of Russia sent again, in 1719, an envoy extraordinary to Pekin, to regulate entirely what remained to be adjusted between the two empires; and seeing that, by means of these differences, the commerce of the caravans was much lessened, the true object of his negotiation was to re-establish that commerce; and, to that end, to try to induce the court of China to consent to the residence of an agent from Russia, at the court of Pekin, who might take care to watch over the affairs of the caravan, and so preserve a good understanding between the two empires. The envoy of Russia, having happily executed the last part of his commission, left, at his departure from Pekin, Mr. de Lange, as agent of Russia at the court of Pekin, who was the author of the following Journal.

The public is obliged for this tract to a foreign minister, who resided many years at the court of Russia, and who permitted it to be communicated to the public. But, to make the reading of it more agreeable and more useful to the world, it was thought sit to add some little remarks in the places which required elucidation, that nothing might be wanting to the reader on so interesting a subject.

JOURNAL OF MR. DE LANGE, &c.

March 1721. R. DE ISMAYLFOFF, ambaffador and envoy extraordinary of His Czarifh Ma-1V1 jesty, having fixed his departure from Pekin to be on the 2d of March, after having finished his negotiations at the court of China in the best manner he possibly could *, I took the resolution of accompanying him to the wall of China; but the gentlemen of the ministry thought proper to refuse me a passport; pretending that, as I was ordered by His Czarish Majesty to reside at the court of the Chan †, it was necessary that I should have permission of the Bogdoi-Chan himself, not only for going as far as the grand wall, but also for every time that I would go to stay a night without the walls of Pekin: to the intent that the court might always be affured that no ill accident should happen to me, being a foreigner t. And, as the Bogdoi-Chan had already quitted his residence of Pekin, to take the diversion of hunting, it was not without a deal of trouble that I obtained a permiffion to accompany Mr. de Ifmay loff as far as Czampinfa, which is a town fixty ly § distant from Pekin, from whence I returned, being escorted by a clerk of the council for the affairs of the Mongalls, and some soldiers; and thus came back to Pekin on the 6th.

* Mr. de Ismayloff, a gentleman of great merit, and a captain in the regiment of the Picobraschinsky guards, was sent, in the year 1719, by the late Emperor Peter the Great, to China, with the character of ambassador and envoy extraordinary, to renew the treaties between Russia and China, and to endeavour to bring the court of Pekin to agree to a regulated free commerce with Russia.

† All the Tartars give to their reigning princes the title of Chan; and as the house which at present fills the throne of China is come from that branch of Pagan Tartars known to us by the name of Oriental Mongalls, the Emperors of China conform themselves to the established custom of their nation, preserving.

to this time, the title of Chan. Vide Hift. Genealog. des Tartares.

† Mr de Ismayloff, at his departure from Pekin, left, by virtue of his instructions, Mr de Lange, in quality of agent of Russia, to treat of, and to bring to a conclusion, a regulation of commerce, and an establishment of an easy correspondence between the two empires; and, although the Chincse ministry opposed most strenuously the residence of the said agent at their court, on pretence that it was contrary to the fundamental constitutions of the empire; yet the said ambassador knew so well how to take his measures, that the Bogdoi-Chan gave his consent to it, notwithstanding all the intrigues of the ministry to the contrary.

§ One ly of China is exactly 360 geometrical paces.

The 7th, early in the morning, I faw enter the court-yard of my house a man who had the appearance of a poor beggar; he brought with him some poor starved fowls, and salted cabbage, together with some pots of tarassun; which is a fermented liquor, made of grain, and what the Chinese drink instead of wine. making it warm before they drink it. This man, having set it all down in my court-yard, was returning, when I ordered him to be called back, to inform me of the meaning of his so doing. Upon which he told me, "That it was part of the provisions he had bought for me, by order of the college who have the charge of the Emperor's magazines of provisions; but that, not being able to bring all at once, he was going to setch the rest." Whereupon, being informed by him what his occupation was, I understood, "That he had made a contract with the said college to furnish me, every nine days, with a certain quantity of provisions for my house. Upon which I ordered him to take every thing away that he said he had bought for me, and bring no more to my house, till I should receive previous information, from the council for foreign affairs, how much I was daily to receive by order of the Bogdoi-Chan, and through whose hands I was to receive them.

Whereupon I fent to let the Mandarins (who were appointed to propose to the council what might regard me) know what had occurred with this man, who came, in the above manner, to bring me provisions on the part of the Logdoi-Chan; and also that I should always most respectfully receive whatever the Bogdoi-Chan, from his friendship for his Czarish Majesty, should order for my subsistence, in case it was sent me in a proper manner; at the fame time, defiring them to acquaint me with the particulars of what the court had ordered for my subsistence. Whereupon those gentlemen fent me the following answer: "That I should receive the same allowance which I had received before, during the refidence of the envoy extraordinary at this court: and that they had already made an agreement to deliver my allowance regularly." I represented to them thereupon, " That I never had any separate allowance during the refidence of his Excellency the envoy at Pekin, having had the honour of eating always at the fame table with him; that, for this reason, I could now receve nothing, until I should know precisely wherein it was to consist; and that, after I should know what the allowance was to be, I should defire them to pay me the amount of the same in money, which they were to pay to the purveyor." These gentlemen were not wanting in letting me know, " That I ought not so nicely to examine what the Bogdoi-Chan. without any obligation, had ordered to be given me out of his mere grace." But I affured them, in strong terms, in my turn, "That I absolutely would receive nothing on these terms; for I was very doubtful whether the Bogdoi-Chan was informed, that fuch a perfon was trufted with the difposition of what allowance he was pleased to order for me." This refolution much discomposed the gentlemen Mandarins, who had reckoned on supplying their own tables with my provisions; but, seeing how difficult it was to obtain their ends on this occasion, they at last delivered to me the sollowing specification, and said it was what the Bogdoi-Chan had ordered for my allowance, viz. per day,

```
i fish.
i sheep.
pot of tarassun.
i fowl.
i bowl of milk.
oz. of tea.
```

```
2 oz. of butter.
2 oz. of lamp oil.
½ gin falted cabbage.
2 fmall measures of rice.
15 gin of wood.
```

To my interpreter per day,

1 oz. of tea. 2 oz. of lamp-oil,

gin of flour. 2 finall measures of rice.

2 oz. of butter. 8 gin of wood.

And every nine days a sheep.

To every one of my domestics per day,

1 gin of beef.
1 oz. of falt.
1 measure of rice.
2 gin of wood.

To a dragoon who was left behind by the envoy at Pekin, upon account of some tapestries they were working for His Czarish Majesty,

1 measure of rice.2 oz. of butter.1 oz. of tea.2 oz. of lamp-oil.2 gin of flour.5 gin of wood.

And every nine days a sheep.

By laen you are to understand ounces, and by gin pounds.

Upon delivering this specification, the Mandarins acquainted me, "That, as they were obliged to buy the fish, the fowls, the sheep, and the milk, for my provisions, with ready money, I might receive the value of those things in money; but, in regard to the other articles, I must content myself to receive them in kind from the Chan's

magazines "."

Upon which I affured them, " I should make no objection, provided they did it in a decent manner, and not by unknown people, who marched off as foon as they had thrown it down in my court-yard, as they had once done." At the same time I demanded of them, "Whether I could still have the Chan's horses, to make use of them when I should have occasion, as I had during the residence of the envoy extraordinary." They answered me thereupon, "That I might certainly have the Chan's horses always; but then, as the stables of the Chan were at a considerable distance, it was necessary for me always to acquaint them of my intentions, the day before I intended to ride out; upon fuch notice, they would take care that the horses should always be ready at my quarters very early in the morning †." To avoid this inconvenience, and to avoid the being obliged to let them know every day where I would go, I took the resolution to buy fix horses, and to keep them at my own expence, though forage was very dear at Pekin. The guard that had been placed upon the envoy's quarters, during the time of his stay at Pekin, under the command of a brigadier, remained still on the same footing after his departure, as did the two Mandarins of the thirty-seventh order t, together

† At lekin they always make vifits in town on horseback. But the princes of the blood, and the grand Mandarins, are generally carried in litters on these occasions, attended with a numerous train of

domestics.

† Every man appointed to any public charge or dignity in China, from the highest to the lowest, is called by the name of Mandarin; whence it comes that there are many orders, which are all distinguished.

^{*} The Emperor of China receives the greatest part of the tribute of his subjects in the country in provisions and manufactures of the growth of the several provinces, which are afterwards distributed in kind to all persons in the service of this monarchy, and reckoned to them as part of their salary; so that all the gold and silver that comes into the treasury of the Chan, arises from the tribute of the cities, the duties inwards and outwards, the tolls of passengers, the mines of gold and silver, and since or consistations; all which together amount every year to immense sums.

together with a clerk, to receive from me whatever I should have to propose, whether by word of mouth or by writing, and to make their report to the council of soreign affairs; and this appeared to me a very good omen.

The 5th, the brigadier of the guard of my quarters let me know, that the Bogdoi-Chan would return from hunting the next day, and that if I was defirous to go to meet him, he would give orders that the Mandarins should be ready to escort me with a guard

of horse for the security of my person.

The 10th, I mounted on horseback very early to go to meet the Chan. When His Majesty saw me, he called me to him, and asked, "If I did not repine to be alone in a soreign empire, so far from Europe?" He further asked, "If I was well, and if I was contented?" Upon which, having with a profound reverence thanked His Majesty for my gracious reception, I assured him, "That I found myself persectly well, and I could not but be well content with having the honour of residing at the court of so grand a monarch." After which His Majesty, having dismissed me, was carried in his litter to Pekin, followed by a very numerous court.

The 11th, 12th, and 13th, I notified to the Mandarins, folicitors in my affairs, "That, having feveral things to get made for the Emperor, my master, I should have great occasion for the money which divers merchants of Pekin were owing to the Commissary Gusaitnikoss, who had been lately at Pekin with the caravan of Siberia; and I craved their assistance to facilitate the recovery of those sums, seeing the debtors had engaged themselves, before the envoy extraordinary, to pay me the same immediately after his departure." The Mandarins explained themselves very favourably thereupon; but our debtors, having got notice of it, retired into the country, which obliged me to

leave this affair to another opportunity.

The 15th, the Bogdoi-Chan went to Czchan-zchumnienne, which is a house of pleafure belonging to His Majesty, twelve ly westward of Pekin, where he frequently makes his residence. But having observed, in his passing, that the triumphal arches, and other like ornaments, which are raised on his birth-day, on both sides of the grand road, paved with square slat stones, that reaches from Pekin to Czchan-zchumnienne, were not of the usual magniscence, all the ministry were disgraced for many weeks. Upon which the ministers, having instantly ordered the demolition of all that had been built, caused to be built up anew, from the palace of the Emperor at Pekin quite to Czchan-zchumnienne, a great number of triumphal arches, and of most magniscent columps, of an exquisite taste, all embellished with gildings, and sessions of all forts of rich silks, of most lively sigures and colours. At the same time, in several places, they

* The Emperor of China might be then in his fixty-ninth lunar year; but he was still very well disposed in body and mind, and was looked upon as a monarch of superior penetration and genius. The Fathers Jesuits, missionaries in China, had great insucate with him; and he usually consulted them on all affairs of importance. He mounted the throne anno 1662, aged eight years, and died in September 1722.

† They give the title of Commissary to those who have the direction of the caravans, which come from

Siberia to Pekiu to trade.

one from another, by difference of habits, characters, and figures, which are embroidered or fewed on their habits; infomuch that, upon feeing a Mandarin, it may be immediately known of what order he is; because every Mandarin is forbid to appear in public without the habit of his order, under pain of the most rigorous penalties.

The prince, his third fon, who already commanded the armics of the empire, succeeded to the empire; for the deceased Emperor had confined his two eldest sons in a close prison, some years before his death, upon some alledged attempts to rebel, true or false, and declared them excluded from succeeding to the empire. Nevertheless their brother set them at liberty, immediately upon his accession to the empire, and heaped favours on them, to make them forget the loss of their right, which he possessed.

erroled theatres of great beauty, where the most able comedians exerted their talents, in representing the most difficult and curious parts of their professions, accommissed with the grandest concerts of music, both vocal and instrumental, diversited with the an although of dancing and feats of uncommon agility. It like is external uncount to present the ministers went in a body to the Imperial pulses. Such the mount to on their knees, with their faces prostrate to the ground, that he would be placed to add some, in whom he could conside, to examine their new structures. But the Bogdol-Chair or derectivem to be told, "That he would see nothing of what they had a ne, and that he would never celebrate his birth-day at Pekin more, for that he was at much Emperial throw of China at Czchan-zchumnienne, as he should be though fitting on the superial throw at Pekin †."

The 17th, I defired the Mandarins, folicitors for my affairs, to come to me upon business that regarded the council. Upon which they sent me word, that, one of ther being ill, the other dared not to meddle in matters that regarded the council, without the participation of his comrade. This obliged me to wait the recovery of the fick Mandarin, and till I could see them both together.

The 18th, 19th, and 20th, I was willing to avail myfelf of the opportunity the fickness of one of my Mandarins gave me, to make some visits to merchants or my acquaintance, and to the Father Jesuits, hoping thereby to induce them to return my visits, and give me opportunity of knowing fomething of the commerce of this empire. But I found that they all received my vifit with very forced civilities, and great referve, particularly the merchants, who endeavoured to appear much occupied about other important affairs; fo that, fecing it very difficult to bring them into my views, in the prefent conjuncture, I thought it best to postpone these sorts of visits to a more proper time. But they, not doubting that fuch a reception would occasion my making many reflections, let me know by a third hand, "That my vifits should be always most agreeable to them, and that they wished, with all their hearts, to divert me every day better than the custom of their country permitted them; and likewise, on occasion, to come and see me, were it not for fear of the foldiers, who followed me every where, which prevented them.—For, in case they should not place the soldiers in the same chamber with themfelves and me, and entertain them with every thing to their liking, they were capable of accusing them of having a clandestine commerce, of great importance, with me, or other suspicious negociations, which would not fail of costing them considerable sums of money, and possibly might prove their entire ruin !." It is true, the Father Jesuits

^{*} The honours which they pay to the Emperors of China approach even to adoration; all those who have audience of him, being obliged to proftrate themselves three times before him, from which none are exempted, not even ambasiadors, or other foreign ministers: Mr. de Isnayloff, notwithstanding his quality, being obliged to go through that ceremony, as well as all others.

[†] The deceased Emperor of China held the great lords of China very cheap; for he very well knew, that, in their hearts, they bore the Tartar yoke very impatiently. Nevertheless, since the very severe executions he ordered in the beginning of his reign, he feldom punished with death the great Chinese Mandarins who fell into disgrace, contenting himself with condemning them to pay exorbitant pecuniary such incapacitated them from doing any thing against his authority, whatever define they might have to

The princes of the house of the Tattars, who at present reign in China, have learned, at the expense of their predecessors, that they ought not to depend too much on the sidelity of the Chinese; for this reason, all the military of the empire is, in a manner, composed of Morgall Tattas, who, on that account, injuy considerable privileges, which makes them very insulated and almost insupportable to the Chinese. And as the number of these Tartars were not deemed sufficient to curb the Chinese, considering the vail

could not alledge such sears of the soldiers of my guard as the merchants; their belonging to the court put them on quite another sooting than the ordinary rank of people were upon; but they pretended that, as they were foreigners, they were obliged to act with great caution, in order to prevent suspicion. This did not surprise me at all, in regard to a nation, the genius of which I had already had a tolerable knowledge of The affairs I had to manage were of a very difficult nature, and in all countries the entering properly into such ought to be the principal care; but I, nevertheless, flattered myself, that this unpromising aspect, at my entering on my functions, would take a more favourable turn, as soon as the Bogdoi-Chan should receive the credentials I had from the Emperor my master.

The 22d, my Mandarins came together to see me, and to know what I had to propose

to the council; upon which I requeited them,

" 1. To put the Allegamba, or prefident of the council for foreign affairs in mind in my name, that they had let my credential, from the Emperor my mater, remain in my hands beyond the usual time; and that I waited, through his hands, the order of the

Bogdoi-Chan, to appoint when he would pleafe to receive them.

2. To acquaint the preficent, that I had resolved to hire a house for myself, near the quarters of the Russians, against the arrival of the caravan, to the end that the said quarters might be repaired, which, from age were gone to ruin, and might be entirely beat down by the approaching rainy season; that, unless this reparation be made, the commissary would not know where to lodge on his arrival at Pekin, except he would run the risk of having the merchandizes Jamaged.

"3. To demand for me a passport, with the necessary escort, for some baggage, less at Pekin, during the time of the ambassade, which I wanted to send out of hand to Selinginsky †." The said baggage was some raw filk which I had bought on account of

Mr. Nicolai Christizy, with cash and effects that he had lest in my han is ;.

The answer which I received immediately after from those gentlemen, contained in subdance, "That the Emperor himself having allost of that house for my quarters, not four would readily infinuate to him that I was not satisfied with it; and that, without a special licence from him, no person in all Pekin, were it even the Imperial trives his tell, would dare to let me a lodging, seeing it would thereby look as if the Poddie Chan had not an inhabitable house for a foreign of Powhich I replied, "That I made no doubt of so great a monarch's having hours enough sor lodging a many

extent of the empre, the late Bogdoi-Chan four I it need fair, in order to argument their number, to make a law, whereby all the Tartar Mongalls, men or a new, who find its marry with Change, were obtained to the cultons of the Mongalls, and to teach them the Mongalls lander as whether, by means of this precrution, all those children findful be deemed naturalized Mongalls, and only the privilege of no avellinoughle.

† Through all Ruils they we hardly any other filk but that of China, which is undoubtedly the best in the world; it being certain, that two pounds of Chinese filk will four for in manufacturing as three pounds

of either PerGan or Italian filk.

[†] Schinginsky is the last fortress belonging to Russin, towards the north-west of China. This town is in the country of the Mongalle, worn the east-side of the river Schinga, thirty drys journey from Pekin, in lit. 51. 30. The climate of Schinginsky is very mild, and the country about it is very pleasant. The Mongoll Tartars did not accustom themselves to the cultivation of ground; yet every thing that is sown or planted there, thrives exceedingly.

eline saste pleased; but, that I was well persuaded, when the Bogdo'-Chan should be forward of the condition that home was it, he would not oblige me to inhabit it longer, entire, that it was asking contrary to the common right, allowed by all the world, to a nimin a person, in a public character, from hiring a lodging, with his own money, which might be commodicus for him, without a previous application to the Emperor limit It." They answered me thereupon, "That the usiges in Europe were not rashifed by them; and, as all the countries in the world had their particular coff me, China had hers, which would not be altered on any confideration whatever." The, also told me plainly "That they could not write to the council on this subject; to, that they knew of a certainty, that no person durst make the proposition to the Emperor."

Upon which having told them, "The, as the cofe was fo, I must submit to remain these, till the impossibility of abiding longer may force me to have recorded to other measures." They of the includes proposed to me, "That the Chan might be periooned to allot me other quarters, without allodging that my present quarter, were in so militable a condition." But, soing I did not pretend to go out, but because it was in such a ruinous state, they persisted in sixing, it was impossible for them to make the

proposal to His Majesty on that socting.

The 23d, the aforelaid Mandarins came again to acquaint me, "That the profident would confult the other members of the council upon my credential letters, and would put the Emperor in reasonbrance, when occasion should offer. But, concerning the fending away the baggage, I must have patience till after the Emperor's birth-day; seeing the preparations for its celebration so fully employed every body, that nothing else was attended to, though of ever so great consequence."

April.

The 1st of this month, the Aloy, or master of the ceremonies of the Chan, invited me, by order of the Bogdoi-Chan, to come to Czchan-Zchumnienne. Upon which I went there instantly. I was no sooner arrived, but I sent to notify the same to the said Aloy, and forthwith went to his apartment. I understood from him, that the Bogdoi-Chan had an intention to have admitted me that day to an audience, but other affairs had unexpectedly intervened; he had ordered him to deliver to me a piece of the tapestry which they were at work upon for the Czar, in order that I might fend it to Russia by an express, and acquaint the Czar, that what pieces remained to be made should be ready in three months *. I laid hold of this opportunity of the passports and convoy necessary for the piece of tapestry, to request of this gentlemen, "That he would be so good as to manage it fo, as that, when His Majesty should give order for the passport and convoy for the picce of tapestry, I should at the same time be furnished with passports for the baggage above-mentioned which I had to forward; and that he would pleafe to be at the trouble of informing himself, when His Majesty would be pleased to receive my letters of credence from the Czar with which I was charged." Whereupon the Aloy defired me to remain at his lodgings, whilft he went to make the proposal to the Emperor; and at his return, he acquainted me, "That His Majesty would, out of hand, give orders to the council, that they should furnish me with the passports and convoy necessary, as well for the tapestry as the baggage I wanted to send; but that it could not be till after the birth-day." That, as to the letters of credence, he did not find it

^{*} The tapeftry of China is generally made of fatin, embroidered with large figures of gold and filk, the colours very bright, but the defigns not correct; they are not adjusted to furnishing of rooms, unless bespoke on purpose, or composed of many different pieces.

proper to mention it to the Emperor, it appearing to him that His Majesty frequently thought of me, and would not forget my letters of credence, and gave me, in some measure, an assume that the Chan would not long defer the receiving it. And then he made his excuse that he could not for ger wait on me, being obliged instantly to return to the court.

The 2d, according to custon, the birth-day of His Majesty should have been celebrated, with the utmost magnificence, at Carhan-Zehumnienne; but, inasmuch as His Majesty was still displeased with his ministers, he only received the ordinary compliments on that occasion, without any other ceremony; after which every body retired to their own houses. I had, among others, the honour of paying my compliments to His Majesty on that occasion. That which appeared to me most worthy of observation at that time, was 3000 old men, the youngest of which was above 60 years old, which, by express orders of the Emperor, had been brought to Pekin from all the provinces of the empire. They were all dressed in yellow, which is the colour of the imperial liveries, and marched in parade to Czchan-Zchumnienne, where they ranged hemselves in the court of the castle, and had the honour of making their compliments to the Emperor; after which His Majesty distributed to every one, without distinction, four laen of silver, and fent them home.

The same day, the parson of the church of St. Nicolas, at Pekin , presented me with a memorial of some debts which he had owing him, by divers persons of that city, on account of the deceased Archimandrite, praying my assistance in the affair.

The 3d, having received from the council the necessary passport for the courier I was to dispatch with the piece of tapestry, I dispatched him, the same day, under the escort of a Chinese courier.

The 8th, some unknown people having entered my house, told me, by my interpreter, "That they had bought for me a certain number of sheep; but if I would not receive them in kind, they were ready to pay me half a laen of silver for every sheep." I returned them in the same manner I did the former, letting them know, "The some person of the college, which had the direction of the Emperor's magazines of provisions, must come to me to show me those who were to bring me provisions." They attempted still, or several occasions, to bring in wood and other provisions in the same way to my house, without my being able to know who they were, or who sent them.

The 11th, I received the pullport for the baggage of Mr. Nicolai Christizy, which I

† Those of the Greek religion have but one church at Pekin, but the Roman Catholics have three churches very magnificently built, where there resort, on Sundays and holidays, a number of people of all conditions, the Roman Catholic religion being tolerated there; but it is remarkable, that the men do not uncover their heads during divine service, because it is a mark of infamy among them to have their head uncovered; no women appear there, having a separate apartment in the churches. The late Emperor favoured the worship of the Roman church to such a degree, that he ordered that all the sons of Mandarins, who made their studies under the direction of the Jesuits, should be obliged to go, all Sundays and holidays,

to their churches, which gave great uneafiness to the Chinese Bonzes.

^{*} The late Emperor of China, notwithstanding his great age, had so extraordinary a memory, till a little time before his death, that a Flemish Jesuit, who is yet at Pekin, recounted to one in the retinue of Mr. de Ismayloss, that, above 20 years ago, this Monarch having shown him a wood pecker, asked him if there were such binds in their country; and having answered yes, he asked its name in Flemish. That, some time after the anival of Mr de Ismayloss, the Emperor, having cast his eye on such a bind, asked him then also, is such birds were in their country; and now answering, no, the Emperor asked him why he did not tell him the truth; and if he did not remember, that, at such a time, he told him there were such birds in their country; upon which the sather Jesuit declared, that he had been so long out of his own country, that he really did not know whether there was or not. The Emperor was very merry upon the Jesuit's having forgot his mother-tongue; and told him the bird's name in Flemish.

diffratched two days after from Pekin, under the efcort of a Chinese courier. The preficient of the council letting me know, at the same time, "That I ought not to send many of those expeditions, as long as the new treaty of commerce between the two empires was unratified in the accustomed forms; seeing it was not understood that they consented to a continual passage by small caravans, which I myself sufficiently knew the reasons for, having assisted at all the conferences held on that subject."

The 13th, I learned that the Bogdoi-Chan was about to fet out instantly for legcholl, which is a town newly built, with a magnificent castle, without the great wall, 440 ly, or two days by post, eastward of Pekin, where he usually passes the fine season of the

fummer in hunting, and other country diversions.

The 14th, I mounted on horseback to go to the president of the council; being arrived at the gate, the guard made me wait till they had acquainted him of my being there; immediately after which, he fent one of his tervants to inform himfelf, "Whether I came purely on a vifit, or had occasion to speak to him about business; and that in case I came about business, that I should communicate the same to his servant, that he might inform his mafter of the subject of it." I made my compliments to the prefident by the messenger, and told him, "That I came to pay a visit to his master; but as to the business I came about, that concerned the master, not the servant." After which, the same fervant returning, told me, "That I would be welcome to his master "." Whereupon, entering into the court-yard, the president came out of his apartment to receive me, and having taken me by the hand, after some reciprocal compliments, he led me into an open faloon, where we fat down together, and were ferved with tea and milk, according to the Chinese manner. After some time, I defired that he would put the Bogdoi-Chan in remembrance that I had letters to prefent to him from the Czar, my master, and that I should be very glad to know if he would be pleased to receive them before his departure. He answered me thereupon as the master of ceremonies had done before, "That His Majesty was well informed of it, and would know himself when he would have time to receive them, without being put in mind of it; and that, if we should put His Majesty in remembrance of it, that would look as if he or I wanted to prescribe the time of doing it to His Majesty." I fought, by all ways possible, to engage him one way or other in this affair, but all in vain; and I was obliged to hold this for an answer; after which he added, "That, if His Majesty had refolved not to receive my letter of credence, he would not have confented to my residing at his court in quality of agent; and that Mr. De Ismayloff having sufficiently explained the reasons of my stay in Pekin, these letters could contain nothing very presfing." Upon which I replied to him, "That, in Europe, the monarchs were not accustomed, when the Czar wrote letters to them, to let such a length of time pass without receiving them; nor take it amis, from their ministers, if they put them in mind of fuch important affairs; that I never expected fuch an answer in China; but yet, as it was what I could not remedy, I must bear it patiently, till such time as His Majesly was disposed to receive them."

The 16th, I mounted again on horseback to go to see the alegada, or first minister, in hopes of getting a resolution more favourable to my affair than I got from the president of the council. Being arrived at his house, I was indeed admitted to come into his court-yard; but as I had no desire to go into the rooms of his servants, I was obliged to re-

^{*} In China, when they go to fee a Mandarin, of what order foever, upon business regarding his office, the Mandarin is obliged to put on the habit peculiar to his order; upon failure whereof, he is amerced in large sinces.

main in the court of they notified to him my borng there. He, like the other, for the ferrant to me, to inform I insfelf of the reason of my coming. To when I figure that I wanted the honour of fleing him, and of acquiriting him with an affek which a did not think proper to emplain to a fervant. The same contains returned very from the me, flying, "My matter thanks you, Sir, for the crucker you have given you field; he is very well; but it is not convenient for him to fly you."

The 17th, I was again in his neighbourhood; and having lest my it to prefer to him to alk permission to see him for a moment, he sent me word, that it was impossible, because he was that instant going to His I-lajesty, and that he did not know when he should have time to speak with me. Whereupon, being this was an at it that could

not be forced, I resolved to let it lie dormant for some time.

The 19th, I went to fee a German Father Jesuit, who coing an old accurationes, and a friend of mine from my such journey to China, made no fample of acting me, that many of the principal Mandarins of China much disapproved of the Chan's confecting to my remaining at Pekin's. But that, as there was no person in all the empire that we had enough to dare contradict the will of the Emperor, unless they would explained to very great danger, it was very probable they would, by degrees, accorded a themselves to my being there. He said to me also, that he had frequently sent his fer-vant to me with his compliments, but that the guard at my door had as often turned think they would have been so untractable, if he would have given them a piece of money. He most strongly enjoined to take no notice of what he told me; for he would by no means appear in this affair; it was sufficient that I was informed by him, in order to take my measures thereupon whin occasion offered.

There are at Pekin a great number of finall merchants, or rather pedlars, who, as fewer as they hear of any foreigners being arrived from Ruffia, or other parts, bring to their quarters all forts of merchandize, which they get partly from the brokers, and partly from other houses, of different forts of people, who may have any goods which they would be willing to dispose of; and it is often better to deal with these pedlars, for all forts of curiosities, and for made filks, than with the shop-keepers; for which reason, I bid some of these people bring to my house, from time to time, what they should light upon most curious in its kind, whether in rich filks, or jewels, or other goods of value, to the end that I might acquire a competent knowledge of all the forts of merchandise to be got in this city. Upon which they represented to me, that I might well believe that they sought nothing more than to gain a little money, it being their trade; and of consequence, they would not fail of doing as I desired them, if my house was occupied by different persons; because what goods were not liked by one might find a puyer in another, and so they might probably always sell something; but as I alone occupied the house, and had such a numerous guard at the gate, they did not know how

^{*} The Chinese regard their ancient laws and customs as sacred and inviolable; and it is not to be wonleved at that they with great reluctance suffer the residence of a Russian agent at Pekin; as it is directly contrary to the fundamental constitutions of the empire, which absolutely forbid the Chinese to go out of the empire, and the admission of foreigners to an abode in it.

⁺ The frequent executions which the late Emperor of China was obliged to cause to be made, in the only part of his reign, in order to keep the Chinese quiet, occasioned such a dread in all the Chinese, that he greatest Lords of the empire could not approach his person without sear and trembling. Nevertheless, his Monarch was far from being a tyrant in reality, for he was a true lover of justice, and spared the blood of his subjects as much as possible. He had forbid, under the most severe penalties, the putting a criminal o death, for what crime sover, unless he should consirm and sign the sentence of death with his own hand

to do it; because, before they were permitted to enter my house, they were obliged to agree with the soldiers of the guard, how much they were to pay them on their going out; and, whether they sold any thing or not, they were equally obliged to pay the more

ney they agreed to for the permission or entry.

The 20th, I fent to demand of the Mandarins, who had the care of my affairs, "It was with their knowledge that the foldiers of the guard that were at my gate did not permit any perfon to enter my house without their giving them money?" They, in answer, let me know, "That they knew nothing of the matter; but they would not fact to make inquiry; and, if they found out the foldiers who through ignorance had done such a thing, they would put things in better order for the future." And I found that they had spoke to the officers of the guard, who told them, "They had strict orders to guard this house, and take particular care that the common people, who are generally very insolent, should not find means of coming into the court-yard to steal any thing; and, as they were to be answerable, they were obliged to use the precautions needsary to this effect." They came to report this to me, as an unanswerable argument. But I assured them, that, whenever the guard admitted people to enter my house during the day-time, I would not make them answerable for any rolbery that might happen at my house, for that I had a sufficient number of my own fervants to drive out of my court-yard any persons who should dare to come there without having business.

It must be observed on this occasion, that the Chinese have the custom of explaining themselves but once on one proposal; and, having once given an answer upon a matter, whatsoever it be, they always hold themselves upon this answer, as an infallible argument; so that, if you turn an assair into twenty different lights, to convince them by one means or other of their error, or to make them alter their sentiments, it is all lost trouble, they firmly holding by their first word. And it is a general rule with the Chinese, high and low, in all they have to do with foreigners; insomuch that every time a proposal is made to them, which their interest or vanity may incline them not to approve, it has be certainly depended upon, that, after infinite disoutes, you will be obliged to receive the first words, which they pronounced in the beginning for an an-

fwer, be it agreeable or difagreeable.

The 21st. I spoke with the brigadier of my guard about this affair, who is a person. generally esteemed by all the people of merit in the empire; some years past he had "Led the greatest posts of the state, but was difgraced and made brightier, on account of the bad conduct of his brother. I can truly lay, this is the most worthy man I have k nown in China, full of honour, reason, and probity; and the Fathers lesuits agreed with me, that there was not his equal in all this great empire. He diapproved very much the conduct of the officers and foldiers of my guard; but he represented to me, at the same time, " That, having precise orders from the Emperor, that all sorts of the lower people should be prevented from entering or leaving my house at their pleasure, to the end that no infult might be offered me, he could not avoid giving the fine orders to the officers of my guard; but, to prevent the abuse of his orders for time to come. he would come regularly twice a-week to my quarters, to have an eye on their behaviour." Which gave me opportunities of making a particular friendship with him; but neither mine, nor all the threats which the brigadier gave to the officers and foldiers on this head, nor the rigorous treatment he made them feel on feveral occasions, could get the better of the infatiable avarice of these military people, who look upon it as their right to exact contributions of those who trade with foreigners. In short, it would have become insupportable to me, to be at the mercy of the chicanes that this pretended guard of honour studied to vex me with every day, if I had not had the hope that my credential letters would be very bon received; and day I should then be able to do any aflairs with more fatisfaction.

affairs with more fatisfaction.

The 27d, my interpreter in the consent our debters, he put it in mind of a promites he had rande to IV. I have the first and allow of more probable tion. Upon which, he promited the consent of the c ledged no more than 650 hours the other cored Dash - hoga, as no do as 320 thun of kitaika on the arrival of the next of even at four, and this have obligation which he had given to the committee Gusait country, because, are a result told them, "That, though I had not an a lends to compact the result of the Mr. Gusaitnicoss, that need not hinder their process of a contract that are the contract of the by lattle and I me, according as their absultes were contract to the state of the contract of the state of the contract of the state of the contract of the co money visto come into the creating of F is Czarish Majesty, a chair con a live paid the whole, I would give them an obligation of indemrity, which would make their obligations to Gulvitnicoli o. no value †. 'Upon which they replied, "Though, could not object to this a pulicat, and that, conformable to their promites to the creek extraordinary, to give me entire fatisfaction thereupen, they would not fail to do it, to as I thould receive part of their cebts before the end of the mouth." These promise continued from day to day, without any part of them being radfilled; and as I knew, by my own experience, that there are no where worfe paymatters han in China, unless they can be compelled by force, I was obliged to fail on other methods.

May 1f, I delivered to my Mandarias two memorials on the fubject of those deliver and the elebts of the parson of St. Nicholas, defiring they would present them to the council, and communicate to me the answer which they should recine on the . I. same day my Mandarins put into my hands eighty-two laen and twenty-fix fun of fin filver; faying, "That I lis Majesty had ordered this sum to be paid me for the value of the sheep, fish, fowls, and milk, for two months past; and, for the time to come, every nine days, a clerk from the Imperial treasury would bring me twelve laen, and thirtyfeven fun, in payment for the faid provisions; and that the other allowances, which 1 was to receive in kind, should be likewife fent me by a clerk of the magazines truct whence they were taken." So that all I should receive for my monthly allowance, in money and provisions, would amount, according to the current prices, to forty-cight laen; but they allowed no forage for my horfes, which is a confiderable article at Pekin,

+ A fort of glazed cotton, kalendered and imoothed, which they make in China, of all forts of colours,

whereof they fell great quantities through all the northern Afia

† The commerce between Russia and China is at present a monopoly belonging to the treasury of Siberia, no other subjects of Russia being to concern themselves in it, on pen of death, unless employed on account of the crown, though it is often evaded, by commune of the Weywodes on the monter places. By virtue of the last treaty, they can fend no more than one caravan a year from Siberra to Pokin, which sloth not confift of more than two hundred persons, instead of one thousand and more, which they amounted to heretofore, and which were subsisted at the charge of the Chan of China, whilst they they were on the terutories of China; but now they are to subsist upon their own charges.

the forage is extremely dear. After which, during the rest of this day, the veather was very back, a great deal or rain with 11 they guils of what, the old house where I haded could no longer find the bad weather; all the wallo' one side of my chamber 1 ll, about midnight, into the count-, and, which made is the pprehensive for what remained. I was obliged to retire the an alphants of the thirty of the danger to which I found my felf expose. The danger to which I found my felf expose, it is claimber, though a forty place, was very low, I found my felt as residence, it is claimber, and quite so all and infirm as the other.

The next day, the 2d of this mooth, I advertifed my I landarins of what had hap pened, praying them to cause immediate repertion to be used, if not of the whole house, of that apartment where I lodged at least. Whereupon they sent to assure me it should be done without loss of time.

But on the 4th, they changed their note, and let me know, that they could do nothing in it before the departure of the F uperor, feeing the college which had the case of the buildings were so much employed about the ccurt, that they could give no attention to other affairs for the present. When a port I offered to repair it by people I would hire on my own expences. But they wanted to impose upon me in the price. And the Mandarins protested to me, that it was an affair that might be their utter ruin, if the Emperor should come to know that they had contented to my repairing with my money a house that belonged to him; but they assured me they should set to work upon it very soon.

The 8th, the Bogdoi-Chan depart of for Jegcholl; and, having the honour to attend him, on this occasion, to fifteen ly from Pekin, His Majesty asked me, "If I expected the caravan soon?" I answered thereupon, "That I had not received any advices from the commissary, but nevertheless I computed that the caravan might be at Pekin in two months from that time." Whereupon he asked me, "If I would not come and pass the time with the court at Jegcholl?" I received such a gracious invitation with all due submission, promising to come to pay my devoirs to His Majesty at Jegcholl as soon as possible. But, on my returning to Pekin, the governor of the city let me know, "That I could not follow the Emperor before His Majesty had sent the necessary orders to him and the council, to give me post-horses, and the escort of Mandarins, which I should have occasion for in this journey." In the mean time, I made several agreements with divers persons, for different sorts of japanned ware, which His Czarish Majesty wanted to have, which I could not get at the usual price, because those who supplied me with them were obliged to give a great part of what they gained on them every day to the soldiers of my guard, for the liberty of entering my house.

The roth, my Mandarius being come to see me, one of them took seave of me; being, as he told me, named by the court to go, in quality of envoy, to the Delay-Lama; and the other gave me positive assurances that, early the next morning, the workmen should begin to repair my quarters, and that they had already provided the materials necessary for that purpose. In regard to my two memorials, concerning the

^{*} The late Emperor of China was extremely affable and gracious towards Europeana, more especially to those who excelled in any science. He was taller than usual for people of his country, and not to be known, either by his complexion or feature, to be of Tartar extraction; it was only to be observed, that his cheek-bones, under his eyes, were a little rising and prominent like the Mongalls.

[†] The Delay-Lama is the fovereign pontiff of the Kalmucks, Mongalls, and many other idolatrous nations north of the Indies. He is adored as a god by all these people, and by them believed to be immortal. He lives in a convent near the city of Potala, in the kingdom of Tangute, upon an high mountain outh of the deferts of Xame, towards the frontiers of China. Vide Hist, Genealog des Tartares.

debts above mentioned, he gave me for answer, "That the president would not receive the n. not sinding it proper to meddle with such trisling things, as he had before and told Is. de Isnayloss himself, that the council would absolutely not embarrass themselves with any affair of debts; that nevertheless he had ordered his mandarin to press the debtors to discharge their debts, in case they were in a condition of paying tuch sums."

The 20th, my mandarin coming, stopped at my gate, and, having learned that my aparement remained fill in the fame condition, he fent one of his fervants to make his excuses to me, for not coming to see me; alledging, that the great heat approaching at ncon would, he feared, incommode him. But I caused him to be told, for my whole answer, "That I did not understand such a compliment, and that I wished with all any heart, that, in time to come, he would dispense with coming to my house at all." Toon this answer, he thought fit to come himself to me, and to complain much of the negligence of the college which had the care of the buildings, in not adverting to the repair of my house, notwithstanding he had wrote to them several times on the subject, in the most pressing terms. I demanded of him, "What he believed the Czar, my walter, would think of fuch usage as he shewed me? and if he was not afraid that, in time, he might be made responsible for such treatment?" But he, laughing told me, "Inat there pailed may other things with them, and of more importance than this was, without daring to carry complaints to the Chan; and he did not doubt but that it was the fune at our court." Nevertheless, the brigadier of my guard, on being informed of the affair, went to the mandarins of that college, and threatened them with his going himself to acquaint the Emperor, that, by their negligence, they contributed to the dir inction of his glory in foreign countries, if they did not, without further delay, cause my house to be repaired the very next day.

The 25th, at length there came workmen to put my apartment into an habitable state. The same day one of our debtors, named Dzchin Sanga, brought me 50 thun of kitrika; but I saw no appearance of getting any thing from the others, they being very promand indigent; and I perceived that the proceedings of our mandarin with them, tended more to get some little presents from them to himself, from time to time, than

feriously to preis them to the discharge of our debt.

in the months of June, July, and a part of August, there passed nothing material regarding me, either at the court or with the ministry; all those of any distinction being going to partake of country diversions. Wherefore, I shall fill this vacation by a faithful report of the observations which I could make, during my stay at this court, as well tayfelf as by some of my friends, of the present state of trade in the city of Pekin; but I must, at the same time, acknowledge to the reader, that there is much wanting to make the observations such as they ought to be, and might have been, if I had not been straightened, and if they had let me enjoy the means of informing myself thoroughly of things.

The people of Korea, who are tributary to China, come twice a year to Pekin *, siz. in the months of March and August, to the number of forty or fifty persons, as

^{*} Korea is a peninfula, eastward of the grand wall of China; it is contiguous on the west to the province of Leotang of China, and on the north to the eastern Mongalls. The Koreans are, from time immenoial, tributaries of China, who treat them very hardly, not permitting them any commerce with strangers. Nevertheless, they do not fail to come clandestinely with their goods, by the sea of Japan, to the river Amoor, and thence by the Naunda to the city Naun, to traffic with the Mongalls, and indirectly with the tussians.

well to pay their tribute to the Emperor as to carry on their trade; which confifts principally of the following more handless.

cipally of the following merchandifcs:

A fort of large paper, made of raw filk, foundhing like the large paper for wrapping up things in Lurope. They make use of this paper in China for windows in place of glass.

P. per, with gold or filver figures, for hanging their chambers.

All forts of large fans, of different fashions.

Whats very neat and fine, which they use in summer in place of matrasses.

Cut tobacco, very finall, for Imoking, much effected in Clana, and preferred to that of their own growth.

Striped cotton stuffs.

A fort of furs, which the Ruffes call chorky, and which they call colouk in Siberia; it is in great abundance in Korea; they fell a great deal of it in I'ckin.

A fort of dry fish, which they get from a certain large shell-fish in the sea of Tapar.

It is with these commodities that they trade; and although they may, in a manner, be considered as the same nation with the Chinese, and in some degree their subjects, yet they do not enjoy the least liberty during their abode at Pekin; all communication and conversation with toreigners being absolutely forbidden them, and much restricted with the Chinese themselves; insomuch, that the Chinese are not less suspicious of them than of any other nation whatsoever. As they cannot make by their trade any thing to a considerable amount, they generally bring with them to Pekin large sums in silver, in Spanish pieces of eight, and in Dutch dollars, which are looked upon in China as inferior to the sine silver of China, which they call the Chan's silver, by 5, 6, or 7 per cent. which shews, that the inhabitants of Korea have some trade with the islands of sapan, or, at least, with the islands lying between Japan and Korea; although it is absolutely forbid the inhabitants of that country to have the least communication or commerce with other nations, or to admit soreign ships into their ports; having, for that end, a mandarin always residing in Korea, to have an eye on the proceedings of that nation. With this money they buy at Pekin,

The finest raw filk.

A fort of damask, called by the Russes goly, and by the Chinese couty-toanza, that is, damask of Korea; because, at first, the Koreans alone bought that fort of damask.

A fort of fluff mixed with filk, fit for linings, called by the Chinese fansa.

Tea and china-ware.

All forts of diffies of white copper, for household use.

Cotton.

They likewise buy the tails of sables, to border their caps, and the collars of their robes.

It is likely that they trade into other parts with the filk and damask, which they carry from Pekin, seeing they take away much greater quantities than the consumption of

their own country can require.

When there is no Russian caravan, nor any of that nation at Pekin, they quarter those of Korea in the habitation appointed for the Russes; but when there are Russes in this city, they give the Koreans other quarters; for this reason the Chinese call this house Couty Coanne, or magazine of the Koreans, when it is occupied by the Koreans; and Urussa Coanne, or magazine of the Russes, when occupied by people of that nation.

When the Koreans, whether deputies from that country or merchants, arrive at Pekin, there are two mandarins forthwith named to go to their lodgings to observe who

3 M 2

goes in to them, or comes out from them; and to examine the cause of their co. dig. and how they became acquainted with the Koreans: they likewife place guarde and around their quarters, to prevent any person from having private access to them. Wh. any of this nation go abroad, upon any affair, the guard follows them every where, with large whips, to prevent any person from joining them in the street; and they dat. not go to see any person without permission of the guard. As the inhabitants of Korca are not used to cide on horseback, and are afraid to mount a horse, for fear of accidents, they give them a guard of infantry, who have no other arms, when they are in gam. ion, than their whips. Befides all these steps, full of suspicion, they fix, at their quariers, an edict of the court, fignifying, that all persons whatsoever are surbid to enter their houle without the knowledge of the mandarin, deputed for that purpose, who, after examining them as to v hat they have to do there, takes notice of their names, and fends a foldier into the house with them to observe what passes. It is a very profitable commission for those mandarins who are deputed to guard the Korcans: for they alway, farm the privilege of trading with them to that company of Chincle merchants who offer the most money for it, which sometimes amounts to a considerable sum; and it 's by no means permitted to any other merchants, besides the members of this company, to trade, for that time, with the Koreans.

The Chincse have not, in a manner, any trade with the Indies *, excepting of some fmall dealings they may have on the frontiers of the neighbouring states: but it was impossible for me to get to the knowledge of what those trades consisted in; for, among a thousand people of the inhabitants of Pekin, it is rare to find one person who hath the least knowledge of any thing that passes without its gates. It is true that the Chinese do carry on trade, sometimes at Bengal, to the Philippine islands, to Batavia, and even to Goa; but that is not brought about but by stealth, by the connivance of the mandarin governors of the fea-ports, obtained by means of a round fum of money, without the knowledge of the court; befides it is absolutely forbid, to every subject of the empire, to go into foreign parts, upon what occasion soever, without a permission, or an order, from the Emperor or the government 1.

The Bucharians come also to Yekin, but without observing any stated times t. They bring large round cornelians, of a very good colour, which they barter with the Chi-

* China is separated from the country of the Great Mogul by sandy deferts, impassable for merchance; and the other provinces of India by mountains, which are very difficult to pass, and in a manner hinders all commerce between these two empires

+ The greatest part of the Chinese who are dispersed in several places of the East Indies, for the sake of commerce, are the posterity of those who left China when the Mongall l'artars made themselves masters of that empary; and they have no other than chandeline communication with their Chinese countrymen. They are castly known by ther long hair, which is natural to them; instead of which the Chinese, subjects to the Tartars, are obliged, under pain of death, to cut their hair short like the Kalmucks and Mongalis, who have all their heads shaven, except a tuft of hair on the top of their head, which they preserve of the natural length of their have.

‡ There are two Bucharips, the G.eat and the Little. The Great Eucharia is fituated between Perfia and the country of the Grand Mogul, about the 40th degree of latitude. This is the country of the Usbeck Tartars, who are Mahometans. The Little Buchuria is fituated to the east of the Great, and extends to the front ers of China, on the fide of the desert Xame, and kingdom of Tibet, which is there confined to the fourth; this last is subject to the Kontaysha, Grand Chan of the Kalmucks. The Bucharians are a particular nation, which have no connection either with the Mahometan or Pagan Taitars, nor with any other people of those parts. They do not know themselves whence they draw their origin. Nevertheless, they make profession of the Mahometan religion. They occupy the towns of the two Bucharias, and only employ themselves about their commerce. Those of the Great Bucharia carry on their trade in the dominions of the Great Mogul in Persia, and in Siberia, and are tributary to the Chan of the Usbecks.

nese against damasks, kitaika, tea, tobacco, china ware, and silver. They string these on fmall filken lines, in the manner of beads; and they are worn by mandarins of the first orders, when they appear at court, or in the colleges, in their habits of ceremony, wearing one row of them about their necks, which hangs down on their bellies. They bring also musk, rough diamonds, and many other forts o' precious stones, but, as I was informed, of no great value, because it is rare to find, among the Chinese, any who will risk the laying out a considerable sum for a fine stone. The Chinese polish these stones, after their own fashion, in order to make them proper for ornamenting the heads of the fair fex.

I had no opportunity of being acquainted with any of this nation, not being allowed liberty sufficient for that end; and, on their part, they dared not run the risk of coming to my house, for fear of the guard at my gate; so that I cannot give an exact account concerning them.

They also bring to Pekin gold dust *, which the Chinese buy commonly at the price of five, fix, to feven laen of filver per laen of gold-dust, because it is unrefined; they affure me that it is very fine when purified, and is then equal to the gold of the Chan.

These Tartars dwell in the provinces of Chamill and Tursant, under the protection of the Emperor of China, in confideration of a moderate tribute, which they pay him annually. In return, they buy at Pekin,

Hides of Russia to make boots.

Fox-skins, red and brown.

Squirrel-skins, while and gray.

Beaver-skins.

Sables, and other furs.

Kitaika.

Cotton, like the woollens of Europe, of which they use part thenselves, and sell part to the Kalmucks 1, their neighbours. They also take,

Tea, Tobacco,

And

Those of the Little Bucharia trade into China, into the kingdoms of Tibet and Tangut, and with the Kalmacks and Mongalls their neighbours; these list pay tribute to the Kontaysha The Bucharians have many customs and ceremonies, much like those of the Jewe; nor is their dialect, physiognomy, and size much unlike them; which may give occasion to many reflections

* The gold which the Buchanans bring to China comes from the high mountains which separate the dominions of the Great Mogul from the Grand Taitury. All these mountains abound in rich mines of all forts, but none of them are wrought; neverthelels, they make confiderable gains annually, by the great quantities of gold-duft which the mighty torrents, formed by the rams in the foring, along with the flows melting, bring down with them into the neighbouring valleys: for the inhabitants of these mountains, together with the Kalmucks, who encamp with their cattle in the adjicent plains, come afterwards to gather these grains of gold, in the pits which the torrents have made in their pallage, and barter them, with the

Bucharians, against all sorts of small things for which they may have occasion in their way of life.

+ The provinces of Chamill and Turfan are fituated to the west of the Desert of Xame, towards the 40th degree of latitude. They make a part of the Little Bucharia, and have been subject hitherto to the Kontaysha, Grand Chan of the Kalmucks; but a few years since the Chinese, joined by the Mongalls,

have possessed themselves of it, after having driven out the Kalmucks

† The Kalmucks occupy a great part of the Northern Asia; they are divided into three principal branches, under one sovereign Chan, whom they call the Kontaysha; they have no fixed habitation, but also the contays the contay Though the Kalmucks are indisputably the braveit of the Tartars, they are, nevertheless, defirous of kiving peaceably, contenting themselves with the sublistence which their cattle can afford them, and do no harm to any, unless they are hurt by them; but when once irritated, they become irreconcileable enemies. Their religion is that of the Delay-Lama.

And of the smallest China-ware; of all which in pretty large quantities.

Befides the goods I have above specified, I know of no others which they bring to Pckin.

The most valuable furniture of lackered ware, viz. cabinets, chairs, tables, bulkets, and other things of that fort, as also the richest porcelain-ware, come from Jopan. For, when the Imperor fends any person to Japan, in a public character, most of the princes and great men of the court, feldom fail to engage him to bring them fome of those things at his return. Sometimes they find means to bring these things into Chine clandeltinely; but that is very feldom. This is the reafon that the commedities of Japan are not always to be had at Pekin, unlefs a man would pay an exorbitant price; novertheless, they are found there sometimes reasonable enough; because seld im a year piles that the Emperor dotl, not amerce fome or other of the great lord, in very conilderable fines, which obliges them to raife all the money they can on their moveables and immoveables, and whoever hath money lying by him, doth, on these occasions, liv it out to great advantage, and buy the most curious and valuable things for little money t.

After the lackered ware of Japan, that of the province of Polich is looked upon as the best; but none of it comes to Pekin, because the great lords of China oppress the merchants to a great degree, and take their goods from them, upon many frivolous pretences, without leaving them the leaft hop's of ever obtaining any payment. For this reason, all merchants, and others of any lucrative trade, at Pekin, have fallen into the cultom of putting themselves under the projection of some one or other of the princes of the blood, or other great lords, or ministers of the court; and by this means, with the withtance of a round tum of money, paid annually to their protectors, they are able to get clear of the extortions of the mandarins, and fometimes of those of the common foldiers: for without fuch a powerful protection, a merchant mut, be an undone man at Pekin, where every one thinks that they have an undoubted right to form pretentions upon a nun that lives by trade. And if any of them are fo imprudent as to attempt obtaining forisfaction, by the way of juffice, they fall from bad to worfe; for the maildarins of juttice, after having drained from them all they can, feldom fail of ordering the goods taken from them unjustly, to be brought to the college; but he must be a cunning fellow, indeed, v ho shall be able ever to get them from thence.

They have at Pekin a people dexterous enough at lackering, but their works fall hort of those of Japan and Pokien, which may be attributed to the difference of climate; and it is for this reason that the lackered work made at Pekin is always much theaper than the other. Nevertheless, the lackered work made at Pekin infinitely ex-

seeds any work of that kind made in Europe.

The thips which arrive every year at Canton from England, France, Holland, Denmark, and other parts, generally bring the following forts of merchandife.

Silver of different coins. All forts of fine cloth.

Camblets.

* All merchandise of Japan is contraband in China, which is the reason they cannot be brought into luffia, with the caravans from China, at least without very great risk. The small quantity of Japan oods, which are claudestinely brought into China, being kept very private, and paid for at very dear ites by the Chinese themselves.

† It seems to be a favourite maxim, adopted in all the eastern courts, to wink at the vile practices, and pacious impositions, of the ministers; and when they have well plucked and drained the substance of the

ople, the prince then iqueezes them dry for his own use.

Woollen fluffs.

Fine Holland linen.

Standing clocks and watches.

Looking-glasses of all sizes.

Mathematical inflruments.

Etwys from England.

Pencils.

European paper of all forts.

Different forts of millinery wares.

Some forts of European liquors, especially wine.

A good part of those merchandises are distributed in presents among the mandarins of the government of that city; of the rest, the European merchants generally make a very considerable profit. They employ the filter these bring in purchasing divers sorts of goods, by virtue of an agreement made before hand: they carry away with them from thence;

Raw filk.

Damasks wrought according to draughts furnished to them.

Wrought filks.

Lackered ware.

Tea, green and bohea.

Badians, a feed having a taste much like anisced.

Canes, and China-ware, made according to models given them.

They also sometimes bring away gold, but very seldom, because they generally get it cheaper in the Indies. They also find at Canton pretty valuable stones, except diamonds, but not in any great quantities.

They make the best filk brocades of China, that are brought to Europe, in the pro-

vinces of Quoantung and Fokien.

The filver which they bring from Europe to Canton is received at the same rate as that brought from Korea to Pekin; and they have the advantage of buying their goods

at Canton from 30 to 40 per cent. cheaper than they could do at Pekin.

The last year, there arrived at Canton a French commissary, belonging to the new India Company established in Paris*, who obtained leave of the court to reside there for time to come; but when he wanted to dispatch the ship loaden with merchandise, he met with so many obstacles at the custom-house, and from the government, doubtless to draw more money from him, notwithstanding he had already made sufficient presents, that at length, despairing to see an end of these impositions, he gave orders to the captain to weigh anchor and depart, in spite of those people; which was done as he desired. But he was obliged, to avoid being very ill treated on this occasion, to take the Chinese habit, and to retire to a convent of Dominicaus, at the distance of two ly from Canton †, where he kept himself incognito, till such time as the French Jesuits at Pekin had sound means, by the sorce of presents, to obtain liberty for him to appear openly, with two or three domestics, and remain there till the court should otherwise direct; on the condition that he and his servants should wear the Chinese habit. Nevertheless, I was afterwards informed, that the mandarins of the government of Canton let no opportunity escape them of chagreening him, insomuch, that he found

^{*} The Miffifippi Company.

[†] There are many Roman Catholic convents in China, which, in the time of the late Emperor of China, had much the fame immunities as the convents in Europe enjoyed. No person durst enter but with the consent of the religious of the convent, unless by express order of the Emperor of China.

bimfelf obliged to re-haberk the first opportunity that offered itself. They also has defend you at Canton one, to so a Oslead, bearing the Emperor of Germany's colour. For the roll, they can be obtained from Europe, and bring back from China, a vegreat variety or to so, and object forts of curiosities, upon which they make a very coal Jeroble profit; but these are so numerous that it is not possible to surnish a coapete a post reason of the tax.

Largad to our encace with China, it is at prefent in a very languishing const but; and nothing it the world would bring more prejudice to our caravans that the commerce which is confied on at Urgan; for from this place there is brought month,, and even weekly, to P km, not only the fame forts of goods which our caravars being, but of a better quelity than those brought by our caravans, and in so great quelity in that the rierchan! as which the merchants of Pekin, who go continually between Pakin and Urga, to trade with our people, and the goods which the lamas of the normfalls f bring from their parts, amount every year to four or five times as much value is the caravans that come to Pekin in the name of His Czarish Majesty. And I have been informed, by these who have been employed by the great men of Pek is to bey ir provision of turs at Urga, that there they can buy finer, and more valual: Hack is sakins, than they have ever feen in our caravan. I must add besides, that the constant cuantities of our inerchandizes brought from Urga to Pekin, do confiderably lower the prices. The merchants of Pekin and the lumas of the Mongalls, who bring them 2) Pekin, are always capable of affording them four or five per cent. lower than the commissary of the caravan can, of which the reader will be easily convinced, if he gives attention to what I am about to lay before him.

The Rufs merchants, and all other people that come and go continually between Selinginfly and Urga, buy their goods where they find it most convenient; instead of which, the commissary is obliged to receive those he brings with the caravan, out of His Majesty's treasury, from sworn appraisers of the treasury, who often set so high price on them, that they find it difficult to fell them at half the price valued at to them. Another advantage which those who go to trade to Urga enjoy, is that they make the journey thither in ten or twelve days; and beginning their traffick immediately on their arrival, they are ready to return in two or three days after; in place of which, the comminary, after having been at confiderable expence, can with difficulty enough get to Pekin in three months; and when he gets there, they keep him shut up fix or seven weeks, according to the maxims practifed by the Chinese hitherto; in consequence whereof, the abundance of merchandize of Russia arrived at Pekin obliges them still to fpend feveral months in getting quit of theirs: and as by the last treaty, they are obliged to maintain themselves, and all those belonging to the caravan, at their own proper expence, all these circumstances cannot fail of occasioning a very material difference in the balance of their trade. For, before they began to trade at Urga, a caravan, how large foever, was all fold off in three months, at the prices fet by the commissary himself. Moreover, all the Chinese who traded at that time with us became rich; instead

^{*} The camp of the Chan of the western Mongalls, who are tributaries of China, is called Urga. This prince encamps on the right of the river Selinga, about 500 versts south of Selinginsky, towards the frontiers of China; and though he doth not always encamp in the same place, yet he seldom quits this country without indispensable necessity. By virtue of the last convention of the frontiers, the Russians of Selinginsky might freely come to Urga to barter Russia hides, and the coarse woollen cloth of Siberia, against sattle; but as, under this pretext, they brought great quantities of valuable surs, which they sold against the merchandises of China, this clandestine commerce much injured the trade of the caravans of Siberia.

August.

of veich, all those who have traced with us force that time have traded to their own loss, and may be diserred as prefent quite ruined. The expences of a journey to Urga are very triffing: for they can buy at Selinginiky as much provision for the roubles as will ferve ten perions for a month; in place of which, ten roobles will hardly feare them a week at Polen. Before, those who go into China to trade are obliged to buy for me for those horfes, &c.; in place of which, these who go to Urgo to trade, put their horse to grafwithout ceiting them a farthing. The Chinele merchants, on their fide, vio come to Ungo, are Ekewife at much left expense than the commission; because they buy. Pelin, and the towns through which they pass, tea, tobacco, rice, and other grains, ordinary damail's, kitaika, and other like merchandife, at a very low prize; which the barter on the road with the Mongalls, against horses, sheep, and, in a voic, all for sec cattle; infomuch that, as the private merchants make both their journey, our and hore allo, with infinite less expense than the commissary of a caravan, it cauron be otherwise, than that they can buy and fell their merchandile on much better terms than a conmissiary can, who is obliged to remain, with a number of attendants, in a city where living is fo dear as at Pekin, a longer time than would ferve a merchant at Selingint of for making four or five journeys to Urga. In fine, when the caravan returns to Ruffia, they find, after fuch great expences, that the quantity of Chinese goods brought to Rusia by private traders, is so very large, that they must fell theirs at a very moderate price. All these circumstances well considered, it is easy to comprehend that upon cloffing the accounts of the caravan, the profits cannot, at this time, be much more than the difbursements. But to return to our journal.

The 14th, I received a letter from Commissary Islopnikoss, dated from the river Tola, 29th of July; by which he desired me to prevail on the council for the assairs of the Mongails to fend him an assignment for 2000 laen of silver upon the custom-house of Kalchanna; offering to return the same (for which he had pressing occasion, for the necessary of the caravan,) as soon as he should commence his trade at Pekin; and he added, that the same favour had been formerly granted to Commissary Oskolkoss.

The 15th, I went to the council, and having spoken of this affair with the askinnamma, or vice-president, he promised to consult the registers of the council upon it, and to write directly about it to the president at Jegcholl, and that he would communicate his answer to me.

The 17th, having fent my interpreter to the council to know if they had come to any refolution on this affair, he brought back the following answer.—" That they had indeed found in the registers, that the council had formerly advanced money to the commissary; but that the trade was an object of so little consequence with them, that they did not think it merited the council's being incommoded with proposals of that fort."

^{*} Tola is a river in the country of the Mongall, which comes from the east, and crteis the river Occhonabout 250 verits fouth-east of Selinginsky. By virtue of the new regulation, the caravans of Siberra, who go to Pekin, ought to enter on the territories belonging to China upon their passing this river.

[†] The council for the affairs of the Mongalls at Pekin is a college, who have the care of every thing regarding the nation of the Mongalls, as well those who are the thereditary subjects of the Emperor of Chaua, as also those who are only under the protection of this empire. This college, at the same time, enters inductely into the cognizance of all the affairs which regard the powers who border on China, from the north-east to the wost, whence it comes that they are the court who have most to do of any in China.

[†] Kalchanna is the first Chinese city, within the great wall, that you come to, in the road from Selinginsky to Pekin. It is here the duties, inwards and outwards, are paid by the Russians, as also for great part of the country of the Mongalls.

The 18th, a mendarin came to me from the council, and notified to me, that His Majester, calling to remembrance my being at Pekin, had given orders to the council that I should be escorted to Jescholl by a mandarin, and some of the military.—Whereupon I answered him, that I would be ready the next day, with my interpreter and two domestics, if they would take care to provide the relays which I should want for the journey.

The 19th, all being ready for the journey, I left Pekin very early in the morning.

The 21st, I arrived at Jegcholl, and repaired forthwith to the court; and having found the chamocilain of the Chan, who is generally an euruch ; I prayed him, according to the cufform of the country, to inform himfelf, on my behalf, of the health of the Bogdoi-Chan, and to inform His Majesty of my Leing there; upon which His Majefly did me the favour of funding me a falver covered with all forts of new fruits, which were followed by another charged with cives forts of nical from his kitchen; he ordered me to be told, at the lame time, that he fent me those for my refreshment, and that I would do well to keep my chamber the reft of the day, to recover my fatique from the journey. The fame evening, fome of the Father Jesui's bling come to fee me, told me that the alegada had resolved to propose to the Emperor to make the caravan encamp in the defert, near Kalchanna, till the court should recurn to Pekin; supposing that so many of the court, and the greatest part of the people of distinction, being in the country, there would be nothing to do for the caravan at Pekin; and that they believed that he would not fail of requiring from me an order to the commiffary, for that purpose. It was casy to see, that what determined the minister to take this refolution, was nothing clf: but his apprehensions that the presents he expected to have from the commissary, if he should be at Pekin at the time of his arrival, might, if he was absent, fall into other hands. But, as this was a defign that might be attended with very bad configuences, and might have been the cause of the loss of men as well as the horses belonging to the caravan, by being exposed to the extremity of cold and famine in the deferts, I became obliged to use all my efforts to reader this intention of the minister abortive.

The 22d, being to go in the morning to court, the Emperor fent the master of ceremonies to require of me passports for some mandarins which were to pass the frontiers of Russia; but as I could well penetrate the grounds of their errand. I thought it my duty to refuse the passports demanded. Nevertheless, notwithstanding all my excuses which I could muster up, to exempt me from giving them, the master of the ceremonies came to declare to me, in the clearest terms, the next day, which was

The 23d, "That the Emperor was, at one time, reloved to fend those people away, whother I would give them passports or not; but that I ought to consider, that in such case, I might expect an absolute denial to every thing which I might have to propose." Which convinced me, that it was absolutely necessary for me, on this occasion, to conform to His Majesty's pleasure, if I would retain the least hopes of succeeding in my lesive of opposing the designs of the minister. For this reason,

On the 24th, when the master of the ceremonies came again to speak with me on his affair, I put into his hands a letter, addressed to the officers commandants on our rontiers, in the form he desired to have it; to which I joined the condition, that our aravan should not be hindered from coming to Pekin directly; and that our commis-

^{*} All those who serve in the chamber of the Emperor of China are cunuchs, and are either Chinese or longalls; the Chinese nation being not less jealous of the fex than other eastern people; but the Monulls, and generally all the Tartars, are not very hable to this malady.

fary should, on his arrival at Pekin, immediately be at liberty to begin his commerce, without being shut up for a certain time, as had at some times been pradiced. The master of the ceremonics premised to speak to His Majesty about it; who had not only the goodness to give his consent immediately, but he, at the some time, gave shift orders to the profid at of the council, the he should take special care that to person whe societ should be about it in managers incorrect the commission in his business.

That there was a perfen of quality, who by him, reads me at offer of 10,000 laen of fiver, till the arrival of the caravan, which I might employ in what manner I thought proper; and that this Lord was very much feandalized at the difobligme answer I had received from the council of the direction of the affairs of the Mongalle, in regard to the 2000 laen of filver which I had required of them for the necessities of the caravan."—Upon which, passing him to let me know who this Lord might be, he told me, "That he was indeed forbid to let me know who this perfon was; but that he would nevertheless, in confidence, own to me that it was the ninth prince, fon of the Chan, who made me this ofter ."—Thereupon I did not omit testifying to him how I was touched with the generality of a prince to whom I had never the honour of paying my devoirs: adding, "I should never forget the good will which His Highness was pleased to show me on this occasion: and that I should all the days of my life retain the same sentiments as if I had received his generous offers."—But the Father Jesuit having remonstrated, "That the prince might possibly think himself offended if I should resuse his offer altogether;" I was obliged to accept of 1000 laen of filver.

The 26th, I paid a vifit to the Father Jesuits of the French nation †, where I found the president of the council, who let me know, by the mouth of these fathers, "That he was come from receiving the Emperor's orders, which were so favourable to our commerce, that there is no instance of the like liberty having ever been granted before in China."—I answered him, through the help of those fathers, "That I had no reason to doubt of the punctual execution of His Majesty's orders, since he had the goodness to charge the governor-general of Pekin with them; whose indefatigable zeal for maintaining a good understanding between the Bogdoi-Chan and the Czar my master, was sufficiently known to me."—Whereupon he caused me to be told, "That he was not a man capable of receiving presents from foreigners, for doing them a fervice, as many others did in such cases; and that a step of that kind would entirely prevent him from ever having the liberty of speaking to His Majesty again in favour of any

The late Emperor of Chi a had fore trea princes born of his feveral wives and concubines. There were three prefent at the first audience of Mr. de Imayloss, who were all very well proportioned, having fine complexions, and black eyes, well formed, without the least appearance of the deformities of the Mongall nation.

[†] There is an appearance as if this was a faare laid for Mr. de Lange, to render him suspected by the Emperor of China, who, in the design which he had then formed of leaving the succession to his third son, could not fail of taking umbrage at the least sales step which the agent of Russia might happen to take on this occasion, which might induce this Monarch to consent to his being sent away, which was probably the whole aim of this intrigue.

[†] The Jesuts had great ascendency on the late Emperor of China; and as the present Emperor hath been under their hands, it ought not to be doubted but he is likewise well assected to them, whatever may be reported to the contrary. At the first audience of Mr. de Ismayloss, the Emperor being seated on the the throne, had on his left, as the place of honour, at three paces distance, a little advanced into the hall, three of the princes his sons; and on his right, a little more advanced, the Jesuits belonging to the court; at five paces behind them, a little more advanced, were placed seven Mongali princes of the Imperial house; and then, on the two sides of the hall, the ministers and grand mandarins of the court, all sitting cross-legged, according to the manner of the Tartars. By so remarkable a distinction it may, in some degree, be comprehended how much these good fathers were in favour with the Emperor.

per on who loever, should it come to this Majely's car; but that, neverthereds, he tered a like it is independent on his few privilege, when he should come to our here to buy any thing, of language in it is a savotrally in others in the price."—Joi which I include the limit dealways know to treat him with proper different in the proper diff

And they showed me all the or lengs and successful the charming price, vish is certainly worthy to be the delight of so si it a Monarch, and in initially superior, in boout, and magnificence, to

the palace at Tekin or Czchanzchumniere.

The 31°, I had the honour of attending His Majesty when he parted from Jegcholl; and, on the occasion, he had the goodness to ask me, "I I enjoyed my health?" After laving answered with all the respect due to so gracious an inquiry, he said to me surther, "I hat he thought he observed some alteration in my countenance, and that I sught to take care of my health."—After which he gave me permusion to return to be in a feer having, by the master of the ceremonies, let me know, that if the calavant due to been so righ, I should have had the honour of accompanying him to the party of hunting.

The 3d of Scptember, I was returned from my Jegcholl journey, being three days

on the road.

The 10th, I fent my interpreter to Kalchanna, to the commissary, with 1500 laen of silver. The 10th, I acquainted my mandarin, that, as the caravan was at hand, it was mest necessary that the nouse should be repaired, that I might not commue under apprehensions of the merchandise being damaged, for want of sufficient cover during the rainy autumnal season. But he commutally resulted me the liberty of getting it repaired of myself, under the promise that he would take care to get it repaired before the actival of the caravan. But seeing one day pass after another, and nothing done, I went, on the 15th, to the president, to pray him to give orders for repairing the house, at the least, not to oppose my doing it at my own expence—But his answer was, he would instantly hire the workmen, and it should be repaired in one day. And these promises were daily repeated, as well by my mandarin as by the president, till, at length, the commissary arrived with the caravan at Pekin on the 29th. As it rained very hard during the whole day, the commissary found, at his arrival, that there was no place where he, or any of his people,

Hunting is the favouite employment of the Taitar pagans. And one may gather the inclination of the Tartais from the pleasure and affiduity with which the late Emperor of China followed the chace; nevertheless, he mixed much of the politician with his favourite passion; for going every year a-hunting. Scotted by a body of the samy, consisting of fifty or fixty thousand men, completely armed, and generally ravelling 100 leagues in this mauner, this Monarch thereby inured his courtiers and his troops to the use farms, and to fatigues, and prevented their falling into the soft and indolent manner of living peculiar to he Chinese.

could be covered from the rain; and he was obliged to let all the baggage of the caravan remain in the court-yard, without being able to fecure one fingle parcel. As foon as the caravan was entered into my court-yard, they reinforced the guard at the gate, and posted centinels all around the home, to fecure us, as they faid, against thieves; but, in reality, to prevent our commissing shaving any opportunities of trading with any person whattoever, till such time as they should receive the merchandises, which they might presend to have occasion for this lagisly and the court. Besides which, they ordered two mandarias, with a clink, to rea am in our liquid, to take good care that no merchandise was fold on create, and to note down exactly the names of all tree should come rate, or go out of our nouse; what goods, and how much they bought, and at what price.

In the beginning of OBober, I fent as in to the council, on the subject of the reprir of our house. Upon which they let me know, the 6th, by a clerk, that the president had sent a counier to His Majesty, so be informed if His Majesty would be pleased to have our house repaired by the treasury, or if it was our business to repair it; the Enperor, by virtue of the last convention between the two empires, not being obliged to

furnish any thing to our people. Whereupon I patiently waited till the 12th.

The workmen came at length to make the reparation so often promised; but it was done fo negligently, that when they made an end, there was little alterion for the better. The comniffary employed the rest of this month to unpack the goods, that he might put every thing in order against the time he should be permitted to begin to trade. In the meanwhile, we were vifited very affiduously by four mandarins, who pretended to be deputed from the court to receive the merchandifes for His Ma, efty, demanding from the commissary, an exact specification of all the goods prought by the caravan, that they might choose what was necessary for the service of the court. were aniwered, "That they need not expect that the commissary would give them a specification of all he had in the caravan; but that, if they had any orders of the court for us, they ought to produce letters of credit, addressed to me or the commissary; or at least, to let us see a specification of the goods wanted, signed by the master of the wardrobe of the Emperor, whereupon they inculd know if such goods were in the caravan or not." But these gentlemen would not quit their demand to, ailedging, "I hat they must go according to the customs observed in times past, when the commutary of every caravan had been obliged to give fuch a specification to these d puted by the court to receive the goods from him; that they did not intend to be forced at this time as they had been with former commissaries, when the count got a our of but indifferent quality, after the best goods had been disposed to private perious; that, to this end, they should be careful to examine all that the commissions had '10 glat, and that they would take what they wanted, for the court, out of the best they could and, particularly tables, at three laen per pair, as usual." The commissary, seeing these people pretend to infift on his giving them goods at fuch an under price, claved from me the protection of the Czar, our common master, alledging that he had sables which cost him twenty or thirty roubles the pair; and that it was easy to comprehend what market he should make with the rest of his goods, if he should be obliged to sell the sables at fuch a losing price. Upon which I made the deputics understand, "That the merchandifes of the caravan did not belong to the commissary nor to me, and in case they did, it was not to be supposed that we should credit them at all, at least without their bringing a specification in form, figned by the person who hath the superintendance of these affairs at court. But that did not signify, they had only to bring their money, and when the commissary had shown them the goods, he would see if he could agree

with them." The consense gentlemen feemed to take offence at this answer. Nevertheless, they enjoyed at led to bring such a specification; but they deserred it from one day to at other. In the mean time, they made use of all their cuming to prevail on us to eleve them, at an under price, all the goods they thought sit to take.

The ist of November, having fent my interpreter to the council, to defire them to admit the comminmy to the liberty of trading, they let me know, in answer, "That it was impossible to to it before the deputies of the court had received the goods they

had to receive for life Majesty."

The 4th, I spoke of this affair, not only with my mandarin, but also with the Kientu, or mandarins appointed to our house, to the end that they should dispose these people to give us their appointed to our house, to the end this affair. The same day I went to meet His Majesty, who was returning from the hunting, and met him on the 5th at eighty ly from Pekin, at the hot-baths of Tangzchang. His Majesty told m., "That he had received news from Europe, that His Czarish Majesty had made peace with Sweden, by the mediation of the Roman Emperor." After which he asked me, "How long the caravan had been arrived?" Upon which I answered, "That they were, indeed, since the 29th of September, at Pekin; but the commissary had not yet got permission

to trade." Upon which His Majesty, dilmissing me, went to the bath.

I must, on this occasion, acquaint the reader with the custom of this empire, in such circumstances as this of the deputies above mentioned. All the mandarins that are charged with any commission of the court, be it to subjects or foreigners, are named and dispatched by the ministry. When such commission is finished, these people are obliged to make presents, not only to the ministers, but also to the princes of the blood, to the end that they may not give them too much trouble, and that they may keep something to themselves. They have no cause to fear that the people, with whom they have to do on these missions, will find access to the ministers, or that ever a serious inquiry will be made into their cenduct; which is so true, that no person will readily undertake to make complaints of their tricks, because there is no reparation to be expected. No person can carry his complaints directly to the Emperor, but they must absolutely be made by the ministers, or those who hold the first office of the palace, or the chamber of His Majesty; and these gentlemen are so closely linked to the interests of the other great lords of the empire, that whatever part, the sufferer may address himself to, he will certainly remain the dupe of the assair.

The lame date the deputies endeavoured again to get fome goods from us, while the

specification might be made out; but their design did not take effect.

The 9th, I hoke again to the mandarias of the coencil concerning our caravan; but I could get no other answer, but that this assair regarded the deputies of the court

only.

The 14th, when I would have gone out myself to the council, the guard, at our gate, stopped me, under pretext that the four mandarins, deputies from the court, had ordered, that no person should be suffered to go out till the goods, which they ought to have for the court, were first delivered. Though I passed in spite of the guard, I was nevertheless obliged to return without doing any thing, as the president was not in the city.

The 15th, I fent my interpreter to the council to receive the resolution of the president, upon what I had represented the day before; and as he sound him not there, but was told he was at home, he went thither to speak with him, and brought me the answer sollowing: "That the president would take care that this assair should be ended out of hand; that, to this end, it was nevertheless necessary, that the commissary should

prefs

put a reasonable price upon his goods." He desired further my interpreter to tell me, that, at this season, he was rarely at home, because he was obliged to be all day long at Czchanzchumniene attending His Majesty; that, when I should have any affair to propose to him, I should communicate the same, by my interpreter, to the mandarius of the council, who would not fail making him the necessary report immediately.

The 16th, the deputy mandarins having made up, according to their own fancy, a specification of merchandises to be received by them for the provision of His Majesty and the court, they came to present it to us, in order, by means of this imposition, to

get a large parcel of goods from us.

But the 17th, this specification being translated into the Russ language, we found that the quantity of merchandise which they demanded was much too large to be agreed to. For which reason, it was asked of them, "From whom this specification was sent to us; and who made it out?" Upon which, after many turns and tergiversations, employed to no purpose, they were at length forced to acknowledge that it was of their own forming; it being their opinion, that such a quantity would be wanting for the use of the court. But in making this avowal, they did not fail to make the commissary apprehend, "That he need not statter himself with a liberty of trading with any person, before they should receive all that was contained in the specification."

The 18th, the alegada being come to our house to buy some goods, I besought him to remember the promises which His Majesty had been so good to make to Mr. de Ismayloss on the subject of freedom of commerce, seeing that by the course which affairs took at present, it looked as if they were entirely torgot. But he gave me for an answer to all, "That it was an assair that did not in the least regard him, and that I had none but the soundil to address muscle to."

none but the council to address myself to*."

The 22d, I fent my interpreter to the council with a memorial on the subject of this affair; but the mandarins he found there resuled to receive it, under the pretext, that they must have before hand the orders of the president thereupon, and know from him

whether they should receive it or not.

The fame day the four deputies, being come to fee us, gave us to understand, "That the usual time of keeping the commission at home being nigh finished, they were come to commence a trade with him, and to know how much he demanded for each fort of merchandise, to the end that, after they had finished their bargain with him, they might then declare our house free for every body to enter." Whereupon I demanded of them. "Who could have authorised them to shut up, in the manner usual with slaves, for any time, the subjects of so potent a Monarch as was the Czar my master?" But these gentlemen, not finding it proper to answer so ticklish a question, contented themselves with saying, "That it would be well for the commissary to resolve to give them the merchandise they required, and that at a reasonable price, unless he would, out of wantonness, involve himself in expences which would much exceed the profit he thought to make by his obstinacy; and that, in the situation he was, being obliged to feed his people at his own expence, he acted directly contrary to his own interests, not to close affairs with them." Thereupon I desired to know, "If they had orders to

^{*} In China all is done by the disposition of different colleges, to whose cognizance the affairs may belong; it not being permitted to address the court directly upon any affair whatever. In the time of the last Chinese Emperor, these colleges were so absolute, that, on many occasions, the Emperor himself dared not meddle with their decrees; but since the Tartar princes have been in possession of the throne of China, they are not much regarded; witness the exercise of all forts of foreign religions publicly authorised, and the allowance of a Russian agent at Pekin, agreed to by the sole good pleasure of the Emperor, in opposition to the remonstrances of his ministers, and to the constitution of the government of China.

press us, in so violent a manner, to deliver them the merchandises." Upon which they answered, "No; and that they were come to deal with the commissary, but that he must let them have the best goods at such prices as the court always paid." The commissary, to make his last effort, offered them merchandises, of the same quality as those which the court had received at other times, without advancing the price; but that did not close the affair. They went away, saying, they would consult together, to see if it was seasible for them to augment the prices of the goods above that which the court

had always given.

Soon after they came from the council to inquire for my interpreter, to communicate to him the answer of the president concerning my memorial. Upon which I sent him directly with the faid memorial, no way doubting, but after what the prefident had him elf told him, it would be received at once. But on his return, he requainted me, that the prefident had ordered a mandarin to let me know the answer, which I wrote, word for word, from the mouth of my interpreter. "I applied to the allegamba on the tubject of the memorial of the agent, and he not only forbid us to receive the faid memorial, but also charged me to tell the agent that which he had formerly told Mr. de Ilmayloff, viz. that commerce is looked upon by us with contempt, and as a very triffing object; that the agent himfelf was not ignorant that we had long refused to admut the prefent caravan, and most certainly should not each two confented to its ad mittance into China, if His Majesty had not suffered himself to be persuaded to it, at the reiterated inflances of Mr. de Ismayloss." That the Ailegamba had, at the same time, added these words: "These merchants come here to enrich themselves, not our people, which is easy to be seen, because they pretend themseive to fix the price of their own goods, that they may fell them the dearer. For their reasons, go tell the agent, that we shall not only refuse to receive the said memorial, but that, in suture, he need not give himfelf the trouble of proposing any thing to us that may be relative to commorce, because we will not embarrais ourselves hereafter with the merchants of Russia." Whereupon our confinement continued much the fame as before; infomuch, that ic was only permitted to the domestics of the first minister, of the president, and a clerk of the wardrobe, to enter our house, which they did very frequently, and in all appearance to fpy what passed in our quarters, in hopes that we should be obliged, at length, to fubmit our trade to their discretion.

The 25th, I understood that the brigadier, who, till that time, had the charge of the guard at our house, was restored to the good graces of the Emperor; and that His Majesty had made him Grand Marshall of the court, with the command in chief of the army which this monarch keeps in the country of the Mongalls. Whereupon I repaired immediately to his house, to pay my compliments; and having found an opportunity, at the same time, of acquainting him with what had passed regarding the sour mandarins deputed from the court; he gave me his word that he would go to court that day, to inform himself circumstantially of that affair; and that afterwards, he

The Mongalls are Tartar Pagans, who dwell to the north of China. They are divided into two branches, of which the first is that of the Eastern, or of the Northern Mengalls, or the Nieuchu, who inhabit towards the coast of the sea of Japan, between the river Amoor and the Grand Wall; these are the natural subjects of the Tartar-house which at present fills the throne of China; and are the very people, who, in the last century, made themselves masters of China. They are brought up in extreme gross idolatry; and have in a manner no religion. They, for the greatest part, dwell in towns and villages, and apply themselves to agriculture. The second branch is that of the Western Mongalls, otherwise called Calchies. These tast are only under the protection of China, without being entirely subjects, having their own proper Chan. They live in tents, and subsist by their cattle, without cultivating their lands. Their religion is the worship of the Delay-Lama.

would order them to receive what might be absolutely necessary for His Majesty and the court without further delay. He, at the same time, seemed to be extremely surprised at the conduct of his brother the allegamba on this occasion.

The 27th, the first minister being come to our house, told me, "That he understood the interdict on our house was not taken off, and defired me to acquaint him with the cause of it." Upon which I made answer, "That I had for a long time, endeavoured to find it out, but I could find no person who would seem to know it. Nevertheless it must, in time, be cleared up, seeing it was a notorious injustice to keep a caravan shut up fo long, that came upon the faith of treaties folemnly ratified." He replied thereupon, "That the court, for a long time, refolved to admit no caravans, because all the merchants, who had traded with the Ruffes, were reduced to the lowest ebb, by the very great quantity of Russ goods which were at present in China; that it was on the very itrong instances which Mr. de Ismayloss had made, as well to the court as to the council, offering, for this purpole, that the commissary and his people should subsist, for the future, at their own expense; that, in the end, they had admitted the present caravan; that the commissary, so far from having any regard to these circumstances, refused now to take the usual prices, that had been offered him for the merchandise which the court had occasion for, and insisted on a very high price for them; that he wished I would bring the commissary to reason in this assair, and let him know the refult." Upon which I told him, "That I had nothing to do with putting a new price on goods which the commissary had in commission; that it did not depend on me, as it was the commissary who was to account for the goods with which he was entrusted, who would not permit any other besides himself, who sold them, to set a price; that, as to what regarded the admission of the caravan, it was stipulated long before Mr. de Ismayloss's arrival at Pekin, and there could not the least alteration be made in it, without shaking the foundations of the treaties concluded between the two empires; and supposing any alteration was to be made, it could not be done but by mutual consent, and after deputies appointed for this purpose by the two empires, should have examined this affair to the bottom, and made a new plan of convention." This answer seemed to nettle the minister, who broke up the conversation, and ordered the commissary to show him some goods.

December, the four mandarins deputed from the court, finding, at length, that we rather chose to have our confinement continue, than to submit to their unreasonable pretensions; and that, on the other hand, the Grand Marshall of the court interested himself strongly in our favour, and would absolutely have an end of this affair, the interdict on our house was at last taken off.

And the 2d of this month, the council made publication, that it was permitted to all persons to come and trade with us; but they used one piece of chicanery, which hurt us much, and really kept off all the merchants; for when they perceived the merchants began to resort to our house, they made known to them, "That no person should carry out the least thing, of what they bought at our house, without showing it first to the four mandarins-deputies, to the end that they might take what they found proper for the use of the court." This notification took away from the merchants all desire of trading with us, seeing they were assured of being great sufferers if they were obliged to pass through the hands of these greedy mandarins; which made me acquainted, more than any thing else, with the misery of the profession of a merchant in China, who are obliged to depend on the discretion of mandarins and soldiers, who have none. But the Poyamba or Grand Marshall of the court, having been informed of it, had the goodness to remedy this new grievance, ordering the mandarins not to take any thing vol. VII.

for the tile of the court, from any other person than from the commissary. For the purpose he sent at the same time, his steward with them, to the commissary, to tell him, "That he came with them, by order of his master, to see how much, and what forts of merchandises these gentlemen would take, to the end that they might make him an exact report." Whereupon they were shown the goods; but they acted so much upon the reserve, in presence of this man, that they took in all but a very middling parcel of goods. Nevertheless, this did not prevent their repairing every day to our house, to take from the Chinese merchants what goods they thought proper. And the more to counteract our trade, the ministry had represented to the Emperor, that the e had been brought, during many years, from year to year, into His Majesty's magazines of fur, a much greater quantity of sables than were necessary for the consumption of the court; and that, as this quantity augmented annually, it was better that His Majesty should order some of them to be fold, than to let them lie and spoil.

The 12th, 13th, and 14th, many Chinese merchants, and other persons from the great houses, and ordinary people of Pekin, having come to our house, ventured to buy some squirrelskins, and other goods of small value, in order to discover the true designs of the mandarins who kept themselves at our house; they did not oppose them until they had sixed their bargains; but when the bargains were concluded, they signified to them that they were not to carry out any of the things they had bought, till they should choose the best of what they had for the court.

The 15th, as they were apprifed at the court and council that we had begun to trade, they published that they would fell, at reasonable prices, 20,000 sables, out of the fur magazines of the Emperor; whereupon all those who had begun to trade with us went to supply themselves there; some for fear of the chicanery of the mandarins, others in hopes of buying cheaper there than with us. In short, they sold, by what I could afterwards learn, the best sables at two one-half laen, middling at one one-half laen to one, and the least at 90 fun; but these were not Siberia sables, but those of tne Tonguses*, under the dominions of China, taken about the border of the river samoort, of which they surnish annually a quantity to the magazines of His Majesty. The country whence these sables are brought is called Solloni.

The 16th, I was informed that, notwithstanding the court had consented to a free commerce between the two nations, free of all duties, the mandarins belonging to our house had given the Arictest orders to our guard, not to let any the least thing of any kind be brought into our house, without producing a billet from them; and such a billet cost them 30 zschosses, which makes about four fun. But those who would have free ingress and egress to our house to trade, were obliged, once for all, to make a sixed agreement with them, either for a certain limited time, or for the whole time we might stay at Pekin; upon which they received a billet, which entitled them to come into, and go out of our house, as often as they pleased. All those who refused to pay in this manner for the freedom of entry into our house, were sent back, as people who came to our house to borrow, or perhaps steal on occasion.

The Tongules are a Pagun people of the north of Asia, who are very probably the descendants of the Fartars. They occupy a great proportion of the eastern parts of Siberia; and some branches of this people extend themselves even to the southern banks of the river Amoor. The last party of the Tongules is subject to China; all the other Tongules are subjects of Russia. Vide Histoire Genealog. des Tartares.

[†] The river Amoor is one of the largest rivers in Asia. It takes its rise in the country of the Mongalis, near the river Selinga, and running from thence eastward, it makes the frontier of these parts between Eastern Siberia and the Oriental Mongalis; and after a course of more than 300 German leagues, it discharges itself into the sea of Japan, in lat 44 degrees north.

The 17th, my mandarin being come to see me, I told him, "That I was very glad to learn that the court had also begun to enter into trade, which they had before looked upon as fo contemptible a thing with them, that they always reproached us with the little importance of it; that, fince His Majesty had given such authentic marks of the efteem he had for commerce, I hoped that, in time to come, they would speak of it with more circumspection." Whereupon he replied, "That it was not with a view of interest that the Emperor had ordered the sables to be sold that I spoke of, but that the fale was made purely because, having so great a quantity of them in his magazines, he thought it better to order them to be fold, than that they should lie there till rotten. I thereupon told him, "That if, at the court of His Czarish Majesty, and in his empire, they could make use of all the furs which the country furnished, they would probably see very few of them in China." After which, I demanded of him, "If it was with the knowledge of the Emperor that the mandarins placed at our gate, fold to the people, who had business with us, permits of passage in and out, and absolutely denied entrance to our house to those who would not pay for those permits?" I would likewife be informed by him, "What was the meaning that the four mandarins, deputies of the court, were continually in our house?" His answer to which was, "That the Emperor knew nothing of it, nor did any person dare to tell him of it; the Alegada having given them leave to fell fuch permits, as a small casual profit; that, as to the mandarin deputies, they were ignorant of the confequence of what they did." Whereupon I told him at the conclusion, "That I did not comprehend why the ministers were fo averfe to us in every thing, even to the refusing to see us, or receive our memorials; that I wished, with all my heart, that they should not carry it so far, as to oblige me to carry my complaints to the person of the Bogdoi-Chan direct; and further, that I asked nothing but what was conformable to treaties, and that, if the treaties were to fubfift in their full force between the two empires, there was an absolute necesfity to hear what I had to fay, and to give fuch resolutions as they should think proper, upon the memorials which I should, from time to time, present them on the occasion."

The latter end of this month, His Majesty made a tour to Caisa, which is a palace, with a fine park, some lys to the south of Pekin, where he passed some weeks; which was the occasion that nothing remarkable passed, during this time, between the ministers and me.

The 15th of January 1722, the guard at our gate refused entrance to some carts of hay which my people had bought, because the peasants had not billets of passage, and they would not give any thing to the soldiers; and notwithstanding I sent to advertise the mandarins, and officers who commanded the guard at our gate, of this insolence of the guard, they, notwithstanding, drove away the peasants with their hay. I complained of it to my mandarin, but to little purpose.

The 16th, after having received the news of the perpetual peace concluded between His Czarish Majesty and the Ottoman Porte, I caused Te Deum to be sung in the church of St. Nicolas, and celebrated the rest of the day in festivity.

The 2d of February, and according to custom, I offered some presents to His Majesty on the new year, vich is a ceremony that must be observed by every person vested with any public character, unless he would expose himself to a general censure. His Majesty received my little presents very graciously, and presented me, in return, with some of all the sorts of game he had taken at the hunting the last autumn*, and of a

good

^{*} The Mongalls, and other Pagan Tartars, have a particular method for drying all forts of fieth, by the air and the fun, which entirely prevents their perishing; by which means they keep wild-fowl from one year to another.

good number of sheep; and it is in this manner that His Majesty is accustomed to regale annually, at the close of the year, those people of his court that he would dif-

tinguish.

The 4th, which is the last day of the Chinese year, the court ended the year with a feast, which was very short, because His Majesty was but just recovered from a sit of illness which he had laboured under. On this occasion, I had the honour of sitting over against His Majesty, at some distance from the throne; and this place is a little below the scatt of the princes of the blood, but above that of the mandarins of the first class. The feast being sinished, and His Mujesty retired, the master of ceremonies came to se'l me, that I might be dispensed with coming the next day, being new year's day, to court, to pay my compliments to His Majesty, seeing it was the custom of the princes of the blood, and mandarins of the empire, to be all ranged in the court of the castle that day, every one according to his rank, where, as I was a foreigner, I could have no rank.

The 1.th, the first minister gave me and the commissive a dinner. On which occafien there passed nothing remarkable, unless that he asked me, "If I was not to return with the clavan?" Which made me think they had already settled this assair at court. I resewited him thereupon, "That it did not depend on my pleasure to leave the court, where the Czar, ray master, had sent me to reside, till he should recal me."

The oth and right, His Majesty caused the celebration of the feast of Lanthorns, which had been annually celebrated, at the court of China, for above 2000 years. This feast was solemnized at Czchanzchumnienne vith great magnificence. During the grand entertainment, which was that day at court, they represented all forts of plays, and other diverting shows; and at night, they exhibited grand sire-works; which, joined to so many illuminations, and to the prodigious quantity of lanthorns, adorned with sigures, and diversified with all forts of colours, caused a surprising agreeable view, during the darkness of the night. They placed me, on this occasion, the same as they did the last time at Pekin, at the distance of some paces from the Emperor's throne.

The 20th, being returned to Pekin, some of the principal of the Korea merchants came to see me; but when they would have entered my apartment, some of the soldiers who accompanied them opposed it; and they narrowly escaped the lash of the soldiers whips, who had listed them against those merchants. Upon which I presently ordered them to be kept, by our people, in the court before my house, to wait there till the merchants should go out of my house. And I, at the same time, gave them to understand, that they, for the future, would do wisely not to make use of their whips at my nouse. After which, the merchants indeed entered into my apartment, but dared not make any stay there, for fear of being insulted by the soldiers that escorted them †. The civility with which I received them, and to which they had not been used with the Chinese.

* The Chinese are accustomed to be at a very great expense at this festival, in fire-works and in lanthorns, having lanthorns that will cost them 10,000 laen, and upwards. The fire of their rockets is also remarkably beautiful. The variety and liveliness of their colours surpass the European performances so much, that we are obliged to own they excel us in these performances.

[†] The Chinese being accustomed to treat the inhabitants of Korea with great roughness, and having probibited them all correspondence with foreign nations, it is not to be expected that they should relax their hard treatment of them for the sake of a minister of the court of Russia; which is, as it were, the only power who could support the inhabitants of Korea, if they should ever be desirius of throwing off the Chinese yoke; seeing that, by the river Amoor, the Russians could fall down into the ports of Korea, without a possibility of the Chinese hindering them. And it is not impossible but this conduct of Mr. de Lange might have been one cause of the court of China's sudden resolution of orderies him to leave the country.

made them have a defire of being more acquainted with me. For they came again on the 22d, before my house, but the guard at the gate refused them entrance.

During the month of Morch, we continued our trade, as much as the mandarins and foldiers of our guard would permit. I here passed nothing else remarkable, unless that the commissary having sent a clerk of the caravan towards the deserts to see in what condition the horses were, which were lest there in their way to Pekin; he reported to us, that they were all in very bad plight; and that, if we did not out of hand send money, that they might be put into stables, there was danger of the greatest part of them dying.

The 6th of April, I fent my interpreter, at the defire of the commission, to the mandarins which were placed at our house on account of the caravan, and let them know, that the commission being obliged to send one of his people with money towards the desert, in order that the people who had the charge of the horses of the caravan should be enabled to put them into stables, he would, for the greater security, have occasion for some soldiers, or some others, to eleort this man; and I prayed their care of this affair. Whereupon they returned me answer, that they would make their report to the council; for without their orders, they could do nothing in it.

The 7th, two mandains, accompanied by a clerk, came to bring me an answer from the president on this assair; and it being wrote on a sheet of paper, they read the same to me in the following terms:—"The Allegamba having been informed yesterday that you wanted to send a messenger again towards the deserts, could not but imagine that it was for some other business than that of horses, that your people made such frequent journeys between the deserts and Pekin; this gives him reason to think that, by the help of the Mongalls, you carry on a secret intelligence between this city and Selinginsky, which may give birth to complaints and threats between the two empires; sor he is not ignorant that the Mongalls are a people capable of engaging in such affairs, and that the Russes do not grudge money on such occasions." I asked them thereupon, "Whether this answer was from the Allegamba, or whether it was their own composition?" Upon which they assured me, that they wrote it, word for word, the same that the Allegamba gave them; and that it was for the same reason he would not consent to the sending the person, as desired.

After this explanation, I thought necessary, for my greater security, to desire them to acquaint the Allegamba on my behalf, "That the precaution he took was not right to take, unless with prisoners, or unless he had any intercepted letter to produce, by which he would convict me of having fought to embroil the two empires; that bearing, as I did, a public character, I might write as often as I pleafed, without having any occasion either for the escort or the consent of the president; and the same, if I had a courier to dispatch for my private affairs, as he could not prevent it without an open violence." I fent forthwith my interpreter to the council, with the mandarins, to know the determination of this minister. But he sent me word, that he had no desire to employ the horses and the people of the army of the Emperor his master in our service, on journies which must cause them to be at expences for which they were not furnished by their ordinary pay. Upon which I made him the proposal of being ourselves at the expence of the people for the efcort which he should grant us, and that we would also mount them on our own horses, that they might have no occasion for the Emperor's; or if that was still more satisfactory, I would only demand a passport, and would run the risk of sending one of our own people without an escort. But he continued firm in his denial, and would not allow of one or other of the expedients, contenting himself with letting me know, once for all, "That he would do nothing in

it." I learn, at the fame time, from my interpreter, that they had reasoned among themselves, on this occasion, in much the sollowing manner: "These foreigners come here with their commerce, to encumber us every moment with a thousand petty assairs, pretending that they ought to be favoured, on all occasions, no more nor less than if they laid an obligation on us; and yet we are still to receive the first answer from them no the subject of our affairs."

The 16th, I understood that, some weeks ago, the Tush-du-Chan of the Mongalls *, who encamped at Urga, had brought complaints to the court of the ill conduct of the Russ merchants who came to Urga; and that he had, at the same time, advertised the ministry, that there never had been so great a concourse of Russ and Chinese merchants at his residence, as in this year; that, thereupon, His Majesty had taken a resolution to send a mandarin, with orders to the Chan to chase out all the merchants, as well Russes as Chinese, from Urga, without letting it appear that it was done by order of His Majesty, but that it should appear as the proper act of the Tush-du-Chan, as master of his own country.

The same day, a courier, who was lately arrived from Selinginsky, with dispatches from the mandarin who resided there, told my interpreter, that the intendant of Selinginsky had tendered several packets of letters that came from Russia to this mandarin, in order to be forwarded to the council of the affairs of the Mongalls at Pekin; but he refused to receive them, because the intendant could not acquaint him with their

contents.

The 4th of May, two mandarins of the council, accompanied with three clerks and two officers out of our guard, being come to my apartment at eleven o'clock at night, informed me, that the Allegamba, being returned from court, wanted to speak with me on an affair of consequence; and, because he was employed during the day-time, from morning till night, he prayed me to give myself the trouble of coming to him, though it was late at night. I was a-bed when the message came to me; however, I made no difficulty of rifing, to comply with this minister's defire; the more, as the mandarin affured me that the business he wanted to speak with me about was a very pressing af-When I came to his house, I was received with remarkable civility; and the Allegamba being come in person to meet me, even to the court, he led me to his apart. ment, and defired me to fit down by him. He then began to make excuses, that, in fo long a time, he had not been able to fee me at his own house, or in other places; but that he supposed I was not ignorant that he was obliged to be every day, from morning till night, with His Majesty at Czhan-zchumnienne. Upon which I replied, that his excufe was unanfwerable, and that I commiferated his being obliged to pass his time in fo fatiguing a manner. After many other reiprocal compliments of this nature, he demanded of me, "If it was long fince I had any news from Selinginsky?" I anfwered, "That it was fome time fince I had any." In the end, the affair which he was about discovered itself, by little and little, when he asked me, " If I remembered that when I would lately difpatch a meffenger, by Kalchanna, towards the defert, he told me

This is the name of the present Chan of the western Mongalls. This Chan was heretofore sovereign; but, since the eastern Mongalls have possessed themselves of China, he put himself under the protection of that empire, in order to be the better able to make head against the Kalmucks, with whom they are in a manner at continual war. He is a very powerful prince. His dominions, on the western side, reach to the banks of the great river Yenisey, and even from thence, on the other side of this river, towards the sources of the Oby; and, on the other side, towards the east, they reach to the great wall. The Chan of the western Mongalls hath a great many petty Chans of this nation for his vassals, and can bring one hundred thousand men, or more, into the field, all cavalry; but his soldiers fall far short of the Kalmucks soldiery.

that he could not confent to it, because he apprehended that, by such means, secret correspondence might be carried on, which might bring on some misunderstanding between the two empires." I told him thereupon, "That I did remember that, and the rest of the unexpected answer he then gave me; but, not having ever been able to guess whence fuch fuspicion could arise, he would infinitely oblige me, if he would please to speak a little more intelligibly on this affair." Whereupon he replied, "We apprehend you have intelligence of our deferters, which you do not think fit to communicate to us *." Thereupon I remonstrated, "That, if he would please to consider the vast distance between St. Petersburg and Pekin, he would himself judge whether it was possible for the courier dispatched on this affair to be returned already, unless he could fly; that, as to the rest, he himself knew that affairs of such consequence were not the business of a day, and required other things to adjust them than secret correspondence." He shook his head at this answer, because there was then a report current at Pekin, that orders were arrived at Solinginsky, from the Czar, not to restore the deserters before spoken of. Some moments afterwards he asked me, " If I would communicate to him the news when I should receive my letters?" Upon which I assured him, "That I should conceal nothing from him, whether it regarded him in particular, or regarded the court; feeing fuch affairs could not be communicated to me but by express orders of the Czar my master; which, whatever desire I might have, I dared not keep secret." This minister, not thinking he had yet sufficient reason to be satisfied, demanded anew of me, " If when I should receive private letters, I would let him have a copy?" I answered thereupon, "That it was certainly the first time, since the world began, such a proposal was made; but that I could not believe that he spoke in earnest on this occasion, although it was a little too late for raillery." This answer being not altogether fuch as he hoped for; he changed, for some time, the discourse, by faying, "That he had an intention of telling His Majosty, that the caravan was almost ready to depart, and of receiving, at the same time, his orders with regard to my person." Whereupon I defired him, "To put His Majesty in mind of the affair, on the subject of which I had so often made instances to him." At length he began to talk to me of my flay at Pekin, faying, " That the term which was agreed with Mr. de Ismayloff, for my stay at this court, wanted little of being expired." And he made me fully to comprehend that I ought to prepare to return with the caravan. Upon which we disputed together long enough; and I told him on this occasion, " That, if he would please to remember that I affilted on all the conferences that were held on this subject; that I had read, and had in my custody, all the correspondence of Mr. de Ismayloff, with the council, about his negotiations; and that I was at all the audiences which His Majesty had granted to that minister, he could not doubt but that what was transacted by Mr. de Ifmayloff, from his arrival till his departure, was as well known to me as to himself." I further alledged to him, on this subject, the resolution of the month of February 1721, which he himself sent to Mr. de Ismayloss; wherein it was said, "That

^{*} The Tonguíes, as well as the Mongalls, and other people of Tartar extraction, who inhabit on the confines of Russia and China, are accustomed to desert very often, by hundreds of families, from the lands of one empire to those of the other, according as their caprice or interest prompts them, which is often the subject of altercations between the two empires. In order to remedy these inconveniencies, it was agreed, in the last treaty, that, for the future, such deserters should not be received by either power, but should honestly be returned to the place from whence they came. From this artice, the Chinese pretend a right to reproach the Russes with not acting caudidly in deserring so long the restitution of seven hundred families of their subjects, which went over to the Russian territories since the conclusion of this treaty; and the Russes, on their side, also reclaim a good number of families, and insist on its being equitable to come to a liquidation of their reciprocal pretensions.

His Majesty had given his consent to the residence of an agent as all wait, without any mention regarding the time, directly or indirectly." But this lord, no withstanding ne had nothing to answer to what I advanced, held himself strictly to his and decision, that my stay had been agreed to only till the return of the present caravan. And this altercation did not cease till I gave him, for a final answer, "That the Czar, my master, not having ordered me to enter this empire in spite of the court, or to continue to refide in it contrary to the good pleafure of the Bogdei-Chan, I was obliged to conform myself, on this occasion, to all that His Majesty should think fit to determine in regard to me." After which he shewed me a small tetter, with an address in the Russ language, faying it came from Naniti Tursoff, interpreter at Selinginsky, and that the Kutuchta * had fent it to Pekin, that it might be delivered to me. He added, "That he knew very well, that, fince the departure of Mr. de Ismayloff, I had received a good number of letters, the contents of which I had communicated to nobody; but, as to this letter, I must determine to open it in his presence, and let him take a copy of it, if I wished to have it; for, if he could not prevail to tar upon me, I should not read it neither, as he would take care to return it whence it came." He gave orders for this purpose to two translators, who were then present, to set themselves by me, and to read the letter at the same time I did. As I had not yet opened the letter, I asked him, "What occafioned a curiofity fo unallowable? and if he did not know that this procedure was directly contrary to the rights of nations?" His answer was, ' That he was well enough apprifed, that what he did on this occasion was a little irregular; but this letter happening to fall into his hands, he expected that I would not make much difficulty of communicating the contents to him; and that I might determine on the alternative he had proposed." Thereupon I delivered him the letter, sealed as it was, and desired him to reflect ferioufly on the confequence fuch an unwarrantable curiofity might producs; and, in the mean time, I should see to what lengths he would carry his authority over my letters. After which, I left him, and retired to my quarters.

The 5th, two mandarins came to me, on his part, to fee, "If I would not refolve to con.ply with his will in regard to the faid letter?" I charged them to tell him, on my part, "That I aways found myself ready to do him all imaginable service which he could in honour capea; but what he desired on this occasion was to unreasonable, that I could not but consider it as an affront which he had an intention wantonly to give me, and that he might depend on being obliged, at a proper time, to give me tatisfaction."

The 6th, the two translators above mentioned were commanded to Czchan-zchumnienne, by order of this minister, which made me think they had proceeded as far as to open my letter; but I was soon convinced of the contrary; for,

The 7th, a mandarin, accompanied by a clerk, came to bring me the faid letter, which had not the least mark of having been opened. He, at the same time, made me a compliment from the Allegamba, saying, "That he desired I would conceive no ill opinion of him, upon what had passed between us on the subject of this letter; inasmuch as he assured me there was nothing serious on his side in this adventure; and that he only took the liberty of having a little pleasantry with me; not altogether without flattering himself, that I might not be averse to comply with his desire on this occasion. But

The Kutuchtu is an high-priest belonging to the Mongalls and the northern Kalmucks. He was formerly no more than a sub-delegate of the Delay Lama, in these parts; but he hath, by degrees, found means to withdraw from the obedience of his master, and to derify himself at the expence of the Delay-Lama.

now, being convinced that I was firmly refolved against this fort of complaisince, to any person whistoever, he would no long releasy sending me the letter in question; and at the fame time, to affore me or in the Chin." After having received the letter, I les him to vice of the Trat I ad me and the beginning, looked on this after as a and it with a second the second of the control of t the letter we had in a character of the factor of the factor of the letter we had in a character of the letter with a character of the letter with a character of the letter with a character of the letter of the by we cannot be found that they are in a character of the letter of the by we cannot be found that they are in the found that they mer co forence of the figure of the country from the would grant

rich muscly .

Thoub, the firm has constituted to the second the align be a fewed in the main it, and held to some firm to be on the align be, when was, "That the Boydeich are id less out in the tare taked of any comtirely adjusted; and as, for I are or term , comi or a wing space of time before any caravan might come as a to 1 has, the L standard found it proper than the agent should return with the present caravan; and when the commerce between the two empires should come to be renewed, he should likewise be permitted to return to Pekin." Whereupon I made answer to the allegamba, " That the orders I received from the Czar were, as he himself well knew, to remain at Pekin till he should recal nic; but as I was in no condition to oppose the orders of the Bogdoi-Chan, I was obliged to have patience, and resolved to do what I had no power to avoid doing; nevertheless, that this was no answer to what I desired to know from him, and that I waited for it with impatience, as I did for a clear explanation upon this precipitate manner of breaking off all commerce and correspondence between the two empires, without waiting for a resolution upon the affairs of the frontiers, and without any declaration of war, or other previous mark of hoslility on either side." But the mandarin declined to charge himself with such a message, he not thinking it proper for him to repeat fuch terms as it was couched in to the allegamba, faying I must either feek an opportunity to tell him myself, or demand a conference for that purpose, by my interpreter.

The same day, in the afternoon, I sent my interpreter to the council, to acquaint the allegamba, by means of the mandarins he might find there, that I had, the fame day, received the orders of the Bogdoi-Chan for my return to Russia; but I had received no answer on his part, upon the affair which was the subject I wanted to confer with him upon; for which reason, if he could not spare time to speak with me himself, he would at least let me know whether he would receive a memorial on that subject from

me or not.

The 9th, another mandarin came to me, and acquainted me, that the allegamba had. been informed of the fubject, concerning which I had fent my interpreter to the council the day before; and as he had not a moment to spare to confer personally with me, VOL. VII.

he had fent the same mandarin to me, to whom I might explain myself on what I had to say to him, as the allegamba had given orders to make him a faithful report of every hing which I should charge him with. Upon which I told him, that I withed he would inform the allegamba that I prayed him to give me, under his hand, a precise answer to the points selle sing, viz.

" I. If the Rogdoi-Chan was disposed, before my departure, to receive and to an-

It. If the credentials which I was charged with from His Czarish Majesty?

"H. If any fultable fatisfaction was to be expected for the injuries done to His Czarish Wejesty's subjects by the 'Lush-du-Chan, or at least by his orders?

" III. What was the reason that they would not grant a free passage to the letters

addressed to the council and to me, which remained on the frontiers?

"IV. In case the Bogdoi-Chan should persist in the resolution of sending me home, what I should say to the Czar, my master, regarding the perpetual peace between the two empires?

"V. Supposing that, contrary to expectation, my departure might be deferred, I defined to know, if, in conformity to the treaties of peace, the Bogdoi-Chan would

grant me post-hories for my journey, or whether I must find them myself?"

The 1cth, there came to me a mandarin, from the allegamba, to inform me, "That there was no likelihood that the Bogdoi-Chan would alter his refolution with regard to my departure; that no person had the boldness to speak again to His Majesty, after he and once explained himself so positively on this affair. But that the allegamba, in his turn, wished to be informed why I demanded so precisely to know the motives of my being fent away; and why I infifted fo strenuously to have a clear explanation of the Bogdoi-Chan towards the Czar; that he did not know whether I durft make fuch dcmands, in case the Bogdoi-Chan should be pleased to speak personally to me, without my being afraid that he would make complaints of it to the Czar my mafter." Upon which I returned him as follows, viz. "That it was absolutely necessary for me to be fully informed of what I defired to know; that, without this being cleared up, I could not well resolve to depart, secing it appeared evidently, that since the departure of Mr. de Ismayloss, the court had intirely changed its disposition regarding the preservation of the good understanding between the two empires; that the allegamba himself could not be ignorant how many of His Czarish Majesty's subjects had, immediately after the conclusion of the last treaty of peace, deserted, and come to settle on the lands in the dominions of the Bogdoi-Chan, without the Czar's having shown any resentment to this time, notwithstanding the same was directly contrary to the sense of the treaty; that the Czar on this occasion, far from forbidding the subjects of China entrance into his dominions, had always permitted them, without interruption, to enjoy, in his dominions, an entire liberty, as well in regard to trade as all other affairs which could concern them, not even excepting some of those very deserters, who having affairs to transact at some places in the Czar's dominions, had been no less welcome than the others, subjects of the Bogdoi-Chan; but now, that 700 of the subjects of China had passed the frontiers, and would establish themselves on the lands belonging to Russia, that would forthwith forbid all commerce, not receive any more letters, and in fine, at one stroke, break off all communication between the two empires; and that without even waiting the answer of the governor general of Siberia to the letter wrote to him on the subject; which was the only certain means of knowing whether His Czarish Majesty intended to retain these people, or to make them return. That, to conclude, I prayed the Allegamba to confider, if it was not much more easy to accommodate this affair affair by treating it with more mildness, than to push it with an haughtiness not to be come with."

Whereupon the mandorin told me, he could not possively undertake for his daring to say all this to the Allegamba; but that if a proper occasion offered, he would not sail of doing it saithfully. He told me further, on the part of that minister, that the mandorins, who had been sent last year by command of the Bogdoi-Chan, to pass the frentiers of Rudia, were returned, they not being permitted to proceed on their journey, before the governor-general of Siberia was made acquainted with it; that the Allegamba might expect to wait long enough for an arriver, as well upon this affair as upon all other a fairs which regarded the interest of the two empires, so long as they did not allow of a free passage to the letters written concerning them to the court. I received no answer then.

In the mean time, I had made a demand fome time ago of the council, for a free passage for the caravan by the old road of Kerlinde, (which the former caravans had been used to take), to save them the inconveniencies attending the route by the deserts, where the people and the cattle had much to endure for want of water; and for this purpose, I sent my interpreter, with a clerk of the caravan, on the 14th, to the council. Now if the Bogdoi-Chan had given his consent or not. But they told him for answer, "That they expected to have been freed from their importuning the council about their beggarly commerce, after they had been told so often, that the council would not embarrass themselves any more about affairs that were only beneficial to the Russes, and that of course they had only to return by the way they came."

The same day, I sent to the house of the sirst minister, to know if I could have the honour of seeing him. But he excused himself, saying, that being far advanced in

years, he wanted to be at eafe.

Nevertheless, I did not refrain going myself next day, which was the 15th, to his house; and the guard at the gate suffered me to pass without interruption. I entered directly into the court-yard, and acquainted him with my being there, by one of his fervants, defiring he would afford me a quarter of an hour's audience: but he fent me word, "That he was not at leifure to fee me, and that, as the affairs about which I would fpcok to him very probably only regarded the council of foreign affairs, he defired I would address myself to them." I thereupon let him know, by the same domestic, "That I was come to speak to him, as the first minister of the Bogdoi-Chan, and if I not had a very preffing occasion of applying to him, he might be fure I would have been very averse to have come to give him trouble; but that as it concerned us equally, both him and myfelf, that I should have the honour of seeing him, therefore 1 was determined not to leave his house without speaking to him." Upon this so precise a declaration, the same domestic returned, a few moments after, and showed me into a grand faloon, well enough furnished after the Chinese manner, where the master of the household of this minister came to present me tea and milk, till his master should come. After I had waited about a quarter of an hour in this apartment, the allegada at length came, and defired my excuse, with a number of compliments after the Chinese manner, that he was not always able to fee me when I might require it, because his great age

It is certain, that the judgment of the late Emperor, either from jealoufy, or the artifices of some feart enemies, was so altered, with regard to the Russia trade, a little before his death, that there was no other way of adjusting it but the having recourse to arms; which was fully resolved on, on the part of Russia, when the news of the death of this Monarch arrived there, which suspended the execution of this design, tall they should see clearly into the designs of his successor. But the death of Peter the Great, entirely broke these measures; so that the affairs between Russia and China are still, at this time, on the same terms they were on the departure of Mr. de Lange from Pekin; and since the last caravan that lest Fekin with hum, no caravan hath been sent from Siberia to Pekin.

and multiplicity of affairs with which he was charged, did not permit him. Whereupon, we being both feated, I told him, "That if the affairs which I had to reprefent to him, regarded only my own person, I should not have ventured to incommode him; but as they regarded our common mafters, and the prefervation of a good understanding between the two empires; or, to fay all in two words, peace or war between the two nations, I thought it my duty to feek before my departure, by every way possible, an opportunity of explaining myself thereupon with him; that he knew that the free passage of the caravans of Siberia was made, in some degree, an effential point in all the treaties between the two empires; that he knew, moreover, that Mr. de Ismayloff had declared, more than once, that His Czarish Majesty could never allow that they should any more cavil on that article; that he further knew, that the free trade of the subjects of Russia, at Urga, was positively stipulated by the late treaty, in which they could not make the least alteration, without a manifest violation of the faid treaty; that he knew, in fine, that it was with the agreement of the Bogdoi-Chan, and by virtue of a resolution of the council, in writing, that I remained at Pekin, after the departure of Mr. de Ismayloff, in quality of agent, impowered by the Court of Russia, till such time as His Czarish Majesty should be pleased to recal me. Notwithstanding which, not regarding such solemn engagements, they had, in regard to this last caravan, treated us so ill, that, if they had been at open war with Russia, they could not have done worfe; that they had kept shut up, during many months, the commissary of the caravan, with all his people, just as if they had been slaves; that there was no kind of infult to which they did not expose those who had a desire to come and trade with our people. And yet more, they had caused the Russ subjects to be shamefully driven out of Urga, who had come to trade there on the faith of public treaties. And as to what regards myself, they had made me suffer more affronts, on all occasions that offered, than can be imagined; in the end, not yet satisfied with all those steps, the president of the council had made it be declared to me positively, that there should not absolutely, for the future, any caravan be admitted before the affair of the frontiers should be regulated to the satisfaction of the Bogdoi-Chan; and at the same time, caused it to be signified to me, that I must prepare to depart with the caravan, because His Majesty would not suffer me to remain any longer at his court, in the uncertainty that affairs stood in between the two empires. That, if this order regarded me only as a private person, there would be nothing in it which did not depend entirely on the pleasure of the Bogdoi-Chan; but having been once admitted by him to refide at his court, in quality of agent of His Czarish Majesty, it was a maxim, practifed by all civilized nations in the world, not to fend away, in a manner fo indecent, a person vested with a public character, unless entirely to break off all good understanding with That, if they defired very ardently, as they afferted on all occasions, the restitution of the deserters in question, and an amicable convention in regard to the frontiers, he would permit me to tell him, that it appeared to me they took quite the wrong way to obtain them; and that the fending me away, so far from facilitating those affairs, was most certainly the greatest obstacle they could think of. That I thought it my duty to remonstrate in the foregoing matters at this time that they might be remedied; because, after my departure, I did not well see how it would be possible to get out of this embarrassment by amicable means." The minister thereupon answered me. That being already to long a time fince the Ruffes had given them the expectation of regulating the affairs of the frontiers, conform to the treaties concluded between the two empires, without their taking the least thought of bringing things to a close. His Majesty had come to a resolution not to admit any caravan before he should be fully latisfied, on the part of Rullia, of their adherence to treaties; and as thereby my relidence at his court became quite unnecellary, His Majesty law nothing that should

oblige him to keep me longer in his empire. That in regard to what passed at Urga, the Tush-du-Chan had good reasons for removing our people from his residence, who had committed great infolences, noways conform to treaties. That as to what regarded the ill usage which I pretended the caravan had suffered, he did not well know of what I fpoke; but as to their being kept shut up a longer time than ordinary, it was our own fault, who would have made innovations in the trade of the caravans. In fine, in one word, that His Majesty was tired of receiving the law, in his own country, from foreigners, of whom his subjects reaped no profit; and that if the court of Russia delayed longer doing him justice, he should be obliged to do it himself, by such ways as he should find most convenient." Upon which I replied, "That I was much surprised to find the Bogdoi-Chan in a disposition so little favourable towards His Czarish Majesty, after he had the goodness to testify himself, on more than one occasion, to Mr. de Ífmayloff, that he defired nothing more than always to live in a good understanding with the Czar, my mafter; and that I could not conceive what caused his change of fentiments fo fuddenly, with regard to His Czarish Majesty. That if the court of China had restitutions to demand from us, we had the like to expect from them; and that, in any shape, there was no reason that could in justice oblige us to restore their deferters, fo long as they retained ours. That if the indulgence of the Czar, my master, in the affair of Albazin*, had raifed rash hopes in any persons, who are ill informed of the forces of Russia, and of the Monarch who reigns over them, I was persuaded, that a Monarch fo enlightened, as was the Bogdoi-Chan, would not fuffer himself to be blinded by fuch delufive appearances; and that he knew full well how to diffinguish an indulgence, arising from magnanimity and esteem for a prince, his friend and ally, from a forced compliance, grounded on weakness and indolence. That as I had, in my instructions, orders to apply my utmost endeavours for the preservation of the good understanding between the two empires, I thought I might tell him, that I was exceedingly furprifed at the proceedings of the Chinese ministry on this occasion; that he could not be ignorant that it depended only on His Czarish Majesty to finish the war with Sweden, in the most honourable manner; and that perhaps this peace was actually made at the time I was speaking to him; after which, I saw nothing that could prevent the Czar, my master, from turning his arms to this side, in case they exercised his pa-That I gave him my word, that all the great difficulties which pertience too much. haps might be imagined in China to attend fuch an enterprife, would vanish immediately, if ever His Czarish Majesty should resolve on transporting himself to the frontiers; for he was a prince that did not fuffer himself to be hindered by difficulties; and that they might then have sufficient cause to repent their having despised the friendship of a Monarch who was not accustomed to receive offences with impunity, and who was inferior to no Monarch in the world, neither in grandeur nor power." This was not at all to the allegada's tafte; therefore, after fome filence, he demanded of me, "If I was authorifed to talk to him in the manner I did? and if I was not apprehensive of being difavowed by the court of Ruffia, in case they should make complaint upon the menaces I used to them?" I thereupon replied to him, "That, in the state to which I faw affairs were brought, I thought it necessary not to disguise any thing to him, to the end that the Bogdoi-Chan, faithfully informed by him, of all he had to confider for and against this affair, might thereby determine with himself thereupon, in a manuer

^{*} Albazin was a little town of about 500 or 600 hottles, which the Russes had built in a very farthe country, upon the south side of the River Amoor, near the mouth of the river Albazin. But at the east of the year 1715, the Eastern Mongalia supported by the Chinese, besieged it, and having carried as after a siege of two years, raied it to the ground.

I sitable to his great wifdom and justice. The thevertheless, it was wrong to take what should faid on this occation for ment or , facing they were only mere reflections, which I was defrom he should in the on the unhappy consequences which the distainful conduct they t', well, in regard to us, might in time produce; and that I was fo little apprehensive of beand acoved by the Court of Ruffia, that I wan ready to give him in writing every word I had rold to him, and that it would be the green fillervice he could render me to speak out or hand concerning it to the Bogde i-Chan, the more as I was well afforced, that if they would give the least attention to the irregular manner in which they had acted in his affair, with a friendly and allied power, they would not fail of comprehending that by intentions acre fincere, and only had for its aim the prefervation of the hum my 'x two en the two corpies." The arriver of the minifor to this was "That it being Lis Majelty's culton never to make any refolution, without first well weighing all curconfiances, he never changed his measures for any reason whatsoever; and after what be had declared post ively, in regard to the carryan and my person, he had no inclinaon to propose to him a change of scatiment in this regard. That we had nothing to to but to a the a beginning in complying with our engagements, after which they would be what they had to do as to the reft." Upon which I concluded, by telling him, "That the case being so, I saw plainly, that it was in vain, on our side, to use more endeavours for preferring the good understanding between the two empires, as long as they would contribute nothing towards it on their fide; that, therefore, the game must go on, seeing the dicc was thrown already. That, however, I had at least the latisfaction of having done my duty in advertifing him, as first minister of the Bogcloi-Chan, of the unhappy confequences which would enfue from all this; and that was the fole reason which made me think it absolutely necessary for me to give him the trouble of this vifit." After which I rose up and took leave of him. On parting, he re-conducted me to the entrance of the folloon, where he staid till I was mounted on norieback.

The same day I was likewise to take leave of the povamba, or great marshal of the court; and after having returned him thanks, which were truly due to him, for all the go which which he had showed to me ever since I had the honour of being known to mm, I profited myfelf of the present opportunity to represent succincily to him the firme things which I had represented to the allegada. He thereupon assured me, "That to was forry to fee that the fuccess of my negotiations did not answer my wishes. That it was true that the Boadoi-Chan was very much piqued that he faw there was no end made to the affair of the deferters; and that he had certain advice that our court had no defire to fatisfy him on this article, and that we only fought to protract time: that it was on these considerations that he had been provailed on by the ministry to order rry return. That for his part, he was aften ifted to fee that our court could hefitute a moment to further force hundreds of families, who were in the utmost poverty, to the folid advantages which we might promite ourfelves from the friendship which the Bogdoi-Chan had conceived for the person of the Czar my master; and he made no manner of doubt, but that, if the Czar had been wel' informed of the juffice of the pretentions of the court of China, and the little importance of that affair, he would inflantly have given orders for refloring the families reclaimed." I would have had him confider the diffance of the places, and that it was in a manner impossible that an answer could have arrived from St. Petersburg on this affair, since the departure of Mr. de limayloss. But he Ropped my mouth by telling me, " That he could not fay precifely what the distance was, but he knew very well that, on other occasions, our couriers had made the journey in much less time. That he advised me to do my best in this affair when I should

arrive on the frontiers, and that he could assure me, that when the Bogdoi-Chan was made easy on this point, he would explain himself very reasonably on all the rest of what we should wish to have done; that however, as to myself, I had cause to be well satisfied with the sentiments the court entertained of me, and that His Majesty had himself declared, that, in case affairs should come to be accommodated, he would not be sorry to see me return to Pekin."

The 16th, I went to pay my court to the Bogdoi-Chan, upon his departure from Pekin to pass the summer at Jegcholl, but had not the honour of speaking to him at this time; His Majesty letting me know by the master of the ceremonies, "That he recommended the same thing to me which he had charged Mr. de Ismayloss with, to tell His Czarish Majesty*. That for the rest, he wished me a good journey; and expected that I would not fail to write from the frontiers, in case I should there be in-

formed of any news from Europe."

A little before I received the meffage from His Majesty, I had an interview with the allegamba, who, after an infinite deal of careffing and flattery, begged of me to labour, as much as possible, to forward the returning their deserters; at the same time adding, "That the Bogdoi-Chan had great reliance on me in regard to this affair; in expectation that, according to all appearances, I would not be backward to return foon to China, either on the subject in question, or on the subject of commerce." I assured him thereupon, "That His Czarish Majesty, having subjects in abundance, had at no time the least temptation to keep the vassals of neighbouring powers unjustly." And I promised, at the same time, to write to him, if, at my arrival on the frontiers, I should learn that any resolution was taken on this affair. Afterwards I demanded of him, "For what reason they resused conveyance of the letters which were on the frontiers? At the fame time, I led him to imagine fome appearance that those letters bore something relating to their affair." Whereupon he answered me, "That if it was possible to believe it to be so, he would not make the least difficulty of instantly ordering the letters to be brought hither; but that, if they contained orders for the rendering back their deferters, they would not have failed to communicate the fame to the mandarin, who kept himself at Selinginsky purely on that affair."

At length, not feeing any appearance of being able to prolong my stay as Pekin till the recal of His Czarish Majesty, I pressed the commissary to neglect nothing that might facilitate his departure as soon as possible; and thereupon he dispatched before-

hand.

On the 25th, a part of his baggage for Krasnagora, which is a place, a day's journey without the great wall, appointed for the rendezvous of all the caravans. On this occasion they did not give a guard of Chinese soldiers to the caravan as had been formerly practised; but they had ordered all the towns where they should stop to give them guards; besides which, there was a bonska or courier, of the council of the assairs of the Mongalls, ordered to attend the baggage, who was not to leave them without a new order.

When Mr. de Ismayloff had his audience of leave of the late Emperor of China, this Monarch de clared expressly that he would permit Mr de Lange to remain at Pekin in quality of agent of the court of Russia, expecting that Mr. de Ismayloff would on his return, prevail with His Czarish Majesty to send back the deserted families in question; but in case that should not be effected instantly, he would not only send away the said agent, but would receive no more caravans, till he should be entucly satisfied on this article. But Mr. de Ismayloff, on his arrival at Moscow, found the court so busily employed about the expedition to Persia, that he found no opportunity of getting a final resolution on this affair.

June

June 6th, a mandarin, named Tulushin, let rue know that, having received orders from the Bogdoi-Chan to accompany me to Scharg asky, and to surnish provisions and possible on the road, he would be glad to be innormed what thought I should be ready to depart, that he might take his measures accordingly, and dispatch, in good time, the couriers necessary for the deserts, to make the argument dispositions for my passage.

The 8th, the commissary went to the council, to demond a guard for the caravan; but they granted none; acquainting him, at the same time, that the Mandarin Tulushin was also charged with the care of the carava; and the as he would be obliged frequently to leave the route of the carava, for providing, ideals and horses which I should have occasion for on my journey, he was to hat so that the him a clerk and two couriers under his command, who were not to leave the care, an before they should safely

arrive at Sclinginsky.

The 'ame day, thirty-fix carriages were dispatched, I den with merchandise, for the place of rendezvous, without any other escort than some of our own people, and a courier of the council.

The 16th, the allegamba invited me to come to him at the palace of the Bogdoi-Chan; and, when I arrived, he prefented the with two pieces of damask on the part of the Chan; telling me, "That His Majesty I aving received presents from me on the entrance of the new year, he was pleased, in his turn, to make me a present of these two pieces of damask." I received this present with all due respect; assuring this minister that I should eternally cherish the remembrance of all the gracious favours which the Bogdoi-Chan had deigned to honour me with during my real ence in his empire; and that, in whatever place I should be in time to come, I would never tell of making it a

subject of particular glory to me.

July 4th, the allegamba fent a mandarin to me, to she vine o letter, which he had very lately received from the mandarin who refided at Selangin.xy, in which he made heavy complaints of the chicaneries that he was forced to bear with, during his refidence in that place, as well as from the officers of His Czarish Myest,, as the other inhabitants of that city; adding, " That every body demanded of him parpetually the reason why he tarried there so long, and if he did not intend soon to ratura home? That thereupon having demanded of them, if they had come to any resolution on the affair which was the cause of his being there, they had answered him, that they had no other orders but to conduct him back, with all civility, when he should think proper to return." He related, besides, in this letter, "That the allowance they gave him, for the subsistence of himself and retinue, was so very sently, that, if he had not had of his own money wherewithal to fupply himfelf, he should have been reduced to great ex-They had, besides, pressed him very hard on the subject of the letters, for the council and for me, that were arrived on the frontiers; and they would, by force, know of him the reason why he refused to receive the letters, and to so ward then to Pekin; but that he had always answered them, that his sole errand to Selicainsky bing on the affair of the deferters, he could not charge himself either with letters of any o -r affair whatloever." After the mandarin had explained to me the contents of tois letter, he told me that the allegamba demanded to know of me, "Whether it was possible that all this could be done by order of His Czarish Majesty?" I let him know, in anfwer, "That, if he had formed ideas of the person of the Czar my master, by those passages, he would do well entirely to efface them; for that, as His Czarish Majesty was more magnanimous than to treat, in the manner there laid down, even prisoners rich in the first collectial, not begin to be its practice with the fact of the first in the first constant. I here, that rot is it is constant. I here, that rot is it is constant. I here, that rot is it is constant. I here, that rot only, is the factor of the first of the copy is that letter, it was ready to the circumstant. The first heads the inverse copy is that letter, it was ready to the circumstant. Out, it is the interest of the circumstant build be accommodated in the circumstant in order of the council it of he was class a with, it to receive a letters, though even for the council it of he before he first it and the circumstant on their fide.

The file, the sale legalist lent to me, in the evening, a mandaria, who told me, after making me a compliment from him, that he would be the next day at the council, and that, it leads to come there likewise, he would explain the reasons which determined the count to resolve on my return; and that he would give me the same in writing. Upon which I told him, I should come there with great pleasure, that I might be informed of them.

The 9th, having notice that the Altegamba was already arrived at the council, I forthwish mounted on horseback to 50 there also. He came in person to receive me at the door, and defired me to place myself at a little table with him. After which he gave me to understand, "That it were to be wished that my residence at that court might continue longer, as the Bogdoi-Chan himself, and all the ministry in general, were so well latisfied with the conduct I had observed during my residence, that they had nothing to say against my person; that they had remarked, with much satisfaction, that they had remarked, with much fatisfaction, that they be added order I had kept, the present caravan had begun and finished its commerce, without producing the least dispute between the merchants of the two nations. It had also fortherly been too usual to see the servants and people of the caravan do numberless infolencies in the streets, and commit all forts of excesses, but that, for this time, they so it not the surface with all desirable decency?"

After I had paid this confident by another, I told him, "That it was with intension of maintaining the like good order that His Czarish Majesty sent me to China; and that it would be owing to themselves, if things, for the future, should not be carried on in the same order, and if any other petty incidents did not come to an accommodation with the like ease." After which, I prayed him to let me know the true source of the changes which happened at Urga, between th subjects of the Czar, my master, and the Mongells; and "wherefore they obliged the Russia merchants to have that place before they had sinished their trade." He answered me thereupon, "That it was done

[&]quot;The Chinese usually bought, from the catavan, goods on credit, for which, at the time when due, they could not pay; which occasioned very frequent disputes between the two nations. To remedy this, the court of Pekin had been accustomed to put into the hands of the commission, at his departure, all those who and not pay what they were indebted to the catavan, in order that he might compel them to pay as they best could. In which cases, the commissions had frequently committed great abuse, and treated the poor Chinese, whom they had in their custody, in the front barburous manner; which very much disgusted the needs of Pekin, and tendered them very averse to trading with the Russian catavans.

the people of Pekin, and rendered them very averife to trading with the Ruilian curavons.

† The excesses committed by those of the caravan had been but too inequent till this time; and the commissions, in place of redressing those disorders, had been very often the nielves the authors of them, without giving themickes the trouble of making the least fatisfaction for them to the Chinese, notwithstanding the great complaints to the Russian ministers thereupon on many occasions. In all appearance, what contributed principally to the good order observed by the Russiaevants of this caravan, was their not getting brandy at free cost, as they did when the Chinese furnished the subsistence for the caravan.

by orders of the Tufh-du-Chan and his council, as supreme judges in their country. Upon which I demanded of lim, "Whether the Tush-dr-Chan was a sovereign prince of the Mongali, or a subject of the Emperor of China?" He replied, "That in truth, the Chan was a valid of the Bogdoi-Chan's; but that did not binder his being mafter in his own country "." I then prayed him to tell me, "Whether the Tush-du-Charwas obliged to conform himfelf to the engagement flipulated by treaty between the two empires, to the end, that I might know it we ought to address the court at Pekin, on the subject of satisfaction we had to demand on that affair? Or were to take it of the Tush-du-Chan? As it was not to be expected that affair would be let pass without a r exact inquiry. That, for my part, I thought the best means of terminating that arear amicably, was, that they should order the mandain, who was to accompany me on the iourney, to go with the to Urga, in our way to Selliginsky; to the end, that after having full information of this affair, I might be able to fend a circumfantial account of it to our ministry." But he answered me thereupon in these terms; "With us no judge, who hath given a just sentence, can be made responsible for his judgment, was he no more than a mere clerk. Your people who were at Urga have affronted the lamar, 28 well by words as deeds; and they have, moreover, atten pied to carry off fome Mongall samilies from those quarters. It is for this reason that the Tush-du-Chan was in the right to remove them from his territories." I ar facered him thereupon, " That this judge ought most certainly to render account of hi judgment, because he had judged people who were no manner of way under his juriful cion. But he would have acted with juffice if, after having feat the culpable to Sclinginstry, he had prosecuted for fact-Listi in at that place. Whereas, now that he liath punished the innocent equility with the guilty, and nath infringed the treaty of peace in fo effectial an article, his judgin r cannot be regarded but as a manifest act of violence." The Allegamba, undir a me infift fo strendously for an inquiry into this affair, smiling, told me, " Mr Agent, you do well to make fo much work about this affair; but I do not know how to explain myself more precisely upon it as present; all that I can say to you is, that all of it will be eafily accommed and when we shall rec ive a satisfactory answer upon the affair of our deserters." After which, he profested me with a writing, which he faid had been drawn up by order or the Bogdei-Chan, to ferve for my information regardly, the reasons of my being sout away. Upon which, we again entered into dispute together; but as these gentlemen, on tacke occasions, hold themselves strictly ded down to a single word, whether est it is to the affair hey are upon or not, it was impossible for me to draw from him any other answer than that they had not designed to grant my remaining at Pekin longer than the time of the present caravan; and that, when the assair of the front' is should be accommodated, they would not be wanting to give a definitive resolution, as well upon this article as upon the other propositions which Mr. de simayloff had made to the court. He affects unds presented to me a letter, faying it was written by order of the Bogdoi-Chan, to Prince Cherkasky, Governor-general of Siberia † :

The Prince Che kasky, Governor general or Siberia, was recalled by the court of Russia, in the year 1772, upon his own folicitations; and they as envaids sent thither a person in quality of Vice-governor,

who remains there still.

^{*} Though the Chan of the western Mongalls is tributary to the Chinese, they have nevertheless a great regard for him at the court of China; the more as he is a very powerful prince; and that, in case of a revolt in China, it is from him that the present Imperial House is to expect the greatest affistance; his subjects being beyond companion much better soldiers than the Mongall Chinese; insomuch, that is they should be disobliged, and should join themselves to the Kalmucks, or to the Russes, nothing could prevent his entrance into China when he pleased, and probably bring about another revolution.

but the round, - he sa to orei le faid letter, it displeased him a little, and made him Tay, " has is a hardly civil in me to refuse a liner, which the Linperor his master had or cled to 'e vii to to and to the put into my hands." I answered thereupon, on the contract to do was I ad on this occasion, if the letters which the faid Ininco the halky, in early of Governor general of Siberia. had written to the council, were not like in a men by order or by Czar my mafter. That he could give this letter to the nondairs, who was to accompany me to Selinginsky, with orders to aceive the letters for the cut which were lying there; and that being done, I should not then make the least deficulty to receive the faid letter." He declared to me afterwards, that it we the pressure of the Bogdoi-Chan that I should take Jegcholl in my way, to have my at here, of leave of His Majesty. And again resuming the article of the letter from the court for the Prince Cherkafty, he told me, " That what I had done on this occasion was not altogether for right; feeing it was not allowed to any person, when in China, to careful ther selves to the will of the Emperor." Upon which I answered him, "That I was permaded His Majesty would put a different construction on this affair, from what he did." But that I wished in my turn to know from him, "Upon what he grounded his ufficious, when he refused us, the last spring, the passage to the deserts for some of our people, whom we would have sent with money to provide subfishence for our hories; and that under the pretext, that by such expeditions fecret correspondence might be carried on, which might produce misunder-flandings between the two empires." Thereupon he said, "That in reality he had no fuch fuspicions; but that he would willingly prevent the diforders which might have happened on the journey of these people; seeing, that if they had been robbed. or affaffinated on the road, we would not have failed to demand fatisfaction from the court." Thereupon I put him in mind, "That he was now brought to explain himfelf: that it was not to hinder fecret correspondence that he refused us passinge, and that he might very well have spared himself that useless precaution, as to what regarded us, which had caused an expence of some thousands of laen, for not being able to put our horses into stables, to which purpose the money we wanted to fend to the deserts was appropriated; and had occasioned the death of a great many horses; and even those that furvived were in such a miserable condition, that they were by no means capable of ferving in the waggons; which obliged our commifary to transport the greatest part of his baggage to Selinginsky by carriages hired at Pekin, which could not be done but at a very considerable charge." This answer made him a little thoughtful; but at length he replied to me, "That he did not fay so; but, be it so or not, we must now part good friends; to which end he prayed me to have no ill-will towards him upon account of the liberty he had taken to tride and to jest with me on the subject of the letter from Turfoff; that he could affure me he had no ill intention on that occasion; and hoped that I would be fatisfied with this explanation, and not think otherwise of that affair in time to come, than as a piece of innocent raillery." To which I answered him, " That as to what regarded myself in particular, he might depend that I should absolutely think no more of it; but, for the rest, I could not do in it according to my own pleasure." Whereupon he asked me, if, at my return to Russia, I should be obliged to give a relation in writing to our ministry, of every thing that passed during my refidence in China, in regard to my negociations; and having answered him yes; he said to me, that in this case, I would do well not to insert a number of trifling things which could answer no good end, but might embroil matters more; for that it was much better that a good understanding between the two empires should continue,

than that differences between them should be widened. I replied thereupon, that, not having been sent to the court of Pekin as an instrument for creating misunderstandings, I would make it my business in my relation, not to touch upon any things but such as were necessary for our court to be informed of. After which we both rose up, and having mutually embraced, we took leave of each other, reciprocally wishing to meet soon again.

The 12th, the commissary having left Pckin, with all the rest of the caravan, I likewise departed for Jegcholl, where I arrived on the 15th; and having forthwith made known my arrival to the Chamberlain of the Chan, he let me know he would instantly inform His Majesty; and, till he should receive his orders for appointing the day of my audience, the intendant of His Majesty's kitchen would take care that my table should be summissed with every thing I might have occasion for.

The 17th, I had my audience of leave of the Bogdoi-Chan, with the ceremonica usual at this court.

The 18th, I lest seacholl, and met the caravan the 24th; which being still within the Great Wall, I passed it the 26th, with the caravan, which I lest on the 28th, near Krasar-gora in the deserts. And, on the 26th of August 1722, I arrived at Selingian after having resided near seventeen months at the court of China.

A SUCCINCT RLLATION OF MY JOUR PLY TO DERPENT IN PERSIA, WITH THE ARMY CORUSSIA, COMPLANDED BY HIS IMPERIAL MATERIX PETER THE FIRST, IN THE YEAR 1722.

I found His Imperial Majefly, all the court the general officies, and the nob. by and gentry, from all the empire, affembled at Moseo; and great respectives a sum of that city, for the celebration of the leftivals, appointed a be solemated in the peace, concluded at Aland in 1721, between Russia and Sweden, and a

was which had lafted more than twenty years.

The softivals were accompanied vial masquerades, grant from orks, balls, afterblies, &c. the detail of which, though it would swell this work to too large a but, yet I think it will not be unacceptable to the reader, briefly to relate one passes in, a mean the magnificent shows exhibited on this occasion; which I am induced to by the consideration, which at that time struck me, of Peter the Creat his having a rays in view, even in his amusements and times of diversion, all possible means of influencing his people to a liking of whatever tended to promote the good of his empire.

The Russians, in general, had a strong aversion to shipping and marking assisting. In order to apprize them of the great advantages arising from a marine sorce, in his triumphant entry into Mosco, he represented to his people that the peace, the rejoiding

for which were now celebrating, was obtained by means of his naval strength.

The triumphant entry was made from a village, about seven miles from Mosco, called

Sulwedsky.

The first of the cavalcade was a galley, finely carved and gilt, in which the rowers r'ied their oars as on the water. The galley was commanded by the High Admiral of Russia. Then came a frigate, of fixteen small brass guns, with three mairs, completely rigged, manned with twelve or fourteen youths, habited like Dutch skippers, in black velvet, who trimmed the fails, and performed all the manœuvres as of a ship at sea. Then came most richly decorated barges, wherein sat the Empress and the ladies of the court. There were also pilot-boats, heaving the lead, and above thirty other vessels, pinnaces, whereies, &c. each filled with masqueraders in the dresses of different nations. It was in the month of February, at which time all the ground was covered with show, and all the rivers frozen. All these machines were placed on sledges, and were drawn by horses through all the principal streets of Mosco. The ship required above sorty horses to draw it. In order to its passing under the gates, the top-mass were struck, and, when passed, set up again; besides which, the gate-way was dug as low as was necessary for admitting it to pass.

These festivals being ended, His Imperial Majesty prepared to undertake an expedition into Persia, at the earnest request of Shach Hussein, the Sophy of Persia, in order to assist that prince against the Assahans, his rebellious subjects, who, under the conduct, first, of Myrvais, afterwards, of Myr Mahmut, had not only seized upon the city and strong fortress Chandahar, but also had possessed themselves of several provinces on the frontiers towards India, making frequent incursions towards the capital of Ispahan. As I had formerly been at the court of Persia, I was engaged by my friend Dr. Blumen-

troft, His Majesty's chief physician, to accompany him in that expedition.

Accordingly, about the beginning of May 1722, all things necessary being in readiness, the troops embarked at Mosco, on board of half gallies, built for that purpose, and fell

down the river to Kolumna; near which town the Mosco live. I have do Cha, about ninety versts from the city of Mosco. Kolumna was the place in the cavous, and where the troops valted till the arrival of the Lupecial Majesty and the limit of the confort, who accompanied him in this expedicion.

May 13th, their Majesties, and all those of the court who were ap of solite attend them in this expedition, set out from Mosco by land, and arrived the next way at Molumna.

The 15th, His Majesty employed himself in reviewing the troops. The secting the condition of the sleet, and in giving the necessary orders. The first confided of about three hundred sail of vessels, of all forts, on board of which were about fir on thousand regular troops, including half the guards.

The 16th, in the evening, His Majesty and the Empress, attended by a few ladies, went on board a magnificent galley, of forty oars, with all proper accommodations, built

on purpose for the voyage.

The 17th, at break of day, the fignal was given, by firing three great gues from His Majesty's galley, for the fleet to get under sail. The galley led the way, and all the rest of the fleet followed in a line. His Majesty's galley carried the standard of Russia, the other vessels their ensigns displayed, with arums beating, and music playing, which altogether made an appearance, perhaps not to be equalled in any other country. In about an hour's time, we came into the river Oka, where the vessels had more room to spread.

Having, in my former journey to Persia, mentioned the several places from hence to

Afracan, I need not repeat them here.

I have formerly noted, that, at this feason of the year, the rivers of these parts may, in some measure, be compared to the Nile; for, from the melting of the snow, they

overflow all the flat gounds adjacent to a very great distance.

The 21st, some of our people going ashore, to take leave of their friends, did not return on board till late in the evening, which caused our being at some distance behind the sleet; upon which we used our best efforts to regain our station: but, in the night, our pilot falling asseep, the bark drove out of the channel of the river into a wood. I, being in the cabin, heard a great noise upon deck, not unusual on such occasions: at last I perceived the vessel to strike against something, when, coming upon deck, I was not a little surprised to see the people climbing up trees; for the bark was jambed in between two birch-trees of very large size. All our endeavours could neither move her backwards nor forwards, until we got people from a neighbouring village, by whose assistance we got her warped off with little damage; which being repaired, we proceeded again on our voyage.

The 25th, we came up with the fleet at the town Nishna-Novogorod, where their Majesties and all the court were most sumptuously entertained at the house of Baron Strogonoss. We staid here some days to take in provisions and other necessaries.

The 30th, being His Majesty's birth-day, the same was solemnized, in the usual

manner, by firing guns, &c.

The 31st, His Majesty sailed in his galley for Cazan, escorted by some of the small gallies, leaving the rest of the sleet under the command of the Lord High Admiral Apraxin.

June 5th, we left Nishna-Novogorod, and, in fine calm weather, proceeded down

the Volga.

The 8th, we arrived at the city of Cazan; the Emperor had left that place the preceding day.

The 9th, we again proceeded on our voyage.

The 20th, we arrived at the town of Sarzioff. Noming very material occurred by the way, in which we were iometimes detained by finning gales on footh. It winds, and by calms, during which we were incommoded by infinite numbers of multito-fies.

At this place we came up with the Emperor, who had appointed an interview with the Ayuka-Chan, King of the Kalmucks. The Chan, for that purpose, had his tents

pitched on the cast banks of the Volga, not far from the river.

Next day, His Majesty invited the Ayuka-Chan and his Queen to dinner on board the galley; which, for the accommodation of the royal guess in gesting on board, was brought as near the shore as possible, and a gallery made from the shore to the galley, for them to walk on.

The Ayuka-Chan came on horseback, attended by two of the Princes his sons, and escorted by a troop of about fifty of his officers and great men, all exceedingly well mounted. About twenty yards from the shore, the King alighted from his horse, and was received by a privy-counsellor and an officer of the grards. When the Emperor saw him advancing, he went on shore, saluted him, and taking him by the hand, conducted him on board the galley, where he introduced him to the Empress, who was scated on the quarter-deck, under a very rich awning.

Soon after the Ayuka-Chan was got on board the galley, the Queen arrived on the shore, in a covered wheel-machine, attended by one of the Princesses, her daughter, and two ladies, who were also escorted by a troop of horsemen. When she was alighted, the Emperor went on shore to receive her, and, conducting her on board, introduced

her to the Empress.

The Ayuka-Chan is an old man about feventy years of age, yet is hearty and cheerful. He is a prince of great wifdom, and prudent conduct; is much respected by all his neighbours for his fincerity and plain dealing. And I recollect that, when I was at Pekin, the Emperor of China made very honourable mention of him. By his long experience, he is very well acquainted with the state of affairs in the east.

The Queen was about fifty years old, of a decent and cheerful deportment. The ladies, her attendants, were young. The Princess, in particular, both a fine complexion; her hair a jet black, which was disposed in tresses round her shoulders; and she was, in the eyes of the Kalmucks, a complete beauty. They were all richly dressed in long robes of Persian brocade, with little round caps, on the upper part of their heads, bordered with sable-fur, according to the tashion of the country.

The Emperor intimated to the Ayuka-Chan, that he would be desirous of ten thousand of his troops to accompany him into Persia. The King of the Kalmucks replied, that ten thousand were at the Emperor's service, but that he thought one half of that number would be more than sufficient to answer all his purposes; and immediately gave orders

for five thousand to march directly, and join the Emperor at Terky.

Both the Emperor and Empress were highly pleased with their guests, and, in the evening, dismissed them with suitable presents. The Empress gave the Queen a gold repeating-watch, set with diamonds, which seemed very much to take the fancy, besides some pieces of brocade, and other silks of value.

It is well worth remarking, that this treaty between two mighty monarchs was begun, carried on, and concluded, in lefs fpace of time than is usually employed, by the pleni-

potentiaries of our western European monarchs, in taking a dinner.

The 22d, we lest Saratoff, and sailed down the river Volga with a fair wind.

The 23d, in the evening, we came to the town of Kamoshinka, where we remained till the next morning.

The 28th, we came to the town of Zaritzina; and the 30th, to another town called

Tzorno-yarr.

July 4th, we arrived at the city of Astrachan. Little remarkable occurred during the voyage. We were fometimes detained by contrary winds; and for the most part of the way, were much incommoded by muskitoes, which plagued us much in the daytime, and interrupted our rest during the night.

The 5th, the weather being excessive hot, the Emperor quitted his house in the

city, and went to lodge in one of the adjacent vineyards.

The 6th, the dragoons, whom we found encamped on the west bank of the Volga, to the number of five thousand, were ordered to march directly to Terky, there to wait the Emperor's arrival.

The 8th, the Lord High Admiral Apraxin arrived with the fleet and troops on board. The next day the troops encamped on one of the islands in the neighbourhood.

During our stay at Astrachan, nothing of moment occurred.

The 16th, all the necessary preparations being completed, the troops re-embarked,

and lay on board that night.

The 17th, the Emperor, Empress, and all the court, went on board; and the wind being fair, sailed down the river; drums beating, and music playing. The sleet was in several divisions, under their respective chiefs; and being joined by a number of large transports, and other vessels, made a very grand appearance, such as had never been seen before in this part of the world, nor frequently in any other.

The 18th, the wind being contrary, we made but flow progress. In the evening it fell calm; all the shoals being covered with high reeds, contributed to increase the in-

numerable quantity of muskitoes, with which we were intolerably pestered.

The 19th, we got out of the river Volga into the Caspian Sea. The wind being contrary, the heavy transports were warped out as far as possible, to get out of the reach of those troublesome insects. At night we came to an anchor, in eight-feet water, near a slat island called Tulney-Lapata.

The 20th, we continued warping out the whole day. At night, we came to an an-

chor, near the four fandy hillocks called Tzateerey-Buggory.

The 21st, at break of day, the Admiral made fignal for failing; the fleet got under

fail, and put out to fea, with a fair wind.

The Emperor, accompanied with the half-gallies, on board which were the troops, fleered to the west, close under the shore. But I being on board one of the large ships, we kept the sea, and steered a direct course for Terky. It is to be observed, that the Emperor and the gallies took their course to avoid being surprised with a gale of wind at sea, which might have been attended with bad consequences.

The 22d, we came into falt water, four fathoms deep, out of fight of land, and also

of the gallies.

The 23d, we had calms, and easy breezes at north-west.

The 24th, in the evening, we came to an anchor in the road of Terky.

The 25th, the Emperor, and all the gallies arrived fafe.

The 25th, the Emperor went afhore; and having vifited the town and fortifications,

returned on board in the evening.

The town of Terky is a frontier strongly situated by nature, being encompassed by a deep marshy ground having only one entrance to it, on the land-side, which is well defended by batteries. It takes its name from a small rivulet running by it, casted Terk. It is governed by a commandant, and hath a garrison of about one shouland

.6

f regular troops and coffacks, and is at all times well stored with ammunition pyisions. This place is of singular use for keeping the Tzercassian mountaineers r, who are well known to be an unruly and restless people. I shall hereaster ccasion to speak more of this nation. The same day, the Emperor sent an ofthe Aldiggery, commonly called Shaffkall, to notify his arrival in these parts. naffkall is a prince of confiderable authority among the mountaineers, and a to the Russians.

27th, the fleet weighed anchor, and failed, fouth by east, to the bay of Agrao called from a river of that name. In the evening, we anchored in the bay, as

le shore as we judged convenient.

28th, the Imperial standard was set up on the shore; all the troops landed and ped. The fame day, a coffack arrived in the camp with dispatches from General nie, who commanded a body of dragoons, giving an account that, in his march, attacked by a strong party of mountaineers, near the town called Andrea; that, fmart dispute, in which several of each side had been killed, and some wounded. aft difperfed them, and took poffession of the town. These people having prefent all their families and effects to some distance in the mountains, it seems this tempt of these mountaineers was premeditated; for the General demanded nobut a free passage through the country, and engaged to leave them unmolested. lace itself is of no defence, though they had barricaded the streets and avenues The poor people felt to their cost the effects of attacking regular troops. ch they had never feen any before. However, this was a certain proof of the is of these people. Several of them were brought prisoners to the camp; they trong able-bodied men, fit for any fervice.

Emperor, before he left Astrachan, had fent manifestos to all the petty princes liefs of Daggestan, declaring, that he did not come to invade or make war against that he only defired a free passage through their territories, and would pay money for what provisions, or other necessaries, they might furnish, and that to ll value; to which some of them agreed, others of them did not. Such is often

fe with free independent states, as are those of the Daggestan.

e 29th and 30th were spent in landing the provisions, artillery, &c.; after which hole army and baggage were transported, on boats and rafts, to the east bank of ver Agrachan. This proved a work of labour, there being no woods at hand to a bridge, nor water enough, at the mouth of the river, to admit our half-gallies,

were defigned for the bridge.

e army being transported over, and encamped on the other side of the river, the ror made a plan, and ordered a small fortress to be raised; he named it Agrachan, the river on which it was built. This place was intended to keep such stores as uld not conveniently carry along with us, and as a place of retreat, in case of unen accidents.

gust 2d, the chief named Aldiggery came to pay his respects to the Emperor, gave him a gracious reception, as he did to feveral other chiefs, of lels note, who in a friendly manner. The Aldiggery was accompanied by a imall troop of his pal officers; most of them were handsome young fellows, very well mounted. this chief had staid some hours, and settled matters relating to the march, he took ave.

the mean time, the foldiers were employed in raining the works of the fortress en thousand costacks arrived from the river Don, all horsemen, under communication otzokia and other chiefs; and also the five thouland Kalmucks, less to the damper-

Chan, according to agreement, as formerly mentioned. They were all well mounted, and had nany spare horses, which were of great use. They all encamped in the plain towards the mountains.

The troops being now all affembled, we only writed for the carriages which the Al-

diggery had engaged to furnish for the artillery and basege

During this interval, our great leader, the Emperor, vis not idle, but daily on horfeback, reviewing the army, which was now incremed to more than thirty thousand comback, reviewing the Costacks and K linuxes; a number safficient to have conquered all revita, had it been intended. Besides the array which were then assembled, the Aldiggery made a tender to the Emperor of a considerable body of his troops, which the Emperor declined the acceptance of.

At length, about three hundred waggons arrived at the camp, drawn by two oxen each; but their harneffing not being such as we were used to, we were not a little em-

barraffed in fetting them a-going.

About the middle of August, the army was put in motion, and marched, in several columns, from Agrachan; leaving there a force sufficient to complete the works, and garrison the place. In the evening, we encamped at a brook of brackish and muddy water. This day our road lay about equal distance between the sea and the Tzercassian

mountains, commonly called Daggestan.

Next morning we decamped, marched along the valley towards the mountains, and at night, came to another brook of bad water, where was a little wood of oaks, and plenty of grass, among which I observed great quantities of a certain herb, called Roman wornwood, which the hungry horses devoured very greedily. Next day, we found about five hundred of our horses dead in the wood and adjacent fields. In our present circumstances this was no small disaster. The cause was ascribed to their eating the wornwood, which, perhaps, might be the case. We avoided, for the future, as much as possible, the encamping where large quantities of this plant grew.

Yet the dead horses, having been in good case, were not entirely lost, as our Kalmucks seassed on them for several days. It is to be observed, that these people preser horse-slesh to beast; and in all their expeditions, their baggage is very compendious, carrying no other provisions than such a number of spare horses as they think they may want. I was often diverted in seeing these hardy people, round a fire, broiling

and eating their horse-steaks, without either bread or falt.

The loss of fo many horses detained us some hours later than usual; but, as both the water and grass were bad, we decamped, and at night, came to a spacious plain opposite to the town of Tarku, where the Aldiggery resides. Here we found fresh water

and good pasturage.

This place is pleafantly fituated in a hollow between two high hills, rifing, like an amphitheatre, to vithin a small distance of the top; having a full view of the Caspian Sea. The Prince's house is the uppermost, and overlooks the whole town. It confiss of several apartments, with a spacious hall, after the Persian manner, having a terrace and small garden adjoining.

Next morning, the Aldiggery came and waited on their Majesties, and invited them

to dinner, which was accepted of.

Towards noon, the Princess, spouse to the Aldiggery, came and paid her respects to the Empress, and gave Her Majesty a formal invitation. This lady came in the equipage of the country, that is, in a covered waggon, drawn by a yoke of oxen, with a few footmen to attend her, and escorted by a small party of horse. The lady, though something advanced in years, had still the remains of an handsome person. She had

First with her, in the waggon, a young lady, her daughter, who was so pretty that she could have been deemed a Leauty in any part of Europe. When they entered the illing ressection. There she still she they then took off their wells, and behave to ith great decerce. They were nichtly decred after the Persian rashion. After the Could have a dish of costes, a sy took have, and returned to the town.

Soon in their departure, the Empire's the Empire's went to the term to dine. The Empire's recent on Forther's, the Empire's in a chack, attended by foine of the court before, and efforted by a lambour of lagrant. The first was following, and near the pulses follows, that the court still finder's could not proceed quite to the place, which, when for Majoly on the latter is a find the ment is court, and valked the reflect the way on foot. The Empire was a reach placed with the romantic fitua-

ion of the three. In the evening tier commed , i course.

Aug if 224, the major matched from Slatik 1. The day being exceeding hot, no water to be outed on the read rejection with a next medicious of duft, to that degree that we could featedly it for each here. I had a fair march very differentle and fatiguing to all, major feating to the large that any could accept all the eather. Notwithfanting thef incomes and reason to limit to dept on collection the whole day, and took by an and the farm each people. At the income to form vers of feels, water, where the arm feater nped, but there was correctly vater enough for the people to drink, when one god us to find the major and a latone party of Coffacks to guard them, left the energy flould attempt to carry them off.

The next day, we halted at the wells. The Emperor having received intelligence, that a certain chieftain of the mountaineers, named Uffiney, was affembling some troops in order to harafs us in our march, which lay through fome hollow grounds; accordingly, towards noon, we perceived a number of horse and foot, on the tops of the neighbouring hills, about three English miles distance from the camp; after they had reconnoited our disposition for some time, about one half of them, composed of horse and fort, came down into the plain, with intent to drive off some of our cattle. which brought on a skirmish between our irregular troops and the mountaineers, wherein feveral were wounded, and fome were killed on each fide. Our people took many of their foot, and of fuch as had been dismounted, prisoners. During the action, our infantry kept close in the camp. The Emperor rode out to the field; he ordered the dragoons to march, and support the irregulars: on their advancing, the enemy Coon dispersed themselves, and sled to the hills, where a considerable number had remained firm on the heights. The carrying off fome cattle is supposed to have been their principal aim, as it would not have been less than downright madness in them to have expected to have gained any advantage by attacking such an army of veteran troops, well provided and well conducted.

In the meantime, our dragoons and irregulars were in pursuit of the enemy, on the other side of the first ridge of hills, and quite out of sight. The Emperor, being apprehensive of an ambush, and of a large body of mountaineers being lodged on the other side of the hills, about three o'clock, afternoon, ordered the army to decamp, and march towards the mountains, which was performed in six columns. The Emperor had hourly intelligence of the proceedings of the dragoons and irregulars, who at length entirely dispersed the enemy, and had taken possession of the town where the Prince Ussney resided. However, it being then too late to return to our former camp, the army encamped that night on a plain between the hills on the banks of a small

rivulet, where we had but indifferent quarters, as there was no more time than to fet up

the Emperor's tent, and a few others.

The next day, the army decamped, and marched back to our former camp at the wells, leaving the dragoons and irregulars to manage the rest of the business, who made the Daggestans, particularly the Usimey and his people, pay dear for their rash attempt of endeavouring to interrupt the march of an army to far superior to any force they could muster. We staid here two days, waiting for the return of our dragoons and irregulars.

The 27th, the troops being all re-assembled, the Emperor decamped, and marched again to the fouth-eastward, towards Derbent, through a dry parched plain. At night, we came to a brook, near the foot of the hills, where we encamped, not having seen

any enemy that day.

The 25th, we marched again, and passing a defile, or hollow way, with some difficulty and delay to the carriages, at night we came to wells of brackish water, where we set up our tents, at no great distance from the hills, the sea being about a mile from us to the left hand.

The 29th, being within a short march of the city of Derbent, the Emperor halted to give the troops time to put themselves in order for an entry into the town, as it is

the frontier belonging to the Shach of Persia.

Near our camp, there are feveral pits flowing with that bicuminous liquid called naphtha. The naphtha here is of a blackish colour, very inflammable; it is used by the Persians to burn in their lamps, and not easily extinguished by rain. But, as I have formerly spoken of this kind of petroleum, I do not enlarge on that subject here.

The 30th, the army fet forwards, the Emperor being on horseback at the head of his troops, which made a fine appearance. At the distance of about three English miles from Derbent, the governor of that place, attended by his officers of distinction, and the magistrates of the town, came in a body to wait on the Emperor, and to prefent him with the golden keys of the town and of the citadel, which they did on a cushion covered with very rich Persian brocade; the governor and all his attendants kneeling during this short ceremony. The Emperor received these gentlemen very graciously, and gave them signal marks of his favour. They accompanied him to the city, where, being arrived, the army halted some time; during which, guards were placed at the gates, and a garrison in the citadel, under the command of Colonel Yunger, with a supply of camion and ammunition, both which were wanting in the place.

The foregoing being completed, the Emperor at the head of his army, marched through the city, and encamped among the vineyards, about an English mile to the

fouth-eastward of the town, and about half a mile from the fea-shore.

Soon after which the Emperor, accompanied by all the general officers, returned again to the city, and examined the condition of the fortifications. On this occasion, the Persian governor made His Majesty an offer of his house, and quarters for as many of the troops as the place could accommodate; but to avoid putting the inhabitants to any inconveniency, or perhaps for other reasons, the Emperor declined accepting the offer of lodging in the city, and at night, returned to his camp.

In this fituation, we continued fome days, and were making the needful preparations for advancing farther into the country, as foon as the transports with provisions, stores,

&c. from Astrachan, which were daily expected, should arrive.

They did arrive in fafety; but a most unfortunate accident happened; the night following, after their arrival, a violent storm of wind, from the north-east, drove the greatest

greatest part of them ashore, where they were wrecked and dashed to pieces; but, by

good providence, not many lives were loft.

This missortune disconcerted IIIs Majesty's measures, and put a stop to the Earther progress of his arms for the present, having nothing before him but a country exhausted of all necessaries; and the scasson of the year being too far spent to wait a sresh supply from Astrachan, the Emperor determined to leave things in the same state they then were in, and to return again to Astrachan, by the same way we came, leaving a garrison at Derbent sufficient to secure the advantages he had gained.

Before I leave Derbent, I shall endeavour to give a short description of the place. It is said to have been first built and sortified, according to the style of the fortifications of that age, by Alexander the Great; though it is not easy to ascertain that tradition, or the area of its first construction; yet, by variety of circumstances, it appears to be very

ancient.

The present citadel, walls, and gates, seem to be of European architecture, and no

mean performance.

The citadel stands on the highest grounds of the city towards the land-side. The walls of the city are built of large blocks of square stone; they reach into the sea, beyond which many huge rocks are tumbled into the sea, to prevent any approach, or passage on that side. The haven is now so choaked up with sand, that there is hardly

entry for a fmall boat.

Derbent may be called the key to the Persian empire on this side, and serves to keep the mountaineers, and other neighbours on that side in awe. The situation is very pleasant, rising gradually from the sea to the top of the hill, commanding a very extensive prospect, especially towards the south-east. About thirty miles due south stands one of the highest mountains in Persia, called Shach-Dagh, which is always covered with snow. To the eastward of the town are many large vineyards, producing plenty of grapes, of which they make a considerable quantity of both white and red wine, of strength sufficient to preserve it round the year, and longer if required. The people of substance there keep their wine in jars, buried under ground, by which method it will keep good for years.

They have also fruitful plains in the neighbourhood, and at some distance, is a large forest of walnut trees, oaks, &c. As this place is a frontier of great importance, the

Sophy of Persia always appoints a person of distinction for its governor.

His Majesty having placed a sufficient garrison in Derbent, which he lest there under the command of Colonel Yunger, upon September the 18th, the whole army marched back through the town, keeping the same route by which we came. Little of moment occurred on our march, though we were almost daily alarmed by small parties of the Daggestans, who frequently made their appearance on the tops of the hills, but fled always at the approach of our costacks. As we had seen no rain since our landing on this coast, our people suffered not a little from the great heats, continual clouds of dust, and want of water.

On the 29th of September, after a most fatiguing march, their Majesties and all the army arrived in safety at the fort of Agrachan, and found the sleet in the bay where we lest them.

October the 1st, we began to ship off the baggage, and what artillery, &c. was not wanted at the fort of Agrachan; in which place the Emperor left a sufficient garrison.

I shall now endeavour to give the reader a short view of the country commonly called Tzercassia, or Daggestan, by the inhabitants of country, from dagb, which signifies a mountain in their language. The country so called is situated between the Euxine.

luxine, or Buck Sea, and the Caspian Sea: these two seas confine it from IV. W. to S. E. Bouthward it reaches to the province of Gurgislan, commonly called Georgia. It stretches northward into a part of the Stepp, or defert, which lies between the phand Ashachan.

The country is divided into feveral free independent principalities, and Kabende for hall, Utiliney, and many others, under their respective chieftenss, who are at full elected by the people; and though that office is sometimes known to continue in the replies at the period elected for several generations, yet it both frequently lappens latter of through mal-administration, or in consequence of wars among the distriction chieftain with his ramily have been deposed or banished, and another the or the place. It hash also been known, that the Sophy of Residual to the place and of the place are of the some of those princes among the Daggestans who lie the most continue and leafure the of late years, these people, trusting to their own valour and the natural transfer the country, pay little regard to either of these mighty monarchs, who sometimes it exact them, at other times court their friendship.

The vhole extent of the country is hilly, with some mountains of green acight? You I am informed, they have fruitful vallies, producing corn, vines, and linder, regard the climate. Besides a breed of excellent saddle-horses, they have great force of castle particularly of sheep, which produce the finest wool I have seen in any para. Whether the samous golden sleece was the produce of these parts or not, I shall leave others to determine.

The men are, for the most part, well made and stout; many of them are employed in the service of the Sophy, and frequently raised to high stations. The Etmadowlett, or prime rainister. Als-Begg, was a native of this country. As to their women, they are esteemed to be the most beautiful of any in Asia, as well for features and complexion as also for since shape; on which account many of these poor girls are purchased at high rates, or stelled away, for the use of the seraglios at Ispahan, Constantinople, and other eastern courts.

The religion of the Daggestans is generally Mahometan; some following the sect of Osman, others that of Haly. Some of those people are Christians of the Eastern or Greek Church. Their language, for the most part, is Turkish, or rather a dialect of the Arabic, though many of them speak also the Persian language.

One article I cannot omit concerning their laws of holpitality, which is, if their greatest enemy comes under their roof for protection, the landlord, of what condition solver, is obliged to keep him safe from all manner of harm or violence, during his abode with him, and even to conduct him safely through his territories to a place of security. With which I conclude what I have to say of the Daggestans.

On the 5th of October, His Majesty and the Empress went on board their galley, the

fleet being ready, and all the troops embarked.

Before I quit Agrachan, I am desirous of bringing the reader, in some measure, acquainted with the character of the magnanimous commander of this expedition, during which I had daily frequent opportunities of seeing that great man Peter the First; and during the whole time, was in company, and conversed with those people who had attended his person for very many years; several of whom possessed, in some degree, his favour, and were well regarded by him. Therefore, I hope, what I am about to offer, concerning this great monarch, will not be unacceptable to the candid reader, whose taking in good part what I shall say, I have some right to expect; for I shall say nothing of fact, but what is true, nor any thing of opinion, but what is sincere.

Several

Several foreign writers have mifrepresented and traduced the real character of Peter the Great, by relating mean stories, picked up at alc-houses, and circulated among the lowest class of people, most of them without the least ground of truth, whereby many people of good understanding have been misled, and, even to this present time, look on him to have been a vicious man, and a cruel tyrant, than which nothing can be more the reverse of his true character.

Though he might have had fome failings, yet it is well known, to many living at the time of my writing this, which is above thirty-feven years after his demife, that his prudence, justice, and humanity, much overbalanced his failings, which principally, if not folely, arose from his inclination to the fair fex.

I shall here take the liberty to insert a passage or two, which, though trisling, yet as fo great a personage is the subject, will not, I trust, be altogether unacceptable or un-

entertaining to the reader, as they are instances of his assiduity.

About the middle of October 1714, I arrived at Cronstadt in an English ship. The Czar having notice of the ship's arrival, came on board the next morning, from St. Petersburg; being attended only by Dr. Areskine, who was his chief physician at that time, and on that occasion served him as interpreter. After His Majesly had inquired news about the Swedish sleet, &c. he eat a piece of bread and cheese, and drank a glass of ale; then went on shore to visit the works carrying on at Cronstadt; and returned, the same evening, in his boat, to St. Petersburg, distance about twenty English miles.

The first winter after my arrival at St. Petersburg, I lodged at Mr. Noy's, an English ship-builder in the Czar's service. One morning, before day-light, my servant came and told me that the Czar was at the door. I got up, and saw him walking up and down the yard, the weather being severely cold and frosty, without any one to attend him. Mr. Noy soon came, and took him into the parloar, where His Majesty gave him some particular directions about a ship then on the slocks; which having done, he

left him.

His Majesty's person was graceful, tall, and well made; clean, and very plain in his apparel. He generally wore an English drab-colour cloth frock, never appearing in a dress suit of clothes, unless on great sestivals, and remarkable holidays; on which occasions, he was sometimes dressed in laced clothes, of which fort he was not owner of above three or four suits. When he was dressed, he wore the order of St. Andrew; at other times, he had no badge or mark of any order on his person. His equipage was simple, without attendants. In summer, a four-oared wherry was always attending, to carry him over the river, if he should want to cross it, which he frequently did. When he went about the town by land, he always made use of an open two-wheeled chaise, attended by two soldiers or grooms, who rode before, and a page, who sometimes stood behind the chaise, and often sat in it with His Majesty, and drove him. In winter, he made use of a sledge, drawn by one horse, with the same attendants. He found these to be the most expeditious ways of conveyance, and used no other. He was abroad every and in the year, unless consined at home by illness, which rarely happened; so that seldom a day passed but he was seen in almost every part of the city.

I have more than once feen him stop in the streets to receive petitions from persons who thought themselves wronged by sentences passed in courts of judicature. On taking the petition, the person was told to come next day to the senate; where the affair was immediately examined and determined, if the nature of it would admit of its being done in so short a time. It will naturally follow, that such free access to his person was not only productive of great relief to many poor widows and orphans, but also

a strong check upon judges; and tended very much to prevent any fort of influence prevailing on them to pronounce unjust sentences, for which they were so likely to be called to account.

His Majesty might truly be called a man of business, for he could dispatch more affairs in a morning, than a houseful of senators could do in a month. He rose almost every morning, in the winter time, before four o'clock; was often in his cabinet by three o'clock; where two private secretaries, and certain clerks, paid constant attendance. He often went so early to the senate, as to occasion the senators being raised out of their beds to attend him there. When assembled, after hearing causes between subject and subject, or public affairs, regarding the interior of the empire, read by the secretary, and the opinion of the senate recited thereupon, he would write upon the process, or upon the affair, under deliberation, with his own hand, in a very laconic style, "Let it be according to the decree of the senate;" and sometimes would add some particular alterations, such as he thought sit to mention, and underwrote, Peter.

His Majesty knew so little of relaxation of mind when awake, that he never allowed his time of rest to be broken in upon, unless in case of fire. When any accident of that kind happened, in any part of the town, there was a standing order to awake him on its first appearance; and His Majesty was frequently the first at the fire, where he always remained, giving the necessary orders, till all further danger was over. This example of paternal regard of the Czar for his subjects, was of course followed by all the great officers, and those of the first quality; which was frequently the means of saving many thousands of his subjects from utter ruin, whose houses and goods, without

fuch fingular affiftance, must have shared the fate of their ruined neighbours.

In acts of religion he appeared devout, but not superstitious. I have seen him at his public devotions at church many times. I have been present, when His Majesty, not liking the clerk's manner of reading the psalms, hath taken the book from the clerk, and hath read them himself; which he did very distinctly, and with proper emphasis. His Majesty was allowed, by the best judges of the Sclavonian and Russian languages, to be as great a master of them as any of the most learned of his subjects, whether churchmen or laics. He wrote a very good hand, very expeditiously, yet the characters distinct enough. Of this I myself am some judge, having seen many of his letters, all written with his own hand, to Mr. Henry Stiles, and others. As to his style, some of his secretaries, and other competent judges of the language, affirmed, that they had never known any man who wrote more correctly, or could comprise the sense and meaning of what he wrote in so few words as His Majesty.

The following I had from a certain Russ gentleman, of very good family, and who was a general officer of unexceptionable character in the army, who had attended His Majesty, from his very youth, in all his expeditions. This officer being an old friend of mine, I went to pay him a visit one evening, long after the death of Peter the Great, when he told me, that such and such old officers, naming them, had dined with him that day, and that the principal subject of their conversation turned on the actions of their old father, (as he termed him by way of eminence,) Peter the Great. He told me further, that, though His Majesty seemed to be severe, on certain occasions, yet no one of them all could produce or recoilect one single instance of his having punished an honest man, or that he caused any person to suffer any punishment who had not well

deferved it.

He hath been represented as making too frequent use of spirituous liquors to excess, which is an unmerited aspertion; for he had an aversion to all fors, and to those un much given to drink. It is true, he had his times of diversion, when he would be merry

himself, and liked to see others so; this may have been necessary and proper, for the unbending his mind from affairs of great weight; but such amusements occurred generally during holidays, and festival times, and was, with him, at no time of long continuance. It has been imputed to him, and not without some appearance of reason, that he had political views in encouraging drinking at these times of merriment; for, on these occasions, he mixed with the company, and conversing with them on the footing of a companion, had better opportunities, at such times, of discovering the real sentiments of those about him, than when they were quite cool.

Those who, by their offices about the person of Peter the Great, might be supposed to be the best acquainted with his disposition, always disavowed his drinking to excess, and insisted on his being a sober Prince. I can aver that, during the campaign of the expedition to Derbent in Persia, he was not once guilty of the least excess, but rather lived abstemiously. In this point, I could not be mistaken, as the tent of Dr. Blumentrost, His Majesty's chief physician, with whom I lodged, was always the nearest tent to

that of His Majesty.

I shall give one instance, in proof of what I have advanced concerning the temperance of this great man, viz. In our third day's march, on our return from Derbent, we were kept in continual alarm by considerable bodies of mountaineers, both of horse and soot, whom we saw hovering on the tops of the adjacent hills, though they dared not to come down to the plain, to attack any part of our army, yet it was necessary to be watchful of them; which, in some measure impeded our march. The evening of that day, we had a hollow way to pass, which took up much time, and obliged the greatest part of the army to remain there all night; so that none reached the camp, except the guards, and some light horse, who attended their Majesties. On my arrival there, about midnight, I found only His Majesty's tent set up, and another small one for Mr. Felton, the Czar's principal cook, and master of his kitchen. I went into Felton's tent, and found him all alone, with a large sauce-pan of warm grout before him, made of buck-wheat with butter, which he told me was the remains of their Majesties supper, who eat of nothing else that evening, and who were just gone to bed.

During the whole march, His Majesty, for the most part, rode an English pad, about fourteen hands high, for which he had a particular liking, as it was very tractable and easy to mount. His picture is drawn by Caravac on this horse. He did not wear boots, as he very often walked on foot. In the heat of the day, when the army halted, he used to get into the Empress's coach, and sleep for half an hour. His dress, during the march, was a white night-cap, with a plain flapped hat over it, and a short dimity waistcoat. When at any time he received messengers from the chieftains of the mountaineers, he put on his regimentals, as an officer of the guards, being lieutenant-

colonel of the Preobrashensky regiment.

During the whole course of his life, His Majesty avoided all sorts of ceremony, except on public occasions. His manner of living in his house was more like that of a private gentleman than of so great a monarch. I was once at court on a holiday, when the Emperor came home from church to dinner, with a large attendance of his ministers, general officers, and other great men. His table was laid with about sisteen covers. As soon as dinner was served up, he and the Empress took their places, and His Majesty, addressing himself to the company, said, "Gentlemen, please to take your places as far as the table will hold, the rest will go home and dine with their wives."

On fuch occasions, the princesses, this children, dined in another room, to whom he fent such dishes, from his own table, as he thought proper for their dinner.

This great monarch took all the pains, and used all the means possible, in order to be intimately acquainted with every thing proper for a man who ruled a nighty empire to know. He entered into the detail of every branch of the arts useful to mankind; into that of all the manufactures which regarded the construction of ships, and sitting them for the sea; into that of the making of arms, artillery, &c. If he had a ruling passion for any one part of these acquirements, it must have been for ship-building; into which he entered himself very early, in the quality of a common workman, with his hatchet, and proceeded regularly through all the degrees, to the rank of master-builder, which he attained but a few years before his death. After he got that length in the art, he made the draughts, formed the mouldings, and directed the buildings of several men of war, of the second and third rates, hunself: and he delicemented, and received his alary as a master-builder. The day of launching the stips, which he hunder built, he celebrated as a holiday, and put on laced of thes; but, before he vent to work, to strike away the strunchions, blocks, &c. he always put off his fane coat.

He was v rv fragal in what regarded his perfonal expences, and those of his household. Notwithstanding his frugality in what related to himself, he spared no cost in whatever concernd the public, in the Conclure of his men of war, in the smillery. fortifications, arienals, cana's, &c. all which bose marks of very great magnificance. Nor was he sparing in his bailed age, and the decorations of his gardens with shaues. grottos, fountains, &c. of which the buildings of the fummer-palace, and the gardina at St. Peterfburg, at Peterhoff, Strealna, Clarky Sealo, and many others are fufficient proofs. I flall not detain the reader longer on the fubject of this very great men's character, or way of living, than to acquaint him, that, as His Majefty was very carly up in the morning, he went abroad generally without breakfast; came home to dinner about eleven of the clock; after dinner, went to Resp for about an hour; after which. if business did not intervene, he sometimes diverted himself at his turning loom; then went to visit those he had a regard for, as well foreigners as Russians, with whom he would be very fociable, and eafy in conversation. He sometimes supped with them; which, generally in his latter days, was on hare or wild-fowl, roefted yeary dry, drank fmall beer, and femetimes a few glaucs or wine; and generally was in bea before ten of the clock at high. He neither played at cards, dice, or any game of chance.

The reader will pleafe to take along with him the following observations, viz. that this monarch was, at no time, even during masquerades, feastings, assemblies, and all other directions or amusements, by day or night, without the attendance of some or other of his ministers, and of those who possessed his considence; by which means business, and such offers as were of the greatest consequence, went on regularly; and some of them even concerted during those times of relaxation.

I now return to the 5th of October 1722; at which time, the Enperor and Empress being embarked on board their galley, and the whole fleet being ready, and the wind fair, we weighed anchor and got under sail, from the bay of Agrachan, for Astrachan, at which place we arrived on the 14th of the same month, little material happening in the passage, only some rough gales of contrary wind.

Having finished what I had to do at Astrachan, I joined company with Simon Gregoritz Narishkin, one of His Majesty's general-adjutants, and Commodore Cosslar, who always commanded the ship in which His Majesty hoisted his slag, when he went to sea;

and with these two gentlemen returned to Mosco.

Accordingly, we for on from Affinding in a finall fliallop, and came by water to the tor of figure 1 to vince at reaching, we got such carriages as the place and it, the continue i our journey, along the lines, to the river Don; these lines are diene momet veig to the mon, being a deep ditch, about thirty feet broad, pallifaand or he rop, with his wooden towers at certain distances, in fight of each other, ver general, includily answer the end proposed by His Majesty, in erecting the dich, which was for the preventing of incursions from the (' ib 1 1 " ' " .

1. 25" of Hovember we arrived in Mosco; at which place His Majesty and the Tay resourced about the middle of December 1722.

he following are the post-stages and distances between Mosco and Astrachan.

The distance from Mosco to Astrachan, the post-road, by land 1412 IN COURT OF TREASURE. TO SERVICE THE SERVICE OF COUNT OFFICE THE COURT OF THE SERVICE OF COUNT OF THE SERVICE OF THE SERVICE

The Court of the court is 1734 between Ruffa and Turkey, which had been court of the court of the court of Ruffa, by their takes now the ruffs the factor of the reaction of the reaction of the reactions of great importance, the Emperor of Germany, through versions of the reactions of family time after its commencement, to be engaged in it.

In the et a minor 1937, a congress was appointed to be neld at 14 minors, a to un of their omiets of Poland, in order to accommodate and a termine all differences between the belligation potents, by the mediation of the maisters of Grand Butain, France, and the States of Hampal, then reflying at the Cotoman Porte, who were Sir Liveran Fawkner, the Larquis as Ville-N ave, and Mr. Kullaine. But before these minister could reach Healton, the plen potential is of the powers at war differed so widely in their respective of wides, that the congress broke up without effect.

The Court of This cheer into the a a person to Confintinople, with new proposals of court and their and, a not to fisher Ressaurant theorem, are admitted into the domination that Court of jack, and he is at war with those powers, I has prevailed the not brings the jounes, at the same a defines of Court Oile in the chance of the powers, I have a strong of the powers of the powers

a ho Courted and will high

United a of Descript 1737, I let out for a St. Petersburg, with only one flavant who underload the Technia I guage. I ward, it a former journey, taken notice of the pulses on the road be view of total regard beloco, I wave the repeating them Troop is, the road to a read of the first of the pulses, which had greatly foffered the preceding for the regard of the control of the receding for the regard of the receding for the regard of the receding for the read of my journey, to give an area of the regard distances, I find here only mention the time, and enimplaces the result in the regard.

The rad, I am racico, early in the morning, and proceeded to the fouth-west to

wards Ricf.

The inta, in the night, I came to "I lique, a large and populous town, fituated of the bull, or he river Coles, in more diby toward fubiliantial merchants, very confider

zb. s callers in her p, pres 's, wax, &c.

The 15th, I got to Si fly, another town, which is reckoned to be at about equaliflance from Mono and from Kieff, and revise last town in Great Rusha, bordering of the Rushan Ukrain. At night I reasond a prima, the first town in the Ukrain, a large and populous place, where, hiving changed hories, I proceeded thence the same night to another town called Korolevitz.

The 16th, I passed through Batturin, a large rambling town, formerly the residence of the Hetmann Mazeppa; it stands on rising hills upon the river Semm. The countraction is very pleasant, and exceeding fruitful, being mostly plain, interspersed with words of oak and other timber. The place is almost encompassed with cherry an other fruit trees. What is remarkable, and demonstrative of the great fertility of the

foil is, that they have about firity a control to geleving corn, all built within the didence of two Confidences

At night, I go to Meshin, most a come a notice of the his place, for want of show on the ground, I was oblined to a variety of notices should find and ride all the role of the vary on how etach. This can have been in I could have been in I could have proposed in it. I can be proposed in it.

The 18th, I puffed the Bir fliches, is occur, in the covening arrived at Kioff, fitt atcd on the well bank of the organices, are the an open. This famous river takes it rife on the portions of well act, are the city of Smolenko, and, after a long course pointing to the fouth, often are inclif into the Black Sm, near Oczakoff.

The city of Kioff it and on a line half, and controls the river, and a spacious plain

The city of Kioff it add on a high hal, and on clooks the river, and a spacious plain to the eastward, as far as your eye can reach. To the weatherd the country is hilly, and many of the hills are covered with woods. There are several vineyards about the town, which produce good grapes for the table.

This place it adorned with many magnificent churches, and is famous for being the repository of saints, and holy men of the Growk church, whose shrines are visited by devout persons from distant places. Besides, they have an university at Kioss, of considerable repute in these parts.

I cannot but observe here, that this part of the country, commonly called the Ukrain, (the uph it is sometimes called Little Russa,) doth, for really of foil, and rich pasturage, and edited parts of Europe, producing vest quantities of various sines of grain, the role of the are always very great, as well as of a replant fax, of the most excellent quality, and that with little labour; for they plow the ground value only, and but with one man, who holds the plow, and crives me norse at the same time.

The Ukrain produces good horses for the studie, and large fixed black cattle, in very great numbers, more than sufficient for their own use, and for supplying their neighbours with as good beef as the world affords. The woods are well flood with game of livers forts, as are the rivers and ponds with fish. Afrom us, which in other areas equites cultivation, grows naturally in such cleaty in the Ukrain, as to be termed a well. The people are very civit and hospitable among themselves, and also to all drangers, living very clean and near in their houses. I now resume my journey.

At Most I met with my wortny friends General Romanzoff, and the privy comtal of Mr. Neptuof, who gave me all the alifteness and diffracts to could define. They observe a heutenant and a troop of coffacts to eleout me through Poland, to the coring of colderia.

Validation, which stands on the declivity of a hill, and is the less own belonging to Russia in that part. The place is but small, though well fortified, and provided with a strong gazriton, &c.

The 21st, carly in the morning, I left Vassilkoss, accompanied by my trusty costacks; and after adding about an hour, I came to the borders of Poland, where is an out-post, and a strong guard of Russian foldiers. This place is called the Zasiave, very necessary in time of war. The territory of Poland is divided here from that of Russia by a deep ditch drawn across the middle of a spacious plain.

From the Zastave I continued my journey, in a strong frost, which made the road very rough, and keeping to the southward along the same plain, I saw neither house nor tree till I came to Belozerkoss, the first town appertaining to Poland in this part. The gates being shut before my arrival, it was some time before I could be admitted. However, at length, the gates were opened; I took up my quarters at a public-house belonging

belonging to a Jew. The same evening I waited on Mr. Bechersky, the governor, and desired he would give me a passport. He treated me with great civility, and ordered the passport to be ready against the next morning.

The 22d, by the excess of the governor's hospitality, I was detained till the evening, waiting for his Excellency's passport, which was absolutely necessary, and proved of

great use to me on the road.

The town of Belozerkoff, so called from a white church there, is a pretty large place, and is fortified. It stands in a pleasant plain. The inhabitants are, for the most part, Poles, mixed with not a few Jews, who keep public-houses, and are generally farmers of the revenues all over Poland. There is scarce a village without some Jews, who keep inns for lodging and entertaining passengers.

In the evening, I took my leave of the kind governor, who, after treating me with great politeness, gave me a guide to the next village, called Shamaryafka, about two

Polish miles distant from Belozerkoss, where I lodged that night.

The 23d, early in the morning, I left this village, in a strong frost, without any snow, and, after passing a few straggling villages, at night I came to Goloquast, where I took up my lodgings at a Jew's house. It is to be observed, that the country is mostly plain, with some rising grounds, interspersed with woods of oak, ash, and elm, and other forts of timber, but chiefly of oak; is very pleasant and fruitful, but thinly inhabited; which must proceed from their being exposed to the incursions of the Tartars and Haydamacks, who at times make cruel inroads into these parts.

The Haydamacks were, the foregoing winter, at this place, with a body of five or fix hundred horse, where they committed many disorders; after which, and after having tortured all the Iews they could light upon, to oblige them to discover their money, they marched off with their booty, before the Polish troops could be assembled

to oppose them.

I was well informed, by people who knew fomething of these lawless banditti, who are called Haydamacks by the Poles, and Zapourosky cossacks by the Russians, that they are a parcel of vagabonds, composed of idle fellows of different nations, who, having fled from justice, find a safe retreat among this crew. They are, for several reasons, protected by the Turks, who lay claim to the islands, and places adjacent, on the river Dnieper, where they inhabit, and have fortified themselves so strongly as not easily to be attacked; nor can they be attacked without danger of breaking peace with the Turks.

They profess the Christian religion; but have no wives nor any women among them, having erected themselves into a wild kind of military order, if it may be so called. Every person, who is desirous of entering into this community, is obliged to serve a certain number of years, before he is admitted into the brotherhood. The grand master is called Cashavar, which signifies chief cook, who is chosen from among the fraternity for his conduct and courage. I think I need not enlarge on the subject of such a worthless society.

The 24th, I left Goloquast, and came, towards noon, to a small town called Pogrebisha, where I halted. The people, at first sight, taking my costacks for Haydamacks, shut the gates, and alarmed the place. My passport soon convinced them of their error. After a short stay, I proceeded again on my journey. At night I reached a small vil.

lage, named Otzeredno, where I lodged.

The 25th, leaving Otzeredno, I got to Vitofftzy, another village, where I lay that night.

The 26th, I arrived at Nemiroff, where the late congress was held, as I have mentioned above. This town is presty large and populous, well fortified and garrisoned.

LD

The governor is General Ruffotsky, who hath Colonel Wangenheim, and several other German officers under him.

The country about Nemiroff is very pleafant and fruitful, having many orchards in the neighbourhood, which produce the largest apples and pears that I have seen any They have also plenty of grapes, very good for the table.

The 27th, about noon, I fet out again on my journey. I got that night to the vil-

lage Petzory, where I remained that night.

The 28th, I halted at Spikoff, travelled thence to Lefkovitz, a large village, where I passed the night.

The 20th, I halted at Tamaz-poly, and lodged at Kleimbofka.

The 30th, I arrived at Tzikanofka, the last place belonging to Poland on that from It is a large straggling village, situate on the east bank of the river Ister, now called Dniester, and is the boundary between Poland and Moldavia. On the opposite shore stands the town of Soroka, the first in the principality of Moldavia, now annexed to the Turkish dominions. The same evening, I sent my man to Soroka, to acquaint the commandant or Perkulab, as they are called of my arrival.

Next morning, the 1st of January 1738, the commandant of Soroka, whose name is Petroky, a Greek, came over upon the ice to vifit me, and told me that he was very forry he could not let me pass without a special order from the Prince of Moldavia, who refides at Yassy, to whom he would immediately dispatch an express for that purpose; and hoped I would wait patiently for an answer. In the evening, Mr. Petroky paid me another vifit; he showed me much civility, and brought me a present of wine, fruits, &c. which was very acceptable in a place where little was to be got for

January 2d. Mr. Petroky acquainted me, that his express was returned, with orders

from the Prince to furnish me with horses, and a proper convoy to Yassy.

Having no more occasion for the costacks, I fent them back again to Kioff; but Mr. Noroff, the lieutenant, was permitted to accompany me to Yaffy. This gentleman is an officer of a marching regiment. The coffacks had their own officer besides.

Soroka is but a small town, pleasantly situated on the west banks of the river, about thirty leagues fouth-east from Chotyn, and the same distance north-west from Bender. The place is inhabited chiefly by Moldavians, mixed with a few Greeks, Jews, and Turks. It is defended by an old tower, in which are fome cannon of little use. The channel of the Dniester runs deep there, between two high green banks. The country

adjacent is fruitful in grain, and abounds in very rich pasturage.

The 2d, early in the morning, I left Tzikanofka, and passed the river on the ice to Soroka, where, the horses being ready, I took leave of the commandant, Mr. Petroky, and proceeded on my journey. Towards noon I halted at a large village called Kay-The preceding fummer many of the inhabitants of this place were carried off by the plague; but it was now, by the rigour of the feafon, much abated. As foon as the horses were changed, we left Kaynar, and, after travelling over a very fine country, came at night to another large village, called Meygura, where we lay.

The 3d, I left Meygura. After palling the river Pruth, I arrived in the evening, at

Yasiy, where I found good and warm quarters.

Next morning, being the 4th, I was conducted to the palace, and waited on the Prince, who is also styled Hospodar of Moldavia. He takes the title of Serene High nels, though he is only promoted to that dignity by the Sultan, or rather by the Sund Visier, and holds it only during pleasure, being trusted with ne other power than the administration of civil affairs. His name is Gregory Duces, of a reputable Greeka

From S reme to Yasiy the country is somewhat hilly, the foil rich, the of the collect. About the river P with are fine woods of various for the collection of the collection o

which the I obsaviar a receive of inderable in no in ready money.

The city of hely hands in a fractor plan, on the rivulation block thirty-five a described and the sould be a server of the north-well from Bender; it may contain the about the three times are only, nothly built of word. The inhabitant of Countries at the Grant for the Proceeding and addition of Cochic be diagranged that a labelet, it is the appearance of a ventual cold offer, a which I may be intended, as a managing country had been at all times expected to the ranges of barbarots has a second of the second of the country had been at all times expected to the ranges of barbarots has a second of the country had been at all times expected to the ranges of barbarots has a second of the country had been at all times expected to the ranges of barbarots has a second of the country had been at all times expected to the ranges of barbarots has a second of the country had been at all times expected to the ranges of barbarots has a second of the country had been at all times expected to the ranges of barbarots has a second of the country had been at all times expected to the ranges of barbarots has a second of the country had been at all times expected to the ranges of barbarots has a second of the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country had been at all times expected to the country ha

The 5th 1 wing then leave of my componion, M. Nor T. who return that k to Knoth, I to our room Yety, accoming all ow my and a cross main two had because and a yew tervalt. We came, at make many ge called Venezista, all meters leagues four heaft from Yany, flanding in a traitful valley, where we took appoint quarters.

The 6th, we left this village in the morning, and came at aight to I I amount outlier

vill so the enveloped.

They by we left Krimnoff. On the road we may with many trom of Partars, going to the collowerd, or an expection, notwithfunding the wearble was executed, with fire and the line. These hirdy people accompasted me all the road of the way to Berder, where we arrived in the evening.

The country from Yaliy to Killianoff is very fine; but towards Bender, it grows more dry and barren, and does not appear of fo good full, nor to have so good pallurage,

as the countries which I passed through.

The Mold, vians are all Christians, and the Sultan indulges them with a governor or place of their own religion. This privilege they have enjoyed for many years, which may be of seemed no finell favour under such an irong overnotes as is that of the Turks. Yet it may be observed, that their yoke is much cather, and their manners much more humanized, that their field entrance and settlement in Europe, though, I am persuaded, that two thirds of Moldavia lie waste at this time. It seems to have been an established system in Turkish politics to depopulate all the countries bordering on Christendom, reserving no more than may be sufficient to surnish their garrisons and troops with provisions.

As the plague had raged all the preceding year in the town of Bender, and had almost depoperated the place, about a mile short of the town, we turned off the road, to the right hand, towards the Turkish camp, where the Serashier, or general in chief, has in the field, with all his army about him. The general's quarters were strongly fortisted, with a deep disch pallisaded and mounted with cannon; but the troops were lodged in cells under ground, laid over with slicks and earth, having a hole at the top

503

these poor people passed with a dry hedge about it. In this miserable condition, these poor people passed the winter. I and my Bosniac captain were conducted to one of these holes, which at night was crowded with Turkish officers of distinction. Such miseries, and many more, are the frequent attendants on destructive was. The Scraskier's name is Gergy Aly Basha, or Young Aly Basha, though he is now about seventy years of age, and hath the character of brave and active general.

The 8th, the Seraskier sent his secretally to me, who asked me several questions relating to my journey, and hoped that necessity would be admitted as an excuse for the badness of my quanters. In the evening the secretary came again, when he told me, that, in two or three days, their feast of Bayram yould be over, and then I should proceed on my journey to Constantinople with a proper convoy. In the mean time, he ordered an officer to surnish me with such necessaries as the place assorbed. In this no agreeable situation I was obliged to wait till the feast was over, being sive long nights, all the while confined within the preciness of any hut. One alleviation was, the company of my Bosniac captain, who tarried with me the whole time.

The 12th, in the morning, the fecretary came and acquainted me, that the Seraskier had ordered a chivadar, or officer, belonging to the Grand Visier, and two Tartars, to effort me to Constantinople; at the same time, he told me that I might depart when I pleased. This welcome news was very agreeable; for I had been but little better than a prisoner from the time of my arrival at the camp; though, I not own, they were very civil, and made me as easy as the accommodations and the circumstances of affairs

would admit of.

I could only see Bender at a distance. But it is well known to be a place of importance, being strongly and regularly fortified, with out-works in proportion. It stands in a plain, near the river Dniester, and is frequently mentioned in the annals of late times, for being the place of refuge of that intrepid, inconsiderate monarch Charles XII. of Sweden, after the Russians had beat him out of the field at Poltova, in the year 1709.

Notwithstanding the contagious distemper was not entirely ceased at Bender, we had

our daily provisions from that place.

As foon as the horses were ready, I mounted, and left this plaguy camp, which is so in a literal as well as an allegorical fense. Although our horses were in exceeding bad case, from the fatigues of the last campaign, and from the want of due accommodations, of shelter, &c. during the severe weather that followed, yet we made a shift to come, in the evering, to a large rambling town, called Kaufhan, inhabited by Budjack Tactars. It hands fouth-well from Bender. Here I had good quarters; the people were friendly and hospitable. At supper I sat by an old Tartar, who seemed to be a person of distinction among them. This old gentleman asked me many questions about Lurope, through an interpreter, particularly about the illustrious family of Lorrain, which surprised me not a little. 'The first dish that came before us was pilaw, made of bailey; then he told me, in French, that it was not dreiled after the French fashion. This brought on a conversation between us in that language, which he spoke well, in varch he informed me, that, in his youth, being with the Turkish army in Hungary, he was taken prisoner by the Duke of Lorrain, wno then commanded the Imperial army. I lis Highness took him into his service, in which he lived many years; and, after treating him with great humanity, at last gave him his freedom, with liberty to return into his own country; which extraordinary favour he acknowledged with great respect and gratitude.

The 13th, having got fresh horses, I lest Kaushan, and travelled to the westward, to wards the Danube, leaving the rising grounds, and came along the plain called the Steppe of Budjack, which is flat, dry, barren, and uncultivated; yet there is some good pature, especially for sheep, of which the Turkish army have lest sew remaining. At night, we came to Kongly, where are about a dozen straggling cottages, inhabited by Tartars. We made our quarters that night in the corner of a large shed, along with our norses.

The 14th, as there was nothing tempting to detain us at Kongly, we fer forward very carly in the morning, and proceeded along the fame barren plan, without feeing a house or tree all that day. In the evening we came to a Tartar village, called Tartar

Kcw, where we were tolerably well lodged and entertained.

The 15th, we left Tartar-Xew, and came in the evening to the town of Ismay, standing on the north bank of the famous river Danube, called Dunay in these parts. The place is very pleasant, within sight of the Black Sea. The inhabitants are chicily Turks. Here I was well lodged, and had good bread and wine. The river here is very broad, and divided into several branches, by illands, considerably large; though, when the river falls into the Black Sea, all the branches are united, and form but one mouth at its entrance into that sea. The north bank consists of rising grounds; the south is senced with high hills. I think the Danube, at this place, may be compared with the Volga at Astrachan, both for breadth and quantity of water. By what i could observe, all the great rivers, from the Volga to this place, have, for the most part, high lands for their western banks, and low stat lands to the eastward.

The 16th, we passed the north branch of the Danube in a boat, to the next island, but the other branches being sast frozen over, we mounted, and rode and walked by turns, the rest of the way upon the ice; which was, in many places, very rough, and uneven, with great ridges, confissing of pieces of ice driven together, and heaped upon one another, by strong casterly winds, and the rapidity of the current. Some of the ridges of ice were at least seven or eight seet high, which obliged us to walk on see most part of the way. However, in the evening, we arrived takely at a town called Tulizin, standing on the south bank of the river, sour leagues from limey, where we

had quarters, and other means of relicihment.

Tultzin is the first town in the ancient kingdom of Thrace, now reduced to a Turkish province, known by the name of Bulgaria. The Bulgarians, who are Chrish no of the Greek church, live for the most part in villages; the towns, in general, being imabited by the Turks. This place hath an old abandoned castle, seemingly of European construction; and, as it stands among hills, on the banks of the river, the situation is very pleasant.

The 17th, we left Tultzin in the morning; towards noon we arrived at a large town called Babbadach, flanding in a delightful valley environed by hills. At fome distance from the top of the hills to the caltward, is a most extensive prospect; parti-

cularly a full view of the Black Sea.

It is supposed that the poet Ovid was banished and confined to this place; which must have been no agreeable situation, to a man who had passed his young days in the court of Augustus, and had entered into all the pleasures and amusements of that court, during the time of its politest and gayest period; in the gallantries of which he was supposed to act no inconsiderable part. This amorous poet's book, De Tristibus, exhibits a melancholy picture of the manner of passing his latter days at this place, so different in climate from the happy temperament of that of Italy.

After changing horses at this place, we set sorwards. At night we came to a village called Kaybaly, at a small distance from which we were so bewildered, in a drift of

mow,

frow, that we lost the road; and, had it not been that the barking of a dog directed us, we must live lain in the fields all night.

The 18 h, leaving Kaybaly in deep fnow, we proceeded, and came to Danua-Kew,

another villige, v we we pulled the night.

the 19th, we trave 'en through a very fine country, whereon we found very little may, and came at right to Kabady, where we lodged.

The 20th, we proceeded, and came to a town called Bazar-tzick, and spent the night there. The counts inhabited by Tarks, Crooks, and Bulgarians.

The 21ft, we came to Provady, a pretty lead to real, inhabited as the former. We

fuld there all hight

The 22d, we left Plovedy; came that eloring to Trengy, where we lodged.

The 23d, we continued our route; he ad at a caravantera, four leagues from Tzengy, and after that at a town celled Ayd is; where, having changed horses, we proceeded on our journey, and slept that night at Benglyr.

The 24th, we came to Amera, and lay there. I cannot but take notice of this fine country, adorned with many beautiful woods and coppies, a very rich foil, and ex

cellent pasture; but a great deal of it lies waste; and it is but thinly peopled.

The 25th, we came to the town of Kirl-gliss; from thence to that of Burglass, where we remained that night.

The 26th, we went on. We lodged that night at Tzorley.

The 27th, we reached the town of Silivry, which stands on the White Sea, or the sea between the Dardanells and the Porte.

The 28th, we passed through a large town, called Buyk-tzeckmidgy; from thence

the last stage to Constantinople.

I must here take notice, that, at Silivry, I was met by another chevadar, who, instead of conducting me directly to the city, as I expected, turned short to the less hand, out of the high road, carried me through by-paths, over steep and moorish hills, uninhabited, till at last we came to a little village; on the top of the hill called Karamackly, where is a neat country-house belonging to Mustapha-cassa Basha, the chief butcher to the Sultan, a place of great trust and honour.

I was lodged in the Basha's house, and met with a friendly reception from his kaya, or sleward, who furnished me with what necessaries I had occasion for. In the mean time, I waited patiently for the return of a messenger whom they had dispatched to the Basha. This place stands very pleasant and airy, within the view of the city, and is a

retreat for the Baiha and his family, in times of the plague.

It will be readily imagined, that I did not much like being carried out of the com-

mon road. But, without asking questions, I followed my conductors.

The 29th, the messenger returned from the city, with orders that I should proceed, which was very welcome news to me. Accordingly, we set out about ten of the clock. Towards noon, we arrived at Constantinople. They conducted me directly to the house of Mustapha Basha, who received me with great civility. And, after asking a few questions relating to my journey, he then desired that I would wait till such time as he should acquaint the Visier of my arrival. Mustapha Basha did not return till the evening. Upon his return, he sent an officer with me to Sir Everard Fawkener, the British ambassador, to whom I was addressed, and in whose house I lodged during my abode at Constantinople.

I shall fay nothing relating to the effects of my commission, farther, than that I punc-

tually conformed to the terms of my instructions.

Here, it may be observed, that, although the Russians under Count Lacy, and under Count Munich, were very successful every campaign, from the commencurent of the war in 1734, and made great acquisitions on the Turkish frontier, on that side, by their taking Asoph and Otzakor, possessing themselves of the Perecop and the Crimes, and carrying their arms, the last campaign, into Moldavia, which was ended by a considerable advantage gained by the Russians at the battle of Chotim; in consequence of which victory, the Basha of Chotim brought the keys of the timpo tent featers to the general of the Russian army, who sent the Busha, and the principal office is under him, prisoners to St. Petersburg; yet the lamperor of General arms in along are were by so means successful; the Turks galling on the Emperor's frontier trate, as truch as key lost of their own frontiers towards Russia. Elited by their success in Hangary, during the last campaign, the Ottoman Perce role in their demands, and insided on higher terms than Russia thought proper to agree to.

This famous city is so well known, that I need not enter into a minute description, so shall only give a transfert view of such remarkable things as occurred to meduring my

fhort stay at this place.

Constantinople is situated in torty-one and one-half degrees north latitude, twenty-nine degrees east longitude, upon a point of land, on the European shore, in the province of Remania, and is essented one of the most delightful situations in the world; for which reason Constantine the Great chose it for the seat of empire; by whom it

was rebuilt and beautified about the year of our Lord 330.

At a distance, the city makes a very fine appearance, having a great number of gilded fpires and domes, or cupolas, which multiply as you approach; but, when you enter the city, the general irregularity and narrowness of the ilreets do in no degree correspond with the magnificent appearance it makes at a diffance; which is, indeed, the cafe of many of the cities and great towns of Europe, feeming to be built at random. I have often thought, that, had a Chinese been consulted, he could have taught both Greeks and Romans how to lay out towns, and that by the fimplest rules; viz. Let there be space enough, sufficient breadth of street, and the houses on each lide built in a straight line; which rules are observed in all the towns I have observed in Chine, pa. ticularly Pekin. This common error, in laying out towns in Europe, must be owing to the remissions of the government of nations; though this great inconvenience, :1 '1) grand a city as Constantinople, hath no relation to the fituation of the place, yet it is thought by many, I think very justly, that, were the streets of this city spacious and regular, it would in some measure prevent the frequent pestilential diseases with which this place is affected, and which prevail here more than in any other place I know; there feldom passing a year without its making a dreadful havock among the populace.

This mortal diffemper being almost always, more or less, in this city, may in part be attributed to a detect in Turkish policy, which suffers all ships to enter the port, without requiring bills of health, at any time; even the ships from infected places are admitted. I do not know but that the belief of predestination, prevailing so universally among the Turks, with whom it is a fundamental article of their creed, may likewise contribute to the continuance of the devastations made, by this terrible disease, among

the human species.

A very great nuisance, attending this place, is its being pestered with a great number of nasty dogs which belong to nobody; they kennel in every corner of the streets; it is unlawful to kill them; and they are generally sed, which is looked upon, by many of the Turks, as an act of charity.

in is without diffort a populous cit; but far short of the numbers reported by common same, which seldom keeps within bounds in things of this nature. It is true, that many strangers resont hither axily, both tron Europe and Asia, and many of them remain here: but then it must be considered how many are carried off annually by the pestilence and other dicases. I do not think the whole number exceeds four hundred thousand souls. In waking the streets, you often meet with people, who, to avoid conversing with you, walk on the other side of the street, for fear of catching the distancer; and most people endeavour to get to windward of each other; which, with many other incommences, renders the place not very agreeable to strangers.

From P on a diffract of Constantinople inhabited by Europeans, and by the foreign ministers refilling at the Porte, there is a fine prospect of the city, and of the Grand Science's feragine; which last stands on an eminence, with sloping gardens, down to the edge of the canal, planted with rows of cypress, and other evergreens. It hath the appearance of a most delightful place; but, though the walks are well shaded, it is not

though good manners, or even fafe, to look at them with a fpy-glass.

Opposite to the seraglio, on the Asian shore, stands the ancient city of Chrysopolis,

or the Golden City, now called Skutary, a pretty little place.

Along the shore of the Propontis, towards the south-west, runs a ridge of very high mountains, called Olympus, which are covered with snow summer and winter. The mountain of that name, mentioned by the poets, stands in Greece.

February the 3d, there was a great fall of snow, followed by a strong frost, which continued for the space of sourteen days. I thought myself happy in escaping it; but this weather is very acceptable to the people here, as it tends to stop the contagious distemper.

I shall now take a view of some of the most remarkable structures in and about this ancient city, which are commonly shown to travellers. Indeed there are but sew remains of antiquity to be seen at present; for the Turks, according to their principles, deface and ruin every thing that hath an air of idolatry, as they call it, whether Pagan or Christian. What Christian churches they have spared are converted into mosques.

March 2d, the weather being fine, I made a party with some friends to ride out and see the aqueducts, which are curious subrices erected in order to supply the city with stress that are faid to be built by the Emperor Valens. They are now kept in repair by the Grand Seignor. They stand at unequal distances, from four to seven or more miles to the northward of the city, according to the respective supplies of water from springs and brooks.

The long aqueduct is about feven hundred yards in length, and near thirty in height; it confifts of two stories or ranges of arches, one above the other, having about fifty

arches in a range, all of hown flone, neatly wrought.

The crooked aqueduct, so called from its form of zig-zag, runs in this figure VVVV; the intent of which is to divert and lessen the force of the current, and hath a triple

range of beautiful arches.

At some distance from this stands the high aqueduct, the most magnificent of all, being near three hundred yards in length, about forty in height, having four stately arches with the same number over them. Besides, there are several others of lesser note, which I need not mention. They are all built to convey the water, over low vallies and hollows, to the city.

At night we came to Belgrade, a pleasant village, inhabited by Greeks, where most of the foreign ministers have their country-houses, to which they retire in time of the

plague.

The nort day we remained at this village, and walked through the war an eighbouling hell, to the eastward, from whence there is a fall vilvar the last Sea. These woods are of fine cak, beach, and other turber, lit was the control tion of a royal navy. They are well furnished with wild-soul, as the rous of the control of the seasons.

other rame.

The 4th, we left Belgrade, when, riding to the fouthward, through placet as and fields, we came about noon to a large village, called Buyuckerty, dancing on one north shore of the canal, or Thracian Bospherus. This canal is eastful, large a from the Black Sca, between two high mount ins, and runs, in a strong current, and of sixteen Loglish miles, to the city, where it discharges itself into the Property. The depth is from ten to discen fathoms; the breadth from about one mile to helf a male, very well stored with most forts of sea-fish, particularly optices of a final hand, but to delicious. The land on both sides is very high, with many pleasant villages along the shore. At the mouth of the canal, where it begins from the Black Sca, the Turks have built two forts to defend the passage, one on the shore of Asia, the outer of the strong strong squadron of men of war, and an easterly wind.

I was informed that, in the reign of Sultan Amurot, a ftrong part of Collicks call in open boats, before these castles were built, or when they were neglected, entered the canal, and put all the city in great consernation. After they had plundered many

villages, they returned again to their own country, with little or no loss.

From the Buyuckterey we fent our horses home, and returned to the city by water. Some days after this, I went to fee the Sultan, as he came from his deroitous as the moleure called Jeney-Jamey. He was on horseback, attended by a small troop of spalin on horseback, and some janisaries on foot. Mahmuth hath a good aspect, and bears the character of being of a humane peaceable disposition. This Prince succeeded Aclamatic who was deposed, about seven years before, by one named Ali-Patrone, or Kelyll, a janifury, and his offociates, all people of low degree; the next in command to Ali-Patrone. or Kalyll, as he is commonly called, was Muss-luch, a dealer in melens and other rrules; the hird was Emy-Aly. These three chiefs governed the Turkish enpire near a month. After they had placed Mahmuth on the throne, they depoted the Grand Visier, and disposed of all offices civil and military, at pleasure. Ali-Patrone, in the mean time, was very fober, never changing his habit, came every morning to the janifaries' hall, where he fat as fovereign judge, and gave fentence on all causes that were brought before him without delay; was very charitable to the poor, and rectified many abuses in the state. That magnificent Visier, Ibrahim-Basha, who had introduced printing, fell a facrifice to the rebels.

One action of the Kalyll's I cannot omit relating, as it evinces, that his high station did not produce forgetfulness of his old friends. There was one Janaky, a Greek, a butcher by trade, who had formerly lent Ali-Patrone half a dollar. He sent for this butcher, and made him Hospodar or Prince of Moldavia. Poor Janaky would willingly have been excused from accepting so high an office; but his patron insisted on his

taking it.

However, these mighty chiefs being intoxicated with power, began to intoxicate themselves with winc also; and they were at length caught in a snare, laid for them by Sultan Geray, Chan of the Crim Tartars, who had been sent for by some of the grandees for that end. Sultan Geray succeeded so well, that the chiefs were cut off, the rest dispersed, and the government re-established on the same sooting as heretosore, with very little bloodflud; the particulars of which being, in general, well known, I say no more of that a fair.

The next place I was carried to was the mint, where I faw them coining money of

diff. ant forts. It flands in the outer court of the feraglio.

It can thence I went to the funous church of Sancia Sophia, now converted into a medium. There being already many descriptions extant of this ancient fabric, I shall only all ferve, that it was rebuilt and adorted by the Imperor Justinian, about the year of our Lord 500. It is highly escended by architects, for the flatness of the dome, or

cupole, which, it is faid, the moderns cannot imitate.

In time of war, Christians are not permitted to enter the mosque. Nevertheless, we were conducted up a pair of back stairs to the gallery, from whence we had a full view of the whole. The floor is laid with clean mais and carpets, having no feat, only one pulpit for the Mullah. The gallery is laid with marble, supported by about one hundred merble pillars, of various colours and sizes, most of them, at least, between five and six seet diameter. The whole of the inside hath a noble and grand appearance. At the entry into the gallery, is an old vestry, with the door closed up, of which a Greek, of my acquaintance, told me the following short story, viz. a certain Mullah being in the vestry, lay, or fancied that he saw, a man on herseback, with a sword in his hand, who bid him begone out of that holy place, &c. This, like other tales of the same nature, was not long a secret, and was interpreted to have been no other than Constantine the Great. However sabulous the story appears, the door of the vestry hath been condemned since that time.

From Sancta Sophia I was conducted to the Hippodrome, where the Greeks used formerly to train their horses to the menage, now called the Att-Maydan, and is still applied to the same use by the Turks. It is a spacious oblong square, having a pretty marble obelisk in the middle. On one side of it is a pillar of brass, with serpents twining cound it; this is somewhat defaced, and is about ten seet high.

In the grant firect, at some distance from the Hippodrome, stands another venerable modument of antiquity; a large and tall pillar, called the Burnt-pillar, because it hath greatly suffered by the in the neighbourhood, which hath cracked it in divers places; this is a missorium common to narrow streets, and not to be remedied without a well

regulated police. This pillar is of purphyry, about twenty yards high.

We went thence to fee the grand refervoir, built with intent of supplying the city with water in case of a siege, This must have cost an immense sum of money; for it is all of it under ground; above it are streets and houses. It is not far from the Hippodrome. Towards the water-side, the covering of it is supported by a great number of arches, and many hundreds of stone-pillars, of which not a few are fallen down, and the whole of it is going a-pace to decay. There was no water in it.

There is another ancient fabric, known by the name of Edikuly, or feven towers, standing on an eminence to the westward; which is now a common prison. Hear the middle of the city stands a small tower called Bellisariu; whether or not it was the

house of that great and unfortunate general, I could not learn.

Opposite to the seraglio, near the middle of the canal, stands a small round tower, upon the summit of a small rock, called Leander's Tower. This, with the foregoing,

are the few remains of antiquity commonly shown to strangers.

The haven, which divides the city from that district of it, called Pera, for its extent and depth of water, may probably equal, perhaps surpass, the best in the known world, well senced on all sides by rising grounds. Near the bottom of the haven is a spacious and most convenient yard for building ships and galleys, with suitable magnaines and warehouses

warehouses for receping the cordage, guns, ammunition, and for every material requisite for building and sitting men of war and galleys for the sea.

Adjoining is a place called the Bagnio, appropriated to the lodging and accommadating galley-flaves; where, it may be supposed, they do not pass their time very

agreeably.

My next walk was to fee the Dervifes at worship; they are a religious order of the Midhometans, who have a mosque in Pera, built in a circular form, with a pulpit for the Mullah, and a gallery built in a niche made in the circle for the nusse. The fermon being ended, the musicians began on various inftruments, which were like the Rusopean flutes and hautboys; upon which sive of the dervises stood up, and danced reand the mosque, in a frantic manner, turning themselves round, as they advanced, with so quick a motion, that their faces were hardly distinguishable from other parts of their heads. They followed each other at certain distances; but an old man of lourscore years outdid all the rest in quickness of turning round. Yet, when he left off, he did not seem to be all discomposed by the violence of the motion. This extravagant sect make cows of poverty and chastiny, travel over all the east, where the religion of Mahomet prevails, and are held in great esteem by the devout of that profession.

The 9th of March, the army intended for Hungary, under the command of Eggeny-Mahomet-Basha, the Grand Visier, began to file off to the camp assigned for them, about three miles to the northward of the city. The procession continued four days; and, as usual, when the Sultan himself, or the Grand Visier, takes the field in period, the troops are attended by all the different trades and artisans to the place of encampment, each trade having the proper dress and badges of their respective profession, with

banners, music, &c.

The first day the janisaries marched, with their Aga, or chief commender, at their head, followed by a numerous multitude of artisans. The first in procession was a plough drawn by painted oxen, with gilded horns. It would be tedious to mention the rest particularly; I shall only observe, that some of this ragamussion crew made frightful figures, being naked to the waist, with sabres run through the sleshy part of their arms, and besimeared with blood—A shocking spectacle!

The fecond day's procession was the pioneers and miners, with their different tools

and utenfils.

The third day, the cannoniers marched.

The fourth day, the Vifier marched out, attended by the general officers of the army, a great many spahis and janisaries, and all the different trades of the town; among which rabble, were me fuch banditti as above described, naked for the most part of the body, all bloody. The Grand Musti was in the same coach with the Grand Visier, and had the Alcoran carried by a Mullah, who sat likewise in the same coach, opposite to the Musti; which was preceded by a number of singers, in their proper habits, singing as they went along. Before the coach was carried the standard of Mahomet, which is a horse's tail, said to be brought from heaven by the Angel Gabriel to Mahomet, and is held in great veneration, seldom appearing but on great solumnities; after which it is carried back to the seraglio, where it remains till the next occasion.

When war is declared against any prince or state, the horse-tail is set up at the gate of the seraglio, called Alla-Capy, or the Port of God, from whence the Grand Seignor dates all his dispatches; and, on that account, the court of the Grand Seignor is commonly called the Ottoman Porte and the Sublime Porte. But when the Sultan is in the field, at the head of his army, he dates all his letters and orders from his stirrup. All generals who have three horse-tails, are called Visier; but the Grand Visier, who

6

in always prime minister, governs and directs all assuits relating to the state, both forcing and domestic; next to him in power is the Kaymeran, who is his lieutenant; after him Nisangy Basha, keeper of the seals; then Kap-adgee Basha, chief porter; Kis lar-egusty, the chief canuch. These are the principal great officers at court. It hippens often, that the Kislar-agasty hath more to say that all the rest put together; for although the ladies live very retired, yet they are not so ignorant as is generally imagined. And, if I am not misinformed, matters of the greatest consequence are canvassed, and often settled in the seraglio, before they are professed to the ministry. One thing is certain, that whoever wants a favour at court needs no better recommendation than a friend among the ladies.

Soon after my arrival, I had an invitation from the famous Count Bonneval, who then was ill of the gout; but, in time of war, it was not thought fit that I should visit

that gentleman.

Mirch 15th, Sie Everard Fawkener went to the camp to take leave of the Grand Visier, as is usual for all the foreign ministers to do, on the like occasions. We dismounted at some distance from the tent of this great man, were conducted by an officer to a magnificent tent, near to that of the Visier, and entertained with coffee, &c. for about a quarter of an hour; after which the ambassador accompanied by the gentlemen of his retinue, went to the Visier's tent, where a stool was prepared for his Excellency. The gentlemen stood during the time the ambassador remained. The Visier sat cross-legged on a sopha raised about half a foot from the sloor, which was all laid with rich carpets. Very near him stood a frame, on which were hung some muskets, sabres, &c. of a very curious workmanship, ornamented richly with gold, silver, and slones of value, as emeralds, rubies, &c. The Turkish camps are, in general, very regular and clean.

The short ceremony being over, we returned again to the city. After some days

ine Grand Visier marched to Adrianople, in his way to Hungary.

Being about to leave this city, I shall detain the reader with no more particulars

than the following short observations.

In Turkey there are few families who have any distinguishing titles or honours appertaining to them which descend to their children. All titles of honour, and places of power and profit in the Sultan's dominions, depend on personal merit, or the Sultan's savour, which dies with the possessor. The only two families who have a just claim to nobility, are those of Dgiggal-Oglu and Kuperly, who, for signal service done the empire, have peculiar privileges; one in particular, that the Sultan, as it is said, cannot condemn them to death. It seems that, on a very critical conjuncture, when assairs were in great disorder, the Sultan died, Kuperly kept it a secret for six weeks; in which time, by his prudent conduct, the government was established on a proper footing. Besides these, there are descendants of their prophet Mahomet's family, of which there are great numbers, who are distinguished by wearing green, and enjoy some privileges.

Having nothing more to do at Constantinople, I am now about to return to St. Peterfburg. As I had a commission from Sir Everard Fawkener for the Grand Visier, who

was then at Adrianople, I took that road.

April 8th, after taking leave of my friends, I fet out from Constantinople, accom-

panied by a tzaush, or messenger, a janisary, and my own servant.

The 13th, in the morning, I came to the city of Adrianople, where I lodged at the house of Mr. Damiral, a Greek gentleman, who is agent at this place for our ambassador, where I found a friendly reception. The city of Adrianople is about forty vol. vii.

leagues north-west from Constantinople, in a pleasant country, inhabited by Turks, Greeks, and some Jews. The Capuchins have also a convent here. The town is pretty large, and is remarkable for having a very noble grand mosque, with very high minorets, of excellent workmanship. The architect was a Greek, of whom it is reported, that the Grand Seignor, being amazed at the extraordinary continued at execution which the architect exhibited in those buildings, thought that nothing of the chanism was out of his reach, and ordered him to make himself win s, and to say of from the top of one of the minorets, which the poor builder was forced to attempt After slying a considerable distance, he fell among some tombs, and broke his neck. I do not youch for the truth of the story; but I was shown the tombs in the neighbourhood, among which it is faid that he fell.

The 14th, I had a visit from Monsieur Pelsonell, the French agent, and some of the

Capuchin fathers.

The 15th, I went to return the visit at the convent. In coming through the marketplace, in the way to my lodgings, I met with a very disagreeable speciacle; which was two men, lying stark naked, without their heads, which had been just before cut off. They were said to have been spies.

After discharging my commission to the Grand Viner, which I effected through Mr. Damiral, and obtaining an order for post-horses, I left Addianopse the 17th, and proceeded on my journey to the northward; in which I need not be particular, having mentioned most of the places in the former part of this relation. I took the nearest way for Yassy in Moldavia.

The 26th, we passed the Danube in a boat, at a place called Kalass, a few leagues

above Ismayl.

The 29th, we arrived at the city of YaTy. The next day I waited on the Prince who received me in a most friendly manner. He gave orders for horses, and two or his guards, to conduct me to the frontiers of Poland. He likewise sent an officer, to accompany me as far as Nemirosse. I then discharged my tzaush and janisary, who returned back to Constantinople.

May 1st, I left Yassy, and came the next day to Soroka.

The 3d, I left Soroka, passed the Dneister, and came to Tamas-Poly, where I lodged The 5th, I got to Nemirosse; and at this place delivered all my dispatches for Europe to General Russoulky, to be forwarded according to address.

The 10th, I arrived at Kioff, and fet out again the same day.

On the 17th of May I arrived at St. Petersburg.

It is to be noted, all my dates are old stile.

I shall subjoin a list of all the stages and distances from St. Petersburg to Constantinople. As I have in a former journey, particularized the slages to Mosco, I need not repeat them here.

				1925		

Thus, I have finished my fourth eastern journey, which, in all probability will be my last to that quarter of the globe. I would not advise any man to undertake this last, at such a season of the year as I did, or in time of war.

TRAVELS OF SOME DUTCHMEN IN KOREA;

WILF

AN ACCOUNT OF THE COUNTRY, AND THEIR SHIPV RICK ON THE ISLAND OF QULLPAER T.

By HENRY HAMEL.

TRANSLATED FROM THE FRENCH *

INTRODUCTION.

THE following short relation was first printed by the author in Holland, where the eight men who returned from Korea were then living: these having been examined by feveral persons of reputation, all confirmed what the secretary of the ship, as he calls himself, had written. This seems to render the narrative sufficiently authentic, in the opinion of the English translator; who observes, that, according to the French editor, in his preface, there is nothing afferted in the description of Korea, which does not agree with what Palafoix, and others who wrote of the Tartar invafion, had faid before. However true this may prove, with regard to the customs of the people, (which, as well as the form of government, feems to be nearly the fame with the Chinese,) there feems to lie an objection against the geography of the Dutch author, viz. that is does not correspond with the map of Korea, as to the names of any of the cities in the road, which the Dutchmen took from the fea-coast to the capital of that kingdom, or even that of the capital itself. Especially since that map was taken from one hung up in the King's palace, and gives the indigenous names to places, unless the names be written by the missioners, according to the Chinese, instead of the Korean language: for though both nations use the same characters, their languages are different. As the author refided thirteen years in Korea, the translator thinks he might have published a more ample and satisfactory account of it. Be that as it will, we may be content, provided it is but genuine, fince that which the missioners have sent over is much more scanty. At the end of the journal, we meet with the names both of those who returned from Korea, and those who were left behind, making in all but fixteen out of thirtyfix, who were faved from the wreck thirteen years before.

Those who returned from Korea, were

Henry Hamel, of Gorcum, fecretary to the ship, and author of this account.

Godfrey Denis, of Rotterdam.

John Piters, of Uries in Friezland.

Gerard Jans, of Rotterdam.

Matthew Ybocken, of Enchuysen.

Cornelius Theodorick, of Amsterdam.

Benet Clerc, of Rotterdam.

Denis Godfrey, of Rotterdam.

^{*} From GREEN's, commonly called Astley's Collection, Vol. IV. 329.

The nan.es of those who remained in Korea, were

John Lampe. of Amfterdam.
Henry Cornell s, of Treelandt.
John Nicholes. of Dore.
Jacob Jans, of flore ay.
Anthony Ulders, of Embden.
Nicholas Arents, of Off-voren.
Alexander Bofquet, a Scotchman.
John, of Utrecht.

SECTION I .- THEIR SHIPWRECK ON QUELPAERT, AND TRAVELS IN KOREA.

1. Their Voyage to Quelpaert, and Shipwreck there.

Departure from Holland. — Great Storm:. — Their Districts. — The Ship wrecked. — How treated by the Natives. — The Wreck secured for their Use: — Sent up to the Governor — are closely confined, but kindly used. — They must with a Distriman, sent as Interpretur. — Very good Governor. — A very bad one. — Some Attempt to escape. — Taken and pumshed. — Quelpaert described.

HEY left the Texel in the Sparrowhawk, on the 10th of January 1653, in the evening; and, after many storms and much foul weather, came to an anchor the 1st of June, in the road of Batavia. As soon as they had refreshed themselves, they set sail the 14th of the same month, by command of the governor-general, for Tayowan, where they arrived the 16th of July. They carried with them Mynheer Cornelius Lessen, who went to take possession of the government of that city, and Formosa, in place of Mynheer Nicholas Verburge, who had resided there three years. The 30th they, by order of the council, departed for Japan: but next day, towards the evening, as they were geting out of the channel of Formosa, there arose a storm, which increased all night.

The 1st of August, in the morning early, they perceived themselves close upon a small island, where, with much difficulty, they at length came to an anchor; for in most parts of that sea there is no bottom. The fog clearing up, they found themselves so near the coast of China, that they could easily discern armed men scattered along the shore, expecting to make their advantage of the ship's wreck: but, though the storm increased, they there continued all that day and the night following, in sight of them. The third say they perceived the storm had driven them twenty leagues from their course, so that they were again in sight of Formosa. They plied betwixt that island and the continent, the weather somewhat cold. What troubled them most was, that the uncertain winds and calms kept them in that channel till the 11th of the same month, when a south-east wind grew up into a storm, with a heavy rain, and forced them to run north-east, and north-east by east. The three following days the weather continued still more tempestuous, and the wind shifted so often, that they were continually hoisting and lowering their sails.

· By this time the frequent beating of the sea had much weakened their vessel, and the continual rain obstructed their making any observation; for which reason they were forced to furl all their fails, strike the yards, and commit themselves to the mercy of

the waves. On the 15th the hip took is, so much water, that there was no mastering it. That night their boat, and the greater part of their gollery were carried away, by the continual breaking is of the var, which thook their boltsprit, and endangered their proves nor was it possible to repeir the day age sustained, the gusts of wind were so violent, and came so close one upon sucher. The length, a wave breaking over their stern, had like to have vashed away all the season who were upon the deck, and filled the ship so full of water, that the reaster cried out to cut down the mast by the board immediately, and so to their prayers, saying, if one or two such waves should return,

they were inevitably lost.

This was their condition, when the fecond watch being just run out, he who looked a-head, cried, "Land! land!" adding, that they were not above a musket-shot from shore; which they could not defect sooner for the rain and darkness of the night. They could not come to an anchor, because they found no bottom; and while they were endeavouring as it, in tain, three successive waves sprung such a leak in the vessel, that they who were in the told were drowned before they could get out. Some of those on the deck leaped or allow d. and the rest were carried away by the sea. Fifteen of them sot ashore, for the most part naked, and much hurt. They thought, at first, none had chaped except themselves; but, in climbing the rocks, they heard the voices of some men complaining, whom next day, by calling and seeking about the strand, they met with, scattered here and there: so that they made up thirty-six, no more remaining out of fixty-sour, and most of them dangerously hurt.

In fearching the wreck, they found a man wedged betwixt two planks, which had fo pressed his body that he lived but three hours: but of all who perished, they could find only their captain, Egbertz, of Amsterdam, stretched out on the sand, ten or twelve sathom from the water, with his arm under his head, whom they buried: nor had the sea cast any of their provisions ashore, except one sack of meal, a cask with some salt-neat, a little bacon, and a hogshead of claret. Their greatest trouble was to contrive how to make a sire, concluding they were on some desert island. Towards evening, the wind and rain somewhat abating, they gathered enough of the simber and sails of

the wreck, to make fome shelter against the weather.

The 17th, as they were lamenting their deplorable condition, fometimes complaining that they saw nobody, and sometimes flattering themselves with the hopes of being near Jama, they espied a man about a cannon-shot distant, to whom they called, and made signs; but as soon as he saw them, he sled. After noon they spied three more; one carried a musket, and his companions bows. Being come within gun-shot, they halted, and percaiving the Dutchmen made towards them, ran away, though they endeavoured to inform them, by signs, that they desired nothing but fire. At last, one of the companions resolving to attack them, they desired up their arms without opposition, and thus kindred their such a stack them, they desired up their arms without opposition, and thus kindred their fuel. These men were clad after the Chinese fashion, excepting only their hats, which were of horse-hair; and the Dutch were much as a hundred armed men, clad like the former, who, after counting, kept them inclosed all night.

Next day at noon, there coming down about two thousand men, horse and foot, who drew up in order of battle before their hut or tent, their secretary, the chief pilot, and his mate, with a boy, went out to meet them. When they were brought to the commander, he ordered a great iron chain to be put about the neck of each of them, with a little bell, in which condition they were obliged to prostrate themselves before him. Those in the hut were treated in the same manner, all the islanders, at the same time, raising a great shout. When they had lain some time flat on their saces, signs were

made for them to kneel, and some questions were put to them, which they did not understand, nor could they, on the other hand, make the natives sensible, that they wended to have gone to Japan. For they call that country Jeenare, or Jerpon. The communder perceiving he could make nothing of all they said, caused a cup of arak to be given to each of them and sent them back to their tent, ordering their conductors to let him see their provisions; which having viewed, an hour after they brought them sice holded in water; but believing they were almost starved, gave them not much, for fear it should do them hurt.

After dinn r they came with repes in their hands, which greatly surprised the Dutch, imagining they intended to strangle them; but their fear vanished, on seeing them run towards the wreek, to draw ashore what might be of use to them. At night they gave them more rice to eat; and their master having made an observation, found they were in the island of Quelp tert, which is in thirty three degrees, thirty-two minutes of latitude.

These people were employed all the 19th in geting ashore the sad remains of the wreck, drying the cloaths, and burning the wood to get the iron, being very fond of that metal. Beginning now to grow somewhat familiar, they went to the commander of the forces, and admiral of the island, who was also come down, and presented each with a prospective glass, and a pot of red wine, besides the captain's silver cup, found among the rocks. They liked the liquor so well, that they drank till they were very

merry; but returned the filver cup, with many tokens of friendship.

The 20th they made an end of burning all the wood of the ship, and saving the iron: during which time, the fire they made coming to two pieces of cannon loaded with ball, they gave so great a report, that they all sled, and durst not go near the vessel, till the Dutch had assured them, by signs, that they need not fear the like accident any more. This day they brought them rice twice, to cat. Next morning the commander gave them to understand, by signs, that they must bring before him whatever they had saved in their tent, in order to be scaled; which was done in their presence. Meanwhile certain persons being brought to him, who had converted to their own use some iron, hides, and other things saved out of the wreck, were immediately punished before them, to let them see, that their design was not to wrong them of any of their goods. Each of the thieves had thirty or forty strokes on the soles of his feet, with a cudgel six feet long, and as thick as a man's arm. This punishment was so severe, that some of their toes dropped off.

About noon they were given to understand, that they must depart. Those who were well had horses provided for them, and the sick were carried in hammocker. They set forward, attended by a numerous guard of horse and foot; and travelling four leagues, came at night to a little town called Tadiane; where, after a slender repast, they were carried into a warehouse, much like a stable. The 22d, at break of day, they departed, in the same order as before, and travelled to a little fort, near which there were two galliots. Here they halted to dine, and at night came to the town of Moggan, or Mokso, where the governor of the island resides. They were all conducted to the square before the town house, where about three thousand men stood under arms; some of whom coming forwards, gave them water to drink in dishes; but being armed after a terrible manner, the Dutchmen imagined their design was to kill them. Their very habit increased their fear, for it had somewhat frightful, which is not seen in China, or Japan.

Their facretary, accompanied with some others, was carried to the governor. When they had lain awhile profirate, a sign was made to the rest to do the same, near a sort of balcony before the house, where he sat like a king. After this, he caused them to be

asked, by signs, where they came, and whither they were bound? They answered, that they were Hollanders, and bound for Nangasaki, in Japan. Thereupon he signified, by bowing his head a little, that he understood something of what they said. Then he ordered them to pass in review by sour and sour at a time; and having put the same question to each of them, ordered them to be carried to the same house, where the King's uncle, who had attempted to usurp the throne, had been confined, and bigd.

As soon as they were all in, the house was beset with armed men. They had a daily allowance of twelve ounces of rice a man, and the same quantity of wheaten meal. but very little besides, and so ill dressed, that they could not eat it. Thus, their common are ils were for the most part only rice, meal, and salt, with water to drink. The governor, who was seventy years of age, was a very understanding man, and in good esteem at court. When he dismissed them, he made signs, that he would write to the King to know his pleafure concerning them, but that it would be a confiderable time before he could receive an answer, because the distance was sourscore leagues all but ten, by land; they therefore begged him to order, that they might have flesh sometimes. They also obtained leave for fix of them to go abroad and other kinds of victuals. every day by turns, to take the air, and wash their linen. He did them the honour often to fend for, and make them write fomething before him, both in his own, and the Dutch language. By this means they began to understand some words. As he was pleafed fometimes to discourse with, and divert them with little amusements, they began to conceive hopes of getting over one day to Japan. He took such care of their sick, that, fays the author, "We may affirm we were better treated by that idolater, than " we should have been among Christians."

The 20th of October, the lecretary, master, and surgeon's mate, were carried before the governor, where they found a man fitting, who had a great red beard. The governor asked them who they took that man to be? And having told him they supposed he was a Dutchman, he fell a laughing, and faid they were mistaken, for he was a After some further discourse, the man, who, till then had been silent, asked them in Dutch, who they were, and of what country? They returned an answer. adding an account of their misfortunes. Then taking the boldness to ask him the same questions, in their turn, he said his name was John Wettevree; that he was born at Riip in Holland, from whence he came as a volunteer in 1626, aboard the ship Hollandia: that, next year, going to Japan in the Ouderkeres frigate, the wind drove them on the coast of Korea; that wanting water, and being one of those who were commanded ashore to get provisions, he and two more, named Theodorick Gerard and John Pieters, had been taken by the inhabitants, seventeen or eighteen years before in the wars, when the Tartars invaded Korea; that he was fifty-eight years of age, and that his abode was in the capital city of Korea, whence the King had fent him to know who they were, and what had brought them into his dominions? He added, that he had often asked leave of the King to go over to Japan, without ever obtaining any other answer, than that he must never expect it, unless he had wings, and could fly thither: that the custom of the country was to detain all strangers, but that they wanted for nothing, being provided with diet and clothes as long as they lived.

This was no pleafing news to the Dutchmen; but the joy of finding so good an interpreter dispelled their melancholy. Yet he had so forgotten his mother tongue, that they had much to do at first to understand him; but he recovered it again in a month's time. The governor having caused all their depositions to be taken in form, sent them to court, and bade them be of good cheer, for that they should have

an answer in a short time. Meanwhile, he daily bestowed new favours on them, giving to Wettevree, and the officers who came with him, to see them at any time, and

acqueint him with their wants.

The beginning of December a new governor came, their benefactor's three years being expired. It would be hard to express the kindness he shewed them at his departure, informach that social them ill provided against winter, he caused two pair of shoes, a contwell lined, and a pair of stockings of skins to be made for each of them. He likewish treated them nob's, declaring that he was sorry it had not been in his power to send that over to Japan, or carry the n with him to the continent. He added, that they ought not to be troubled at his going away, because, being at court, he would use all he endeavours to obtain their liberty, or have them carried thither. He restored them the books they had saved, with some other parcels of goods, giving them, at the same time, a bottle of precious oil. He likewike got the new governor to mend their allowance, which he had reduced to rice, falt, and water.

But after that lord's departure, which was in January 1654, they were much wor't used than before, for barley was given them instead of rice, and barley-meal in place of wheat; the first of which they were forced to ich, to procure either food. This hard usage tent to I them to think of making their ofcape in the approaching spring, and the rathe, as the King's order did not come for carrying them up to court. After long confusing how her night size on a bost in a disk night, at length six of them resolved to execute this design about the end or April; but one of the gang having gotter astep of the wall, in order to see where the earl lay, was discovered by some does,

whose barking alarmed the guards.

The reginning of May, the master going abroad with sive others, as he was walking, observed, at a little hamlet near it a city, a bork well rited up, without any body to guird it. He professly into a city disk a draught of water, he went aboard, without taking care for any more. Whilst they were labouring to draw the back over a little should that was near it, some of the inhabitants discovered their design and one of them running out with a racket, went into the water to oblige them to return: yet that did not hinder them from proceeding, except one, who not being able to get up to the real, was forced to go back to land. The other are attempting to hoist the sail, both mail and tail fell into the vater. They soon got things to rights again, with much labour; but as they end-avoured a second line to hoist fail, the end of the mail broke off thort, and could not possibly be mended. These delays giving the natives time to get into another back, they soon overtook the sugitives; who, notwithstanding their weapons, nimbly boarded them, hoping to make themselves masters of the vessel: but sinding it full of water, and unsit for service, they all submitted.

Being carried before the governor, he caused them to be laid stat on the ground, and their hands chained to a great log: then the rest being brought also bound and manacled, the prisoners were asked, whether they were privy to their slight? This all the six positively denying, Wettevree was set to examine what their design was: and they answering, it was no other, but to go to Japan; "How durst you, (said the governor,) attempt that passage without bread and water?" They replied, they had chosen rather to expose themselves, once for all, to the danger of death than to die every moment. Hereupon the unsortunate wretches had each twenty-sive strokes given him on the bare buttocks, with a cudgel a sathom long, four singers broad, and an inch thick, being stat on the side that strikes, and round on the other. These strokes were so unmercifully laid on, that the sufferers were forced to keep their beds a month;

in the effect with and, we show were confined, and firstly guarded day

continued to the first well or it to leagues four's of the continued of th

2. Their Journey to the Capital of Korsa, and other Adventuces.

Sent for to Court: — The Read thither: — A rivel of the Citt! — I it is in the Gracie. — Carefully many: — A frong Caple. — Serve Coll. — Arte is of it and uly to the office Sharveck or Quelpart. — The Ditch in Duis 1. — Bunished from Court — are he ly used by it. Gree rows — Get leave to beg.

The latter end of May, orders came to carry them up to court. Six or feven days after they put them into four obats, with festers on their feet, and one hard made tast to a block, to prevent their leaping into the waler, which otherwise they u ight casily have done, all the foldiers being lea-fiels. After two days struggling with contrary winds, they were put back, and the inters being taken of, remembed to their former prises at Quelpacia. There or five days after, being support again by time in the morning, towards evening they got close up to the continent; and having lead all night in the road, landed next morning, where their chains were taken off, but their guards doubled. Presently horses were brought, to carry them to the city Hey-man, where they all methodin, having been separated at sea, and landed in several places.

The morning following they came to the town of Jeham; where their gunner, who had never enjoyed health fince the shipwreck, died, and was buried, by the governor's order. Next night they came to the city Nadioo; the day following to Sansiang; thence to Tongap, after crossing a high mountain, on the top where f is the spacious so t called slipam-Sansiang. Thence they travelled to the city Teyn, and next day, having baited at the little town of Kuniga, at night came to the great town of Khin-tyo, where formerly the King kept his court, and at present the governor of the province of Thillado resides. It is a city of great trade, and very samous in that country, though a day's journey from the sea. Going thence, they lay at Jesan, the last town of the same province; then at the little town of Gunun, next at Jesan, and, lastly, at konsio, the residence of the governor of the province of Tiongsiando. Next day they crossed a great river, and entered upon the province of Sengado, in which Sior, the capital of Korea, is seated.

After lying many days in feveral places, they croffed a river as wide as the Marfe of Dordrecht, and a league from thence arrived at the city of Sior. They computed the distance seventy-sive leagues, from their landing to this city, all the way northward, only a little inclining to the west. Here for two or three days they were lodged all in one house, and then removed into little huts, three or four together, to remain with the Chiacse, who were settled there. Being carried in a body before the King, he examined them, by means of Wettevree. After which they humbly beseeched His Majesty to

3 X 2

fend them over to Japan, that, with the affiftance of the Dutch there, they might one day return to their own country. The King told them it was not the cuftom of Korea to fuffer strangers to depart the kingdom; but promifed, at the same time, to provide them with all necessaries. Then he ordered them to do such things before him as they were most expert at, as singing, dancing, and leaping. After which, causing meat to be set before them, he gave to each two pieces of closs, to clothe them after the Korean fashion.

Next day they were all carried to the general of the forces, who ordered Wettevree to tell them, that the King had admitted them among his life-guards, and, as fuch, would allow them feventy kattis of rice a month. Hereupon each had a paper given him, in which was fet down his name, his age, and his country; what profession he followed before, and what he now was, all in their character, sealed with the King's great seal, and the general's; which is nothing but the print of an hot iron. Together with this commission, they delivered to each a music, powder, and ball, with orders to give a volley before the general's, every first and fourth day of the month; to be always ready to march into the field with him, whether the King went, or upon any other account. In spring and autume, that general reviews his troops three times a month; the soldiers likewise exercise as often in private. A Chinese and Wettevree were appointed to command them, the former as serjeant; the other was to have an eye over them, and teach the customs of the Koreans.

Most of the great men, out of curiosity, invited them to dine at their houses, to see them exercise, shoot, and dance, after the Dutch manner. But, above all, their wives and children were eager to view them, because the common people of Quelpaert had spread a report that they were of a monstrous race, and, when they drank, were obliced to tuck up their noses behind their ears. Hence the people of sashion at Sior were amazed to see them better shaped than their countrymen; above all, they admired the sairness of their complexion. They so thronged to see them, that, at first, they could scarce walk the streets, or be quiet at home. At length the general put a stop to this, forbidding all persons whomsoever to go near them without his leave; the rather, because the very slaves of great men took the liberty to fetch them out of their chambers to make sport with.

In August, a Tartar envoy arriving to demand the usual tribute, the King was correct to send them to a great fort, six or seven leagues from Sior, to be kept there till the ambassador departed, which was the beginning of next month. This fort stands on a mountain called Numma Sansiang, which is three hours' work to ascend. It is so strong, that the King himself retires thither in time of war; and most of the great men of the kingdom live there. It is always furnished with three years' provision for a great

number of people.

About the end of November the cold was so vehement, that the river was scozen, and three hundred horses loaded passed over it. The general, concerned to see the cold they endured, informed the King, who ordered some hides, for the most part rotten, which they had saved from the shipwreck, to be distributed among them, that they might fell them, and buy some cloathing. Two or three, with the money they got by these hides, purchased a little but for nine or ten crowns; chusing rather to endure cold, than to be continually tormented by their landlords sending them to the mountains, two or three leagues distant to setch wood. The rest having cloathed themselves the best they could, were forced to pass the remainder of the winter as they had often done before.

The Tartar ambassador returning in March 1655, they were forbidden, as before, under severe penalties, to stir out of doors; but the day he set forward, Henry Jans, their

Accordingly,

their maîter, and Henry John Bos, a gunner, under pretence of going for wood, refolved to meet him on the way. As foon as he appeared at the head of his troops, they said hold of his horse's reins with one hand, and with the other turned aside their Korean habit, to let him see they were clad after the Dutch manner underneath. This, at sirst, caused a great of sustaining the muititude, and the ambassador asked them carnedly, who they were; but they could never make him understand them: however, he ordered them to follow him. At night he caused enquiry to be made for somebody to explain what they said to him; and hearing of Wettevree, sent for him in haste. That interpreter having advertised the King, a council was held, where it was resolved to make the ambassador a present, in order to stifle the matter from coming to the Khan's ear.

These two unhappy Dutchmen were brought back to Sior, and put in prison, where, in a there time, they died; but whether of a violent or natural death was unknown to their countrymen, who were never allowed to see them afterwards. As soon as this assure as noticed abroad, they were carried before the council of war to be examined; and, though they declared themselves no ways privy to their companions design, yet each of them was sentenced to receive sifty bastinadoes for not giving notice of their going out. But the King remitted this punishment; saying, they were to be considered as poor wretches cast into his country by storms, rather than as outlaws who came with an intent to plunder. Hereupon they were sent home again; but with an injunction not to stir abroad without His Majesty's orders.

In June, the general fent their interpreter to acquaint them, that a veffel being run aground on the island of Quelpaert, and Wettevree too old to perform the journey, three of them, who best understood the Koresian language, should prepare to set out to bring an account of the wreck. In pursuance of this order, the assistant, the

pilot's mate, and a gunner, were chosen, and set forwards two days after.

The Tartar ambassador coming again in August, they were commanded, under pain of severe punishment, not to stir out of their quarters till three days after he was gone. The day before he came, they received letters from their companions, giving an account, that they were closely confined on the southermost borders of the kingdom, to the end, that if the great Khan had been informed of the two unhappy sellows who were dead, and should demand the rest, he might be told, they were all three cast away going to

the island of Quelpaert.

The ambassador came again towards the end of the year; so that although the great Khan had fent twice into Korea, fince that unfortunate attempt of two of their companions, without making any mention of it, yet most of the great men used all their endeavours with the King to destroy them. The council fat three days upon this affair; but the King, his brother, the general, and some others, were not for taking fuch measures. The general proposed, that each of them should fight two Koresians with the fame weapons, alledging, that the King would thus get rid of them, without putting it in the power of any to fay, that he had murdered poor strangers. telligence was fecretly conveyed to them by fome charitable perfons. And foon after, the King's brother passing by their quarters, as he was going to the council, of which he was prefident, they fell proftrate at his feet, and implored his favour; which fo moved him to compassion, that he solicited strongly in their behalf; insomuch, that they owed their lives folcly to the King and him. This giving offence to many persons, to prevent the defigns of such who might attempt to destroy them, and keep them from being feen by the Tartars, it was thought fit to banish them into the province of Thillado, with an allowance from the King of fifty pounds of rice a month.

Accordingly, in March 1657, they departed on horseback from Sior, in charge of a serjeant, accompanied by their acquaintance as far as the river, a league from the city, where they took their leave of Wettevree. They passed through the same towns they had seen in their way to the court; and coming to lie at Jeam, set out next morning, and, about noon, arrived at a great town, called Diusiong, or Thillapening, commanded by a large citadel. The Penigse, who is chief in the absence of the governor, resides there, and has the title of colonel of the province. Being delivered to him with the King's letters, the serjeant was dispatched to setch their three companions who had been sent away the year before, and were twelve leagues off, where the vice-admiral commanded. They were lodged together in a public house, making in all thirty-three persons.

In April, they brought them some hides that had been left behind at Quelpaert, which was but eighteen leagues distant. The only business they were charged with, was to pull up the grass that grew in the square before the castle, twice a month, and to keep it clean. The governor, who was very good to them, as well as all the citizens, being obliged to go to court to answer some accusations, was in danger of his life: but being well-beloved by the people, and savoured by the grandees, on account of his samily, he came off with honour. The governor who succeeded him was more rigid, obliging them to setch their wood, which used to be brought them, from a mountain three leagues off: but an apoplexy delivered them from him in September following.

Yet they fared no better under the next, who came in November: for when they asked him for cloaths (which were then worn out with carrying wood) or any thing else, he answered, that the King had given no orders as to that point; that he was only obliged to furnish their allowance of rice, and that for other wants it was their business to provide for themselves. They therefore presented him with a petition, for leave to beg, each in his turn, representing, that they could not get their living any longer by carrying wood, because they were naked, and that their labour would yield nothing but a little salt and rice. He granted their request; and, in a short time, they were provided against the cold.

At the beginning of the year 1658, a new governor coming, afflicted them with new crosses. He forbid them to go abroad, prossering, if they would work for him, to give each three pieces of cotton cloth. But this they respectfully declined, knowing they should wear out more cloaths in his service than what he would furnish them with. At the same time, some of them falling ill of a fever, (the very thoughts of which disease terrified the natives), he consented, that they should beg in companies; provided they were not absent above a fortnight or three weeks, and that they neither went towards the court, nor Japan. The other half who remained at home, he ordered, should look to the sick, and take care to pull up the grass in the square.

3. Their hard Ujage, and the escape of Eight to Japan.

King of Korea dies. — A great Famine. — The Dutch parted; Get leave to beg. — A kind Governor. —
Three Comets. — Eafe of the Dutch diffurbed by severe Governors; — Some hire a Bark and escape.
Get out to Sea: — Descry Japan. — The island Gotto. — Are carried ashore. — Sail to Nangasakis. —
Received by the Eastors. — Return to Holland.

IN April the King died, and his fon fucceeded him, with the confent of the great Khan. They went on in their trade of begging, particularly among the religious men, who were very charitable, being never weary of hearing their adventures, and the cultums of other countries.

The governor, who arrived in 1660, was so kind to them, that he often declared, if it was in his power, he would send them into their own country, or at least to some place where the Hollanders frequented. This year there happened such a drought, that all forts of provisions were very scarce. The next was yet more miserable, abundance of people being famished to death, and the roads full of robbers; but the King vigorously pursued them. Acorns, pine-apples, and other wild fruit, were all the support of the people. The famine was so great, that villages were plundered, and some of the King's stores broken open: yet those disorders being committed by the slaves of great men, none were punished for them. This calamity lasted all the year 1662, and the following felt some share of it. The place where the Dutch were, being no longer able to surnish them with provision, the governor, about the end of February 1663, by order from court, distributed them into three towns: twelve he sent to Saysiano, sive to Suinschien, and as many to Namman, sixteen leagues beyond; their number at this time, being reduced to twenty-two. This separation, which at first afflicted them, proved the means of the escape of the author, and his companions.

They set forwards on foot, carrying the sick, and what baggage they had, on the horses allowed them, and all lay in the same towns the first and second night. The third day they came to Suinschien, where the five affigned to that place were lest. Next day they lay in a country house, and setting out early in the morning, came about nine to Saysiano, where their conductors delivered them to the governor, or admiral of the province of Thellado, who resides there. This seemed to be a very worthy lord: but five days after he was succeeded by another, who proved their scourge. The greatest favour he granted them, was leave to go cut wood fit to make arrows for his men, who had nothing to do but to learn to shoot, the great men striving who shall keep the ablest

archers.

Winter drawing on, they petitioned the governor for permission to seek for cloathing; and he gave them leave to be absent half at a time, for three days. This liberty proved very beneficial to them, because the great men, who had compassion on them, favoured their sallies; so that they were sometimes allowed to be a month abroad. Whatever they got was shared in common. This continued till the governor was called to court, where the King declared him general of his army, which is the second employment in the kingdom. His successor eased them of all their burdens, and ordered, that they should be as well treated as their countrymen, who were in the other towns. Thus they were only obliged to pass muster twice a month, to keep house in their turns, and to ask leave when they wanted to go abroad; or at least give the secretary notice, that

they might know where to find them.

This governor, besides other favours, often treated them, and pitying their missfortune, would ask, why, being so near the sea, they did not attempt to pass over to Japan. They said, they durst not venture to do any thing so contrary to the king's will; adding, that they knew not the way, nor had a vessel. He replied, there were barks enough along the coast. The Dutchinen alledged, that they did not belong to them, and if they missed their aim, they should be punished as thieves and deferters. The governor laughed at their scruples, not imagining they talked after that manner only to prevent suspicion; and that all their thoughts, day and night, were employed in contriving how to seize a bark. The late governor had not enjoyed his new honour above six months, when being accused to the King of flaving put to death several persons as well nobles as commoners, on very sight occasions, he was condemned to receive four-feore and ten strokes of a cudged on his shin bones, and to be barrifted for every

The bark hailed them, and asking, by signs, whither they would go, the Dutch softy their colours with the arms of Orange, which they had provided for that purpose, crying, Holland, Nangasaki. Hercupon, they made signs for them to strike their sail. which done, they carried two men into their bark, and asked them several questions, without being understood. Their arrival had so alarmed all the coast, that not a man was to be seen, but who was armed with two swords. At night, a great bark brought aboard them the third man for dignity in the island; who perceiving they were Isol landers, gave them to understand, by signs, that there were six Dutch ships at Nangasaki, and that they were in the island of Gotto, subject to the Emperor. They continued here three days well guarded, aboard their bark. Meantime, water, wood, as diesh, was brought them, with a mat to cover them from rain, which fell in great abundance.

The twelfth, being furnished with provisions, to go to Nangasaki, they set forward, accompanied by the officer above mentioned. He carried some letters from the Emperor, and some goods, being attended by two large barks, and two little ones. Next day, towards evening, they saw the bay of that city, and at midnight anchored before it, where they found sive Dutch ships. Several inhabitants of Gotto, as well as chief men, did them many kindnesses, without taking any thing in return. On the sourteenth, they were all carried ashore, where the Company's interpreters received them. Then their answers to several questions being taken down in writing, they were carried to the governor's house, and about noon brought before him. When they had satisfied his curiosity, he much commended their resolution in encountering so many dangers to recover their liberty.

After this, he ordered the interpreters to conduct them to their commandant, Mynheer William Volguers, who received them very kindly; as did his deputy Mynheer Nicholas Le Roy, and in general all their countrymen. The governor of Nangafaki, who would have kept them a year, caused them to be brought before him on the twenty-fifth of October; and after examining them over again, restored them to the Company's director, who lodged them in his own house. A few days after, they sailed for Batavia, where they arrived on the twentieth of November. At landing, they delivered their journal to the general, who gave them a very favourable reception, and premised to put them aboard the ships that were to sail from thence on the twenty-eighth of December; which vessels arrived at Amsterdam on the twentieth of July, 1668.

SECTION II. — A DESCRIPTION OF THE KINGDOM OF KOREA.

1. Its Situation and Extent, with the Manners of the Inhabitants.

Situation. — Bounds. — An open Sea. — The Coasts. — Intense Cold. — Soil and Produce. — Animals. — Provinces. — Inhabitants, their Character very pusillanimous. — Diseases. — Physicians. — Great Smokers. — Their Houses small, and low. — Recreations. — Travelling.

THE kingdom known to the Europeans, by the name of Korea, is by the natives called Tiozenkouk, and sometimes Kaoli. It reaches from thirty-sour to forty-sour degrees of north latitude, being about one hundred and fifty leagues in length from north to south, and seventy-sive in breadth, from east to west. Hence, the natives represent it in form of a long square, like a playing card; nevertheless, it has several points of land which run far out into the sea.

On the west, this kingdom is divided from China, by the bay of Nan-king, but it is goined to n on the north by a long and high mountain, which is all that hinders Korea from bong an island. On the north-east, it is bounded by the vast ocean, where all direct of heroings also are caught there in December, January, Isbruary, and Vlarch. Those taken in the two first months are as large as what they have in Holland: those they catch afterwards are smaller, and like the Dutch frying herrings. Hence, the author and his companions inferred, that there is a passage above Korea, Japan, and Tarrary, which answers to the streights of Weigats: for this reason, they often asked the Koresian seamen, who use the north-east sea, what lands were beyond them; and they all told them, they believed there was nothing that way but a boundless ocean.

'I'l ofe who go from Korea to Chin; mbark in the uttermost part of the bay: for the d'figulty of rasing the mountain notes the way by land very troublesome in summer, because of the wild heasts; and in winter, on account of the excessive cold; yet in this seal in the bay may be crossed over on the north side, being generally frozen

hard enough to bear.

The coasts being inclosed with rocks and fands, makes it difficult of access, and dangerous for strangers to approach it. Towards the fouth-east, it is very near Japan, there being but twenty-five or twenty-fix leagues distance betwixt the town of Pousan in Korea, and that of Olakko in Japan. Betwixt them is the island Suissima, which the koresians call Taymuta. It formerly belonged to them, but they exchanged it for that or Ouclpac t, in a treaty of peace concluded with the Japanese.

The cold is so intense in Korea, that in the year 1662, the Dutch being in the monasteries on the mountains, there sell such a prodigious quantity of snow, that they made passages under it to go from house to house: to walk upon it, they wear small boards, like battledores, under their teet, which hinder their sinking. By reason of this excessive cold, those who live on the northern coast feed only upon barley, and that none of the best, for no rice or cotton can grow there. The better fort of people have

their meal brought from the fouth.

The rest of the country is fruitful, and produces all the necessaries of life, especially rice, and other forts of grain. They have hemp, cotton, and silk worms; but they know not how to work the silk. There is also silver, lead, tigers skins, and the nist noot. They have slore of cattle, and make use of oxen to till the land. The Dutch niet with bears, deer, wild boars, swine, dogs, cats, and several other creatures; but never saw any elephants there. The rivers are often petered with alligators, or croco-silves, or inversal sizes; some are eighteen or twenty ells long; the eye is small, but very thurp; the neeth placed like those of a comb. When they eat, they only move the upper jaw. Their back bone has sixty joints. The natives often told them, that three children were one efford in a crocodile's belly. Korea breeds abundance of serpents, and venomous creatures. As for sowl, they have plenty of swans, geefe, ducks, herons, storks, eagles, falcons, kites, pigeons, woodcocks, magpies, daws, larks, lapwings, pl calams, hers, besides other forts not known in Europe.

Korea is divided into eight provinces, containing three hundred and fixty cities and

towns, without reckoning the forts and callles, which are all on the mountains.

The Korefians are much addicted to stealing, and so apt to cheat and lie, that there is no truiting of them. They think over-reaching a good action, and therefore fraud is not infamous among them; yet the law will redress a man, who has been cheated in a bargain. They are withall filly and credulous. The Dutch might have made them believe any thing they would, because they are great lovers of itrangers, but chiefly the religious

religious men. They are an effeminate people, and discover very little courage; at least the Hollanders were informed so by several credible persons, who beheld the havoe the Emperor of Japan made among them, when he slew their King; and how they behaved, when the Tartars coming over the ice, seized the kingdom. Wettevree, who was an eye-witness to the whole, assured them, that more Koresians died in the woods,

whither they fled, than were killed by the enemy.

They are not ashamed of cowardice, and lament the misfortune of those who are They have often been repulsed in attempting to plunder European They abhor blood, and fly when they meet with any. vessels, cast on their coast They are much afraid of fick folks, and particularly those who have contagious diftempers: fuch they presently remove, putting them into little straw hovels in the middle of the fields, where they fee none but those who are to look after them: these give notice to passengers to keep off; and when the sick man has no friends to take care of him, others will rather let him die, than come rear him. When any town, or village, is infected with the plague, the avenues to it are shut up with a hedge of briars, and some are laid on the tops of diftempered houses, that people may know them. Many medicinal plants grow in the country, but the people are not acquainted with them, and almost all the physicians are employed by the grandees; so that the poor, who cannot be at that charge, make use of blind men, and conjurors, whom formerly they followed every where, over rivers and rocks, and into the idol temples: but this custom was abolished, by the King's order, in the year 1662.

Before the Tartars subdued Korea, it was full of luxury and debauchery, the natives giving themselves wholly up to eating, drinking, and lewdness: but now the Tartars and Japanese tyrannize over them; they have enough to do to live when a year proves bad, because of the heavy tribute they pay to the former. Within these sitty or sixty years, the Japanese taught them to plant tobacco, which, till then, was unknown to them; and telling them the seed came from Nampankouk, they often called it Nampankoy. They take so much at present, that there are very sew of either sex but what smoke; and the very children practise it at sour or sive years of age. When first brought them, they bought it for its weight in silver; and for that reason they look

upon Nampankouk as one of the best countries in the world.

The poorer fort have no cloaths but what are made of hemp, and pitiful skins: but, to make amends, the root nisi grows there, in which they drive a great trade to China

and Japan.

The houses of the Koresians of quality are stately, but those of the common fort very mean; nor are they allowed to build as they please. No man can cover his house with tiles, unless he has leave so to do; for which reason, most of them are thatched with straw, or reeds. They are parted from one another by a wall, or else a row of stakes, or palisados. They are built by fixing wooden posts, or pillars, in the ground at certain distances, and filling the spaces between with stone up to the first story: the rest of the structure is of wood, plaistered without, and covered on the inside with white paper glued on. The sloors are vaulted, and in winter they make a fire underneath; so that they are always as warm as a stove. The sloor is covered with oiled paper.

Their houses are small, consisting of one story, and a garret over it, where they lay up their provisions. They have seldom more furniture than what may be absolutely necessary. The nobility have always an apartment forwards, where they receive their friends, lodge their acquaintance, and divert themselves; there being generally, before their houses, a large square, or base court, with a fountain, or sish-pond, and a garden with covered walks. Tradesmen, and the chief citizens, have generally a warehouse

adjourn

adjoining to their manfion-house, where they keep their goods, and treat their sriends with tobacco and arak. The women's apartment is in the most retired part of the house, where none must approach them: yet some wives are allowed the liberty of seeing people, and going to feasts; but they sit by themselves; and facing their husbands.

There are, in the country, abundance of taverns, and pleafure houses, to which the Koresians resort, to see common women dance, sing, and play upon musical instruments. In summer, they take this recreation in cool groves, under close shady trees. They have no inns to entertain passengers, but he who travels goes and sits down, at night, near the pales of the first house he comes at. Presently, those within bring him boiled rice, and dress meat enough for his supper. He may stop thus at as many houses as he will: yet, on the great road to Sior, there are inns, where those who travel on public affairs, have lodging and diet, at the public charge.

2. Their Cuftoms and Learning.

Their Marriages. — Condition of Wives. — Duty of Children. — Mourning for Parents. — Their Funerals. — Inheritance. — Education of Children. — Evamination for Places. — Language and Writing. — Their Geography. — Printing. — Arithmetic. — Account of Time.

KINDRED are not allowed to marry within the fourth degree. They make no courtship, because they are married at eight or ten years of age; and the young maids, (unless they be only daughters) from that time, live in their father-in-law's house, till they have learnt to get their living, or to govern their family. The day a man marries, he mounts on horseback, attended by his friends; and having rode about the town, stops at the bride's door, where he is received by her relations, who then carry her to his house, where the marriage is consummated, without any other ceremony.

A man may keep as many women abroad as he can maintain, and repair to them, at any time, without scandal; yet none lives with him but his wife. Noblemen, indeed, have two or three women besides in the house; but they have nothing to do with the management of the family. To say the truth, they make no great account of their wives, whom they use little better than slaves. Although a woman has borne her husband a great many children, it is in his power to put her away whenever he pleases, on the slightest pretence, and to take another: but the woman has not the same privilege, unless she can get it by law. What is still harder, he can compel her to take and maintain their children. However, this unreasonable custom helps to render the country very populous.

Parents are very indulgent to their children, and, in return, are much respected by them. They depend upon one-another's good behaviour, and if one of them withdraws after an ill action, the other does the like. It is not so with the slaves, who have but little regard for their children, because they know they will be taken from them as soon as they are able to work, or do any business. If a freeman lies with a woman-slave, the children born of them are slaves; and such whose father and mother are both slaves,

belong to the mother's mafter.

When a freeman dies, his children mourn three years, during which time, they live as aufterely as religious men: they are not capable of any employment, and those who are in posts must quit them. It is not lawful for them even to lie with their wives; and, if they should have any children born during the mourning, they would not be accounted legitimate. It is not permitted them to be in a passion, or to sight, much less

to be drutik. The neurning they wear, is a long hempen robe, without any thing under it, but a fort of lackcloth, made of twified thread, almost as thick as the twine of a cable. On their hats, which are of green roads woven together, instead of an latter band, they wear a hompen cord. They never go without a great cane, or ended in their hand, which serves to distinguish who they are in mourning for, the came denoting the father, and a stick the mather. During all this time, they never wash, and con-

fequently, look like mulatto...

As foon as any one dies, his kindred run about the streets shricking and tearing their hair. They take special care to bury him bonourably, in some put of a mountain chosen by a fortune-teller. They inclose every corpse in two cosms, two or three singers thick, put one within the other, to keep out the water, painting and doning them, according to their ability. They generally bury their dead in sping and autuum. Such as die in summer, they place in a thatched hut, raised on four stakes, till rice harvest is over. When they intend to bury them, they bring them back to the hot ie, and put their cloaths, with some jewels, into the cossin: then, after making merry ugon, they set out at break of day with the body. The bearers sing, and keep time as one go, whilst the kindred and friends of the party make the air sing with their cries. Three days after, these latter return to the grave, where they make some offermes, and then eating all tegether, are very meny. The manner fort only make a grave five of six sect deep; but the great men have sepulches of stone, on which are placed their statues, with their names, qualifications, and employments, cut undernead. Every full moon they cut down the grass that grows on the grave, and offer new rice there; that being their greatest setting next to the new year.

When the children have fully performed this duty to their parents, the chief four takes possession of the house, with all the lands depending on it. The rest is divided among the other sons: but the Dutch never heard that the daughters had any share, because the women carry nothing to their husbands but their cloaths. When a sather is fourfecore years of age, he declares himself incapable of managing his estate, and is signs it up to his children: then the eldest taking possession, builds a house, at the common expense, for his father and mother, where he lodges and maintains them.

treating them with the grewest respect.

The nobility, and freemen in general, take great care of the education of their children, putting them very young to learn to read and write. They use no manner of rigour in their method of teaching, but murage all by fair means. They give then teholars an high idea of learning, and of the worth of their ancestors, telling them how temourable those are, who, by this means, have raised themselves to great fortunes, which breeds emulation, and makes them frudious. It is surprising how much they improve, by such exhortations, in expounding the writings they give them to read, wherein all their learning comists. Besides this private study, there is, in every town, a hot le, where the nobility, according to ancient custom, of which they are very tenacious, assemble the youth, to make them rend the history of their country, and the trials of great men, who have been put to death for their crimes.

There are affemblies, likewise, kept yearly, in two or three towns of each province, where the scholars appear to get employments, either by the pen, or the sword. The governors of towns send able deputies thither, to examine them, and choose the best qualified; and, according to the report made to them, they write to the King, who bestows employments or those deemed worthy. The old officers, who till then, have only had civil or military commissions, at this time use all their endeavours to be employed in both professions, to increase their revenue. The aspiring to these honours, is

often the ruin of the candidates, because of the presents they make, and treats they give, to gain reputation, and obtain votes. Some also die by the way, and most of them are satisfied with getting the title of the employment they aim at, thinking it honour enough to have been designed for one.

Their way of writin, and their arithmetic, are very hard to learn. They have many words to express the same thing. They sometimes talk sast, and sometimes slow, specially their learned men, and great lords. They use three sorts of writing; the sist like that of China and Japan, which they use for printing their books, and all public affairs. The second is like the common writing among Europeans: the great men and governors use it, to answer petitions, and make notes on letters of advice, or the like: the commonally cannot read this writing. The third is more unpolished, and serves women, and the common sort. It is easier to write in this character, that the other two; names and things, never before heard of, being noted down with very curious pencils. They have abundance of old books, both printed and manuscript, so choicely kept, that none but the King's brother is trusted with them. Copies of them, with cuts, are kept in several towns, that, in case of fire, they may not be all destroyed.

As to their knowledge of the world, their authors affirm, that there are fourfcore and four thousand several countries; but sew of them give credit to what they write, saying, that then every little island, and shoal, must pass for a country, and that it would not be possible for the sun to give light to so many in one day. When the Dutch named some kingdoms to them, they laughed, affirming, that they only talked of towns, or villages; for their knowledge of the coasts reaches no farther than Siam, which is the limit of their foreign traffic. In effect, they believe there are but twelve kingdoms, or countries, in the whole world, which once were all subject, and paid tribute to China; but that they have shock off the yoke sixe the conquest of the Tartars, who, they say, are not able to subdue them. They call the Tartar, Tickse, and Orankay; and Holland, Nampankouk; which is the name the Japanese give to Portugal, and, therefore, not knowing the Dutch, they give them the same.

Their almonacks are made in China; they themselves wanting skill to make them. They print with boards, or wooden cuts, and lay one cut to each side of the paper, and so strike off a leaf. They cast accounts with little long stricks, as the Dutch do with counters. They know not how to keep books of accounts, but when they buy any thing, set down the price under it, and write on it what they made of it, and so find what profit or loss.

They reckon by moons, and every third year add one moon. They have conjurors, diviners, or foothayers, who assure them whether the dead are at rest, or not; and if the place where they are buried is proper for them: in which point they are so superstitious, that they often remove them two or three times.

3. The Trade and Raligion of Korea.

Trade of Korea. — The Religion there. — Monasteries and Temples. — The Superiors. — Married Priests. — Numeries.

THE inhabitants of Korea have scarce any trade, but with the Japaneie, and the people of the island of Susima, who have a storehouse in the south part of the town of Pousan. They supply Korea with pepper, sweet wood, alum, buffalo's horns, goats and buck-skins, besides other commodities, which the Chinese and Dutch sell in Japan. In exchange, they take the product and manufactures of the country. The Koresians have also some commerce in the northern parts of China in linen or cotton cloth;

but it is very chargeable, because they travel only by land, and on how soir in the but the rich merchants of Sior trade to Pe-king, and they are always three months, theast, on the road.

There is but one fort of weight and measure throughout the kingdom, but the trace we abuse it very much, notwithstanding all precautions, and orders of the government. They know no money but their kasis, and those pass only on the frontiers of China.

They pass filver by weight, in little ingots, like those Lrought from Japan.

As for religion, the Koresians have scarce any. The common people in see odd grimaces before the idols, but pay them little respect; and the great oaks honour them much less, because they think themselves to be something more than an idol: for when any of their kindred, or friends die, they all appear to honour the dead mun at the offering, which the priest makes before the image; and frequently travel thirty or forty leagues to be present at this ceremony, in order to express their grateful remembrance, or esteem, for some good commander, or learned religious man. On sessivals, the people repairing to the temple, every one lights a bit of sweet weed; then parting it into a vessel for that purpose, they offer it to the idol, and placing it becomes in a, make a low bow, and depart:—this is their worship. For their belief, they are of opinion, that good doers shall be rewarded, and evil doers punished. They know nothing of preaching, or mysteries, and, therefore, they have no disputes about religion, all believing and practifing the same thing throughout the kingdom. Their clergy offer persumes before their idols twice a day; and, on testivals, all the religious of a house make a noise with drums, basons, and kettles.

The monasteries and temples, which are very numerous, are built by the contributions of the people, for the most part on mountains. Some of them contain five or six hundred religious, whereof there are four thousand within the liberties of some towns. They are divided into companies of ten, twenty, and sometimes thirty: the eldest governs, and, if any one neglects his duty, may cause the others to punish him with twenty or thirty strokes on the buttocks; but if the offence be heinous, they deliver him up to the governor of the town they belong to. As every man is at liberty to become a religious, Korea swarms with them, and the rather, because they may quit the profession when they please: however, generally speaking, these monastics are not much more respected than the slaves, because of the great taxes they are obliged to

pay, and the work they are forced to do.

Their superiors are in great esteem, especially when learned, for they are equal with the grandecs, and called the King's religious men, wearing (the badge of) their order over their clothes. They have the power of judging as subaltern officers, and make their visits on horseback, shave their heads and beards, must eat nothing that had life, and are forbidden conversing with women. Whoever breaks these rules, receives seventy or eighty strokes on the buttocks, and is banished the monastery. When they first receive the tonsure, they impress a mark on the arm, which never wears off. They work for their living, or follow some trade: some go a begging, but all have a small allowance from the governor. They bring up children in their houses, whom they teach to read and write. If these children consent to be shaved, they retain them in their service, and receive what they earn. When their master dies, they become free, and heirs to all their goods, mourning for them, as if they had been their fathers.

There is another fort of religious men, who, like the former, abitain from flesh, and ferve idols; but they are not thorn, and may marry. They believe, by tradition, that mankind, originally, had only one language; but that the design of building a tower to go up to heaven, caused the confusion of tongues. The nobles much frequent the

monasteries, to divert themselves, either with common women, which they find there, or others they carry with them, because they are generally deliciously seated for prospect, and accommodated with fine gardens, so that they might better be called pleasure houses than temples; but this is to be understood of the common monasteries, where the religious men love to drink hard.

There were two convents of religious women in the city of Sior; one contains none but maidens of quality, the other those of the inferior fort. They were all shorn, and observed the same rules and duties as the men. They were maintained by the King and great men: but three or four years before the Dutch left Korea, His Majesty gave them leave to marry.

4. Of the King, and Government of Korea.

The King tributary; yet absolute: — His chief Officers. — State in going abroad. — Petitions, how prisented. — Military Officers, and Soldiers. — Shipping. — The Revenue. — Punishment for Rebels, and Traitors: — Killing a Husband: — Murder and Theft — For Adultery: — Not paying Debts — Beating on the Shins, and Feet, Buttocks, and Calfs of the Legs.

KOREA is tributary to the Eastern Tartars, who conquered it before they subdued China, from whence an ambassador comes three times a year, to receive the tribute, which the people pay in the root Nisi. Upon his arrival, the King goes out of town, with all his court, to receive him, and waits on him to his lodging. He is treated every where with such respect, that he seems to be honoured more than the King himself. He is preceded by musicians, dancers and vaulters, who strive to divert him. During the time he remains at court, all the streets, from his lodging to the palace, are lined with soldiers, who stand within ten or twelve feet one of the other. There are two or three men, who have no other employment but to pick up notes thrown out of the ambassador's window, in order to be carried to the King, who desires to know what he is doing at all times. That Prince studies all manner of ways to please this officer, that he may make a favourable report of him to the Great Khan of China.

But although the King of Korea pays an acknowledgment to the Emperor of China, yet his power is absolute over his own subjects. None of them, not the greatest lords, have any property in their lands; their revenues arising out of those estates they hold of His Majesty during pleasure, and from the great number of their slaves, for the Dutch knew some who had two or three hundred.

The chief officers, by sea and land, who make up the King's council, meet every day at court. They must wait till their advice is asked, before they give it; and till they are appointed to manage any business, must not meddle with it. These people have the first places about the King, which they enjoy till fourscore years of age, provided they behave well. The same is practised in other inferior employments at court, which no man quits, unless it be to rise. The governors of places, and subaltern officers, are removed every three years; but very sew of them serve out their time, being cashiered for misdemeanors on the accusation of the spies, which the King keeps in all places.

When His Majesty goes abroad, he is attended by all the nobility of the court, wearing their respective badges; consisting of a piece of embroidery before and behind, on a garment of black silk, with a very broad scarf, a great body of soldiers following in good order. He is preceded by men, both on soot and horseback, some carrying colours and banners, others playing on warlike instruments. They are followed by the life-guards, composed of the principal citizens. The King is in the middle, carried under a very rich gold canopy, and the whole proceeds with such silence, that not the vol. VII.

least noise is heard. When he passes by the great men, or sold are, the inclusive term their backs to him, without offering to look, or so much as eas, the inclusive term their backs to him, without offering to look, or so much as eas, the inclusive term of foldiers put little slicks in their mouths, that include the content of making a noise. Just before him goes a secretary of site, in the end of a cate, or hard along the site of the persons either present on the end of a cate, or hard along the site of the track cannot see who present them. These, which are bounded in by the reported to gather them, are laid before the King, on his return to the process and whatever he orders relating thereto, is forthwith put in execution. The hard cost, and windows of the houses in the stream, through which His states stry passes.

The King keeps abundance of foldiers in his califal cry, those role butiness is to guard his person, and attend him when he goes abroad. The province are likewise obliged, once in seven years, to fend all their freem n, by turns, to guard him for two months. Each province has its general, with fair or live coronels under him, and each as many captains depending on them; each of whom is governor or some tewn, or strong hold; insomuch, that there is not a village, but where, at least, a corporal commands, who has under him tithing men, or officers over ten men. These corporals are obliged, once a year, to deliver to their captains, a left of what people are under

their junsdiction.

Their cavalry wear cuirasses, head pieces, bows and arrows, swords, and whips with small iron points. The foot likewise wear a corsset, a head piece, a sword, and musket or half pike. The officers carry nothing but bows and arrows. The foldiers are obliged to provide fifty charges of powder and ball, at their own cost. Every town in its turn, surnishes also a number of religious men, to guard and maintain, at their own expense, the forts and casses, which are situate in narrow passes, or on the sides of mountains. These are reckoned the best soldiers, and obey officers chosen out of their own corps, who observe the same discipline as the other troops. Thus, the King knows to a man, how many are sit to serve him. Those turned of sixty, are discharged from duty, and deir children supply their places. The number of fraction, who relikes are nor have been in the King's service, together with the slaves, makes above half the popule in the country.

Horea being annost encompassed by the sea, every town is obliged to fit out and maintain a slip. Their thips I we generally two mass, and thirty, or thirty-two cars; to each of which there we sive or six men: to that each of this fort of galleys has about three hundred men, for rowing and fight. They carry some small pieces of cannon, and abundance of artificial sire-works. Every province has its admiral, who views these vessels care a year, and gives an account of what he finds to the high admiral, who sometimes is present at these reviews. If any of the admirals, or officers under them, commiss a sault, he is punished with banishment, or death; as in the year 1666, their go remor, who had the command of seventeen vessels, was punished for the offence

already mentioned.

The King's revenue, for maintenance of his house and forces, arises out of the dulies prid for all things the country produces, or that are brought by seal to this purpose, in all towns and villages there are store-houses to keep the tithe, which the farmers, who are generally of the common fort, take upon the spot in harvest time, before any thing is carried away. Those who have employments, receive their salaries out of the revenues of the places where they reside, what is raised in the country being assigned to pay the sea and land forces. Besides this tithe, those men, who are not listed in the

army, are to work three days in the year, at whatever business the country shall put them upon. Every soldier, whither harse or soot, has yearly three pieces of cloth, worth eighteen shillings, given to cloth him; which is part of the pa, of the troops that are in the capital. This is what is reised on the people, who know no other duties, or taxes.

Justice is severely executed among the Kerchans. He who rebels against the King, is destroyed, with all his race. his houses are thrown down, and no man darcs ever rebuild them; all his goods for seited, and fornetiones given to some private persons. Nothing can save the man from punishment, who makes any objection to his decree: this the Dutch were often witnesses of. I among the rest, the author remembers, that the King having desired his brother's wife, who was excellent at her needle, to embroider him a west; that princess bearing him a mortal hatred, stitched in, betwixt the lining and the outside, some charms and characters, of such a nature, that His Majesty could enjoy no pleasure, nor take any rest, whilst he had it on.

At length, suspecting the matter, he had the vest ripped, and sound out the cause. Hercupon, the King condemned her to be shut up in a room, the sloor whereof was of brass, and ordered a great fire to be lighted underneath, the heat whereof tormented her till she died. The news of this sentence soon spreading through the provinces, a near kinsman of the unhappy lady, who was governor of a town, and in good esteem at court, ventured to write to the King; representing, that a woman, who had been so highly honoured as to marry His Majesty's brother, ought not to die so cruel a death, and that more savour should be shown to the sex. The King, incensed at this courtier's boldness, sent for him immediately, and, after causing twenty strokes to be given him on his shin bones, ordered his head to be cut off.

This crime, and those sollowing. are only personal, and do not involve the whole family. If a woman kills her husband, she is buried alive up to the shoulders, in a highway, and an axe laid by her, with which all passengers, who are not noblemen, are obliged to give her a stroke on the head till she is dead. The judges of the town, where this happens, are suspended for awhile: it is deprived of a governor, and made subordinate to another place; or, at best, only a private genleman is left to command in it. The same penalty is inslicted on such towns as mutiny against their governor, or send false complaints against them to court.

It is lawful for a man to kill his wife for adultery, or any other heinous fault, on proving the fact. If the woman fo killed was a flave, the penalty is, to pay three times her value to the owner. Slaves, who kill their mafters are cruelly tormented to death; but they reckon it no crime for a mafter to kill his flave, though upon a flight account. Thus they punish murder. After they have long trampled on the criminal, they pour vinegar, (in which they wash the putrified carcase), through a funnel down his throat, and when he is full, beat him on the belly with cudgels till he bursts. Thieves are trampled to death: and though this be a dreadful punishment, yet the Koresians are much addicted to stealing.

It a fingle man is found a-bed with a married woman, he is stripped naked to a little pair of drawers; then daubing his face with lime, they run an arrow through each ear, and fasten a little drum on his back, which they beat at all the cross streets, to expose him: this punishment ends in forty or fisty strokes of a cudgel on the man's bare buttocks; but the woman receives them with drawers on. The men are naturally very amorous, and so jealous, that they seldom allow their best friends to see their wives. If a married man be taken lying with another man's wife, he is to suffer death: this happens chiefly among persons of rank; and the criminal's sather, if living, or else his

nearest relation, must be the executioner. The offender is to choose his generally the men desire to be run through the back, and the women to throat cut.

They, who by a time appointed, do not pay what they owe to the King persons, are beaten twice or thrice a month on the shin bones, which is do can find means to discharge the debt: if they die before they have satisfied their nearest relations must pay it for them, or suffer the same punishment; so the ever loses what is due to him. The slightest punishment in this country is, nadoed on the buttocks, or calfs of the legs; and they look upon it as no disgratic it is very common, being often liable to it for only speaking one word amiss governors, and subordinate judges, cannot condemn any man to death, quainting the governor of the province; nor can any try prisoners of state, thing be first informed.

The manner how they bastinado on the shin bones is this: they tie the crir together, on a little bench four singers broad, and laying such another under which are fast bound to it, they strike on the shins with a sort of lath of oal as long as a man's arm, somewhat round on one side, and slat on the other, the broad, and about the thickness of a crown piece. They must not give at strokes at one time, and then two or three hours after they repeat them, till

number be compleat, according to the fentence.

When the offender is to be drubbed on the foles of the feet, he is made t on the ground, then having bound his feet together by the great toes, they on a piece of wood they have betwixt their legs, and beat them with a cudge as a man's arm, and three or four feet long, gaving as many strokes as the ordered. The bastinado on the buttocks is thus: the men being stripped, t them lie on the ground with their faces down, and bind them to the bench. The have a pair of wet drawers left on, and in this posture they beat them with a longer lath than those before mentioned. An hundred strokes are equivalent and many of them die, some even before they have received fifty.

When they are adjudged to be beaten on the calfs of the legs, it is done wit wands, as thick as a man's thumb. This punishment is common to women prentices. Whilst these severities are inflicting, the criminals cry so laments

the spectators seem to suffer no less than the offenders.

A DESCRIPTION OF TIBET, OR TIBBET *.

INTRODUCTION.

LTHOUGH Tibet is a country of very large extent, yet it scarce appeared in our maps before those published by De l'Isle. It was there represented as a narrow kind of defart, lying between India and China, without either towns, rivers, or mountains, although no part of Asia abounds more with the two latter. Europeans had, indeed, received some confused accounts of it from the missioners sent into the Indies; but none particular -nough to form any right judgment of its qualities, form, or dimen-The Jesuits Grueber and Dorville, were the first who (having travelled through great part of it, in their way home from China in 1661,) gave us any tolerable ideas of its large extent, or the customs of its inhabitants.

The letters relating to their travels are published in Thevenot's French collection. Kircher also, in his China Illustrata, has given an account of their journey through that country, with cuts of the most remarkable things that occurred, as delivered to him by themselves †. But, as they travelled only one road, they have gone but a little way towards furnishing out the geography of those unfrequented regions. In short, the map-makers had almost nothing to work upon for Tibet, but the scanty materials of those friars (for Desid ri † says but little of the country or road he took,) before the late missioners in China procured a map of it; which, though far from being complete, or exact in every particular, affords, on the whole, a very fatisfactory view of the country.

With respect to the inhabitants, animals, and other productions, we are not perhaps fo well provided; there being very few materials for the history to be met with, but what come from the above-mentioned miffioners. As those who transmitted the map were not in Tibet themselves, they have communicated only a few scattered remarks which they had from the Lama mathematicians, who furveyed the country §. Of this kind are those to be found in Avril's Travels, and Gerbillon's Historical Observation: on Tartary, who had his informations from a Chinese envoy. Others, as Tavernie: and Thevenot, have occasionally spoken from report, concerning Butan, or Tibet. The most complete and express piece yet extant upon the subject, seems to be, a Description of the Kingdom of Butan, written by an anonymous author ||; but as it does no appear from what authority he has taken his memoirs, they are to be made use of witl caution.

* From Green's Collection, vol iv p 449. † A translation is inferted in Ogrlby's China. Thevenot has omitted the cuts.

Defider, the Jefuit, travelled, in 1714, from Kashmir in India to Lapas; but gives little or no accour of the road, or the country.

An account of this is given in the Nieuv. Mercur. Paris, for July 1718.

These are published by Du Halde, in the fourth volume of his description of China, under the title "Geographical and Historical Observations on the Map of Tibet, containing the Dominions of the Gran Lama, and the adjacent Countries subject to him, reaching to the Source of the Ganges, extracted from the Memoirs of Pere Regis."

SECTION 1.— The Name, Extent, Mountains, and Rivers of Tibes.

The Name, Situation, Extent, Bounds. — Tibet surveyed: — Account of the Map: — Its Imprification of International Kantes terrible to pass. — Elevation of Tibet. — River Yaste, or Tian-pu, 1,1-1,2 mm, Lan-tsan, Kin-cha-Ky-aug. — Source of the Whang-ho. — River of Gold. — Lake of Stair. — Lakes of Tibet.

Tibt, or Tobt. It is also pronounced by some nations Topet, or Tupet. The Tartars call it Barantola, under which name they comprehend all that vast tract lying between the great river Ya-long, and the source of the Ganges, extending above twenty degrees from east to west, and more than eight from north to south. The people of Kashmir and others on this side the Ganges call it Bûton or Bûtan; and the Chinese, Tsan, or Tsan-li, from the great river Tsan-pû, which runs through it. But Lass, or Lasa, being the richest and pleasantest province, and dignised with the residence of the Grand Lama, those borderers frequently give that name to the whole country.

We are likewise told, that among the Tartars, the name of Tanguth, or Tangui is common to all the countries from Koke-Nor to the south of the Canges †; but of reaffure us, that it is unknown to the inhabitants, who call then slives Void †. The like may be said of Tusan, which Gaulil says is the name of Talat, or rather one of its names §: that is, such as may be given to it by the Tu-san, or Si-san then selves, who were formerly masters of it, or some particular bordering people; for it is certain

neither of those two names belong to Troet at present.

This country, taken at large, is fituate between the eighty-fiventh and hundred and twenty-first degrees of longitude, and b tween the twenty-fixth and thaty-ninch of leitude; being in length, from west to east, one thousand seven hundred and all ty-five miles; and its breadth, from north to south, where broadest, seven hundred and eighty: but as its figure is somewhat triangular, growing narrower gr. dually as it extends from east to west, in some places it is not above half that breadth, in some a fourth part, and in others still less. It is bounded on the north by the country of Koko-Nor, and a great sandy defart, which separates it from Little Bûkharia; on the east by China; on the west by the Mogul's empire, or Hindustan, and Great Bûkharia; and on the south by the same empire, the kingdom of Ava, and other countries belonging to the peninsula of India without the Ganges.

As Tibet was but little known of the Chinese themselves, though their next neighbours, an ambassador, whom the late Emperor Kang-hi sent thither the beginning of the present century, to reconcile the two Lama sactions of the red and yellow hat, mentioned hereaster, employed certain persons, whom he had brought for the purp se, during the two years he staid in the country, in making a map of all the territories immediately subject to the Grard I ama. In 1711, this map was put into the hands of Regis, to be connected with the maps of the Chinese provinces: but as no situation had been fixed by celestial observation, and the distances were laid down only from common computation, he could not execute his orders.

The Emperor her upon resolving to procure one more accurate, sent two Lamas, who had studied arithmetic and geometry (in a mathematical academy, established under the protection of his third son), with orders to comprise in their map all the

^{*} See Souciet's Obf. Math. p. 161.; and Du Halde's China, vol. ii. p. 360, 363, and 384. † Du Halde, as before, p. 363. † Bibl. German. vol. iii. p. 25. It is there spelled Vodjid.

country from Si-ning in the province of Shea-si to Lasa, the Grand Lama's residence, and strong thence, to the source of the Gauges; and likewise to bring some of the water of the river back with them. This performance was, in 1717, laid before the missioners, who sound it vastly preferable to that of 1711; but not without faults. However, by help of the measures used in this map, by comparing it with some itineraries in the south-west, west, and north-west roads, and by the informations they received from some persons of note, who had travelled in that country, they sound themselves in a capacity to draw a map of all libet, much more correct than any before published.

As the two Lamas were about their work at a time when the Eluths were ravaging Tibet, they were obliged to hurry away, for fear of falling into the hands of the enemy, they being of the yellow hat, or Chinese party. They therefore contented themselves in many circumstances relating to the countries round the source of the Ganges, with such internation as the Lamas, in the neighbouring temples, could afford them *, and with what they could learn from the historical account found at the Grand Lama's at Lasa. If the latitude of the mountain, called Kentais (or Kante-shan, according to the Chinese), from whose west-side the Ganges issues, had been taken by observation, the course of that river might have been more easily determined: for although the Lama geographers traced the course of the Tsan-pu, which slows from the east of the same mountain, yet their measures alone cannot be sufficient for accurately fixing the latitude of Kentais †.

West of this mountain is another called Kantel, in the map, Kenti; which, according to Desideri, is frightful to look at, and always covered with snow: it divides Kashmir, in Hindustan, from Great Tibet, which begins from the top of it. From the entrance on that side as far as Leh, or Ladak, the road lies between the mountains, which are a true image of sadness, horror, and death itself. They are heaped upon one another, and so contiguous that they are scarcely separated by the torrents, which fall impetuously down, and dash with such a noise against the rocks as stuns and terrifies the most intropid travellers. The top and bottom of these mountains are equally impracticable.

The road over them is ordinarily so narrow, that there is scarce room to set one's feet; and the least sale step tumbles you down the precipices, in great danger of losing your life, or breaking your limbs, as happened to some of the karawan which the author went with. Shrubs or bushes would be of great use on this occasion; but there is not a plant, or so much as a blade of grass to be found on them. In passing the unreasons that separated one mountain from another, they found no other bridge than some narrow to tering plank, or some ropes stretched across, and twisted with green boughs: they were often obliged to put off their shoes in order to tread sure: for the author's part, he still trembled at the very thoughts of those dreadful passages.

I he land of Tibet, in general, is very high. Gerbillon observes, that a mandarin, who had been there as envoy, informed him that, in passing from China to Tibet, he found a f nsible ascent; and that in general the mountains, which are very numerous, are much more elevated on the east side towards China, than on the west-side facing

^{*} It is observed by Regis, p. 388. of Du Halde's China, that in this part of the map the missioners retained the names of places given by these informing Lamas (because more to be depended on than those found in travellers), as if they did not observe the same rule in other parts of the map; and, indeed, in the country of Ko ko Nor, Manchew na ness are of sen inserted islead of Mongul.

[†] Du Halde's China, p. 384, et seqq.

‡ Lettres Edifiantes, p. 190, et seqq.

Tibet *. Certainly, continues that author, these little hills, whence the small river Altan-kol† (or Golden River) takes its rise, must be vastly higher than the sea; since this river, which is rapid enough, discharges itself into the lakes of Tsing-sû-hay, and the Whangho has a very swift current from those lakes, for about two hundred leagues, to its fall into the Eastern Ocean. This elevation of the land makes the country, on this side, very cold for the latitude; but when you descend the mountains, and enter Tibet, the air is much more temperate. In the western part, where Desideri travelled, the climate was very severe; the winter being, he says, almost the only season which rules the year round, and the tops of the mountains continually covered with snow §.

The missioners have transmitted very little concerning the geography of Tibet, except the map || which affords many materials for making a description of the country. The great river, which runs quite through Tibet, from west to east, a cording to Regis, is called Yarûtsan-pu, or Dsan-pu, that is, the River Yarû; or simply, Tsan-pu, the river, by way of eminence, in the same manner as Kyang in China is almost become a particular name of the Yangtse-kyang, which divides that extensive empire. It is yet hard to determine where the Tsan-pû discharges itself: but as it runs from Tibet south-west towards the sea, it probably falls into the Bay of Bengal, about Arakan, or near the mouth of the Ganges, in the Mogul's empire; called by the Tibetians, Anonkek, or Anonjen. The rivers to the west of the Tsan-pû run into countries very little known. It is no less uncertain where many others empty themselves.

The Nu-kyang enters Yun-nan, and after a course of some hundred li, changes its name to Lû-kyang, and passes into the kingdom of Ava. The Lan-tsan-kyang likewise enters Yunnan, and after receiving several small rivers, becomes the great Kyulong-kyang, that is, the River of the nine Dragons, and slows into the kingdom of Tong-king. On the north of the same province of Yun-nan, runs the Kin-cha-kyang, or River with Golden Sand; which, after a long winding course, falls into the Yang-tse-kyang. The Chinese maps, which the missioners found in the tribunals of the province of Yun-nan, as well as the inhabitants of the country, give the name of Nu-i to the people beyond the river Nu-kyang; and to their neighbours on the north of the kingdom of Ava, that of Ti-tse: but probably these are not the names of those half-savage nations, inhabiting the mountains, through whose country, it is likely, some of the rivers of Tibet must run **.

With regard to the Whang-ho, the Chinese envoy told Gerbillon that it has its source †† in the north-east part of Tibet ‡‡, from a lake, or rather three lakes, called Tsing-sû-hay, so near to each other that they seem but one. From thence it hastens towards the south, between mountains; and being enlarged with all the small rivers of Ko-ko Nor, it enters China near Ho-chew, (a city of Shensi, on the borders of Se-chwen, ten days journey in a straight line from the source,) by a very narrow passage, between two vast steep rocks, cut for the purpose, as the Chinese tell us, by their famous Emperor Yu.

The envoy farther informed him, that he had croffed a river of Ko-ko Nor, called, in the Mogol tongue, Altan Kol, or Golden River: that it is about three feet deep, and

^{*}The same is observed on the side of Tartary, to the north of the Great Wall; so that China lies in a fort of hollow, inclosed by the mountains of Tibet and Tartary.

† Du Halde, as before, p. 258.

China, divided into nine sheets.

¶ So it is named in the map.

† The course of this river has been described before, p. 73.

Ko-ko Nor, described before, p 402.

runs into the lakes of Tsing-sû-hay; has abundance of gold mixed with its sands, which employs the inhabitants all the summer in gathering it, and makes a principal recome of the Princess of Koko Nor: that a person they employ will take aix, eight, or ter ounces, sometimes more: they take the sand from the bottom of the river. then wash it a little, and retaining what looks like gold, melt it in crucibles. This gold, which seems to come from the neighbouring mountains, is esteemed very good, and sold for six times its weight of silver. There is also gold in other rivers belonging to the Grand Lama, and much of it is carried to China. Regis agrees with Gerbillon in this, and particularly instances the Kin-cha-kyang † before mentioned: but says, the missioners are ignorant what river has supplied China with that gold, which is preferred to all others.

Gaubil is more particular and exact than Gerbillon. He fays, that in the place where the Whang-ho rifes, there are more than an hundred springs, which sparkle like stars; whence it is called Hotun Nor that is, the sea of stars, in the country. The Chinese, Sing § sû || hay, signifies, the Sea of Stars and Constellation. These sources form two great lakes, called I I ala Nor, or Karo Nor, that is, the Black Sea, or Black Lake, about two miles from Hotun Nor. Afterwards there appear three or four little rivers, which joined, form the Whang-ho, which has eight or nine branches. In 1704, the Emperor Kang-hi caused the source of this river to be searched after. In the memoirs presented to that monarch, the sources of the Whang-ho are named Otantala ¶ consisting of many little lakes; the waters of which are received by two great lakes to the eastward; and all together produce the Whang-ho **.

Besides the lake of Koko Nor, which (according to Grueber) signifies the Great Sea, and is called by the Chinese, Si-hay, or, the Western Sca, there are several other large ones in Tibet, as, the Charing Nor, and Oring Nor not far from the Hotun Nor, or Oton-tala; the Tenkiri, above seventy miles long, and forty broad, in latitude thirty-two degrees, and longitude west of Peking twenty-sour; the Lonkeri, and Map-ania, where the Ganges begins. This is all that can be gathered from authors, with regard to the natural geography of Tibet: as to the natural history, they afford very sew remarks.

SECTION II. — Of the Kingdoms into which Tibet is divided, particularly Great and Little Tibet.

THE country, generally comprized under the name of Tibet, is variously divided by authors. Bernier ††, within its limits, places three kingdoms, Little Tibet, Great Tibet, and Lassa; Desideri does the same, calling the first Baltistan, and the second Butan; under which last name, Tavernier ‡‡, and others, seem to include both Great Tibet, and Lassa. However that be, these three divisions or provinces of Tibet, are subject to so many distinct sovereigns; exclusive of the countries of Koko Nor, and the Tufan, or Si-san, which properly fall within the limits of Tibet, and have sovereigns also of their own. Of these we shall give, separately, what account authors furnish us with.

^{*} Du Halde's China, p 258. † This river, whose name has the same fignification with that of the Altûn Kol, runs not far from the said lakes, which shews the country abounds with gold. † Nor, or Naor, is great lake, or sea § Sing, not Tsing, signifies stars. || Or, Lyew, signifies constellations. ¶ This is the Manchew word, and, indeed, most of the names of places in Koko Nor, and the borders of China, are given in that language, instead of the Mongul, which is spoken by the inhabitants.

* Gaubil, Hist. de Gentch. p. 190, et seq. † Memoirs of the Mogul Empire, tom. iv. p. 122, et seq. ‡ Travels in India, p. 182, et seq.

I. LITTLE TIBET, OR BELADISTAN.

Little Tibet Bounds, Extent, and Produce. - Eskerdû the Capital.

LITTLE TIBET, recording to Desideri, is called also Baltislan *, and lies to the north-west of Kashmir, the northern province of Hindustan, but a few stages distant. This author informs us little farther than that the country is fertile, its inhabitants are Mchammedans, and the princes who govern them, subject to the Great Mogul †.

In the year 1664 they were the property to that monarch. Bernier acquaints us, that a differation having arisen a few years before in the King's family about the succession, one of the profer ders to the crown applied secretly for affishance to the Governor of Kashmîr, who, b, s'râh-Jehân's order, gave him powerful succours; and having put to death or slight all his competitors, lest him in possession of the country, on condition

of paying tribute yearly in crystal, musk, and wool.

This perty King came to see Aureng-Zobe, when he was in Kashmir, bringing with him a present of the same kind; but he had so pitisul a train, that Bernier should never have taken him for what he was. The lord, in whose service the author was, having entertained him at dinner, the better to get information concerning those mountains; Bernier heard him say, that his country, which borders on Kashmir to the south, was bounded on the east by Great Tibet; that it vas about thirty or forty leagues broad \$; that it afforded a little crystal, musk, and wool, but for the rest was very poor; that there were no gold mines, as was reported; that in some places there was very good fruit, especially melons; that they had very hard and troublesome winters, because of the deep snows which fell; and that the inhabitants, who formerly had been Pagans, were almost all become Mohammedans, of the Shiyah 10Ct, which is that of the Persians, as himself was ||.

The fame curious author gives an account of the road to Kashgar, from whence we learn that Eskerdû, the capital of Little Tibet, has eight days journey from Gûrche, a town on the borders of the kingdom of Kashnîr, which is rour stages from the city of that name; that two stages beyond Eskerdû has Sheker, another town, situate upon a very samous medicinal river; and since fare a forest, on the frontiers of the kingdom; from whence, in sisteen days more ye reach the city of Kashgar, which lies east of Little Tibet, inclining somewhat to a pnorth \P .

2. GREAT TIBET, OR BUTAN.

The Name, Extent, chief Cities, Air and Soil.— The Inhabitants.— Its Commerce, Commodities, Religion, Lamas, or Priegls.— Government.— Bûtan invaded by the Great Mogul.— The King's Artifice.

THE names of Great Tibet and Bûtan, which by some authors are extended over the whole country, from the frontiers of Hindûstan to the borders of China, are, by others restrained to the western part of that region; but what its dimensions are none

^{*} Rather, we presume, Belâdislau, that is, the Mo

¶ The same, p. 128.

have undertaken to define: even the Lamas, who made the map of Tibet, have not divided it into provinces or districts, contenting themselves with setting down the names

of fuch parts as occurred to their knowledge.

Greaf Tibet, according to Desideri the Jesuit, lies to the north-east of Kashmîr, and somewhat farther from it than Little Tibet. The road thither, though extremely difficult, is pretty much frequented. This kingdom begirs at the top of a frightful mountain, covered with snow, named Kantel, which Desideri arrived at with the caravan, thirteen days after he had left Kashmîr. In seventeen more, travelling all the way on foot, through frightful mountains, they arrived at Leh, or Ladak *, a fortress situate amongst them, where the king resides. They found no great towns in those mountainous provinces †. Ladak, or Latak, is placed in the map about seven miles north of the river Lachû, which ninety miles lower falls into the Ganga, or Ganges. Fifty miles to the north-north-west of it, in the mountain bordering on Hindûstan, stands another fortress, called Timur-keng ‡. An hundred and ninety miles east of Latak, and on the same river, lies Chasir-tong, another city, or fortress; and eighty miles south-east of this, Dsaprong, or Chaprong §. But that map does not give the name of Great Tibet, or Bûtân, or indeed, any general name, to the part where these places are situate.

Desideri observes, that the weather in Great Tibet is very severe, and that winter reigns almost all the year round ||. Agreeably to this a merchant of Lassa told Bernier, that the whole kingdom of Great Tibet was, in comparison to his, a miserable country, full of snow for more than sive months of the year ¶. According to Desideri, the earth produces nothing but corn and barley; scarce any trees, fruit, or roots, are to be seen.

The fame author writes, that the inhabitants of Bûtan are naturally gentle and teachable, but unpolite, and ignorant; having neither sciences, nor arts (though they do not want genius), nor any communication with foreign nations: that they wear nothing but woollen: that their houses are small, narrow, made of stones piled rudely one upon another: that traffic is ordinarily carried on among them, by exchanging provisions: that the merchants repair thither to look for wool: and that they have uo money of their own, but make use of the Mogul's coin, each piece being worth five Roman Julias **.

Great Tibet carries on a trade with the neighbouring kingdoms, and formerly the caravans of India, as Bernier informs us, passed through it from Kashmir to China; till the Great Mogul, Shâh Jehân, having made an attempt upon that country, the King suffered none to enter his dominions, on that side, for a considerable time. In the interim, they went by way of Patna in Bengal; but at present, the old road seems to be open again, Desideri, the Jesuit, having gone thither with a caravan from Kashmir.

The commodities of Tibet, which the merchants brought back in their return from China, according to Bernier, were musk, crystal, and jashen; but chiesly very fine wool, of two forts, one of sheep, the other called tour, which is rather a kind of hair, like the castor's, than wool. The jashen is found here; it is a bluish stone, with white veins, so hard, that it must be cut with diamond dust. It is highly esteemed in the

^{*} Latak, in the maps. † Lettr. Edif. tom. xv. p. 180, et feq. ‡ Signifying, perhaps, the Iron Caftle. D'Anville calls it Timur-kand. § Probably the Chaparanga, which Antony Andrada reprefents as a very great city.

| Lettr. Edif. p. 200. ¶ Bernier's Merwirs of India, tom. iv. p. 128. ** Lettr. Edif. p. 194, et feq.

court of the Mogul. They make cups of it and other veffels, of which the author

had some very rich ones, curiously inlaid with threads of gold *.

As to the religion of Great Tibet, Desideri takes notice, that the sufficient plantations one meets with in Bûtan are Mohammedans; but that the rest are inhabited by Gentiles, who are less superstitious than those in other idolatrous countries. They call God, Konchok †, and seem to have a notion of the Trinity. They adore another deity also, named Urghien † who they say was both God and man, without suher or mother, but born of a flower about seven hundred years ago §; yet they have the statue of a woman, with a flower in her hand ||, who, they say, is Urghien's mother.

They adore faints likewise, and use a kind of beads. No fort of meats is forbidden them. They reject the transmigration of souls, and polygamy; in which three points

they differ from the Indians.

Their religious persons, called Lamas, wear a habit different from secular folks. They do not braid their hair, nor wear bobs in their ears like others; but have the tonfure, like Romish monks, and are obliged to perpetual celibacy. Their employment is to fludy the books of the law, written in a language and character different from the vulgar. They recite certain prayers, chanting them in the same manner as is done in popish churches. They are the persons who perform the ceremonies, present the offerings in the temples, and keep the lamps lighted. They offer to God corn, barley, dough, and water, in very neat little vessels; which offerings are eaten as a holy thing by them. They are held in great veneration, and live ordinarily in communities, separate from all prosanc conversation. They have local superiors, and over them a fuperior general, whom the King himfelf treats with great respect. One of that Prince's relations, and the fon of the Lompo, or prime minister, were Lamas. The King, and teveral of his courtiers, confidered Defideri, and his companion, as Lamas of the law of Jesus Christ come from Europe. They said, their book was like that of the misfioner; which however, he would not believe. He adds, that many of them know how to read their mysterious books, but none understand them ¶.

There is only one Ghiampo, or absolute Prince in Bûtan. He who reigned in 1715 was named Nima-Nanjal '*, and had under him a tributary King. After visiting the Lompo, or prime minister before mentioned, called the King's right arm, the missioners had an audience of His Majesty himself, who received them sitting on his throne. Next day they had a second, and sour days after a third, wherein they were treated

more familiarly than at first ††.

This country has been so lately discovered, and little frequented, that scarce any thing is to be met with relating to its history, excepting a particular or two mentioned by Bernier. This author informs us, that feventeen or eighteen years before he was in Kashmîr ‡‡, Shàh Jehân, the Great Mogul, had attempted to concuer Great Tibet, as formerly the Kings of Kashmîr had endeavoured. His army, after sixteen days difficult march among mountains, besieged a castle; which having taken, there

^{*}Bernier, as before, p. 125 and 129. † In the Italian, Konciok. Grueber writes Konjû. † This, probably, is the fame worshipped in Lassa under the name of La, and called in China, Fo. † That is, about the year 1005: it should rather be 2746 years ago, if Fo, or La, be meant. || The Mohammedans of Little Bukharia believe, that the mother of Isa, or Jesus, conceived by smelling a slower. thould he know that? ** In the original, Nangial. †† Lettr. Edif. p. 194, et seq. † He was there in 1664.

remained no more to do than to pass a river, which is famous and very rapid *, and so march directly to the capital town, which might have been easily carried, the whole kingdom being struck with a panic; but the season being far spent, the Governor of Kainmir, who was the general, apprehending he should be surprised by the snow, returned. After he was gone, the garrison lest in the castle, either for sear of the enemy, or want of provision, soon abandoned it; which frustrated his design of returning thicher the next spring.

In 1654, the King of Great Tibet, knowing that Aureng-Zebe was at Kashmir, and threatened him with war, sent an ambassador with presents of musk, crystal, and those precious white cow-tails, which, by way of ornament, are faltened to the ears of ele-

phants; also a justen of great price, on account of its extraordinary bigness.

This ambassador's train consisted of fisteen or fixteen persons, all tall men. Excepting three or four of the better sort, all the rest were dry meagre sellows, with only three or sour hairs on each side for a beard, like the Chinese, and plain red bonnets on their heads, like seamen; the rest of their garments suitable. Four or sive of them had swords, but the rest marched behind the ambassador without any thing in their hands. He promised the Great Mogul, in his master's name, to suffer a mosk to be built in the capital city; that his coin thenceforward should, on one side, bear the impress of Aureng-Zebe, and himself become tributary. But it was thought, when the Mogul's back was turned, he would laugh at that treaty, as he did at one he made formerly with Shâh Jehân †. However that be, all we know farther of the affairs of Great Tibet since that time is, that it hath at present a king of its own, as hath been before related.

SECTION III. — A DESCRIPTION OF THE KINGDOM OF LASSA, OR BARANTOLA.

1. Its Name, Extent, Cities, and Inhabitants.

Its different Names, to what owing: — Its Bounds, and Extent: — Cities and Towns. — Tonker, or Lasse. — Mountains; Putala. — Inhabitants; their Shape: — their Dress: — a slovenly People. — Female Polygamy: — Language and Characters: — Soil and Produce: — Rhubarb; Worm-Seed; Martens. — Read of the Caravars. — Course of Trade. — Commodities. — Women Artizans. — Silver Coin.

THE third part, or dominion, into which Tibet is divided, according to Bernier, and Defideri, is called Laffa, apparently from the territory of Laffa, wherein the capital city is fituate, whose names are inserted in the map. This kingdom, Grueber tells us, is called by the Tartars 1, Barantola; and Tavernier describes it under the name of Bûtan: for this last being the general appellation used by the bordering nations towards India, that author might have taken the name from the Indian merchants at Patna, and not from the Lasia merchants, who came there to sell their musk §. It might be owing to the same cause, that Desideri could never hear at Kashmir of more than two Tibets, the Great, or Bûtan, and the Little: but at Ladak ||, the capital of the first, he was told of a third called Lassa ¶; the name Bûtan, if used in the country, being probably peculiar there to Great Tibet.

^{*} This must have been the Ganges, if the capital was Latak in Great Tibet; and the Tsan-pû, if it was Tonker in Lassa. † Bernier's Memoirs of India, p. 123, et seq. † Meaning, we presume, the Eluth Mongo s. § See Tavernier, part ii. p. 182. || In all probability, this part of Tibet, which Desideri calls Bûtan, after the Indians, goes only by the name of Ladak in the country itsels. ¶ See Lettr. Edif. tom. xv. p. 188.

On the contrary, Bernier became apprized of three Tibets at Kabmir, because he had his information immediately from a merchant of Lassa; and this might be the calor why he does not give any of them the name of Bûtan, which, perhaps, is not used in Lassa. However that be, this may account how one author comes to apply the appellation of Bûtan to Tibet in general; while another restrains it to Great Tibet only. Grueber calls this whole country Tangut, and says, it is divided into several parts, of which Lassa, or Barantola, is the chief: yet others affert, that the name of Tangut is at present unknown to the people of Tibet. This may be true, and yet it may be used by the Tû-san, or by the Tartars of Koko Nor, (called by him Kalmak) through whose territories that missioner travelled in his way from Chima.

The kingdom of Lassa, or Barantola, is bounded on the fouth by vast chains of mountains, covered with snow, and no less difficult to pass than those which scure Great Tibet on the west; the torrents that separate them being to be passed on planks laid on ropes stretched across them. On the west lies Great sibet; on the north a great sandy desart, which separates it from Kashgar and Little Bukharia; and, on the east, the countries of Koko Nor, and the Tu-san, bordering on China. According to the report made to Tavernier, to the northward nothing was to be sound but vast

forests and snow; to the east and west, nothing but bitter water 1.

There is no determining, by the map, how far this country extends westward, or by what bounds it is separated from Great Tibet. Desideri says, this third Tibet is six or seven months journey from Ladak, through desart and uninhabited places §: if so much, Lassa must be small in comparison of Great Tibet; but, properly, that is the time the author spent on the road between the two capitals of those countries; nor

does he mention when he passed out of one dominion into the other.

According to the map, the country of Lassa, or Lasa, is fuller of towns than Great Tibet, especially the territory of Lassa, where stands the capital of the kingdom. The chief of these towns are Tonker, Changaprang, Shamnamrin, Chusor, Sankri, Dsanlarken, all to the north of the Yarù, or Tsanpù, and on or near that river; Sûrman, and the ruins of Tsitsirhana, near Koko Nor. To the south of the Tsanpû, cities are more numerous; the principal are Aridsong, Changlas, Jiksea, Rinkpû, Oytong, Lasoy, Tonk-chong, near the river: Chiron, Niamala, Paridsong, Tudsong, Tarengdsong, &c. near the south borders of the country: but the missioners have transmitted no account of any of these places except the capital. They only observe in general, that the towns in Tibet are, for the most part, but small ||, and none of them in a state of defence: nor is there, according to Regis, much occasion for fortisscations; because the Tartars (whom they only have to fear) in their wars, seldom undertake sieges, choosing to fight in the open field ¶.

The capital is, in the map, called Tonker, and fituate at the foot of the mountain Putala, near the confluence of a small river with the Kaltyû, which falls into the Tsanpû, about thirty miles to the south-south-west. The missioners, who call this place Lassa, or Lasa, say scarce any thing of it, only Regis observes, that it is rather a spacious

temple than a city.

According to Grueber, the mountain Putala (or Butala **, as he writes it) is very high, and stands at the end of the city, and on it the castle ††, where the Great Lama,

fometimes.

and Teva, King of Tangut, refided *. Gerbillon reports, from the information of a Chincse ambassador, that the Kaltyû-mûren †, a pretty large river, runs at the bottom of Putala, in the middle of which stands the Grand Lama's palace, or temple, seven stories high, in the uppermost of which he lodges; and that by the side are the ruins of King Tsanpa's royal city, destroyed by Kush Hian, King of the Eluths, towards the middle of the last century. The author was assured, by the same person, that it was but four hundred leagues from Si-ning in Shen-si, to Putala, which he had travelled in softy-six days in winter ‡, and that the country was pretty well inhabited §. Desideri observes, that at Lassa they reckoned it but four months journey to Pe-king ||. Grueber says, the King resides at Pûtala, a castle built on the mountain like the houses of Europe, consisting of four stories, and very good architecture ¶.

The inhabitants **, according to Tavernier, are strong and well-proportioned, but their noses and faces somewhat flat. Their women are said to be bigger and more vigorous than the men 1†, but much more troubled with swellings in the throat; sew

escaping that disease.

Both fexes are clad in fummer with a large piece of fustian, or hempen cloth: in the winter with a thick cloth, almost like felt, and wear on their heads a kind of bonnet, much like our drinking-cans, which they adorn with boars teeth and pieces of tortoise-sfhc"s, round or square. The richer fort intermix coral, and amber-beads, of which their women make necklaces. All wear bracelets upon their left arms only, from the wrist to the clow. The women wear them tight, the men loose. About their necks they were a filken twist, at the end whereof hangs a bead of yellow amber or coral, or a boar's tooth, which dangles upon their breasts. On their left sides their girdles are buttoned with beads of the same !!.

Grueber observes, that the courtiers were exceeding expensive in their dress; which consisted of cloth of gold, and brocade, Some of them were a habit resembling, in all respects, that of women §§, excepting that they made use of a red coat, after the numer of the Lama. For the rest, this author says, the people of Barantola are very slevenly, for that neither men nor women, wear shirts, or lie in beds, but sleep on the ground: that they eat their meat raw, and never wash their hands or saces: but that as to their manners, they are very affable, and friendly to strangers. Women are seen in their streets, as among the other Tartars, contrary to the custom of the Chinese ||||.

With regard to their diet Tavernier reports, that they feed on all forts of flesh, except that of cows, which they adore as the common nurses of mankind; and that they are great lovers of spirituous liquors T.

they are great lovers of spirituous liquors 'T¶.

Although the men, according to Friar Horace, are restrained to one wife, and cannot marry within certain degrees, without the bishop's dispensation ***; yet Regis observes, that a woman there is allowed several husbands, who are generally related, and even

^{*}Grueber's Voyage, p. 1, and 20, in Thevenot's Collection, part iv.

† This must be the Mogul name, as Muren, in their language, fignifies a river.

‡ By the way of Tsing-su-hay, where the Whangsho rises, twenty days from Si-ning.

¶ Grueber, as before, p. 1.

* Horace, a late Capuchin mission or to Tibet, pretends, that country contains no fewer that thirty-three millions of people: though Desideri, but a few years before, in his journey from Great Tibet to Lassa, found nothing but wild uninhabited places. The King's setter to Horace, in 1742, is dated at Lassa, from his palace Khaden Khagn San (nulprinted elsewhere Khadeno Khagser) and the Grand Lama, from his great palace of Putala.

†† That may be the reason why they are allowed so many husbands.

fometimes brothers. The first child belongs to the eldest husband, and those born afterwards to the others, according to their seniority. When the Lamas are reproached with this custom, they apologize for it by the scarcity of women, which prevails both in Tibet and Tartary, where the males are more numerous: but this excuse, says the

missioner, is trifling; for the Tartars admit of no such irregularity *.

The same author informs us, that the language of Tibet disters entirely from the Mongol and Manchew, but nearly agrees with that spoken by the Tû-san, or Si-san; and that the Tartars call the characters in use with the people of Tibet, the characters of Tangut †. La Croze has published the alphabet, which was given to Bayer by a Mogul interpreter. He says, they are the same with the Wigur, Oygur, or Jugur characters I, as they used formerly to be called; which are in use through all the east, from the Caspian Sea, to the Gulf of Bengal. Besides the Mogul letters, which are derived from them, and but little varying, our author observes, that the manner of writing of all the Indians, is very like it, and almost suspects it to be derived from thence. He adds, that the specimen of the Bûtan characters, given by Hide §, is the running hand letters; those of his alphabet the capitals: and that the anonymous author of the description of Bûtan ||, speaks in brief, but fully of both kinds ¶.

The above mentioned alphabet confilts of four vowels, the y being wanting, and very rightly, for it is properly a confonant; twenty fimple letters, ten double letters, and ninety-fix compound characters, or fuch as are animated with their vowels.

Regis tells us, that the missioners could procure no account of the plants produced in this country, nor of the nature of its trade, only that it is chiefly carried on by the way of Bengal **: but Tavernier gives us some account of both. According to him, the soil is good, abounding in rice, corn, pulse, and wine. The chief commodities, in which the inhabitants trade with other nations are musk, rhubarb, worm-seed, and surs. The most excellent rhubarb comes from hence: it is a root which they cut in pieces, and stringing them ten or twelve together, hang them up to dry: as the wet spoils it, the merchants run great hazards in bringing it; both roads, especially the northern, being subject to rain.

Worm-feed grows in the fields, and must die before it can be gathered: But the mischief is, that before the seed is ripe, the wind scatters the greater part, which makes it so scarce. When they gather it, they take two little hampers, and as they go along move them from the right to the left, and back again, as if they were moving the herb, which they bow at the top; and thus all the seed falls into the baskets.

Had the natives as much art in killing the marten as the Russians, they might vend great store of those rich surs, considering the animals are very numerous there.

The fame author informs us, that there are two roads to Bûtan (as he calls this country for the reason before mentioned;) the northern by Kabul ††, the other, southern, through Patna in Bengal, and the territories of the Rajah of Nupal †‡; being a journey of three months over the mountains of Naugrokot, which are nineteen stages of the caravan from Patna, mostly through forests full of elephants. They travel in palekis,

^{*} Du Halde's China, p. 385. † They are called by the Chinese, Sissan Wha, "the language of the Sissan;" and Sissan He, "writing of the Sissan:" by the Tartars, Tangut Jerjen, that is, "the characters of Tangût;" which last term is common among them. See Du Halde, Pars edit. vol.iv. p 463; and the English, vol.ii. p. 388. ‡ Something has been already spoken concerning the Oygûr characters and those of Tibet. See Green, vol. iv. p. 398, and 399. § In his Hist. Relig. vetr. Perfar. tab. 17. [Mentioned before. § See Act. Erudit. tom. xivi. p. 415. ** Du Halde, as before, vol. ii. p. 388. †† Or rather Kashmir, before mentioned. ‡‡ This seems to be the Nekpal of Grueber, who went the southers road.

but generally on oxen, camels, and horses of the country, which are exceeding imall, but very hardy. They are eight days crossing the mountaine. They can make use of no other carriage for their goods but those small horses, the road is so narrow and rugged: but the merchants are commonly carried on the shoulders of women, who attend for the purpose. From the mountains they make use of the same kinds of voiture,

as at fetting out.

When the merchants, trading to Bûtan for musk and rhubarb, get to Gorroshep Ir, the last town belonging to the Mogul, and eight stages from Patna, they apply to the custom house officer to reduce the twenty-sive per cent. duty on those commodities, to seven or eight; and if he refuses, go the northern road round about, through Cabul. When they come there, the karawans part, some for Tartary, others for Balk. Here the merchants, coming from Bûtan, barter their goods with the Tartars, for horses, mules, and camels, money being scarce in that country. Those goods are afterwards transported by the purchasers into Persia, as far as Ardevil and Tauris; whence some Europeans have imagined, that rhubarb and wormseed came out of Tartary, as, indeed, some of the former does; but not so good as the other fort, being lable to corrupt some. Some of the merchants go to Kandahar, and thence to lipal an, whither they carry coral, yellow amber, and lapis lazuli, all in beads, if they can meet with them.

Those who pass through Gorroshepûr, carry from Patna, and Daka, coral, yellow amber, bracclets of shells, particularly tortoise, with great thick pieces of the last, some, round, others square. As the people of Bûtan burn amber at the end of their seasts, like the Chinese (some of whose ceremonies they observe), it is in great request among them. The merchants of this country will give, at Patna above mentioned, for a ferre (or nine ounces ') of large pieces of yellow amber, as big as a nut, bright and clean, thirty-five or forty rûpis; which will yield, in Bûtan, from two hundred and fifty to three hundred, according to its colour and beauty. Coral, wrought into beads, is prositable enough; but they chuse to have it rough, to shape it as they please themselves.

The women and maids are generally the artists among them, as to those toys. They also make beads of crystal and agate. As for the men, they make bracelets of tortoise, and other shells. They also polish those little pieces of shells which the northern people wear in their ears; and adorn their hair with. In Patna, and Daka, there are above two thousand persons thus employed, to furnish the kingdoms of Bûtan, Asem, Siam, and other northern and eastern parts of the Mogul's dominions.

The King of Bûtân coins much filver, in pieces of the value of a rûpi, whence the author concludes, there must be some filver mine in the country: however, the merchants could not tell where it lay. As for the gold they have, which is but little,

it is brought them by the merchants of the more eastern regions †.

** A idiada says, they use a fort of confession among themselves.

as in the Romish Church; for they have their inserior Lamas, chosen by the Grand Lama, who act as bishops in their respective dioceses, having under them simple Lamas, who are the religious. To these may be added the use of holy water, crosses, beads, and other nations.

Some, and a have observed, like Regis, would conceal this refemblance, wifely confidering, the is would be noted to the reagion to be formerly related to one confedict to be großly ido arous, but would help to confirm the Protestant charge of idoletry upon it. Others would pretend, that the people of Tibet were once Christians, but now degenerated into Pagens; and Andrada tays, they have still an idea of the Christian anylones, though confused and corrupted. Grueber having suggested, that he was the suffice a listent he had been in Barantola, or Tibet, Theyenot, his collector, takes care to adjain the reader, that the Jesuit was instaken; for that he sinds Christian by help for a listent through the east, than the ecclessifical writers were aware of; a listent there had been Princes, and even whole nations, Christians on the frontiers of China. The adus, that he could even point out the time when Christianity was carried this er by the Natorian missioners, and how it came to be lost; but that it was necessary to wantill the proofs could be printed in the languages in which they was visited, and some other pieces added; which would continue a much, he says, to clear up the geography and history of those countries.

We are 'or the fetracts never were printed, but feer his Christian Princes and nations were confuch as the famous Freder John, and his people; who, as Christians, don'the his had no other existence then in the writings of the Nestorian missioners; a 'et of men, it may be presumed no less addiced to deceiving, than the Romish of Grecian. Hayton, not content with Living Ung, or Yang Khan, and his tribe Christians, assume, that both Kublay, the conqueror of Chine, and his brother Liulakô, who reigned under him in Persia, were convents to the fairh. But we find nothing the this in history, unless the Bonzas were Christians, to whom the Chinese historiche say the former was too much a klicked.

To onit others, we have a fl grant instance of this imposing spirit in the missioners. infl come to hard from Tabet idelf. Triar Horace de la Pen ia, before mentioned, who is at the head of that inifion, pretends, that he, and his brother Capuchus, not only converted the city of Lossa, but almost brought over the King and the Great Lama nimillity, who gave them have to build a church, and licence to preach; recommended their to the true law, and allowed their fubjects to embrace it §. Thus, these men ch, with the great I cafe imaginable, what the missioners in China deemed impossible to be officied. Corbillon and Rogis feg, the people are fo infatuated with their Lamas, that there is no hope of converting them |; much less can it be supposed the Great Lama, who affurnes the title of a deity, would turn a profelyte to the Capuchins, and acknowledge a man for his fuperior. This would be to own hanfelf an impostor; to renounce his infallibility (which one may as well suppose the Pope would do); subject himself to the laws of a mortal, and, in short, ungod himself at once. Yet this gross forgery of Friar Horace is supported by the Pope, and the congregation de propaganda fide, by whose orders the memoir was cooked up, and published. It is observable, that Horace does not once mention the pretensions of the Grand Lama to the God-head; either through ignorance, or knowing that a circumstance of that nature would confute his false affertions.

Hence, it plainly appears, how little regard ought to be had to the testimony of the missioners, Romish or Nestorian, in cases of this nature. Gaubil cannot conceive how such a notion should prevail, of there being Christian nations in the east, untels the thing was fact: but he himself, at the same time, helps us to account for it in a very natural way. He says, the Chinese call the Lamas of Tibet, the Bonzas of the West; and have often considered the Christians among them as western Bonzas, or Lamas, and as Mohammedans. Might not then the notion have arisen, and been propagated from the report of other nations, who mistook the Lamas, and those of their per ussion, for Christians, on account of the great resemblance which they found be went the religion of the Lamas, and that of the Greek or Roman missionaries? Of this the schewing authorities amount almost to a demonstration.

Kircher tells us, that Andrada, the Jesuit, undertook the voyage into Tibe., on hearing that the inhabitants were professed Christians. In the relation of the journey of the Russian ambassadors, who went to China about the year 1623, speaking of the Mongul Lamas, or friers, as they are called, there is this expression: they say, that their religion is the same with ours, only the Russian monks are black, and theirs white the Lamas (says Desideri) told us, that their book of the law, or religion, was like ours: the King also, and several of his courtiers, considered us as Lames of the law of Jesus Christ S. Hence it may be well presumed, that Marco Polo, and the friars who went into Tartary in the thirteenth century, mistook the followers of the Lamas for Christians, if they have not designedly represented them as such.

3. Of the Dalay Lama, adored as God incarnated.

The Origin and Name. — Frequent Incarnations. — Image Worship. — A licensed Man-slayer: — The Impostor's Titles, and droine Attributes: — Cheat, how kept up, and propagated: — The uls', how adored: — Attended by Prests. — Their Number at Putcla. — Great Lama's State, in giving Audience: — His Exercisents worn as precious Relies. — The Donation of Tibet.

THE chief object of worship in this country, is the same which in China is called Fo ||, but by the Lamas in Tibet, La ¶. This Prince, who was born one thousand and twenty-six; cars before Christ '*, and reigned in a part of India, called Changtren-cho ††, or, as others say, Si-tyen †‡, gave himself out to be God, assuming human slesh; and when he died, it was pretended, that he only withdrew for a while, and would appear again in a determinate time; as he actually did, if the testimony of his devout disciples, the writings of the primitive fathers amongst them, and, in short, the tradition and authority of the whole church, from age to age, down to the present, are at all to be regarded in proof. And this imposture has been practiced since as often as there has been occasion for it: So that the god La, still lives, and is corporally present in the person of the Dalay Lama. In which respect, the church of Tibet has infinitely the advantage of the Romish, inasmuch as the visible head of it is considered to be God himself, not his vicar, or deputy; and the incarnate deity, who is the object of divine worship, appears alive in human shape to receive the people's adorations: not in the form of a senseless bit of bread, or playing at bo-peep in a diminutive waser,

which

A SALVENIA

^{*} Hift. de Gentch. p 107. † See Ogil. China, vol. ii. p. 344. ‡ Purchas. Pilgr. vol 3. p. 799 § Lettr. Ediff. tom. xv. p. 198. || Couplet fays, Fo fignifies 'non homo,' or, no man. Sin. Phil. See his Letters, p. 1, in Thevenot's Collection, tom. iv. †† Couplet. Sinic. Philof. Proœm. p. 27, et feq. ‡‡ Gaubil, as before, p. 190, in the notes.

which would be too gross a cheat to impose on the understandings of the Tib tians, however ignorant and superstitious the missioners, to their own shame represent them.

The priests account for the several incarnations of their deity, from the docking of the soul's transmigration or passing from one body to another; of which La was the first inventor. They solve, after the same manner, every thing that concerns their principal images; such as Menippe, which has several heads of different forms. Grueber (who calls it Manipe) says, those heads are nine in number, and so placed, as to terminate in a cone of monstrous height. This is the chief of all the images, before which the people perform their secred rites, with many odd gesticulations and dances, often repeating, O Manipe Mi hum, O Manipe Mi-hum! that is, O Manipe, save us! They frequently set divers forts of meats before this image, in order to appeale the deity.

The fame author mentions a most detestable custom, which has been introduced into the kingdoms of Tangut, and Berantola. They chuse § a lusty youth, to whom they grant liberty, on set days of the year, to kill, without distinction, whomsever he meeteth with; supposing, that they who are thus slain, as if consecrated by Munipe, immediately obtain eternal happiness. This youth, whom they call but, that is, the slayer, dressed in a very gay habit, ducked with little banners, and armed with a sword, quiver, and arrows at the times appointed, fallies suriously out of the house (being, tays the author, possessed with the demon to whom he is consecrated,) and wandering through the ways and streets, killeth people at his pleasure, none making any

resistance ¶.

The Great Lama who, as we faid before, is La, or Fo incarnate, is, according to Grueber, called in the country, Lama Konjû, or the Eternal Father . . He is also stiled Dalay Lama ††. The same author says, in another letter, that Great Lama signifies the Great High Priest, and Lama of Lamas; as he is also stilled, the High Priest of High Pricsts #1. These last titles regard only his office, or degree, in his ecclesiastical or religious capacity; but with respect to his divine nature, or quality, which intitles him to be adored as God, they term him likewife the heavenly Father §§, afcribing to him all the attributes of the true deity; as, that he is omniscient, and that all things are open to his view, even the screts of the heart. If at any time he asks questions, it is not, fay they, for fake of information, but to remove the scruples of the incredulous and disaffected. They believe that Fo (or La) lives in him: hence those of his religion in China call him Ho-fo, or the living Fo. In consequence of this persuasion, he is held to be immortal, and that when in appearance he dies, he only changes his abode: that he is born again in an entire body, and the happy place of his refidence is revealed by certain pretended tokens, which the Tartarian princes themselves are obliged to learn of the other Lamas; who only know the child appointed by the preceding Grand Lama to fucceed him

This has been shewn to be an invidious misrepresentation. See Green, vol. iv p 123, note (a). † Bernier says, they are wedded to this doctrine, and that his Lama physician was full of surprising stories about it. † Du Halde's China, vol. is. p. 387. § Doubtless the priests, by the chief priest's orders | See the cut drawn by Grueber, who saw this stall youth, who had a location to kill people for the good of their souls. ¶ Grueber's Letters, p. 22, in Theoremot's Collect part 4. ¶ The same, p. 1. Desiden writes, Konchok. See Green, vol iv. p. 454 note (c). †† On this occasion, Bentinck observes, that as the word Lama, in the Mogul languages, signifies a priest, and Dulay, a vast extent, or the ocean, Dalay Lama is as much as to say, the universal priest. See History of the Turks, Moguls, &c. p. 486. By this author's leave, Lama seems to be a word in the language of Tibet. †† Grueber's Letters, as before, p. 22; and Ogilb. p. 36.

To keep up this opinion of his immortality, the Lamas after his death, feek, throughout the whole kingdom, for another person, as like unto him, in all respects, as may be, to supply his place: and thus he has undergone a new resurrection, or incarnation, seven times since his first appearance *. Bernier relates the matter thus, as he had it from a Lama physician. When the Great Lama is old, and ready to die, he assembles his council, and declares to them, that now he was passing into the body of a little child, lately born: that when this child, who was bred up with great care, was fix or seven years of age, they (by way of trial) laid before him a parcel of houshold-goods mixed with his own, which yet he could distinguish from the rest: and this, he said, was a manifest proof of the transmigration †.

Grueber fays, that this belief is propagated by the policy of their kings, and those who are in the secret of this cheat, in conjunction with the Lama Konjû t. The miffioners rail heavily at this imposture, calling it wicked and diabolical, as if besides transubstantiation, which is worse, they had not other impostures in their own religion §. But it is done, doubtless, out of envy; because they have none which redounds so much

to the honour and wealth of themselves.

Grueber fays, the Great Lama fitteth in a remote apartment of his palace, adorned with gold and filver, and illuminated with lamps, in a lofty place like a couch, covered with coftly tapeftry. In approaching him, his votaries fall proftrate with their heads to the ground, and kifs him with incredible veneration. Thus, adds the Jesuit, hath the devil, through his innate malignity, transferred to the worship of this people that veneration which is due only to the Pope of Rome, Christ's vicar, in the same manner as he hath

done all the other mysteries of the Christian religion ||.

The fame author farther observes, that he always appears with his face covered; letting none see it but those who are in the secret: that he acts his part extremely well, while the Lamas, or priests, who are perpetually about him, attend him with great affiduity, and expound the oracles that are taken from his mouth ¶. Here it must be noted, that Grueber learns all he writes concerning the Great Lama from the citizens of Barantola; for the missioners could not see him, no Christian being admitted into his presence **, nor, indeed, any body of a different religion, without adoring the pretended deity: however, they took an exact copy of his picture, as it was exposed to view in the entrance of the palace; to which they paid the same veneration as to himself in person ††.

Bentink tells us, that at the foot of the high mountain near Putala, whereon the Dalay Lama refides, above twenty thousand Lamas dwell in several circles round it,

^{*} Grueber's Letters, as before, p. 1; but p. 23, and in Ogilby, p. 361, it is faid by fome miftake, seven times in an hundred years.

† Bentink observes, that although the Lamas are great sticklers for the metempsychosis; yet those among them who pretend to know more than the rest, do not believe that the soul passes really out of one body to enter into another; but only its faculties. See History of the Turks, Moguls, &c. p. 487.

† Grueber's Letters, p. 2.

§ Neret, the Jesut, in his Voyage to the Holy Land, published in the New Memoirs of Missions into the Levant, tom. v. calls the Greek and Armerian patriarchs, ravenous wolves, and the worst of names, for deceiving the people with the pretended descent of the miraculous fire into the holy sepulchre on Easter-day, although he himself would impose the more palpable sable of the house of the Lady of Loretto travelling from Nazareth to Italy, upon the belief of his readers; and Vertot, in his History of the Knights of Malta, would persuade us, that the Romissh church, when in possession of the said sepulchre, was actually invested with the power of bringing down the fire from heaven; and were the Latins restored, no doubt they would go on with the impossion less boldly than those who at present have the management of it.

[Grueber's Letters, p. 22, and Ogilby, p. 361.

according as the rank and dignities which they posses, render them more worthy to

approach the person of their sovereign pontiff *.

proach the perion of their lovereign ponting.

According to the account transmitted by Regis, the Grand Lama fits cross-legged on a kind of altar, with a large and magnificent cushion under him; where he receives the compliments, or rather adorations, not only of his own fubjects, but of prodigious multitudes of strangers; who make long journies to offer him their homage †, and obtain his bleffing. Some even travel there from India, who never fail to enlarge before him upon their own merit, and magnify the fufferings they have undergone in their painful pilgrimage. But next to the people of Tibet, the Tartars are most devoted to the Grand Lama, some of whom resort to Lasa from the most distant corners. When the Eluths-Diongari invaded Tibet, the fifter of Ayuki, Khân of the Eluths-Torgauti t, with her fon, was at Lassa upon the like errand.

Princes are no more excused from this fervile adoration than the meanest of their fubjects; nor do they meet with more respect from the Grand Lama, who never moves from his cushion, nor any other way returns the salute. He only lays his hand upon the head of the worshippers, who then think all their fins pardoned. The Lamas who drew the map observed, that in receiving the Emperor's ambassador, he did not kneel like the Tartar princes; but when he enquired after Kang-ki's health, resting upon one hand, he only made a small motion, as if he intended to rife from his feat §. He was at that fame time dreffed in a red habit of woollen frize, fuch as the common Lamas

wear, with a yellow hat gilt ||.

Grueber affures us, that the grandees of the kingdom are very eager to procure the excrements of this divinity, which they usually wear about their necks as relicks. In another place, he fays that the Lamas make a great advantage by the large prefents they receive for helping the grandees to some of his excrements, or urine; for by wearing the first about their necks, and mixing the latter with their victuals \(\Pi \), they imagine themselves to be fecure against all bodily infirmities **. In confirmation of this Gerbillon informs us, that the Mongols wear his excrements pulverized in little bags about their necks, as precious reliques, capable of preferving them from all miffortunes, and curing them of all forts of diftempers. When this Jefuit was on his fecond journey into Western Tartary, a deputy from one of the principal lamas, offered the Emperor's uncle a certain powder, contained in a little packet of very white paper, neatly wrapped up in a fcarf of very white taffety: but that prince told him, that as it was not the custom of the Manchews to make use of such things, he durst not receive it. The author took this powder to be either fome of the Great Lama's excrements, or the ashes of something that had been used by him ††.

Trophies are erected on the tops of the mountains ## in honour of the Great Lama, for the prefervation of men and cattle §§. All the Kings, who profess the religion of the Great Lama, before they are inaugurated, fend ambaffadors, with very sich pre-

fents, to crave his benediction, as a means to render their reigns happy

Till of late, the Dalay Lama was a mere spiritual prince; but he is now become a temporal one also, with a large patrimony; the Chân of the Eluths, who conquered

THE religion of the Creat I ama feems to be more extended than proof in the world: for befides Libet, which is its native-feat, it has spread itself over all the Lides, Clina, and Western Tertary, from one end to the other. It is true, the pertines or .' c Indias and Chira, have many ages ago thrown off his jurifdiction, and let up chief richt of their own who have modelled the religion of their respective countries. according to their different funcies, or interest. But Tibet, and the giver part of Tanary, are full subject to him in spicituals. The better to govern this yell dominion he constitutes deputies, or vicars, to officiate in his flead. These are called Hutuktus, or Klimakia, which, according to Regis, are chosen from among the disciples of the Great I in ... It is exceeded a real happiness to be admitted into the number of these left, which now receeds two hundred; and they on whom the honour of Hûtuktû is conterred, are confidered as so many lester Fos 1; they are neither confined to the pagods, nor limited to Tribet, but fettle where they please; and soon acquire great tiches, by the offerings of their numerous worshippers §. One of them who resided among the Kalka Mongols, about the beginning of this century, fet up for himfell ! in opp rition to his mafter. assuming all the privileges and powers which the Grand Lama pic ends to; and, in all likelihood, others from time to time will follow his example.

For keeping up discipline and order in ecclesiastical matters there is a kind of hierarchy in Tibet, consisting of church officers, answering to archbishops, bishops, and priods. They have also their priors, abbots and abbesses, superiors, provincials, or such like degrees, for ordering what concerns the regular clergy. The Lamas, or itselfs, who preside over the temple sthroughout the country, are sent from the college of the Lama's describes before mentioned. The other Lamas officiate as affishants at divide service in the churches and monasteries; or go abroad on the mission into foreign countries.

How cr that be, we find here, in the persons of the hûtûktûs, the appearance of the Deity in several
differ in bodies; but they have more sense, or modelly, than to affert that the same body is multiplied, or
existing in several different places at once, as the Romish priests do, in consequence of their absurd and
slasour mous doctrine of transubstantiation.

§ Du s'alde, as before, p. 385.

See Green,
sol iv. p. 377.

Regis fays, the Lamas generally wear a woollen frize like ours, but narrower, and not fo close; yet is lasting, and retains its colour. They use, besides the hat, different kinds of bonnets, according to their leveral dignitics; one of which is somewhat remarkable, as it resembles our bishops' witnes; but they wear the sir before.

The Great Lama's colour is red; but as the Emperor of China has of late gamed some footing in Tibet, these of his party, as well as all the Mongol and Kaika Lamas, wear yellow. Bentink, speaking of these latter, observes, that they go habited in long yellow robes, with great sleever, which they bind about their waist with a girdle of the same colour, two singers broad. They have the head and beard shaved very close, and wear yellow hats. They always carry a great pair of beads of coral, or yellow amber, in their hands, which they turn incessantly between their singers, saying prayers to themselves after their manner. The nuns wear very nearly the same dress, excepting that they wear bonnets edged with fur, instead of hats, which the Lamas wear t.

There are several princes in Tibet who assume the Lama habit, and under the titles of the Grand Lama's principal officers, act almost independently of him. The dignity of Lama is not limited to the natives of Tibet alone. The Taitais and Chinese, who are

equally ambitious of this honour, go to Lassa to obtain it †.

The multitude of Lamas in Tibet is incredible, hardly a family being vithout one, either out of their devotion, or expectations of preferment in the Grand Lama's fervice. The rules of the Lamas are too many and burdensome, to be all observed by one Lama; wherefore they divide the load among them, one confining himself to this particular duty, and another to that; but they are all obliged to conform to celibacy §, as well as to renounce worldly grandeur and employments ||.

As to their character, if you will take it from their great adversaries, the missioners, most of them are debauched; yet they govern Princes , who give them the chief place in assemblies, and are blindly followed by their votaries, who give them the best of what they have. Some of them are tolerably skilled in medicine; others have some notion of astronomy, and can calculate eclipses. Bernier met with one of these Lama physicians at Kashmir, who came in the train of an ambassador from Great Tibet ††. He had with him a book of recipes, which he would by no means part with ††.

Regis represents them as very ignorant §§, affirming that few of them can read or understand their ancient books, or even fay their prayers, which are in an ancient tongue and character, no longer spoken or known ||||. But this charge must be unjust, if other writers may be credited ¶¶. Besides Friar Horace declares, that there are in Tibet universities and colleges for teaching the things relating to their law *** or religion.

Bentink gives a different account of the Lamas in Tartary. He fays, they both teach and practife the three great fundamental duties of honouring God, offending nobody, and giving to every one what belongs to him: that the lives which both they and the Kalmûks, or Eluths lead, incontestably prove the two last points; and that he was informed by some travellers of credit, that they strenuously protest against adoring more than one God: that the Dalay Lama, and Khûtûktûs, are his fervants, with whom he communicates for the instruction and good of men: that the images which

they honour are no more than representations of the Deity, or some holy men; and that they expose them to the view of people, only to put them in mind of their duty.

This, excepting what relates to their external discipline, is all the author could pick up after all his pains, not having been able to find persons capable of thoroughly informing him: for as all the facred books of their religion are written in the language of Tangût*, which both Mongols and Eluths are entirely ignorant of, they depend, like the papists, wholly upon what their priests are willing to tell them; and these make so many mysteries of what regards their worship †, that one has much ado to get any thing out of them. For all this, it seems strange to Bentink, that Europeans should be so little acquainted with a religion which is spread over all the middle part of Asia, and might be so easily known to the Russians, who border on the countries where it is professed: but then he observes, that the Russians, like other nations, search after nothing but what concerns their profit ‡.

If the Russians in Siberia, mostly merchants and soldiers by profession, are to blame in this article, the Romish missioners must be much more culpable: because they were obliged, in point of duty, to be thoroughly acquainted with the religion of the people whom they were sent to convert; and by their residence for above an hundred and sifty years in China, had the sullest opportunity of consulting both their priess and books: yet how little have they done that way; nay, the latter missioners, even those who were in Tibet itself, appear more ignorant of the religion of that country than the early ones. Friar Horace, the Capuchin, who, if you will believe him, had such easy access to the Grand Lama, and was so highly carefied by him, was yet, as hath been before observed, a stranger to his divine character §. On the other hand, Desideri, the Jesuit, though he says he was at Lassa, never once mentions the Dalay Lama, as if no such person had resided there; he only speaks of some great Lama, who had audience of, or made a visit to the King.

For having thus failed so egregiously in this particular, various excuses are made by them: some allege the ignorance of their priests, as not able to give an account of the doctrines of their religion: others, their reservedness in communicating either what they know themselves, or their facred books: others pretend, these volumes are written in an obsolete language and character, not understood by the priests themselves; and some shuffle it off by saying, if they were to search their books, they do not believe they should meet with any thing worth knowing, more than what they are already acquainted with. Lastly, they give up the conversion of the Tibetians, declaring, that so long as the Great Lama continues master of Tibet, Christianity can make little or no progress there ||.

As to this last apology (not to mention its being expressly contradicted by the testimony of honest Friar Horace, as before mentioned,) it seems strange that the Nestorian missioners should find it so easy, and the Romish so difficult to convert this nation; or that the inhabitants of Tibet should be more obstinate now than they were nine hundred years ago; and more averse to embracing Christianity at present, that their religion bears so great a likeness to it, than before, when it had scarce any resemblance of it at all; indess it was on account of that conformity.

But not to fray to examine the weight or confiftency of such arguments any surther, we may justly unpute the omission either to their own negligence, ignorance, or unwil-

^{*} Or Tibet:

lingness, fully to lay open the agreement of the religion of Tibet with that of Rome, as hath been already suggested *.

The most powerful among the Lamas are those called by the Chinese, Mong-san, who possess a wide territory in Tibet, north of Li-kyang-tû-sû in Yun-nan, between the rivers Kincha-kyang and Vu-lyang-ho. This country was ceded to them by U-san-ghey, (whom the Manchews made King of Yun-nan), to engage them in his interest †.

Although the religion of the Great Lama is spread though China, yet he seems to have no jurisdiction there; at least the millioners are silent as to this article of his supremacy, reckoned so important in their own church. The Lamas, however, have from time to time attempted to get footing in the empire, perhaps with a view to establish their master's authority there; but have never been able to compass their design, owing, in great measure, doubtless, to the opposition of the Ho-shang, or Bonzas, who probably, affert the freedom, or independence of their church, as the Gallican formerly did in France.

Gaubil tells us, that the Chinese history first speaks of Lamas being employed by the Mongols, and erecting monasteries among them, in the reign of Keyuk Khân, grandson of Jenghîz Khân t. But as they came in great numbers, and were very chargeable to the people, going among them from house to house, Tayting \$, sixth Emperor of the Ywen, forbad them to enter China . However, their authority continued there while that family possessed the throne, whose ruin is attributed to the encouragement given them by Shun-ti, the last of it: but Hong-vû having restored

the dominion of the Chinese, expelled the Lamas along with the Mongols.

They recovered their credit in China when the Manchews got possession: for although they were formerly no friends to the Lamas, yet when they began to invade their neighbours, they politically favoured them: and when Shun-chi became master of the empire, the Grand Lama omitted no measure that might secure his interest in that Prince, not disdaining even to leave Lassa, and travel to Pe-king, to congratulate the Emperor, and bless his family. After this, the Empress erected a magnificent temple for the Lamas, whose example was imitated by the Princes, Princesses, and others; which encouragement soon multiplied their number in China. They are very wealthy, and dress in fine yellow, or red satin, and the choicest sure; they appear well mounted, and attended with retinues, more or less numerous, according to their degree of Mandarinship; which honour the Emperor frequently confers upon them Thus, on his side, he endeavours politically to ingratiate himself with the Grand Lama, whose power, he knows, is very great among the Tartars, carrying on his intrigues even in Tibet itself.

Hence it came to pass, that in the beginning of this century, a division happened in Tibet itself, amongst the Lamas. One party adhered to the red hat, the colour used by the Grand Lama; the other assumed the yellow hat, to denote their attachment to the present imperial family of China **, whose interest has increased since the Tsevang raptars troops, which had ravaged the country, were defeated there in 1720, by the Chinese army ††.

5. The Government of Tibet.

Tibit conquered: — Its Donation to the Lama. — Another Revolution in the Kingdom: — G ver ned by a Tipi: — Awed by China. — Emperor imposed on by the Lamas. — Envoys, how treated. — The King's State, and large Cannon: — How reverenced.

TOWARDS the beginning of the last century, Tibet was governed by a King of its own, called Tsanpa Han *; in the Chinese history, Tsan-pù; and the dominions of the Grand Lama were confined to a small province †. But about the year 1630, the Grand Lama being exasperated to find Tsanpa deficient in the respect which he used to pay him, called to his affistance the Eluchs of Koko Nor 1, a nation most blindly devoted to him. They, under the conduct of Kushi Han, aided by Paturu-hum Tayki §, invaded Tibet with a powerful army; and having obtained a compleat victory, took the King prisoner, and put him to death. After which he gave his kingdom to the Grand Lama, being satisfied with becoming his vassal; and having the title of Han conferred upon him, settled, with all his people, in the neighbourhood of Lassa, to secure the Grand Lama in the possession of his new dominion: but the auxiliary Princes returned home to the country of Koko Nor ||.

Andrada, the Jesuit, who in 1624 travelled from Agra in the Mogul's empire, to the source of the Ganges, pretends, that the Grand Lama's resentment to the King arose from his beginning to have some thoughts of embracing Christianity, upon the preaching of that missioner; and that while he was in India, whither he had returned to procure assistance in his ministry, the revolution above happened. Regis has alopted this siction of that lying Jesuit , who in all probability, never was in Tibet, as shall be shewn hereafter.

The posterity of Kûshi Han continued to protect the Grand Lama, in the manner above related; yet, according to Bentink, the Khîn of the Eluths-Dsongari, who possess Great Tartary, kept a kind of superiority over the country, and took care, that the two Khîns†, who had the administration in temporals within the Grand Lama's dominions, did not abuse that power; and whenever they endeavoured to become independent, which happened pretty often, they were always sure to find him in their road †‡, who knew how to bring them to their duty §§. About the year 1710, this Prince, called Tse-vang-raptan ||||, being then in war with the Emperor of China, arrived at the lake of Lop, and crossing the fands with only sourteen persons, came to the

river

^{*} Gerbillon, on this occasion, says, that this Prince was formerly very powerful, and is supposed to be the famous Prester John; but with as little reason as others affirm him to be the Christian King of the Abissins in Africa: for M. Polo, and the monks who first brought the account of him declare, that Ung Khân, chief of a horde of Tartars, was the Prester John; and then this latter must have concerned himself with temporal as well as spiritual affairs, which the Dalay Lama never did. Thus are writers led astray by this ignis fatuus, and beforted with a regard for authority or tradition, though ever so much exploded, or absurd in itself. † Perhaps that of Lassa, where the capital is situate. † Or, Eluths-Koshoti, see Green, vol. iv. p. 402. § Ibid. p. 401, e. | Du Halde, as before, vol. ii. p. 258, and 386. § See the same, p. 385. ** See also Hist. of the Turks, &c. p. 490. †† Meaning him at Lassa, and the other of Koko Nor. †‡ Desideri observes, that this third Tibet, or Lassa, is more exposed to the incursions of the Tartars, than the other two. Lettr Edist. tom. xv. p. 204. A Lassa Tartars they were. Dernier's Memoirs of India, tom. iv. p. 128. Tavernier, on the other hand, says, vol ii. p. 185, that the inhabitants of Bêtan know not what war is, having no enemy to fear but the Great Mogul. This circumstance agrees better with Great Tibet than Lassa. §§ History of the Turks, &c. p. 485. | Pronounced by the Chinese, Lapstan.

river Hotomni * in Kashgar. There being joined by some troops, he sent a detachment to Lassa, commanded by an experienced general, with six thousand men, to conquer Tibet; under pretence that the Grand Lama was an impossor, and that he was resolved to reduce the Lamas to their ancient dependence on the sovereigns of the country.

Talay II in †, the grandson of Kûshi, who then reigned in Tibet, marched against them with an army of twenty thousand men; but notwithstanding the superiority of his troops, was defeated and slain. After this, the country of Lassa was ravaged, the towns taken as soon as besieged, and the temples entirely plundered, even that of the Grand Lama not excepted, where the booty was immensely rich, and all the Lamas that could be found were transported into Tartary †. This happened at the time when the Lama geographers were making the map o Tibet. But Raptan, it seems, did not long keep possession of this country; for Kanghi sending an army against him, his troops were defeated in several battles, and himself obliged to retire to his own country § in 1720, all Tibet remaining in possession of the Chinese forces ||. However, it may be presumed, they did not keep it as a conquest, but restored it to its former masters; for in 1742, Friar Horace found a King at Lassa, whom he names Mivagn ¶, as well as the Dalay Lama.

As the Great Lama renounces all concern with temporal affairs ever fince the donation that was made to him of Tibet, he chuses a viceroy, who governs in his name, and by his authority, under the title of Tipa (or Deva, as some write it). For though the Hâns, who succeeded Kushi, reside at Lassa, in the heart of the country, they meddle not with the government '*, but are content with reigning over the wandering hordes of Eluths. The Tipa, though married, wears the Lama habit, but without subjecting himself to the rules of that order. The late Emperor Kang-hi, during the war with Kaldan, predecessor to Raptan, created the viceroy of Tibet, Vang, or Regulo, to attach him to his interest. He knew, that both the Tipa and Grand Lama secretly savoured Kaldan, and were capable of crossing his designs: besides, had they joined the Mongols, and interested religion in the war, it would have been difficult to withstand so many enemies. Wherefore, after the deseat of that daring Prince in 1697, the Emperor observed no measures either with the Tipa, or Grand Lama himself, but spoke like their master †1.

On this occasion our author Gerbillon, in his seventh journey into Tartary, with the Emperor of China, relates a curious passage concerning the Dalay Lama's regeneration. The Emperor had for a long time suspected the death of the Dalay Lama, because his ambassadors could never obtain an audience, under pretence that the divinity was in his retirement: but being resolved to discover the truth, he sent an envoy in 1696 to the Tipa (or Deva) with positive orders either to see him, or know if he was dead; at the same time commanding that officer to deliver up to him the daughter of Kaidan (married to a Tayki of Koko Nor, subject to the Talay Lama,) and two Hûtûktûs, who had espoused the interest of that Prince, threatening to make war upon him if he refused to comply.

Meth p. 179. § Du Halde, as before, p 388. ¶ Letter Edistom xv. press. p 22. ¶ So his letter is signed, but without the title of Han at the end, which looks suspicious properties of Grueber says, there are two Kings in Barantola, one called the Deva, who governs in temporals, the other the Grand Lama. See his Letters, p. 22, in 'hevenot's fourth tom and Ogilby's vol. i. p. 360. But is matters be as Gerbillon represents them (for Regis is not so particular), Grueber must have mistaken the viceroy for the H n, or King. He likewise, p. 20, makes the latitude of Lassa, by observation, twenty-nine degrees fix minutes: the Jesuits' map, twenty-nine degrees thirty-six minutes, †† Du Halde, as before, p. 258, 259, and 385.

The Tipa, terrified at this meffage, immediately dispatched Nimata Hû'ûltû, one of the principal Lamas of Pûtala, with a respectful letter to the Expror, offering to land the parties demanded, if His Majesty insisted on it, only interceding in their savour. Kang-hi received this eavoy with extraordinary honour, and accepted his presents of pastils, coral, beads, &c. Having been asked concerning the Talay Lore, he told the Emperor, that he had been dead fixten years: that before his death he shared them he would rise again at a place appointed; which accordingly happened: they are defined them to educate him till he was sisteen years of age, and, in the mean time to keep his death secret lastly, that he left a letter, with an image of Fo, directing it to be sent to the Emperor, the tenth moon of the sixteenth year after his decease; till which time the Lama begged His Majesty would conceal it.

The Emperor promifed to do so, and sent two inferior Mandarius along with bin, to obtain immediate satisfaction to his other demands. Two days after their departure, an envoy, whom I sis Majesty had sent to the nephew of Kaldan, returned and informed him, that in the second moon of the same year the Talay Lama's an band ser to'd him of his death, and pretended regeneration, and that in the sixth moon the roam, had a lama came out of his resistement. The Emperor hereupon the thing health along by the Lamas, sent an empress to call back Nimate III albeit, and the two emptys. The Lama said he knew nothing of what had been published in another place, but make had executed his orders. Upon the, Itis Anjesty thought it no breach of the transfer to open the above-mentioned letter before all the Mogul Prine's of his in the first twenty-second of March 1697; and thus the death of the Taley Lamas, which he peaced so long before, was published.

On this occasion it may be observed, that the Emperor's envoy to Last is for pied with hories for himself and attendants, by the country people where ever locomos; besides camels to carry his beggage, and all necessaries, being allowed for the part an ox for five days. In like traumer, the Emperor maintains the envoyers it is dead. Lama, and the Princess of Koko-Nor, when they come to Perking †.

We find little more in travely recording Lada, exceeding what her view remains from the report of merchase, a lating to the King of Buten; by which tenthe reasons already given, is to be und affood Barantola, or Lada. This Prince, according to that author, both conflortly feven or eight thousand men for his gound, armed with bows and arrows: but some carry battle-axes and bucklers. There are always fifty elephants kept about the palace, and twenty-five camels, with each a piece of artillery on his back, that carries a half pound ball, and a gunner, who sits behind to manage it.

The merchants affored Tavernier, that fome of their cannons had letters and figures upon their of above fire hundred years itanding: that no person dure stir out of the kingdom without the governor's leave, or carry a musket along with him, unless his kindred will be bound that he shall bring it back. One of them had a piece, which, by the characters on the barrel, appeared to have been made above an hundred and eighty years. It was very thick, and polished within as bright as a looking-glass. Two thirds of the barrel were garnished with embossed wires; certain slowers of gold and silver being inlaid between. The mouth was shaped like a tulip, and it carried a butlet that weighed an ounce. But the author could neither prevail with the merchant to sell it, nor give him any of his powder, which was long, but of an extraordinary force.

There is no King in the world more feared and respected by his subjects than the Ring of Bûtan; being in a manner adored by them. When he sits to do justice, or give audience, all that appear in his presence hold their hands close together above their togetheads; and at a distance from the throne prostrate themselves upon the ground, not during to lift up their heads. In this humble posture they make their petitions to him; and, when they retire, go backwards till they are out of his sight. The merchants assured Tavernier, that those about the King preserve his ordure, dry it, and reduce it to powder like sousses; that then putting it into boxes, they go every market-day and present it to the chief traders and sarmers, who, recompensing them for the r kindness, carry it home as a great rarity; and when they scass their friends strew it upon their meat. The author adds, that two of them shewed him their boxes with the powder in them †.

SECTION IV. — AN ACCOUNT OF THE SI-FAN, OR TU-FAN; AND THE COUNTRY INHABITED BY THEM.

1. Of the Si-fan's Country, and Manners of that People.

The Si-fen's Country: — Different Accounts of: — Its true Situation. — The Remains of a large Duranism. — The Black Si-fan: — The Yellow Si-fin: — Their Government, Language, and Cuffors: — Almost independent. — The Rh ibard Comey.

THE country of the Si-san (who are a people quite unknown, at least in name, to the western historians, whether Asiatic or European) is differently represented as to its situation and dimensions, in the accounts sent from China by the missionary geographers. According to Regis, it borders on the provinces of Shen-si, Section, and Yun-nan, reaching from the thirtieth to the thirty-sisth degree of north latitude; and westward to the river, called by the Chinese, Ya-long-kyang †.

By another account, it extends but a little way along the western borders of Shen-si For better understanding the situation of it, the author observes, that the little town of Chwang-lang (or Chwang-lang-ing) stands, as it were at the meeting of two valleys whereof one goes towards the north as far as the pate of the great wall, called Hya-yu quan ||, the space of above an hundred leagues, and contains three great cities, Lanchew, Kan-chew, and Sû-chew, with several forts belonging to them. The other like vexter do westward above twenty leagues to Si-ning, and is full also of little forts which are subject to that city, and render the Chincle absolute masses of the plain country: but they are not so of the mountains, which are inhabited by a nation different from the Chincle, who lie to the south of them, as well as from the l'artars, while to the north ||

This vague account only helps to puzzle the reader; for the Chinese lie to the ear and north, rather than to the south of these people; and the Tartars more to the west than to the north, where the Chinese territories interpose. In short, supposin them to be situated as before described, according to the map, their territories must be

As from hence it appears, that by the King, the Dalay Lama, who was then fovereign, is to a understood; to that by Bûtan must be understood Lassa. As for the small nustake, in saying he fits to c justice, whereas the Great Lama meddles not with temporals, it is very excusable in the author, who might well imagine that was a part of his regul office.

† Tavernier's Travels, vol.ii. p. 184, et so 1 Du Halde's China, vol.ii. p. 305.

§ It lies in about twenty-fix degrees forty-eight minutes, it he map of Shen-si.

Or Khya-yu-quan, and Kya-yu-quan.

**Du Halde, as befored.

**Du Halde, as before vol.ii. p. 22.

a narrow tract of mountains lying between the north-west part of the province of Si er-si, and the country of loke Nor, inclosing the latter on the north and east in form of a bow. But in the map there is no mention of the Si-san in those quarters, whence, princely, Bu Halde, or his correspondent, has mistaken the country of the Si-san for that of Hole Nor.

In the time place, the maps of the Jefuits differ from both the foregoing accounts. In the fifth freet of Tibet, the country of the Si-fan is diffinely marked out. It is bounded on the east by the Chinese province of Se-country on the north by the country of Koko Nor; and on the west by a river called Isacho Isitshham. The infinite the south of the lakes whence the Whang-ho islues, runs through Sections, where it where it takes the name of Ya-long-kyang, and after varies that of Kin-cha-le and a seconding to this situation, which seems to be the right, the country of the Si-fan I is between twenty-nine degrees sifty-four minutes, and threy-three degrees in the second principle of latitude, and between twelve degrees thirty minutes, and eighteen degrees eventy minutes of longitude west of Pe-king. Its sigure is triangular, the base. Which is not the north, being about thirty miles long; and the other two sides, which make and a to the south, about two hundred and forcy-five each.

This is all which at prefent remains to the Si-lan, of a very large dominion they we e formerly possessed of, compassing all Tipet, and even some neighbouring corrections of China. Hence, it may be profumed, it is (as well as on account of the affinity beaven the languages of the Si-fan and Tibet) that the Chinese, we are told, extend the name of Si-lan over all that country, and sometimes to all the nations lying west of their own empire. In all probability, it is that great empire of the Si-fan, including the whole country between China and Hindustan, with all those wide plains and defirts on the north and west of it, inhabited by Eluth-Tartars, and bounded, in the map, by a chain of mountains, which were formerly called Tangût, Tanguth, or Tankut ; and the rather, because at present the language and characters of Tibet, still used by the Si-ran, are called the characters and language of Tangut, as hath been already observed s. However that be ||, the condition of the Si-fan, or Tu-fan, is very different from what it was formerly. They have not now one town in their possession, and are pent up between the rivers Ya-long on the west, Whang-ho on the north, and Yang-tse-kyang on the east ¶; whereas anciently their kingdom had fortified towns, was well peopled, and very powerful "".

The Chinese distinguish the Si-san, or Tu-san, into two sorts of people: The He Si-san, or black Si-san, and the Whang Si-san, or yellow Si-san; from the colour of their tents, not their complexions, which are in general a little swarthy. The black Si-san have also some pitiful houses, but are very uncivilized. They are governed by petty chiese, who depend on a greater. Those whom Regis saw were dressed like the inhabitants of Hami ††. The women wore their hair parted into tresses hanging down on their shoulders, full of little brass mirrors.

The

^{*}Who seems to be Regis, for he is quoted afterwards. † See the maps. ‡ Du Halde, as before, vol. ii. p 385. § See Green, vol. iv. p 457, note f. || How easily might the missioners have solved all difficulties concerning the situation and extent of Tangût, when they were on the spot? But they do not so much as tell us what name the Si-san go by, either among themselves or any of their neighbours, except the Chinese. Thus, for want of making proper enquiries, either through negligence or ignorance, they have recourse to conjectures themselves; differ from one another in their accounts of things, and generally leave material points of history and geography in the dark, just as they found them. ¶ Its springs are in this country. The most samous of them, called He-shwi by the Chinese, but Chûnak by the Tu-san, rises in the mountains named Chûrkûla.

** Du Halde, as before, vol. i. p. 22, and 29. †† Or Kham-il, in Little Bûkharia.

The Yellow Si-lin are subject to certain families, whereof the cldest is made a Lana, and wears a vellow habit, which may also contribute to their name. These Lamas, who are all of the same family, and govern in their respective districts, have the power of deciding cares, and punishing criminals. They inhabit the same canton, but in separate bodies, and without forming large samilies of the same kindred, which appear like Syam in, or little camps, as the Chinese geographers call them. The greater number of them dwell in tents; but some have their houses built with earth, and a few of bricks. They want nothing of the necessaries of life. They have numerous slocks of shoop. Their horses indeed are but small, but well shaped, mettlesome, and strong.

The Lamas who govern those people do not make them uneasy, provided they render them cortain bonours, and punchually pay the dues of Fo, which are very trising '. The Armenians who were at To-pa†, seemed very well pleased with the Lama, who is lord of the place, and was not then above twenty-five, or twenty-fix years of age. Far from vening his subjects, he only took from each family a very

finall tribute, in proportion to the quantity of land it poffesfed.

There is faid to be some disterence in the language of these two sorts of Si-san; but as they understand one another well enough to understood together, it is probable that they dister only as dialects of the same tongue. The books and characters used by their chiefs are those of Tibet. They have customs and ceremonies very different from the Chinese, though berdering on them: for instance, it is usual for them to present a large white handkerchies of cotton or tassety when they go to wait upon persons whom they mean to honour. They have also some customs like those found among the Kalka Tartars, and others which resemble the usuges of the Tartars of Koko Nor.

Neither nation is more than half subject to the neighbouring Chinese Mandarins, before whom they rarely appear when summoned, little regarding their citations: nor dare those officers treat them with rigour, or offer to force them to obedience; the frightful mountains they inhabit, whose tops are covered with snow even in July, sheltering them against all pursuits. Besides, as the rhubarb grows in abundance on their lands, they are courted by the Chinese for that precious commodity 1.

2. The History of the Si-fan, or Tû fan.

Formerly very famous: — Invade the Empire: — Conclude a Place: — Affift the Chinese. — The Whyhe Tartus the letter Peace. — Invade the Empire: — Burn the Capital: — Are made to retreat by Chinese Stratagens. — Invade China of ish: Are defeated again. — Sue for Peace: — Ere letter but routed: — Another Defeat: — Their Capital taken: — Recovered again: — The Tû-fan retreat: — A Peace concluded: — Their sourching State.

IT appears from the Chinese geographers of the middle age, from the history of the provinces of Shen-si and Se-chwen, and by the great annals Nyen-i-she, that the Si-san, or Tû-san, had formerly a very large dominion, and Princes of great reputation, who made themselves formidable to their neighbours, and even to the Emperors of China. On the east side they not only possessed divers territories, which at present belong to the provinces of Sc-chwen and Shen-si, but also pushed their conquests so

^{*} These dues seem to be a kind of tithes, as being exacted on a religious account. That of Fo was always the religion of the Tû-san, who always chose their Lamas to be ministers of state, and sometimes to command their armies. Du Halde, p. 29.

† Near Si-ning, at one end of the great wall in Shen-si.

† Du Halde's China, vol. i. p. 22, et seq. Some of their avers yield gold, of which they make handsome vessels and images.

far into those provinces, as to subdue several cities of the second rank, whereof the formed four great governments. Westward they were masters of all the countries, from

the river Yalong to the borders of Kashmir, in the Great Mogul's empire.

In the feventh century, Ki-tson, King of the Tu-tan, possened this vast do minion, and had several Kings his tributaries, to whom he sent patents and seals of gold. This Prince, in 630, coveting an alliance with Tay-tsong, that renowned Emperor of the Tang dynasty, sent a samous embassy to that Prince; which having been received with great marks of distinction, he by a second, demanded a Princes of the imperial blood, for his son Long-tsong. The Emperor's council, looking on this as a very bold proposal, rejected it, without deigning to deliberate on it. Hereupon Long-tsong succeeding to the throne, on the death of his sather, came at the head of two hundred thousand men to demand the Princes; and having deseated certa a Pinces tributary to China, who opposed his passage, penetrated to the borders of Shen-1, where the Emperor then kept his court. From thence he sent one of his officers with a haughty letter to His Majesty, demanding that the Princes should be immediately delivered up to him, with a certain quantity of gold, silver, and silks, by way of portion.

The Emperor, offended at fuch a demand, amused the envoy with hopes, till his troops were affembled on the frontiers, and then dismissed him displacefully, and without returning any answer to his master's letter. At the same time his army attacked that of the Si-fan, and routed it. However, as the loss was not considerable, Longtsong rallied his troops, and being in a condition to give the Emperor uncasiness, in 640*, the Princess, by advice of his council, was tent, with a great deal of pomp, to the Si-fan King who after the ceremonies of marriage were over, retired, and became very serviceable to the Empire on divers occasions: particularly, when the General Alena usurped a tributary kingdom of China, he joined the imperial army with all his forces, which he commanded in person, and had a good share of the victory in killing the

rebelt.

Ki-li-so. who succeeded Long-tsong, improved the peace he was in with all his neighbours, by the treaties which he made with different nations of Tartars, especially the Whey-he †. This Prince dying without any issue, Susi, his next heir and successor, was, called in, with his Tartarian confederates, to affish the Emperor When-tsong §, obliged at that time to quit his court at Chang-gan-sû (at present called Si-ngan-sû) and abandon it to the rebel Gan-lo-shan. This Gan-lo-shan was a toreign Prince, whom the Emperor, against the advice of his ministers, had advanced to the highest employments, and even intrasted with the command of his army. This traitor, finding himself master of great part of the north, assumed the title of Emperor, and marched to attack Chang-gan; which having entered, he plundered the imperial palace, and carried the treasure to Lo-yang ||; but by the assistance of Su-si, he was deseated, and soon after killed in bed by his own son.

The Tû-fan, or Si-fan, in reward of their fervice, besides the rich plunder of Lo-yang, and other rebellious cities, were presented with great quantities of silks, and the choicest things that China afforded: but whether through covetousness, or pride, as soon as

they

The dates, which in Du Halde are fet in the margin, we have thrown into the text. † Du Halde's China, vol. i. p 23. † Whey-he, or Whey hû. They inhabited in the neighbourhood of Turfan. See before, p 431.e. § Or, Hivn-tsong. This Emperor began his reign in 713, and did in 762. He founded the college of the Han-lin-ywen, first gave the title of Regulos to his distinguished generals, and divided his dominions into fifteen provinces. || This was about 762, in the fourth year of the reign of So-tsong, Hivn-tsong's successor. But this history, in Du Halde, is very inaccurate, neither observing the dates, nor reigns, when the sacts, which are related, happened.

they heard of the Limperor's death, they fet forward with a formidable army; and uriving on the frontiers of the empue, before there was the least surmise of their irruption, the governors of Ta-chin-quan, Lanchew, and all the country of Ho-fi-û †, were forced to furrender. The prime minister, who at first could not believe this, fent Ko-tfey, the most experienced general then at court, with three thousand horse to learn the truta.

Kto-tfey f being informed at 11/yer-yar,, a city not far from the capital, that the enemy's army confilling of three hundred thouland & men, would be there that very d . dispatched a courier to the minister to apprize him of the danger, and preis for Juccours: but the good patriot did not flir a ftep fafter. Meantime the general of the who knew the country, being arrived at Hyen-yang, detached a confiderable of troops to pones, themselves of a bridge on the river. The Emperor, from vincin the honest ministry had, tool then, concealed the danger he was in, confounded • no the nets, abondoned his palace. The great men of his court, the officers and prope all followed his example. Thus, the victorious army entered the palace without if it mee, and having carried off the immense riches, set the city on fire.

No-tley, who had retired, that he might join the troops, which, on the first alarm, lell ('h. ng-gan, feeing himfelf now at the head of forty thouland men, to supply by policy what he wanted in strength, ordered a detachment of horse to encamp on the neighbouring hills; and there ranging themselves in one line, to make a dreadful noise with their drums, and light up great fires every night in different places. This artifice succeeded; for the Tû-san fearing to be surrounded by the united forces of the empire, conducted by a general of known bravery and experience, marched westward and

blocked up the city of Fong-tfyang.

Ma-lin, who commanded in that district, came to the relief of the place; and forcing his way through a body of the enemy's troops, whereof he killed above a thousand, threw himself into the town. As soon as he was entered, he caused all the gates to be opened, to let the enemy fee he did not fear them. This extraordinary conduct confirming them in their first suspicions, and their fatigued troops being unable to withstand fresh forces, they resolved to retire with the spoil they had already gained. After their retreat, the Chinese repaired Chang-gan, whither the Emperor returned some months

after his shameful flight.

These troubles were no sooner over, than the Chinese were obliged to take the field againft a new rebel, called Pû-kû, who entered into confederacy with the Tû-fan and the Whey-he Tartars, before mentioned: but he being very opportunely taken off by a fudden death, they had the address to disunite the two nations, by fomenting a jealousy about the chief command. Yo-ko-lo, general of the Whey-he, would needs command the whole army. This the Tû-fan opposed, as contrary to their orders, and dishonourable to their kingdom, which was much superior to the little state possessed by the Whey-The Chincse generals, who were encamped in their view, secretly supported the pretentions of Yo-ko-lo, and at length joined him. Hereupon the Tû-fan were attacked as they were marching off, and lost ten thousand men in their retreat.

The King of the Tû-san meditated how to retrieve his losses, and being informed, that the Whey-he were retired much diffatisfied with the Chinese, he sent his army to befiege Ling-chew. The governor of this city, and its diffrict, who had but few troops,

^{*} This was ten years after Hinn-tsong's death, in 772, the eighth of Tay-tsong So-tlong's successor. That is, to the west of the Whang-ho. Elsewhere, Ko-tsu-1. In Couplet Ko-tswi. hundred thousand, according to Couplet, p. 61. Du-Halde, as before, p. 23, et feq. and 199. care-

carefully shunned an engagement. The course no took was, at the heart of two thousand horse, to attack the magazines of the besegres; which he not only built, but carried off all the spoil they had taken, with perfect their begage. This has ooled the Tû-san to return home in histe, where they remained que locaive cors, and then brought a formidable army into the field, which duality at to two behins, tell about at the same time on the districts of King-cher and Pag-cher. These macros troops easily deseated several bodies of the imperial totes. By that it the Ceneral we key routed them intirely, in 779, by means of an ambericade.

This defeat disposing the King of 10 fen to neare, he so to man' todor with no sewer than sive hundred men in his retinue, to the map int; who to make him, detained him a least time of court, without on had once. This is the secretary incented at such contempt, was prepared to take resemble, when he shall have him pen d to cie. His son Testions, who succeeded (in 701), then g and instant in a such teached the ambassador, and his retinue, gave the north nables, and in the them with presents, sent them back, under the conduct of Wey-ling, one of his coils rs; who had orders to lay the blame of the small regard which had been paid his ambassadors, to their bad

conduct, and having too numerous a r tinue f.

Wey-ling, contrary to his expectation, was received and diffinified vitth henour, as well as a magnificence that furprized the Emp for himfelt, and gave him an effect in for this court I, which promifed an involable regard to peace. But this King dying in 786, Trang-po, his fuccessor, ordered his army forthwith to enter Shen-si; which they did, without being discovered, and defected all the imperial troops they met with, till they arrived at Kyen ching, called a pretent Kyen-yang; but the Chinese general, Li-ching, with the troops of the province, or ling up, as the enting were on the point of besieging the city, obtained so complete a victory, as forced than to sue for peace, which was ratisfied by oath. Yet some of this officers, who defined the communion of the var, endeavoured to seize the Emperor's envoy, and carry him to their comp. The general, however, distance they are her hostilities, returned home with his army.

This first expedition not laving the detect of success, the King of the Tufan prepared for a second; and in 791 feat an army strong enough to oppose both the Chiles, and their new allies he whey-he Tarras. At first they took some confidence forts, which ray in their roads; and having post-fied themselves of Gon-si, advanced to Peting, which lies to the south of Ming-hap. Here they were surprized, and descated by the Whey-he: yet far from retiring, they continued their match towards the court with incredible resolution: but soon after, the General Wey-hau falling on them unexpectedly, cut several bodies of them in pieces, and pursued them as far as the frontiers; where afterwards, to hinder the incursions of the enemy, the fortresses of Tong-ka, Ho-tau, Mu-pu, and Ma-ling, were built, in the district of Nica-yang-ste,

belonging to Shen-si.

Yet this precaution proved useles; for scarce were those towns finished, when the Tù-san returned in 801, and at length took Lin-chew, which they had before attempted several times in vain. But on the appearance of Wey-kau with his army, they abandoned the city, and marched towards Wey-chew in Se-chwen, which was one of the best places they had. Wey-kau pursued them, and finding they sled continually before

^{*} His death fell out in 780, and Ko-tsey, the famous general, died in 784, the sirst of the forty ninth fexagenary cycle of the Chinese. † Du Halde's China, p-24. ‡ Yet neither the name, nor situation of this court is mentioned; nor does it appear from the history in what part of their dominions the capital of the Tû-san stood

him, laid stege to that town. The King of the Tû-san, startled at this next, in mediately sent Lun-mans, his prime minister, with confiderable succours; but toing met by Wen kau, he was defeated, and taken pristate. In mediately distribusition, he had admission u to Wey-chew, which he made a place of arms, and we to best go the sorters of Quen-min-ching; but was bast ed there, through the bravery of the

guvuror.

Wey-Chew was one of the royal cities; and the Kings of Tû-fan, fince the time of Ki-lo-fo, refided there one part of the year: io that King Itay, who is recelled his brother, refolving by all possible means to recover it, levied an army of an hand, d and fifty thousand men next year, and fent to besiege it. On the report of their match, the Camele general threw himself into the city: but the expected succours nor arriving, he was constrained to surrender, after a siege of twenty-sive days, held out against the continual assaults of the enemy.

The Tû-fan, puffed-up with their conquest, advanced towards Ching-tu-fû, the capital of Sc-chwen. The Emperor's general, unable to oppose their march, spread a report that he was gone to puffes himself of the desiles of the mountains through which they had passed, and caused his little array to make all the necessary motions to induce them to believe it; which had so good an effect, that for fear of having their

retical cut off, they retired to Way-chew.

As toon as they were returned, Itay, who was a mild prince, being content with having retaken the place, fent to acquaint the imperial generals on the frontiers, that he was willing to live in peace; and as a proof of his finecity, enjoined his officers to act only on the defensive. The Chinese, on their side, behaved with great generally, on several occasions. Si-ta-mew, a Tû-san, governor or Wey-chew, having offered to deliverup that place to the Chinese general, almost all the other officers were for accepting the proposal, but Ni-û-san; who declared, that a great empire ought to prize sincere dealing more than the possession of a town, and that their breach of the peace would authorize all the persidies which the Tû-san had committed, or should commit for the future. Hereupen the offer was rejected.

Itay took the opporturity of the peace, to govern his subjects by new laws, and advanced none to employments but men of the greatest medic. If he was informed of any person remarkable for his innowledge, and application to study, he preferred him to those who were equally experienced in the rangement of estars. Thus, he for shang-pi-pi, one among the literati, of great reputations, have the forthest part of the kingdom; and after he had examined him, made him governor of the city and

diffrict of Chen-chew, at prefent Si-ming 7.

3. History of the Tu-fan communed, to the Destruction of their Empire.

Disorders in Government cause a R.Jellion: — The Released in all his designs. — The fan Power levker. — King of Hya deseated by the Tu-fan: — Their Power raised by owndring the Kingdom among three Brotlers: — Two of them submit to the Einsteror on good terms. — the sinal Destruction of the Empire of the Tu-fun, or Si-jan.

ITAY dying without iffue, was succeeded by Ya-mo, his nearest of kin, who gave himself up wholly to his pleasures: he lived in peace with his neighbours, but by his

oppressions

^{*} Hence it appears that the Tû-fan had introduced the Chincle form of government; perhaps, after having made some conquests in China, as the Lyau and Kin did afterwards. † Du Halde's China, vol. 1. p. 25, et &q.

oppressions and cruelties, became so odious to his subjects, that they less their courtiin crowds. In short, he was the first cause of this kingdom's falling to dream. The distractions increased much more after his death; for as he neither less any ensides, nor had nominated a successor, one of the ministry, gained by the willow queen, caused the son of Pay-va, her savourite, a child of three years old, to be preckimed Fing in 842.

On the first report of this election, Kye-ta-na, first minister of state, hereign to the palace, and opposed it, in behalf of the royal family. But his zero cost black his life; for they killed him as he was returning home. This conduct of the court less them the hearts of all the people. Lû-kong-je, the great general, who was tom with the army, near the frontiers, refused to obey the orders that were flat him by the new government; and even conceived thoughts of making himself king. He was a man of boundless ambition, and proud, full of his own merit, extremely passonate, and often cruel: but on the other hand, was brave, skilful, and capable of the greatest undertakings. He first caused a report to be spread, that he was proposing to extirpate the usurpers of the crown; and then marched directly against the army of the new King, which he deseated. He also took and plundered Wey-chev. By this time his army, by the accession of malcontents, was an hundred thousand strong. But the first thing he attempted, was to bring the governors of the provinces into his measures.

Shang-pi-pi being one of the principal, and his troops, by the care he took to exercife them, the beft in the kingdom, Lu-kong-je was willing to found him first: and after writing him a deceitful letter, advanced towards the city. Shang-pi-pi, who save through the general's design, to deceive him in his turn, wrote him an answer, which flattered his hopes. At the same time, setting forward with all his troops, he came upon the rebels so unexpectably, that without any difficulty, he defeated their army although much stronger than his own. Lu-kong-je retired much enraged in his heart, and, in 846, having recruited his forces, imagined, the way both to regain his authority, and win the affections of his nation, was to enter the territories of China, and give them up to be plundered. He had some success at the beginning; but was quickly beaten by the Chinese generals, who afterwards took from the Tû-san the city of Yenchew, and several fortresses.

The rebel, who confidered these as losses which might easily be retrieved, if once he was sole master of the kingdom, having augmented his army by Tartars, to whom he promised the plundering of the frontiers of China, bent all his thoughts on reducing Shang-pi-pi. Thus he began his march; and arriving near Chen-chew, forced Shang-pi-pi to abandon his camp, which he had fortisted on the first news of his approach. Hereupon that officer passed the river, broke down the bridge, and followed the enemy step by step on the other side, without ever coming to an engagement, although Lukong-je, to draw him to a battle, made great ravages in his march. Meantime the natural brutishness of the rebel general, and his bad temper, which increased by the small success of his enterprizes, rendered him so insupportable to his soldiers, that they deserted in troops to Shang-pi-pi, while the Tartars, for the same reason, rended home.

Lu-kong-je hereupon despairing of compassing his design, submitted to the Emperor on certain conditions, and repaired to Ko-chew, a Chinese city, where he lived at ease the remainder of his life. This happened about the year 849. While this ambitious general was master of almost the whole forces of the state, the Princes of the Blood retired into different parts of the kingdom, where they had small patrimonies; and some took shelter in certain forts that belonged to them, towards Se-chwen, resolving rather

to submit to the Emperor of Clina than to an usurper. Others fortified themselves in their mountains; while some of the most considerable remained in the territories they possessed, bordering on the government of Shang-pi-pi. Hence arose an infinite number of distractions in the state, which lasted many years, and proved the ruin of this

monarchy at last.

When the Tû-san, divided into disserent parties, were weary of fighting, many officers and soldiers joined themselves to Pan-lo-chi, Prince of Lû-kû, a place in the borders of the district of Chen-chew, which the children of Shang-pi-pi had preserved for their nation. As soon as they beheld a chief of the royal blood, they quickly formed an army, and resolved to attack the King of II)a, who had ill requited their fervices. This new King was a Tartar originally of Tupa, (near Si-ning,) who, by affishance of the Tû-san, had about the year 951, founded a new dominion, near the Whang-ho, under Li-ki-tiyen *, in spite of the Chinese, the capital whereof was Hya-chew, at present Ning-hya; from whence the new kingdom took its name. This King had in the year 1003, † renewed the war with the empire, at that time governed by the Song t, entering suddenly with a numerous army into the western part of Shen-si, which bordered on the small dominion that the Tù-san were still possessed.

Pan-lo-chi offered to join the Chinese commander with his forces, to destroy this growing power, provided the Emperor would honour him with a title that might give him more authority among those of his own nation. The proposal being liked, His Majesty sent him patents, as governor general of the Tû-san. The King of Hya, who knew nothing of these private contracts, after making some ravages, besieged the town of Si-lyang, and taking it, put the governor to death. He thought to push his conquest farther, believing, that Pan-lo-chi was coming to join him with his troops: but that Prince arriving at the head of fixty thousand men, attacked him with so much valour, that he entirely deseated his great army; however, being wounded in the battle, he

died foon after the victory.

So-tfo-lo, his fuccessor, in 1015, bent his thoughts on recovering the ancient monarchy of his ancestors. His little dominions consisted only of seven or eight towns, particularly Tsong-ko-ching, Li-tsing-ching, Ho-chew, I-chwen, Tsing-tang, Hya-chen, and Kan-ku, with some neighbouring countries; but was in hopes, that the rest of the Tû-san would join him, when they should see him powerful enough to defend them. He fixed his court at Tsong-ko-ching, where he established officers the same, both as to number and titles, which the kings, his predecessors, had. Afterwards, levying new forces throughout his dominions, he entered the territories of the empire several times, but was always beaten; and at length, concluded a peace.

As the growing power of the King of Hya, who had assumed the title of Emperor, gave So-tso-lo some uneasiness, the Chinese monarch, to engage that Prince more firmly in his interest, made him governor general of Pau-shun, which stood very conveniently for him: but So-tso-lo dying soon after, the division, which ensued among his children, hastened the entire ruin of the Tû-san state. That Prince had by his first wife two children; one named Hya-chen, the other Mo-chen-tsu. He had afterwards the Prince Ton-shen, by a second venter, who prevailed on him, in her son's favour, to imprison his children by the first, and oblige their mother to turn nun. But they finding

* See an account of the origin, extent, and end of this monarchy, p. 433, and 446.

[†] This is the year marked in the margin; but if so, Li-ki-tsyen must then have reigned sitty-two years.
† This family, which is the nineteenth, began their reign in 961.

means to escape, and deliver their mother out of the convent, the reords who had assisted them, declared in their favour.

So-tso-lo, who had recovered from his infatuation, approving of this change, gave Tsong-ko-ching to Mo-chen-tsu for his maintenance; for he had removed is court to Chen-chew. To Hya-chen he assigned Can-ku, for the place or his abole; and to Ton-shen, whom he judged most capable of keeping up his family, he surredered all his authority, with the government of Pau-shun, and the rest of his don'ties. Ton-shen resided at Li-tsing-chin; where he was beloved of his people, and he red by his neighbours; insomuch, that all the Tû-san, who do all to the north of the Valang-ho, were under his subjection.

This great power, wherewith the younger brother was invested, gave the two elder, and their samilies, apprehensions of being one time or other opposite. Anti-ching, fon of Hya-chen, more uneasy than his lather, deli end up Kaa-bu. Ho-chew, and all the lands which were in his possession, to the Emperor; who quart d to him, and his posterity, whatever he demanded, in order to live with honour in the case inc.

Kyau-ki-ting, the heir of Mo-chen-tfu, the eldest brother, was much a took in his little state; but did not long survive his father. His son Ly charg, who rescreeded, so incensed his subjects by his violences and cruelty, that they somed a cost in to depose him, and set up his uncle Sû-nen in his stead. But the plot being discovered, Sû-nen, and almost all his accomplices, were put to depth.

One of the principal officers, named 11 earlo-ki, finding means to efcape, carried with him Cho-la, one of the family; and fer in the city of Ki-ku-ching, could him to be proclaimed Prince of that petry flate. But Hya-ching haltering that a tarn his forces, took the place, and put Cho-fa to death. Thyen-lo-ki having tour means to get to Ho-chew, perhaded Van-chau, the governor, to conquer the country of Thing-lang, and rep eferting the thing as very cafer, that general attacked the little city of the oblivion, which he took without difficulty. Hereupon, Prince Hya-ching theing a minfulfill hated by his people, and vigorously attacked by the Chinese, in 1099, reprired himself to Van-chau, and offering him all the territories that belonged to him, obtained his domainds of the Emp ror.

The like happened to Long-fu, a fon of Mû-ching, whom one of the chiefs of the Tû-lan had put in perfection of the city of Hi-pa-wen. After reversi but les fought, with various fuccess, against Van-chau, wherein he distinguished himself by his surprizing valuer, that Prince submitted also upon advantageous terms.

In the midst of the troubles, which arose in the twelsth century, between the Chinese Emperors of the dynasty of the Song, and the eastern Tartais, called Nu-che, who took the name of Kin, the samily of Ton-shen, which continued longest in splendor, made an alliance with the Kings of Hya; and under their protection, enjoyed their to literies premy peaceably; till at length it was involved in the common ruin by the victorious arms of Jenghiz Khân. The year 1227, according to the Chinese history, is t'e zera of the intire ruin of the Tû fan †: from which time they have remained in their ancient country without either name or power ‡.

The missioner passes slightly over this part relating to the destruction of the power of the Si san, and Si-hya; which yet is the most curious and interesting to us or all their history, as being connected with that of Jerghiz Khin.

† Yet in the preceding history we find no mention of them, possibly for the reason given by Green, vol. iv. p 447.

INTRODUCTION.

News of Kanay: - A Minfion thither refolved on, and why. - Pagans deemed Christians. - Goez prepares for his Journey. - Abstract; whence taken.

HE name of Katay, first made known in Europe by Marco Polo, had fince his time been so little heard of, that most people doubted if there ever was such a country: but while the public were thus divided in their opinions, news came from the Jesuits of Lahor † concerning that famous empire. They had their information from an aged Mohammedan merchant, who had distributed an hundred thousand pieces of gold at Mekka, and had lived in Khânbala † thirteen years, whither he went as ambassador from the King of Kaygar S. He said the Katayans were a very fair and hand. tome people, exceeding the Rûms, or Turks, in comeliness: that they were Christians, having temples full of pictures and images; had crucifixes, which they devoutly adored: priests, whom they much reverenced, and fed with presents: monasteries, altars, lamps, processions, and other ceremonies. He added, that among them were some Jews, and many Mohammedans; which latter were in hopes of converting the Christan King to their religion.

On these tidings, Nicholas Pimenta, a Portugueze, visitor of the Indies at Goa, out of his Jesuitical zeal formed a design of sending missioners to instruct this nation; who being at so great a distance from the head of the church, might otherwise, it seems, be liable to fall into errors. Hereupon he fent advice to the Pope and King of Spain: who forthwirn gave orders to Arias Saldanna, then Viceroy of India, to affift and defray the emperices of the expedition, as Pimenta should direct. Goez, who was coadjutor to Xavier, superior of the mission in the Mogol's empire, and spoke the Persian, as we'll as understood the customs of the Mohammedans, being then at Goa on an embassy to the Viceroy from the Great Mogol, Akbar, who had a great esteem for him.

Pimenta | pitched on him as a fit person to undertake this new mission.

Those of the society were informed, by the letters of Matthew Ricci, sent from Peking, that Katay was the fame country with China: but as that information was contrary to the advice of the Lahor Jesuits, the visitor inclined to the opinion of the latter. On the one hand, he could not conceive, it feems, that so very foolish a sect as the Mahommedan could penetrate into China; and, on the other, it was affirmed. that there was not the least fign of Christianity ever having been in that vast empire. Whereas Katay was reported to be a Christian country, and this was the rather believed.

VOL. VII. 4 4 88

^{*} Green's Coll. vol. iv. p. 642. † In a letter of Jerom Kavier, dated from thence 2508.

§ It should be Kasgar, or Kasngar.

| He was joined in † In Purchas, Xambalu. He was joined in commission with another ambassador.

as it came from the Mohammedans themselves. However, it was thought not improbable, that Katay might have communicated its name to China, as being a kingdom contiguous to it. On the whole, it was thought proper to pursue the design with a view both to remove the doubt, and find out a shorter way of trading with China.

With regard to the Christians, whom they took for granted would be met with in Katay, the Mohammedans, fays Trigautius, either told lies, according to their custom, or were deceived by appearances: for as they do not worship images themselves, and saw many in the temples of the Chinese, not much unlike these by which the Papists represent the mother of God, and certain saints, they might think both followed the same religion. They observed, that the priests put candles and lamps on their altars: that these Pagan facrificers were facred vestments, like what the Romish books of ceremonies call pluvials: that they make processions, and sing much in the same manner as is done in the Romish church, according to the institution of St. Gregory, and such like things; which the devil, says our author, who imitates facred ceremonies, had transferred to the Chinese; and this resemblance, continues he, might induce foreigners, especially Mohammedans, to think they prosessed Christianity.

Goëz being chosen as before mentioned for the expedition, was seat back by the visitor to Lahor, then the capital of the Mogol's empire, in order to accompany the merchants, who every fifth year, according to the old Mohammedan's report, set out for China, with the title of ambassadors from the King of Persia. In 16.2 he came to Agra, where the Akbar, applauding his design, gave him not only his letters to several petty Kings, his friends or tributaries, but also four hundred crowns for his journey f. Here he put on the the habit of an Armenian merchant, wearing his hair and beard long; also, according to the custom of that people, took the name of Abdallah S, adding Isay, to denote his being a Christian; and by this means obtained a free passage,

which he could not have done had he pailed for a Portugueze.

He carried with him feveral Indian commodities, as well for diffuife as to exchange for necessaries on the road, bought with money furnished by the Viceroy for that purpose. He arrived at Lahor the 13th of December. Xavier gave him for companions two Greeks, Leo Grimani, a priest, and Demetrius, a merchant, who were will acquainted with the roads; and, in place of four Mohammedan servants appointed him he took one Isaac, an Armenian, to whom we owe the following journal of his travels: for Goëz dying at So-chew, in the entrance of China, Isaac went forward to Pe-king, where Ricci drew up an account of their travels, partly from some minutes left by Goëz, and partly from what Isaac told him, on the credit of his memory ||.

This curious relation is inferted in Ricci's Commentaries ¶, which Nicholas Trigautius, or Trigault, a Dutchman, translated out of the Italian MS. into Latin, and published at Rome in 1618. Purchas has given it in English, in his Pilgrims; and Kircher an abridgment of it in his China Illustrata; whence Ogilby has made his translation. The following abstract, though referring to Purchas, is taken chiefly from

the original.

Chasubles, or Copes. † We have already shewn, that there is more reason to believe, that the devil transferred those and other coremonies, doctrine, and practices from the Bonzas to the Papills. See before, p. 221, a. † Purchas adds, from Jarric, besides a thousand supees, which he had already spent. Perhaps that was the money advanced to him by the Viceroy, as mentioned lower down. Purchas says, from Jarric, that he took the name of Branda Abdallah. | See Purchas, vol. iii. p. 311; and Trigant. de Christiana Expedit cap. xi. and xiii. | Book V. ch. xi, xii, and xiii. | Book V. ch. xi, xii, and xiii. | Tunder the title of "De Christiana Expeditione, apud Sinas." It was transfated into French, and published at Paris the same year

OLZ, furnified with feveral writings, and a table of moveable feafts till the car 1610, lest Lahor in Lent 1603, with a caravan of five hunar d merciant, who fet our every year with a great number of horses and waggers for the kingdom of Kallar. In one month's time they came to the city of Ather, in the province of Lahor; and fifteen days after passed a river a bove-shot broad, the stary skill a days, on a report of a numerous gang of robbers being on the road. In two mantis more they came to the city of Passaur, where they rested twenty ways. At another inual town beyond this they were informed by a pilgrim, that thirty days off war a city named Kafrestân *, into which no Mohammedan dared to enter under pain of death; yet that Pagans were admitted into the city, but not their temples. He added, that the inhabitants of that region go to church dreffed in black: that the foil was fertile, and yielded plenty of grapes: he gave a cup of the wine to Goëz, who found it very good, and thence conjectured they were Christians. Here they staid other twenty days: and because the way was infested with thieves, they procured a convoy of sour hundred foldiers, from the lord of the place.

Travelling twenty-five days farther along the foot of a mountain, they came to a place called Ghideli, where the merchants pay duty. On the road they kept on their guard against the robbers, who, from the top of the hill, asiail them with stones, unless fome go up to repel them. For all their care they were affaulted by them, and many wounded, who had much ado to fave their lives and goods. Godz escaped by flying into the woods.

In twenty days more they came to Kabul, a famous city and mart fill in the Mogol's dominions. Here they staid eight days; for some of the merchants had no mind to go farther, and durft not venture forward, being fo few. Here the caravan met a Princes, who was fifter of the King of Kaskar, called Massamet Khan +, and mother to the King of Kotan: she was called Haji Hanem !, as having been on pilgrimage to Mekka; from whence returning, and falling flort of necessaries, she applied to the merchants to borrow money. Goez, confidering that his Mogol patents were now wearing out, thought this a proper opportunity to procure the friendship of another King; and, therefore, lent her 600 crowns on certain goods, refufing to take any interest; which, how ver, she made up to him, repaying him bountifully in pieces of marble, which is the best merchandise that can be carried to China. Crimani, the prieft, wearied with tediousness of the journey, would go no surther; and Demetrius staid in this city to trade §.

The caravan being much increased, Goëz held on with Isaac the Armenian. In the next city they came to, called Charakar ||, is great store of iron: here Akbar's seal,

^{*} Kafichan fignifice, " the Country of Infidels," In the original Capherflam.

[†] Doubtless a mistake for Malamet Khân, and the rather, as ne is ancovered miscal Haji signifies "Pilgrim," and is a very honourable title among the Mohammedans. § Purchas, p. 311 Trigaut. 1, v. c. 11. || In the original, Ciaracar. Doubtiels a mistake for Maliamet Khan, and the rather, as he is afterwards miscalled Mahametain.

which hitherto had freed him from payment of customs, was diffect unit. I can disaster they came to Parvam, a small town, in the utmost considered the Green control dominions. After resting five days they travelled over high mountains, and in twents stages came into a region named Aingharan. In fitteen more they got to a other caucil Kalcha*, whose inhabitants dwell in villages, and have fair hair like the Dutch. The days farther they came to a place called Jalalabad†, where the Bramins exact customs granted them by the King Bruarate.

In fifteen days more they came to Talhan t, where a rebellion of the Kalchans detained them a month. Hence they passed to Kheman, a small walled town, under Abdulahan, King of Samarhan, Burgama, Bukharata S, and other no shbouring least doms. The kalchans being in the neighbourhood, the commander of the place to the merchants not to pursue their journey by night, lest the rebels lighting of their should by that means be sure shed with herites; but to come into the town, will join him to repel them. They were scarce gotten up to the walls, when rews being been since in

that the Kalchans approached, the governor and his people ran away.

Hereupon the merchants in de in laste a solification with their baggage, and car is into the inclosure plenty of stones, to make use of, in case arrows sailed. In a robers perceiving that, sent a messenger, desiring them to sear nothing, promising to accompany and defend them. The merchants not daring to trust them, sled to the new wood, leaving their goods at the mercy of the thirves; who, after they had taken who they pleased, called them back, and permitted them, with their empty packs, to enset the empty wall. Benedict lost nothing but a horse, for which also he attern a directived cotton cloths. They continued at khem a in great apprehensione, the attern at length an eminent commander, called Olobet Phanaskan, tent his brother out or Bukharate; who, by threats, compalled the rebels to let the merchants depart. However, their rear was plagued with palierers, sour of whom setting upon Goez, he threw amongs them his Persan turban, and while they made a foot-ball of it, set spurs to his horse, and overtook his company.

After eight days travel, in a very bad road, they came to Tenga Badashan ||, which signifieth "a troublelome way;" for there is space but for one to pass, and that on the high bank of a great river ¶. The inhabitants, with a company of soldiers, set upon the merchants, and took from Goëz three horses, which he after redeemed. Here the staid ten days, and then, in one day, came to Charcunar '*, where they were it a days detained by rains in the open field, and, to mend the matter, assaulted by thickes. Ten day after they arrived at Serpanil, a place quite forsaken. Then they climbed a high hill, called Sakrithma, which only the strongest horses were able to pass, the rest going about: two belonging to Goez halted, and had much ado to overtake the caravan.

In twenty days they came to the province of Sarchil, where they found many villages, not far from each other. After two days flay for refreshing, they in two days more came to the soot of a mountain, called Chechalith H, which they ascended, thick covered with snow; many were frozen with the cold, and Goez was in great danger,

Ling that here is find fix day: at length they cannot a Tanghetar, belonging to the king 'om of that are. There is a fell from the bank of a great river into the water, and for significant legal, it dead. In one on days more they reached the town Yakonth; but here added to bad, that Goez loft fix hories by the way. Five days after, hatting before the carryan, he got to Hinkan; from whence he fent necessaries to the rest, who soon after arrived there in November, 1603*.

Harlan, the capital of the kingdom of Kaskar, hach great refort of merchants, and variety of commodities. Here the caravan of Kabul ends, and another assembles to proceed to Kasa: the ceptaint, or chief, buys the post at a great price of the King, who vests him with absolute power over the merchants. It was a year before a sufficient number could be gotten together to undertake so long and dangerous a journey: nother do caravans set our from hence every y ar, but only at uch times as they

In the, shall be admitted into Katay.

The commodity between entioned, befi for carrying thirter, is a certain fining table, which for want of a fitter word, Europe is call y fore. The King of Keray tas it at a great price; and what he leaves, the marchanes of to others, at exceeding that rates. Of it they make veffels, ornaments for gaments, and giral's, with other toys, whereon they engrave less et, flowers, and other figures. The Chinefe call it tune? Incre are two hinds, one more precious, like thick fliats, which are found be diving in the river Kotan, not far from the city-royall. The other meaner fort is divided out of quarties, and fawed into flabs above two ells in breadth. The hill where they are dug, called Konlanghi Kasho, or the story mountain, is twenty stages from the same city. This marble is so hard, that they must soften it with first to get it out of the quarty. The King same it every year to some merchant, who carries provisions for the vorkmen for that space of time.

Coez visited the King, named Mahametain¶, and presenting him with a watch, a gl 'c, a to her European commodities, procured his pass to the kingdom of Chalis's; too he did not think it proper yet to speak of going to Katay. When he had been there say this, Demetrius arrived from Kabul; and but for Goez interposing with gires, had been handsomely drubbed, as well as imprisoned, for refusing, according to the custom of the merchants, to make a present to the mock Emperor, whom they chuse

with the King's permission.

One day, as he was eating with fome Mohan medans, who had invited him, there rushed in a person armed; who, setting a sword to his breast, commanded him to in-

^{*} Purchas, p 312. Triguit. ch. 11. † Yankian, or Junkend, as others. See before, p. 578. † Culcd the carevan Basha of In the original, tushe; a mustake, no doubt, for yu-she. See Green, vol. iv. p 309. | By the Jesuit's map, the river of Khoton runs about ninety nules eath of Yarkian. In Purchas, Mahamethin; before called Massamet Khân, which shews the names are much corrupted. In the original, Calles: yet Ramusio writes Chalis, i.e. Khalis. | † Kotan, Hoton, or Hotom. 11 Purchas has ten days: but six are more agreeable with the map. 66 This must be salle, for the Mohammedan, never invoke Mohammed. Perhaps it should be for refusing to say the Mohammedan consession of faith: in which case he must either have turned Mohammedan, or suffered death.

voked; and the company taking his part, thrust that mad sellow out of the house. The like zeal, it seems, often endangered him. Another time he was for for cyalle King of Kistar, who in presence of his priests, and the Mullas, or learned in it ak I what law he prosessed, whether that of Moses. Pavid, or I tohinmed, and mich a he turned himself in praying. He answered, that he prosessed the law of Jous, where they call Isay; and turned any way when he prayed, believing that G I was a where. This occasioned a great dispute among them; for they turn to die well; yet they concluded, that in this his practice might be good.

Meantime one Haji Afit, of that country, being appointed captain of the functionary arrayan, he invited Goëz to a feaft, accompanied with music. At the one of the extertainment, he defired his company to Katay. This was just what the Joseph according who, knowing the disposition of the Mohammedans, wanted the invitation of the ground them. As was so carnost in the matter, that he got the King to second his request to Goiz; who complied, on condition that His Majesty would give him his let ers patent Those of the first caravan, from Kabul, who were loth to lose his company, did all they could to dissuade him from the enterprize. They advised him not to trust to the

people of Kafkar, faying they were treacherous, and would destroy him.

This advice was the more to be regarded, as feveral of the natives themselves affirmed, that those three Armenians would be slain by their companions, as soon as they were out of the city. This so terrified Demetrius, that he dropped them a second time, and would have distanced Goez from proceeding any farther; but Benedict was resolved to fulfil the expectations of those who sent him, at all hazards.

SECTION II. — Continuation of the Author's Transis from Kashgar to So-c'ew, " Katay, or Chira.

OEZ hereupon preparing for his journey, bought ten horses for himself, his companion Isac, and their baggage. Meantime the caravan basha, who was gone to his house five days journey distant, to get his equipage ready, sent to Goez to hasten sorward, and by his example quicken the other merchants.

About the midst of November, 1604, they came to a place called Yolchit, where they pay customs, and their passports are examined. From thence, in twenty-five days, they got to Aksu, passing through the following places, Hanchalishs, Alcheghet, Hagabateth, Egriar, Mesetelek, Horma, Thalek, Thoantak, Minjeda, Kapetalkol-zilan, Sark-ghebedal, Kanbashi, Akon-sersek and Chakor. The road was very fatiguing, being through the sands, and very story.

In the way they croffed the delart, called Karakathay, that is, the black land of the Kathayans T; because, as they say, the Katayans dwelled there a long time. Also one

^{*} Because Mckka, to which the Mohammedans always turn, lies west, or south west of Kåshgar.

the name of Jefus.

Allu is a town of the kingdom of Karra, whole governor, the King's nephew, being but twelve years old, affairs were managed by his preceptor. He would needs fee Goez, who prefented him with fugar and fuch childish things. The young Prince, in return, received him kindly, and made him dance at a solemn ball. Benedict next sisted the Queen-mother, who admitted his patent with great reverance: to her he gave a crystal glass, a piece of Indian calico, and the like.

Here they staid fifteen days for other merchants, and then departing proceeded through Ohograkh, Gazo, Kashani, Dellay, Saragabedall, to Ugan, and then to Kucha, another town, where they staid a whole month to refresh their beasts, almost spent with the bad ways, and want of barley. Here, to extort a present, the priests would have

constrained Goëz to fast during their Lent.

Trom hence, in twenty-five days, they came to Chalis, a small, but well-fortified city. This country was governed by a natural son of the King of Kasker, who hearing that Benedict professed a different religion, began to terrify him, saying, it was a very suddicious thing for a man, who was of another faith, to enter those territories; and that for so doing, he might lawfully deprive him both of his goods and life. But when he read the King's letters patent, he was pacified, and with a present became also a friend. One night sending for Goëz, Isaac sell into tears, thinking he was going to be put to death. Bunedict despising the danger, went courageously to the palace: but when he came there, found all the business was, that he might dispute with the priests and learned men; whom, it seems, he presently struck dumb by dint of argument: nay the Viceroy himself approving all he said, declared, that the Christians were the true believers; adding, that his ancestors had prosessed the same law. After this he see sted, and kept him to lie that night in the palace.

In this city they staid three months, for the caravan busha would not depart without a great company (it being so much more gain to him) nor suffer any man to go before. However Goez, tired with the delay and expence attending it, by a present obtained leave of the Viceroy, to make the best of his way. He was just ready to depart from Chalis, when the merchants of the former caravan returned from Karay. These feigning an embassage (as usual) had pierced as far as the capital; and having lodged for three months in the same palace of strangers, with the Jesuits, brought sure tidings of Ricci, and the rest of the society, to Goez; who wondered thus to find that Katay was China, and Kambalu was Pe-king. Among other evidences, they produced a piece of writing in Portugueze, which they had taken out of the dust swept out of the

chamber, in order to shew in their own country, at their return.

Goez having obtained the Viceroy's letters for his fecurity, departed with Isaac, and a few others, and in twenty days came to Puchan, a town of the same kingdom; whose governor generously furnished them with necessaries out of his own house. From hence they travelled to Turfan, a strong and well-fortified city, where they staid a whole month. From Turfan they proceeded to Aramuth, and so on to Kamul, another well fortished place; where, likewise, they halted for a month, because they were well

Goezarived at So chev the end of the y. Goegator realth, by his long pur He had thirteen horse, five hard fer anto, and two boys whom he lought, befides the marble, more voith it in all the oil, ile whole volved at two thousand five hundred ducats. In this city I mer with other Notherman neturned from the capital, who confirmed the received reports. Thereupon he wrote forthwith, to acquaint Ricci of his arrival: but the supe scription of the letter being written in European characters, and the Chinele, who carried them, not knowing either the Chinele names of the Jesuts, or the quarter where they lodged at Pe-king, could not deliver them. next year, at Easter, he fent other letters by a Mohammedan, who had fled from that city (for none may either go in or out without the magistrates leave), acquainting them with his voyage and fituation, defiring them to take fome course to free him from his milon, that he might return by fea to India along with the Portugueze.

The Jefuits, who had long before been informed from Goa of his intended journey, yearly expected him, and made such enquiry of those counterfeit ambassadors; but could hear no tidings of him. They were therefore rejoiced at his letters, which they received in November following, and prefently dispatched a person, to bring him, if possible, to court; not an European, lest one stranger should hinder another; but a native, by a Chinese mother, named John Fordinand, a virtuous young man, who had not yet performed his noviciate. To him they joined a new convert, well acquainted with the country. His orders were, in case he could not bring Goez thence by leave of the magustrates, or any other means, to stay there with him, and write to the Company;

who were then to try what they could do by their friends at Pe-king.

This journey, of near four months, was undertaken in a very fevere winter, they fetting out the eleventh of December. Meanwhile Goez, who fuffered more injuries from the Mohammedans in So-chew, than on the road, was forced to fell his marble for twelve hundred ducats, which was under half price; wherewith he paid his debts, and maintained his family a whole year. In the interim the caravan arriving, he foon run out the remainder of his cash, in the frequent entertainments he was obliged to make for the captain of it. This laid him under a necessity of borrowing money; and because he was chosen into the number of the seventy-two ambassadors, he bought some pieces of marble, hiding an hundred pounds of it in the ground, to conceal it from the Mohammedans: for without that commodity, he would have been debarred from going to Pe-king*.

Let us now turn to Ferdinand, who had his afflictions also: for his fervant run away from him at Si-ngan-sû, the metropolis of Shen-sit, carrying away half what had been given him to bear his charges. From thence, however, with much fatigue, he got in two months to So-chew, where he arrived the seventh of March, and found Goez on his death-bed. The fick man, however, rejoiced at receiving the letters from those of his fociety; but died eleven days after, without having made auricular confession for so many years; as to which, he relied on God's mercy.

* Purchas, p 315. Trigant, lib. 5. csp. 13. † In the original, by miliake, Shan-li, His VOL. VII.

His death was not without fufficion of poison from the Mohammedans"; we soon as he departed, soized all that he left behind. Among the things to a lost, nothing is more to be regretted than his journal, which he had kept in de his travels. This book they were the more earnest to get into their hards in or prevent payment of debts there entered. They would have buried him also Mohammedan, if stace and Ferdinand had not opposed them. Goez was a great parts, and after his admission, had done great service to the society, but we priested. He ordered Ferdinand to caution the Issuits not to trust the Mohammedan.

nor pursue this road to China, as being unprofitable and dangerous.

As the merchants, by a cultom among themselves, divide the goods of all thos die on the road, they bound shae, threatening to kill him if he would not invoke hammed. Hereupon Ferdinand presented a request to the Viceroy of Landwho wrote an order under it to the governor of So-chew, to examine the all drift tially. He first was favourable; but corrupted by bribes, threatened to whip the plainant, and held him in prion three days. However, not discouraged by this ment, he fold his garments for went of money, and continued the fuit nive meaths this while, as Ferdinand could not speak Persian, nor Isaac either Portugueze, or I they could not converse together. When before the tribunal, one said the I prayer, the other repeated the name of Benedict Goëz, with a few Portugueze what nobody understanding either of them, the judge thought they spoke in the guage of the previace of Kantons, and understood each other.

At length, in two months, Ferdinand learned to fpeak the Perfirm. The Me medans, a nong other things, pleaded that Ferdinand was a Chinese by his counter and Isac a Saracens. In answer to this allegation, Ferdinand one day assured the that he was a mortal enemy to the law of Moharmed, which did he profess, he without doubt, absain from hogs flesh: at the same time pulling a piece of por of his sleeve, he and Isac fell to eating it very heartily. Hereupon those prese up a loud laugh; while the Mohammedans assumed, that at the Armenian, sayir was deluded by the Chinese cozener: for all the way on the road to prevent of

Benedict and haac had abstained from pork.

Thus, the effects of the deceased were decreed to Ferdinand: but, after all, no was found, except the pieces of marble, which had been hilden underground: they sold to pay their debts, and buy necessaries for their journey to Pe-king; what length, both of them arrived. They brought a cross finely painted on gilt newith the passports of the Kings of Kâskar, Quotan, and Chalis; which are kept memorial.

Ithac related all these passages to Ricci, upon credit of his memory, and a few mi of Bened. It's . Having staid a month at Pe-king, he was sent, by the usual roa

^{*} This is an invidious reflection, common with Popish zealots. † It should be, turn M medan. ‡ Although none were there who understood either Latin, or Portugueze; sure were enough among the Mohammedans who could speak the Persian. It seems, by this account Ferdinand could not speak the Chinese. § The Mohammedans are every where called Sarace this author; which term we use here only to avoid repetition of the same word. [] There is room to believe, not only that the distances of places are often made greater than they are, but also the places themselves are not always set down in their proper order, some seeming to be placed after, should be before others: and the rather, because it must have been morally impossible for Isaac to retained the distance and position of such a number of towns as are mentioned, exactly in his memory, does not appear of what nature, or extent, the minutes of Goëz were.

Anakro*. From thence, in his voyage to India, he was taken by the Dutch: but being redeemed by the Portugueze of Malakka, he held on his course; and, hearing of his wife's death, returned not to the Mogol's country, but staid at Chaul, and was alive in 1615, when Trigautius wrotet.

TRAVELS THROUGH TIBET, TO AND FROM CHINA:

BY SEVERAL MISSIONERS.

INTRODUCTION.

Road to China through Tibet attempted by Andrada the Jesuit: — his Relation cenfured. — Chesaud sets out: — is forced to return. — Grueber's Travels; literary account of them.

LTHOUGH Goëz was fent expressly to discover the road to China, through Little Bukhâria; yet it does not appear the Jesuits prosecuted that design, probably for the advice he left them to the contrary. However, about the year 1660, Amatus Chesaud, a Frenchman, superior of the residency of Issâhân, attempted to pass thither through the countries of the Uzbeks and Turkestân, but was deterred by the difficulty and danger of the road. From that time none of the Romish missioners have ventured to travel on that side, although caravans are continually passing and re-passing, with which the Armenians make no scruple to associate themselves, and perform the journey with safety.

The above-mentioned undertaking dying with Goëz, the Society turned their thoughts next on opening a way to China through Tibet: a region, whose inhabitants they were informed were Christians, or at least of a religion nearly resembling their own; and, consequently, had so much the stronger inducement to prosecute that design, as they hoped to meet with easy conversions, a thing they despaired of in Mohammedan countries. Travellers mention two ways of passing into Tibet; one the northern road, by the north part of the Mogol's empire, the other southern, through Bengal. In 1624, Anthony Andrada, a Portugueze Jesuit, attempted the northern road, and penetrated as far as Katay, or China. In 1661, Grueber and Dorville, Jesuits, travelled from China to India, through Tibet, taking the southern road; with regard to which, Tavernier about the same time procured some informations. In 1414, Desideri, another of the Society, passed into Tibet, as far as Lass, by the northern road; and

Makau. + Purchas, p. 316. Trigaut. lib. v. cap. 13.

lastly, in 1732, Horace de la Penna, with other Capuchins, went to the same place

by the fouthern route.

These are all the travels to this vast region that have appeared in print. Those of Andrada and Chesaud are very short, and contain nothing extraordinary. The first, it seems, made the journey, on hearing that the people of Tibet were professed Christians. The substance of his relation is this: that he lest Lahor in 1624, and having passed the Ganges, entered into Skrinegar * and Chasaranga, very great and populous cities; in the last of which are many monuments, he says lest by the Christians; that from thence crossing an exceeding high mountain, on the top of it he discovered a vast lake, which gives rise to the Indus, Ganges, and the other great rivers of India: that passing forwards through high mountains he arrived, after many days journey, at the city of Redor, in the cold northern region of the same name: Lastly, that from hence travelling through the kingdoms of Maranga and Tankhut, subject to the Tartars, he in two months arrived at Kathay, or China.

Bentink, in a note on Abulghazi's genealogical history of the Tartars, tays, he is fure that the author of Andrada's letter, relating to the present state of Tibet, and religion of the Lamas †, never was in Tibet, in regard all he writes of that country, is so contrary to what at present appears to be the case; and that all he reports concerning the worship of the Lamas, is taken from the account which Rubruquis has given of certain religious among the Tartars. It must be confessed, the journal of his travels is very superficial; and besides affording very little, if any, light into the geography of the country, mentions places, such as the kingdoms of Redor; and Marango, which do not appear to lie in the northern road through Tibet: nor is there any lake there, which is the common fountain of the rivers above mentioned; at least the Indus, and all the other rivers of India, except the Ganges, are known to have their sources in India itself §.

The travels of Chefaud feem to be more genuine than those of Andrada, but are still less to the purpose: for he went no farther than the borders of Great Bukhâria, and then turned back. The account was sent by the author, in a letter from Kashan near Ispâhân, written in Persian to Kircher, who has inserted an abstract of it in his China Ishafarata ||, to the following effect: that a year before he wrote the letter, he travelled from Ssahân (or Ispâhân) to Bâlkh; which he says, is the regal city of Uzbek si in order to see if it was practicable to pass through that country and Turkestan, to Katay, and thence to China: but that when he arrived in the train of the Uzbek ambassador, as far as the bounds of Kezalbash **, he sound the way to be both difficult and dangerous: that for this reason he continued for some months at Hayrat ††, formerly (he says) called Skandria, and there had a full view of the place which the ancients called Bakhtra, where there is a great university (built by the son of Tamerlang ††, but going to ruin), and many other structures raised by the Uzbeks, when in

possession:

Perhaps, a mistake for Serinegar, or Kashmir; but then that city lies on this side of the Ganges. † Printed at Par's in 1629, with permission of the Society, and dedicated to the general of that order. † Perhaps, Redok; which, as well as Maranga, is mentioned by Grueber. † History of the Turks, Moguls, &c p 491. | Ogilby has given a translation in his China, vol. i. p. 363. It has no date. It is only one of the capitals of the three Uzbek dominions in Great Bukhâria ** That is, of the Persian dominions called Kezelbash, or red-heads, from their turbans. See Green, vol. iv. p. 639. note d. †† Herat, or Heri, capital of the province of Khorasan in Persia. †† Or, Timur-ling that is, lame Timur for Tamerlan was lame of one leg. His son, spoken of here, was doubtless, Shah Rokh, who succeeded him, and reigned at Herat.

possession *: that from Hayrat he came back to Mashahad †, called by some the Holy; where there is a masjid ‡, adorned with gold. Here he staid two months disputing with the learned, who are numerous, about their law: that leaving this place, he came to Nishapûr, and then to Sabazwar §, belonging to Khorasan; whence passing through the cities of Setam, Damgan, and Jamnam ||, he proceeded to Kashan, in the province of Arakand ¶, the way for the most part sandy; and thence to Ssahan.

These are all the itinerary remarks which these two authors assord: but Grueber, though not so particular as could be wished, is much more copious. What relates to his travels, is contained in five letters, all written in Latin by himsels; except the first, which is in Italian, from one anonymous virtuoso to another, setting forth the substance of a conversation which he had ** with our Jesuit on the subject of his travels, and the customs of the Chinese; on which last the discourse chicsty turned. The second is from Grueber to John Gamans, a Jesuit at Aschassenburg in Germany; containing a brief account of his journey from China. The third, dated December 11, 1664, from Dantzick, is in answer to several questions put to him by some learned nobleman, concerning China, and the Tartars who conquered it. The fourth is on much the same subject, dated from Breslaw in Silesia, March 14, 1665. The last, containing the substance of several letters written by Grueber to Kircher ††, furnishes the most particular account of his journey from China to India, gives the latitudes of the chief places observed by the author, and is embellished with cuts drawn by him, representing the habits of the people, the Great Lama, Ptala, Buth, the slaying youth, and other remarkables in the countries he passed through.

These letters are published by Thevenot, in his French collection of voyages !!: but he has omitted all the cuts, which Kircher gives in his China Illustrata, and after him Ogilby. In the following section we have incorporated the remarks, contained in the several letters, together; or making the substance of that to Kircher the text, supplied

it with notes from the reft.

thirty farlang distant.

SECTION I. — TRAVELS FROM CHINA TO EUROPE, IN 1661. BY JOHN GRUEBER, JESUIT.

Sets-out. — Si-ning. — Great Wall: — Account of it. — Delightful travelling, in the Great Defart. — Koko Nor Lake. — Kalmak Tartars: — Their Dress and Dwellings. — Lassa, or Barantola. — Tartar Women. — Mountain of Langur. — Nekpal Kingdom. — King Partasmal. — The Jesuits present. — Odd Customs. — Kingdom of Maranga. — Mogul's Empire. — Comes to Agra: — Returns to Europe: Resumes the Mission. — Author's Character. — Latitudes observed. — Road from Tavernier. — Gorroshepur City. — Way of travelling — Nupal Country. — Mountains of Naugrokot. — Women-Porters. — Butan, or Tibet.

THE missioner set out for China, as we conjecture, in the year 1656. According to the first letter, he went from Venice to Smyrna by sea: from thence to Ormuz by

* The author seems to mistake Timûr, and his descendants, for Uzbeks; which latter possessed Khorasan but a very short space, under Shaybek Khân. † Or Mashhad, the same with Tûs in Khorasan. See Green, vol. iv. p. 443. note i. In the original, written Maxahad. † Or, temple, in Kitcher Mesquit. The Persian word is meskû, whence mosk. § Also, Nishabur, and Sebzwar. || Doubtless, Bastam, Damagan, and Semnan, three cities in the road from Nishapûr, to Kashan. ¶ By which must be understood the Persian Irâk. ** In company with Signor Carlo Dati. † He tells us, in his third setter, that on quitting Rome he left many geographical remarks with Kircher, and that he was about publishing them in 1664. They were published in his China Illustrata, at Amsterdam, in 1667, in folio ‡‡ Part iv. containing twenty-six pages and a half.

land

land, in five months: from Ormuz by sea, in seven months, to Makac. There landing he passed through China, partly by water, partly by land, to Pe-king, in the comonths. He staid in China three years; in one of which, viz. 1660, he says, the sity-six Jesuits, who were then in that empire, baptized more than inty thousand ri in the

In his return, he took a road never, perhaps, attempted by any European before. Grueber left Pe-king in the month of June 1, 1661, in company with Albert Dorville, of the same Society: in thirty days he came to Si ngan-sû \(\), and in thirty more to Sining, or Si-ning sû, cressing the Whang-ho, or Yellow River, twice in the way.

Si-ning is a great and populous city, built at the vait wall ¶ of China, through the gate of which the merchants from India enter Catay, or China. Here they stay till they have licence from the Emperor to proceed forward. The wall at this place is so broad that six horsemen may run abreast on it, without embarrassing each other. Here the citizens of Si-ning take the air (which is very healthful, coming from the desarts,) and recreate themselves with the prospect, as well as other diversions. There are stairs to go a-top of the wall, and many travel on it, from the gate at Si-ning to the next

at So-chew, which is eighteen days journey.

This they do by the governor's licence, out of curiofity; having a delightful prospect all the way from the wall, as from an high tower, of the innumerable habitations on one side, and the various kinds of wild beasts, which range the desart, on the other side. Besides wild bulls, here are tigers, lions, elephants, rhinoceroses, and monoceroses, which are a kind of horned asses **. Thus, the merchants view the beasts free from danger; especially from that part of the wall, which running southward †† approaches the more inhabited provinces of Quang-si, Yun-nan, and Tibet: for at certain times of the year they betake themselves to the Yellow River, and parts near the wall, which abound with thickets, in order to get pasture, and seek their prey.

This defart is partly mountainous, and partly level, all over fandy and barren; excepting that in some places you meet with little rivulets, whose banks yield good pasture. It begins in the middle part of India, and extends from south to north; but nobody ever yet hath discovered its bounds, which may stretch to the frozen ocean. Marco Polo calls this defart Lop, and speaks of its being haunted with spirits. But Grueber says nothing of them. The Tartars formerly called it Beljan now Samo; the Chinese, Kalmuk; others Karakathay !!. The Tartars accustomed to defarts dwell here in tents, removing with their cattle, wherever they can find a river, or place sit for pasture §§.

The road from Si-ning, as far as Lassa, is somewhat differently described, in different letters. In the first we are told, that our missioner passing out of China, encered the sands of Desart Tartary, which he crossed in three days: afterwards he came to the banks of the Koko Nor, which signifies the Great Sea; being a great lake, or sea, like the Caspian, where the Yellow River has its source

* Grueber, letter 1. † The fame, letter 2. ‡ In the fecond letter, he is faid to have fet out the thirteenth of April, fent by the new Emperor (Kang-hi) as mathematician of the empire, leave being procured by Adam Schall. \$ Capital of Shen-fi. | A miffulke for Si-ning-chew, or Wey. In the fecond letter it is called Ciniara, a city feated at the great wall. ¶ Not fo, but feveral miles diffaut. Grueber drew a draft of the wall, which is given by Kircher. ** In another place of this letter, it is faid, no other animals are found in this defart, but wild bulls of a mighty bignefs. †† The author miffakes here, for the wall does not proceed fouth of Si-ning, nor touch that city, but ends twenty miles to the west; nor can any travel from Si-ning to So-chew on the wall; which besides being, on many accounts, unfit for the purpose, breaks off in several places for twenty or thirty miles together. ‡‡ These stem to be the remarks of Kircher, mixed with those of Grueber, who could never have committed so many blunders in so sew lines. The Chinese call it Sha-mo, the Tartars, Kobi; both words signifying a sandy defart. Kalmuk is a nickname, that comes from the Mohammedan Tartars. \$6 Letter the fifth. She Green, vol. iv. p. 451.

Leaving this sea behind him, he entered into the country of Toktokay, which is almost defact, and so barren, that it need fear no invasion. One meets with nothing but some tents of Tartars. It is watered by the Toktokay, a very fine river, whence it takes the name. It is as large as the Danube, but so shallow, that it may be forded every where.

Thence having croffed the country of Tangut, he came to Retink, a very populous province, belonging to the kingdom of Barantola; where at length he arrived, whose

capital city is called Lassa +.

According to the fifth letter, or Kircher's abstract, we are told, that presently after they had palled the great wall, they found a river flored with fish, on which they supped in an open tent. Then croffing the Saliron River t, they immediately entered that valt an Iba ren delart of Kalmak, inhabited by the Kalmak Tartars §, who rove up and down it to 10b the caravans, and at certain feafons feale with their portable cities on the banks The Johnits often met with their habitations in the way, and draw their of the awers. figures as reprefented in the plate ||, viz. a Kalmak man, clothed with a leatnern garment, and a yellow cap. A Kalmak woman in a habit made of a cream skin, of a green or ied colour; each with a charm about their necks, to prefer them from dangers: 2 Lieu 1, that is, one of their Tartar priefts, or bishops. They wear a white coat, or cto. It, cast buck unds, with a red girdle; and a yellow coat, from the girdle of which Lead to be divin a purse: their cap, or hat, is painted red. In the offskip are expressed their habit tions, bring tents made with small sticks twisted, or plaited together, and covered with a coasse woollen stuff \(\Pi \), bound together with cords. The turning-wheel is an infirument like a fceptre, which the people turn round while the Lama prays.

From Si-ning they in three months entered the kingdom of Lassa, which the Tartars call Barautola '*. The King is styled Teva ††, descended from an ancient race of the Tangut Tartars, and resides at Butala, a castle built on a high mountain [‡], after the European sashion, where he has a numerous court §§. 'The great priest of this country is called Lama Konju ||||, and adored as a god ¶¶. He resides at Barantola, and is the Pope of the Cainese and Tartars, called by them God the Father; whose religion, in all essential points, tallies with the Romish; although, says the author, no Christian ever was in the country before '**.

Here they staid a month, and might have converted many of the natives, but for that devilin God the Father (as the author calls him), who puts to death such as results adore him. However, they were kindly treated by the people and King, who was the brother of that God the Father ##.

In the court of Deva, King of Tanguth †‡‡, they faw a woman born in Northern Tattary, dreffed in an unufual habit: She wore hair like knotted cords, her head and girdle adorned with cockle-shells §§§. They faw, likewife, some women no less strangely dreffed, who came from the neighbouring kingdom of Koin. The ladies braid or curl their hair in the manner of hair-laces, or small bands, and twist it behind them: on their foreheads they wear a red fillet, beset with pearls; and on the top of their heads a filver crown, bedecked with turchoises and coral.

^{*} In his second letter, he says, he met with neither man nor bird, but many wild beasts; and that they suffered extremely in the journey. † Letter the first. † Or, Whang-ho. † These are the Eluths, or Tartars of Koko Nor. | See plate 54, p. 403. ¶ Rather, selt. ** Letter the fifth. Milprinted Baranteka, in the second letter. † Or, Deva, as in the sifth letter; and Tipe, as others write. † See Green, vol. iv. p. 456. ff Ibid. | | For so Sama Koajum (28 it is there aultily printed) is explained in the second letter. † See Green, vol. iv. p. 459, d. † So Barantola is called here.

Grueber drew the pictures of the Grand Lama, (taken from one hang at the patacegate,) and of Han, late King of Tangut *. This last, who had fourteen tone, was for his goodness and justice reverenced as God. He was of a dark complexion, his beard

of a chefnut colour, mixed with grey, and his eyes protuberant f.

From Lassa, or Barantola, they came in four days to the foot of the mountain Langur; which being exceeding high, travellers can hardly breathe at top, the air is so very thin; neither is it to be crossed in summer without great danger from the exhalations of certain poisonous herbs. Besides, as no waggons or beads can pass in fir the rock, and precipices, they must proceed on foot, almost a month, till they came a Kuthi, one of the two chief cities of the kingdom of Nekbal. This mountainous track I is plentifully furnished with springs, both hot and cold, which issue from all parts of the mountain, affording store of fish and pasture.

From Kuthi, in five days, they came to the city Nesti §, still in Nekbal; where pro-

visions are so plenty, that thirty or forty hens are sold for one scutam.

From Nesti they came in five days journey to Kadmendu ||, the metropolis of Nekbal, where reigns a potent King.

From Kadmendu, in half a day's time, they came to the city Nekbal, called also

Baddan by the natives, the regal city of the whole kingdom ¶.

The first letter relates, that Nekbal is a month's journey in extent, and has two capital cities, Katmandir and Patan **, separated only by a river. The King, called Partasmal, resides in the first, and his brother Nevagmal (a young handsome Prince), in the latter. He had the command of all the troops in the country; and while Grueber was there, had a great army in the field, to oppose a petty King named Varkam, who made frequent incursions into his dominions.

The Jesuit presented this Prince with a telescope; wherewith having discovered a place where Varkam had fortified himself, he desired the Prince to look that way, which he did; and seeing the enemy so near, cried, "Let us march against them;" not considering that their seeming approach was the effect of the glass. It is not easy to express how pleased he was with this present ††. He likewise gave the King other curious mathematical instruments; with which he was so taken, that he determined not to let them go, but that they promised him faithfully to return. In that case, he promised both to erect a house for their use, endowed with ample revenues, and grant them full power to introduce the Christian law into his kingdom ††.

In this country, when a man drinks to a woman, the company pour in the liquor cha, or the wine, three times for the parties; and while they are drinking, affix three pieces of butter to the brim of the cup, which those that pledge them take off, and stick on their foreheads.

They have a most cruel custom in these kingdoms; for when they judge their sick people to be past hopes of recovery, they carry them into the fields, and casting them into deep ditches sull of dead corpses, there leave them to perish; and their bodies, when dead, to be devoured by birds and beasts of prey, esteeming it an honour to have living creatures for their tombs.

^{*} See Green, plate 61, p. 460. † Grueber has given other cuts relating to Tibet; which, with their descriptions, have been given in Green's plates, 56, 57, 58, and 59. † Kircher supposes this to be the Parapapitus of Ptolemy, and Belor of Polo; in which last conjecture, at least, he is very much mistaken. † This, and Kuthi, are said a little lower to be the two chief cities of Nekbal. Is In the first letter called Katnandir. ¶ Letter the fifth. ** This must be Baddan, or Nekbal, in the fifth letter: but there is a great diagreement between the two letters with regard to its distance from Katmandir. † Letter the first. † How came they to neglect to favourable an offer?

The women, out of a religious whim, never wash, but daub themselves with a nostly kind of oil; which not only causes them to stink intolerably, but renders them

extremely ugly and deformed.

From Nekbal, in a journey of five days, you meet with the city Hed and a ', a colony of the kingdom of Maranga, included in Thebet. Its metropolis is Radok †. From the names of Dominic, Francis, and Anthony, still in use with the natives ‡, it appeared, that Christianity had been planted there in times put §.

In the first letter we are told, that in Maranga he saw no towns, but only houses, or rather huts made of straw, and among them a custom-house. The King pays yearly to the Great Mogol a tribute of two hundred and fifty thousand rixdollars, and

feven elephants ||.

From Hedonda (crossing the kingdom of Marangi), in eight days, they came to

Mutgari, the first city of the Mogol's Tempire.

From Mutgari is a journey or ten days to Battana **, which is a city of Bengala on

the Ganges.

From Battana, in eight days, they came to Benarcs, a populous city on the Ganges, famous for an academy of the Brachmans, where persons are instructed in their

religion and fciences.

From Benares, in clean days, they came to Katampor, and from thence, in feven more, to Agra ††. So that from Pe-king thither was a journey of two hundred and fourteen days; but reckoning the time which the caravans rest, it will come to about fourteen months. Here Dorville, the campanion of Grueber in his travels, died 11.

The author's travels from Maranga is related, with some variation, in the sirst letter. It is there said, that from thence he entered India, and came to Minapor, the metropolis of the country, where he crossed the Ganges, twice as broad as the Danube. Thence he travelled to the city Patan; and from Patan, in twenty-five days, to Arga, the chief royal seat of the Mogol's empire, eleven months after he had left China.

This first letter furnishes us also with an account of his travels from Agra to Europe, and several other particulars not to be met with in Kircher's memoirs. From Agra he got, in fix days, to Deli; and from Deli, in fourteen, to Lahor, on the Ravi, which is as broad as the Danube, and falls into the Indus, near Multan §§. At this last place he embarked on the Indus, and in forty days fell down to Tata, the last city of Indostan, and residence of a viceroy, called Laskartan. Here he found many English and Dutch merchants. From thence sailing to Ormuz, he landed; and passing through Persia, Armenia, and Asia Minor, came to Sinyrna; where putting again to sea, he arrived first at Messina, and then at Rome, sourteen months after he had left Agra.

He had not been long at Rome before he received orders to return to China. Accordingly he went into Germany, and from thence to Poland, with a defign to cut out another new road through Russia; having by the Emperor's means, obtained passports from the Dukes of Courland and Moscovy: but when he arrived on the borders of Russia, news came that the King of Poland, in conjunction with the Tartars, had invaded the Grand Duke's dominions. Fearing therefore that it would be difficult, to

VOL. VII, 4 G grt

^{*} At the end of the letters, it is faid to be the first city of the Mogol's empire. † This, Kircher ebserves, was the utmost extent of Andrada's travels. † This looks like a pious life. § Letter the fifth. | Letter the first. ¶ This author calls him the Mogor. ** In the first letter, called Patan. † Kircher says, he received the foregoing account from the mouths of Grueber and Dorville: yet at the end of this abstract tells us, the last died at Agra, in his way to Europe. ‡‡ Letter the fifth. | § In the original, Multaia, by missake.

get to Moskow, called by the Tartars, Stoliza, he thought it best to return to Venice, which he did just at the time when the Emperor was sending Count Lesly on an embassy to the Porte. In the train of this lord he travelled to Contantinople, designing to take his way through Natolia, Persia, and the Indies. But on his arrival was seized with a violent flux, and pains in the stomach; so that being unable to proceed, he returned by sea to Leghorn, and thence to Florence. Here no chorder about, he repaired to Venice, in order to pass through Friuli to Vienna, and so Constantinople, once more to attempt getting to China by that road, (but how he succeeded, we do not find.)

The author in 1655, when he set on his reads to China, was about serty-five years of age, of an assable temper, and extremely civil, joining to other good qualities the German sincerity, which rendered his conversation perfectly igreeable. The variations sound in the letters from whence we have collected our materials, seem to be owing to the defects of the author's memory, and in slakes of those who relation from his mouth. With regard to the Chinese and Tartars, he has explained some things more fully than other authors have done, as well as related others in a different manner.

We shall add, by way of supplement, the information which Tavernier received from the merchants in Bengal concerning this southern road through Tibet.

The kingdom of Bû-tàn, whence comes the musk, rhubarb, and some furs, is a kingdom of great extent: but Tavernier could never come to a perfect knowledge thereof. He observes, that the caravan is three months travelling from Patna, in Bengal, to the kingdom of Bû-tan . It sets out about the end of December, and eight days after arrives at Gorroshepûr, the last city in the Great Mogol's dominions.

From Gorroshepûr to the foot of the high mountains is eight or nine days journey more. As the country is nothing but wide forests, full of wild elephants, the merchants suffer much; for instead of taking their rest, they are forced to watch, keep fires, and shoot off their muskets all night long; otherwise, the elephant, who makes no noise in treading, would be upon the caravan before they were aware; not that he comes to hurt the men, but to get what victuals he can find.

You may travel from Patna to those mountains in Pallekis But they usually ride upon oxen, camels, or horses, bred in the country. These last are generally so little, that when a man is on the back of them, his seet touch the ground; but they are very strong, and will travel twenty leagues together without baiting. Some of them cost

^{*} Letter the first and sourth. † The Jesuits, who made the map, sound it to lie in thirty-fix degrees, thirty-nine minutes, and twenty seconds, which difference of twenty-nine minutes shews Grueber's observation to be far from accurate, and brings that of the other places'under the same suspicion. Ogilby has twenty minutes instead of ten; as it is in Thevenot. ‡ Butan is Tibet. For a description of the musk, rhuberb, &c. from this author, see Green, vol. iv. p. 457.

200 crowns: for indeed the roads over the mountains are so narrow and rugged, that

you can make use of no other fort of carriage.

Five or fix leagues beyond Gorroshepûr you enter into the territories of the raja of Nupal, which extend to the frontiers of Bû-tan. This rajah pays every your to the Great Mogol an elephant for his tribute. He resides in the city of Napul, from whence he derives his title: but there is little of either trade or morey in his country, which is all woods and sorests.

The caravan being arrived at the foot of the moderal is of Naugroket †, abundance of the inhabitants, chiefly women and maids, repair thither, in order to carry the merchants and their goods across the mountains, which is eight days journey more. There are three women to carry one man, relieving one another by turns. They have upon each shoulder a woollen roll, to which is sattened a large cushion, that hangs down their books, upon which the merchant sits. Their luggage and provisions are laid on the back of goats, which carry an hundred and sity pounds weight a-piece. They who chuse to ride, are in many places, forced to have their horses hoisted up with cords. They never feed them but morning and evening. Their morning fare consists of a pound of meal, half a pound of brown sugar, and half a pound of butter, mixed together with water. In the evening they must be contented with a sew star pease bruised, and steeped half an hour in water. The women-porters get for their ten days travel two roupies a-piece; the same also for every loaded goat, and every horse which they lead ‡.

After you have passed the mountains, you may travel to Bû-tan upon oxen, camels, horses, or in pallekis. Thus far from Tavernier concerning the road to Bû-tan: what he relates with respect to the inhabitants, and trade of the country, has been already

inferted §.

SECTION. II. — TRAVELS INTO TIBET IN 1714: BY HYPOLITO DESIDERI, AN ITALIAN JESUIT.

[Now first translated from the French.]

Author leaves Goa. — High Mountains, difficult to cross. — Fertile Spots. — Comes to Kashmir. — News of Tibet. — Enters Great Tibet. — Horrible Mountains. — Dreadful travelling. — Arrives at Leh, or Ladak. — Air, Soil, Inhabitants. — Believe in a Trinity. — Saints and Images. — Other Resemblances. — Vists the Grand Lama. — Searched for Jewels. — A third Tibet. — Comes to Lassa. — Admitted to Audience. — Favourably received.

THE account of this journey into Tibet was written in Italian by the author to Ildebrand Grassi, another missioner of the same society and nation, then residing in the kingdom of Mayssur, in the peninsula of India, on this side Ganges. The letter is dated from Lassa, the tenth of April, 1716. N. S. A French translation of it is inserted, by Du Halde, in the sisteenth tome of the Lettres Edistantes et Curieuses, &c. containing twenty-six pages , in twelves, large print. The relation, as those of the missioners commonly are, is very superficial. It gives you neither a regular journal of the road, nor description of the country and inhabitants, but only certain loose, imperfect

^{*} Perhaps, the same called in Grueber's journal Nekhal; and in Desideri's, Nepal, / lacteen stages, or days journey, from Patna. † Tavernier's Travels, part ii. p. 183. † See Green, vol. iv. p. 456, et seq. | It begins, p. 183.

remarks; which, however, are of no small use, considering how little we know of Tibet. On this occasion the reader will, doubtless, be surprized to see that the Jesuita who have been so long in China and India, between which that wast region lies, should not be able to give a better account of it than what is to be found in the reports of this author, and his successor, Horace de la Penna.

Defideri, having been appointed for the mission of Tibet, left Goa on the twentieth of November, 1713, and came to Surat on the fourth of January, 1714. Having spent the time he staid there in learning the Persian, the twenty-sixth of March he took the road for Delhi *, where he arrived the eleventh of May; there he found Manual Preyre, destined to the same mission, for which they both set out the twentieth-third of September, and got to Lahor the tenth of October. From thence departing on the nineteenth, they, in a few days, came to the foot of Caucasus, which is a long chain of very high and steep mountains. After passing one, you find a second higher than the first; that is followed by a third; and the more you ascend, the more you have to ascend, till at the last, you come to the highest of all, called Pir-Panjal. The Gentiles have a prosound respect for this mountain; where they bring offerings, and worship a venerable old man, who, they say, is appointed to guard the place. This the author takes for granted to be the remains of the table of Prometheus, whom the poets seigned to have been chained to Caucasus !.

The top of the highest of these mountains is always covered with snow and ice. They were twelve days passing them on foot, crossing with incredible trouble the torrents made by the melted snow; which rush over the stones and rocks with such violence, that Desideri was often forced to lay hold of an ox's tail, to prevent being carried away with the current. He likewise suffered extremely from the cold, for want of providing proper cloaths for the journey.

This mountain-country, though otherwise so frightful, yet in several parts appears very agreeable, from the multitude and variety of trees, fertility of the soil, and many habitations that occur: for here one meets with some small territories, whose Princes are dependent on the Great Mogol; nor are the roads so bad, but that travellers may pass them either on horse back, or in a jampan, which is a kind of palankin.

The tenth of March they arrived at Kashmîr, where they were obliged to stay six months, because the prodigious quantities of snow which fell in the winter had shut up the passages. Here Desideri was reduced almost to the last extremity, by a distemper caused, as he judged, by the fatigues he had undergone. However, he continued to learn the Persian, and make enquiries concerning Tibet: but after all his pains, he could find then out but two countries of that name; one called Little Tibet, or Baltistan S, a few days journey from Kashmîr, extending from the north towards the west; whose inhabitants and princes are tributary to the Great Mogol. But there is no business there for the missioners, long experience having convinced them, that they can reap but little fruit in countries, where, says the author, the impious sect of Mohammedans prevails.

The fecond Tibet, named Great Tibet, or Bûtan, extends from the north towards the east, and lies a little farther from Kashmîr than the other. The road, which lies

Dehli, or Delli, in the Mogul's Empire.

† It is, doubtless, on this weak ground, that Desideri has given the uncertain name of Caucasus to this chara of mountains, omitting the modern name, which would be certain, and of infinite more use Such absurdities, which in authors are very common, only discover their ignorance, while they would shew their learning, and perplex instead of clearing up geography. Beinier, in his memours, part iv. p 81, 101, et seq. speaks of this old man and Pir-Panjel.

‡ Lettres Edif. tom. 15, p. 183, et seq. g Ferhaps for Beladestan, that is, the mountain-country, nee Green, vol. iv. p. 452.

through narrow passages, is frequented by caravans, which go thither every year for woollen. The first fix or seven days journey is tolerable; but afterwards the roads grow very difficult, occasioned by the winds, the snow, and the extreme cold: yet one is obliged to lie at night on the bare ground; sometimes even on the snow or ice.

Great Tibet begins at the top of a frightful mountain named Kantel, all covered with fnow; one fide of it belongs to Kâshmîr, the other to Tibet. They left Kâshmîr the 17th of May 1715, and were forty days in travelling to Leh, called also Ladak, where the King of Great Tibet resides; which journey they performed on foot. The thirtieth, being Ascension-Day, they passed the mountain, that is, entered Tibet. The road lay through the mountains, which are a true image of horror. They are heaped one upon another, and so close together, that they are scarce separated by the torrents, which dash against the rocks with a noise enough to daunt the most hardy travellers.

The top and bottom of the mountains being impassable, one is obliged to proceed along the sides of them; and the vay is so narrow that there is scarce room to set one's foot; hence great caution must be used: for the least salse step tumbles you down the precipices, where you run the risk of losing your life, or at least of breaking your limbs; as happened to some of the caravan: for there is not a bush, or blade of grass to catch at, which might save your fall. In passing from one mountain to the other you find no other bridges over the torrents, than some narrow, quaking plank, or cords stretched across, and interlaced with green boughs. Nay, often you are obliged to put off your shoes, that you may tread with less danger.

The very thoughts of those passes made the author tremble: not to mention the other inconveniences before mentioned, relating to the weather and manner of resting at night. Add to this, the necessity they were under of feeding on the slour of satrû, a kind of barley, which they commonly boiled; though the natives eat it crude, when they could find a little wood to dress it. To increase their misery, the reslection of the sun from the snow almost blinded them; so that Desideri was obliged to cover his eves, leaving only a small opening sufficient to see his way. Lastly, every two days they met with custom house officers; who not content with the usual duties, demanded what they thought sit *.

In these mountainous countries one finds no large towns, nor any money, but that of the Great Mogol, each piece being worth five Roman Julios; trade being generally carried on by exchange of commodities.

They arrived the twenty-fifth of June, at Leh, or Ladak; which is a fortress where the Ghiampo, or King, resides; who is absolute, and named Nima Nanjal. He has under him a tributary King. The first settlements one meets with are Mohammedan; the rest are inhabited by Pagans, who are less superstitious than the natives of other idolatrous countries.

The climate in Tibet is very rough. Winter reigns almost all the year round; the tops of the mountains are continually covered with snow. The soil produces nothing but corn and barley. One sees neither trees, fruits, nor plants. Their houses are small and narrow, made of stones heaped one upon another, without any art. The inhabitants go clothed with woollen stuffs. They are naturally of a mild and trastable disposition, but ignorant, and unpolished; having neither arts nor sciences among them (although they do not want genius), nor any correspondence with foreign nations.

As to their religion, they call God Konchok, and feem to have a notion of the Trinity: for femetimes they name him Konchok-chik, or the one God: at other times,

Konchok-sum, or the Trine God. They use a kind of beads, or which they repeat Om, ha, ham. Om, they say, implies intelligence, or the arm, that is, power; Ha, the word; and Hum, the heart, or love; and that these three words i misy God. They adore also one called Urghien, born about seven hundred years ago. When asked also be Cod, or man, four answer, it is he is both: that he had nother father, nor method, but was produced by a flower. However, their statues in a refer to a woman with a flower in his hand, who, they say, is Urghien's motion.

They would be feed to the policies, whom they consider as laure. In the churches there is an estar covered to naciosh, in lornaments; in the mildle of this a kind of tabernacie, where according to them, Usefilen whiles; if ought they assim he is in heaven. The she will, they reject the transmission of souls, and do not admit polygon men is an fort of means prohibited and them; there

articles in which they wifer widely from the idolatrous Indian.

Their religious are called Lamas, and our miffeness were could be I as Lamas of the Christian law by the King, and feveral of his court; who obtains them to recite their office, had the curiofith to lock at the books which they read they had eagerly enquired what the pictures apprehented which ther four dishere. If they have a mined them, they had Neuro, the is, very well is they add do to their books has like that of the nufficients; but Defined, it for a, could not believe it. The allows many of them can read their my le ious books, but affirm, mean and flaud them. They often white the was falled in their language, or they are as, that they might near him explain his religion. This, which could be nothing but currofity, the authors ould impose as a proof, that they were ready to embrace the Romash touch so

Two days after their arrival at Ladak, the inifioners went to vifit the Lampo, who is the first person next the King, and called his right a.m. The second of June they had their first audience of His Majesty, who received them sitting on his throne. The sourth and eighth they were fent for again, and treated vith more similarity. The fixth they visited the Great Lama, who was accompanied with several other Lamas, one of whom was a near relation of the King's, another the Lampo's son. They were received very policely, and presented with several refreshments, according to the custom of the

country.

These honours and testimonies of friendship, however, did not secure them against trouble. Some of the Mohammedan merchants, who came from Kâssmîr to trade for wool, either through jealousy, or hatred of the Christian name, told the King and his minister, that the missioners were rich merchants, who brought with them pearls, diamonds, rubies, and other precious commodities. This was enough to bring vexations upon them. They were presently visited by a messenger from the court, who having fearched their lodging, carried away with him a large basket, and a leathern putic, wherein they kept their linen, books, several writings, some instruments of mortification beads, and medals. The most credulous papist can scarce be supposed stupid enough to believe, that this King was more pleased to see such trumpery, than pearls and diamonds, which he expected: yet the Jesuit, true to the cause of lying and imposture, has the front to affect that the Prince declared so much.

Defider had already begun to learn the language, in hopes of fixing his abode in this country, when he came to learn, that there was a third Tibet. After feveral deliberations, it was refolved, contrary to his inclination, to go and make the discovery. This is a journey of about fix or feven months, through defart and uninhabited places.

This

^{*}An account of them, from this author, is given Creen, vol. iv. p. 454.
† They approved of things which they used themselves in worship.
† How could be know this, who was ignorant of their language, as he consesses in the same breath?

J Lettr. Eds. p. 194, et see

This chir. Tibe, also, is more exposed to the incursions of the Texture, who border on

it, then he other two.

They departed from Laddk the feventeenth of August 1715; and arrived at Lassa, the conteenth of Morch 1716. They suffered greatly in the way, travelling through the mode of snow, ice, and excessive cold, which reigns in those mountains. Soon after her arrival, they were cited to appear before certain tribunals, about a trouble-scale as ur *. As they passed by the palace, the King, who was in a balcony with one of his ministers, asked who they were. That lord, who was a person of great probaty, and knew their case, took that occasion to apprize His Majesty of the injustice which was done them. Hereupon the King sent for Desiden a mediately, and gave orders, that they should give over vexing them.

Some days after paying a visit to the same minister, he asked our Jesuit, why he had not been yet introduced to the King? His answer was, that he had nothing sit to hake a present of to so great a monarch. This excuse not serving, he was obliged to appir to the palace; where in the hall he found above an hundred persons of distinction, this demanded audience. Presently two officers came, and having taken a list of their sames, carried it to the King, who immediately ordered Desideri to enter along with a Great Lama. The Lama's present was considerable; the Jesuit's but trissing: yet the Prince caused his to be brought from the door, where the other was left (according to custom) and to show how well satisfied he was with it, kept it near him, which is longular mark of distinction at this court. Then ordering the missioner to sit opposite to him, and very near his person, talked to him for near two hours, without speaking a cond to any other present. But Desideri had no opportunity all the while to put in a stable, in behalf of either his religion, or mission thither. In short, the King, after speaking in his commendation, dismissed him.

This Prince is a Tartar, who some years before conquered Tibet, which is not far non China: for they reckon but four months journey from hence to Pe-king,

hahe, an ambaffador, who luck arrived from that court, was returned to

Bibliotheque, ou Histoire Literaire; with judicious remarks by the journalist. | Congregation

Congregation de propagando, from the account he gave them by word of mouth or writing, of the state of Tibet, and success of his mission. As on one hand Horace seems to have in posed on them, in many things; so on the other, there is no doubt but they in their turn, have imposed on those for whom the memoir was designed. namely, persons of sigure and wealth, who were best able to give assistance to this new mission. They judged, that the surest way to obtain their ends, was to represent Tibet in great measure already converted, and that nothing was wanting to complete the work so successfully begun, but a sufficient number of missioners. It it thus only that the glaring improbabilities which appear in this tract can be accounted for, which we have taken notice of elsewhere: and as we have likewise inserted already from thence the little which it affords concerning the country and inhabitants of Tibet *, we shall confine our abstract chiefly to matters concerning the mission, and other occurrences.

Clement XI. confidering that the inhabitants of Tibet (little known to the moderns) where St. Thomas preached the gospel; were at present all Pagans, resolved in the last year of his popedom, to send thither twelve Capuchins of the province della Marca, in the estates of the church, under Francis Horace della Penna, as present; with orders to enquire into the state of that kingdom, and see how a mission might be introduced for preaching the faith, and converting the natives. After a tedious and statiguing journey, the missioners at length arrived at the capital, taking the road from the Great Mogol's empire through the kingdoms of Battia and Batgao; but for want of a regular correspondence, several years passed, without hearing any thing from them. Mean time nine of the twelve died, and the present returning to Rome, gave an account, that the other three were rendered unsit for service, either through age, or the hardships they had suffered. He said he was sent by the King of Tibet, to solicit for more mussioners, and to settle a method of corresponding by letters, as well as receiving searly the supplies necessary for the support of the mission.

Horace and his companions having been presented to the King, and a Great Lama, they were received with a benevolence natural to those people: and His Majesty having heard the reason of their coming into his dominions, ordered the presect to deliver him, in writing, an account of the law which he proposed to preach. The Lama did the same, and Horace having obeyed their commands, waited on the King some days after, to know his opinion of the doctrines contained in the memoir. "Lama," says he, know that the law professed by me and my subjects has always appeared good to me, as having been bred in it: but, I confess, yours seems better." The Capuchin, on so good encouragement, made a bold push, and desired His Majesty not only to embrace a religion which he approved of, but to oblige his whole kingdom to do the same. The King (who, doubtless, did not expect so hasty a summons) answered, that it was not time for that yet; bidding him and his companions, in the mean while, to learn the language, and teach their law.

Horace, after this, went to the Lama, to know what he thought of the matter. But the Pontiss, it seems, more reserved than the King, gave him his objections in writing t, and defired his solution. The Friar went to work without delay, and having drawn up an answer, carried it to the Lama; who only said, he would examine it. and then talk to him about the same. However, as he observed their humility and disinterestedness (which, by the way, Friars know well how to counterfeit on occasion) he shewed an extraordinary love and kindness to them §. He likewise recommended to them the

^{*} See Green, vol iv. p. 458, et feq. † This account of the origin of the miffion is taken from the memoir itself. † To have given the reader a right idea of this remarkable affair, the Friar's system of doctrines, and the Lama's objections, ought to have been set forth in the memoir. § Nouv. Bibl.

ng of the language; which, that they might do the more effectually, the King put into the hands of a Lama monk, much offeemed at court. He likewife gave them ission, confirmed by edich, to build a church and house, forbidding any person to them, and ordering his ministers to protect them, and require no tribute of . These savours from the heads both of the state and church, procured them the

is region is so vast, that the inhabitants amount to no fewer than thirty-three ons. They are very tracable, and of an amiable disposition. Although they are all iles, yet they have, and confess, both in the names and forms, many things which

lomanists retain, and profess in their religion t.

prace being ready to return to Europe, to execute the King's commands beforeioned, received from him the following passport: "From Lassa, the place of
lence and residence of the King, be it known to all our subjects, ministers, great
mall, who dwell on the road to the kingdom of Niverri, westward, That the
pean Lama having come to Lassa, capital of the rich kingdom of Tibet, to aid
lo good to all people; and being to return to the said kingdom of Niverri, no taxerer is to demand any duty of him. We order, that nobody do him any injury;
hat all assist him in his passage. From our palace of Khaden Khagn San, this year
imo Khagn, that is, 'of the Region of the Water,' the 23d of the moon," which
ers to the 7th of August 1732.

had orders, when he had got to Nepal t, capital of the kingdom of Batgao, to to the King, and first minister of state, to let them know how he did. This he rmed, and received answers both from them and the Grand Lama. That of the runs as follows: "We have a great pleasure that you, European Lama, by the of God, are in good health, and that your body is like to the finest gold, and as acreasing of the moon till it comes to be full. We have received your letter with rystals, which are extremely agreeable to us. Return quickly with other Fathers; continue writing to me without interruption, as runs the Ganges §. Written Lassa, the good day the 23d of the seventh month." This answers to the 3d of

1st 1733.

ne Grand Lama's letter is in these terms: "It gave me no small pleasure and plation to find by your letter, that you are very well ||. And since you have always owels of a father for your dear friend, I must believe that your life will always be happy. All your discourses are printed in my heart. This letter is wrapped in ce of yellow brocade, called torchesalam ¶. Given the good day, 1st of the sixth h, in the year of the Water Ox," that is, the 23d of July 1733.

ne letter of the prime minister begins in a kind of religious rant. "Triumph over fidels, and be you holy! I am rejoiced to hear that you are very well, and that pranches of your heart are extended to gather the fruits of your excellent law." may conceive from these letters, adds the memoir, the great esteem which the, the Grand Lama, and the prime minister had of our holy evangelic law "."

Nouv. Bibl. tom. xiv. p. 48, et seq † An account of these articles has been already given. Napak. Penhaps the Nup 1 of Tavernier. See Green, vol. iv. p. 458, a. § It is not that the King should mention the Ganges (which is not in his dominions of Lassa, but those of t, or the second Tibet,) when the Tsan-pu, which runs near Lassa, is in more esteem. It is obable, that the King should write to this friar: it is much less so, that the Great Lamb should stoop d him a letter, especially conceived in such terms, as amount to acknowledging him as his superior. It help the Great Lama would mention such an impertinent circumstance? Those who er these letters, can only conceive that they were forged, to make the Popish dapes believe their n was in high esteem with such as were chief in power.

L. VII.

Upon this report made to His Sanctity, and the holy congregation, they appointed for the mission nine other Capuchins, assigning to each eighty Roman crowns for his voyage, and as much for his annual maintenance, giving them a year's salary beforehand. They set out in 1738, with a present for the King, and another for the Great Lama; besides two briefs, one for each. In the year 1742, a letter came from Friar Horace, setting forth, that they had arrived at Lassa the year before: that the presents of the Pope, called by them the Grand Lama, had been received with great satisfaction; and that the King, as well as the Great Pontiss, were preparing presents for his Holiness, and to answer his briefs; which were to be sent the year following by one of the Capuchins, whose age had rendered him useless to the mission.

There came with the faid letter the original privilege for liberty of conscience, granted by the King, and published throughout his dominions. It is conceived in

"We, Nivagn, King of Tibet, give warning to all men under the sun, and in particular to the ministers of the residence of the Supreme Lama, to the ministers of Lhasa, to the chiefs of a thousand, of an hundred, and of ten men: to the chiefs of the Tartars, and all both great and small: to the ministers named Hemor, Ghalep, and Chiri jis, and to all the governors of fortresses and provinces, and to all the governors of foreral castles, and to the subordinate governors; and to the nobles of all Tibet; to the privileged persons, and all others, powerful or not powerful; that none of you have the presumption to hinder the execution of the present privilege in favour of all these European Fathers of the religion, called that of the Capuchins, or true Lamas Gokhar, provided that none others interfere who come for sake of their private interest; these being arrived not to trade, but only with a view to do good to all men; to recommend the works of true saints; to conduct all men in the true road to paradise; to teach subjects to be very submissive, and to obey, with a sincere heart, their proper Kings, their viceroys, and their ministers; and to extend the law of the true God, that is to say, the evangelical law.

"The Sovereign Pontiff, or Grand and Supreme Lama of all these Fathers, who, as a tender father, extends his compassion and love to all men, to draw them out of the road to hell, and render them partakers of an eternal and immense glory, as well as selicity, in the abode of paradise; without regarding the incredible expense, sends into all kingdoms, as far as in his power, preachers of the true law: and it is for the same end, and not for other motives \$\frac{1}{2}\$, that he has sent some again into our kingdom. It is for this reason that we give for ever our seal to all those who shall come after them, liberty to preach, and extend the law of the true God, freely, openly, and publicly; not only in the city of Lhasa, but also throughout the kingdom of Tibet, in all places, and to all persons, as well religious as secular.

"To you all, universally, as before recited, more powerful, or less powerful, and in particular to the Chinese, to the Tartars Hor ||, and to all others, whether religious or secular, we command, that no person attempt to hinder those whose hearts are enlightened with the light of the true God, to embrace the true law, and who voluntarily desire to embrace the true law, or have embraced it already. All you, as above,

Nouv. Ethl. tom. xiv. p. 57, et seq. † His Majesty should have sa'd, their Catholic Kings. To be sure he knew the Pope's heart better than he did himself; nor ever heard that these European Lamas had been expelled China eighteen years before, for contrary suspicions. § How comes it this uncouth term, though often inserted, is not explained? § These are a fort of Tartara, never heard of in Europe before,

do not dare to hinder them from learning it; and when they have embraced it, let none obstruct them, or sorbid them to observe freely, openly, and publicly, this true law. Be it known likewise to you, that all who shall embrace and keep this true law, shall be reputed by us more faithful subject than those who retain the first; and that with respect to the preachers of the true law, or apostolic missioners, we shall guard and defend them, taking them under our special protection: neither do any thing, be it ever so trivial, that may give them the least cause of uneasiness; but live in peace with them. All you, who are concerned as aforesaid, print these letters. Given at Kaleno Khagser [before, Khaden Khagn San,] the residence of the triumpher on all sides, in the year of the Iron Bird, the 30th of the seventh month:" that is, the 9th of September 1741.

During the eight years that Horace was absent from Tibet, the King's affection for the Romish religion (which the memoir always takes care to compliment with the name of holy) increased, it seems, instead of diminishing: in proof of this, part of a letter is inserted, which we are told was written from the King, by his secretary of state, to Horace whilst in Italy; intimating, that "he gave belief to his own religion, only because he was bred in it; whereas he believed in that of the Capuchins, and held it in great devotion." This he bid him represent to his Grand Lama. But he assigns no reason why he believed in it; nor is the date of the letter, or of its arrival,

mentioned 1.

We are fold next, that the exposition of doctrines, given by Friar Horace to the Grand Lama, had made the same impression on that Pontiss as on the King; as appears

from his privilege, which, in substance as follows, is the same with the royal.

"We univerfally command all men under the fun, particularly all the ministers of our residence, the ministers of Lhasa, that all these European Fathers of the religion called that of the Capuchins, or Lamas Gokhar, in the kingdom of Tibet, not being mixed with the other, who come for sake of interest, or only to trade; we command, we say, that wherever they go or stay, every one of you may affist them, and do them good offices. And that throughout the whole extent of the kingdom they may carry on, in peace, the work which they have been sent to execute \s. Written and given in our great palace of Putala, the year of the Bird of Iron, and twenty-eighth of the autumn of the star called Thrumaho;" that is, the 7th of October 1741.

Our Friar likewise speaks of some conversions which he had made, and of certain persons whom he had baptized. He observes, that the Capuchins he carried with him, having had time to make a great progress in the language, which he taught them during the voyage, he hoped they would soon be able to preach the gospel, which the people of Tibet were very well disposed to embrace: so that by the protection of the King, the Great Lama, the prime minister, and the whole court, he did not doubt

^{*} Meaning the established religion of Tibet. Was ever such impudent forgery? Would any sovereign thus incense his subjects, by stigmatizing them openly as rebels? Does the religion of Tibet assert the independency of the church on the state more than the Romish? But the devil knows how to hide his cloven foot till he has gained his point. † It is strange this should not be as strong a motive in Tibet, as it is in Europe; or that the people there should so easily get over the prejudices of education, which in these parts of the world are found so difficult to conquer. Does not this shew how egregiously mistaken and concerted we are, in fancying ourselves endowed with more reason and good sense than any of the Asiatics? † Nouv. Bibl. p. 64, et seq. § Here the Lama is supposed to give the Capuchins licence to overturn the established religion, and dethrone himself, in favour of the religion of the Capuchins, which new term seems to be coined to distinguish the religion taught by them from that of the Jesuts. Such is the rancour that reigns among these detestable orders of friars.

quickly to see the capital city entirely converted; especially considering how well the doctrine had been received by great numbers both of the clergy and laity.

But, he adds, that, considering the great extent of the kingdom, and many millions of inhabitants, it would require a great number of missioners, dispersed through the provinces, to carry on and complete the work so successfully begun. On the other hand, the memoir declares, that the Apostolic Chamber was so poor, and much in debt, that, far from supporting new missions, it was not in a condition to maintain these already established, the number of missioners requisite for the purpose was so great. This inability in the Apostolic Chamber happened to be the more unlucky, in regard the Kings of other dominions bordering on Tibet required missioners: for the Capuchin de Recanati, superior of the mission, sent to the kingdom of Batgao in 1735, being with two of his companions at Nepal, the capital; the King, it seems, was so enamoured with their doctrine, that he assigned them a large palace, consistent from one of the grandees, for their habitation; and granted them liberty of conscience, by the following public edict, sent by the said superior to the procurator-general of his order.

"We Zaervanejitta Malla, King of Batgao, refiding in Nepal, grant, by virtue of these presents, to all the European Fathers, liberty to preach, teach, and gain over to their religion, the people under our dominion; and in like manner permit our subjects to embrace the law of the European Fathers, without fear of being molested either by us, or those who bear authority in our realm. However, these conversions ought to be perfectly voluntary, and not procured by force. Thus it is. Kasinat, the Doctor, was the writer: Grisnansarangh, the Governor-general, confirms it: Bisoraja, the Great Priest *, confirms and approves it. Given at Nepal, in the year 861, in the month of the Margsies. Good day. Health.

"I, Friar Vito de Recanati, Capuchin Missioner, testify that this is a true copy of the original. †."

The same Capachin, with his companions, passing afterwards into the kingdom of Battia, bordering on the Mogol's empire; the King being informed, that they preached a law which it was necessary to embrace and follow, in order to be saved, sent one of his ministers for them, to the place where they then were, resolving to hear honself what they had to say on that subject. Accordingly they explained their law, and pointed out the errors of that observed in the country. All this they made him easily apprehend, by means of a written instruction; which pleased to such a degree, it seems, that he commanded them to remain with him, because, forsooth their religion being all charity t, he would needs have them preach it in his kingdom s. Recanal answered, that being destined by the Pope to the mission of Batgao at Napal, he could not comply with his request. The King replied, that he would write himself to the Pope, to obtain his permission for them; not doubting but he would both grant it, and send him other missioners.

The Capuchin hereupon submitted, and received the letter written by the King to His Sanctity, in these terms: "I am in good health, and wish the same to you. Some-

* These Pagan High Priests, or Popes, contrary to what is found in Europe, are more tractable and honest that the inferior priests.

† Nobody doubts but the Friar would have sworm to the truth fa greater falliched, to serve his religion or interest: for friars are the same now as in the time of the Tart irs, and before.

‡ O wicked deceivers! Spawn of Satan! Well ye know, that it is the most uncharitable, cruel, and distructive religion, both to the souls and bodies of men, this day on earth.

As if there was little or no charity among his people: though the missioners, both Protestant and Papist, represent the Indian charity and humanity every where, as infinitely surpassing what is to be found among the greater part of the Christian sects.

[These strange notes of Green are given for the reader's amusement.]

TRAVELS THROUGH TIBET BY SEVERAL MISSIONERS.

go I was informed, that the missionary Fathers have been sent to do good to ind. Out of a desire to have it explained to me, I sent for them into the ce; and being satisfied that their ministry is entirely charity, I ordered them to my kingdom: but, as they tell me they cannot obey me without the Sove-Pontist's permission, I entreat this Lord, the Sovereign Pontist, to command Fathers to remain in my realm, which I shall consider as the highest favour, at Battia in the year 184, and mouth of the Busadabi. Signed the King." it is. "I Friar de Recanati, Capuchin missioner, attest that this is the true sense original."

e fame missioner, we are told, sent this letter, with the King of Batgao's privilege, procurator general; who received it the beginning of this year *, before the of Horace, from Tibet, reached his hands. The Pope having received these ts from the procurator, sent them to the Congregation de la Propaganda. These in debt, and in no condition to bear this new expence, represented the case to soliness; who, notwithstanding the poverty of the Apostolic Chamber, gave orders ading over some regulars, at his own expence, though not so many as were requiHe wrote also to the King of Battia a very sine brief, it seems, to acquaint him, the condescended to his request, and returned him thanks; at the same time ting him to be the first who should set his vassals the example of embracing the sh religion. He wrote another likewise to the King of Batgao, to thank him for ivilege before recited, and make him the same exhortation †.

is is the state of the mission in Tibet, Batgao, and Battia. But as it was not le to support it, without greater expences than the Pope and congregation aforewere able to supply, therefore the procurator-general of the Capuchins published receding account, not only to let all good Catholics see what a hopeful prospect was of propagating their religion in those foreign countries, but also to excite ees and pious souls to contribute their cash to promote so glorious a design.

us ends the relation whereon the journalist has made several pertinent remarks, we shall briefly touch on. First, he asks, since these three Kings required ners of their own accord, why should it be at the expence of those they apply to? they less inclined to maintain the priests of a religion they liked, than those of a on they were out of conceit with? Secondly, that as the capital of Tibet had almost entirely converted in 1741, he cannot conceive how Friar Horace should of only fome conversions since that time, and a few persons baptised. He wonders fince Lhafa was almost converted, that he fays nothing of the Christianity of i, which is fo near it; especially as he had the Great Lama's licence to make ytes . Thirdly, that the facility with which the Grand Lama appears to favour w religion is beyond all imagination; especially as they pretend to have acquainted hat there was in Europe a Sovereign Pontiff, or Dalay Lama, who exercised the uthority over the Christians, as he of Tibet did over that kingdom, and all Tartary. fays the journalist, exposed a clashing of interests, titles, and jurisdictions, which to have incensed the Lama of Putala against him of Rome. Instead of that, after ing answers to his objections (neither of which are laid before the reader,) he ies as tractable as the King himself. What makes this surrender of power and It the more incredible, is the Grand Lama's laying claim to the divine attributes,

12t is, 1742, when the relation or memoir was printed. † Nouv. Bibl. p. 70, et seq. looks as if the Grand Lama was more ready to own himself an impostor, than the inserior were to lose the benefit of the imposture,

no

no less than Christ himself*. Is it possible, that a person who enjoys the horours of a god, is accustomed to the same adorations, and considers himself rastly superior to all mortals, should so casily give up all his rights, and acknowledge for his superior a man

he knows nothing of, refiding in a distant corner of the earth †?

Fourthly, as the missioners pretend they found the people of Tibet so ready to embrace the evangelic law, doubtless, the reader would be glad to know, what were the doctrines they preached: but they neither tell us whether those delivered in scripture, or Pope Pius IVth's creed, or, simply, the institutes of their order, are what they call the Religion of the Capuchins. They do not mention a word of Jesus Christ, whereby one might judge it was him they preached. There are only two things then mentioned in the relation which could induce the Tibetians so easily to conform. The first is the outward agreement, in the form of ecclesiastical government t. But this, instead of a rewarding their conversion, ought to be one of the greatest obstacles: for where there is such a great similitude, it must be the most difficult thing imaginable to convince the people, that there can be any reason for a change §; besides twenty to one the Pagan Lamas would find they should be losers by becoming Christian Lamas. In short, there needs no more to set the Lamas of Tibet against the religion of the Capuchins, than obliging them to learn the Latin for their offices. This single innovation would make the greater part of them revolt.

The other thing which might facilitate the conversion of the Tibetians is, that the married men can, by their law, have but one wife. This is a very savourable article, plurality of wives being, according to the missioners, the great obstacle to the conversion of other nations: but there is a circumstance mentioned by Du Halde, though not taken notice of by Friar Horace, or those who drew up the memoir, which knocks all in the head again; namely, that although the husbands in that country have but one wise, yet the women have several husbands ||. If this be the case, woe be to the missioners who shall attempt to deprive them of so important a privilege. If the men accustomed to a plurality of wives, rise up in arms every where against the Christian religion, which would reduce them to one, what opposition must it meet with from the women, long used to half a dozen husbands at a time? Doubtless, they would sly upon the missioners tooth and nail in defence of their rights.

Fifthly, the privilege granted by the King and Grand Lama, for liberty of confcience and preaching is not, perhaps, a thing fo rare, or of fuch great confequence as may be imagined, or the memoir would represent it: for Kempfer affirms, that in most of the states of Asia, as well as Japan, liberty of conscience is readily granted ¶, so that it be not inconsistent with the temporal government, or prejudicial to the public peace. But what is singular in the privileges granted by the two powers ruling in Tibet, is, that they exclude the missioners who mix themselves with others, who come for private interest, and motives of commerce. It would require no great skill in conjuring, says the journalist, to guess at those others, who are to be excluded by the edict **: but who told the King and Lama, adds the same author, that there are missioners of such a mercenary order ††? Why, who should, but their good friends the Capuchins?

^{*} The Journalist says, than the Pope of Rome. But the Popes do not assume the name of God in an absolute sense, as the Grand Lama does † Nouv. Bibl. p. 81, et seq. ‡ Sce Green, vol. iv. p. 459, a. § Ibid. p. 212, note f. § Ibid. p. 457, d. ¶ But not, we presume, in so extensive a degree, giving leave to any who will, to embrace the new doctrine, and forbidding any to hinder them, &c. ** He means, doubtless, the Jesuits. †† Nouv. Bibl. p. 90, et seq.

CARON'S ACCOUNT OF JAPAK,

[Translated from the Dutch.]

Extract from Hagencar's Voyage to and in the East Indies, from 1631 to 1638, with CARON's Account of Japan *.

IN 1634 Hagemaar was fent by the Governor-general of Batavia, Brouvar, with the yachts Grol and Zeeburg, to Tayovan in Formosa, where he arrived in the middle of August. A violent tempost drove him soon after from the road. After being to see about a considerable time, he cast anchor in the bay of Firando in Japan. There is a good roadsted in the entrance for barks and Japanese vessels, but it is not very fit for the Company's ships.

Formerly there were two hamlets close to each other, near the road, which made together a tolerable village; they now are united, and form a confiderable town. The

houses are small, and constructed of thin deals rabbited together.

There are hardly any merchants here, but those who reside at the lodge, which is very large, and built of wood. It consists of four large rooms, five bed-rooms, baths, stoves, kitchens, and other conveniences. It is, however, an old and ruinous building, so much so, that the merchandise in it may not be considered as very safe. To have it properly secured against thieves, sire, or other contingencies, a stone house ought to be erected.

The 1cdge attracts many people to this place to trade with the Dutch. Without this, the place would be what it formerly was, a village of fishermen. The increase of revenue to the Lord of Firando is proportionate to the increase of buildings; and there

are now thirty-fix streets in the place.

Hagenaar then failed to the bay of Courchie, in the fame neighbourhood, where he found some other Dutch ships. The president of the factory, Koakebakker, came on board his ship, accompanied by some Japanese chiestains, in order to muster the crewaccording to custom. The next day he went higher up the bay of Firando, and discharged his cargo.

About this time thirty-seven persons lost their lives at Firando, on account of their being either professed Christians, or born of Christian parents. Some were hung up by the feet; others were beheaded, and cut to pieces; and again, others were tied to

stakes and burnt.

On the 1st of November, Hagenaar sailed to Nangasakki with the Company's bark, taking with him 36,000 taels, each worth three gilders, to exchange for silver in bars. Here he saw a venerable old man, Melchior van Santvoort, who had resided there thirty years, having belonged to the sleet of Mahu, one of whose ships had been lost here. After a stay of nine days, Hagenaar returned to Firando.

Nangas.kki has a capacious bay, and a good road. The city stands close to the sea, at the end of a valley. It is intersected by several canals, over which there are a number of wooden bridges, which are mostly covered. The houses are large, and in general built of wood. There are many streets, most of them unpaved, and, in rainy weather, scarcely passable. At night they are shut by booms. The place has neither walls nor ditches, but is very populous, and abundant in provisions.

About this time the yacht Venlo was laden with timber, rice, and forcy boxes, each containing about 3000 gilders in filver, bound for Taiovau; the Wepen von Delft was fent with specie and the requisite articles of merchandise to Chin; and the Gro. (Hagenaar's vessel,) with a flue-ship, sailed direct for Batavia.

IN August 1635, Hagenaar arrived at Firando, for a second time, coming such from the Piscadores, whence he brought a rich cargo. Disputes having arisen, about this time, between the Japanese and the Dutch, on matters of trade, it was deemed expedient to send an envoy to the Emperor at Jedo, in which city he had his residence. Hagenaar was appointed to this office, and set out on his journey about the middle of December.

Directly after his arrival, which was in the beginning of the year 1636, he apprized the Lord of Firando thereof, and folicited an audience. He made a public entry into Jedo; on which occasion the concourse of people was so great, that they could scarcely move forward. They took up their abode in the house of a bouze, or Japanese prisst, which was the usual place of resort of the Dutch who came to Jedo. It was not till the next day that he obtained an audience from the Lord of Firando. The presents were at first resused, but afterwards accepted. The Dutch were obliged to have a position drawn up, couched in the most respectful terms, stating the object of their embassy, by the private secretary of the Lord of Firando; and nearly a month elapsed in various procrastinated ceremonics and negotiations, before a message was sent to them from one of the chief ministers of the Emperor, saying that no opportunity had yet occurred of laying their petition before the Emperor; that it was not likely that their business could be done before the sandats, that is, the Japanese new year; and that he, therefore, advised the Dutch to set out on their return.

Hagenaar, upon this, took his departure from Jedo, leaving behind him, however, fome of the Company's fervants, amongst whom was the senior merchant Frans Caron. Having reached the large city of Meaco in eight days, Hagenaar, who had been wounded by his Japanese servant, in a fit of drunkenness, was obliged to take his passage by water to Hosucka, where he arrived the next day. As he had to wait here for the Company's bark, he took a palanquin to view the city. He saw here eight magnisscent pagodas, adorned with gilt statues; also the samous castle, which is strongly fortisted according to the Japanese mode, being surrounded by handsome stone walls, and deep ditches. The bark soon made its appearance, and Hagenaar returned to Firando.

In the beginning of June, our people faw the last Japanese vessels come in from their whale-fishery. This fishery commences in December, and continues till May or June. In this period they had taken two hundred and seventy-four fish of various sizes. They

are all caught near the shore.

About this time Caron came back from Jedo, where he had had an audience of the Emperor, who was very well pleafed with the prefents offered by the Dutch; and gave them in return two hundred pieces of filver, worth about two thousand five hundred gilders. The Lord of Firando gave the chief of the Dutch sactory leave to build a ship, and man her with Japanese; and in other points the affairs of the Company seemed to go on very well.

In the beginning of August, Hagenaar sailed for the island of Tabour. A Japanese, who was accused of thest, proved his innocence by the following method: he held in his hand a piece of very thin Chinese paper, upon which were painted three monstrous

images, folded together. Upon this a large piece of red hot iron was put; the paper inflantly caught fire and was confumed, but the iron did not appear to have done the leaft injury to the man's hand. This was confidered as a mark of his innocence, and

ne was acquitted in consequence.

Hagenaar then returned to Firando, where, soon after, it was determined in council to send the merchant Van Santen to compliment the Emperor, and transmit some presents to him. At the same time, the information given by the junior merchant Verstegen relative to the existence of an island very productive of gold, in the latitude of thirty-seven degrees north, about sour hundred leagues to the eastward, was taken into consideration; but it was determined not to make any attempt at that time to discover it; partly for want of vessels, and partly, because the season was gone by for sending such as could have been dispatched from Japan: besides, the matter was looked upon in a very dubious light, as the Castilians were in the habit of traversing those severy year. The enterprise was therefore deferred till a more convenient time.

On the 18th of October the Japanese celebrated a sessival in honour of archery. At the end of a wide street, in which the principal magistrates resided, a target was erected. Three Japanese appeared on horseback, armed with bows and arrows, and otherwise equipped as for war. They put their horses upon a full gallop, and, upon approaching the target, they shot their arrows at their highest speed, about ten seet off. When the centre was hit, loud acclamations were heard. Each horseman shot three times.

Hagenaar now received orders from Batavia, to proceed thither by way of Taiovan:

and failed accordingly in the beginning of November.

THE accounts given by Frans Caron, mentioned in the following narrative, interfperfed with additional observations by Hendrik Hagenaar, which latter are distinguished by inverted commas, respecting the interesting empire of Japan, are separated from the

narrative part, and here subjoined.

Japan, called Nippon by the inhabitants, is supposed to be an island, or an assemblage of islands, together constituting an empire. This is, however, not quite certain. The Japanese are themselves ignorant on this subject. By the most particular inquiries made by Caron it appears that, from the province of Quanto, whence the Emperor derives the largest portion of his revenue, and in which is situated his capital city Jedo, it is twenty-feven days journey, in a direction north-east-by-east, until the utmost point of the province of Tsunga, which borders upon the ocean. Thence an arm of the sea is passed, which is reckoned to be eleven leagues broad; after which you come to the country of Jesso, or Sesso, which produces large quantities of beautiful furs, but which is very defert, mountainous, and thinly inhabited. It is fo extensive that, though the Japanese have penetrated very far into it, they have not yet found its termination, and cannot determine its extent. They have often been obliged to give up the further purfuit of discovery for want of provisions. This obstacle might, however, easily be removed; but the accounts given by the emissaries sent thither have not encouraged the Emperor to make further progress. According to them, the country is wild; and where there are inhabitants, they are represented as being hairy all over the body, with very long hair and beards, more resembling wild beasts than human beings. Whether therefore, any of the islands which compose the empire of Japan are united to the continent or not, must thus remain unascertained.

The two large islands, called Chikok and Saickok, are governed by Kings and noblemen. The last-mentioned, which is the largest, includes a separate province called Fisen, which is said to be the smallest province of the whole empire. The largest island, Japan Proper, or Nipon, is close to the two just mentioned, and reaches to the country of Jesso, whose extent, as has before been observed, is not exactly known. It is divided into seven provinces, namely, Saickok, Chikok, Jamaisort, Jessingo, Jessigen, Quanto, and Ochio. These provinces, together with their cities and fortresses, are under the immediate authority of a number of Kings and noblemen, who govern them, and levy the revenues, out of which they transmit annually to the Emperor, the amount which has been fixed as their quota upon their appointment.

The revenues are appropriated, in the first place, to the maintenance of the Emperor, the King, his son, and of the court, in which objects are expended 4,000,000 cockiens, each cockien worth ten Dutch slorins; secondly, 5,000,000 cockiens are devoted to maintain the guards, who are all noblemen, and receive pay each according to his rank. The whole annual expenditure is 28,345,000 cockiens. The lordships, lands, and estates which the Emperor distributes amongst his Kings, Princes, and noblemen, generally bring in 19,185,000 cockiens; but whether they produce more or less, the

amount at which they are rated must be brought into the imperial treasury.

The monarch has the title of Emperor, and is the lord paramount of the subordinate Kings, who are all dependent upon him; and he is also the absolute proprietor of all their possessions. Caron saw, during his residence in this country, several instances of Kings and noblemen, who, for trisling misdemeanors, were exiled to different islands, and others who were condemned to death; whose estates, revenues, and treasures were bestowed upon others, according to the will of the Emperor.

The imperial city of Jedo is very large. The palace, or castle, is six miles (in the original an hour and a half) in circumference; and is surrounded by three deep moats, and stone walls. These moats are connected with each other, and the bridges and gates of communication are so numerous and intricate, that it is difficult to sorm a conception of them.

The streets are very broad; some are bordered on both sides by sumptuous palaces. The gates are fortissed on each side with iron bands, or gratings, about an inch in thickness, laid crosswife over each other. Over each gate is a large building, capable of containing, in case of necessity, two or three hundred men.

It is in the interior part of the castle that the imperial palace is situated, consisting of many large apartments, surrounded by shady groves, which although planted by art, appear to be the productions of nature. There are likewise sish-ponds, rivulets, open spaces, race-grounds, sides, gardens, and a number of separate apartments for the women.

In the second inclosure stand the palaces of the Princes of the Blood, and of the principal ministers. In the third and outer inclosure are the palaces of the principal Kings and nobles of Japan; all gilt and richly adorned. Without are the dwellings and houses of the inferior nobles, more or less sumptuous, according to their rank. Taken altogether, this astonishingly large palace appears, within and without, like a golden mountain; for all the nobles, from the highest to the lowest, spare no expence to ornament their residences, in order to give a greater lustre to the whole, and to please the Emperor, who takes great delight therein.

Here refide the married wives and children of the nobles, in order that, being always under the eye of the court, they may serve as hostages for their fidelity. This exceedingly large palace, which has an extent equal to a great city, is thus at all times tilled

with

with great men, who never appear in public warbout a numerous retinue of interaction nobles, pages, horses, and palankeens. The streets, however broad, are yet too narrow

for their pompous processions.

The Empeior shews himself to his subjects, sometimes on horseback, and sometimes in an open sedan. He is generally accompanied by a number of lords, who are styled Itis Majesty's companion-nobles. They are generall some of his richest and most powerful subjects, but do not enjoy any other dignity or employment that that of constantly attending upon the person of the monarch. It is requisite, however, that every one of them should possess some eminent qualification. Some are musicians, others physicians; some singers, others beautiful writers; some painters, others orators.

Upon them follows the first division of the body guard, consisting of principal lords; Kings, and Princes, the Emperor's sons by his concubines, who are on that account excluded from the succession to the throne, as also his brothers, nephews, and other near relations. These illegitimate Princes are very numerous, as may casely be supposed from the great number of the Emperor's concubines. One of the Emperor's uncles, who is King of Mito, has sifty-four sons, besides daughters, whose number is

not publicly known.

In the third place, follows a part of the fecond division of the body guard. As this confists of several thousand men, the colonel, some of the officers, and part of the guard precede the Emperor about the distance of a cannon-shot; and the rest follow him at a similar interval.

How uncommonly large foever the number be of the foldiers kept by this monarch, none are found amongst them but chosen men, well made, of a courageous appearance,

expert in the use of arms, and even not ignorant of literature.

The appearance of the Emperor in public thus makes a brilliant display. An astonishing multitude of people are seen, all well made, all dressed in black silk, some on foot, some on horseback, before, aside of and behind the monarch, altogether marching in ranks in the best order, and without any one deviating in the least from his appointed station.

It is at the same time in the utmost silence that the procession proceeds. No one is heard to speak a word. Neither the spectators in the streets, nor those who form the procession make the least noise. It can only be perceived by the sound of men's foot-

steps, and the trampling of horses.

Some time before the Emperor appears in public, his intention is announced; all the streets through which he is to move are cleansed and strewn with sand. The doors of all the houses are open. No one is allowed to appear at them, or at the windows, or in the shops. Every one is obliged to return to the interior of his house; or, if there be any one that the Emperor desires to see, he must kneel on a mat before his door.

When the Emperor defigns to repair to Miaco, which fometimes happens once in feven years, to pay a vifit of ceremony to the Dairo, who is the true heir to the throne of Japan, an entire year is previously taken up in making preparations for the journey, and regulating the ceremonies to be observed. In order that the nobles may not croud each other on the road, the number that shall set out and travel every day is fixed.

Jedo is one hundred and twenty-five leagues distant from Miaco. Many cities, and large open villages lie on the road, two, three, or four leagues asunder. There are also twenty-eight palaces, erected at convenient distances to lodge the Emperor and his retinue on their journey. Twenty of these palaces are fortified. All, from the first to the last, are provided with an establishment of an household, soldiers, hories, furni-

412

ture, and every necessary for the use of the Emperor. Those who accompany the Emperor when he sets out from Jedo until he reaches the first palace, remain there; the retinue that is in readiness these replaces them, and go on to the second, where they remain; those in the second go on to the third, and io on till the last, regularly

relieving each other. The fame order is observed in the homeward journey.

In the year 1636, a large building was founded at Nicko, fituated four leagues from Jedo, intended as a maufoleum for the then lately deccased Emperor. In front of the pagoda, appertaining to this building, was suspended the large brass chandelier, which had been presented by the Company to His Majesly in that year. Close to it stands a castle, surrounded by a double moat, and handsome bassions, built of stone. It contains a great number of elegant apartments. This castle, which was built for no other purpose than for the accommodation of the Emperor, when he is required to be present at the funeral ceremonics of his father, was completed in five months, an incalculable number of carpenters, masons, stone-cutters, painters, and other workmen, having been employed in its erection, which in the ordinary course of work, might easily have consumed three years.

The treasures of gold and silver of that monarch are kept in chests containing each one thousand tasels. It is said, that there is an incredible number of them; but the real number is known to very few. These chests are distributed in different parts of the chief palace, in one place more, in another fewer. According to the labels upon them, it would appear that some of these chests have remained silled with money for one hundred years. Since the receipts very sa exceed both the ordinary and extraordinary expenditure, it follows, that immeasurable sums must be kept in these treasuries.

The present Emperor's father was the son of Ongosschio, who put an end to the last state of civil confusion into which the empire had fallen, and gave to it a regular form of government. He died at the age of fifty; when on his death-bed, he addressed the sollowing words, amongst others, to his son:—"The lands and treasures which I possess, belong to you; but there is one thing which I wish to put into your own hands; it is this chest; it contains the ancient laws and annals of the empire; the decisions and proverbs of our sages; and the principal and most precious gems. Keep all these things with care; they belonged to me, and have been religiously kept and respected by all

our progenitors."

The present reigning Emperor had not, when he succeeded to the throne, either a lawful wife, or any children, being exceedingly addicted to an unnatural propenfity. The Dairo, who had two very beautiful female relations, fent them to him, requesting that he would honour her whom he liked best with the title of Midni, or Empress. The Emperor, unwilling to offend him, retained one of them; but he never had any thing to do with her, continuing to live according to his usual manner. This young Princess fell, in consequence, into a deep melancholy, which, however, she sought to conceal, for fear of exciting the Emperor's displeasure. Her nurse, to whom she was much attached, and who was much respected in the court, having observed this, took the liberty once, when she thought she had found the Emperor in a good humour, to fay to him. "How is it possible that your Majesty takes so much delight in the barren. pleasures to which you are devoted, whilst you neglect a beautiful Princess, who would not only yield the bloffoms of pleasure, but also the useful fruit of an heir to your dominions?" The monarch, though offended at this freedom, made no reply, but rifing, retired to his own apartment, whence he immediately sent for his principal architects, and commanded them to collect as many workmen as they could, and instantly to begin. the construction of a palace, to be built in the form of a castle, surrounded by high

wails and deep moats, provided with heavy gates, drawbridges, and a range of apartments. As foon as this palace was finished he caused the Empress, her nurse, and all the female attendants who had accompanied her from Miaco to be shut up in it, with

a throng injunction that they should never see the face of a man.

Thele occurrences greatly displeased the Emperor's own nurse, who had influence over him, and who was respected at Court as if she had been his own mother. She regretted much to think that the Emperor would leave no children. To induce him to alter his mode of life, she caused the most beautiful damsels to be sought for in the palaces of the Kings and principal loads, and to be presented to him as occasion might serve. When, however, this did not succeed, she sought for the most beautiful girls throughout every station in the empire. Amongst those whom she brought forward into notice, there was the daughter of a sword-cutler, of whom the Emperor became enamoured, and who became pregnant by him. This circumstance, however, occasioned so much jealousy amongst the other ladies belonging to the Emperor, that they determined to destroy the infant as soon as it was born; and they in fact did commit this horrid deed. How much soever this grieved the Emperor's nurse, and others of the courtiers, yet they gave no information of it to the Emperor, dreading the terrible and sanguinary consequences which it would, doubtless, have produced.

From the earliest times of which the annals of the empire make mention, till about one hundred years ago, Japan was governed by a series of Princes of the same race, who followed each other in uninterrupted succession, and who bore the title of Dairo. Their subjects honoured them, not only as sovereigns, but as saints; infomuch, that they were never disturbed by any internal commotions. Every one imagined, that to offer resistance to the Dairo, or not to pay due reverence to his sanctity, was equivalent

to finning against God himsels.

Whenever any one of the Kings of the empire engaged in hostility with another, a general was sent from the court, who, with the imperial army, took the side of the one savoured by the Dairo, or compelled them to adjust their differences, or punished them. The fanctity of the Dairo not only relieved him from intermeddling personally in such affairs, but it was considered as a shameful degradation for him even to touch the ground with his foot. The sun and moon were not even permitted to shine upon his head. None of the superstuities of the body were ever taken from him, neither his hair, his beard, nor his nails were cut. Whatever he eat was dressed in new vessels. He had twelve wives, to whom he was married with much pomp and ceremony. Whenever he appeared in public his wives accompanied him, each in a separate carriage, ornamented with his arms and emblems. In his palaces stood two rows of houses, six on each side, all handsomely built and adorned, appropriated for these twelve wives, besides many other apartments for his concubines.

Every evening a banquet was prepared in every one of these twelve separate houses or palaces. No one was previously acquainted with that which the Dairo honoured with his presence. As soon as this was known, the sestion multitude repaired from the other eleven, to the savoured abode; the other eleven wives attended with their ladies in waiting, and musicians, to do honour to the house and to her who dwelt therein. Plays were represented, and dancing and feasing prevailed; all being intent upon as

fording the greatest pleasure to the Dairo.

When a son and heir to the empire was born to him, eighty of the youngest and hand-somest ladies, wives of noblemen, were assembled, in order to choose a nurse from amongst them for the hereditary Prince. They were conducted in great state to the palace, and welcomed with much ceremony by the other eleven wives of the Dairo, or Empresses.

Empresses, and by all the ladies of the court, together with nine of the principal lords, and nearest relation of the Dairo, who, in default of male issue, were, respectively, to succeed him.

On the following day they were all examined, and out of the eighty, forty were again felected; upon which occasion a festival was held. The forty who were rejected, were dismissed with much ceremony, demonstrations of respect, and valuable presents. On another day the forty were reduced to ten, these again to three, and out of these sinally one was chosen. At each selection new sessions took place, and presents were distributed.

The nurse thus selected instantly suckled the child, who had in the mean while sucked the breasts of one of the principal ladies belonging to the court. It was not, however, till after she was consecrated, as it were, by repeated ceremonics, that the nurse was reckoned worthy of being intrusted with so precious a pledge. Numerous were the marriage and child-bed selsivals, and anniversaries, all which were celebrated with great state and ceremony.

All these peculiarities continue to be observed at the court of the Dairo, who has a sufficient revenue to destray the expenses attending them, without having recourse to the sunds belonging to the state, which are at present under the control of another Emperor. I shall now, in a sew words, relate the occasion of this important revolution.

The dignity of commander-in-chief of the army, was formerly one of the highest and most important in the whole empire. The Dairo's second son often sided it. A certain Dairo, who had a third son, of whose mother he was servently enamoured, wished, to please her, to advance him to the same dignity as his brother, who, either by saw or custom, was entitled to it. For that purpose he ordered that the office of commander-in-chief should be divided between them, that is, enjoyed by them by turns every three years. This was accordingly done; but one of the brothers during the time in which he was in office, so much ingratiated himself with the great n en of the land, that they entered into an engagement with him, to maintain him in the possession of the important post he filled. The representations and menaces of his father were, in consequence, unavailing to make him quit his situation at the termination of the appointed three years.

The consequences of this dispute were easily to be foreseen, and that the slames arising from it would soon burst out and spread over the whole empire. The Dairo finding himself compelled, in order to maintain his authority, to have recourse to coercive measures, resolved to bring his son back to his duty by force, or even, if necessary, to deprive him of his life. The last took place. This was the first civil war that the Dairos ever were engaged in, and the first opposition to their authority.

The other commander-in-chief, however, remaining the fole possessor of his important post, acted in the same manner as his brother had done; he pursued his measures with such certainty, and obtained so powerful a party amongst the great men of the empire, that, after the decease of the Dairo, he caused himself to be declared the absolute governor of the empire, leaving to the heir apparent nothing more than the title and the accustomed forms of respect paid to the imperial dignity.

The consequence of this was a second civil war. The Dairo took his opportunity, and appointed another commander-in-chief, who descated the first. But the benefits arising from this victory were reaped solely by the general; who, in his turn, following the steps of his two rebellious predecessors, usurped the sovereign power.

Hence arose a third civil war, of which the consequences were more pernicious than those of the two former; for each King or lord who felt no inclination to submit to this

new fovereign, fet himself up for an independent Prince. The empire was thus torn to pieces in every corner. There was no city, town, or even village, however small, that

was not at enmity with the neighbouring places.

In the midst of these disturbances and commotions, a soldier of fortune arose. At first he had only a band of fifty men; but by means of his courage, and the good fortune that accompanied him, he soon found himself at the head of a numerous body, with which he made himself master of a considerable number of cities and fortresses, and, in the course of three years, made the whole empire submit to his authority.

He further acted in the same manner as the other mutinous commanders had done. He left to the Dairo only the title and the revenues attached to it, and took the real sovereignty upon himself. The Dairo, too weak to offer any resistance, was compelled to wear the yoke imposed upon him, and to crown the new Emperor with his

own hands, referving only the title.

The name of this usurper of the empire was Taicko. He was a man of great abilities. and reigned fortunately, by reason of the measures he adopted to consolidate his authority, and to prevent the chief nobles of the empire, who both envied his good fortune, and submitted with reluctance to the dominion of a Sovereign of so ignoble a birth, from stirring up mutiny or rebellion against him. In fact his plans were wisely and efficiently laid for this purpose. In order to provide employment for those of whom he was most apprehensive, and whom he desired to remove from the court, he declared that, infoired by the defire of fame and of the extension of the frontiers of the empire, he had projected to undertake the conquest of the land of Corea. For that purpose he dispatched thither an army of fixty thousand men, and gave commands in this army to those Kings and nobles of whom he had the greatest suspicion. He afterwards contrived to make this war last feven years, during all which time he kept the great men whom he diftrusted, at a distance from court. He wrote to them, from time to time, in an infinuating way, and fed them with fine words and large promifes. At the same time, however, he strictly enjoined them not to think of returning till they had completely subjected the country, and had attained the renown of having united it to the crown of Japan.

The army, however, so long detained in those distant parts, began to murmur. Every one ardently desired to return home, without being able to obtain permission to do so. Not daring, however, to do otherwise, both officers and soldiers began to wreak their discontent upon the conquered inhabitants, and committed every kind of barbarity. Murders, rapes, and conflagrations were incessant throughout the country; and their nanton excesses arose at length to such an height, that the oppressed natives, no longer able to bear or submit to them, sent deputies to the Emperor to prefer their complaints to their new Sovereign. These not having, in their opinion, been received in a sufficiently friendly or considerate manner, found means to administer poison to the Monarch. The intelligence of his death no sooner reached Corea than the army dispersed. The chiefs hastened home, either to take their chance in a struggle for the imperial dignity, or at least to secure to themselves some lordship or territory.

Tricko had an only fon named Fideri, who, at the untimely death of his father, was only fix years old. The Emperor, upon feeling his approaching diffolution, made a will, by which he named as guardian to his fon, one of the chief nobles of the empire called Ongosschio. He made Ongosschio sign an instrument with his own blood, by which he promised, that as soon as the Prince attained the age of sisteen years, he would cause him to be crowned Emperor of Japan by the Dairo, would acknowledge him as such, and would rather forseit his life than depart from this solemn engagement.

Ongostchio,

Ongosschio, who had been selected by Taicko, because he was acquainted with his abilities, having conducted his affairs with great prudence, caused himself to be appointed regent of the empire. He availed with much cunning, of the jealousy that prevailed amongst the different Kings, which he found means to excite and formant, in order to promote his purposes. No sooner was he firmly settled in the government of the empire, than he forgot the engagement in favour of his princely pupil, which he had entered into, and signed with his own blood. Fideri, having attained the appointed age, was accused by his guardian of not being faithful to himself, and of having entred into engagements and conspiracies with some of the nobles, in order to procure himself to be crowned without his knowledge; and even of having declared himself to be his enemy.

These frivolous or unintelligible accusations were backed by measures of force. Ongossichio had recourse to arms to maintain himself in the imperial government. Having affembled an army in the kingdom of Suraga, he marched to Osacka, where Fideri held his court. He besieged the place, and took it after an investment of three months. Fideri was constrained to beg for mercy, and to offer to resign the empire; requesting surther of Ongossichio, that he would give him some lordship, and receive him amongs his vassals in the same manner as the other nobles. For the readier obtaining of these conditions he sent his wise, who was a daughter of Ongossichio, that she might intercede with her father for him. But Ongossichio would not even see her. On the contrary, his ambition and cruelty rose to that pitch, that he caused a large quantity of wood to be collected and piled up round the house into which his son-in-law, with his mother, wives, and most faithful friends had retreated, and setting it on sire, put them all most wretchedly to death.

After this deed of cruelty, he difincumbered himself of all the men of consideration who had taken the part of Fideri, and in that manner subjected the whole empire to his sway. He in some measure made amends for his violence and cruelty, by a wife government, in which he equalled his predecessor Taicko. But he did not long enjoy his high dignity. He was far advanced in years when he attained it, and died soon after his usurpation. His son, Combo, or as some call him, Conbosamma, succeeded him and was crowned as Emperor. He was the father of Chiongon, the Emperor who sat on

the throne at the time this narrative was composed.

The revenues of the empire, which are distributed to or farmed by the kings and nobles, amount to 18,400,000 cockiens, each cockien being worth ten gilders. In time of war, or as often as the Emperor requires it, each noble is obliged to furnish a quota of troops equivalent to the extent of his possessions. For example, a nobleman who has an income of one thousand cockiens must provide and maintain in the field twenty footfoldiers, and two horsemen. The Lord of Firando, who has a revenue of 6,000 cockiens, is obliged to furnish 1200 infantry and 120 horsemen', besides the servants, slaves, and other followers of a camp. The number of the troops which the Kings and nobles must furnish upon the first summons of the court, thus amounts to 368,000 infantry and 36,800 cavalry. The Emperor moreover entertains, out of his private purse, 10,000 foot-soldiers, and 20,000 horsemen; who lie in garrison in the cities and fortresses, or serve him as body-guards.

^{*} There must be here a mistake in the numerals, and either the revenue of Firando must be 60,000 cockiens, or its contingent 120 infantry and 12 cavalry; the former is most probable. S. H. W.

Most of the nobles, at least those of the first rank, generally keep in actual service twice as n any troops as they are required to furnish at the first summons. It is by the splendour of this martial recinive that they chrossoperions that their princely power. Besides which, they seek by this in ms to avail of any opportunities that may occur to make themselves more known, and by some martial exploit to acquire renown. This was apparent in the last war of Arimas.

All the cavalry wear act tour, but the foot-foldiers only wear a belinet. Some of the horf-men are armed with piftols; fome with fhort larce, and others with bows and ar-

row; all, however, are provided with fein ters.

The infantry, which is divided into companies, are armed with two fabres, and, according to the fize and fluength of the men, with heavy or lighter firelocks. Some

carry long pikes, or nanganets, which are a fort of bayonet.

There is an officer to every five foldiers, who is a need like the men. Five of these smallest subdivisions, or twenty-five men, have again an officer, so that each company, which counts of fifty privates, has ten inferior officers, and two who are placed over them; over which two again there is another, to whom it cy are si bordinate, and who is the effective captain of the company. Five companies have a chief placed over the captaine, and sifty companies again another chief over the ten officers, who each command sive companies. The cavalry is organized in the same way.

The number of the living inhabitants of the whole empire of Japan is annually exactly known; as well as particularly, the number of foldiers, citizens, and farmers. Over every five houses an inspector is appointed, who must keep a register of all who are born, and of all who die, and render account thereof to his superior. The latter reports the same to the lord of the place; he again to the King; and the King transmits his documents to two ministers, who are appointed for that purpose by the Emperor.

The Dutch are in the habit of defignating all the counsellors and placemen of the empire by the general appellation of counsellors of state. But they have all their respective titles of honour, except the four first and chiefest ministers of state, who have none, but are always attending the person of the Monarch in his court, and render account to him of all that occurs in the empire. These are both feared and reverenced by all the hings and nobles. The incomes of the chief ministers amount to twenty, those of the inserior placemen to ten; and the salaries of those who fill the lowest stations may, at least, be reckoned at from two to three tons of gold *.

To one dares to attempt any opposition to the will of the Sovereign; and when he has positively stated his opinion, no one ever dares to utter any thing by way of persuading him to change it. The least punishment that would await a temerity of this kind would be banishment. The placemen are chosen from amongst the loads and nobles who are educated for the particular service of the Emperor; who selects from amongst them those who please him most. Hence in the hope of favour, in which they all live, each pays his court to the Sovereign, and is ready to fulfil his desires even before his lips are opened to express them. Whatever injustice the Emperor may commit, or into whatever extravagance or excesses he may plunge, they praise or approve of all.

Though the nobles possessery enormous revenues, yet the expences which they are obliged to incur are still more so. They must appear at court, and at least reside there six months in every year. What they are compelled to expend in that time in the metropolis almost surpasses belief. The lords from the northern and eastern parts of the empire must be at court during one half year, and those from the south and west during the

^{*} A ton of gold means one hundred thousand gilders or about 92col, sterling. S. H. W.

other halo. Let it is reflered, presionly to coming to court, to alk permission to do to; and on their arrival they give 10 npous enter similars. Such also take place at their deputare. On their journes out and home they are elected by bodies of from one to fix thouland men, each according to his rank and wealth; and it will readily be conceived that so numerous a retinue must be extremely expensive to them. The Lord of trainde, which is the place where the Company have a lodge or sectory, though one of the obligation of the nobles, does not go to court with a lets suite that three thousand nobles, toldiers, esquires, and other dependants, requisite to compose a stately picture. At Jedo there are two palaces, in which he commandly keeps one thousand attendants, both male and semale. The other nobles at the same, each in proportion to his income.

It is affonishing concourte of people is the conformal that every thing is very dear at Jedo, and that housekeeping is one quently very expensive. In addition to the assistenance of their retinue, comes that of their buildings. How sump uously soever they may be adorned, the proprietors have never done, but are constantly making alterations or additional ornaments. To this is to be added I kewise the cost of cloaths, in which in the same manner not a little is wasted; for all these numerous dependants must be habited so as to do honour to their chief. The women, especially, spend large sums as well upon their own dress, as upon that of their ladies in waiting, and further semale attendants. The grand dinners they are obliged to give, and the presents they are forced to make, also run away with a great deal.

In addition to all this, it must likewise be stated, that whenever the Emperor takes it into his head to erect new cassles, or to repair the old ones, to dig canals, or to effect any other similar works, each noble is obliged to surnish workmen according to his rank and revenue. The number of workmen that are forthcoming on such occasions is incredible, as is also the rapidly with which they sinish what they are engaged in. The nobles spare no expense to make the Emperor observe their zeal to afford him satisfaction, and at the same time, doubtlessly, to get the sooner rid of the burthen which is laid a non them.

Whenever any of the chief nobles build a new palace, he causes an entrance to be made for common use, and also one which is more clegant, adorned with carvings from top to bettom, varnished and gilt. This is covered over with planks in order not to be dar aged either by the sun or by the rain; and it remains thus covered till the Emperor goes to feast in the new-built palace. As soon as he has passed in and out of it, it is again that and covered up, nor is it either opened, or uncovered again, except upon a like occasion; because no one may enjoy the honour of treading on the same threshold with the Emperor; whilst at the same time it would be considered as derogatory to His Majosty to pass over one that had been worn.

The Sovereign feldom pays more than one visit to the same house during his life. Whole years are employed in making preparations for his visit. All the articles of furniture are adorned with the arms of the empire, in carved work, in painting, or in embroidery. After the imperial feast, they are put by, and are never again used. They are preserved like precious jewels, in remembrance of the honour done to that house by the Sovereign, in appearing at table in it. He is invited three years before hand; and the interval is not the least too long to iffue the necessary orders, and pay due attention, that nothing may be wanting.

Such an entertainment is of confiderable importance, and occasions no little to do. It continues for three months for all the nobles and courtiers, for whom, from the day that the Emperor dined there, open table is held for that time, daily. The excesses

that take place on these occasions are not triffing. The erection of a new condition, and the serst which the Monarch deigns to celebrate there, with the consequence of the enough to ruin a King. And in fact, some of them, and many of the great in it, then themselves by it. To continue in favour with the bovereign it is necessary, however, for them to resolve upon celebrating these honour-bringing but it not stativities.

When the Emperor has been out a hunting, and has cought any cranes, a peace of bird that is highly venerated in this country, he comet mes tends one of them as a prefent to some grandee who is most in favour with him. But the honour to receive a bird from the Emperor, caught by his own hand, is so great, that the tavoured nobleman, in order to testify his gratitude, is obliged to lay out at least one half of his possession presents, feasting, and other expences, and sometimes to ruin nimself entirely.

The Lord of Zatsuma lately gave an entertainment to the Emperor in a newly crected palace. So well pleased was the Monarch with the reception he had met with from that nobleman, that he presented him with an addition of fix tons of gold to his annual income, to serve for provender for his horses, as His Imperial Majetty expressed himself.

The Emperor frames and concludes all the marriages of the nobles. The wife whom they receive from his hand is always the object of their tenderest affection. To acceive her, they erect a palace on purpose. They give her a number of women to terve her, sometimes as many as two hundred, according to their income. The money which is dissipated by the sex in dress and ornament may be called exorbitant. Their separate apartments must be sumptuously adorned, gilt, carved, and provided with costly furniture. They only go out once a year to see their nearest relations. On those occasions they sit in palankeens, and are accompanied by from thirty to sifty ladies in waiting, each of whom is attended by a waiting-maid, who follow each other in stately order on each side of the palankeens, which are superbly decorated.

The children of those wives who are given by the Emperor in marriage succeed the father in his lordship and territories. It they are barren, or bring forth no male children in his lordship and territories.

dren, the kingdom, or the lordship, is generally transferred to another noble.

The nobles in this country have as many concubines as they choose, or can maintain. The number of their children is consequently often very great, who have never-

theless no share of their paternal inheritance, and sometimes fall into beggary.

Whatever can be imagined as contributing to pleafure and the support of luxury is to be found in the apartments of their women. There are gardens, fish-ponds, arbours, fummer-houses half on flore and half over the water, all forts of land-birds and of waterfowl, mufical instruments, and such like. Plays are represented; and feasts and banquets constantly occur. They very feldom admit any men into them, and then only fome of their nearest relations. These women's apartments are very carefully guarded. No woman, whether old or young, rich or poor, may have any conversation or connection with any man but the one to whom she belongs. They must pass their whole lives, or at least a great part of them, in the state of servitude to which they are condemned. It is not only a criminal action, but even the bare suspicion of it, that is punished by death. Nevertheless, the women are very amiable, mostly possessed of surpassing beauty and elegance of shape, and gifted with many captivating graces. With the greatest humility and the most ready obedience they serve the King or the nobleman to whom they belong, whilst he is in their dwelling. They anxiously attend to every thing that can afford him fatisfaction. They talk, or are filent, laugh, or are grave, according to the humour which they perceive predominates at the moment in their mafter.

Their dress is of different coloured filk. Each, according to the rank they hold, or the post assigned them, wears an appointed colour. Some wear a red dress, with green

failes and ribbons; others a white one, with red trimmings; others again aspear in yellow, with fearlet girdles and firings. Almost all their dresses are embroidered, or adorned with golden ngures, either painted, printed, or sewn. The wives of all the nobles of every rank have their sevants or ladies in waiting, mostly daughters of nobles, who have had a cultivated education. They must bind themselves for twenty, or at least for lifteen years; and some do so for their whole lives.

All women, from the highest to the lowest, are taught this lesson, never to interfere in state affairs or in any worldly matters: this lesson is observed by them as an holy law. Hence they never dare hold any conversation with their husbands on such subjects, or even ask them any questions. They would not only, not receive any answer, but it would be taken in very ill part; and there is nothing they are so fearful of as the is-

pleasure of their husbands.

The men of this country fay proverbially, that upon entering the apartments of the women, they leave all worldly cares and the remembrance of them, behind them upon the door-mat, and take them up again, when they go out; adding, that they vifit those places for no other purpose than to drink deep from the full cup of the pleasures of this life. In fact, nothing is ever heard there but founds of delight. New modes of stirring up the fire of leve, and of satisfying the passion, are incessantly invented. New festivities are in constant preparation; every kind of musical instruments are heard; singing, dancing, dramatic entertainments, in short every thing which can please the taste of the

master is adopted and practifed.

The reasons which the Japanese adduce, for having adopted this mode of living with respect to their women, and that they do not allow any male stranger to set soot in their apartments, or to hold any intercourse with them, or that they should interfere in any kind of business, are expressed by them to be, because they maintain that the woman is been to serve the man, to accommodate him in his pleasures, to bear children, and to bring them up; and that having enough to do with those occupations, they must not apply themselves to any thing else. Furthermore they suppose, that by these means they prevent innumerable jcalousies, quarrels, wars, massacres, and a thousand other inferior alls, which they maintain are almost the inevitable consequences of a contrary mode of acting; such as their ancestors, to their fore grief, experienced at the period when their women were not kept in such strict bands. They relate a thousand instances of these, either registered in their ancient histories, or handed down to them by tradition, or commemorated by the drama. They have a long catalogue of wives, who have deceived, ruined, and even murdered their husbands in those times.

Either by education, or in consequence of a fortunate temperament given them by nature, the women in Japan are faithful to their husbands, and very modest. Some examples are given by Mr. Caron as occurring during the time of his residence there.

A nobleman of clevated rank in the kingdom of Fingo had a very handsome wife. The King falling in love with her, caused her husband to be privately murdered. A few days afterwards he sent for the widow to court, who, in the mean time, had obtained a knowledge of the King's crime and intentions. The Prince having declared his passion to her, and pressed her to grant the completion of his desires, she answered him in the following terms; "I ought, O King, to account myself fortunate to have been able to please you, or to contribute any thing towards your happiness. Yet I declare to you, that the moment you touch me, I will bite out my tongue with my teeth and cause my own death, unless you grant my previous request. If you grant this request, however, I promise to become your servant. Give me thirty days to mourn for my husband, and to celebrate his funeral; and permit me at the end thereof, to

hold a feast on the tower of your palace, with all my relations, that I may take I rave of them, and affare them of my regard." This request, though it somewhat displease i the King, yet he could not refuse it; nor could he conceive why she desired to hold this feast on the tower of his palace. However it was so; a feast was held there; the King was prefent, and indulged in eating and drinking, flattering Immfelf that he should shortly satisfy the defires that raged in his bosom; the lady however rose, and pretending to require a little fresh air; proceeded to one of the galleries of the tower at a little distance from the company, whence she suddenly made a spring, and dashed herfulf to pieces, in the presence of the King and all the guests; preserving thus this violent death to a violation of her chassity.

A young fervant-maid kneeling before a noblerian, whose servant she was, and reaching out her hand to pour out some wine for him, had the misfortune to let an unlucky wind escape her. She was hereby so forcibly affected by shame, that she was not only deprived of the power of rifing and leaving the apartment, but, drawing back her hand, and letting her face fall upon her bosom, she covered her head with the flip of her drcks, and feizing her right breast she drew it up to her mouth, and set her teeth into it with fuch a delirious force, that they remained clenched in her flesh,

until the actually died from the emotion of thame that had feized her.

A certain nobleman having caused a number of handsome and well shaped young girls to be collected from among it the inhabitants of his territories, in order to put them to fervice in the habitation of his wives, found amongst them the daughter of a poor foldier's widow, who pleafed him fo much that he took her for his concubine; fome time after, her mother fecretly fent to inform her that her poverty was fo great that she even wanted bread. Whilit she was reading her mother's letter the nobleman came into the apartment, and she attempted to conceal the writing from him. But he, most likely entertaining suspicious thoughts, became angry, and insisted upon knowing from whom the letter came, and by whom it had been brought. A feeling of fhameon account of the poverty of her mother made her refuse to satisfy him; but at length, feeing he was preparing to take the letter by force, she folded it up, put it into hermouth, and attempting to fwallow it, it fluck in her throat and choaked her, so that fhe died incontinently. Anger and jealousy made the nobleman instantly cut open her throat, and get the letter out of it; which was not fo much damaged but that it could be read. He foon found that the unfortunate victim was innocent, and that the fecret which she had fought to conceal at the expence of her life, was no other than the penurious fituation of her mether. He was much affected by her death, and melting into tears, fent for her mother to his palace, where she was amply provided with all that was necessary or agreeable, and was yet alive, when Mr. Caron left the country.

As a further proof of the chaftity and natural modesty of the nation, it may be stated, that parents never include in light or loofe convertation in the prefence of their children, even not in any allusions to marriage or its purposes, nor in many things of the kind' that would be confidered as perfectly harmless by us. If any thing of the kind happens to escape in an unguarded moment from any one in company, the young people directly

rife and leave the room.

The children love and respect their parents in an uncommon degree. They are firmly perfuaded that those who fail in, or neglect, their duty to their parents, will bepunished by the gods. During the whole year they appropriate one day in every month to the memory of the decease of their parents. On that day they neither eat field, nor any thing that has received life; fruits and vegetables are then their only food. The. The revenues of the nobles arise out of the various products which is afford. Some lands yield corn; some gold and filver; check copyor, around a clead; others again timber, hemp, cotton or filk. All these reconstructs are established at the real value, and are known to the Emperor, who appoints a chancehor or steward to each of them, upon the pretence, and for the purposes, as appear by the sollewing form of appointment; "To our beloved and faithful: your ast its are extended and you have many subjects to govern. This has induced me to send to you are under standing and faithful person, who has been brought up under my root, it once to give him to you for an aid. Make use of him, and demonstrate the coby your or and the every imaginable demonstration of joy. He is sumptuously characteristic presents are made to him; and in result every means is resorted to to brang him ever so the interest of the chief to whom he is sent.

Those who are employed by the Emperor for this purpose, are educated at court from their infancy, and have always served him in one of the three coambers. He is therefore fundamentally acquainted with them, and conceives that he can implicitly rely upon them. He makes them swear, and sign with their blood, to transmit information to the Emperor of whatever they see, be it of much or of little consequence, of whatever they hear, and of whatever in any way comes to their knowledge respecting affairs of state; as likewise to keep a daily register of the mersures and acts of the grandces to whom they are dispatched. The Kings and nobles dare do or undertake nothing unknown to the chancellor, who in fact is more the real governor of their territories than themselves.

Almost all the nobles entertain a certain number of men of understanding and experience, whose advice, given without any simulation or reserve, they listen to. Every evening they must represent to them any mistakes into which they may have fallen during the day just elapsed; for it is a received maxim amongst this nation, that no human being can know his own faults. They are convinced that those who are called to the exercise of important dignities, and who have the direction over many things, often fall into error, by precipitation, by anger, by pride, or by too fond an attachment to pleasure; and they prefer to be privately reminded of their faults than to be exposed to the consequences which might ensue from them, or to the observations to which they might give rise in public.

The principal courtiers have their proper names; they are, however, in general, addressed by the name of the territories which they possess, or by the titles of dignity they enjoy: the place or castle at which they usually reside bears the same name as themselves. Besides this, men are mostly distinguished by three different names, at three different periods of their life. Infancy has its proper appellative, which it would be ridiculous, according to their ideas, to apply either to the age of adultness or to that of grey hairs. When they attain the age of manhood they change their name, taking

one that is fitting; and the fame occurs again in advanced life.

The Japanese, however, in general have also samily names, which are derived from their ancestors. These they place before their familiar names, saying, that they existed

before them in the world, and ought therefore to have precedence.

When a nobleman dies, from ten to thirty of his subjects or servants, according to the rank and power of the deceased, rip open their bellies, and accompany him to the grave. Those who do this, have entered into an engagement to do so, and have given their words to that effect; for whenever it happens that their lord shews them any particular favour, or promotes them in his service, they thus address him, to demonstrate their gratitude: "My lord and master! you have so many faithful subjects; what have I

cu own, and by promiting you flat is that it is confirmed than you do." To confirm the promiting that beaker of view of the promiting you flat is that it is a few to be a followed than you do." To confirm the promiting that drink a beaker of view of there, which is a following commonly as right

the Jap rule: engagements confirmed in that way car out he broken.

The ripping open of their bell es is the speriouned. They affectle their relations, and go all together to a pageda. In the mide of it incress and carpets are forced upon which they fit down, and partale of a fare cell rapple. They get and dink heartly and gody, as if nothing was the marker. As we their past the mark ho means to did one sopen his belly coof-wife, so that the energies gush out. Such as possess most courage alterwards out their own throats, and immediately give up the ghost. There are nevertheless no fewer that finy different modes of ripping up their bellies, which are customary a rought them. He who preforms this operation with the greatest courage and coolings, acquires the most same, and is most admired and praised.

"All the pagodas are constructed of timber, and are elevated three or sour feet above the ground. They are mostly of a square form, and from ten to sorty feet across. On each side stand steeples, likewise constructed of wood, carved and gilt. These pagodas are in great numbers, but most of them are of a small size. Every where are to be seen images, or representations of dragon's heads, giants, and such like, though mostly without any proportion or regularity. The Japanese utter short ejaculatory prayers before the pagodas; after which they throw their offerings, which consist in

finall pieces of copper money, into a fort of box or cheft."

When the principal nobles erect any lofty walls, either by the command of the Emperor, or for their own use, it sometimes happens that some of their dependants beg the favour of being permitted to serve as a soundation, and that their bodies may be laid under the wall; for the Japanese have imbibed the idea, that a wall erected upon the body of a man, who has offered himself voluntarily for that purpose, is subject to no manner of accident. When the offer is accepted, the victim lays himself down in the trench dug for the foundation, and heavy slones are then lowered down upon him, which crush him to pieces.

"The persons, however, who offer themselves up in this manner, are slaves, who are treated very ill, and lead a wretched and penurious life; so that it is probable, that they, on that account, prefer rather to die in that manner than lead so miserable a life."

The Empiror possesses a good number of large and well fortissed castles. Those of Olicka and Jedo are the principal. In the territories of the Kings and nobles there are likewise large castles, and great cities, but the latter are not surrounded by intrenchments or walls.

All the streets in the towns and cities are laid out nearly alike, and of the same length, namely, sixteen ickiens, each ickien being three ells *. At the end of each street is a gate which is always shut at night, and sometimes also, in case of necessity, by day. A watch is set every night, and the streets are lighted by lanthorns. All roads are measured, and at the end of each league there is a stone, shewing the distances from the different places.

Both in the cities and in the villages there are two inspectors appointed over each kreet, who have an eye over all that occurs in it, and are obliged to render an account

^{*} This seems rather applicable to the breadth than the length. A Dutch ell is three-quarters of a yard. S. H. W. thereof.

thereof. In order that some persons may not appear before the magistrates in a manner, or upon motives, unbecoming the respect due to them, superiors are appointed in every street to prevent this, who act as fathers, friends, arbitrators, or counsellors, and endeavour to settle disputes in an amicable way. If this may not be, they then appear before the judges. In cases of importance immediate resort is had to their tribunal.

In many cities, wells of water, at fmall distances from each other, may be observed in most of the streets; which is a very necessary precaution, as the houses being built of wood are very subject to accidents by fire; by which it often hoppens that entire streets are consumed.

Neither cities nor fillages have any municipal rights or income; for each place has its own lord, who post sits there the sovereign authority. Neither citizens, merchants, or nobles, pay any kind of taxes or imposts, excepting alone for the ground upon which their houses are built. This tax amounts to the value of from one to twenty gilders, according to the size of each house, and the extent of ground it occupies. Besides which, every freeholder must surnish for each arvas a workman or servant, and this occurs twice or thrice every month. The service, however, that is required often does not last for one hour, and continues at most for half a day.

Each King or lord subsists upon the produce which he derives both from land and water. In the same manner the nobles under them, and the soldiers, live upon the produce of that portion of land which is appropriated to them by their lord. The merchant lives upon the profits of his profession. The citizens and mechanics, from their vocations and labour. The peasants, who are little better than slaves, subsist upon an allotted portion of the produce of the lands which they cultivate.

"The revenues, thus arising both from the land, and from the fisheries, are bestowed by the Emperor upon particular lords. He also disposes of the produce of the whale-fishery. We may here remark, that the whales, of which in general from two to three hundred are caught by the Japanese, are nothing like so large in these seas as they are in Greenland. Their blubber is generally from four to eight inches in thickness, and is much intermixed with the sless, which is eaten by the inhabitants."

Every lord, or master, from the Emperor down to the meanest citizen, dispenses justice in his own assains, territories, house or family. The Emperor has certain regents or magistrates in all his dependences, cities and villages, appointed to take cognizance of affairs regarding him. The nobles and the military enjoy the privilege, when they are condemned to death, of ripping open their bellies. Merchants, citizens, and persons of inferior rank, receive their punishment from the hands of an executioner. Those who follow mercantile pursuits are held in no manner of respect, but are on the contrary despised on account of the deceptions they practice in their trade, in which, only looking to immediate profit, they use all manner of tricks, craft, and lies. Nor are the citizens and mechanics in much estimation; they are despised on account of their inferior station; the citizens, because they are at the service of the public, and mechanics, because they subsist from the labour of their hands. The peasants are very wretched; they labour very hard, and live very poorly.

The punishment of death is inflicted for the slightest crimes, particularly for thest; whoever has stolen even the value of one penny, has no pardon to expect. Whosoever hazards any money in gambling loses his life. Whoever kills another, whether on a sudden, or by treachery, must give life for life. All crimes which are punished by death by us, are equally so there. Every one must bear the punishment of his own crime.

When, however, the offence is committed against the state, punishment is inslicted upon the whole race of the offender. The sathers, the sons, the brothers, all are condemned to death; all their property is confiscated: the mother, the sisters, and the daughters, are sold for slaves.

The property arifing from confiscation, whether in the immediate domains of the Emperor, or in the territories of the lords, does not fall either to the monarch or the lords; they have no manner of share in it. Whatever is confiscated comes into the hands of a receiver, who keeps an accurate account of the same; and it is appropriated to the erection or repairs of pagodas and bridges, to the keeping in repair of

the high-roads, and to other similar objects of public utility.

"Various modes of capital punishment are practifed. In order to discover a theft the following process is adopted. A small flat and square piece of iron, about a quarter of an ell fquare, is heated red hot, and afterwards fuffered to lie till it begins to look blue. It is then laid upon both the outstretched palms of the accused, upon which have previously been laid one or two sheets of very thin paper, painted with images of demons, which instantly catch fire; the accused then throws off the iron as soon as he can. his hands are burnt or fcorched, he is pronounced guilty; or if they remain unhurt he is acquitted. A man convicted of theft is first fastened to a cross in the following To a bamboo of the thickness of a man's arm two sticks are fastened across : the fufferer is placed upon it, and tied by the neck, with a flip knot, to the bamboo; his hands, arms, and legs are then tied down to the cross sticks. Being thus placed, the cross with the man upon it is set up an end. A man then comes forward provided with a pike, the point of which is armed with a sharp flat piece of iron, a quarter of an ell in length. With this he pierces the body of the criminal, first penetrating on the right fide up to the left shoulder, and then from the left fide up to the right shoulder. These stabs generally pierce the heart, so that the suffering of the criminal is short. The other kinds of punishment which prevail in this country are all cruel in their fort; and adapted, by the excitement of terror, to ferve as examples to deter other malefactors."

In all places, and on all occasions, the execution of justice is very severe. The Lord of Firando, not long ago, caused three young ladies out of his seraglio to be shut up alive in a large chest, the inside of which was provided on all sides with nails, leaving them to die in that most miserable manner. One of them had entered into a too familiar intercourse with a nobleman, but the other two had committed no other crime than that of having been privy to the amour, and not having divulged it. The nobleman ripped up his belly.

A husband who finds his wife with another man in any apartment of which the door is shut, is allowed to kill them both, although no harm may have happened between them, as sometimes, though seldom, is the case. If the husband be not at home, or is in the sield, the father of the wife, her son, her brother, or another relation, may exercise the same right, and represent the person of the husband. Even a male servant belonging to the house may do the same. Hence instances of adultery occur very rarely. During the whole time that Mr. Caron resided in that empire, only one instance of that crime came to his knowledge. The affair happened in the following way:

A certain Japanese, pretending to go a journey, returned very shortly after he had left his house, and found a man with his wife, whom he killed in the very act. He tied his wife to a ladder, and left her standing upright the whole night. The next day he invited to dinner all their relations, both his own and those of his wife, as well men

as women. Although this was contrary to the custom of the country, as men and women are never invited to a feast at the same time, but always at different times; he requested that for that once they would depart from the custom; and his defire was complied with. The women being affembled in a separate room, asked several times for the mistress of the house. The husband's answer was always, that she was busy making ready, and would foon make her appearance, deficing that they would in the Both men and wowen, however, being now met mean time divert themselves. together in the dining-room, fot down to table, often repeating, however, during the meal, the inquiry for the mistress of the house. In the mean time, the husband having left the room for a while, went and cut off the private parts from the corpfe of the adulterer, and laid them upon flowers in a box, the lid of which he shut down; then loofening his wife from her bands, he made her put on a winding-sheet, and put the box into her hands, leading her to the company in that drefs, and telling her, "Go and offer the company this dainty, and try whether the guests will say a good word for you, and will entreat me to forgive you." The woman, more dead than alive, as may eafily be conceived, fulfilled her communion, and fe'l upon her knees before the company. But no fooner had she opened the box and perceived the contents, than she rose to take flight, but her husband, intercepting her, cut off her head. The gueste were not a little diffurbed by this scene, and using from table, left the house and returned to their homes.

"Those who travel to Jedo along the road called the Long Street, which is one hundred and thirty-six leagues long, are served in the houses where they stop for refreshment by women, or slaves, as they call them. An interpreter asks the traveller which of the women, whom he sees, and who are all dressed in filk, he desires to have to sleep with him that night. The woman on whom his choice falls, willingly submits. In Japan it is a regular custom that, as soon as any vessels enter a harbour, the hosts or innkeepers repair to the commanders of the ships, and ask them whether they desire to have a concubine during the time they remain there. If the offer be accepted, the man brings forward a woman, and the conditions are settled as sormally as if it were a marriage. These women receive for their support three, four, or six pence every day, and are allowed one or two silk dresses, which cost twenty, twenty-sive, or thirty gilders; one or two cotton dresses, doe-skin shoes, and other articles of ornament. To the parents or proprietor of the concubine a payment is made of ten, sisteen, or as high as thirty gilders. The agreement is celebrated by a festival, and the parties live together, during the appointed time, as man and wise."

The following are reckoned to be offences against the state: the breach of any of the Emperor's ordinances and proclamations; the misconduct of the nobles of the empire in the administration of the affairs committed to them by the Emperor; the embezzlement or improper appropriation of the revenues of the empire; the coining of counterfeit money; the ravishment of another's wife or daughter; the forcible carrying away of women from the highlands to the lowlands. Not only the offender in these cases, but his whole samily, is liable to punishment. If the wise be an accomplice in the crime she must also suffer death; but if she be innocent of it, she is quit by being fold for a slave; for the women are not allowed to be put to death for the crime of another; it is only their own crimes for which they are liable to capital punishment. The usual punishment on occasions of the kind just mentioned are, according to the nature of the crime, burning alive; crucifixion, with the legs in the air and the head downwards; tearing into four quarters by bulls; and sometimes being cast alive into boiling water

or oil.

A certain Japanese, who had contracted with one of the imperial governors to surnish a certain quantity of carpenter's work and massonry, having miscalculated in his bargain, failed to complete it properly, but to hade it he had brided some of the military and inspectors, in whose department the contract was to have been executed. This having been discovered, the inspectors we a concern ed to rap of an their bellies, and the contractor to be crucified with his head devinvaries. Here as a man of great desert, and one who was much respected by the principal count has and courtiers of the Emperor; and although, according to law, no person may or dere be a petitioner in such cases, to excuse those who have committed crimes of that nature, yet the great inclination which was selt for the offender, and the compassion value, his case excited, worked so powerfully upon the members of the council, that they ventured to throw themselves at the Emperor's seet, and to solicit mercy for him. Behold the answer:

"I have heard your request with displeasure; but what offends me most is, to perceive by it, that your judgment has been so remarkably weakened. Ought not a man who has been guilty of so enormous a crime to die? And what is the motive which induces you to solicit me in his behalf? Have ye also let yourselves be shamefully builted by presents or by money? Go, change your sentiments; do not attempt to insinge the laws by disarming justice. If there be any one amongst you who is so much attached to money and niches, let him enter into my treasury and satisfy his desires. Enter, I say, unto ye all: ye have my leave." No one ventured to make a

ceply, but all retired abashed and confounded.

A peculiarity is observed in the insliction of capital punishments in Japan, which is worthy of notice. It happened, fays Caron, in my time, what indeed is not a matter of rare occurrence, that a nobleman who had been appointed by the Emperor to the administration of a certain territory in the neighbourhood of Jedo, extorted from the peafants a larger contribution than that at which the lands they cultivated were legally field. Scraping in this manner together more than he stood in need of for the furpoit of his chabliliment, he faved money and became a rich man. The peafants, at length, not being able to endure the oppression under which they laboured any longer, presented a petition and proved the allegations which it contained. Upon this, the nobleman was condemned, together with his whole family, to rip open their bellies. He had a brother in the western territory, at about two hundred and fifty leagues disrance, in the service of the King of Tingo; an uncle at Zatsuma, twenty leagues further; a fon in the fervice of the Rajah of Kinocani; a grandfon in the eaftern territory, one hundred and ten leagues from Jedo, at the court of the King of Massamne; another son in the fervice of the governor of the castle of Quando; two brothers, who were soldiers in the imperial fervice; and another fon, the youngest of all, who lived near Jedo, and whom he had given to a rich merchant, who, having no other children, but daughters, had, even in his inlancy, earneftly begged to have the young man, with the intention of marrying him to one of his daughters; the Dutch were well acquainted with the merchant. All these persons, living at such wide distances from each other, ripped open their bellies, and died on the same day, and at the same hour.

In order to fix the day of execution, a calculation was made, how many days an imperial courier would require to travel from Jedo to Zatiuma, the most distant place where any of the relatives of the culprit resided; and on what day of the month, and at what hour of the day, he could arrive there. It appearing, that that would be on the eighth day of the eighth month, orders were issued, that all the others should execute the sentence upon themselves on that day exactly at noon; which was observed with

the greatest precision.

The merchant, whose daughter had married the youngest son of this noble criminal, died at Osacka of griet at the death of his son-in-law, whom he had educated, and whom he tenderly loved. His daughter desired also to rip open her belly, and die with her husband; but seeing unt her parents kept a watchful eye over her to prevent her, she took the resolution of declining to take any food or drink, and by that means put an end to her life, eleven days after the death of her husband.

These instances are sufficient to teach us the dreadful effects of a despotic government, and by contrast, the happiness of those nations whose lives and property do not depend upon the will of a tyrannical sovereign, but are solely under the constraint of laws that do not operate but to the harm of those who are really guilty. Extortionary avarice ought undoubtedly to be restrained and punished, but, at the same time, a line of difference ought to be drawn between those who are guilty of an infraction of the rights of others, and those who have not participated either by act or will in the crime. Tyranny follows one road, and true civil liberty the other.

The Japanese shew a great degree of Stoicism in the hour of death, whether it be a natural or a violent one. Even the women appear actuated by an intrepidity, in other countries foreign to their sex. They are sometimes seen to suffer the cruellest tortures with great coolness. The pain of death is likewise denounced against the utterance of falsehood in particular cases, especially in such, by which the magistrates are sought to

be deceived in the exercise of their judicial authority.

It is, however, necessary to observe, that all that has been said on the subject of capital and other punishments is alone applicable to the inferior nobility, the military, the merchants, citizens, and peasants. The punishments that are insticted upon the Kings and upper order of nobility are different; their lives are not touched.

Forty leagues to the eastward of the coast of Jedo, there lies an island in the main occan, which is only one league in circumference, and is called Faitsiesina. The coast of it is precipitous; there is no bottom to be found around it, and there is no harbour:

vessels can therefore only touch at it in the following manner:

The first persons who went thither were adventurers, who, on a persectly calm day, by means of straps and ropes sastened round their bodies, found means to climb up the precipice. Those who had ascended the height in this manner, made use of those ropes to haul up to the top timber and tools, which were sastened to them by their companions, who remained in the barks. Provided with these materials and tools, they contrived to fix some beams in such a way, and to secure them so well at one end, that the other jutting out from the rocks, were able to hold by ropes attached to them the barks below, and keep them listed six or more seet above the water, leaving them in that suspended situation. For the least wind occasions so heavy a swell against the rocks, that any vessel remaining at the foot of them would be dashed to pieces against them. The island is every where barren and craggy, and produces nothing but a sew mulberry-trees. It is almost as difficult to approach the island, as it is to land people upon it.

The nobles of the first rank, who have committed any offence against the Emperor, or have drawn upon themselves his displeasure, are sent in exile to this island. There are guard-houses placed at different parts of the island, well provided with soldiers, who are stationed there to prevent any one from having any intercourse with the exiled nobles, or from conveying any assistance to them, as the means of their escape. The garrison is relieved every month, wind and weather permitting, at which times provisions for the soldiers, and for the exiles, are sent thither. These provisions are very bad, and are distributed in a very sparing manner. Exclusive of a little rice,

the wretches confined there only receive the back of trees, and other strange sood, disticult to eat, and werse to digest. Small huts are their abode, which are scarcely sufficient to shelter them from the heats of summer or the colds of winter. They suffer very severely in consequence of their hand treatment. They are, moreover, obliged to collect the filk produced by the worms, which are bred here in considerable numbers, to prepare and spin it, and to weave as many pieces of filk stuff every year as are imposed upon them for a task.

When the Emperor died in the year 1631, all the prisoners, in every part of the empire, not one excepted, were liberated, on the same day and hour. Each received a small sum of money, according to his necessities, in order to travel to the place to

which he belonged.

The Japanele are neither very fuperstitious, nor are they over religious. They do not pray either in the morning or the evening, nor before nor after meat, nor on any fixed hours of the day. The most religious scarcely go to the pagoda more than once a month. They are sometimes heard to utter the word Nammanda; which is the name

of one of their principal deities.

The priests generally hold torth three times in a year; those who are members of the sect to which the priest belongs, assemble in the pagoda to hear him. The members of a certain sect, when they are assisted with serious or protracted diseases, send for a conjuror, who continues with them for twenty-sour hours, reading all the time, or rather making an unintelligible noise; for all that relates either to their religious worship or to medicine and other sciences, is written in a learned and secret language, which is only known to those who are initiated.

At the same time the number of pagodas in Japan is incredibly large. The priests reside in them, from two to twenty in a community, according to the size of the

buildings.

"The priests have their heads shaved. The usual dress of their order has a great resemblance to the linen frocks which the common people of South Holland wear. Upon festivals, however, they wear silk clothes, the upper part of which they throw over the arm, like the slips of a cloak."

Their occupation confifts in reading prayers before the idols, burying the dead, or being present at the burning of the bodies and the interment of the ashes: this takes

place with much ceremony.

"The feelt of the deceased, called Bom, is celebrated very nearly in the same manner as the festival of All Souls in the Roman Catholic countries. The priests perform the service every year on an appointed day, each in their rank, and in their own pagodas. They go in a row, one after another, in procession, round a covered grave,

chanting of litanies and a fort of service for the departed.

"Tombs are erected round the pagodas, and consist of a stone-wall round the grave of one or two seet in height. Those who visit them from time to time strew them with slowers, or with green branches, and pour a little water into a hole, which is made in one of the stones for that purpose, to which they put unboiled rice, which either the poor people, or the birds soon take away. Upon some graves is erected a stone post or pillar, with an inscription, commemorating the name and rank of the person who lies buried there; but this is only the case with respect to the graves of people of some consideration or wealth."

There are twelve different religious fects amongst the Japanese, out of which there are eleven of whom the priests eat nothing that has received the breath of life, or have any carnal connection with women. If any one of them transgresses this rule, and is legally

legally cot victed thereof, he is buried with half his body out of the ground in the high road; and every passenger, who is not one of the nobility, is obliged to give him of a cut with a saw across his neck. This half-interred sufferer may thus be three or four days before his torments are emied.

"Although the priefts are not allowed to have any communication with women, they keep catamites; and this they do openly, without its being confidered as wrong."

The twelfth sect is the one that is held in the greatest respect, and is the most celebrated by the learning of its members. The priests that belong to it are married. They may eat whatever has had life, whether land or water animals. Jeko is the name by which this sect is distinguished. It abounds more in superstitious practices than the others. The chief priests and heads of the pagodas belonging to this sect receive no less honour than Kings. When the members of the sect meet them, either on foot or in a sedan, they fall down on their knees, and worship them.

"The Great Dairo fills, amongst all these priests, the same station as the Pope of Rome does with respect to the Roman Catholic clergy in the Christian world. It is on this account that the Emperor is obliged to pay a visit to him every three years, at Miaco, and to pay homage to him by the offering of costly presents. In this visit the Dairo hands a beaker of wine to the Emperor, who, after drinking the wine, breaks the vessel, and joins the pieces again together; which is considered as a symbol of

fubjection."

This feet has more fumptuous pagodas and richer priests than any of the others. Some of the clergy derive their incomes from lands appropriated to that purpose, either by the Emperor hunfelf, or by the lords of the places where the pagodas stand. Others are maintained by the people. In the same manner as in Roman Catholic countries, every one has his own confessor, and a convent to which he directs his alms; so has each Japanese his particular pagoda, and savourite priest, in whom he places especial considence, and who experiences, above all others, his charity. It is in this, that their religion principally consists; their alms or benevolence flow in no other channel; they are ignorant of any other religious merit.

The opinions and ceremonies of all these twelve religious sects are different. Some believe that can is endowed with an immortal soul; that the body returns to earth, but that the soul at some future time is to return to this world, in order to lead either a happy or a wretched future life, according to its deserts, in having conducted itself well or ill in its pre-existent state. The dostrine of the destruction of the world is unknown to them. Some believe that the world has existed from all eternity, and will continue eternally to exist. Some maintain that man does not possess any soul, that is, not an

immortal spirit, and that he has therefore only to sear a worldly judge.

The principal and wealthiest members of these sects make use of their pagodas mostly as places of entertainment and delight. As they are generally erected in the most agreeable situations, on pleasant eminences, and surrounded by refreshing shades, they make choice of them whenever they are desirous of enjoying an excursion or a party of pleasure. They indulge in all manner of excesses in the presence of their idols, and under the eye of their priests, who are not more sparing in eating and drinking than their guests. Debauches of every kind are practised; and a number of courtezans are sent for, whom they make use of in the presence of the priests, who, in their turn, being forbidden the use of women, have recourse to unnatural practices.

^{*} In a former place it was faid every feven years; this is Hagenaar's account, the other was Caron's. S. H. W.

The Japanese are never heard to enter into any religious disputes. Nor do the members of one sect ever seek to make converts amongst the others. Each remains in his own persuasion, without troubling others, or being troubled himself on points of faith.

"Hagenaar relates, that he faw men wearing ropes with knots in them, flung over their shoulders, whose eyes turned round in their heads, and who were called jammaboos, fignifying as much as conjurors, or exorcists. Any one who has laboured for a long time under a discree, sends for one of the most celebrated jammaboos, who, after having spoken in a loud and vehement manner for a considerable time, appears to receive an answer in another voice, which all the persons present hear without perceiving whence it proceeds, saying, 'Why do you torment and vex me so long? I am not he that does it, but such or such a one your enemy, who sent me to cause this evil to come upon you. Appease him, and I will depart.'

"He further observes that, though he has travelled in many parts, he never saw such magnificent idols as amongst the Chinese, who always put three together, painted most gaudily, and adorned like Kings with crowns; with always a black one amongst them. They also put the images of three beautiful women together, of a fair complexion, and

well-shaped limbs, most elegantly sculptured.

"On the outside of the city Osacha, Hagenaar saw six pagodas, before which were placed three images of gigantic stature, with chests to receive offerings beside them, into which some of the people cast pieces of copper money. Through the middle of the smallest of these pagodas ran a rapid rivulet, which afterwards sank into the earth. A sew poor old women were observed throwing into the brook pieces of paper upon which something was written; they muttered some prayers at the same time, in the same manner as the old women do at Rome, when they ascend the consecrated steps.

At such places, as barks and other vessels must pass close by, in their passage round the coasts and bays, the abode of a priest is erected on the points of land, or close to the vater, resembling a peasant's cottage, or rather, perhaps, a pigstye, which is hung round with bits of painted paper, and looks like a little book-stall, or picture-shop in

110lland.

"In a cove about half a league from the Dutch lodge at Firando stands a little wooden house, scarcely an ell high and an ell broad. Pregnant women go thither in pilgrimage, and pray in these words: Give me a son, and I will make you an offering. By way of earnest in bespeaking the good offices of the power they worship, they leave a little rice as an offering. These little houses have a great consormity with the niches which the Roman Catholic Christians make in the walls, along the high roads, or at the corners of streets, for the reception of images, to which in like manner they pray and make vows."

All the priests and some of the nobility are strongly attached to unnatural lusts; they do not make any sin of this propensity, and neither feel shame or remorfe on

account of ir.

The Christian religion was formerly very much detested in this country. This is evident from the various very severe perfecutions which the professors of it have suffered. At first, the believers in Christ were only beheaded, and afterwards attached to a cross; which was considered as a sufficiently heavy punishment. But when many of them were seen to die with emotions of joy and pleasure, some even to go singing to the place of execution; and when, although thirty, and sometimes one hundred were put to death at a time, it was found that their numbers did not appear to diminish, it was

then determined to use every exercion to change their joy into grief, and their songs

into tears and groans of mifery.

To effect this, they were tied to flakes and burnt alive; were broiled on wooden gridirons, and thousands were thus wretchedly destroyed. But as the number of the Christians was not perceptibly lessened by these cruel punishments, they became tired of putting them to death, and attempts were then made to make the Christians abandon their faith, by the infliction of the most dreadful torments which the most diabolical invention could suggest.

The women and girls were stripped naked, and compelled to crawl on all-fours through the streets; after which they were violated in public by russians, and at length were thrown into tubs full of snakes, who were taught to infinuate themselves into their bodies. One's heart shrinks to hear of the many other abominable and inhuman

cruelties which were committed, and the pen refuses to record them.

The Japanese Christians, however, endured these persecutions with a great degree of steadiness and courage; very sew, in comparison with those who remained steadsast in the faith, were the number of those who fainted under their trials, and abjured their religion. It is true, these people posses, on such occasions, a Stoicism and intrepidity of which no examples are to be met with in the bulk of other nations. Neither men or women are afraid of death. Yet an uncommon steadsastness in the faith must, at the same time, be requisite to continue unsubdued in these trying circumstances.

Once a year a general and strict search is made throughout all the territories of the empire. All the inhabitants are assembled in the pagodas, where they must sign with their blood, that they are true Japanese, and not Christians; or, if they are Christians, they must abjure their faith. But this measure has not produced the effects which the Emperor expected from it; as not one year elapses, in which several hundred Christians

are not put to death.

All these persecutions and massacres have, in sact, considerably reduced the number of Christians; and the court has directed, in order to discover those that remain, that, if any one was found to be a Christian, he should be relieved from the punishment to which he would otherwise be liable, upon making a discovery of a fellow Christian; or, if he could or would not point out another, that then he should suffer the penalty affixed to the profession of his religion, namely, to be hung up with the head downwards. It is generally supposed, that this measure will be more efficacious for the extirpation of Christianity, than all the punishments that have hitherto been devised.

An accurate register is kept of those Christians who have saved their lives by treachery of this kind; and the strictest measures of precaution are observed that they may not abscord. They are consequently all known; it is known where they are; and

they can be forthcoming as often as they may be defired to appear.

Japanese, who were well informed, and experienced in affairs of state, assured Mr. Caron, that there was no doubt, but the court had in view to destroy all the Christians in one day, without sparing one individual, as soon as an affurance could be obtained that none others were to be found in the empire; in the hopes, in that case, of preventing

Christianity from ever again rearing its head.

All the houses in Japan are built of wood, and nothing but wood and charcoal is burnt in the fire-places. Hence fires are very frequent, and it is not an uncommon occurrence for entire cities to be consumed by the slames. How large soever the quantity be of timber and wood which is requisite for these various purposes in a country so thickly inhabited, yet no scarcity is ever experienced of the article; a proof that it is a country abounding in forests and in trees.

Each house has a kind of magazine or warehouse belonging to it, which is constructed to as to be proof against fire: articles of the greatest value are stored or kept in them. All the houses are elevated four seet from the ground, and are sloored with deals, which are covered by mats closely joined together. The Japanese generally live in the lower apartments; the upper story is principally used as a storehouse for provisions, and for many other articles of inserior value. The parlours or state-rooms, in which they receive their friends, are very neat and handsome.

"Tubs or veffels full of water are placed on the top of most of the houses, in order to serve, in case of need, to extinguish sires. All kinds of variegated woods, such as red, marbled, or slowered, and camphor-wood, abound in this country, and are in

common use."

The houses of the nobles and of the military are separated into two divisions. On one side of the entrance are the apar ments of the vomen, who are never seen, and who never make their appearance. On the other, are the apartments of the husband; some of which are rooms in which he receives his friends and others, such as are devoted to the occupations which his profession, or office, require.

The wives of the ci izens and merchants appear in publ c; together with their daughters and female flaves they attend to the domestic duties of the family. They are, however, never addressed but with great respect and politeness; and long or free conversations with them are very carefully avoided. Both the man who addressed and the woman who permitted such would be dishonoured, nay, perhaps, considered guilty of a crime.

Their principal articles of furniture are skreens, strongly gilt and handsomely painted with various figures and devices. The walls are often covered with various representations, or are neatly pasted with gilt or marbled paper, so artfully done as to seem as if the whole room was made of paper. All round runs a black varnished border.

There are some small rooms or closets, which are only separated from each other by very light sliding-doors, also covered with paper, which may be taken away at pleasure;

and then the feveral small rooms make only one large saloon.

At the upper end of the faloon is a painting, before which stands a vase of slowers; for slowers are in season here almost throughout the whole year. At the lower end is a gallery leading down into a neat garden, adorned with artificial rocks and evergreen trees. The room in which company is usually received looks into the garden.

They do not fet off their houses with japanned ware, boxes, or chefts; these are placed in an interior apartment, to which none but their most familiar friends and relations have access. Tea-equipages, paintings, elegant writing in frames, and scimeters of beautiful workmanship, are the articles of furniture in which they take most delight, and on which they expend most.

Both nobles and citizens receive their visitors with great civility. They offer them feats, and present them with tobacco and tea. People of wealth and consideration are entertained with wine, served out in a varnished beaker. Politeness requires that the

visitors should partake of the refreshment set before them.

Banquets are always enlivened by fongs, and the found of stringed instruments. It is a fortunate circumstance that, in this country, no quarrels, and much less any fighting, takes place amongst those who have drank too much. Whenever any one finds himself overcome by excess of drinking, he leaves the company as well as he can, to sleep away the effects of his intoxication.

Drinking parties are never held in the public taverns in Japan; they always take place in private houses. Inns and taverns are indeed numerous, but they are only vol. vii.

4 M appropriated

appropriated for traveling and strangers, who take up their temporary resign them

"What is called the amongst the Japanese is a decoction of rice, sweetener honey or logar, and it dented. It is very heating, and occasions the head-ache; that's strict to be. The is in great estimation here. The great people kee value for the covering, in order to it there is not reagrancy. The tea-leaves are ground in a little mill is the power of the influence of it as can be upon the point of a laife is just into with posting to the influence of a provential faying, the purpose of which is, in an or a that is heating; the drinks in an east."

Country by son ing people before marriage is here unknown. Man are continued by son the latners, or, if there we none alive, between the ne relations. If, however, a man does not like his vife, he may fend her away,

observing the n cettary solenmities, and giving her a bill of divorce.

The man are ambighingly permitted to refort to public profitutes; and the likewife also and to take feveral concubines. But the women, as has been also

obser ed, and it expiate the smallest familiarity with a man by death.

The rate has been just faid, however, with respect to divorces, only relates to the zers the merchants, and the lowest rank of the military, but by no means either the higher or the inferior orders of nobility. On account of the respect which bear for the noble parentage of their wives, they are refirated from giving the bill of divorce: and although they do not pleafe them, they do not therefore cear maint, it, and them as their wives. It follows, however, in fuen cases, of course, that concubiles whom they keep are the objects of their affection, and engrofs their care I fo he had beprens that, when he Impancie humband are thred of their concubi they return to their vives; but this is not often the case. The women are thus c rl ta'y labjected to the will of the man, and can pedef, no property; whill the i enjoy will berty in that respect, and do as they please. Hence, the women creer is present the men from telling up any aversion to them, string by the flat at ention to acquire a knowledge of their not your and temper, to do whitever to pleaf to them, and by that means to obtain their love and affection. Wives and concubi exert their powers of pleafing in emulation of each other, but it too often hoppens t the letter are victorious in this war are of female allumment.

Public stews, and public proflictes are permitted late. The women who destheir subsidence from this shameful source, are constructed as the slaves of these whose service they are. The reason alledged for the allow are of this, is, that ex nay have the means of this fying his cannot defice, without being lea into a temptorion of attempting the seduction of the wife or deaghter of his neighbould as on account of the easy means thus applied to the satisfaction of animal defict that those who pursue unlawful ways, much with no mercy, but are killed withe remorfs.

The children are educated with a great deal of tenderne's and indulgence. They a very foldom beat, and fome parents never to alter the of the rod. When they er or hurt themselves, or even when their fraction' to entitue a whole night, they a alveys spoken to in a soothing manner, and no one has the heart to beat them,' even to lead them. The Japanese allege, that they do not a possession fusionent to receive any benefit from chastisement; that the period output to be waited so when an increase of years make their understandings open, and that they attain sufficient

cient experience to prefit by luch 'rear and d'or, and that, in the mean time, lessons and exhertences ought to be the only to see on the d.

It is certainly a very pleasing right to of first the model, and the ferse with which is litten or tween years old, and ever then as are only teren, conduct themselves. They act, speak, and and are as a is they are already full grown, and wholly otherwise than European children do. They are more tent to school before they are fix, seven, or eight years of age; and a listed and strong hear criteria by which their fitness for school is judged. It is alleaged, that a an eather period, they are meapable of being taught; and that schools are then, with respect to them, not places a here they assemble to imbibe learning, but to play, to hurt one another, and to impede each other in their learning; to teach each other their evil customs; and to acquire new and bad habits, which they would not otherwise have gained.

When the period arrives when it is customary to scale them to school, their instruction is commenced, not so much by force as by friendly advice. They are not taught to write till the, shew an inclination to learn that are; nothing is done either to compel them to it, or to overcome any repugnance they may shew for it. In every respect, it is endeavoured to inspire them with emulation, or a laudable emblision. Examples are said before them. They are told that such or such a one had, by his improvements in learning, acquired much esteem and celebrity, and had advanced his samily in the world.

It is certain, that in children educated in this mode, the instructions given them sink into their very marrow and blood, and that they naturally become virtuous, and attentive to the fulfilment of their duties; much more so than those who are taught by the degrading influence of the rod and the ferula. But it must also be observed, that the Jupanese are naturally obstinate; sorce would have little effect to make them abandon their natural inclination. It is not even uncommon that school nasters who have had reconce to castigation to teach their scholars their duty, have been murdered by their pupils.

"Children are never either fwathed, or dandled about in Japan; immediately after a child is born, the midwife rubs its hands and feet with a kind of oil, and lays it down on the ground. The children of the country people are often feen flark naked in the coldest weather, crawling about upon their hands and feet."

When the father or mother of a family becomes old, and their children have attained years of maturity, the father divells himself of the management of the family, gives up his occupation, shop, or trade, and commits the whole of his affairs to his eldest son, to whom he at the same time gives up the principal apartment in his house, and conveys to him the greatest part of his property; or if they happen to be wealthy people, he goes to reside in another house. The property which he does not convey to his eldest son is retained for his other children.

Young women do not bring any portions with them in marrige. Rich people generally fend, upon the wedding-day of their daughters, a fum of money, according to their rank, to the bridegroom; but he fends the money back again, with many expressions of gratitude. This is ordered so, that the women may not pride themselves upon their dowers, or assume any authority in consequence. Common people, or those who are not very rich, sometimes retain such a present of money. It is a saying in this country, that a woman lives all her life under another's roof; for, in her youth, she resides with her parents; in her married state, with her husband; and in her old age, with her children.

The Japanese nation enjoy the reputation of being extremely honourable. The pill ciple of their fidelity arises from their love of fame, upon which they are set above all things, and to which all their efforts are directed. None but those who are lost to every sense of character, do any thing to prejudice or hurt another. To preserve their honour they willingly lay down their lives. Numerous examples may be produced of

this. The following may ferve for onc.

At the time when the guardian of Fideri, as has been before related, declared against him, the latter Prince had in his power as hostages, a queen, the wife of the King of Cocora, and her children, together with feveral other queers, and the wives of noblemen. The King of Cocora, who was then with Ongosschio, chose his side. Fideri having learnt this, gave orders that the queen and her children should, for greater security, be conveyed into the castle. The queen sought to prevent this, saying to Fideri in the most respectful manner; "My Lord, I am a woman placed under the power and authority of the King my husband, in the same manner as he is under your power and authority. Transfinit your orders unto him, in order that he may fend his to me, and thereby enable me to pay obedience to your commands." As she was one of the most cminent lidies in the empire, it was a point of honour for her not to go out of her own house, which would even have reflected difgrace upon the King her husband. Fideri, however, highly offended at her prefumption, fent word to her, that she must remove if she did not curofe to be forcibly dragged from her home. Upon receiving this menace, and to avoid the difgrace a compliance with the Prince's order would have brought upon her, the came to the determination of rather facrificing her life than submit to the infamy which etiquette would have attached to her in the contrary case. Perceiving that her opposition did not produce the defired effect, she entered into an apartment, together with her children, her nurse, and her attendant women, who had also resolved to accompany her to death; she caused a great quantity of firewood to be brought into the room, and the floor to be strewed with gunpowder. She then wrote, with her own hand, her will, and fome elegiac verses, which she put into the hands of a faithful servant. whom fhe commanded as foon as he faw the flames burst out of her room to hasten away, and convey the writings she had committed to his care to the King her lord and She then let fire to the apartment, and burnt herfelf with all her attendants, whilst the servant acquitted himself of the duty laid upon him.

In another point of view they possess great fidelity and honour. When any one commits himself to their protection, soliciting them to defend his life and honour, they do so most honourably, and spend the last drop of their blood in suffilling this trust, without regarding their personal interest or safety, or that of their wives or children. The point of honour in this respect is so saidly adhered to, and they carry their generosity so far to assist a friend in need upon his solicitations that they never swerve from it, how great soever the danger be that may hang over them, how much soever their lives may be exposed, or how visible soever the imminent peril be which they encounter.

When several persons are guilty of a mutual crime, and one of them is discovered and convicted, he willingly suffers himself to be tortured, and will rather die under the most excruciating torments than betray his associates. The tortures that are inslicted are at the same time most cruel; no one is ever spared, and they do not terminate but with the life of the sufferer. All, however, does not prevent him from remaining sirm, and from enduring every anguish rather than break the promises he has made, and occasion the death of his triends. The heaviest and most heart-rending evils are considered as nothing, in comparison with a stain upon their honour.

Almost all the trade of Japan is carried on by foreigners. Little can be disposed of

to the grandees, for the land yields in abundance, to them, all they want.

The foreign nations who carry on trade here, and who bring their merchandize to the annual fairs, are, in the first place, the Chinese, who have, as is well known, from time immemorial, or rather from the period that Japan was first inhabited, traded hither. It is about one hundred years ago, that is, a little before the middle of the fifteenth century, that the Spaniards and Portugueze first traded to these parts. The English have also had a slight commercial intercourse with Japan; but it continued for a very sew years. The profits they derived from it were not adequate to their expectations. The natives of Siam and Cambodia likewise made their appearance here with their junks, but of late their trade has been materially reduced. Finally the Dutch got access hither, about forty years ago, that is to say, shortly after the establishment of the Dutch East India Company: their trade has never been interrupted.

All foreign articles of merchandize as well as a great many of those of home production, are sent to the great city of Miaco, which is an emporium for all kinds of goods. Merchants, brokers, factors, and agents from every quarter of the empire, resort hither to dispose of, or purchase, the various articles in which they deal. Goods are sent thither from distances of two and three hundred leagues; and others again are forwarded thence to those remote places. Horses are employed for the conveyance of them, who must at times travel over mountains of difficult ascent, and through vallies intersected

by rocks and rivers.

"It was earlier than the middle of the fifteenth century that the Portugueze became acquainted with Japan, through the means of the Siamefe, Cambodians, and Chinefe. They experienced much fatisfaction in trading thither, as they found a genial climate, a healthy air, a fertile country, and as much, if not more, money, that in any other known quarter of the East Indies. They likewife found a great degree of conformity in the public celebration of religion, with the ceremonies in use in the Romish Church. They hence laid themselves out, with very fortunate essect, not only to extend their commerce, but likewise to increase the dominion of their religion. They had built very handsome churches in the province of Nangagarne; but the arrogance of the Castilian and Portugueze character soon drew down upon them the aversion of the natives. Their ships were seized and burnt, and their persons were destroyed by the most dreadful massaccs. In the year 1636 the Portugueze who had ventured to settle there again, were again expelled with their families, and interdicted from residing in the country in suture. The occasion of this was their being in the habit of annually sending over a number of priests from Zemnar."

Trade is carried on in Japan not only in all kinds of articles of necessity, but also in such as are only conducive to luxury and pleasure. The foreign merchants import annually into the country between four and five thousand peculs of raw silk, and an innumerable quantity of silk stuffs; full two hundred thousand deer-skins, and upwards of one hundred thousand other furs; a large quantity of slax, linens, red wool, long dresses, tutenague, quicksilver, medicinal drugs, cloves, pepper, musk, sapanwood, sugar, china, camphor, borax, elephants' teeth, red coral, and a great variety of small articles, chiefly

of Chinese manufacture.

It is here believed, that the Japanese were in the habit of travelling to China from the very earliest times that the country became inhabited; that they were in alliance with the sovereign of that empire, and that the Emperors of Japan and China used to send annually ambassadors to each other. But the Japanese, who were familiarly received in China in great numbers, having at one time excited a disturbance, it rose to fuch a pitch that they destroyed in emile city phenderic ... lavilling if e win ling a great port of the men, and con mixing all member of cases to. The however, recovering from their diffray, took from results or 10,000, and their time to well, that they richly retaliated upon the lap include, a transfer the fword. The Emperor of China taking into could be about that a compactive number of Japanese had been able to commit to be a country, and that in the of his dominions, was no less alarmed than afformation. In confequence has a determination to expel every Japaneie from na copies, and to prob by their en again for ever; caufing at the lates those a flor, monument to be cruded in conration of their vicked conduct, and upon which the tenence of their perpenal; tion was expressed in letters of gold. Boulds this he carded a proof pation issued by which all his subjects were probablic, a pon point of fourth, around it is Japan. In the commence ment this order was more finely or ' read it as it is a p although, even then, as usually happens in such cales, the editable found a persta the edich, by making felte clearances, and pretending that they were bound t other place. The contravention of this law was not only punished by the c the offender, but also by the confiscation of both vefill, and cargoes. At the however, these things are not narrowly looked into in Chian.

Notwithstanding this severe measure of the Chir-le Emperor, the sovereigns of have never interdicted the Chinese from entering into their territories. They de that they would not return evil for evil, and that in fact the Japanese were to and had given occasion to the resolutions that had been entered into in China.

"Intelligent Japanese affirmed to Higenaar that the inhabitants of Japan were ality descendants of Chinese which id been barished from their country, and had re to the islands which they now inhabr. That the occasion hereof was, that many nobles of the court of the Emperor of China, hiving entered into a conspiracy a him, it was discovered, and several of the principal conforators were seized and death; but as an immense number of people indicates mark in this combination Emperor was satisfied with the bandliment of the insertor closses; and that these etogether with such of the chiese as had saved themselves by slight, took refugilettled in these sertile and pleasant islands."

"It was added that, after they had regulated their fociety, they confidered a means of obliterating the memory of their origin, and of the occasion of their confirmemigration to their present abode; that they desired not that the world should had that they came from China, and had been expelled thence on account of their miss. With this view, therefore, they changed their dress, language, and mode of writing, accustomed themselves to almost every thing that was the reverse of what was custary in China. That this is the origin of the distinction that is observable between and the Chinese, and indeed between them and almost all other people in ar numerable variety of peculiarities; as well as of their deviation from certain cust which are common to all nations excepting the Japanese. It is hence that it is said a differ, in particular, from the Chin se in the mode of wearing the hair; which latter wear very long, never cutting it, and tying it together at the top of the he whilst the Japanese shave the crown of heir head quite bare till a little above the e tying the remainder of the hair round as neck, with a strip of a hite paper."

After the Japanele were banished from China, they navigated to Taiovan (Formowhither the Chinese brought their goods to trade with them. But a report of this tercourse having been made to the Emperor of China, their admittance at Taiovan v

equally prohibited.

ì

About a hundred years after that prohibition, the Japanese began anew to frequent that island. They used to tail with seven patsports, from their Emperor permitting them to trade respectively to Taiovan, I anquia, Cambodia, Siam, and other places. These patsports likewise included directions, according to which those who visited foreign parts were to regulate themselves, in order to prevent the recurrence of events similar to that

which had taken place in China.

Now circumstances and other views afterwards induced the Emperor to vithdraw these parition is, and to prohibit all his subjects from undertaking any forcign voyage. Pride is supposed to have formed the basis of this determination of the court. The honour and reputation of the Emperor are objects of so tender a nature, and he is so strenuously devoted to maintain them, that he cannot bear any tang from foreigners that seems to show the least appearance of tarnish upon them. Them a principle of justice, besides, he would not suffer his subjects to commit any act in a foreign land that might displease the government there; as in sast happened about that time and afterwards, both at Talovan and in the dominions of the King of Siam, who had taken upon himself to punish the delinquents.

Another reason of this prohibition is, that the Emperor will not allow any arms to be exported out of his dominions, nor that ravigators should use them to hurt or annoy the introduction of the places where they touch, whilst it is scarcely possible for voyages to to take place without such instances. So very strict is the prohibition against the exportation of arms, that, whilst Mr. Caron vas in Japan, two Chinese, and five Japanese will a had sold the same to him, without, however, having any knowledge of the intention

Cit's Chinese, were beheaded.

In another, and the right powerful movine for prohibiting feating ages, is the jealing in herdion, that table I pentile vine refort to foreign comments, may acquire to use introduction for the Charlian religion, and may cause it to make its appearance of in in the cause.

The Japancie have, therefore, no locally relations; and exceeding diction thereing has to China, have never follows and the site of other potentials. The King of Spain, the Pope of Rome, and the Site, of Site, have, more than once, it is plendic inbaffes to Japan, which have obtained by a very triend young; but the Amne of or Japan has not reject been able to resolve the answering there excludes by recipined comounts our soft more of histories.

the l'arthetempe or note of the loller lerve any automore formalie operations of commerce, the profits of variables, and the local ting a hypothesis a called the life in the price of any article of thich a or any mapped to be not dece. There exist using very cate there, and exceed a life independent of a nother who he in variations of the control of the price of the

All the necessaries and the function of life are positived in the empirity of disposition, copper, and lead in observations; a liferrial is also contained the cotton, and fame, an annual quantity of full one hundred thousand pocule of all forms, and form and four handred thousand pocule of filk-couldn't, a great many to the result of all kinds of provisions in much greater abundance then is required the resultings of the inhabitants.

^{*} The produce of the Lumbax pentandrum.

The sea-weed which grows upon the rocks, is a favourite article of food with them. It adheres to them in the manner of oysters; and is collected at low water. The hills abound in a great variety of herbs; and the fields with very beautiful flowers, of which the great people make a good deal of work. They are likewise very fond of birding. There are some very experienced physicians, who can tell the nature of a disease by feeling the pulse. Most medicines are administered in pills. The properties and the use of the bark are very well known. But they have very little knowledge of the treatment of wounds."

Only one language prevails throughout the whole empire of Japan; only one mode of dress; one kind of weight; and one species of coin; of the last, however, it is only the gold and silver coin that are uniform. The Casies, which are current in many different kingdoms throughout the Indies, are of various value. The variation in their currency induced the government to buy up all the casies, and to issue in their stead other pieces of copper coin which are all equal in nominal value. They acted with persect equity on this occasion, as on many others, as they bought up this base coin above its nominal value, and by that means made every one eager to exchange it.

It has already been stated that Japan possesses a great abundance of horses, bulls and cows, for they are never castrated; also deer and swine, together with other quadrupeds,

both wild and tame, and all kinds of fowl.

There are very excellent and falubrious mineral fprings and baths; impregnated with cupreous, nitrous, fulphureous, ferruginous, and stannary particles; some are brackish and others fresh. Amongst others there is one which rises in a hole upon a high mountain. This cavity is ten feet in diameter at its mouth, and appears very dark on account of its depth. Within, as far as the eye can reach, it appears studded with

sharp points jutting out and resembling elephant's teeth.

Another of these springs bursts out at the foot of a mountain, not far from the seashore. The water does not rise in it without intermission, but at intervals, and at regular times, that is to say, generally twice in twenty-sour hours, when it continues rising for an hour at a time. Yet when a warm easterly wind blows, it rises three, and sometimes four times in that period, and then likewise flows an hour at a time. When the hour of its rising approaches, a sound is heard as of a strong wind, which appears to force the water upwards with such violence that the heavy stones which lie at the mouth of the spring shake with the force. The water gushes up three or four fathoms into the air with a report as loud as that of a great gun. The heat of this water is very great; it exceeds that of boiling water. The bason into which it falls has been surrounded by a wall. It is conducted through this wall by spouts into the buildings erected for the curing of patients who resort to this spring.

Although the language as well as the form of the letters or characters is widely different in China, Japan, Corea, and Tunquin, there is nevertheless a particular language and mode of writing, used by scientific men, which is learnt and understood by many in

all these four extensive countries.

The Japanese write with painting-brushes, and do it very expeditiously. A little time suffices to commit to writing whatever they command or defire. They possess a peculiar promptness in expressing a great deal in a few lines. Their petitions, letters, and other writings, especially those which are destined to come into the hands of the magistrates and the nobles, are uncommonly short, but convey the meaning of the writers, accurately and fully.

Though they do not keep accounts in the fame manner as we do, yet they are very exact in their statements of receipt and expenditure. They are very ready in calculating,

which they do upon boards, by means of a little stick, to the end of which a piece of chalk is fastened.

There are likewise libraries in Japan, but they are not so frequently met with as in Europe; for the inferior classes read very little. The chronicles and annals of the empire are preserved in the palace of the Dairo, where they are continued. The Dairo himself, his nobles, and their wives, do not distain to commit to writing the events that occur in their time.

A COPY OF THE MAPAN DIARY:

K-relived per a Danish Ship, July 12, 1674, and given to Sir Robert Southwell by Sir Nathanael Hearne .

Sunday, June 29, Anno Dom. 1673, aboard the Ship Return.

HIS day we had rainy weather, and the wind foutherly. In the morning about eleven of the clock, coming before Nangasacque, there came off to us two or three sears, one with Japan, the other with Dutch colours; they haled us in Portugueze, asking us who we were, and from whence we came? We answered them in English and Dutch, and told them we were English from Bantam; they would not come aboard us, but from the Japan boat they wished us to come to an anchor, to forbear sounding of trumpets, and siring of guns, which we complying with, they returned ashore.

About two hours after there came nine boats from the shore towards us, in which were two principal men. one being called the governor, and the other the secretary, ecompanied with one interpreter that spoke Portugueze, and sour others that spoke Dutch, and several other persons to the number of sourteen, which we entertained in the great cabin; being seated, the governor, by his interpreter, asked me several questions; sirst, whether we were English? I told them yes, and that we came with license from the King of England, for the East India Company to trade, and to have commerce with them, as we had several years before, now forty-nine years past; and that we brought letters from our King of England, and the Honourable East India Company, for His Imperial Majesty of Japan; and also tendered them a copy of the articles, or privileges, granted to us, at our first entrance here, by the Emperor, in the Japan character, which they perused, and read, and could understand, asking very much for the original or grant itself, with the Emperor's chop or seal, which I said we had not, by reason it was delivered to the Emperor's council at our departure from Firando; they kept it, saying, they would deliver it to me again very suddenly: then they asked if we had peace with Portugal and Spain, and how long our King had been married to the daughter of Por-

^{*} From Kempfer's History of Japan.

tugal, and what children she had? To all which I answered, that we had peace with all nations, that our King had been married about eleven years, that he had no children by the Queen, that it is customary in our parts for Kings to marry with their equals to strengthen their alliance, and for other reasons of state, and not with their own subjects; also I acquainted them of some presents we had for His Imperial Majesty, which seemed to please them: they asked what religion we had? I told them the Christian as the Dutch, not Papists; they asked what goods we brought; I told them in general terms,

wherewith they feemed content and went ashore.

Two hours after they came again, and faid, that if we would be content to trade as the Dutch, we should, but we must, according to the Japan custom and manner, deliver our guns, and all other ammunition into their hands to be carried ashore, with our two boats; that nothing should be diminished; that they would send to the Emperor, and upon receipt of his answer, we should come ashore and have a house; they brought boats to ride by us as guerds, a-head and stern, and on both sides (a small distance from the ship), full of scidious: then they took the names of every man aboard, and viewed every man; they brought a Dutchman with them to see if we were English, asking every man if ne were not a Portugal, or if he could not speak that language. After taking an account of the quantity of bales of goods we had brought, and their several qualities, they asked what ships came with us out of England, and concerning our stay at Pehoe and at Bantam? I told them one went for Tonqueen, the other returned for Bantam; then they demanded our ammunition, which was delivered them in part, as much as they could well carry; so taking our two boats with them they went on shore.

June 3cth. Came on board the governor, fecretary, and bonjoyfes, with the interpreters, and faid, fince it was forty-nine years fince we had been there, what was the reason of our so long absence? I answered, that we had for about twenty years civil wars in England, and twice wars with the Duich, and that it was no finall matter to refolve upon so long a voyage, it being very difficult and dangerous. They asked if we had any that had been here before aboard our fhips? I told them not a man; then they faid how could you find the way into the harbour? I answered them we had sea-draughts for our affiftance, which feemed to content them. This morning they brought off boats with them, wherein they took the rest of our powder and shot, with every particular man's arms, leaving nothing of that nature aboard, and viewing a double barrel gun, and fome small pistols fent for presents by our honourable employers, they were well pleased with them and took them ashore, faying they would shew them the governor, who would write to the Emperor the particulars of the curiofities we had brought. They wrote down exactly every thing they took ashore, and compared their accounts together in the great cabin before the fecretary; who approving thereof, with much courtely took his leave, promising that with all speed we should have an answer from Jedo, and admittance to trade: I gave them thanks, and faid we no ways questioned their honourable performance; they faid they would not take our great guns ashore, but leave them aboard for our conveniency.

July 1st. The governor and the interpreters came aboard again and examined me concerning the affairs of Tywan; to which I answered, that our interpreters there had told me, that in regard the governor of Nangasacque this last year had put a price upon their goods, they intended not to come this year with any juncks. Being asked whether they intended to set out their juncks and rob upon the coast of China, I answered that I knew of no such intent: but the Dutchman that came with them the first day, told

them

them I had faid they did intend to rob at fea, which I told them was an untruth, for I had faid no fuch matter. Then they examined all our men over again by their ran s, to know their age and office, which they took; and defined against next dry they might have a particular account of every particular man's goods he had to ie'l; how rany pieces of each fort; and likewise defined the contents of the Honourable Congray's bales, which I promised I would endeavour to get reads. They took the dimensions of the ship, and masts, yards, &c.; and said if we wanted my thing from the shore we should make a wast; and in case of the death of any person we thould not throw them overboard, but put out two wasts, and that they would come choard with an interpreter; and again told us, they had sent to the Emperor, and wished us to be cherral and contented, and so departed.

2d. In the morning came aboard the interpreters with some gentlemen of the Experor's, and desired an account of the news we brought; I told them we had peace with all nations at home and abroad; that being in Bantam we had news from Surat, trom the chief of our nation; that there were seven een French ships upon or about the coast of Malabar; that it was supposed there might be a war between them and the Dutch, but the certainty we knew not. Then they desired me to read a Dutch letter brought in our ship for the Dutch Chief here, from Tywan, which I did, and told them the contents were, that they had been a long time prisoners, and were in great want, and desired the Dutch Chief to intercede for their liberty to the Emperor of Japan, the next treaty there might be betwixt the Chinese and this empire; for they understood, as to matter of commerce, all was for the present laid by. They asked if the letter did not mention they would not send any juncks this year to trade; I told them nothing to that purpose; and what I had told them, I had from our jurybasses, but was certain of nothing, all being but reports of the people; with this they departed.

This afternoon they came off and brought us some fresh sish, peaches, plums, eggs, radish, cucumbers, melons, gourds, six hens, a hundred small loaves of bread, bought by the Dutch commodore, and rated all at a copang and a half, which was extraordinary dear, yet we paid them with many thanks. I asked them leave to wear our colours, and sound our trumpets, which they said we might do; and at their departure we sounded; I desired them to lose no time in sending up to the Emperor; they told me they had sent away two days before, and that we might rest contented; they made no doubt but we should have a kind reception, and with all speed possible. We daily went

to prayers, with finging of pfalms publickly upon the quarter deck.

Note, That all questions they put to us they did it in the Portugal language, and were answered in the same, or Spanish, and then put the same in Dutch again; and thus they constantly did, asking one thing five or six times over, and every time had their answer for their more certain understanding; so that all persons in these parts should have one, if not both these languages.

4th. We made a waft, thinking they would have come from the shore aboard us,

but they came not, we suppose they understood not the manner of our wast.

oth. This afternoon came aboard in two boats a bonjoyce with fome others, and about fix interpreters; they inquired of me concerning the Portugal religion, whether they were not called *Catholico Romano*: I told them yes, that they fo termed themselves; they asked if they had not a woman-image, or print, called Sta. Maria and a man Sto. Christo, and whether they had not their images in reverence? and what other saints they had? I said I had heard they had images of these too, which they worshipped, but how many others they had I knew not, as not being of their religion;

they asked what religion we had; I told them the reformed religion, so called in Lingland, and in Duich Ghereformeert; they afking, whether we had any images as the Portugals had, I told them we had none; then thing what worthin we had, I told them by cords, preying to God Almi, hty, maker of heaven and earth, bove in the he arene, filling the world with his preferee; but that we had no images of him. They affect, who that St. Canife was? I told them the Son of God; Who was Sancta Maria? I told then we colled her the Vingin Mary; and that we made no address to her: They ask d how the Deich did worship God; I to'd them as we who were Ghereto meet: and adding how the Dutch called God and Christ? I faid Codt and Christus: they ask I how we called the Pereugal religion? I told to in Roman Catholicks; by what rame we termed those that were of that religion? I told them papills or popillaly affected; how the Dutch called them? Popifien and Riers-Cutholitchen, and Rooms Ge lade: and what other names they go e them? I told them I was no Dutchman: but without question they had offer names for them, but all were to this effect. then asking what the Fortugais called us? I told them Hereyes, in English hereticks. in Dutch the same. It being Sunday we put our colours with S. George's cross; they afacd why we put our colours to-dry, not having spread them before fince our coming? I faid this was our Sunday, which came every feventh day, and it was our culton to to ac: they asked again what way we worshipped God? I faid by prayer every morning and even unto the great God of Heaven above; Whether the Dutch did the like? I told them I believed they did; with all which they feemed fatisfied, and having asked these questions fix or leven times over, they wrote them down, together with ray answers, and gave them me to sign, which I did, although I underflood not their character; all the interpreters firmed the fame, and put their feals to it, and fid upon their words it was as they had asked me; then wishing us not to throw any thing overboard by night, to keep our men lober, and not to give them leave to go into the water to fwim, and to forbear fighting; I told them we had no arms abourd; they faid not with he ives; I repaid it was not our callom. I defired them to fend us fome hogs, blivet, felt, fish, rad thes, turnips, or other falleting, with one barrel of tackee, (having forme ly made a wast, and none came call to us, they faid the had not feen our waft), and promising to fend us the next day what we wanted, they d parted, not faying any thing against our usual colours, having been aboard five hours and very troublesome. The same evening, about an hour aster, they returned aboard again, and faid that in our colours we now put abroad there was a cross, how it came, that when we first entered the colours we then wore had no cross in them, only stripes white and red? I answered, the colours we came in with, were new colours of filk made at Tywan, red and white without a crofs; because the Chilese had told us, they were great enemies to the cross for the Portugals sake, and that it would be better taken not to wear the cross at our first entrance. They asked to tee the colours we came with: I faid it being a rainy day at our entrance, those new colours were spoiled and were taken in pieces; yet they desired to see them, which being brought, they were fatisfied: then I faid these colours that we now wear were the right English colours, and had been worn by the English nation for several hundred years; and that when we were last at Firando they were worn by our English ships; and that the Dutch knew very well they were our colours, whom I defired them to "Ik for their fatisfaction; they faid one of the interpreter's father had been interpreter to the English, and that he was still living, and that they would inquire of him: moreover I faid, we did not wear the cross as in worship or superstition, but as being worn by

the

and.

Inglish nation for distinction, and that the Portugal's colours and cross were much unferest from ours; they asked if ever England had be nounder the government of Practal or Spain, and had received the cross from them? I told them we never had been subject to either of them; but that it being so long since our first using them, I could not tell them certainly what was the cause of our first wearing them, being used by us time out of mind, and according as I read in history above six hundred years, and that our King was a monarch of three great nations, and an enter that the King on Portugal; with all which they seemed fatisfied; all questions and answers were put in writing and signed by me; having been here some three hours they departed, promising to send us some provisions to-morrow. This morning early we heard sive shot from some shipping at lea; the Dutch boats went out but could not get to the ships;

two hil were feen; we hoped they might be English.

7th. This morning about fix of the clock entered the two ships that were off, they proved Dutch, each about two hundred tons, fquare sterned, manned, as they tell us, with one hundred and forty men between them, which is more than they usually carry; they came from Batavia about forty days fince; news we could not learn any as yet: we put out our English colours with the cross in them, slay, ancient, and jack, at their entrance; about ten of the clock came about the interpretens with two chief men, and they told us that for the future, until other orders came from Jedo, they would not advice us to wear our colours with the cross in them, it being so night he Pertugal cross, the generality of the people would take our cross to be the Portugal cross; any oth. colours we night wear, but not in the form of a crois: this the interpreand advifed us to observe from them as our friends, not that it was the command of the governor or Emperor, and by this means we might be aftered of the Japanners friendship and of a trade; they promifed us that to-morrow we should have the fresh provisions we had defired; and taking a particular account of all goods for quantity and quality we had aboard, they went ashore, telling us again that they expected within twenty days an answer from Jedo, and then we should have an house and all other accommodation necessary provided to our content. About eight at night there came on boand again two chief decretaries, and feven interpreters, and told me they had been receiving the Dutch Chief concerning the news these two ships brought from Batavia, as ich sas (as they were informed) that the English and French were joined together and that's war again to the Hollanders, who had taken a thip about Batavia from the English. at I that the English had taken one about Ceylon, or the coast of Malebar, from the Duten: the reging me (that fince the Hollanders and we had made peace five or fix years fince, and promised to ashift each other, and were both of one religion) how it cane to p is that we lell out with the Dutch, and joined with the French, that was a Romai Cathelick; I answered, that when we came from England all was in peace, and at our being at Bantam the like, and that we knew of no wars, more than what they now told me their two ships brought advice of, much less could I give any reason for the same, and that I did not believe what the Dutch reported, unless there came news from England or Bantam, to confirm it. Then they shewed me a paper signed by Mr. Mutinus Cæsar, chief for the Dutch here, wherein he declared the abovesaid nows to be true, and hath promifed the governor of this place, that notwithstanding there was war between the two nations, that in this port both by water and land he and his men should live peaceably with us, as likewise in any part of the Emperor of Japan's country, for such were his commands; and therefore required of me to sign the like paper, with promifes that I and our nation should live peaceably with the Dutch. and not put any affronts upon them, which if we did as they defired, they told us, the Emperor would protect us (though but new comers into his country) as much as he should the Dutch; for which I returned him thanks, and made him the same promifes, and figned to a paper in the Japan character according to their cuflom. This they foreral times repeated, that we should have the same friendship as the Dutch. although they had been here fo many years, and we but newly come; but they expected our peaceable living both here and upon their coult; and that as foon as the Emperor's aniwer came from Jedo, they would provide alithings there for our convenience and fecurity. They required me to promie, that when to other flips came that we expected, they should do the like, which I aid. I also peopled to them, that since there was war between both nations, they would let our fries depart first out of their ports, for the Dutch were like to be double the number of hips to us, and in case they went out first, in all probability they would lie in wait for u, and fight us at our going to fea; which proposition they said was but reason, and int upon receiving the Emperor's orders for our reception, we might propose that, or any thing else judged necesfary. They itaid aboard till midnight and io departed.

8th. This day they brought us from on shore some sresh provisions, viz. three small hogs rated eventy sour tayle, some salt and fresh fish, some baket, and one tub of sackee, containing four gallons, at 2½ ayle; all our provisions amounting to 6½ copangs, which we paid with thanks; every thing being excessive dear, contrary to what we were informed at Tiwan of this place; but we find the price of every small thing to be put down in writing by order of the government; and it being not sitting for us to refuse any thing they bring us for our relief, until we have admittance to trade, and a house ashore, we pay for every thing at the rates they put them at for compliance

fake. The interpreters tells us that the Dutch pay the same rates.

noth. We made a waft, and soon after came off by our ship side in a small boat two interpreters; we desired them to come aboard, but they would not; we requested some hens and water, with some herbs and roots, which they promised we should have the next day. We enquired what news they had learnt from the Dutch ships concerning the engagements there had been, but could not get any satisfactory answer; they told us that upon arrival of the Dutch admiral they should know more; they told us likewise that there were but three Dutch ships more expected here this year, and so departed.

11th. They brought us some water and hens, with some radishes, cucumbers, &c. We paid three copangs for all, according to their account: as yet we could not receive

any certain news of the ships that had been taken.

13th. These two last nights we had much wind and rain, and so excessive violent, that it was rather a tusson than a storm, coming from the mountains in such violent gusts upon us, that although we ride with our best and small bower in the river where no sea goes, it being a mile round, both our anchors came home, and we were forced to let go our sheet anchor, the wind veering from the S. to the S. S. E. and S. E. but blessed be God we suffered no damage.

19th. Arrived a junck from Batavia, wanting from thence fifty days; the men were all Chinese, and colours Chinese; her lading being pepper, sugar, several sorts of callicoes, allejaes, &c. for account of particular Chinamen here at Nanguasacque. We enquired, but could not be informed, of certain news of the difference between us and Holland; they reported we might expect the Dutch Chief with three or sour ships more in a few days from Batavia; they said they had spoken with two China juncks of Tywan, but heard of no war.

28th. In the morning about ten o' clock came on board our ship with three boats, the chief sccretaries, and their banjoise, with seven interpreters, and our attendants. They told us, that they had received letters from the Emperor, whom they had acquainted with our being here, and with the intent of our coming to trade, upon account of our former friendship (all which as they were advised had been considered), but in regard our King was married with the daughter of Portugal, their enemy, they could not admit us to have any trade, and for no other reason. I his they said was the Emperor's pleasure, and express order, and therefore they could make no alteration in it: they likewife faid we must be gone with the first wind, nay, within twenty days. I replied, it was impossible for us to go until the monfoons changed. They asked how many days we defired. I replied forty-five days hence; I supposed the winds might be favour-They faid, what provisions we wanted to supply our occasions we should have, and feemed to give confent to our staying until the monsoons changed. express themselves to be very forry that we could not be admitted to trade. I several times aliedged, that we had licence by our last articles to come here and trade, and that we had been nigh two years upon this voyage; wherefore I defired again and again, that we might be admitted to fell this ship's lading of goods. They said they could make no alteration in what the Emperor had commanded; that his will was, that we must be gone, and come thither no more; for by reason of our alliance with Portugal, they would not admit of us. They told us we should have our ammunition, &c. again, and fo departed.

31st. We made a waft, the interpreters came to us; we defired feveral provisions, as water, wood, rice, wheat, hogs &c. We told them we had no more money, and therefore defired them to take payment for the provision we wanted in goods, offering English cloth, or China silks, such as they best liked. They took notice of our request and offer, and promised to return next day, and bring us several things; so we hopet

to have relici, which God grant.

Our commander fummoned his officers, and at a confultation it was agreed, that all finaling cabins between decks should be taken down; as also bulk heads, and two men to be reduced to one cheft, and other provisions and rummages to be made to clear our ship, against the day of engagement with an enemy; also finding several of our men to be discontented for want of provisions, which we could not procure, and our voyage proving extremely long, we were sain to give them good words and large promises to make them amende, when we came where it was to be had, to prevent a mutiny, especially in our condition; for we might not (by the Japanners orders) strike our men for any crime, which we were more ready to observe, less they should take any advantage against us: our lives, with ship and goods being in their power, and we deprived of all means to help ourselves: we were full of troubles in our minds: God in his infinite mercy deliver us out of their hands.

Aug. 2d. Came aboard the interpreters again, and defired a particular account of what we fhould want weekly, during our flay here, and for fix weeks provisions to carry us from hence to Bantam, all which we put down in writing, and they promifed to bring us weekly what we defired; and for payment they would take what goods they had occasion of that were China goods, but English goods they would have none.

6th. In the morning about ten o' clock came aboard the interpreters (whom we had expected with many a longing look, in regard of our want of provisions), and brought us the particulars we had defired; this being the first week we entered upon account with them, amounting in all to 111 tail 1 mass, which being reduced into copangs, make 161 and 6 mass, accounting each copang at 6 tail 8 mass. I firmed a paper to

They promised to bring us weekly the like quantity, during our stay here, and to provide for us according to our desire, at our departure. They told us there was a ship seen at sea some twenty leagues off, but they knew not what she was, so we parted with much friendship and content. About two o' clock in the afternoon entered the ship they told us of, which we all made, at a distance, both scamen and others, to be the Experiment belonging to our honourable employers, and dispatched by us from Tywan for Bantam the 19th of November last. To our great grief and discontent we saw our companion a prisoner, God knows what they have done with the ship's company, but to our apprehension she was no ways damnified, so that the parting from us in time of peace, we judge her to have been surprised; the truth God knows, who we hope will keep us out of their hands.

8th. In the afternoon entered two Holland ships, or great fly-boats, about three hundred tons each, the first with a slag on the main-top, which she kept aboard until she camewithin sight of the slap that wore the slag here before riding in the harmhour. We put out a wast all this day, intending to desire a boat of water, but none

came a board of us.

oth. Our waft being out, the interpreters came by our fide in a boat. I defined fome water, pumpkins, and gamons, which they promifed us speedily. They asked us if we know that English ship that the Dutch had brought in. I answere them she use our companion out of England, and we had dispatched her for Tywan. They said all her men were prisoners at Batavia; that Sanuel Farron and the junck were taken and carried to Batavia. Also they said they had hanged some of our men at Batasia; that they had taken two English ships more at or near Ceylon, and four French ships; that now all the Dutch were come for this year, and to returned. God deliver us out of the hand of our enemies.

4th. Came all the interpreters, benjoyces, deficing to know what ratities we had the rd, and fail they would willingly buy them, not by order from the governor, but as from them fives. Particular men showed them what was at hand; but they put a finall price and often upon every thing, and bought nothing; they spake of several of the Chinese goods, which they defired to be brought to hand against to-morrow,

and they would remain to fee them, fo departed.

15th. Came off in the morning the chief magistrate of Nanguasia que and two fecretaries of state, attended with fix of the Dutch interpreters, and two other interpreters, that told me, they had formerly been interpreters to the Dutch; both of them spoke and understood Dutch better than any of the other. They took a view of most of the rarities we had aboard, provided by our honourable employers, and belong. ing to particular persons, and of all our China goods: after which they examined me concerning the state of Europe, our King and his alliance, especially by marriage and descent, concerning the course of the sun, and moon, and stars, and tides, &c. with many other questions they had formerly put, and about the paper I formerly gave them in the Japan character, and whether any in England could write that, or the China character; to all which I answered the truth, and informed them of affairs, as briefly as I could. They told me that the English, French, and Bishop (meaning, as I suppose, of Munster) had taken three of the seven provinces under the States-General, asking me whether I knew what places or cassles they had taken. I auswered, we knew nothing but what we heard from them; and that they very well knew, we having been nigh two years out of England. They took feveral rarities ashore to show the governor, and promifed to return them. The two interpreters told me that it was for our good they came aboard; fo that we hope some good may come of this examination extraordinary. In the afternoon came aboard our weekly provisions of food and water: the interpreters told us that Mr. Baren was not hanged, nor any English at Batavia, as had formerly been reported. They faid that there had been a fight between the Dutch and the English, and that we had taken and funk ten or twelve ships, and be sen the Dutch home again. We were glad to hear from our country, not having had any letters fince our departure.

The wind came cafferly with gufts and rains, for five weeks of our time here. Generally we had fouthed winds, fair weather, and very much heat; we now

expect (it being the moon's wane) alteration of weather.

22d. In the morning came in a il,-boat, about three hundred and fifty tons, from Batavia, wanting from thence forty-one days: they report, that there was no other news from Holland than what formerly they brought. They faid Coxinga of Tywan's juncks were roving upon the coast of China, taking what they could.

25th. Came of the interpreters, and acquainted us, the wind being northerly, we must make ready to be gone within one or two days, and defired to know what we

wan'ed, which we told them, and fitted our ship for sail.

26th. In the morning came aboard two fecretaries of state, and the magistrate of Nanguafacque, with the usual interpreters. They brought in several boats all the provisions of wood, water, rice, &c. that we wanted. We made up all our accounts, and agreed and figured them an acquittance in full for what we delivered them; and having adjusted accounts, the secretaries examined me again, with several questions formerly answered, concerning our country and King, Holland and France, &c. But they asked now one question more than formerly, which was; fince it was forty-nine years fince our being here, caufed, as I had told them, by the civil wars, which we had nigh for twenty years, and twice wars with the Dutch, and in all that time having trade with Bantam, why we did not come for Japan, as well as for Bantam? I answered, that the trade between England and Bantam was chiefly continued for pepper, which was bought yearly with what was fent out of England, and returns made immediately, which could be done with a small stock; but the trade for Japan could not be carried on from England directly, but required a fettlement in feveral places in India, as Tonqueen, Siam, Cambodia, and Tyvan, which several factories required a stock of twenty tons of gold, which our Honourable curpleyers had resolved to set apart, to furnish the trade with such commodities as were proper for this market; which being to confiderable a fum (befides the employment of many ships.) it was no small matter to resolve upon so great an adventure, which required time, and peace, and other matters for their encouragement, which until now they had not found convenient; and thefe, I supposed, were the reasons inducing our Company new to prosecute this voyage: they seemed contented with this answer. After they told me, the wind being come fair, and they having furnished us with what we required for our maintenance of life, and for the carrying on our voyage for Bantam, which was according to the Japan courtefy, we must be gone from hence the next day. We should have our boats sent us, and all our ammunition, and we must depart peaceably without shooting off any guns in the jurisdiction of the Japan Emperor, which I promifed we would perform. I asked whether we might wear our colours. They faid we might wear any colours that had no cross in them, our cross being offenfive to them for being nigh the Portugal cross. Then asking, whether we might return hither after the death of our Queen? they answered, possibly we might, if

the Dutch and feveral Chinese did fatisfy the Emperor, that we vere not is an'ty with Portugal; but he could not assure us we should have adminion, ou ich vay was not to come; for this Emperor's commands (according to the Juan in . It erells unto sweat that goeth out of a man's hands and body, which neve rotume lina sain; the Emperor's commands admit of no alteration. They allow, why veel the redoined religion did alm tol marriages with the Romanists, because the fema a untilly draws the inclination of her hulb and to her religion. I entwered, a was true in l'arope, and each party adhered to their opinions, without any alteration as to the nation. I defined fome answer in writing, to they our Honounable employers in England for their fatisfaction. They animered, they had no cider in many in it is perfor to give any, and that it was sufficient when we had received verbail, Act, if our agent it Lantan had the power of the Duch on all at Baca is a sufficient his name was; and how many English were usually in Banta n? I answer the English at Bantam the agent had the chief command; and as to the remede. English, they were more or less as shipping come in; that the Dutch usual, and in some infinite with several nations, and fortified themselves in all parts; that we vere a arcable, and came chiefly for trade. They promifed me, that none of those fix Dacco it ps should flir out of port these two months, and they hoped we should in less time be at Bantam; and that we should miss our enemies; and wished us a happy voyage, and array years of life; fo giving them many thanks for their continual favours, withing them long life and happiness, we parted, with much outward courtely and feeming reluctancy, for our not being admitted by the Emperor to feetle a trade here. God grant us protection wherefoever we shall be forced to go from hence, for the security of the Honourable Company's estates, our lives and liberties. We have had a troublesome life here under the fevere commands of this people.

27th. In the morning, about leven o'clock, came aboard the old secretary, whom they now called the second person, with another great man, and several interpreters; with them came all our ammunition and boats. They told me, the wind being fair, we must be gone; and said, we should have our boats and all things restored to us, which they ordered to be delivered, excepting our powder, and that we should have when we were out of the harbour; raying, the Dutch and Chinese had their arms all delivered them without, but we should have all but the powder delivered to us presently, for our better fatisfaction and dispatch. They told me, I should give order immediately to weigh our anchors, which I did, and about ten o'clock we were under fail; they charged us not to shoot any guns off, neither in harbour nor at sea, so long as we were upon the Japan coast; and, in case the wind came contrary, and we were forced back, we should endeavour to come for Nanguasacque, and at our entrance to fire no guns; if we did, we must expect they would treat us as enemies, and all the country had order to esteem us as such, in case we fired any guns. I promised to comply with their commands, and returned them many thanks for all their favours and affiftance we had received, and that being got out we would stand for the coast of China; then wishing us a good voyage, they returned to their own boats, and faid, they would fee us out of their port. The wind being but little, we could not get out, which they feeing, they fent for Japan boats, and towed us out with about forty boats. We put out a pennant from the main-top of red and white, and no other colours. About three o'clock we were got some four miles from Nanguasacque; the wind being contrary, they told us we might come to an anchor, as the Dutch did, and when the wind came fair, we must be fure to be gone immediately; they would leave our powder in boats with two interpreters,

65E

nterpreters, and a guard to fee us out at fea; and then again withing us a good voyage, hey returned, taking the most part of their boats and guards with them, which were ery numerous, being, by estimate, at least five thousand men, besides spectators, that and out of the country and town to see us depart.

25th. In the moning, about two o'clock, came aboard the interpreters, and told us he wind was fuir, and we must be gone. We told them we were ready, and would reigh anchor by break of day, but being strangers, desired we might have day before is; they delivered as our powder, and we were under fail about five o'clock, with a mall gale at north-cost. We took our leaves; and, God be praised, got out of their slutches, to our great toy and cor ent of mind, having been three months in their port, a continual sears.

During the time c were in port (by what they told us) there came this year twelve uncks in all. viz. eight from B.tavia, two from Siam, one from Canton, one from Cambodia, and fix. Dutch ships of the Company's. They had not any from Tywan, by reason the year before they put the price upon their sugar and skins; and so they need to do with all other people, for what over goods shall be brought to their port; which if they do, sew will seek after their commodities upon such unequal terms.

THE HISTORY OF JAPAN.

Physician to the Dutch Embassy to the Emperor's Court,

And tra flated from his or simil M nuice it, in the Ce tion Language, never before pr

By J G SCHEUCHZER, T R S

And a Member of the College of Physicians, London *.

CHAP. 1. — Of the Empire of Japan in general, as to its Situation, and the Largeness of its several Islands.

HIS empire is, by the Europeans, called Japan. The natives give it several names and characters. The more common, and most frequently used in their writings and conversation, is Nipon, which is sometimes in a more elegant manner, and particular to this nation, pronounced Nison, and by the inhabitants of Nonkin, and the southern parts of China, Sippon. It signifies "the soundation of the sun;" being derived from m, "fire," and in a more sublime tents, "the sun," and pm, the

" ground, or foundation of a thing."

There are full fome other names and epithets, which are feldom mentioned in convertation, but occur more frequently in their writings. Such are for instance; r. Ienka, that is, "the luncel fund empire;" as if it were the only one existing under beeven. Hence the Emperor is called Tenkofama, "the subcelestial Monarch." In former times, this name was peculiar to the empire of Japan alone; but fince continerce hath made known to them feveral other countries, they now condefeend to honour them also with the same epithet, particularly such whose inhabitants are admitted and tolerated among them. Thus the call the empire of China, To Sin Tenka; the United Provinces of the Netherlands, known to them by the name of Holland, Hollanda 1 enka. 2. Fino Motto, is much the fame with Nipon, and fignifies, properly speaking, " the root of the sun," ft. being the sun, and motto, a root; no, is only a particle, by which these two words are combined together. 3. Awadsissima, is the original name of this country, and is as much as to say, a "terrestrial Scum Island;" awa, signifying scum, ds, the earth, and Ssima, an island. This name is grounded upon the following fabulous tradition, recorded in their histories, of the origin and first creation of the feveral islands, which compose this mighty empire; which in former times, for want of communication with other countries, was looked upon by the natives. as the only inhabited part of the globe. In the beginning of the creation, the fupreme of the feven first celestial spirits, (of which more in the seventh chapter of this book,) stirred the then chaos, or confused mass of the earth with a staff, which, as he took out, there dropped from it a muddy fcum, which running together, formed the Japonese islands; one of which, of the fourth magnitude, still retains this name, being particularly called Awadissima. 4. D Sin Kokf, or Camino Kuni, "the Country or Habita-

^{*} Our author's account being often prolix and tedious, only the most interesting portions are extracted, and arranged in a sequence of chapters.

tion of the Gods." For by Sin and Cami are denoted the gods which were particularly and originally worshipped in Japan; and both kokf and kuni signify a country. 5. Akitima, or according to the common pronunciation, Akitsussima, is another name given to this country of old, and frequently to be met with in their chronicles and legends. 6 Tontsio, "the true morning." 7. Sio, all, viz. all the several islands subject to the Emperor of Japan. 8. Jamatto, which name is also given to one of its provinces. Several others, as Asijwara, Asijwara Kokf, Qua, or Wa, and some more I forbear mentioning, to avoid being too tedious on so trisling a subject.

The empire of Japan lieth between 31 and 42 degrees of northern latitude. The Jesuits, in a late map of China, made and corrected by their astronomical observations,

place it between 157° and 175° 30' of longitude. It extends to north-east and east-north-east, being irregularly broad, though in the main, pretty narrow in comparison to its length, which from one end of the province Fisen, to the extremity of the province Osiu, is supposed to be two hundred German miles in a straight line, all the further distant coasts and islands, though subject to the Japonese Emperor.

not reckoned.

It may, in different respects, be compared to the kingdoms of Great Britain and Ireland; being much after the same manner, though in a more eminent degree, divided and broke through by corners and forelands, arms of the fea, great bays and inlets, running deep into the country, and forming feveral islands, peninsulas, gulfs, and harbours. Besides, as the King of Great Britain is sovereign of three kingdoms, England. Scotland, and Ireland, to likewife the Japanese Emperor hath the supreme jurisdiction of three separate large islands. The first and largest is called Nipon, from the name of the whole empire. It runs lengthways, from east to west in the form of a jaw-bone, whose crooked part is turned to the north. A narrow channel, or streight, full of rocks and islands, some inhabited, some uninhabited, parts it from the second, which is next to it in largeness, and which, from its situation, lying to the south-west of Nipon. is called Saikokf, that is, "the Western Country." It is also called Kiusiu, or, "the Country of Nine;" being divided into nine large provinces. It hath one hundred and forty-eight German miles in circumference; and, according to the Japanese, it hath one hundred and forty of their own miles in length, and between forty and fifty in breadth. The third island lies between the first and second. It is near of a square figure; and being divided into four provinces, the Japonese call it Sikoks, that is, "the Country of Four," viz. provinces. These three large islands are encompassed with an almost inconccivable number of others, some of which are small, rocky, and barren, others large, rich, and fruitful enough to be governed by petty Princes, as will appear more fully by the next chapter, wherein I propose to lay down a more accurate geographical description of this empire.

All these several islands and dominions, composing the mighty empire of Japan, have been, by the ecclesiastical hereditary monarch Susiun, divided into Gokisitzido, as they are called by the Japanese, or seven large tracts of land, in the year of Christ 590. Many years after, in the year of Christ 681, Ten Mu divided the seven chief tracts into sixty six provinces, appointing so many lords of his court to command and govern them, as Princes, or his lieutenants. Two more islands, Iki and Tsussima, formerly belonging to the kingdom of Corea, having been conquered in the last century, and added to the empire of Japan, there are now in all sixty-eight provinces. Both these divisions of the Japanese empire, though they subsist till now, yet through the misery of time its sixty-eight provinces have been since their first constitution torn into six hundred and four lesser districts. In the sirst and happiest ages of the Japanese monarchy, every

Prince

Prince enjoyed the government of the province, which he was entrusted with Emperor, in peace and tranquillity. The inferies of enfuing times, the frequent quant and contentions, which arose among the chief branches of the Imperial Family about Succession to the throne, by digrees involved the whole empire into blood and con: Its I'mnces of pouled diff-rent parties, and no fooner were as ms introduced among as the most powerful and surest means to make up their distensions, but ever encervoured thereby to maintain himself in the possession of those lands, whose g Lent he was owing entirely to the Imperial bounty: luch as had not been pro for by the Emperor took case to provide for themselves. The Princes aivided hereditary dominions among their lons, who, though possessed of but one post their father's estate, would not be behind them in grandeur and magnificence. volder then, if the number of princedoms and dominions went on perpetually in ing. The Emperors of the now reigning family, usurpers the alches of the t of which they are possessed, think this great division of the provinces of the e no ways detrimental to their government, but rather conducive to make them the acquainted with the true state of their riches and revenues; therefore, far reducing them to their former standard, they still tear and divide them more more, as they please, or as their interest requires, of which there are some late inth. The province of I fikusen was not long ago divided into two governments, Jane and Kurume, and the Prince of Tikungo had orders from court to furrender part dominions to the Prince of the two islands above-mentioned, Iki and Tsussima, wh then had nothing in possession upon the continent of Japan.

The borders of this empire are its rocky, mountainous coasts, and a temp of fea, which by reason of its shallowness admits none but small vessels, and even not without imminent danger, the depth of most of its gulfs and harbours being no known, and others, which the pilots of the country are better acquainted withal, for harbouring or ships of any considerable bulk. Indeed, it seems Nature purp designed these islands to be a fort of a little world, separate and independent o rest, by making them of so distinut an access, and by endowing them plentifully, whatever is requisite to make the lives of their inhabitants both delightful and plear

and to enable them to fabilit without a commerce with foreign nations.

Besides the several islands and provinces already mentioned, there are some sudistant countries, which do not, properly speaking, belong to the empire of Japan seither acknowledge the supremacy of the Emperor, or live under his protection, these I think it necessary to give some preliminary account before I proceed to a sparticular description of the Japanese empire itself. They are, some of the Empero Liquejo, the inhabitants of which style themselves subjects, not of the Empero Japan, but of the Prince of Satsuma, by whom they were subdued and conque 2. Thosin, is the third and lowest part of the peninsula of Corea, which is governed the name of His Imperial Majesty, by the Prince of Iki and Tsussima. 3. The is Jeso, which is governed for the Emperor by the Prince of Matsumai, whose own do nions make part of the great province Osju.

I. The Liquejo islands, as they are set down in our maps, or the islands of Riuki they are called by the inhabitants, must not be confounded with the Insulæ Leuco or the Philippine Islands. They lie to the south-west of the province Satzuma, wis situate upon the continent of Saikoks, and the neighbouring island Tana; or Tanssima, and according to our maps, reach down almost to the 26° of northern latits Is we believe the Japanese, they are so fruitful as to yield the rice-harvest twice a y The inhabitants, which are for the most part either husbandmen or sishermen, a

good-natured, merry fort of people, leading an agreeable contented life, diverting themselves after their work is done with a glass of rice-beer, and playing upon their mufical inftruments, which they for this purpose carry out with them into the fields. They appear, by their language, to be of Chinese extraction. In the late great revolution in China, when the Tactars i worded and possessed themselves of that mighty empire, the natives retired in great numbers, and were dispersed all over the East Indies. Not a few fled to chele islands, where they applied themselves chiefly to trade, being well skilled in navigation, and well acquainted with those seas. Accordingly, they ftill carry on a commerce with Sitzuma, and go there once a year. Some centuries ago, these islands were invided and conquered by the Prince of Satzuma, v hose successors full keep them in awe by their bugies, or heutenants, and firong garrifons, though otherwife, by reason of their remoteness from Satzuna, the inhabitants are treated with much regard and kindness; for they are obliged to give their Sovereign only one-fifth part of the produce of their country, whilst his own natural subjects, the Satzumese, are taxed at two-thirds. But besides what they pay to the Prince of Satzuma, they raise a contribution among themselves, to be sent by way of a present, once a year, to the Tartarian Monarch of China, in taken of loyalty and fubmission. They have, like the Tunquinese and Japanese, a Dairi of their own, or an ecclesiastical hereditary Monarch, to whom they pay great respect, supposing him to be lineally descended from the gods of their country. He refides at Jajama, one of the chief of these islands, situate not far from the island Osima, which is of the second magnitude.

11. Corey, or Coræa, is a peninfula, which stands out from Tartary, running towards Japan, opposite to the coasts of China It hath been, as the Japanese relate, divided of old into three provinces. That which is lowest, and nearest to Japan, is by the Japanese called Thosijn; the second, which makes up the middle part of the whole penintula, Corcy, and the third and uppermost, which confines upon Tartary, Fakkusai. Sometimes the name of either of these provinces is given to the whole peninfula. The natives, according to the account of the Japanele, are of Chinele extraction. They ferved often and under different masters. Their neighbours, the Tartars, sometimes entered into alliances with them, at other times, they invaded and subdued them. Mikaddo Tfiuu Ai, Emperor of Japan, perfecuted them with war; but he dying before he could put an end to this enterprize, Dfin Gu, his relict, a Princess of great parts and personal bravery, pursued it with the utmost vigour, wearing the arms of the deceased Emperor, her husband, till, at last, she made them tributary to Japan, about the year of Christ 201. Sometime after they entered into fresh alliances with their neighbours, the Tartars, and so continued unmolested by the Japanese, till Taiko possessed himself of the secular throne of Japan. This valiant Prince, reading the histories of his empire, found it recorded, that the Coreans had been fubdued by one of his predecessors, and made tributary to Japan: as in the meantime he was but lately come to the throne, he doubted not, but that he should get time fully to settle and to secure himself in the possession thereof, if he could send some of the most powerful Princes of the empire abroad upon fome fuch military expedition, and by this means remove them from court and country. He, therefore, gladly scized this opportunity, and resolved to renew and support his pretensions to the kingdom of Corea, and through this kingdom, as he gave out his main defign was, to open to himself a way to the conquest of the great empire of China itself. Accordingly he sent over some ambassadors to Corey, to defire the natives to acknowledge the supremacy of the Japanese Emperor, and to give tokens of their loyalty and submission. But the Coreans, instead of an answer, killing the Emperor's ambassador, by this hostile act gave him just reason to proscute them with

Accordingly a numerous army was fent over, without further delay, under the command of such of the Princes of the empire, whose presence he had the most reason to be apprehensive of. This war lasted seven years, during which time his generals, with much ado, broke at last through the strong opposition made by the natives, and their allies the Tartars, and, after a brave defence, made the country again tributary to Japan. Taiko dying about that time, and the army returning, Itelas his fuccessor, ordered that they should, once in three years, send an embassy to court, to acknowledge his fovereignty. Since that time, they relapfed by degrees under the domination of the Tartars, and drove the garrifons left by the Japanese down to the very coasts of the province I siosiin, the only thing they have now remaining of all their conquests in Corea. As things now fland, the Emperor of Japan seems to be latissied. for the fecurity of his own dominions, to be mafter of the coasts, the care and government whereof he committed to the Prince of the islands Iki and Tsussina, who keeps there a garrion only of fifty men, under the command of a captain, or buggo, as they are here called. And the inhabitants are ordered to fend an embaffy to court, and to take the oath of allegiance and supremacy only once at the beginning of every new Emperor's reign. The coasts of Corea are about forty-eight Japanese water leagues, or fixteen German miles, distant from the island of Tsussima, and this as much from the continent of Japan. Numbers of rocks and finall islands lie between them, which though they be for the most part uninhabited, yet the Japanese keep strong garrisons in some of the chief, to watch what ships fail by, and to oblige them to shew what commodities they have on board, as claiming the fovereignty of thote feas. The commodities brought from I siosijn are the best cod, and other fish, pickled; walnuts, scarce medicinal plants, flowers and 100 s, particularly the ninfeng, fo famous for its excellent virtues, which grows in great plenty in the provinces of Corea and Fakufai, as also in Siamsai, a province of the neighbouring Tartary; this plant, though it be found elicwhere, yet that growing 11 the provinces abovefuld, is believed far to excel others in goodness and virtues. The natives have also some few manufactures. Among the rest, a certain fort of earthen pots, made in Japil and Niuke, two Tartalian provinces, were brought over from thence by the Coreans, which were much esteemed by the Japanese, and bought very dear. But of late, it was ordered by the Emperor, that there should be no more imported for the future. The boats made use of by the Isioncese are very bad indifferent fiructures, which one scarce would venture further than Trusting to

III. Jefo, or Jefogafima, that is, "the Island of Jefo," is the most northern island the Japanese have in possession out of their own empire. It was invaded and conquered, as I was informed in Japan, by Joritomo, the first Cubo, or secular morarca, who left it to the Prince of Matsumai, (a neighbouring island belonging to the great province Oilu,) to be by him governed and taken care of. Sometime after, the inhabitants, weary of a foreign government, fell upon the garrison the Prince of Matsumai left there, and killed them all to a man. This act of hostility no sooner reached that Prince's ears, but he fent over a good army, with three hundred horse, to demand, and, in case of resusal, to take ample satisfaction, and to chastise the rebels. But the Prince of Jeso, to prevent further mischievous consequences, sent over an embassy to Matsumai; and, to take off all suspicion of his having had any intelligence or hand in the affair, he delivered up twenty of the ringleaders, which were executed, and their heads impaled, upon the coasts of Jeso. This act of submission entirely reconciled him to his superiors, but the natives being ever fince looked upon as a stubborn and tumultuous people, strong garrisons are constantly kept upon the southern coasts of this island, to put it out of their power ever to attempt the like; and the Prince is obliged to fend once a

year an embaffy to Matsumai, with presents to the value of one mangoks. This island lies in 42 degrees of northern latitude, to the north-north-east, right opposite to the 316a 100 ince Oofia where its two promontories Sugaar and Tavaalaki, running out grea pro mee Conta where its two promontones sugar and Tasjaraki, running out ve y for the feet formal age gulf, which directly fices it. The passage over to this a company of the formal and it is not to be made at all times, by reation of the current, and the first of the formal and formations to the work, though offer to be in a product of the containing to the first of the sessing as one island Kill, and the first of the sessing which right is of the containing to the inhabitance of the first of the containing to the contain orthogold for the state of the it it is . A to its figure, I could not patter and init, positive neither from the account of soint of the country, they within ruch from each their Some represent it very near round, others make it of a live puller figure, with mige premonteries, gulphs, and bays, the fearunning in freed plans for an up income he country, that one in gat be eafily induced to believe in composed of few at different is ands. I am ap to bessere, that the country discovered by ce Viie, to the notified lepan, was part of this Mand. I took notice that in some of he lipse e'e riags, the fouth-well and larger part is called Matfuli; but it was, generally localking, to indimerch'ly drawn, that I should be at a loss to determine, whether it be an iffinit by lifely, or joined to the left. According to the account the Japanese give of the chabitant, they rea throng but favage people, wearing long hair and ber de, well falled in the in necessant of bows and arrows, as also in fishing; the Steeted pare living almost viole, on fish. They describe them further, as very dirty ind + 1 but the truth of this accuse on is not so strictly to be relied on, since they, the Japanese then lelves, are so extremely nice and superstitious in frequently washing and cleaning their bodies, as to have found the very same facity ith the Dutch. The language of Jedfo is faid to have formthing of that which is spoke in Corea.

Behind this island, to the north, lies the continent of Okujeso, as it is called by the Japanese, that is, Upper or High Jeso. That there is such a country is not in the least questioned among geographers; but they have not as yet been able to determine, whether it confines on Tartary or America, consequently where they are to place the Streight of Anian, or the so long wished-for passage out of the North Sea into the great India 1 Ocean, supposed that there be such a one, or whether it is closely joined either to Tartary or America, without any intermediate streight or passage at all. I made it my business, both in my travels through Muscovy and Persia, and during my flay in Japan, to enquire with all the diligence I was capable of, into the true flate of those northern countries, though, in the main, to very little purpose, having hardly met with any thing worth the notice of the public. At Moscow, and at Astrakan, 1 spoke to several people, which either in their travels through Siberia and Kataya into China, or during their stay in Siberia, whither they had been banished by the Czar, and lived many years, picked up what few and uncertain information they could, but could learn nothing farther, but that the Great Tartary is by an isthmus, or neck of land, joined to a neighbouring continent, which they supposed to be America; and from thence concluded that, in all probability, there is no fuch thing as a communication between the Icy Sea and the Indian Ocean. In a map of Siberia, which was made and cut upon wood, by one who was banished thither, and the names of the places marked VOL. VII.

marked in Sclavonian characters, there were feveral confiderable promontories, which from the eastern coasts stood out into the sea, one of which, too great to be brought upon the table, was cut off at the edge. He that shewed me this map, told me at the same time, that according to the accounts which could be procured from the Tartars living in those parts, this very promontory is nothing but an isthmus, which runs towards a neighbouring large continent, on which it confines, but that it is composed of high, rough, and almost inaccessible mountains, and that in his opinion, if ever there hath been a passage there, for the first inhabitants of the world to get over into America, and to people that continent, fuch another undertaking would be at profest utterly impossible. This map of Siberia, such as it was, is extremely ill done, and without any scale of distances, or degrees of longitude or latitude, was yet the first which could give the Czar of Muscovy some, though very impersect, notions of the great extent of his Tartarian dominions to the north. And it is from the fame, my particular friend, the ingenious Mr. Winius, who was by the Czar appointed inspector-general over the apothecaries and druggists shops in Muscovy, made the first rude sketch of his map of Russia and Tartary, which he afterwards considerably corrected and augmented by feveral accounts procured from different paris, and withal reduced to the necessary degrees of longitude and latitude. He was not a little affifted in this undertaking by Mr. Spitshary, Greek and Latin interpreter at the court at Muscovy. This learned and industrious man was, by the then reigning monarch of Russia, sent his ambassador to the Emperor of China, with fecret orders and inftructions to spare neither trouble nor expences, to get himself acquainted with the true state, situation, and extent of the Czar's dominions. Accordingly he went to Pekin through the northern parts of Ruffia and Tartary, and having dispatched his business at the court of China, returned through the fourhern provinces, and came back to Moscow about the year 1680. During my stay at the court of Moscow it so happened, that he was to be our interpreter which brought me much acquainted with him, and fed me with no small hopes of learning fomewhat new and more particular, than was hitherto known, about the state of those countries; but I found him too distrustful and fecret, and very unwilling to communicate what observations he had made upon his journey. The late illustrious Nicolaus Witten, L. L. D. and Burghermatter at Amsterdam, a person to whom the public is greatly indebted, met with much better fuccess in his own enquiries, for in his last embasify to the court of Mulcovy he did, by his extraordinary good conduct, great learning and affability, infinuate himfelf fo far into the favour of the Czar, and the grandees of his court, that whatever accounts they had procured from all parts of Russia, were without reserve communicated to him, which enabled him to compess that excellent and accurate map of all the Russian empire, and the Great Tartary, with its mountains, rivers, lakes, cities and provinces, for the most part till then unknown; a work which by reason of its great usefulness could not but highly oblige the curious. But however accurate this map of Doctor Witlen's was, which afterwards proved very useful to Mr. Isbrand Ides, in his journey by land to China, where he went ambassador, vet the full extent of the eaftern coasts of Siberia, and the Great Tartary, remains as yet undetermined, and we are still in the dark, as to what relation they bear to the neighbouring continent, which is probably that of Oku Jeso.

The Japanese on their fide are so little acquainted with the state and extent of that country, which lies behind the island Jeso Gasima, and which is by them called Oku Jeso, that they say it is only 300 Japanese miles long; but what authority they have to support this affertion, I cannot tell. A ship having some years ago been accidently cast upon the coasts of that continent, they met among the rude and

favage inhabitants, fome persons clad in fine Chinese silk, by which may be very probably conjectured fome communication the natives have with the neighbouring Daats, or Tartary; at least that these commries are not very remote from each other. A jonk, which was fent thirder on purpose up in discovery, about the year 1684, returned after having been three months upon her voyage, and brought the very fame account. An experienced Japanele pilot, who was well acquainted with the feas about Japan, as having been every where round this empire, upon my enquiry could give me no other fatisfactory answer, but that between Japan and Jesogasima, the currents run alternately, sometimes east, sometimes west, and that behind Jesogasima, there is only one, which 1035 conflantly, and directly north, whence he concluded, that near Daats, so they call Tartacy, there must be some communication with another sea to the north. A few years ago another imperial jonk was fent out in quest of those countries. They falled from the eaftern coasts of Japan, and after many troubles and incommodities endured between 40 and 50 degrees of northern latitude, they difcovered a very large continent, supposed to be America, where having met with a good harbour, they said there during the winter, and so returned the next year, without any the least account of that country, or its inhabitants, excepting only, that it run further to the north-west. Since that time it was resolved at the court of Japan to be at no further pain or expence, about the difcovery of those countries. I was little the better for confulting the Japanese maps of those seas, though I saw several of them in different places, as at Jedo, in the palace of Tsussimano Cami, governor of Nagafaki, in the temple of Symmios near Ofacca, and in feveral other temples. They all represent a large continent, which stands out from the Great Tartary, and extends itself behind the island Jesogasima, reaching about 15 degrees of longitude further cast than the eastern coasts of Japan. A large space is left empty between it and the neighbouring America. The country itself is divided into the following provinces, marked with their common writing characters, Kabersari, Orankai, Sitsij, Ferosan; and Amarifi. Between the two last provinces is marked a confiderable river, which loses itself into the sea behind the island Jeso, to the south-east. But as all their maps are very indifferently done, without any scale of distances or degrees, and as besides the names of the provinces above-mentioned are only in their canna, or common writing, and not, as other more authentick records, in their fifi, or fignificant characters, I shall leave to the reader's own judgment to determine, how much there is to be depended upon them. And this is all I could learn in Japan about the state of those countries which lie to the north of this empire.

Before I leave off this general geographical description of the Japanese empire, I must not forget to mention two other islands, which lie further off to the east, or east-north-east, of the coasts of Osiu, at least at one hundred and sifty miles distance, but as the Japanese pretend, belong to their empire. They have given them very high sounding names, the smaller, more northern, and more remote from Japan, being called Ginsma, the Silver Island; the larger, and nearer Kinsma, the Gold Island. They keep their slate and situation very secret from all foreigners, chiefly the Europeans, for as much as their rich names have already tempted them to go in quest thereof. The King of Spain having been informed that they lie westward of America, in that part of the world, which by the Pope's division was assigned to him, as all those lands, which should be discovered from the east, were to the King of Portugal, sent out a very expert pilot to look for them about the year 1620. But this voyage proved unsuccessful. The Dutch attempted the same at different times with no better success. They sitted out one ship for that purpose at Batavia in 1639, and two others in 1643,

which had orders to go further, and to attempt the discovery of the coasts of Tartary and America. The voyage of these two ships, one of which was called Breaken, the other the Castrecoom, proved very unior tunate. For besides that they suffer the nucli by slowers, the captain of the Bresken having hazarded himself on shore, with to be of his ship's company, in a post of Japan lying under the 40 degree of northern that it is they were all seized upon, put in irons, carried prisoners to Jedo, and to barbarously treated,

About the year 1675, the Japanele accidency discovered a very large island, one of their parks having been forced there in a florm from the island Fathico, no n which they computed it to be three hundred miles distant towards the east. They met with no inhabitants, and found it to be a very pleasent and from the island rountry, well supplied with fresh vater, and familiaed with pleaty of plants and trees, particularly the arrack-tree, which he sever mish give room to consedure, and the island by tasher to the fouth of James, can to one east, there are a son in only in hot countries. They called it Barenna, or the idead Bane, and be east, and more inhabitants upon it, they make a truth the current an analysisted or red. On the shores they found an incredible of they or the above to in a face to long.

atility, I is I now all occurrent to men ion, or Patrile confiner, which is an inuch re to five, the E stry Patrion Island, in the most renormalized the Japanese have in po" thich fouthward. It has under the man acciding with I do, and is reckoned to De about eighty depanded wat r leagues diffunction, the confinent of Jupin, being the the name to a long row of final ideads, all roft configures to each other. It is the of Allind, where the great men of the Emperor's court, when out of falour, are uluarly confined, purfuent to a ver and all cultons of a pt performers on a ricky coalt, from the extraordinary legat of which the whole iffind him borrowed its name. As long as they continue on this island, they read work for their l'relihood. Their chief amusement is weaving, and so is of the filk flusts wrought by the r, as they are generally men of ingeauity and good understanding, er- to inimitably fine, that the Enperor hath forbid under fevere pennales, to export or to fell them to 10 righers. This island, besides it being washed by a rough tempestuous ha, is so well guarded by nature itself, than when there is some provision of the corn on neces. faries of life, or some new prisoners to be brought in, or the guard to be relieved, the whole boat, with all the lading, must be drawn up, and again let down by a crane, the coasts being so steep and rocky, as to admit of no other access.

CHAP. II. — The Division and Sub-division of the Empire of Jupan into its several Provinces; as also of its Revenue and Government.

In the general geographical description of Japan, which I have laid down in the preceding chapter, I took notice that this empire hath been divided into seven great tracts of land, which were again sub-divided into fixty-eight considerable provinces, and these into 604 smaller districts, or counties, as one might call them. I proceed now more particularly to consider the largeness, extent, sertility, produce and revenues of each province, as I sound them in a Japanese description of this empire, published in Japan, by the title of Sitzi Jossu.

But before I proceed to a particular confideration of the feven large tracts of land, which the Empire of Japan hath been divided into, and of their feveral provinces, I shall take notice of the Gokinai, or Gokinai goka Kokf, that is the five provinces of the Imperial revenues, so called, because all the revenue of these five provinces is particularly

particularly appropriated for the support and maintenance of the Imperial court. They amount to 148 mans, and 1200 kokes of rice. The reader is defired toobserve in general, that all the revenues in this country are reduced to there two measures in rice. A man contains 10,000 kok.. and a koki 3000 bales or bags of rice. These five Imperial provinces are, 1. Jamafaro, otherwise Sansju it is a large and fruitful country. Its length from fouth to north is a hundred Japanele miles; and there are feveral good towns and other places of note with a it's compals. It is divided into eight diffricts, Otokuni, Kadono, Okongi, Kij. U. fi, Kusse. Sakanaka, and Tsukugi. 2. Jamatto, or Wosiu, is likewise a very good country, and much of the same length with the former, going from fouth to north. It had formerly feveral places of note within its compass, which are at present reduced to a very small number. It is divided into sisteen districts, Soono Cami, Soonosimo, Feguri, Firole, Katzu-Dsiau, Katsunge. Ohuno Umi, Utz, Jofino, Uda, Sikino Simo, Sikino Cami, Takaiidz, Tooidz, and Jammanobe. 3. Kawatzij, or Kasiu, a folerably good country, about two days journey in length, and divided into fifteen difficults. Nullori, Ifikawa, Fukaitz, Jaskabe, Ookake, Tukajatz, Kawatz, Sarara, Umbarada, Katarno, Wakaje, Sibukaja, Sick, Tanbokf, and Tennan. 4. Idiumi, or Sensju, is a very large country, but indifferently fruitful. Its ler th is an hundred Japanese miles from south to west. It is bordered on one side by the sea, on the other by a ridge of high mountains. It is plentifully supplied with fill by the neighbouring fea: it produces also some buck-wheat, rice, pease and beans, though but few, as I not of the best fort. It hash but three smaller districts, Octori, Illurie, and Fine. 5. Sitzu, oti ciwise Tsinckani, and S'sju. It hath two days journey and a hilf in circumference. It is the furthermost country westwards on a inge outp. The fouthern parts of it are very warm, but the northein colder, and abound move in what they call gokokf, which are the five chief forts of peafe eat in this country. It also also fome fifth, and falt, and is in the main a very good country. It is divided into chireen districts, Sij Jos, or Symmios, Katatz, Fingassinai, Nisimari, Ja lan, pir. alimo, Samalami, Telijura, Kawanche, Muko, Awara, Arima, and Nolje.

I proceed now to the feven large tracks of land, which the Japanese empire hath been

divided into by the Emperor Siufian.

The first is Tookaido, that is, the south-eastern tract. I have observed above, that the laid feven large tracks have been by the Emperor Tenmu further divided into tixty-eight previnces, the five provinces above mentioned included, to which some his dred, are after two more were added. The Tookaido confifts of fifteen of these fixiy-cigit to which are 1. Ig, otherwise Isju, which is limited on the south, and call by he ... To t'e north it is separated from the neighbouring provinces by a ridge of lash mountains. It is a hot country, but indifferently fruitful, producing fome lants, tre s, and bandoos. It is divided into four districts, Aije, Namanda, Iga, and Nabari. 2. Ific, otherwise Sesju, is three days journey long, going from fouth to north. It is almost wholly encompassed by the ica, but extremely fruitful, with an agreeable - ricty of hills and plains. It is divided into fifteen districts, Quana, Afaki, Safuka, I.fii, Aanki, Taato, Nifikissima, Gosasuma, Inabe, Mije, Ano, Itaka, Watakei, Ino, and Taki. 3. Sfima or, Sifio, is but a finall province, which one may travel across in half a day's time. It is a very barren country, but the neighbouring fea fupplies it plentifully with fish, oysters, shells, and the like. It hath but three districts, Toosij, Ako, and Kamesima. 4. Owari, otherwise Bissu, is an inland country, entirely separate from the sea, but one of the most fruitful provinces of the whole empire, and richly stocked with inhabitants. It is three days journey long, going from south to north, and divided into nine districts, Amabe, Nakassima, Kaquuri, Nirva, Kassungale, Kassungale, Jamada, Aitsi, Tsitta, and Toosijnossima. 5. Mikawa, otherwise Misiu. is a very barren and poor country, with too many shallow rivers and, ponds, which are very prejudicial to the growth of the gokokf. It is one day's journey and a half long, going from cast to west, and divided into eight districts, Awoumi, Kamo, Nukada, Batz, Fori, Jana, Tsitarra, and Akumi. 6. Tootomi, otherwise Jensju, a very good and fruitful country, and one of the pleafantest provinces for a curious variety of hills, rivers, fertile plains, towns and villages. Its length is supposed to be two days journey and a half, going from east to west, and it is divided into fourteen districts, Fammana, Futz, Fuufa, Aratama, Nangakami, Nagassimo, Sutz, Jammana, Kikoo, Faifara, Tojota, Jamaka, Sanno, and Jwata. 7. Surunga, or Siusju, deserves likewise to be commended for the variety of its towns, villages, hills, and truitful plains. It is of the fame length with Tootomi, going from east to west, and divided into seven districts, Tsta, Masiasu, Udo, Itabe, Rofarra, Fusij and Suringa. 8. Kai, otherwise Kaisiu, and Ksjoohu, is a flat country, and abounds in rice, fields and pasturage, plants and trees. It breeds also some cattle, chiefly horses. It is two days journey long from south to north, and divided into sour districts, Jamusas co, Jaazzsiro, Coma, and 9. Idfu, or Toosju, a long peninfula, being almost surrounded by the fea. It affords a large quantity of falt, and all forts of fish, and is reckoned in the main a tolerable good country. It is pretty mountainous, with some flat ground, and some few rice-fields. It hath but three diffricts upon the continent of Nipon, Takato, Naka, and Camo, whereto are added two neighbouring islands, Oosima, and Firkasima. 10. Sangami or Soofiu, is three days journey long; a flat and barren country, which affords hardly any thing for the fustenance of human life, but tortoiles, fish and crabs from the sea, besides a good quantity of timber out of its large woods. It is divided into eight districts, Asikaranno Cami, Asikaranno Simu, Oosimi, Juringi, Ajikoo Takangi, Camakura, Mijura, and Jesima. 11. Musafi. or Busiu, a very large province, having five days journey and a half, in circumference. It is a flat country, without woods and mountains, but very fruitful, abounding in rice, gokokf, garden. fruits, and plants. It is divided into twenty-one districts, which are Kuraggi, Tsukuki, Tama, Tatfinbana, Kaikura, Iruma, Tefma, Fijki, Jokomi, Saitama, Kodama, Tfibu Sima, Fabara, Fafifawa, Naka, Kami, Adats, I fitfubu, Jebara, I otefima, and Oofato. 12. Awa, otherwise Foosiu, a middling good country, with mountains, hills, rivers, and plains, affording both rice and corn; it is tolerably well inhabited and plentifully fupplied by the neighbouring fea with fish and oysters, whose shells the inhabitants make use of to manure their ground. It is one day's journey and a half long from fouth to north, and divided into four districts, Fekuri, Awa, Asaima, and Nakaba. 13. Kadfufa, otherwife Koosju, is three days journey long, going from fouth to north, a tolerable good country, though not without high rough mountains: great numbers of the inhabitants get their livelihood by weaving of cannib, or hempstuffs, which they understand very well. It is divided into eleven districts, Ssussu, Amafa, Itsuwara, Umingami, Foiko, Mooki, Islimi. Farinib, Nagawa, Jammanobe, and Mussa. 14. Simoofa, otherwife Scosju, is faid to be three day's journey long going from fouth to north, a mountainous country, indifferently fruitful, but abounding in fowls and cattle. It is divided into twelve districts, Kaddosika, Tsibba, Imba, Sooma, Sasjuma, Iuuki, Tooda, Koosa, Unagami, Katori, Fannibu, and Okanda. 15. Fitats, or Sjoo, a very large province; my author makes it almost square, and says that it is three days' journey long on each fide. It is but a middling country, as to its fruitfulness, but produces a great quantity of filk-worms and filk, of which there are feveral manufactures established there, as there are also some other things, the inhabitants being a

5 ver

very industrious people. They likewise carry on a trade with cattle. It hath eleven districts, Nijbari, Makaije, Tsukkurin, Kawaats, Ssida, Imbarak, Namingata, Naka, Kussi, Taka, and Iengoko. Iengoko signifies a distant country, by which is probably meant some neighbouring island. The revenues of trase sistem provinces of the first

large tract called Tockardo, amount in all to 494 mankoxf.

II. Toofando, that is, the Eastern mountainous track, hath eight large provinces within its compass, which are 1. Oomi, an extracrainary good and fruitful country, with variety of mountains, hills, rivers, and fruitful fields, producing both rice and corn, and affording to the labourer a thouland sold reward, (according to my I panele author's way of expressing the fruitfulness of this country.) It hath three days journey and a half in circumference, and is divided into thirteen diffricts, Singa, Karimotto, Ius. Cammoo, Kanfaki, Inungami, Sakatta, Jetz, the upper and lower Affai, Imito, Takaffima, Kooka, and Joofitzumi. 2. Mino, or Diofiu, is not inferior to the former, neither in an agreeable variety of hills and plains, nor in tertility, producing plenty of rice, corn, and gokokf, and other necessaries of life. It is three days journey long from fouth to north, and divided into eighteen diffricts, Isiquelu, Fufa, Awadfi, Ikenda, Oono, Mottos, Mussijroda, Katakata, Atlumi, Kakumi, Iamangata, Muggi, Guundsjo, Camo, Cako, Tokki, Jenna, and Taki. 3. Fida, otherwise Fisju, falls far short of the two former, both in largeness, and fertility. Its utmost extent from south to north doth not exceed two days travelling. It abounds in woods and forests, and yields a great quantity of fire-wood, and timber for buildings. It hath but four districts, Ofarra, Mafijinda, Ammano, and Araki. 4. Sinano, otherwife Sinsju, a very cold country. Salt and fish are very scarce here, because of its great remotencis from the fea; and it is not well provided with cattle, by reason of its few pastures. It is otherwife tolerably fruitful, and produces a good quantity of mulberry-trees, filk, and cannib, of which there are feveral good manufactures established there. It is said to be five days journey long from fouth to north, and is divided into eleven didrices, Midfutz, Tekaij, Fennishina, Tislagatta, Sacku, Ina, Siuwa, Tiskumma, Atsumi, Sara, and Sijna. 5. Koodluke, otherwise Dsiosju, is four days journey long, going from east to west, a warm and tolerable good country, producing plenty of mulberry trees, though the filk they yield, is not of the best fort, and the stuffs brought from thence but coarfe. It is distinct into fourteen districts, Uffui, Aash, Shkanne, Ssetta, Sai, Nitra, Kattuoka, Spora, Cumma, Kanya Tago, Midorino, Naba, and Jammada. 6. Simoodiuke, or Jasja, is thee days journey and a half long, going from eaft to west, a tolerable good country, not very mountainous, but rather flat, with abundance of pasture-ground and rice-firlds, which plentifully supply it with grass, rice, cond, and the gokoki. It hath nine districts, Aflara, Janada, Afo, Tfuga, Taka, Sawingawa, Sawooja, Nafu, and Mukabe. 7 Mutfu, or Oosju, is by much the largest province in Japan, being full fixteen days journey long from fouth to north. It is an extraordinary good and fruitful country, and wants nothing for the support of human life. This whole province was formerly subject to one prince, together with the neighbouring province Dewa, of which more hereafter. It is divided into fifty-four (and according to others fifty-five) districts, Sijrakawa, Kurokawa, Juwasi. Mijaki, Aitz, Nama, Oda, Afa' a, Adatz, Sibatta, Karida, Tooda, Natori, Sinnobu, Kikkunda, Sibanne, Affonufa, Namingata, Iwadewaga, Kawatz, Fitzungi, Takano, Wattari, Tamadsukuri, Oonato, Kami, Sfida, Kuriwara, Jefan, Jeki, Mifawa, Nagaooka, Tojone, Monowara, Oofika, Gunki, Kaddono, Fafikani, Tfungaru, Uda, Iku, Motojes, Ifbara, Teidfi, Sikamma, Inaga, Siwa, Iwasaki, Kimbara, Kadsinda, Datte, Socka, Fei, and Kisen. 8. Dewa, otherwife Usju, is five days journey long, a very good country, abounding in good

pasture-ground, plants, and trees. It is fad to have the Spring fifteen days earlier than other provinces. It belonged formed, to Osju, but is not a separate province, divided into twelve districts, Along, Kayanco, Murajama, Orana, Ostana, Titala Tangaira, Diwa, Akindatauri, Sende to Isoormi, and tanarroot. All the revenues of these eight provinces amount to 563 margors, according to the older by but to present

they are confiderably in proved.

III. Foku Rokkudo, that is the northern trad, have twen moviners within its compais: 1. Wackafa, otherwise Sakusie, is one any 's parantal in hall on a going from fouth to north. It is limited to the local by he was a plantally Supplies it with fish, crabs, tortoises, and in his. It wish is no constitute, and a divided into three dillies, Oonibu, Ooi, are and a 2. Jeff of our wife soreju. Its length, from fouth to north, is of the edge of each of the edge of good pattureground, where the inhabitants by plant, or cautle. It produces also canaib, mulberry-trees and filk, and the goldon very plantfully. It is divided into twelve districts, Tsuruga, Nibu, Imadats, Asijor Coro. Col ai, Kuroda. Pingani. Takakida, Joofdfida, Sakagita, and Naandsjo. 3.1 2., che. ife King, is two anys journey and a half long, going from east to well, a locarble good courty, yielding as no ch of the gokokf as is necessary for the tale. has of the inhabit and Some filk manufactures are carried on here, and it affectly the best vinegar, lacki, and fore, which are exported into other provinces. It had four difficults, Johne, Nome, Tikawa, and Kanga, to which some add Kaboku. 4. Noto, otherwise Secsiu, is a fort of a peninsula, almost wholly encompassed by the sea, and on this account plentifully supplied with sich and crabs. It hath feveral iron-nines, but not much good ground, and the goldon's ripen confiderably later than in other provinces. It is two cays journey and a half long, going from east to well, and is divided into four districts, Legui, Note, Luncefund, and Sfus. 5. Jeetsju, otherwise Jucisju, hath three days journey in circumference, a tolerable good country, pretty well supplied with golsoks. A particular fort of carthen pots is made here. It affords also some wood, which is made use of particularly for bridges. It is divided into four districts, Tonami, Imidfu, Mebu, and Nijkawa. 6. Jetfingo, otherwife Jeesju, a large province, having fix days journey in circumference. It is very mountainous to the fouth, otherwise tolerably fruitful, producing filk, cannib, and the gokokf, though not of the best fort. It is divided into seven districts, Kabiki, Kof, Missima, Iwoodsi, Cambara, Nutari, and Iwasune. 7. Sado, or Sasju, a pretty large island of three days journey and a half in circumference, situate to the north of Japan, just over against the two provinces Jeetsju and Jetsingo. It is a very fruitful island, plentifully supplied with corn, rice, and gokokf. It hath also some woods and good pasture-ground. The sea affords fish, and crabs. It is divided into three districts, Umo, Soota, and Camo. The yearly revenue of these seven provinces amounts to 243 mangokf.

IV. Sanindo, that is, the "Northern Mountainous, or Cold Tract," consists of eight provinces: 1. Tanba, otherwise Tansju, is two days journey long, a middling good country, producing plenty of rice, besides several sorts of pease and pulse. It affords also some fire-wood, and is divided into six districts, Kuwada, Funaji, Taki, Amada, Fingami, and Ikarunga. 2. Tango, otherwise Tansju, is one day's journey and a half broad, going from south to north, likewise a middling good country, where silk and cannib may be had at a very easy rate. It is plentifully supplied by the sea with fish, crabs, and the like. It is divided into sive districts, Kaki, Joki, Tango, Katano, and Kumano. 3. Tasima, otherwise Tansju, is two days journey long, going from

east to west, a middling good country, much like the two former, and divided into eight districts, Af 171, Jeou, achu, Acto Kornofela, Flangaka, Satzumi, and Mikuma i. 4. Imaba, other wie Lingu, is at a cut the fema length and degree of main winels with Tafima. It is instead to take north by the fee, and on the fouth by a rice of mount tains. It hath to tal me actions of one folille stuffs, and is divided in a fever provinces, Togom' I gate', Li ai'i, Oci ii, Lakaguio, Ketta, and Konno. 5. Fooki, otherwife Fakusta, is two days towner and a half lone, going from fourth to north, a middling good country, producing please of gokold, connin, and fisk, of which last there are feveral good manuactures could on here. It is divided into fix dutricts, it warrara, Kume, Jawata, Aneri, Oomi, a d Frio. 6. Idamo, oderwae Unsu, is two days icurney and a half broad, going how eart to veil, almost wholly encompassed by the Corean sea, after the mann wif a period la. It is a very ruitful country, producing variety of trees, grafs, and give s. It hat't also forme menutadianes of coarse fick stuffs. It is divided into the districts, ju, Nomi, Somano, Alinka, Tattenci, Jachuno, Kanto, Itis, Ninda, and Oofara. 7. Ivaini, otherwise Sekisju, is two days journey long, going from fouth to north, a middling good country, producing plenty of cannib, and affording foine falt. The inhabitants give twice as much a year to their Prince at tacy do in other provinces. It is divided into five diffricts, "Illama, Naka, Oots, Mino, and Canoab. 8. Cki, otherwif. Insju, an island ercolad into a province, and situate in the Corean sea, opposite to the coasts of that peninsula. It is a very barren country, producing a few gokoht. It hath two days journey in circumscrence, and is divided into five districts. All the yearly revenues of these eight provinces amount to

123 mangokt. V. Sanjodo, that is, "the fouthern mountainous, or warm tract," is composed of eight provinces, which are, 1. Farima, otherwife Bansju, hath three days journey and a half in circumference, a very fruitful country, producing in plenty all manner of necessaries. It hath several manufactures of filk-stuffs, paper, and cloth. It is divided into fourteen districts, Akas, Kata, Kamo, Inami, Sikama, Iwo, Akato, Saijo, Sitz, Kansaki, Taka, Mitzubo, Issai, and Itto. 2. Minasaka, otherwise Sakusju, is three days journey long, going from east to west, a middling good country, affording as much fruits, plants, victo ils, and cloth, as is necessary for the support of its inhabitants. It is observed as somewhat remarkable, that this province is less subject to vinds than any other in the empire. It is divided into feven districts, Aida, Katzunda, Tomarif. Tomafigafi, Khume, Ooba, and Matuma. 3. Bidlen, or Bisju, hath three days journey in circumference, a middling good country, producing pleaty of filk. Its foll is preity warm, and the produce of the fields and gardens are observed to ripen entire than in other provinces. It is divided into eleven districts, Kosuma, Waki, Iwarasi, Ooku, Akofaka, Kandatz, Minne, Ooas, Tfitaka, Tfingofar a, and Kamofima. 4. Bitsju, otherwise Fisin, is one day's journey and a half long, going from east to west, a very good country, plentifully supplied with all the newsfiaries of life. 'I he gokokt and cannib in particular are extremely cheep here. It is divided into nine diffricts, Utz, Kaboja, Kaija, Simomitz, Assanguts, Oda, Sitzuki, Teta, and Fanga, to which are added two islands, Saburosima, and Jorisima. 5. Bingo, otherwise Fisju, is somewhat more than two days journey long, going from fouth to north, a middling good country, plentifully supplied with rice and gokokf, which are likewise observed to ripen here much earlier than they do elsewhere. It is divided into fourteen diffiles, Abe, Furfiles, Kamijsi, Asuka, Numasimi, Bonitz, Asijda, Kooni, Mikami, Camidami, Mitsuki, Josso, Sirra, and Mijwara. 6. Aki, other Gesju, is two days journey and a half long, going from fouth to north, a mountainous and barren country. Upon the coasts they make falt. Corn, rice, and gokokf will hardly grow here, but it abounds with woods and forcits. VOL. VII.

forests, which afford plenty of mushrooms. It is divided into eight districts, Numali, Takatta. Tojoda, Sada, Cammo, Sabaku, Aki, Takamija, and Iku Kushima; which last is the name of a place particularly samour in this province. 7. Suwo, or Seosju, is three days iourn y long, going from east to work, a middling good country, abounding chiefly in plants and good past in ground. The coasts afford as much sish, crabs, shells, and other submarine substances is a other province whatever. It is divided into six districts, Oosiara, Kumade, Thao, Sawa, and Jooski. 8. Nagata, otherwise Tsiosju, is two days journey and a lilling, from east to work, a middling good country, limited to the south and west by the sa, to the north by a ridge of mountains. It produces gokoks, sish, crabs, and other necessaries, twice as much as there is requisite for the maintenance of the inhabitants. It is divided into six districts, Atsa, Tojora, Mine, Ootz, Amu, and Missima. The whole yearly revenue of these eight provinces amounts to 270 mangoks.

All the feveral tracts of land, provinces and districts, hitherto mentioned, belong to the great island Nipon. I proceed now to the second island, which is next to Nipon in largeness, and which is by the Japanese called Kiusju, the Western Country, and

Saikokf, the Country of Nine. This offers to our view the

VI. Great tract of land, called Sailaido, that is, the Western Coast Tract. It is composed of nine large provinces: 1. Tsikudsen, otherwise Tsikusiu, is from south to north four days journey long, a middling good country, producing both corn and rice. It hath several Chinaware manufactures, and is divided into twenty-four districts, Sima, Karoa, Jassijka, Nosima, Mikasa, Monagatta, Onk, Musiroda, Fonami, Sara, Naka, Cassiji, Siaki, Musimi, Ito, Musijro, Vutz, Kur nde, Nokosima, Sinotz, Kasakura, Kamitzkasakuri, Kokus, and Tassai. 2 Tsikuago, otherwise Tsikusju, is, from fouth to north, five days journey long, a tolerable good country, producing corn, rice, and peafe in great plenty; the coasts afford filh, crabs, and shells. A great deal of sweetm at is road; here, and exported into o her provinces. It is divided into ten dift. As, I liwara, Mij, Ikwa, Mi, Nike, Kindfina, Simodfina, Jaminacando, Jaminaseta, and Takeno. 3. Badien, or Foosju, is sour days journey long from south to north, a tolerable good country, particularly famous for producing extraordinary good medicinal plants. G eat numbers of filk manufactures are carried on in this province. tome of which the Prince takes in part of payment for his revenue. It is divided into eight districts, Tangawa, Sakku, Mijako, Nakatz, Tsuiki, Kamitzki, Simotzki, and 4. Bungo, otherwise Foosju, is three days journey long, middling truitful. It affords filk from its mulberry-trees, cloth, hemp, gokokf, and foing fearce medicinal plants. It is divided into eight districts, Fita, Kees, Nawori, Oono, Anabe, Ookata, Faijami, and Kunisaki. 5. Fidsen, otherwise Fisju, is from south to north full five days journey long, a good and middling fruitful country, besides the produce of corn and rice, plentifully stored with fish and fowls. It hath also some cloth manufactures, and is divided into 11 districts, Kickij, Jabu, Mine, Ooki, Kansoki, Saaga, Maatsura, Kısıma, Fusitz, Kadsuraki, and Takaku. 6. Figo, otherwise Fisju, hath about five days journeys in circumference, a middling fruitful country, affording plenty of firewood, and wood for building, as also corn, peafe, fish, crabs, and other necessaries, as much as will supply the want of the inhabitants. It is divided into fourteen districts, Tamana, Jamaga, Jamamatto, Kikutz, Afo, Takuma, Kuma, Aida, Mafiki, Udo, Jaadfiro, Koos, Amakusa, and Askita. 7. Fiugo, otherwise Nisju, is about three days journey long, a poor country, mountainous, and producing hardly what corn, rice, and fruits are necessary for the sustenance of its inhabitants; some few mulberry-trees grow there. It is divided into five districts, Uski, Koiju, Naka, Mijasaka, and Morokata. 8. Oosumi, otherwise Gusju, is from east to west two days journey long, a small but fruitful fruitful province, plentifully supplied vith all the necessaries of life, particularly such as the sea affords. There is a great quantity of paper made here, and some sew silk stusses. It is divided into citat didricts, Ocsavi, Pisingari, Kuwabara, Soo, Sijra, Kimodsuki, Komadsij, and Kumagge, to which is added the neighbouring island Tangasima. 9. Satzuma, or Satzu, is much of the same length with the former, middling fruitful, producing chiefy mulberry-acces and hemp. It both a sew cloth manufactures, but the cloth is very good. It can surnish other provinces with hemp. It is divided into sourteen districts, Idsoni, Takaki, Satzuma, Icki, Ila, Ala, Kawanobe, Jene, Juumaki, Fire, Fani, Jamma, Okinokosima, and Koskisima. The yearly revenue of these nine provinces amoun s to 344 mangeks.

An island of the third magnitude, which lies between the two former, and is by the Japanese called Sikoks, that is, the Country of Lour, viz. Provinces, together with the neighbouring island Awads, fittuate to the north-east of Sikoks, and the great province Kanokuni, which stands out from the continent of Nipon, make up the seventh

large tract of land, which is by the Japanese celled

VII. Naukaido, that is, the Track of the Southern Coasts. It is some of defithe fix following provinces: 1. Kijnokupi, etherwife Ki v, is four day councy and a half long, going from fouth to north, a flat and barren courtry, walted by the fix on three fides, and producing neither coin and rive, nor peak and pulle. It is divided into feven diffricts. Ito, Naka, Nagula, Anab, arrida, Fitaka, and Muro. 2. Awadi, an island of about a day's journey in length, in the near, a ry barren, afforcing however, cloth, fith, and ralt, as much as there is necessary for the maintenance of the inhabitants. It hath but two diffricts, I fina and Anjwara, to which are added two of the chief neighbouring islands, Musuma and I. since 3. 4 was otherwise Asja, is two days journey long, a middling good country, I mewhat mountainous, and plentifully stored with cattle, fortl, fish, crabs, and shalls. It is divided ano nine districts, Miosi, Olen, Nafingafi, Nanifi, Katfura, Naka, Itano, Awa, and Mina. 4. Sanuki, otherwife Sansju, is three days journey long, going from east to west, a middling good and fruitful country, with variety of rivers, mountains, and fields, producing rice, corn, peafe, and The fea affords plenty of fish and crabs. This province is famous for having given birth to feveral great and eminent men. It is divided into eleven districts, Owutfi, Samingawa, Miki, Mino, Jamada, Kanda, Ano, Utari, Naka, Tado, and Kako. 5. Ijo, otherwise Josju, is two days journey long, a middling good country, mountainous in some parts, flat in others, some of the fields being sandy, others producing rice, hemp, mulberry-trees, grafs, and plants. Some falt is made upon the coafts. It is divided into fourteen districts. Nij, Sucki, Kuwamira, Ootz, Kasasaja, Nooma, Tike, Otiumi, Kume, Fuke, Jio, Kita, Uwa, and Uma. 6. Tofa, otherwife Tosju, is two days journey long, going from east to west, a middling good country, supplied with plenty of peafe and pulse, wood, fruits, and several other necessaries of life. It is divided into seven provinces, Tosa, Agawa, Taka, Oka, Fata, Nanaoka, Katasima and Kami. The yearly revenue of these six provinces amounts to 140 mangoks.

There remain still two other islands not hitherto mentioned, which were conquered, and annexed to the empire of Japan, in the late war with the inhabitants of Corea. They are called Iki Tsussima, both their names being put together, and have now a Prince of their own, having been formerly subject to the Prince, or petty King of Satzuma. The first of these two islands is Iki, otherwise Isju; it is a days journey long, and hath two districts, Iki, and Isijda. The second island is Tsussima, otherwise Taisju; this is somewhat larger than the former, and likewise divided into two districts, Akata, and Simoakata, that is, Upper and Lower Akata. The fruitfulness of these islands is said not to be very considerable, but they say that some foreign curiosities are to be seen

there, and the number of ido's worshipped by the innabitants is much talked of. The yearly revenue of these two islands amounts to 3 man, and 5000 koki.

The whole revenue of all the Much and provinces b longing to the great carpire of Japan makes up in all a yearly full of 2328 man, and once kells, according to the account above given. My Japan de author, however, puts it only at 2257 many olds.

Though it be not a proper place here to enter into particulars concerning the gor ernment of the Japanese empire, its provinces, and districts, yet for the better understanding of my history, it seems necessary, that, before I proceed any feether, so noted in particular, with an absolute and monarchical power; and so is every province in particular, or the Prince who, under the Emperor, enjoys the government there is The pretent tests, or see that Monarch, is The alos, fourth successor, and great product and anima, said Emperor of the now reigning family, who esturped the throne upon the lawful neir, and reigned about the beginning of the sixteenth century. They is harb the character of a text to but just and prudent monarch. He inherited from its ancestors, along with the crown, an absolute and unlimited power over oil his studies, from the treat it extraction up to the highest rank. Even the greatest Princes and lords of the empire, are so far his vasiels, that he can disgrace, exile, and deprive them of their lives and dominions, as no pleases, or as he thinks the peace and we sare of the empire requires, or their crimes deleave.

Particular proclects are governed by hereditary Princes, a fled Daimio, which fignifies "high-named;" that is, Princes and lorde of the highest rank. Some of their lave found means by force of arms to enlarge their dominions. Thus, the Prince of Satzuma made himfelf mater of the two neighbouring provinces, Onlumi and Fiugo, and the Prince of Cangue of the neighbouring province Noto; on which account, these two Princes are said to be the most, we read to the empire.

The lords of smaller districts are called Siomio, "well named," lords of an inferior rank. Their dominions, whether they reliflands, as Goto, Firando, Amakusa, Matfaki, and several others, or situate upon the continent of the three chief islands composing the empire of Japan, are mentioned in the list of the fixty-fix great provinces, each under that province whereto they belong, or in which they lie. All the Silmio are so far subject to the Emperor, that they are allowed but six months stay in their hereditary dominions. The other half year they must spend in the Imperial capital, sedo, where their wives and samilies are kept all the year round, as hostages of their sidelity.

Some of these smaller districts are imperial demcsne, or crown lands, either, because they have been appropriated of old for the support of the crown, or because in success of time, as occasion offered, they were taken from their hereditary possessor by way of punishment, and annexed thereunto, it having been always one of the chief political maxims followed by the Emperors of Japan, to maintain themselves in peaceable possession of the throne, by splitting large dominions into several small ones, and by endeavouring, by all possible means, to weaken the power and authority of the Princes of the empire. The largest of these crown lands are governed by what they call, bugios, acting in the nature of lieutenants, the smaller ones by daiquans, as they are called, or stewards. All the revenues must be brought into the Emperor's exchequer.

CHAP. III. - The Author's Opinion of the true Origin and Descent of the Japanese.

IT hath been the constant opinion of most European geographers, that the Japanese are originally of Chinese extraction, descended from the inhabitants of that mighty empire. This opinion is grounded upon the following two stories, which were brought

out of the East by European travellers. The first is: It once happened in Chila that leveral families conspired against the Emperor. Upon discovery of the plot, it was ordered, that all those who had any hand in it, should be put to death without mercy. But the number of accomplices being so extensive, that at last the executioners themfelves grew weary of shedding so much blood; the air ir was ag un laid before the Emperor, who the eupon relolved, that their femence of death should be converted into transportation and banishment into the neighbouring, then rude and unineabited, islands of J. pan, which they peopled, and thereby became the progenitors of that numerous and powerful nation they are now inhibited by. The second story hath been reported as follow: One of the Engerors of China unwilling to part with his empire, and all that grandour and power he was possessed of, within the short term human life is limited to, end avoured to find out, if possible, some universal medicine, which could make him immortal; on this account, he fent expert and able men into all parts of the world. Amount the rest, one of his chief physicians perfuaded him, that the proper ingredients for luch a medicine were, to his knowledge, to be met with in the neighbouring islands of Japan; but that they were of fo tender and fingular a structure, that they would wither, and lole their virtues, if touched by any other but chaste and pure hands. And, the better to execute this defign, he proposed that three hundred young men, and to many young women, all of a strong and healthful constitution, should be carried over thither, which accordingly he did himself, though far from having any real intention to fatisfy his Sovereign, but rather out of a defire to escape his tyranny, to settle in happier climes, and to people these then uninhabited islands. As to the first of these two stories, Linschoot is the author of it; but he not acquaining his reader, what authority he had for it, or how he came by it, and there being not the least mention made, neither in Chinese nor Japanese histories, of any such conspiracy, it deserves no credit, but ought to be entirely rejected as forged and fabulous. But as to the fecond, the coming over of a Chinese physician, with so many young men and young women, the fame is not at all denied by the Japanese; may, far from it, they still shew a place upon Khurnano, (so they call the southern coasts of the provinces,) Kijnokuni, and some neighbouring provinces, where he landed and afterwards fettled with his gallant colony; and the remains of a temple, which was there erceted to his memory, for having brought over to them from China good manners, and useful arts and sciences. As to the occasion of his coming over, it is recorded in Japanese histories, that there was great search made after an universal medicine, during the reign of the Emperor Si, or Sikwo, or, as the vulgar pronounce it, Sino Sawo. This Emperor was one of the three Chinese Neros, Sinosko, Ketzuwo, and Tnuwo, whose memory will be for ever abhorred. He not only governed his empire with unparalleled tyramny, but lived with the greatest pride, and most profuse magnificence imaginable, of which there are several remarkable inflances mentioned in the history of his life. He caused once a large spot of ground to be dug up for a lake, and having ordered it to be filled with Chinese beer, he failed over it in stately barges. He caused a stately palace, named Kojaku, to be built for his refidence, the floors whereof were paved with gold and filver, and the whole building of fuch an extent, that the Emperor Kooll, who usurped the throne upon his grandson, whom he put to death, with all the Imperial family, having set it on fire, it burnt in the ashes for the space of three months; which memorable event gave birth to a proverb, whereby the Japanele express the fudden changes, and short duration, human grandeur and happiness are liable to. It was this Emperor who, out of a strong desire for ever to enjoy the empire, ordered that great search should be made after a medicine, which could render him immortal. If it be therefore under his reign, reign, the above faid physician went over into Jupan viel, the long, it must be granted to the Japanese, that they came by much took it to be the property of the interior, which was then already governed by Kosen, the reign of ment in the feventh year of the right of action, they is done in the feventh year of the right of action, they is done in must first I mperor of Japan, and 200 before the lith of our town in the right was are by no means a sufficient proof, that the Japaneses ation is the results of the right of t

probable origin.

It is unquestionably true, that languages, and their rapidities of the record tain marks, as perhaps it is possible to produce, whereby to a contract the contract of a nation, but likewise to find out to the produce it increased, by being, as it were, incorporated with other in as. On a recommendation rations afford us evident proofs. Thus, for instance, which each factority is that the Italians, French and Sp nierd, descend from the concans; and the C. was Low Dutch, Danes, and Swedes, are the offspring on the wicht Gods. 'Ho, in a go still further, and affert, that the larguages along of taxons nations, and affert, that the larguages along of taxons nations, and affert, confiderations thereupon, will qualify and enable us to form probable competures, what revolutions happened among them, whether, and what neighbouring nations they were conquered by, as also, whether, and how from time to time they increased by fresh fupplies and colonies from to eigh parts: for it may be laid down as a conftant rule, that in proportion to the number of ilrangers who come to fettle and live in a country, words of the tongue spoke by then will be brought into the lauguage of that contary, and by degrees, as it ware, naturalized, and become fo familiar to the natives, as if they had been of their own growth. The number of German, French, and Danish words, in the Englin language, doth it not coidently prove, that England was fucceffively conquered by the I and, Love Saxors and French. Not even the Latin tongue was able to preferve its punty, but Greek words were freely, and in great number, adopted into it, aft the Romas became maker of that country, then the feat of learning and politing is. The language now spoke in Transilvania hath a considerable mixture both cash Latin and neighbouring Hungarian. The language of the inhabitants of Somegallia, (a finall country near Kuffia,) is composed of the Lettish, Sclavonian and Latin. The fact conferration holds true in other parts of the world, as well as in Europe. John d. Barris in his Decades and Flaccourt in his History of Madagascar, assure us that the language spoke by the inhabitants of that large African island, is full of Javan and Malagan words, as remaining proofs of the trade and commerce which these two nations, about two thousand years ago the richest and most powerful of Asia, had carried on with Madagascar, where they settled in great numbers. The language spoke in the peninsula Crimea, or Taurica Chersonesus, in Asia, still retains many German words, brought thither, as is supposed, by a colony of Goths, who went to settle there about eight hundred and fifty years after the deluge. The late Mr. Busbeq, who had been imperial ambassador at the Ottoman Porte, collected and published a great number of these words in his fourth letter; and in my own travels through that country I took notice of many more. If we were better acquainted with the languages of the Javans, Ccylonese, Malabarians, Siamites, and other Indian nations, they would doubtless enable us to trace out their origin, mixture with their neighbours, and the revolutions that happened among them. But to apply what hath been faid nearer to our purpole, I may venture to affirm, that if the Japanese language was to be thoroughly, and most

most rigorously examined into, we would find it entirely one, and free from all mixture with the languages of their reighbours, at least to fuch a degree, as would give room to conjecture an original discent from them. By their neighbours I mean chiefly the Chinese, who inhabit the caltern maritime provinces of that empire, and carry on a commerce to Japan. They speak three different high ger, according to the three chief provinces they belong to, which are Navley, In ktsju, and I'clusju. Now a native of Japan doth not understand one word of either or these languages, excepting the names of a few things which were brought by the Chinese into Jopen along with the things themselves, and which conclude no more for an original deteent of the Japanese from China than some sew Portugueze words, as pun, I ilma, bolan, cappa, fraico, bidou, tante, and a new more, still lest there, would be allowed a sufficient proof, of the Japanese b ing originally descended from the Fortugues. Nor was the number of Chin le, who came from time to time to feetle in Jepan, ever considerable enough to occasion any remarkable alteration in the mother-ton, ie of the Japanese, though they could and actually did communicate and introduce among them the arts and sciences, which had long b fore flourished in China, may even the knowledge of the learned and fignificant character-language of that country, which is likewife received in Coron, Tunquin, and other neighbouring kingdoms, much after the same manner as the Latin is in most European countries. But besides, there are two other essential proprieties of a language, I mean the confluction and pronunciation, in the Japanefe language so entirely different from that of the Chinese, that there is no room lest to think that these two na ions gave birth to each other. And first as to the construction and way of writing, the Chinese set their characters one below another in a row, without any intermediate particles to connect them: the Japanese inde... do the same; but the genius of their language requires befiles, that the words and characters should be fometimes transposed, fometimes joined together by other words and particles, particularly invented for this purpose, and which are so absolutely necessary, that even in reprinting the books of the Chinese, they must be added, to enable their people to read and to understand them. And as to the pronunciation, that also is vastly different in both larguages, whether we confider it in general, or with regard to particular letters, and this difference is so remarkable, that it seems the very instruments of voice arc differently formed in the Japanese, than they are in the Chinese. The pronunciation of the Japanese language, in general, is pure, articulate and distinct, there being seldom more than two or three letters (according to our alphabet) combined together in one fyllable; that of the Chinese on the contrary, is nothing but a confused noise of many confonants pronounced with a fort of a finging accent, very difagreeable to the ear. The same difference appears with regard to particular letters. Thus, the Chinese pronounce our letter H. very distinctly, but the Japanese can give it no other found, but that of an F. Again, the Japanele pronounce the letters R and D, very distinctly, of which the Chinese, particularly those of Nanking, always make an L, even such as are otherwise well skilled in the European languages. I could give several other instances of this kind, and further shew, that, what hath been observed of the difference between the Chinese and Japanese languages, holds equally true with regard to the languages spoken in Corea and Jedso, compared with that of the natives of Japan; but it is needless to give the reader, and myself, so much trouble, the rather, since nobody ever pretended to draw the original descent of the Japanese from either of these two nations.

Another argument against the descent of the Japanese from the Chinese, I could draw from the difference of the religion of both nations. If the Japanese were a colony of the Chinese, they would have doubtless brought over from thence, into the uninhabited

habited iffinds of Japan, the religion and worship of their ancestors, and propagated the fame upon their posterity. But this appears quite otherwise. The old, and probably, orginal religion of the Japanese, which is by them called Si nos, and the gods and idols, worthipped by its adherents, Sin, and Came, is poul arody to this errore. nor hath it ever been admitted of, nor their gods acknowledged and willipped, nor the religious way of life of the Japanese followed by the Chincle, or indeed any other heathen nation. It was besides the only one established in Japan during a succession of many ages. For the foreign pagan doctrine of Stake, which the Japanele now call Bupo, or Budsdo, and the gods, which it commands to worship, Buds and Fotoge. though ever fince its early beginnings it met with uncommon fuerals, and speedity spread over the best part of Asia, yet it was not introduced into Japan till flaty-fix years after our Saviour's nativity, under the reign of the Emperor Symin, when it was brought over from Corea. And although afterwards, through the considered of the Japanese monarchs, it was fuccefsfully propagated by feveral run ionaries, who came over from China, and the neighbouring kingdoms, and speedily toread all over the curp're, yet it never could prevail fo far, as to banish the respect and veneration for the old religion of their ancestors out of the minds of a constant and sedtest nation. On the contrary, the more the Bupo doctrine got ground, the more pairs were taken for the prefervation of the Sintos worship, by embellishing the same with new gods, temples, festivals and fables.

What hath been inferred from the difference of religion against the original descent of the Japanese from China, could be surther supported by the wide difference there is between the characters anciently used by both nations, I mean the gross and rude common characters, as they call them, of the Japanese, and the simple and plain images of the Chinese. But this being an argument of less moment, I will not inside upon it, and only mention in a few words two other remarkable differences.

And first I could plainly show that the Japanese greatly distor from the Chincse, in their civil customs and way of life, as to eating, drinking, sleeping, dressing, shaving of the head, saluting, sitting, and many more. Secondly, the very inclinations of the mind are remarkably different in both nations. The Chincse are peaceable, modest, great lovers of a sedate, speculative, and philosophical way of life, but withal very much given to fraud and usury. The Japanese on the contrary are wallike, inclined to rebellions and a chilolate life, mistrustful, ambitious, and always bent on high designs.

By what hath been hitherto observed, it appears plainly, that the Japani se are an original nation, at least that they are not descended of the Chinese. The difficulty now remaining to be cleared up, is, how, and from what parts of the world, to trace out their true original descent. In order to this we must go up higher, and perhaps it is not inconfistent with reason and the nature of things, to affert, that they are descended of the first inhabitants of Babylon, and that the Japanese language is one of those, which facred writs mention, that the all-wife providence hath thought fit, by way of punishment and confusion, to infuse into the minds of the vain builders of the Babylonian tower. This at least seems to be the most probable conjecture, whatever way they went into Japan, or whatever time they spent upon this their first peregrination. Nay, considering the purity of the Japanese language, I may pursue my conjectures, and further assiring, that they cannot have spent much time on their first journey to Jopan, for asmuch as we cannot suppose, that they made any considerable stay in any one country, or with any one people then existing, without granting at the same time, that in all probability they would have adopted some words of the language of that nation into their own, of which yet it would be found upon examination to be entirely free, contrary to what

we find in all European and mo't Eastern languages, known to us, which seem to have been from their very beginning to thoroughly mixed and confounded, that there is scarce any but what hath some words of another though never so remote. If then four Japanicle colory did reach that part of the world, which divine Providence affigued for their future about, as foon as the Chinele, Tunquinele, and other neighbouring nations did theirs, it must be supposed that they fortunately fell in with such a road. as could with falety and speed bring them to the eastern extremities of Asia, from whence there is but a fhort passing over to Japan. In order therefore to trace out what road it is probable they took, we must consider the first Babylonians in the condition they were in, after that dreadful confusion of languages, wholly disappointed from going on with their vain defign, and brought to the fatal necessity to part with each other, and to be dispersed all over the world. And in order to this let us suppose, first, That among the different parties there arose in all likelihood a strong emulation to chuse for their suture abode such countries as were not only fruitful and delightful, but thought to be less exposed to the involution of other parties, either because of their commedious fituation towards the fea, or between large rivers, and high mountains, or by reason of their great distance. And in this regard it is highly probable, that such countries, as were very remote, but fituate under a temperate climate, became not the last inhibited. This seems to be the case of the empire of Japan, whose remoteness, as well as its fruitfulness, and pleasant situation, between 30 and 40 degrees of northern latitude, could fully unfwer all the expectations of a first colony. But, secondly, let us suppose, that the chief care of these first colonies, in their search for a country fit for their habitation, must needs have been to follow such roads, and tracts of land, where in the mean time, they could be provided with the necessaries of life. This intention could feared be answered more effectually than by travelling, either along the sea-coasts, or, and with more probability, along great rivers and lakes, where they could be supplied with fish for their own nourishment, with sweet water to quench their thirs, and where they were like to meet with good pasture ground for their cattle, till at last they alighted at a country, where they thought they could fettle with fafety and convenience.

If, therefore, the dreadful confusion of tongues at Babylon, brought its inhabitants, as indeed it must have done, to an indispensable necessity to part one with another, and to be difperfed all over the world, fuch parties as fpoke the fame language, keeping together, and fettling in what country they best liked, we may take it for granted, that not a few went towards the neighbouring Black and Caspian Seas, and that by this means the country of Hircania, which is situate between the Caucasus and Caspian shores, as the best and most delightful spot of Persia, became first inhabited, as did soon after the neighbouring fruitful countries, fituate between the Black and Caspian Seas. Such as intended, or thought it expedient, to pursue their journey further, met here with two different ways, one up the rivers Tanais and Wolga to the north, the other along the castern shores of the Caspian Sea into Asia. It is foreign to my present purpose to shew what became of the former. And as to those that went along the eastern Caspian coasts, they must have at least reached to the mouth of the great river Oxus, or Dfiehuun, where it discharges itself into the Caspian Sea, and if we suppose that they followed that river up to its fource, it was then no very difficult matter for them to penetrate into the very midst of India, where they must have soon met with the source of the rivers Indus and Ganges, and going down the different branches of it, got into Indostan, Bengala, Pegu, Siam, and other neighbouring kingdoms, much easier and fafer, than if they had been obliged to travel over the barren, and still uninhabited Maharounian mountains, or to cross the large desarts of Siftuun and Saablestuun. VOL. VII. ,4 R

Even to this day, travellers going from Ispahen to Candahar chuse rather to go through Messhed, a journey of 375 miles, than to take the shortest road, which is but 250 miles. across these wild and dangerous desarts. But to return to the Calpi in Sca, before I carry off our Japanele Colony from thence on their journey to Japan, I mult beg leave to make a fhort digreffion in favour of a famous and valiant nation of the Turks, or Turcomans and Uibels, as they are now called, which fettled upon its eaftern and north-eastern coasts. Turk signifies a shepherd, and Turkestaan, a shepherd's country. Juspeek is as much as to fay, hundred lord, which secons to imply, that the country of Usbeck was once governed by so many Princes. But nations have the same language, the fame religion, the same manners and customs, and must therefore be looked upon as originally one, on which we may diervedly beflow the glorious epithets of being a mother of many nations, a nurse of illustrious heroes, and a stem of mighty monarchs They foread from the north-eastern coasts at the Caspian Sea, between 40 and 50 degrees of northern latitude, as far as the bodiers of Kitaija. Their way of life answered to their name; for during many centuries they haved together in hordes, and small common-wealths, wandering from place to place with their cattle, wherein their chief riches confifted. Of these Turks, or Turcomans, are descended the Dagestaan and Nagajan Tertars, the Tartarian inhabitants of the kingdom of Caian, the Boscarian Tartais, the inhabitants of the province of Mogestan in Persia, and some other Tartars, which dwell in that kingdom under tents. The Kifilbacs, or noblemen, and great families in Persa, value themselves mightily upon their being of Turcoman extraction. There are likewife defeended of them the Crim Tartars, which live between the Dniper and Danabe, upon the coasts of the Black Sca, as also those Tartars, whom the great conqueror Sinchitcham (a Prince, who well deferved a Plutarch, or Quintus Curtius, to write the history of his life, conquests and heroic actions) sent out upon an expedition into Poland, and who, not meeting with all the expected fuccess, chose rather to flay, and to people the then as yet uninhabited Pontus, than to return without honour and victory. I must filently pais over many other branches of the fame race, which fell by degrees under the dominion of some neighbouring, chiefly northern, nations with whom they were in fuccess of time so thoroughly mixed and incorporated, that even the very footsteps of their original descent would have been lost, were it not for fome few remains of their former language. I will only add, that the famou Timerian was an Usbekian Scythe, and that the Ottoman Emperor, the great Mozul, and the King of Sopra, are all of Turcoman extraction. Thus much of the Turks and Ufb.cks. In order now to come nearer to our purpose, I will avoid fpeaking of those companies, which went along the river Inike, or from the source of the river Obij down the same towards the Tartarian Ocean, and became the first progenitors of the Tartarian nations living in those parts. Nor will I pretend at present to determine, what way the Chinese colony took in their journey to China. It is only six mouths travelling from the coasts of the Caspian Sea to the borders of China. Jagen Andasen in his voyage to China in 1647, did not stay longer. Two Tartarian merchants, whom I converfed with at Astracan, and who had been several times in China, gave me the following account of their journey thither. They went from Astracan over the Caspian Sea, (which they took to be 200 miles long, and 150 broad), to Serathijk, in 15 days, from thence by land to Urgentz, the residence of an Usbelkian Prince, in 5 days, from thence to Bochau in 15 days, travelling through a wild large defart: from Bochau there are two different ways, whereof travellers may chuse which they please. The one going over Chasger was then infested with rovers, so they took to the other, which across a well inhabited country brought them to Taaskend in 14 days, thence to Oxiend in 7 days, thence to Kaasker the capital of Turkistaan, and the chief town between Buchara and Katai, in [this number was omitted in the cilicinal] days, thence to Tfutfijk the first frontier town of Kattai in 30 days, thence to Hamifisk in 5 days, thence to the great wall of Kattai, Chatai, or China, in 60 days, travelling through a well inhabited country, and lastly from the great well to Cambalu, or Peking, the capital of China, and refidence of the Chinese Emperor, in 10 days, completing the whole journey within fix months time. A Cal nuclear an result of the retinue of a Calmuckian Prince's ambassador to the King of Pecsia, whom a ruce at Ispahan, where he offered me for sale the root taichuan, int is great yeller root, or rhubarb, which he had brought himself out of China, gave me the journal of his voyage from Mienkisilaag to the great wall of China, thus. He went from Wien isleeg to Dilem in 20 days, from thence to Gilgaas, where they cross a large river, a 17 days, from thence to Torkai in a few days, thence to Milaudij in 10 days, thence to Toktan in 10 days, thence to Thenrehhu in 5 days, thence to The in 10 days, thence to Kalah in 4 days, thence to Balane in 6 days, thence to Karbok itai in 10 days, thence to the great wall of China in 9 days, travelling through a defart and uninhabited country, where he met only a few Tartarian shepherds dwelling under black tents. Michlishag fignifies, in the country language, hundred winter-quarters, or resting places. It is an island situate on the eastern coasts of the Caspian Sea, near 45 degrees of northern latitude, and the refidence of Ajukeh, the Prince of the Calmuckian Tartars living in those parts, who expelled the Turks, or Turcomans, out of their country, and forced them to depart even from the Caspian shores. After all I think it no ways probable, that the first Chinese went into China through such desart and barren countries, where travellers are oftentimes necessitated to carry the necessary provisions of water and victuals along with them. I am more inclined to believe, that their journey was more to the fouth, and perhaps along the north fide of the Imaasian mountains, where the country is very fruitful, with rich pastures, and plenty of sweet water, and fish, and other necessaries of life, and where they were like to meet either the source, or else some of the branches, of the large river Croceus, which could conveniently and fafely bring them into the very heart of China.

But now, at last, it is high time to make a step backwards, and to fetch the first Japanese colony from the Caspian shores, where we left them above, on their journey to Japan. If we suppose, that for some time they travelled along the east, and northeastern coasts of the Caspian Sea, till they came to the island Mienkisslaag, and that thence they followed up some of the rivers, which there discharge themselves into the faid fea, we will find, that by this means they got into a large and fruitful country, extending itself far eastwards, and very proper, by reason of its happy situation and great fertility, for the leifurely and eafily pursuing of their journey. Confidering this it will not appear improbable further to suppose, that having once met with so good and pleasant a country, where there was no want of provision for them and their cattle, they refolved to keep to it, avoiding to enter the hot, defart, and barren provinces, now inhabited by the Turkesteaans, on one, or on the other side to go down the rivers Istifi, Jenesi, Silinga, and others, which arise thereabouts, and would have brought them to the less agreeable and cold northern countries. Thus, moving on infensibly castward, they perhaps discovered in time the lake of Arguun, whence arises a large river of that name, and continuing their journey along the faid river, for very near an hundred German miles, they must have necessarily met there another much more confiderable river, called Amuur, which runs E. S. E. and could, in a journey of about 200 German miles, bring them to the eastern coasts of Asia into the theu uninhabited peninfula Corea, where the faid river loses itself to the eastern ocean. haps hops also, if our travellers went down the river Jends, for about 150 Cerr at rules, to 55 degrees of northern latitude, they nugia have there discovered a ruch trace commodious and pleasant way to the liver Amuar, which hath been of late very advantageously followed by the Medicivites in their journeys to China. But is to the whole plan of this journey I must refer the reader to the accurate and excellent map of Russa, and the great Tartary, which the tate in abious Nicholaus Wiezen, Lie D. I arghermafter at Amsterdam, and for each the Sacs Ambastador to the Russian court, put shed in 1687 and thereby so have of light the curious, that he justly deserves the honours due to discoverers of unkness a worlds. This may was ancient at corrected in some places, and abridged by Mil through Yees, who provided it to the recount he

In a ted to the world of his journey through Tartary into Clana.

Having error brought our Japanele colony as far as the resilier at Cores, it will be no circult matter, confidering the near less of Kindle, the further oil province, lying weatheards on the comment of the great island Nipon, to be no their over in ther, and this the rather, because of the several islands which lie between Conca and Nagatto, in an alm of continued row, particularly the two larger ones. Iki and Mathera: for it is but reasonable to suppose, that a colony, which had counge enough to venture so far upon their first peregrination, and which had been often recess ated not only to have recourse to takes and rivers, but frequently to cross the time, had natural curiofity enough left, in still and fair weather, to go out in canous or be its, such as then probably they made use of, upon discovery of the state and extent of the Corean Sea and the neighbouring illands; and that having by this means di'covered the continent of Nipon, they refolved to go over thicker, which they neight eafily do, even in ordinary fifting. boats, and to choose that country for their suture abod. Now, if any body knows how to bring them hither through the Eaftern Tertary and the country of Jebs. (which way perhaps the American colonies went), facer and speedler, Language willing to fubmit. Means hile I do not this k is probable, that our Japanese colour made any confiderable ft y upon these we seen coalls of larger. Their innate curiosity and travelling humour and pullage also the tear or being I slowed and diffurbed by other parties, multicads have jumped them to travel as the court with the come to its fouthern expendences, and rardeal rivilito the province lajo, which by reason of its fraitfulness. good air, and removening from the western coast Tolly answered all the expectations of a secure and pleasant abode. I am the more inclined to believe, that they first settled in this province, since their posterity still look up n it as the place where their ances. tors dwelled, and as such honour it with frequent pilkimages and other acts of devotion. Thus far my conjectures, for as fuch only I deliver them, concerning the true criginal descent of the Japanese nation.

Before I put an end to this chapter, it will not be amiss to say something of the increase of this first Japanese colony, after they had once taken the resolution to stay, and to people the country, where doubtless for several ages, before any considerable improvements were made in agriculture, and other arts and sciences, they led a simple and indigent life, living on their cattle, on what the earth produced of plants, roots, and fruits, and the sea afforded of sish and crabs. It was unquestionably and chiefly owing to themselves, that in process of time they became so numerous and powerful a nation, and the present inhabitants of Japan must be looked upon in general, as descendants of those, who, after the confusion of languages at Babel, came over and settled in these islands. But on the other hand it cannot be denied, but that from time to time new colonies were sent over thither, chiefly from China and Corea, and perhaps also from some other neighbouring countries. The Japanese themselves make frequent

mention in their histories of learned Chinese, who brought over into Japan their books, and the knowledge of useful arts and sciences, though not till the latter ages, when the Japanese monarchy was already become a powerful empire. And indeed since so few foreign words have been brought into the Japanese language, that it is hardly visible, that there hath been any alteration at all made in it, and since the religion and old customs subsist till now, it appears plainly, that whatever foreign colonies did from time to time voluntarily, or by chance, come over into Japan, their number must have been

very inconfiderable with regard to the bulk of the Japanese nation.

Confidering further, that the islands of Japan are encompassed with a dangerous and flormy fea, it is highly probable, that from time to time ships coming from foreign countries stranded upon the Japanese coasts, and that, if any of the ship's company were fortunate enough to fave their lives, they chose rather to stay in Japan, and to settle among the natives, than to trust themselves again to the mercy of the sea, and to run the hazard of a perilous return into their own country. Though navigation by this time be highly improved, yet the like accidents still happen very frequently, and there is hardly a year but some ships are forced upon the coasts of Japan, coming sometimes from countries either to remote, or fo entirely unknown, that scarce any conjectures can be made about them, neither by the shape, nor the language and customs of the Several remarkable instances of such accidents are recorded in Thip's company. Japanese historics. The Japanese having some conturies ago accidentally discovered the island Genkaisima, situate to the north of Japan, found it inhabited, as their histories relate, by Ori, that is, black devils, which they profecuted with war, and having purged the island from this vermin, as they call it, they peopled it with a colony of their own. It is highly probable, that these blacks had been forced upon the coasts of this (then uninhabited) island in a storm. It is further observed in the history of this war, that they wore long hairs spread over their shoulders, and that they had a strange fort of household goods, as among the rest high European hats. As to the Japanese calling them devils, we need not in the least wonder at it, confidering either their black colour, or the natural pride of the Japanese nation, which so far despites all other countries, as to call them Umakokf, that is, the countries of devils. Otherwife, what countrymen these blacks had been, is not very difficult to conjecture, by their wearing long hair, by their furniture, and some other circumstances; and I don't believe to impose upon any body, if I affert that they have been Malagans. It is well known, that the Malagans to this day are extremely fond of their own hair, and delighted with wearing it of a confidenble length, beyond any other of the black nations of Afia. Belides, they had in lower times by much the greatest trade in the Indies, and frequented with their merchant hips, not only all the coasts of Asia, but ventured over even to the coasts of Africa, paracularly to the great island of Madagascar. The title, which the King of the Malagans assumed to himself, of Lord of the winds and seas to the cast and to the west, is an evident proof of this, but much more the Malagan language, which spread most all over the east, much after the same manner, as formerly the Latin, and of late the French, did all over Europe. The high hats, which were found among the household-goods of these blacks, must have been brought out of Europe, they having never been labricated any where else. It was an ancient custom of most eastern Princes (which fubfifts till now in the kingdoms of Cambodia, Siam, Pegu, and some others) to present their prime ministers of state, and chief favourites with such hats, as tokens of their particular favour, and they alone had the privilege of wearing them, as fingular badges of honour. They were formerly brought out of Europe by land to Ormus, and from thence exported all over the east by the Malagans, Armenians, and other trading

trading nations; but after the Portugueze had discovered a new way to the Indies. round the Cape of Good Hope, they exported them from Europe (where they are now out of fashion) directly by sea. Now, whether there was not among these black inhabitants of Genkaisima, some great man, who received these hats from his Prince, or whether they fell by some other accident into their hands, is not material to enquire. There is also mention made in Japanese histories of black inhabitants, who were found in fome of the islands lying to the fouth of Japan, and who in all probability must have been, either Malagan reachauts, or elfe inhabitants of some of the Molucca islands, who having been forced thiller in a florm, and finding them uninhabited, refolved to itay and to people them. Not long before my arrival, and during my stay in Japan. feveral ships stranded upon the coalts coming from remote and unknown countries. In this case all the ship's company, as well those that remain alive, as the bodies of such as are drowned, when thrown on shore, and all the ship's tackle, and the boat, if any, must be brought up to Nagasaki, as the place appointed for a general inquiry into ma-The governors of this place examine into all the most minute circumflances of the unhappy accident, with that ware and jealous circumipection, which is peculiar only to this nation, and in order to discover, if possible, what country the ship came from, and what language those that saved their lives speak, this examination is formalimes made in preferace of the Dutch refident, who did me the favour, upon thefe occasions, to carry me along with him. It is a duty incumbent on every Prince of the empire, to take care, in case any ships strand upon the coasts of his province, that they be fell up, as aforefaid, to Nagafaki, which is commonly, out of respect for the Emperor, done with great expence. Not long ago a jonk coming from Manilhas, on board which we're some Topassians, a fort of black Christians, was wrecked upon the coasts Most of the ship's company were drowned, some died on shore, and only three were brought up alive to Nagalaki, the last of whom died there in prison, after 'taving taken force physic, ordered him by a Japanese physician. Of another ship, which stranded upon the same coasts, only three black failors were saved, which could not pronounce one diffinct word, besides that of tobacco; after having lain for sometime in prison, they were delivered to us, to be transported on board our ships. Another ship was brought to Nagasaki, which had been forced upon the northern coasts of Japan, without any body on board. The odd uncommon structure of this veffel, and the remains of three Chinese characters upon the stern, made the Japanese conjecture, that it came from the extremities of Jefo. Not long ago another ship perished upon the coasts of the island Riuku, and only two of the company were saved, which were brought first to Satzuma, and from thence to Nagasaki, with a convoy of eight barges, which must have put the Prince of Satzuma at the expence of some thoufand rixdollars. They were well shaped comely persons, and had their heads shaved much after the manner of the Polanders, no beards, and three holes in each ear. They shewed by their decent and civil behaviour, and free, but modest, appearance, a tolerable education, and a good clear understanding, by endeavouring to give the Japanese some notions of the number, fituation and largeness of the islands, from whence they came, which they did by putting stones of disferent sizes upon a table, calling each by its name; among the rest, that island, where they lived themselves, was by them called We had reason to apprehend, that the good understanding and quick apprehension they shewed, when under examination, would be the occasion of their imprisonment for life at Nangasaki. If we believe the Japanese, there is another unknown nation, and very different from theirs, as to their customs, shape and language, which inhabits the island Kubitesima, one of the most northern islands belonging to Japan.

They describe them as Pygnies, and from thence call the whole island the Pygmy Island. What extraction they be of, and how they came to inhabit this island, I will leave to themselves to determine. I will only add on this head, that the first European ship which came into Japan, was a Portugueze merchant-snip, forced thither acciden-

tally in a storm.

Upon the whole, the wide difference which is still observed between the Japanese inhabitants of feve al provinces, as to their shape, seems to argue strongly, that from time to time, different and new branches were grafted into the original tree of this nation. For although the Japanese in the main, particularly the common people of Nipon, be of very ugly appearance, short-fized, strong, thick-legged, tawny, with flattish noses, and thick eye-lids, (though the eyes stand not so deep in the forehead as in the Chinese,) yet the descendants of the eldest and noblest families, of the Princes and lords of the empire, have fomewhat more majestic in their shape and countenance. being more like the Europeans. The inhabitants of the provinces Satzuma, Oosiimi, and Fiuga, are of a middle fize, strong, courageous, and manly, otherwise civil and The same is observed of the inhabitants of some of the northern provinces in the great island Nipon, excepting those of the great province Osju, who are faid to be beyond others cruel and unmerciful. The inhabitants of some provinces of Saikokf, particularly of Fisen, are short, slender, but well shaped, of a good handsome appearance, and extremely polite. The inhabitants of the great island Nipon, particularly of its eaftern provinces, are known from others by their big heads, flat nofes, and mufculous fleshy complexion.

Now, to close this chapter, and to sum up in a few words what hath been therein largely dwelt on; it appears, that in the first ages of the world, not long after the deluge, when the confusion of languages at Babel obliged the Babylonians to drop their defign of building a tower of uncommon height, and occasioned their being dispersed all over the world, when the Greeks, Goths, and Sclavonians departed for Europe, others for Asia and Africa, others for America, that then the Japanese also set out on their journey: that in all probability, after many years travelling, and many incommodities endured, they alighted at this remote part of the world; that, being well pleased with its situation and fruitfulness, they resolved to chuse it for the place of their abode; that in all likelihood they spent many centuries in a polyarchical way of life, fuch as is led to this day by the Tartars, living in hordes, and wandering with their cattle and families up and down the country; that being infenfibly, and by degrees, grown to be a numerous and powerful nation, they thought it expedient for the good of the country, and for their own fafety, to deliver up the government into the hands of one Prince, and chuse for their first monarch the valiant Dsn Mu Ten Oo; that confequently they are an original nation, no ways indebted to the Chinese for their descent and existence, and that, though they received from them several useful arts and sciences, as the Latins did from the Greeks, yet they were never made subject, and conquered, neither by them, nor by any other neighbouring nation.

CHAP. IV. — Of the Origin of the Japanese, according to their own fabulous Opinion.

THE Japanese fancy themselves highly affronted by the endeavours of some, who busy themselves to draw the original descent of their nation from the Chinese, or others of their neighbours. They pretend, that they arose within the compass of their own empire, though not out of the earth, like mice and worms, as the proud Athenians, for that

that same teason, were upbraided with by that cource Diogenes. They claim a birth much higher and nobler, and effects themselves not is him efficiency of the very actions, whom otherwife they do not look upon a council in the point of the chaos, out of which all through wre not in the chaos, out of which all through wre not in the chaos, out of which all through wre not in the chaos, out of which all through wre not in the chaos, out of which is invisible power. They have two did any the chaos of the confidences, who is in the confidence of the confidences, who is in the confidence of the confidences, who is in the confidence of the co much higher and nobler, and effects themselves no it's him effective of the reces infert the names of these two successions or dir than cut is like own ranings. The names of the first succession are possely metapic scal, and the man, he may timed of it in their historical books, for there is no acce as is a sit of the coand actions, nor of their government. They succeeded a sit of the coand actions, and actions, nor of their government.

Ten d Sin Sitzi Dai, that is, the succession of the seven given in that is a

- 1. Kuni toko dat sij no Mkutto.
- 2. Kuni Sa su Tsi no Mikotto.
- 3. To o Kun Nan no Mikotto.

These three gods had no wives; but the four following of the same successors are married, and begot each his fuccessor by his wite, though in a main of ar b yould the reach of human understanding. These were,

- 4. Utfil Nino Mikotto, and his wife, Sufitfi Nino Mikotto.
- 5. Oc Tono Tsino Mikotto, - Oo Toma te no M kote.
 6. Oo mo Tarno Wikotto, - Oo si Wote no Mikotto.
- Isanami no Mikotto. 7. Ifanagi no Mikotto,

Thek feven gods are by them represented as beings purely spiritual, and the historical of their lives and governments as dreams. The real existence of such a time, when fuch spiritual beings governed the Japanese world, is what they religiously believe, though, at the same time they ov n, that it is far above their understanding to conclive how it happened, and entirely out of their power to determine how long their government lasted.

The last of the first succession, Isanagi Mikotto, and his wife Isanami Mikotto, are held in peculiar veneration by the Japanese, as being the progenitors of the second succession of god-men, of whom issued the third race of the now existing inhabitants of Nipon. (Mikotto is an epithet peculiar only to the first succession of spiritual gods, and signifies the incomprehensible bliss and happiness of these first monarchs of Japan: fornetimes, however, they will bestow it on such of the inferior gods, for whom they have a peculiar veneration.) Those of the Japanese who turned Christians, called them their Adam and Eve. They are said to have lived in the province Isje, though it is not known in what particular part of that province they were born, lived, or died. They observe only, that this preadamitical Adam, (if I may have the leave thus to call him), was the first, who, taught by the example of the bird sekire, or according to the vulgar, Isitataki, lay with his wife in a carnal manner, and begot by her fons and daughters of nature excellent indeed, and far superior to ours, but greatly below that of the divine

beings, of which they sprung. I anami's first-born son, and the first of the second succession of god-men, is supposed by the very law of pumogeniture to have been entitled to a superiority over his brothers and sisters, upon which, and a lineal descent from him, is grounded the right the Dairis, or Ecclesastical Hereditary Emperor's eldest sons, claim to the crown of Japan, upon their father's demise. The second succession is called Dsi Sin Go Dai; that is, the "succession of five terrestrial gods or god-men;" who are

- 1. Tenfio Dai Dfin, in the larguage of the learned, and Ama Teru Oon Garri, in that of the vulgar. The characters whereby this name is expressed signify, "a great spirit streaming out celestial rays" He is the first-born fon of Isangi, and the only one that left children behind him. For it was his posterity, creatures not of a mean extraction, but of an excellent and almost divine nature, who inhabited the country for many millions of years, till they begot the third race of its present short living inhabirants. All the Japanele, without exception, look upon themselves as immediate descendants of Tensio Dai Dsin; because they say, that all his younger brothers left the world without iffue. But particularly the Ecclefiastical Hereditary Emperor grounds his right to the empire, (which is of late gone over into fecular hands, he himfelf having preserved nothing but his title, and a shadow of his former power and grandeur,) upon a lineal deicent from Tenfio Dai Dfin's first-born fon, and so down. Tenfio Dai Dfin committed not only during his reign many noble and heroic actions, but even after he left this world, as is recorded in Japanese histories, he sufficiently proved by many miracles, and manifested himself to be the most powerful of all the Gods of the country, the very life, foul, light, and supreme Monarch of nature. For this reason, he is devoutly worshipped by all the faithful adherents of the old Japanese religion, as it was of old established in Japan. And the adherents of all other sects, even their greatest philosophers, and atheists, shew a particular regard and veneration for his name and memory, as that of their first parent. Devout pilgrimages are made yearly by the Japanese of all ranks and qualities, to the province where he lived, and where there is a temple erected to his memory. Nor is there any province or town throughout the empire, but what has at least one temple, where Tensio Dai Dsin is worshipped; and, in hopes of obtaining by his power and affidance great temporal bleffings, worshipped with much more affiduity and devotion than any other of their gods. There is otherwife no mention made in Japanese histories of his wife, nor of the wives of his successors, and their names are entirely lost to posterity. After some hundred thousands of years, Tensio Dai Dsi was succeeded by his eldest son,
- 2. Oofiwo ni no Mikotto, or with his full title, Massai Ja su Katz Katz sai ja si Amani Oosi woni no Mikotto. His successor was
- 3. Ninikmo Mikotto, or with his full title, Amatsu siko siko Fono ni Niniki no Mikotto. He was succeeded by
- 4. De mi no Mikotto, or with his full title, Fikofoo foo De mi no Mikotto. He was fucceeded by
- 5. Awase Dsu no Mikotto, or with his full title, Tuki Magisa Take Ugei Jakussa fuki awadsi Dsuno Mikotto. With him ends this second, or silver age, as one might call it, of the Japanese world. Something more shall be said on this head in the first chapter of the second book. The names of the sive terrestrial Gods of this second succession are expressed in Tab. xvi.

These are the two successions of divine and half divine Beings, from whence the Japanese draw the original descent of their nation. The account they give how these gods were created, and how they begot each other, is no less chimerical and fabulous. The first of the seven great celestial spirits, they say, was the very first thing that arose vol. VII.

out of the chaos, being its pureft and invisible part and power. His for any bear men out of him in a manner beyond the reach of human understanding, or as found precent to explain it, and to make it intelligible, by the motion and active power of the hearens Thus were begot the feven go at celestial spiries of the fieft and fub-celettial elements. fuccession. It was the last of them who, knowing his wile in a carnel manner, begothe fecond fuccession of god-men, of beings helt divine and halt human. These though they fell far short of the perfection of their progenitors, yet by virtue of those divine qualities, they had ftill left them, they preferved their lives, and continued the tucceilion of their government unto their peterity, which they begot in a more comprehenfible manner, for an immemorial time, far exceeding the term human life is now At last, all expired in the person of Avale Diuno, the last of this second race, who himself became the first parent of the third, the now living inhabitants of Japan. To those of this third race, who descend lineally from the first-born fon of Awase Dfuno M'kotto, from his first-born, and fo down, or their iffue wanting to their next heirs, is by the Jopanese attributed to a supernatural, almost divine power, and an unlimited authority over their fellow-creatures. This is in fome measure expressed by the great titles and high founded epithets, they give to this whole family, but particularly to its Head and Prince. Such are Oodai, the great generation: Mikaddo, Emperor, Mikotto being peculiar only to the first and second succession of gods and god-men:) Tenco. Heavenly Prince; Tenfi, Son of Heaven; Tee, Prince; and Dairi; by which last name is frequently denoted the whole court of the Eccledaffical Heredicary Emperor.

Thus far the common tradition of the Japanele about the original descent of their nation, which is effected as facted among them, as the authority of holy feriptures is among Cariftans. It were needless to refute it, it being of itself of fo weak a nature, that it will not bear the inquiry of even the most common understanding. Some people, perhaps, will think it not unlikely, that, under these two successions of gods and godmen, is allegorically couched an obscure account of the Gold and Silver Age of Greek writers, or of the first are sof the world before and after the deluge. But ther, how will they reconcile that infinite time, during which the Japanele protend, that there two freceding of spiritual beings govern d the world, to that short number of years which pailed fines the creation, according to the divine account deliver. I to us in holy The Japanese, is feems, would not be behind hand with the Tgypfians, Childeans, Brancines, and others of their neighbours in the Lail; who all, purform to that pride and varity which is natural to eathern nations, dated their origin as high as they could, and effected it glorious to shew a long feries of Monarchs that ruled over them. But what they feem to have more particularly aimed at, is to outdo their neighbours the Chinese; for they make Tensio Dai Dsin, the first progenitor of the spanese nation, in their historical writings, many thousand years anterior to the first and fielitious, as they call him, founder of the Chinese nation, Sinkwosi, or, according to the Chinese pronunciation, Tien Hoamtsij. And lest even this should not be sussicient to clear them of all fuspicion of being any ways descended from the Chincse, they prefix the succession of the first great celestial spirits, which they derive from the very beginning of the creation. They are, however, at a loss what to answer, when asked, how it came about, that Awase Diuno, the last of their terrestrial gods, a being endowed with fo many excellent and supernatural qualities, as they ascribe to him, begot so poor and miserable a race, as that of the present inhabitants of Japan. They have as little to say concerning the state of their country, and the history of their ancestors before the time of Sinmu, their first monarch. For this reason, several of their own writers have ventured to call Japan, Atarasikoks, and Sinkoks, that is, New Country; as if it had

Deen newly found out and peopled under the reign of their first Emperor. Thus much 's true, that the genuine Japanese history begins but with the reign of this first Monarch, who in ed about 600 years before Corid. And herein the Chinele are gone far beyond them, for they begun to write the history of tir 1 country at least 2000 years before; and they can show, what, I believe, no other not up can beast of, a succession of moriarchs, with an account of their lives, government, and remarkable actions, down to this time, for now upwards of 2000 years. It must be owned, however, that the Japenele nation must needs have existed, and lived in the country, a considerable time before their first Odai, Mikaddo, or Emperor; since when I e was raised to the throne, they were then already grown very numerous, and fince, 1 . long after, as is recorded in their histories, great was crose among them, and may chousands perished by place and finding: unless one would bring them over at once from another country, or out o' the couth like mufhrooms, which is either impertment or improbable. I am now incined to believe, that, from the time of their ancestors coming into the coentry, they led for many age, a wandering lite, erring from I lace to place, with their families and cattle, which the very disposition of the country, divided by mountains, fear, and rivers, from to have required; till the happy Ninus Dfin Mu Ten Oo, civilized and brought them is to better order, and become Limfelf, whether by force or choice, their first mounts. Since that time they have been accurate and faithful in writing the lillory of their country, and the lives and reigns of their monarchs. To conclude, as Dadfijno Milketto is by them believed to have been the greatest of the first succession of celedial faints, and Ten fio Dai Dfin, that of the fecond of god-men, fo they look upon Sin Mu Ten Oo, as the greatest of the third race of the now living inhabitants; in whose family the hereditary right to the crown, with a more than human authority, and continued down to Kinfan Kivotci, the prefent one hundred and fourteenth I likacijo, that is, two thousand three hundred and fixty years, computing to the year f Chilt 1700. I fay, the hereditary right to the crown; for the government of the the infeltit of late gone over into feeder hands, as will be shown more particularly in another place.

CHAP. V. — Of the Character of Japan, and its Produce as to Mineraly.

JAPAN bonks of a happy and healthful climate. The air is very inconstant and fubject to frequent changes, in the winter loaded with fnow, and liable to fharp frofts, in the furnmer, on the contrary, particularly during the dog-days, intolerably hot. It vains frequently throughout the whole year; but with the greatest profusion in the months of June and July, which are for this reason called Satsuki, that is, Watermonths. However, the rainy feafon in Japan is far from coming up to that regularity which is observed in other and hotter parts of the East Indies. Thunder and lightning

happen very frequently.

The fea, which encompasses the islands of Japan, is very rough and stormy; which, with the many rocks, cliffe, and shoals, above and under water, make its navigation very dangerous. It hath two remarkable and dangerous whirlpools. The one is called Faifaki, and lies near Simabara, below Amakusa. It is dangerous, chiefly when the tide turns; for in high water it Lecomes even with the furface of the fea, but as foon as the tide begins to go out, it also, after some violent turnings, falls in of a sudden, as I was informed, to the depth of fifteen fathom, swallowing up with great scree what ships, boats, and other things happen at that fatal juncture to come within its reach, which are dashed to pieces against the rocks at the bottom. The shattered pieces sometimes remain remain under water, sometimes they are thrown out again at some German miles distance. The other whirlpool lies near the coasts of the province Kijnokuni. It is called Narrotto; and from the neighbourhood of the province of Awa, Awano Narrotto, which signifies, "the rushing of Awa," because it rushes with a great boistering noise about a small rocky island, which is by the violence of the motion lept in perpetual trembling. This, though of a formidable aspect, is yet esteemed less dangerous than the other, because its noise being heard at a considerable distance, it may be easily avoided. Japanese authors, especially poets, frequently allude in their writings to the wonderful nature and motion of this Narrotto, as do also the priess in the pulpit.

Water-spouts also are frequently observed to rate in the Japanese seas, and to turn towards the coasts. The Japanese fancy, that they are a kind of water dragons, with a long watery tail, sixing up into the air with a swint and violent motion, for which reason

they are by them called Torimaki, that is, "if outing dragons."

The foil of Japan in itself is, for the major pois mountainous, rocky, and barron, but through the indefatigable care and industry of the natives, it hath been made fruitful enough to furply them with all monner of a scoffaries, besides what the neighbouring fea affords of fish, class, and so is. Even the most rocky and uncultivated places yield their plants forces, and rocks for the federance of the inhalitants, which their indigent arcellors by the rece leaded to de so and to prepare, so a rot only to make them followed by likewise placing and acceptable to the taste. Considering this, and the straight, more for the government in general, we need not wonder, that this vail and populous empre is so apurtantly provided with all the need ries of human the there are particular world, which Nature seems purposely to have separated from the odd of the globe, by encompassing it with a rocky and tempessing us to a, it easily can which of mills without any adilitance from torcign countries, as long as arts and agriculture are followed and improved by the natives.

the country behaves is plentifully furpiled with fresh water, there being very many fourthins, leb is and increasing and Jown the empire. Some of the rivers in particular, are to linguand rapid to real a enhanced the fleep high mountains and rocks, where they arrie, or because the promie showers of rain, which fall frequently, that they are not to be partid over without danger, the rather, fince some are so impenious as to bear no bridges. Some of the most famous rivers are, 1. Ujingava, that is the River Ujin. It is about a quarter of a German mile (or an English mile and a hali) broad, and there being no bridge laid over it, it must be forded through. The force and rapidity with which this river falls down from the mountains is fuch, that even when the water is low, and fearce knee-deep, five ftrong men, well acquainted with the bed of it, must be employed to ford a horfe through; which with the many large flones lying at the bottom, makes the passage equally disticult and dangerous. The people, whose business it is to ford passengers through this and other such like rivers, left they should not take due care, are, by the laws of the country, made answerable for their lives. This is the reason, why there are but few unluckly accidents happen. 2. The river Couni is famous for its furprising beginning; for it is recorded in Japanese histories, that it sprung up of a sudden in one night in the year before Christ 285. It borrowed its name from the province where it arifes. 3. The river Askagava is remarkable, for that the depth of its bed alters perpetually, on which account it is frequently alluded to by Japanese authors, chiefly poets.

Japan is very much subject to earthquakes, which happen so frequently, that the natives dread them no more than we Europeans do an ordinary storm of thunder and lightning. They are of opinion, that the cause of earthquakes is a huge large whale's creeping

under ground, and that they fignify nothing. Sometimes, however, the shakes a e s, violent, and last 10 long, that whole cities are thereby destroyed, and many thousa of the inhabitants buried under the ruins. Such a dreadful accident happened, Father Lewis de Froes relateth (in opere de Rebus Japonicis collecto a Job. Hayo,) i. . : vear 1586 he himself being then in Jepan *. The like accidents happened frequ fince hat time. In 1704, I had a letter from Batavia, from a friend of mine, lately arrived from Japan, wherein among other things, he gave me an account or finh a violent shock, which happened there in 1703, whereby, and by a great fire which broke cut at the fame time, almost the whole city of Jedo, and the imperial palace itself, were destroyed and laid in ashes, and upwards of 200,000 inhabitants buried under the ruins. It is remarkable, that fome particular places in Japan are observed to be free from all manner of fuccussions. The Japanese reason variously upon this phænomenon. Some attribute it to the holiness and fonctity of the place, and to the powerful protection of its genius, or tutelar god. Others are of opinion, that thele places are not flook, because they immediately repose upon the unmoved center of the The fact itself is not called in question; and there are noted for having this fingular privilege, the islands of Gotho; the fmall island Sikubusima, on which stands a most stately temple of Bonzes, being one of the first that was built in the country; the large mountain Kojalan near Miaco, famous for the number of its convents, monasteries, and monks, besides some few others.

The greatest riches of the Japanese soil, and those wherein this empire exceeds most known countries, consist in all forts of minerals and metals, particularly in gold, silver, and copper. The many hot wells in several parts of the empire, and the several smoking and burning mountains, shew what a slock of sulphur, which is the mother and main ingredient of mineral and metallic bodies, is hid in the bowels of the earth, besides the vast quantities of this substance dug up in several places. Not far from Firando, where we had our factorics and warehouses, before we removed to Nagasaki, lies a small rocky island, (one of those which, by reason of their great number, are called by the Japanese kiukiu Sima, that is, the Ninety-nine Islands,) which, though never so small, and encompassed by the sea, hath been burning and trembling for many centuries. Another small island opposite to Satzuma, which is by the Japanese called Fuogo, which name they borrowed from the Portugueze, and retained ever since.

^{*} The effects of this earthquake were so stupendous and dreadful, that I could not so bear, with the reader's leave, to it set at length, the account which F. Lewis de Froes gives of it, in a letter dated at Smonoscki, in the province Nagatia, October 15, 1586. His words are: "In the year of Chi st 1586, Japan was shook by such dreadful earthquakes, that the like was never known before From the province Sacaja, as far as Miaco, the earth trembled for forty days successively. In the town of Sacaja sixty houses were thrown down. At Nagasa as, a small town of about a thousand houses, in the kingdom Oomi, the earth gaped and swallowed up one half of that place; the other half was destroyed by a sire. Another place in the province Facata, much frequented by merchants, and likewise called Nagasama by the notives, after it had been violently shook for some days. was at last swallowed up by the sea; the waters rising so high that they overshowed the coasts, washed away the houses, and whatever they met with, diowned the inhabitants, and left no footstep of that once rich and populous town, but the place on which the castle shood, and even that under water. A strong castle in the kingdom of Mino, built at the top of a high hill, after several violent shocks, sunk down and disappeared on a sudden, the earth gaping, that not the least footstep remained, a lake quickly filling the place where the foundations of the castle had been. Another accident of this kind happened in the province Ikeja. Many more gaps and openings were observed up and down the empire, some of which were so wide and deep, that guns being fired into them, the balls could not be heard to reach the other end, and such a stench and smoke issued Taicosama) resided at Sacomot, in the castle Achee, when these earthquakes begun, but they growing too thick and violent, he retired hastily to Osacca. His palaces were strongly shook, but not thrown down?
